42. 10s. each. In 1840 it had 85 students. Columbia College, formerly King's College, established in 1754, has a president and 10 other professors, about 140 students, a library of 14,000 vols., and an estate valued at upwards of 400,000 dolls. The city has also an episcopal seminary, and various other sectarian high schools; a college of physicians; the American and New York academies; an historical and philosophical library, and a mercantile library; medical, law, agricultural, horticultural, typographical, musical, and numerous other learned societies, with extensive libraries and reading-rooms; a chamber of commerce, board of trade, American Institute for domestic industry; and mechanics' institutes, academies of the fine arts and drawing, a repository of arts, &c. Sixty-two newspapers, of which 14 were issued daily, were published in New York in 1838. The New York hospital, into which 1,769 patients were received in 1837, and Bellevue Hospital, are the principal of the numerous institutions for medical relief. There are admirable institutions for the blind and the deaf and dumb; a society for the reformation of juvenile delinquents; a fund termed "Long Island Farms," for the provision of destitute children; 4 savings' banks; and a great variety of other useful public institutions. Few, if any, cities have increased in pop. and wealth so rapidly as this. In 1838, the value of the real property within the city was estimated, for the purpose of assessment, at 194,343,359 dolls., and that of the personal property at 69,609,582 dolls., exclusive of property belonging to the corporation, and of the estates and properties of the various churches, schools, and universities. The city debt, in 1839, amounted to 9,352,955 dolls. (*Amer. Almanack*, 1841.)

The city of Brooklyn, on Long Island, immediately opposite to New York, bears the same relation to the latter that Pera and Galata do to Constantinople. It stands on rising ground, and is laid out, like New York, in streets running at right angles to each other. Its pop., which, in 1830, was 15,934, had risen, in 1840, to 36,283. It has a navy-yard, a handsome city-hall, 17 churches, a municipal court, which sits daily, 2 lycæums, an academy, a collegiate institute for young ladies, many good private schools, several banks, insurance companies, and benevolent societies. It has a steam cotton factory, many carding machines, some cloth-finishing works, lead-works, distilleries, rope-walks, morocco-leather factories, &c.; and is a place of considerable trade. Steam-boats ply continually between it and New York, and it is connected by a railroad 12 m. in length with Jamaica, in the interior of Long Island. On Aug. 26, 1776, the British gained a victory over the American forces on Brooklyn heights, which gave New York into their hands; of which city they retained possession till 1783.

New York, under the name of New Amsterdam, was founded by the Dutch in 1621, being given with the rest of the colony to the Duke of York in 1664. In 1673 it was re-taken by the Dutch; but in the succeeding year it fell again into the hands of the English. It was the scene of several of the events that preceded the outbreak of the revolution; and the first congress of the U. States under the new constitution was held in it in 1789. (*New York Gaz.*; *American Almanack*; *Proceedings of the Bristol, Bath, &c. Soc.*; *Stuart*; *Official Papers*, published by Congress.)

NIAGARA (RIVER and FALLS OF). The river of Niagara is that portion of the great river St. Lawrence, in N. America, that extends between Lakes Erie and Ontario, the level of the former being 331 ft. above that of the latter. The Niagara river issues from the N.E. extremity of Lake Erie, at Black-rock, near Buffalo, where it is  $\frac{1}{2}$  m. wide, and runs northward about 35 m., embracing in its course numerous islands, and running over a high ledge of rocks, forms the *Great Falls*, the most stupendous cataract in the world. On flowing out of the upper lake, the river is almost on a level with its banks; so that any considerable rise of its level would make it lay under water the adjacent flat country of Upper Canada on the W., and of the state of New York on the E. (*Hall's America*, i. 179.) For 3 m. from Lake Erie it has a rapid current; but it then becomes smooth and placid, and continues so till within a mile of the Falls. About 5 m. from Buffalo the river widens, forming several islands, one of which, called Grand Island, 12 m. in length, comprises about 17,000 acres. Navy Island, belonging to the British, has an extent of 304 acres; the rest are much smaller. About 2 m. below Navy Island, on the left or Canadian bank, the river receives the Chippawa, which is connected with the Welland canal, the artificial channel of communication between the upper and lower lake. (See *ant.*, 143.) The shores on either side are but thinly settled. Between Buffalo and the Falls, a distance of 21 m., there are only 4 villages, two on either side. A few farm-houses are dispersed here and there, but, for the most part, the banks are covered with forests. The river, before reaching the falls, is propelled with great rapidity, being a mile broad, about 25 ft. deep, and having a descent of 50 ft. in half a mile. An island at the very verge of

## NICARAGUA:

the falls, the river is made 2 sheets of water: one of these, called the Horse-shoe Fall, on the Canadian side, is 600 yards wide, and 128 ft. in perpendicular depth; the other, called the American Falls, being about 200 yards in width, and 164 ft. in height. The breadth of the island is about 500 yards. This great sheet of water makes a ledge of hard limestone in horizontal strata, below which is a somewhat greater thickness of soft shale, which decays and crumbles away more rapidly than the former stratum, so that the calcareous rock forms an overhanging mass, projecting 40 ft. or more above the hollow space below." (*Iyell's Geology*, i. 261.) The depth of the water is much greater on the Canadian than on the American side; and hence, while the scarcely hidden rocks below the American Fall cause the flood to be broken into foam, the deep green hue of the billows beneath the Horse-shoe Fall is but slightly changed by the crests rising above them. "The finest view of the falls, perhaps, is from the table-rock on the Canadian shore, and from the banks above it. Another good view is from a boat crossing the river 200 or 300 yards below the falls, both of which are thus seen to the greatest advantage. The rapids, however, are best seen from Goat Island, to which a very ingeniously constructed and strong rough bridge has been thrown, on the American side, over rapids and great blocks of rock. On the N. side of the island, the rocks, projecting into the river 200 ft. or 300 ft., immediately over the falls, are accessible by a second wooden bridge, below which the water runs with fearful velocity. From the rocks, the view over the precipice and great fall is terrific, absolutely appalling; although the prodigious volume of the tumbling waters is not so apparent at this spot as from the table-rock and the boat." (*Stuart's America*, i. 146.)

"The banks rise from the ravine perpendicularly above the river upwards of 180 ft., and hence artificial means are necessary for effecting a descent to the water's edge. Spiral staircases have been constructed both on the Canadian and American sides; besides which, a third was constructed, in 1829, at the lower end of Goat's Island, for the purpose of descending to a ledge actually underneath the fall. By these means the traveller is enabled to view the falling waters in almost every possible direction. "The overwhelming sensations, with which the spectator can hardly fail to be affected, are produced by the immense flood, precipitating at least 100,000,000 tons per minute, as well as by the stupendous mass and overpowering force of the roaring and falling waters. Every surrounding object, indeed, is viewed with indifference, while the mind is wholly absorbed in the contemplation of a spectacle so sublime, surpassing in majesty and grandeur and power all the works of nature that have ever arrested the attention or presented themselves to the imagination. 'To form a faint idea,' said the late Governor Morris, 'of the great catract of Niagara, fancy to yourself the Frith of Forth rushing wrathfully down a deep descent, leaping in foam over a perpendicular rock 175 ft. high, then flowing away in the semblance of milk, from a vast basin of emerald. You will thus have some notion of the unparalleled, the petrifying influence with which these falls impress the beholder: but, truly, as the poet says, the eye of man must see this miracle to comprehend it, or the feelings it produces.'" (*Stuart*, i. 143.) These stupendous falls have attracted and continue to attract a large number of visitors, in consequence of which numerous large hotels have been built on both sides the river. Many private villas have also been erected on the Canadian side. After the river has passed over the falls, its character is immediately and completely changed. The waters, which had expanded at the falls to an entire width of 1,300 yds., including Goat Island, are again contracted after their union into a stream not more than 160 yds. broad; and the river then runs furiously along a deep wall-sided valley, or huge trench, which has been cut by the continued action of the stream during the lapse of ages. The cliffs on both sides are in most places perpendicular, and the ravine is only perceived on approaching the edge of the precipice. (*Hall's North America*, i. 158, 196.)

By the continual destruction of the rocks, owing to the eddies and spray rushing against the soft shale strata, the falls have within the last 50 years receded upwards of 150 ft., or, in other words, the ravine has been prolonged to that extent. Through this deep chasm the Niagara flows with a constantly decreasing velocity for about 7 miles; and then the table-land, which is almost on a level with Lake Erie, suddenly sinks down at Queenstown, and the river emerges into a plain, continuing for 7 miles to Lake Ontario. There seems to be no reasonable ground for doubting that the falls were once at Queenstown, or 7 m. below their present position; and that, from the force of the water undermining and wearing away the rock, they have receded from Queenstown to where we now find them. This recession is still going on, at the rate of nearly 60 yards in 40 years; and consequently they seem destined, in process of time, to reach Lake Erie, which,

## NICE.

being only about 70 ft. in depth, would thus be completely drained. It is not unlikely, however, that, in the long interval that must thus intervene, some convulsion of nature may occur to change the comparative levels of the district. But supposing this not to occur, and that the falls recede to the lake, the probability is, from the accumulation of mud, and the gradual filling up of the lake that is now going on, that its principal portion will have been previously converted into dry land. (*Iyell's Geol.*, i. 262-264.)

NICARAGUA (LAKE OF), the most considerable lake of Central America, comprised within the state of Nicaragua, and extending principally between the 11th and 12th degs. of N. lat., and the 84th and 86th of W. long., about 12 m. in a direct line from the Pacific, and 90 m. from the Caribbean Sea. It is of an oval shape: length, N.W. to S.E., about 130 m.; average breadth, perhaps, about 40 m. It has numerous creeks and harbours, and several islands. It receives a good many rivers, especially along its N., N.E., and W. sides; its surplus waters are carried to the Caribbean Sea by the Rio San Juan, which issues from its E. extremity, and is said to be navigable, during the rains, throughout its whole extent.

The project for uniting the Atlantic and Pacific Oceans, by means of the river San Juan and of a canal from the Lake of Nicaragua to the Pacific, has been often mooted; and the country certainly presents greater facilities for effecting this great work than any other part of Central America, or than the Isthmus of Panama. The river San Juan, notwithstanding it is in one part impeded by cataracts, is said, by Thompson, to be available for craft drawing 3 or 4 ft. water, at all times of the year, and for vessels drawing from 10 to 12 ft. water to run 30 to 35 leagues from the sea. The lake itself is adapted for ships of the largest burden, being 15 fathoms deep. The distance between its S.W. shore and the Gulph of Papayago, in the Pacific, is only 29,880 yards, or 15½ m.; and though the intervening country be laid down in many maps as mountains, the greatest actual height of any part of it above the level of the lake is only 19 ft., as was proved by a series of 347 levels, about 160 yards apart, taken in 1781. (See *Thompson's Guatemala*, *Append.* p. 512-520.) The surface of the lake is about 134 ft., and its bottom 42½ ft. (Engl.) above the level of the Pacific; but the ascent might probably be overcome by a succession of locks. The difference in the level of the two oceans, formerly supposed to be so serious an obstacle to the undertaking, was ascertained by Humboldt not to exceed 20, or at most, 22 ft. (*Pol. Essay*, i. 31.) At its west extremity, the Lake of Nicaragua is connected by a small river with the Lake of Leon. The latter, 50 m. in length by nearly 30 in breadth, is said to be also of sufficient depth for the largest ships. It is but 13 m. from the Pacific, and 5 from the river Tosta, which enters that ocean; and the height of the intervening ground between it and the Pacific is not more than 51 ft. above its own surface, which last is only 3 ft. higher than that of the Tosta. In this direction, also, a communication has been contemplated. At one period, a British company proposed connecting the two oceans, and it was afterwards said that the Dutch government had undertaken it; we believe, however, that no active steps have been yet taken to carry either of the above plans into execution. (*Thompson's Guatemala*; *Geog. Journ.* vi., &c.)

NICASTRO, a town of the Neapolitan dom., prov. Calabria Ultra II., on the W. side of the Appennines, 19 m. S. by W. Cosenza. "It is a straggling town of 5,000 inhabs., and the seat of a bishop and a sub-intendant. Its houses are mean, and all roofed with red tiles. A ruined castle, on a conical hill, rising from amidst all these modern buildings, is that in which Henry, the eldest son of the emperor Frederick II., was confined for some time." (*Craven's Tour*, p. 23.) It has some trade in oil, and there are many mineral baths in its vicinity.

NICE (Ital. Nizza, an. *Nicea*), a city and sea-port of the Sardinian dom. in Italy, cap. div., and prov. of its own name; on the Mediterranean, about 5 m. E. from the bar, the boundary of the French territory, 35 m. N.W. Genoa, and 98 m. S. by W. Turin; lat. 43° 16' N., long. 7° 16' 37" E. Pop., in 1838, of the town and canton (ex. garrison), 33,911. It is beautifully situated in a small plain at the foot of the maritime Alps, by which it is protected from the N. and E. winds; while the cool sea-breeze, which prevails every day with a regularity almost equal to that of a tropical climate, moderates the summer heat. The principal disadvantage of its situation is that, being open on the W., it is exposed, and but little protection, to the influence of the *mistral*, or *vent de liue*, which is often keen and piercing. It is encircled by bastioned walls; and has on the E. the steep rocky hill of Monte Albano, surmounted by the ruins of an old castle. The view from this hill is very fine, and at sun-rise and sun-set the island of Corsica is sometimes clearly distinguished, though it be some 70 m.

## NICOBAR ISLANDS.

80 m. distant. The port, which is small and protected by a pier, admits vessels of 300 tons burden, and is visited by the steamers from Marseilles to Genoa. Nice is divided into two parts by the river Paillon, here crossed by a good stone bridge. The old town has narrow and crooked streets, which, however, are kept very clean. The new town to the W. of the river is well laid out and handsome: it has a square surrounded by open arcades, and some of the houses near the sea, and in the vicinity, are very superior. The cathedral, several convents, 3 hospitals, the governor's residence, college, public library, theatre, and a fine arch erected in honour of Victor Amadeus III., are the principal public buildings: it has several bath-establishments, and some good hotels; and Dr. Farr states that the rents of houses and apartments are lower here than in any other place of general resort on the Continent. It has manufactures of silk twist, snuff, soap, essences, perfumery, and paper, a fishery of anchovies, and a considerable trade in the export of oil, wine, oranges, hemp, &c., and in the importation of corn from the Black Sea, salt fish, manufactured goods, and colonial produce. In 1839, the value of the imports amounted to £2,313,450 fr., and that of the exports to nearly as much. It is a bishop's see, and the seat of a royal council, and of the head court of justice for its div.

Nice, in common with Montpellier, enjoys the reputation of having a peculiarly genial climate, and is accordingly resorted to by numerous invalids, especially from England, during the months of November, December, and January. Mr. Forsyth says, that when he arrived at Nice on Christmas Day, "a soft and balmy air, oranges growing in every garden, lodgings without a chimney, and beds with mosquito-curtains, presented the first signs of Italy." But at other seasons it is less suitable for invalids. In February, the *vent de Bise* begins to blow; and it is very trying to persons with delicate constitutions. This explains the singular discrepancies in the accounts of different travellers as to the climate of Nice. Dr. Farr and Sir James Clark, especially the former, give full and satisfactory information as to the climate of Nice, and its surrounding localities, and the classes of invalids most likely to be benefited by residence in it. A noble road, constructed at a vast expense, leads over the Maritime Alps from Nice to Turin. Another road, begun by Napoleon, but not completed till 1827, leads along the sea coast from Nice to Genoa; and a third road is now about being opened from Lyons to Nice, which will be a shorter and better way of entering Italy than by Mont Cenis.

Nice is said to have been founded by colonists from Marseilles. Under the Romans, it was originally the seat of a naval arsenal; but, under Augustus, the latter was transferred to Frejus. Under the French, it was the cap. of the dep. *Alpes-Maritimes*. Among the celebrated individuals to whom it has given birth, are the painter, Vanloo, the astronomer, Cassini, and Marshal Massena, one of Napoleon's ablest generals. (See Dr. Farr's  *admirable Guide to Nice*, passim; Clark on Climate, 3d ed. p. 202.)

NICOBAR ISLANDS, a group in the Indian Ocean, between the 3d and 10th degs. of N. lat., and the 93d and 94th of E. long., about midway between the N. W. point of Sumatra and the Andaman Islands, and from 100 to 130 m. from each. Sanbelong and Carnicobar, the former at the S. and the latter at the N. extremity of the group, are the principal; there are, however, about half a dozen other islands of some consequence, and a number of small islets. Most of these islands are hilly, and all are covered more or less with dense woods of cocoa-nut, areca palm, and various timber trees. The climate is extremely unhealthy to Europeans, and is supposed to owe this quality, in great part, to the extensive spontaneous decomposition of vegetable matter. These islands are inhabited by a race of natives of the Indo-Chinese stock, whose inoffensive character contrasts strongly with the wild ferocity of their neighbours of the Andaman Islands. Their chief occupations are fishing, rearing hogs and poultry, a little agriculture, and trafficking among themselves, and with foreigners who touch at the Nicobars. Cocoa and betel-nuts are met with in immense quantities, and most of the Indian ships bound eastward, call here to take in a cargo of the former, which they obtain at the rate of 4 nuts for a leaf of tobacco, and 100 for a yard of blue cloth. The natives also exchange fowls, hogs, birds' nests, ambergris, tortoise-shell, wild cinnamon, saffras, &c., for iron, tobacco, cloth, silver coin, and other European goods. They live under a number of petty chiefs; but little is known of their internal economy, customs, &c., the great insalubrity of the climate having successively broken up all the establishments formed on the Nicobars by the Danes, the British missionaries, &c., in the latter half of the last century. (Hamilton's *E. I. Gaz.*, &c.)

NICOLAËFF, a town and river port of European Russia, gov. Kherson, at the confluence of the Ingul

## NICOLAËFF.

with the Bug, about 20 m. above the latter, falls into the estuary of the Danube, lat. 48° 38' N.; long. 32° 0' 21" E. Pop. 2,500. Nicolaïeff was founded in 1790; and was intended to be a great naval depot, and the station of the Russian fleet in the Black Sea. It stands in an elevated, healthy situation, covers a large extent of ground, and is extremely well built. The streets are wide, and regularly laid out, and the private houses, which are mostly of brick, have a handsome appearance. Among the numerous public buildings may be specified the new church or cathedral, the admiralty, the town-house, the marine barracks, the naval hospital, &c. In the vicinity is an observatory. The admiral commanding the fleet in the Black Sea resides here; and here, also, are the various offices connected with this department of the service, with schools for the instruction of pilots, ship-builders, naval artillery, &c.

Nicolaïeff owes its existence to its river, which has its entrance without the bar of the Dniukp, and water sufficient to float large ships up to the town. There are extensive docks and yards for the building of ships; but the latter are, notwithstanding, mostly constructed at Kherson, being sent thither to be laid up, or, when necessary, repaired. Still, however, Nicolaïeff has not, as its founders anticipated, become a large, thriving town, and, latterly, indeed, it has been either stationary or has retrograded. This is ascribable partly to the want of good water, and the scarcity and high price of fuel caused by there being no timber in its vicinity; partly to its harbour being, though very superior to that of Kherson, decidedly inferior to that of Sevastopol in the Crimea, at which a part of the fleet is now always stationed; and partly, and principally perhaps, to the great advantages enjoyed by Odessa as a commercial emporium. Nicolaïeff is, in fact, nearly deserted by all the mercantile class, and depends entirely on the employment afforded by government. (Clarke's *Travels*, li. 350, 8vo. ed.; Lyall, l. 201; Schmitzer, *La Russie*, &c., p. 723; Pinkerton's *Russia*, p. 100.)

NICOLAS (ST.), a town of Belgium, prov. E. Flanders, cap. canton, on the high road between Ghent and Antwerp, 19 m. E. N.E. the former, and 12 m. W. S.W. the latter. Pop. in 1836, 16,153. It is well built, and handsome, and its inhabs. generally opulent. It has a fine town-hall, a par. church, in which are some good Flemish paintings, an hospital, 2 orphan asylums, a convent, a prison, and a large market-place, partially planted with trees. It is one of the most flourishing towns of Belgium, and has manufactures of woollen, cotton, and silk fabrics, hats, paper, soap, tobacco, chocolate, &c.; with salt-refineries, tanneries, breweries, dye-houses, and potteries. It has, perhaps, the largest market for flax in Europe, and large annual fairs for cattle and horses. It is the seat of a tribunal of commerce; has academies of music, drawing, &c., and sends 1 deputy to the states of the prov. (*Flandern, Fland. Orient.*)

NICOPOLIS, a town of Turkey in Europe, prov. Bulgaria, cap. sanjak, on the Danube, 100 m. E. by S. Widin. Pop. estimated at 10,000. It has an imposing appearance, being situated on a range of hills above a bay of the river, and surrounded by strong ramparts mounted with cannon. It is further defended by an ancient castle, and has several suburbs, in which the Greek and Bulgarian inhabs. principally reside. Generally it is ill built, but has some large houses, and several handsome mosques and public baths. It is the seat of a Greek archbishop and a R. Cath. bishop: its position on the Danube gives it some commercial importance; it is, however, said to be in a state of decay. (Elliot's *Treat.* 1.175.) Nicopolis was founded by Trajan, and some portions of its ancient walls are said still to exist. But it is chiefly memorable, at least in modern times, for the great battle fought in its vicinity, on the 28th of September, 1396, between the Ottoman army under Bajazet, and that of the Hungarians and their allies under their king Sigismund. The latter sustained a complete defeat, ascribable as much to the rashness and presumption of the Count de Nevers and other French leaders, as to the bravery and superior discipline of the Turks. (Gibbon, cap. 64.)

NICOSIA (an *Tricinitus*?), the principal city of the Island of Cyprus, near its centre, on the small river Pedla; lat. 35° 13' 11" N., long. 32° 26' 45" E. Pop. according to Turner, about 17,500, of whom about 2-300 are Turks. It stands in a low fertile plain, near the foot of a range of high mountains, and is surrounded by walls in the shape of a hexagon, flanked by 13 bastions. The ground of the enclosure is very unequal, being in some parts elevated to the height of the walls, and in

\* Dr. Lyall says that this deficiency has been supplied by the construction of a reservoir, the existence of which has, however, been doubted from its not having been mentioned by the accurate Dr. Pinkerton. But it may have been overlooked by the latter, or may not have sufficiently answered the purpose for which it was intended.

others forming a deep valley. The streets are in general not more than 10 and 15 ft. in breadth; and, being unpaved, are always filthy, and, in winter, almost impassable. Having been the residence of the principal Venetian families during the period that the island was subject to Venice it has many fine houses, which are now, however, mostly in ruins; and at present it consists principally of brick and mud huts. The bazars, though tolerably well supplied, is not even arched, but roofed with reeds and mats, which admit the rain in all directions. Most houses have gardens, which abound with olive, lemon, and pomegranate-trees; and hence the first view of the city is very pleasing, from the contrast between the foliage and the dark mountains to the N. There are 8 mosques, all of which were once churches, the principal having been the cathedral church of St. Sophia, built by the Venetians; it is in the Gothic style, of an oblong shape, with a pentagonal projection at the end opposite the entrance, for the reception of the altar. The interior is laid out in three aisles, divided by clumsy white-washed Corinthian columns. On the two bellies the Turks have erected two high and handsome minarets. There are still 6 Greek churches, and 1 Roman Catholic, and several Greek convents. The city has also 4 public baths, and a large, but ruined caravanserai. It has some manufactures of carpets, printed cottons, and red morocco leather, and exports wine and cotton.

Nicosia is supposed to occupy the site of the ancient *Trimitus*, or *Trimitus*, mentioned as a place of some note by the Byzantine historians. When Richard I. of England took Cyprus in 1191, and conferred it on Guy de Lusignan, it was made the cap. of the new kingdom, and greatly enlarged. It fell, in 1480, to the Venetians, who built the present walls, and several churches and handsome palaces; and who held it, with the island, till 1571, when it was taken from them by the Turks, under whose brutal and destructive sway it has since continued. (*Turner's Levant*, ii. 544-547; *Kimnci's Asia Minor*, 172, 189; *Drummond's Travels*, &c.)

NICOSSIA, a city of Sicily, intend. Catania, district of its own name, on two hills, 14 m. N.E. Castrogiovanni. Pop. in 1831, 13,151. Like other towns in the interior of the island, it is remarkable for nothing but the number of its churches and convents. It has few manufactures, and hardly any export trade, but a considerable traffic in the corn and cattle of the surrounding country, which is very fertile. Its situation is such as to afford a strong military position; and it is supposed to be the ancient *Herbita*, founded in the earliest period of Sicilian history.

NIEVRE, a dep. of France, reg. centre, nearly co-extensive with the old prov. of Nivernais, between lat. 46° 40' and 47° 35' N., and the 3d and 4th degs. of E. long.; having N. Yonne, E. Côte d'Or and Saône-et-Loire, S. the latter and Allier, and W. Cher. Area 681,093 hectares. Pop. (1836), 282,321. A mountain chain runs from S.E. to N.W. through its centre, dividing the basin of the Loire from that of the Seine; the culminating point of the chain in this dep. being 2,900 ft. above the sea. The Loire and Allier bound Nievre on the W.; the other principal river is the Yonne. The Loire and Yonne are united by the Canal du Nivernais, which, commencing at Decize on the former river, is continued through the depts. Nievre and Yonne, for a distance of above 100 m.; but the work is not yet completed. The Nievre, whence the dep. has its name, flows through its W. part, and, after a course of about 25 m., generally southward, joins the Loire at Nevers. It turns many mills, but is navigable only for rafts or small boats. The soil is not, in general, very fertile. In 1834, 295,261 hectares were estimated to be in cultivation, 67,396 in meadows, 9,900 in vineyards, 3,667 in orchards and gardens, and 239,561 in woods. In 1835, of 83,861 properties subject to the *contribution foncière*, 43,650 were assessed at less than 5 fr., and 13,926 at from 5 to 10 fr. The fertile portions of the surface are comparatively well cultivated, and sufficient corn is produced for home consumption. The annual produce, in wine, is estimated at about 260,000 hectolitres; of which the white wines of Pouilly are the best. *Is ont du corps du spiritueux, un léger parfum de pierre à fusil, et un goût fort agréable; ils ne sont pas sujets à jaunir, et conservent assez long-temps leur douceur.* (Jullien, p. 156.) In 1830 there were supposed to be about 132,000 oxen and cows, and 315,000 sheep in the dep.; but the breeds are not particularly good. The chief resources of Nievre are in its forests and mines. Most of the small rivers, which are not navigable, have been adapted to floating down rafts of timber and fire-wood, a good deal of the latter being sent down the Yonne and Seine to Paris. The coal wrought near Decize is principally destined for the supply of Paris and Orleans. Lead, copper, and some other metals are found, but iron is by far the most important metallic product, and its yearly value in the shape of pig iron, iron plates, anchors, files, &c., is estimated at 8,724,000 fr. Hardware and cutlery, at Cosne and La Charité, glass, and earthenware, especially at Nevers, linen and woollen cloths, and musical strings, are among the principal goods manufactured. Nievre is divided into 4 arrondis: chief towns, Nevers the cap., Château Chinnon, Clamecy, and Cosne. It sends 4 mems. to the Chamber of Dep. Number of electors (1834-39), 1,379. Total public revenue (1831), 6,236,756 fr. (*Hugo, art. Nievre; French Official Tables*.)

NIGER, JOLIBA, or QUORRA, a celebrated river of Central Africa, having its remote sources near the extreme W. coast of the continent, in the country of the Mandingoes, in about 8° N. lat., and 6° W. long. It thence pursues a course N.W. and N. to the 10th deg. of lat., and then follows a general N.E. course to Timbuctoo, below which it turns S.E., and afterwards S. and S.W., to its mouth, in the Gulf of Benin. Supposed length about 2,300 m. The upper part of the Niger, called by the natives the Joliba, was first discovered in modern times by Mungo Park, who was sent out in 1795 by the African Association; he describes it at Sego, the cap. of Bambarra, as "glittering in the morning sun, broad as the Thames at Westminster, and flowing slowly to the eastward." (*Travels*, p. 220.) He succeeded in ascending it as far as Bamankoo, 250 m. above Sego, the cap. of Bambarra. From Cabra he ascended down the stream to Boussa, where, unfortunately, he was killed by the natives. Major Laing concluded, from information obtained in the neighbourhood, that the sources of the river were on the N. side of the mountains of Kong, at a height of 1,600 ft. above the sea, in lat. 8° 20' N., and long. 9° 10' W.; but Mr. Macqueen conjectures that the Allinar, its principal source, rises farther to the E. than Laing supposed. Lander, the servant of Captain Clapperton (who was murdered near Saccatoo), sailed from Boussa, with the stream, to the mouth of the river, previously called the Nun, in the Bight of Benin; and thus finally identified the Niger and the Quorra, and put an end to all the doubts and theories that previously existed as to the course and termination of the former. It hence appears that the length of the Niger, measured along its banks, exceeds 2,300 m.; and it is probable that its basin is nearly, if not quite, as extensive as that of the Nile. According to Caillie, it is navigable for large canoes within 100 m. of its source; for 200 m. below that point it has not been navigated by Europeans; but from Bamankoo to Timbuctoo it has been pretty accurately laid down, both by Mungo Park and Caillie. The river valley is here of considerable width, fertile, and comprising numerous towns and villages on either bank. The current of the river is not strong; and both travellers saw flotillas of canoes of 60 tons and upwards frequently passing up and down the river, which in the rainy season is flooded on both banks to a considerable distance. (*Caillie*, ii. 34.)

In about lat. 16° N., the stream expands, forming a lake, called Debo, which measures about 10 m. from N. to S., is from 12 to 15 ft. deep, calm, transparent, and surrounded by extensive marshes. (*Caillie*, ii. 20.) Hence to Timbuctoo the valley becomes still wider; the pasturage of cattle, the tillage of rice, millet, maize, &c., are extensively pursued, and along the banks are numerous villages, which export rural produce. In lat. 22° 30' N., and long. 32° 40' W., the river bifurcates, and on the N. and narrower branch is Cabra, the port of Timbuctoo; these branches, however, seem to unite a few miles lower down. It has been already observed that the course of the river below Timbuctoo was traversed by Mungo Park as far down as Boussa; but, as that traveller was killed there, and his papers were lost, we know nothing of this portion of the river, except that it is navigable for vessels of considerable size.

The highest point of what may be called the lower Niger hitherto visited by Europeans is the neighbourhood of Yaïri (lat. 11° 20' N. and 5° E.), which point Lander reached in 1830. Here the river leaves the great plain of Soudan, and enters the defiles of a mountain range crossing this part of Africa from E. to W., and probably connected, on one side, with the Djebel-el-Kumri, and on the other with the mountains of Kong. The direction of the stream from Yaïri, for about 150 m., is nearly due S.; but it is full of rocks, sand-banks, &c., and wholly unnavigable, except at the time of the rains, and immediately after. Below Boussa, the banks on both sides are generally high and rocky; cultivated plains intervene in many places between the river and the mountains, but in others the offsets come close down to the water's edge. From Boussa downwards, the Niger is navigable for moderate-sized vessels; and in lat. 6° N., a little below Atta, it leaves the hilly country, and enters an alluvial plain, the lower part of which is an unhealthy swamp covered with jungle; many branches here diverge from the main stream, and at the mouth is an extensive delta, which, however, is, as yet, very imperfectly known. At Atta, the river is about 2 m. wide; and near Kabba, in lat. 8° 45', it attains a width of 5 m.; but its breadth, close to the mouth, is somewhat less than a mile. The tide is said to extend within about 30

m. of Atta, or about 120 m. from the sea. The only branch of the Niger hitherto explored is the Chadda, which joins it on the left bank in lat.  $7^{\circ} 52' N.$ ,  $32^{\circ} m.$  above Atta. Captain Allen and Mr. Laird sailed about 100 m. up this trib., and inform us that it is quite equal in width, though not in depth, to the parent river. It has many shoals and sand-banks. It has been conjectured that this river has its source in the great lake of Tchad, discovered by Messrs. Clapperton and Denham; but the more probable opinion seems to be, that it has its sources on the N. declivity of the Gebel el Kumri, not far, perhaps, from the sources of the Bahr-el-Abiad, or W. arm of the Nile. The only other known tributaries of the lower Niger are the Sacatoo, May-arrow, and Coodoonia, all joining it on the left or E. bank: the former of these was discovered by Clapperton, and from the course which it pursues, it may possibly be the same river that joins the Niger near Yauri. (See *Arrowsmith's new map of Negroland*.) Both rivers flow from a range of mountains, running N.W. through Houssa, and forming the watershed between the tributaries of Lake Tchad and the Niger.

In the article *AFRICA* (Vol. I. 40.), we have given a succinct account of the successive modern expeditions that have been fitted out for the purpose of exploring the course of this river, so long involved in doubt and obscurity; and though much still remains to be accomplished, its general course and leading features have been pretty well ascertained. This, however, has not been done without a great sacrifice of human life. The inhab. of the countries in the lower part of its course are among the most degraded in the scale of human beings: the slave-trade is extensively carried on; and was being continually waged between the different tribes, travellers are exposed to the greatest dangers. (Ritter's *Africa*, li. 110., and *Hutton on the Slave Trade*, pp. 41, 42.) The climate, also, is extremely unhealthy, so much so that out of 40 persons who were allied, in 1832, on a commercial expedition up the Niger, only 11 survived. Three steamers, well fitted up for the purpose, have recently been detached (June 1841) to this river, by government, with full powers to form commercial treaties with the natives, and to concert measures for the extinction of the slave trade. But did our limits permit, it might be easily shown that there are no rational grounds on which to anticipate any considerable success from this expedition, and that the barbarism of Africa seems to depend on natural and irremediable causes. (Caillie's *Travels in Central Africa*, ii., with *M. Jomard's Remarks*; Ritter's *Africa*, li. 47—173.; *Lander's Exped.* 3 vols.; *Geog. Journal*, vols. ii. and viii.; *Laird and Oldfield's Exped. into Africa*, &c.)

The history of the Niger is involved in extreme obscurity. Herodotus was informed by the Greeks of Cyrene, that, in the interior of the African continent, a city had been reached by some Nasamon travellers, which was inhabited by negroes, and stood on the banks of a river containing crocodiles, and flowing from the W. eastward (*ἀπὸ τῆς πρὸς ἑλίου ἀνατολῆς*, li. 32.), which he conjectured to be the Nile. Now, as the Bahr-el-Abiad, or W. arm of the Nile, flows from W. to E., and is certainly more likely to have been reached by the Nasamons than the Niger, the conjecture of the venerable father of history, that the river which they encountered was, in fact, the Nile, seems to be more consistent with probability than that of D'Anville, Rennell, and other learned moderns, who suppose that the city visited by the Nasamons was Timbuctoo, and the river the Joliba of Mungo Park. The latter theory has, however, so far prevailed, that the name Niger is that which is now usually given to the river discovered and explored by Park and Lander. The word *Niger*, or *Nigris*, is first used by Pliny (*Nat. Hist.* v. 1—9.), from whose somewhat confused account it would appear that there were supposed to be two rivers of that name, one in Mauritania, S. of the great chain of the Atlas, and the other in Æthiopia, thus briefly described:—“*Nigrit fluvio eadem natura quæ Nilus: eademque et papaverum et casii, et egypti condimenta, hincque tri-potamia augetur*.” He seems, also, to have conceived that the Niger and Nile were united, and that there was a large water-system, having many branches, in the interior of Africa. The poet Claudian also entertained the idea of a similar connexion:—

Gir nobis sinuam amnis  
Æthiopum, shalli mentis gurgite Nilum.

Ptolemy furnishes a somewhat more detailed account of the river, and assumes that there are two separate streams in the interior of Africa, both having many branches (*ἡμετέρας*), and connected with lakes; the river most easterly he terms the *Gir* (*Ἰγίς*), that to the W. being the *Nigr* (*Νίγρις*), communicating with the lake Libye, which may, perhaps, be identical with the lake Tchad, discovered by Denham and Clapperton. Ptolemy says nothing, however, respecting the course of the river, though he seems to have been of opinion that its waters were absorbed in lakes, or lost by evaporation. Edrisi, Abulfeda, and other Arabian geographers, con-

ceived that the Niger (by them called *Nil-el-Abid*, “*N. gris Nileo*”) flowed westward, discharging its waters either into the Atlantic or some lake of the interior; and they represented it as rising from the same source as the Nile, and identified with it in the upper part of its course; this, indeed, is the opinion still maintained by the natives; and it is far from improbable that some of the affluents of the W. Nile may be connected, during the period of the inundation, with some of the affluents of the Niger. Such, in a few words, seem to be the leading statements of the more celebrated of the old geographers respecting the Niger. It is doubtful, perhaps, whether the Greek and Roman writers really possessed any authentic information as to the rivers and lakes S. of the Great Desert; and, at all events, the statements now referred to, if they really apply to that part of the continent, are at once extremely limited and extremely vague. That the caravans, which appear from a very remote period to have maintained an intercourse between the countries to the N. and those to the S. of the Great Desert, should have fallen in with and had some knowledge of the Joliba, is far from improbable; and, perhaps, had any remains of the literature of Carthage come down to our times, they might have thrown considerable light on the question as to its identity with the Niger: but, with our existing means of information, it would appear, notwithstanding the learning and ingenuity that have been brought to its investigation, to be all but insoluble. The notions of the ancients are too obscure to admit of any certain inferences being deduced from them; and supposing (against the opinion of the learned Baron Valcknaer, *Recherches sur l'Afrique*, 408.) that the Niger is to be looked for to the S. of the Great Desert, the Bahr-el-Abiad, or western arm of the Nile, the Yeo, and other considerable rivers falling into the lake Tchad, correspond quite as well with their statements as the Joliba.

NIJALK, a town of Spain, in Andalusia, prov. Granada, 15 m. E.N.E. Almeria, and 78 m. E.S.E. Granada. Pop., according to Miñano, 5,792. It has 2 par. churches; its chief branch of industry is the manufacture of horse-cloths.

NIJIR-EGYHAZA, a large market town of Hungary, co. Szabolcs, 28 m. N. Debreczin. Pop. 15,640, principally Protestants. It has a saltpetre refinery; but by far the greater part of its inhabs. are agriculturists.

NIJNII-NOVGOROD, vulgarly *Nijegorod*, that is, Lower Novgorod, a government in the central part of European Russia, on both sides the Wolga, between lat.  $54^{\circ} 26'$  and  $57^{\circ} 6' N.$ , long.  $41^{\circ} 40'$  and  $46^{\circ} 38' E.$ , having N. the government of Kostroma, E. Kasan and Simbirsk, S. Penza and Tamboff, and W. Vladimir; area, 18,740 sq. m. Pop. (1838), 1,071,000. Surface flat or gently undulating; the soil, which consists principally of sand and black friable mould, is exceedingly fertile; and being (for Russia) well cultivated, this is one of the most productive provinces of the empire. Exclusive of the Wolga, several of its affluents, including the Oka, Bortonga, Piana, &c., traverse different parts of the government, which is well watered, at the same time that it is not marshy. There are some very large forests, those of the crown amounting to about 1,200,000 deciatines. The produce of the corn crops considerably exceeds the consumption. Hemp and flax are very extensively cultivated. Great numbers of cattle and horses are bred; and government is taking the most effectual measures to improve the latter. This is a considerable manufacturing, as well as a rich agricultural district. Coarse linen, canvass, and cordage, are the principal manufactured products; there are, also, some iron-works, with numerous distilleries and tanneries, soap-works, glass-works, &c. Commerce extensive and growing. The exports consist of corn and flour, cattle, horses, leather and tallow; the manufactured articles specified above, with iron, timber, potash, mats, glass, &c.

NIJNII-NOVGOROD, NIJEGOROD, or NIJN, the cap. of the above government, in the angle formed by the confluence of the Oka with the Wolga; lat.  $56^{\circ} 19' 40'' N.$ , long.  $44^{\circ} 28' 30'' E.$  Stationary pop., 25,000. It stands partly on a steep hill, about 400 ft. in height, the summit of which is occupied by the Kremlin or citadel, and partly on the low ground along the sides of the rivers. The citadel, from the ramparts of which there is a noble view of the Wolga, Oka, and surrounding country, contains the government offices, two cathedrals, built after the model of that of Moscow; an obelisk 75 ft. in height, erected in honour of the deliverance of their country, the patriotic citizen, Muhi, and Prince Pojarski; and other public buildings. The upper part of the town has several good streets, and being ornamented by numerous churches, placed in conspicuous situations, has an imposing appearance. The lower town consists principally of a very long street, bordering the Wolga. With the exception of the principal public buildings, and a few private houses, the rest of the city is constructed of wood. Among the establishments are 3 convents, a bazaar, a gymnasium, and 4 primary schools, an ecclesiastical seminary, and a large military school. The town is

ancient, having been founded in 1222. The Kremlin was surrounded by strong walls and towers in 1508.

A bridge of pontoons leads across the Oka to the splendid new bazaars erected on the left bank of that river for the exhibition and sale of merchandise brought to the fair. These, which are divided into parallel rows or streets, are constructed of stone, roofed with iron, having covered galleries in front, supported by 8,000 iron pillars. They are built on piles, and to guard against the danger of inundation, the ground on which they stand was raised about 20 ft. Being enclosed on 3 sides by canals, and on the 4th by a navigable inlet of the Oka, there is every facility for the delivery and shipment of merchandise. The establishment is of very great extent, comprising above 2,500 booths; and is admitted on all hands to be at once the largest and most perfect of its kind that is any where to be met with. Including the church, dedicated to St. Macarius, the patron of the fair, it is said to have cost in all about 11,000,000 roubles.

Nijni Novgorod has various manufactures, but it owes its great importance almost entirely to its commerce. It is the grand entrepot for the trade of the interior of the empire, and has, in fact, a greater command of inter-navigation than any other city of the old world. Besides the corn, cattle, and other products of the surrounding country, the Kama, the principal affluent of the Volga, conveys to Nijni the salt of Perm; the gold, silver, copper, and other metallic treasures of the Oural mountains; the furs, &c., of Siberia; and even the teas of China. The silks, shawls, and other merchandise of central Asia, and the fish, caviar, &c., of Southern Russia, come up the river from Astrakhan; while the manufactured goods of England and Western Europe, the wines of France, the cotton of America, and the sugar of Brazil, are conveyed to her from Petersburg and Archangel, with both of which, as well as Moscow, she is connected by navigable rivers and canals. These advantages, joined to her situation in a fertile country in the centre of the monarchy, were so highly appreciated by Peter the Great, that it is said he at one time intended to have made Nijni the capital of his empire; and it is, perhaps, to be regretted that he did not carry this project into effect.

Latterly the commercial importance of Nijni has been vastly increased. Previously to 1817, the great fair, now held here, was held, in a less convenient situation, at Makarieff, lower down the Volga. But the buildings for the accommodation of the merchants at Makarieff having been accidentally burnt down in 1816, government took advantage of the circumstance to remove the fair to Nijni. It begins on the 1st of July, and continues for a month or six weeks, and is well known, not only over all Russia, but over most other countries of Europe and Asia. It is carried on within the bazaars already noticed, which were constructed by government for the accommodation of the traders, to whom they are let at moderate rents. The produce disposed of is classified as follows, viz. 1st, Russian produce, raw and manufactured; 2d, Merchandise from the rest of Europe, consisting principally of manufactured and colonial products; and, 3d, Products of China, Bokhara, the Kirghises, and other Asiatic nations. The estimated value of the produce belonging to each of these classes, exposed to sale in 1827, 1832, and 1839, has been as under:—

	First Class.	Second Class.	Third Class.	Totals.
	<i>Roubles.</i>	<i>Roubles.</i>		
1827	67,000,000	16,000,000		
1832	89,900,000	17,000,000		
1839	122,557,000	15,055,000	23,000,000	

In 1830, Russia sent to the fair silk goods valued at 8,500,000 roubles; hides, tanned and raw, 3,000,000 r.; dry and salted fish, 1,600,000 r.; cotton stuffs and yarn, 19,000,000 r.; woollen stuffs, 500,000 r.; furs and peltries, 8,000,000 r.; and 2,000,000 goods from. During the same year there were sent to the fair by foreigners, woolsens of the value of 2,200,000 r.; 32,358 boxes of tea; 306,570 lbs. of silk, &c. Every sort of article is to be found in one or other of the different bazaars. In 1839, the cottons exposed to sale were valued at 28,544,000 r.; and the metals and metallic goods at 22,300,000 r. The concourse of strangers during the fair is quite immense; so much so, that the population is then increased, according to the lowest estimates, by from 150,000 to 200,000 individuals. Here are seen dealers from India, China, Tartary, Bokhara, Persia, Circassia, Armenia, and Turkey; and from Italy, Poland, Germany, France, England, and even America. Amusement as well as business is attended to: theatrical representations, shows of wild beasts, and other Bartholomew-fair diversions, being got up for the entertainment of the multitude. (Schneider, *La Russie*, &c., 114—120; Lyall, li. 329—355; Pussart, &c., *Das Europäische Russland*, 582, &c.)

NIKOLSBURG, a town of Moravia, circ. Brünn, from which city it is 28 m. S. Pop. about 8,500, a third part of whom are Jews. It has a fine castle and grounds

belonging to Prince Dietrichstein, a philosophical academy, a gymnasium, and several other superior schools; and in the castle is an extensive library, comprising many valuable MSS. The town is dirty and wretched; it has however, manufactures of woollen cloth and other stuffs, and some trade in wine and marble, both produced in its vicinity. (*Western Nat. Enquirer*; *Borghaus*.)

NILE (Lat. *Nilus*, Gr. *Niλος*, from *νίος* *νίος*, "new mud," because it brings down vast quantities of slime or mud\*), a large and famous river of N.E. Africa, flowing N. through Abyssinia, Nubia, and Egypt, to the Mediterranean Sea, celebrated alike for its magnitude, the inexhaustible fertility which it confers on the "land of Egypt," the uncertainty of its origin, its connection with some of the most interesting events in the remotest periods of authentic history, the great cities that were early built on its banks, and the stupendous monuments that still attest the wealth and power of their founders. The discovery of its real source was an object of intense curiosity to the ancients, as it still remains to the travellers and geographers of modern days; the words of "Illi-  
bus,"

Nile pater, quantum te possum dicere causam  
Aut quibus in terris occubuisse caput,

being nearly as applicable now as in his time.

The Nile is formed by the junction, at 15° 34' N. lat. and 32° 30' 58" E. long., of two great arms, the *Bahr-el-Azrek*, (the *Asiapus* of the ancients), or Blue river, from the S.E., and the *Bahr-el-Abiad*, or White river, from the S.W. The sources of the former, which derives its name from the dark colour of its water, were discovered and described by Pacy in 1618, and were subsequently visited by Bruce, who ridiculously pretended to have, for the first time, ascertained the true sources of the Nile, and thus solved a problem that had for ages occupied the attention of the learned world! This E. branch rises from two fountains near Geesh in Gojam, in Abyssinia, at an elevation of about 10,000 ft. above the level of the sea, in lat. 10° 59' 25" N., long. 36° 53' 30" E. It thence flows N. to the lake of Dembea, or Tzana, a large sheet of water which receives many other streams; but the Nile is said to preserve its waters with little intermixture with those of the lake, across which its current is always visible. Escaping from this lake it sweeps, in a southerly direction, round the E. frontier of the provinces of Gojam and Damot, till, between the 9th and 10th deg. N. lat., it takes a N.W. direction, which it preserves till, at Khartoum, it unites with the other great arm, the *Bahr-el-Abiad*, flowing from the S.W. The *Bahr-el-Azrek* receives in its course several important tributaries, and is in several parts interrupted by cataracts, one series of which has a fall of 280 ft. At the point of junction with the other great arm, it is about 4 m. in breadth, and has a rapid current; but, during half the year, its waters are low.

The W. arm, *Bahr-el-Abiad*, or White River, derives its name from the fine whitish clay usually suspended in, and colouring its waters. It is broader and deeper than the E. arm, brings down a larger volume of water, and appears to have been regarded in antiquity as the true Nile. (Herod. li. caps. 30, 31; *Mémoire de D'Anville*; *Mémoires de l'Académie des Inscriptions*, &c. xxi. 46.) If, however, the derivation of the name previously given be correct, the *Bahr-el-Azrek* would seem to have the best right to be considered the genuine Nile, inasmuch as it carries down the greater portion of that mud whence its name has been derived, and the deposits of which have, in the lapse of ages, formed the land of Egypt. But without insisting further on this point, though the sources of the *Bahr-el-Abiad* have not hitherto been explored,

Nec licuit populus parvum te, Nile, videre,

its course was traced, in 1827, by Linant, for about 160 m. from its confluence with the *Bahr-el-Azrek*. (*Geog. Journal*, li. 171—187.) And a party sent by the pacha of Egypt on a slaving expedition have since traced it to a much greater distance, or to a point supposed by Col. Leake to be in about the 10th deg. of N. lat. and 2½th deg. of E. long.; and at this point no mountains were in sight, the river being, also, of great breadth, full of islands, and shallow. Perhaps, however, we shall not be far wrong in fixing its sources on the N. slope of the Gebel-el-Kunari, or Mountains of the Moon, in about the 6th deg. of N. lat., and between the 22d and 30th deg. of E. long. But whether its conduits form themselves into lakes, as was conjectured by Ptolemy, or fall successively into the main stream, are questions as to which no information can be given. The course of the *Bahr-el-Abiad*, so far as it has been explored, to its junction with the *Bahr-el-Azrek*, is pretty uniformly N.E.; it receives many tributaries, and forms numerous islands. "At the point of confluence, the *Bahr-el-Abiad* is only about 1,800 ft. across; but

\* This is the derivation given by Servius in his notes to Georg. li. iv. v. 291.; but many other derivations have been proposed, and perhaps the Nile may, like the Hebrew Nahal, merely mean the river, or river par excellence. (See *Dictionnaire de Trévoux*, art. Nil.)

a little above it enlarges much, its banks being frequently 3 and 4 m. apart, and in some places during the inundations the waters extend 21 m. from side to side. In its ordinary state, and in mid channel, it has here from 3 to 4 fathoms water." (*Geog. Journal*, ii. 187.)

After the junction of its two great arms, the united river, or Nile, takes a generally N. direction, but with almost innumerable windings. Not far below the point of confluence is a low range of mountains, through which the river rushes in a narrow gorge, forming what is called the sixth cataract; and thence deflecting eastward, through extensive and verdant plains, it passes the cap. of Shendy and the ruins of the ancient Meröë. It receives, close to the town of Addameir (lat.  $17^{\circ} 45' N.$ ), the waters of its important tributary the Tacazzé (the *Atabaras* of the ancients), which has its sources in the high lands of Lasta, in Abyssinia, in lat.  $11^{\circ} 40' N.$  long.  $39^{\circ} 40' E.$ , about  $2\frac{1}{2}$  deg. E. of lake Dembea, pursuing hence a pretty uniform course N. N. W. to its junction with the Nile. From this point to its embouchure, a distance of about 1,350 m., the Nile receives no affluent whatever, either on its E. or the W. bank, a solitary instance, as Humboldt has remarked, in the hydrographic history of the globe. (*Per. Narr.*, v. 74.)

At Abu Hamed, in about  $19^{\circ} 40' N.$  lat., and  $33$  deg. E. long., the river, which had previously been following a northerly course, turns suddenly to the W., and thence pursues a south-westerly course to Edab, in the prov. of Dongola, in the 18th deg. of lat., where it again curves round to the N. This deflexion is called the Great Bend of the Nile. In its course through Dongola, the valley on each side is very circumscribed. The river enters Lower Nubia in about  $19^{\circ} 40' N.$ , where it is precipitated over a ledge of granite rocks, forming what is commonly called the 3d cataract. Under the 22d parallel occurs the 2d cataract, of Wady-Halfa. The first, or lowest cataract, is that of Assouan (an. *Syene*), near the island of Elephantine, where the river has cut its way through a ridge of granite rocks. (See Vol. I. 74.)

It must be observed, however, that the term "cataract," as applied to the broken course of the Nile, bears no analogy to the great cataracts of Niagara, the Fesse-Yache, &c.; for most of them scarcely exceed a few ft. in height, and are in fact rather rapids than cataracts. In a portion of Lower Nubia the river-valley is very much contracted; the rocks on both sides approach the shore so closely as to allow little space for the deposit of alluvium; and in other places on the Libyan side, the sand covers the whole level space between the hill and the bank. At Kalabsheli, the an. *Talmis* (which has a temple bearing a close resemblance to the temples of Tentyra, Edfou, and Philæ), the river rises from 30 ft. to 40 ft. during the floods; and after their subsidence in Feb., the stream flows at a rate of 2 or 3 nautical miles an hour. (*Geog. Journ.*, vol. ix. part 3.) The Nile, after entering the boundaries of Egypt at Philæ, 6 m. from Assouan, runs in a quiet and very tortuous stream, though generally northward, through the whole length of the country, enriching it by its waters, and its deposits, which, indeed, not only give to Egypt its fertility, but make it habitable. But, with the exception of the district of Fayoum (Vol. I. 831.), the valley of the Nile in Upper and Central Egypt is very contracted dimensions, the mountains, and the burning sands of the desert encroaching so closely upon it, that it seldom exceeds 10 m. in width, and is frequently not half so much. But how limited soever, this narrow stripe is of extraordinary beauty and fertility, and contains the magnificent remains of some of the noblest and most populous cities of the ancient world. But we beg to refer the reader to the article *Egypt* for farther particulars as to the past and present state of the bed of the river, its inundations, and its Delta. In antiquity, the Nile seems to have poured its waters into the sea by 7 mouths; but it has now only 2 mouths, those of Rosetta and Damietta.

The former, or most westerly, has a breadth of 1,800 ft., with a depth of about 5 ft. in the dry season. The Damietta mouth is only 900 ft. wide; but its depth averages between 7 ft. and 8 ft. when the river is lowest. The greatest breadth of the Delta is about 85 m. from E. to W.; the distance of its apex from the sea being rather more than 90 m. Great changes have, however, taken place in it during the lapse of ages; the soil has not only been elevated many feet by alluvial deposits, but its shape and the position of its apex have greatly altered even within the period of modern history. The river begins to swell in its higher parts in April, and even earlier in the Bahrel-Abiad; but at Cairo no increase occurs till the beginning of June, its greatest height at that city being in September, when the Delta is almost entirely under water. The waters subside in Nov., leaving a rich alluvium, which is the great source of the fertility of Lower Egypt. *Quotannis certis diebus, præcipue circa solstitium æstivum, aucto magno per totam spatiosam Ægyptum, terram pluvitis omnibus destitutam aquis suis irrigat, limo tegit, et fecundissimam efficit. Unde unica spes Ægypti in Nilo posita est, quia fertilis*

*aut sterilis annus est, prout ille magnus aut parvus fluit.* (Cicero, *De Nat. Deor.* l. cap. 52.) We need not, under such circumstances, feel surprised that the ancient Egyptians regarded the Nile as a god to whom they paid divine honours. The greatest breadth of the river may be estimated at 2,000 ft., or about twice the width of the Thames at London Bridge. Its average current does not exceed 3 m. an hour; the water is always muddy; and even in April and May, when it is clearest, it has a cloudy hue. When it overflows, the colour is of a dirty red, consisting chiefly, we believe, of the red-clay deposit of the Bahrel-El-Azrek; for, as already stated, the Bahrel-Abiad brings down only a fine whitish clay. The Nile abounds with a great variety of fish, such as the *Labrus Niloticus*, or white trout, the *Muraena anguilla*, and a large species of salmon. The *Oxyrinchus* of this river, so famed in the antiquities of Egypt is, according to D'Anville, the fish now called *Kesheer*. None of the fish, however, except eels, have any very close resemblance to those of Europe. Among the waterfowl of the Nile, the most characteristic is the Turkey-goose, or *Anas Nilotica*, the flesh of which is both palatable and subservient. From Assouan down to Cairo, about 360 m., the banks, except in the rocky parts, present no native plant, but abound with all sorts of excellent vegetables, raised by the industry of the inhabitants, on this peculiarly fertile soil. Cultivation, however, is more common on the E. than on the W. bank of the river. Hippopotami are found in Nubia, but not in Egypt; the crocodiles, also, are greatly reduced in number, and are now confined to the district above Assut.

NIMEGUEN, or NYMEGEN (probably the an. *Noviomagus*), a town of Holland, prov. Guelderland, cap. arrond., on the Waal, here crossed by a flying bridge,  $9\frac{1}{2}$  m. S. by W. Arnheim, and 53 m. S.E. Amsterdam. Pop. about 14,000. It stands on several small but steep hills, and is pretty strongly fortified. Though not ill built, it has an irregular appearance, the streets being narrow; and, on account of the abrupt elevation from the river, the windows of one range of houses overlook the chimneys of another. Among the public buildings worth notice, are an old edifice, said to have been raised by the Romans, and now forming part of the fortifications; the old castle of Valkenot, believed to have been built by Charlemagne; and the town-house, an edifice of considerable beauty. Several of the churches are likewise entitled to attention; and a high tower, called the Belvidere, is much resorted to by visitors, on account of the extensive view which it commands of the course of the river and the surrounding country. Nimeguen is the seat of tribunals of primary jurisdiction and commerce, and the residence of a military commandant and a receiver of taxes. It has a branch of the Society of Public Good, a commission of agriculture, and a Latin school. It produces Prussian blue, glue, &c., and has some tanneries; but the only article for which it is celebrated is its pale beer, sent to almost every part of the Netherlands. Nimeguen is known in history from the treaty concluded here, in 1678, by Spain, France, and Holland. It was taken by the French on the 8th Sept., 1794, after a severe action, in which the allies were defeated. Various Roman antiquities have been discovered in and about the town. (*De Cloet*; *Dict. Geog.*; *Barrow's Tour in Holland*.)

NIMES, or NISMES (an. *Nemausus*), a city of the S. of France, dép. Gard, of which it is the cap., in an extensive and fertile plain, near the Vistre, 23 m. W.S.W. Avignon, and 30 m. N.E. Montpellier: lat.  $43^{\circ} 50' 8'' N.$ , long.  $4^{\circ} 21' 40'' E.$  Pop., in 1836, ex. com., 41,194. The distant view of Nimes is not imposing. Notwithstanding its numerous fine edifices, it has only the *Tourmagne* to render it conspicuous at a distance. The city proper, which is surrounded by boulevards, on the site of the ancient fortifications, is confused and irregular with narrow streets and ill-built houses. But the boulevards and suburbs, which comprise three fourths of the houses, are regularly laid out, clean, and have numerous handsome modern buildings and fine public promenades.

Nimes is principally interesting on account of its remains of antiquity, of which it probably possesses more than any other city of Europe, Rome excepted. The most classical, though not the most extensive, of these is the oblong temple, absurdly called the *Maison-carrière*, nearly in the centre of the city. This edifice was supposed, from an inscription discovered on its frieze, to have been built in honour of Caius and Lucius Cæsar, grandsons of Augustus; but, from subsequent discoveries, it would appear to have been erected to the adopted sons of Antoninus Pius. At any rate, it dates from the finest period of Roman art, and is one of its most perfect remains. It is raised on a platform ascended by 15 steps, and has 30 Corinthian columns, 6 in the front and at the back, and 9 on each side, exclusive of those at the angles. The portico, which is of ample dimensions, is supported by six detached columns in front, and two on either side:

the other columns on the sides and back of the building are sunk half way into the walls. The capitals of the columns, and the frieze, cornice, and other parts of the building, are profusely adorned, in the most exquisite taste. The measurements of this edifice are as follow:—length, 82½ ft.; breadth and height, 40½ ft. each; height of the platform on which it stands, 18½ ft.; height of the stylobate, 19 ft.; height of the doorway, 23½ ft.; breadth of do., 10½ ft. The columns, which are about 30 ft. in height, have a height equal to 10½ diameters. (*Frossard, Tableau Pittoresque de Nîmes*, ii. 171.)

The *maison-carrée* was considerably injured in the middle ages; but it is protected from future spoliation by being inclosed within an iron palisade, and since 1823 it has been employed as a museum of paintings and antiques. But it would have been more consistent with good taste to have preserved it untouched and unoccupied, in its ancient simplicity.

The amphitheatre of Nîmes is admitted to be the most perfect structure of its kind extant, after that of Verona. It stands on one of the boulevards, surrounded by a large open space, on which no buildings are allowed to be erected. It is said to have been founded by Antoninus Pius. Its longest external diameter is 437 ft.; its shortest 332½ ft.; it has 32, or, according to some authorities, 35, ranges of seats, and is variously estimated as having sufficient accommodation for from 17,000 to 23,000 spectators; the height of the building outside is from 68 to 104 ft., and its total external circ. is 1,174½ ft. (*Frossard*, i. 135.) Though it was occupied by the Visigoths, and afterwards the Saracens, as a fortress for their defence against the Franks, the outer wall is still nearly entire. It consists of two stories, each having 60 arches, and an attic story, and is entered by four gates, one at each of the cardinal points, the principal being on the N. side. The arcades of the ground story are separated by pilasters, those of the upper by columns, in an irregular Tuscan or Doric style. The interior is in many parts dilapidated and overgrown with vegetation; but it still serves for bull-baits, jousts, and dramatic entertainments, to which the modern inhabs. of Nîmes are as much addicted as their ancestors were to the more barbarous exhibitions of gladiators.

A few portions of the ancient walls still remain, principally in the *Portes d'Auguste* and *De France*: the first, which, in the time of the Romans, was the principal gate of the city, consists of 2 large and 2 smaller arches; the former, which are in the middle, have between them a small Ionic column, respecting which there has been much controversy, all the other decorations of this gate being of the Corinthian order. The *Porte d'Auguste* is elaborately ornamented with sculptures, which constitute one of the principal points in which it differs from the *Porte de France*. In the N.W. part of Nîmes is a ruined *nymphæum*, or Roman bath, of considerable size, improperly termed the Temple of Diana. Near (but) on a height overlooking the city, is the *Tour magne* (*turre magna*), a tower supposed to have been built by the Greek colonists of the city before the Roman invasion; but the original purpose of which has not been correctly ascertained. It is in the Doric style; its lower part being heptagonal, its upper, octagonal. It is in great part ruined; but being still 100 ft. in height, and in a conspicuous position, it is used to support a telegraph. The above are the principal objects of architectural interest in the city. The Vandals, and other barbarians, are said to have destroyed the basilica of Plotinus, the temples of Apollo, Ceres, Augustus, &c.; but the still existing memorials of antiquity are more than sufficient to evince the almost unequalled magnificence of the ancient city.

Nîmes does not, however, owe its sole interest to its antiquities. It has several large, and some good modern, edifices. The cathedral, begun in the 11th, but principally constructed in the 16th and 17th centuries, has little to recommend it, except its occupying the site of the Temple of Augustus, but the *Palais de Justice* on the Esplanade, the *Hôtel-Dieu*, principally rebuilt in 1830, the general hospital, the new theatre, several of the churches, and the public library, are handsome, well-contrived buildings. A large fortress to the N. of the city was constructed by Vauban, on the site previously occupied by the basins that received the water brought thither by the aqueduct, of which the *Pont du Gard* forms a part. It is now the central prison for the S. depts. of France, and has usually about 1,250 inmates. The bishop's palace, episcopal seminary, college, and large barracks, are the other principal public buildings. The esplanade contiguous to the amphitheatre, and the *Cours Neuf*, are among the finest

vewed a supply of water from the neighbourhood of Uzès to Nîmes. We have no certain details as to the founders of this great work, the era of its construction, or the purpose for which the water brought thither was employed. Some antiquaries have ascribed its erection to Agrippa, son-in-law of Augustus, about *anno* 19 n. c., while others have ascribed it to Adrian, or his successor Antoninus, who derived his origin, by the father's side, from Nemanus. But, by whomsoever constructed, it was worthy the most brilliant era of Roman power. The Pont du Gard consists of that part of the aqueduct which was thrown across the Gardon, in a wild defile, 11 m. N.E. Nîmes. It consists of 3 rows of arches, or, as it were, 3 different bridges, raised the one above the other, the whole being constructed of large stones, without cement. The first, or lower tier or bridge, has a length of 529 English ft., and a height of 63½ ft.; and consists of 6 arches of unequal size, the breadth of the largest, through which the Gardon usually flows, being 82½ ft. The second, or middle tier, is 816 ft. in length, and 62½ ft. in height; it consists of 11 arches, generally smaller than those of the first tier, but like them of unequal size. The third or upper tier, 870 ft. in length, and 21½ ft. in height, has 35 arches, which of course are much smaller than those of the other tiers, being respectively only 13½ ft. in width. The entire height of the structure is 188 ft.; its width or thickness, which is 19½ ft. at its base, diminishes as it ascends; on its summit is the watercourse, 4½ ft. in depth and 4 ft. in breadth, and through it a person may now pass with ease from one end of the structure to the other. About the middle of the last century, a carriage road was built up again to the bridge as high as the base of the second tier of arches. The *Pont du Gard* in the Tuscan style; it is very little ornamented, but is a highly picturesque object. With singular good fortune, it escaped dilapidation during the dark ages; and the greatest injury it experienced was in 1609, from the Duke de Rohan, who broke away a portion of the second tier of arches to facilitate the passage of his artillery; but the breach was afterwards repaired at the expense of the States of Languedoc.

Nîmes is a bishop's see, the seat of a royal court for the lévys. Gard, Lozère, and Vaucluse, courts of primary jurisdiction and commerce, a chamber of commerce, *conseil de prud'hommes*, a university academy, the royal academy of Gard, a royal college, &c. It has schools of drawing and chemistry, as applied to the arts, societies of agriculture, medicine, &c., a Bible society, a commission of antiquities, an atheneum, an extensive public library, and a cabinet of natural history.

Nîmes is further distinguished by its manufacturing industry. It is one of the principal seats of the silk manufacture of France; ranking, in this respect, immediately after Lyons and (perhaps) St. Etienne. Its manufactures are principally silk hosiery and shawls; and silk stuffs mixed with cotton, linen, and wool. There are, altogether, between 7,000 and 8,000 looms at work in Nîmes, many of which are Jacquard looms. All the weavers work with their families at their own homes, there being no large factories except for dyeing or for printing silk stuffs; which latter branch of industry has greatly augmented since 1835, when it employed from 600 to 700 hands, exclusive of children. But, though the silk manufactures of Nîmes be extensive, the goods produced are not much esteemed by the upper and middle classes, being mostly mere imitations of those of Lyons, and of inferior quality. From this and other causes the export trade of Nîmes is small; its industry is not progressive, and its pop. often experience distressing *crises*. The weavers employ about 11 hours a day at the loom; the wages of a man being estimated by Villermé at an average of 30 sous, those of a woman at 12 sous, and of children from 5 to 12 sous. These low wages being barely sufficient to provide current necessities, the weavers are almost all wretchedly clothed, dirty, and ill provided with fuel in winter. According to Villermé, they are intelligent and laborious, and not addicted to drunkenness or other kinds of idleness; but they have neither economy nor foresight, with the exception of the silk stocking weavers, who being employed on articles less subject to the rapacity of fashion, are less affected by *crises* than the rest. These form, in fact, a separate class, distinguished for economy and prosperity, notwithstanding that their wages are smaller than that of most other artisans. The besetting fault of the working pop. of Nîmes is a want of perseverance. Few are able to write and read; and many spend a considerable part of the week in idling. Besides silks, Nîmes has manufactures of cotton goods, gloves, leather,

This violence broke out, soon after the downfall of Napoleon, into the most atrocious acts on the part of the Catholics, which might easily have been suppressed by a vigorous government, but which were, in fact, rather encouraged by the imbecile bigots then at the head of affairs in France.

Nemausus is supposed to have been founded by a colony of Phœnicians: it was subjugated by the Romans, *anno* 121 B. C. In the middle ages it belonged successively to its own viscounts, the counts of Thoulouse, and the kings of Aragon, by one of whom it was ceded to Louis IX., in 1258. Nîmes has given birth to many distinguished persons, among whom may be specified Count de Gebelin, author of the *Monde Primitif*, and M. Guizot, now (1841) minister for foreign affairs, and author of the able and original works on the progress of civilisation in France and Europe, &c. (*Histoire de la Civilisation en France, and Histoire Générale de la Civilisation en Europe, &c.*) This illustrious individual, to whose enlightened and rational patriotism, integrity, and good sense, France and Europe are under the greatest obligations, first saw the light on the 4th of October, 1787: he is a Protestant; and the simplicity of his character, and perfect freedom from all sorts of pretension, give additional lustre to his talents and eloquence. (*Biog. art. Gard; Tableau de Nîmes; Villermé, Tableau des Ouvriers, &c.* l. 406-417; *Bourring's Report; Inglis, &c.*)

NINEVEH, a great and famous city of the ancient world, the cap. of the Assyrian empire, is supposed to have stood on the E. bank of the Tigris, opposite to the modern city of Mosul (which see). There is every reason to think that its site was identical with that of the village of Nunia, and the "tomb of Jonah," about 3 m. from the river, which stand upon and are surrounded by vast heaps of ruins; lat. 36° 29' 17" N., long. 43° 19' 17" E. Herodotus (l. 1. 185.) and other profane writers ascribe its foundation to Nimus, son of Belus, and first monarch of the Assyrian empire; but, according to the Bible (Gen. x. 11.), "Asshur (the grandson of Cush) went forth out of the land of Shinar, and builded Nineveh." Its history is lost in the obscurity of succeeding ages; but it was, no doubt, a very large and important city long before the Christian era, for at that period Jonah described it as "an exceeding great city of three days' journey." (iii. 3.) Strabo says (l. xvi.) that it was larger even than Babylon: the circuit of which he estimated at 385 stadia; and, according to Diodorus Siculus (l. ii.), it was of an oblong shape, 150 stadia in length, and 90 in breadth; that is, above 34 m. in circuit. Very little dependence can, however, be placed on these statements; and it is, at the same time, admitted that the walls included a large extent of well cultivated gardens, and pasture grounds. The description of its walls, given by Diodorus, is too obviously exaggerated to require any notice. The prophet Jonah says that Nineveh "had more than six score thousand persons that could not distinguish between their right hand and their left." (Jonah, iv. 11.) This expression, the import of which is by no means clear, has been generally understood to refer to the children; and, taking it in this sense, and including under the term "children" the younger persons under nine years of age, they might be taken at about one fourth part of the pop., which, consequently, would be 480,000. But if we suppose, as some critics have done, that the children referred to by the prophet could not well exceed five years of age, they might be taken at between one sixth and one seventh part of the pop., which would, consequently, amount to from 720,000 to 840,000. It is plain, however, that these statements are far too vague to be entitled to any considerable weight.\*

Nineveh was the residence of the Assyrian kings, and a city of such commercial importance, that Nabonapodonosis her: "Thou hast multiplied thy merchants above the stars of heaven." (iii. 16.) She was besieged and taken by Arbaces the Mede in the 8th century B. C., but appears to have been regarded as the cap. of the Assyrian empire down to *anno* 612 B. C., nearly 3 centuries after Jonah's prophecy of her destruction, when she fell, after a protracted siege, into the hands of Alaxsarus, of Cyaxares, king of Media, who took "spoils of silver and gold, and none end of the store and glory out of all the pleasant furniture," making her "empty and void, and waste." (Nahum, ii. 9, 10.) The spoil was taken to Ecbatana, the citizens were dispersed in villages, and the Assyrian empire, which for four centuries had been the glory of the Eastern world, gave way to that of the Medes and Persians. It seems certain, however, either that the city had not been wholly destroyed, or, which is most probable, that a new and inferior city had, at a subsequent period, grown out of the ruins of the more ancient city; and the latter, no doubt, is that referred to by

Tacitus, *Annal.* xii. 13., and Ammianus Marcellinus, xxlii. 20. Kinnier supposes that the present remains, comprising an oblong rampart and foss, about 4 m. in circuit, with a moss-covered wall about 20 ft. in height, are those of the more recent city. The ruins at first sight present a range of hills, from which large stones are constantly dug out; and the bridge over the Tigris seems to have been entirely built of stones from the ruins, which have, no doubt, furnished as large a supply for modern buildings as the quarries near Mosul. The tomb of Jonah occupies one of the hills above mentioned, and is covered by a mosque, held in high veneration all over the East. Bricks, entire as well as in fragments, and pieces of gypsum, with inscriptions in the wedge-formed character, are found here, closely resembling those of Babylon. (*Kinnier's Persia*, pp. 256-259; *Olivier, Voy. en Turquie*, iv. 265-278; *Ainsworth's Assyria*, p. 256-258.; *Cabinet, Dict. de la Bible*, ad voc. *Nineveh*.)

NING-PO, a city of China of the first rank, prov. Che-Ksang, at the confluence of the rivers Kin and Yaou, near their mouth in the harbour of Chusan, 46 m. E. by S. Hang-tcheou, and about 180 m. S. E. Nankin; lat. 29° 35' N., long. 121° 17' E. Pop. estimated at from 200,000 to 400,000. It is surrounded by walls and bastions, now in ruins, and is entered by 5 gates; the streets are broad and long, and the shops surpass those of Canton in elegance and splendour. It is intersected by numerous canals; a floating bridge crosses the inlet; and there are several pagodas, government warehouses, and other public buildings. The suburbs are flat, presenting rich fields and rice-gardens; but at the back, skirting the sea-shore, are dark-looking barren hills. Ning-po may be considered the third or fourth emporium of the Chinese empire; and its trade to the N. and S. districts of China, as well as to Siam, is of the highest importance. In the neighbourhood are very extensive salt works, and salt is exported in considerable quantities. The town is accessible by vessels of 300 tons; but large ships unload at Chinhae, a fortified town at the entrance of the inlet. The English have formerly traded to Ning-po, and the ruins of the British factory are still visible on the hill near the harbour of Chusan. They were compelled, however, by the Chinese, in the 17th century, to confine themselves to Macao, at the same time that similar restrictions were imposed on the Portuguese. (*China Opened*, l. 115.)

NIORT, a town of France, dép. Deux-Sèvres, of which it is the cap., on the Sèvre-Niortaise, 34 m. P. N. E. La Rochelle, and 43 m. W. S. W. Poitiers; lat. 46° 29' 8" N., long. 0° 19' 12" W. Pop. in 1836, ex. com., 18,015. It is pleasantly situated on the declivities of two hills, and is surrounded by planted promenades. It was formerly ill-built, but has been greatly improved since the Revolution, many new and good streets having been constructed on the site of the ancient fortifications. The castle of Niort, which has been long converted into a prison, was the birth-place of Mad. de Malutenon. The town has two good parish churches, one of which was built by the English, two hospitals, some good barracks, public baths and public halls, a handsome arcade (*arcade royale*), a theatre, a public library with 20,000 vols., including some rare MSS.; and a botanic garden, having attached to it a large horticultural school. It is the seat of tribunals of primary jurisdiction and commerce, a Royal atheneum, a council *des prud'hommes*, a society of agriculture, and a communal college. It has manufactures of leather, gloves, shoes, woollen stuffs, wooden and horn articles, &c.; and is an entrepôt for the wines of the Gironde, and for timber, wool hides, and cattle. It is also celebrated for its confectionery (*confitures d'angelique*). (*Hugo, art. Deux-Sèvres*.)

NIPTON. See JAPAN.

NISHAPOOR, a town of Persia, in Khorassan, cap. district of its own name, 46 m. W. by S. Meshed, lat. 36° 55' N., long. 36° 8' E. Pop., according to Captain Conolly, 8,600. The town has a poor appearance, being confined within a mud wall and ditch, without either minarets or domes; the only building that appears above the wall being a shagreened mosque. The circuit of the present wall does not exceed 4,500 paces, and the greater part of the enclosed area is covered with ruins. The houses now inhabited, of which there are about 1,200, are meanly built, chiefly of mud. A tolerably large bazaar is well filled with goods for the consumption of the town, and provisions are alleged to be cheap and of good quality.

Nishapoor has few manufactures, and cannot boast of a single branch of foreign trade, except that of turquoises, from which, owing to the exactions of the government, and clumsy mode of working, it derives little benefit. The turquoise mines (from which exclusively are derived our supplies of this valuable gem), are about eight or nine in number, principally situated in a hill about 40 m. W. S. W. Nishapoor; of these, however, some have been abandoned, and others are so imperfectly wrought, as scarcely to pay the miners' expenses. The gems are usually found in a

\* The well-informed authors of the learned and valuable work, *L'Art de Perifier les Dattes*, have made a singular blunder in noticing this subject. They say that the children of 5 years of age and under do not exceed the 1-20th part of the pop. of a city; and that, consequently, the pop. of Nineveh must have amounted to about 2,400,000 (Tom. ii. 245, 8vo. ed.)

reddish brown rock, but occasionally also in a firm quartzose rock of a whitish grey colour, abounding with veins of specular iron. The produce of the mines would be very great under proper management; but nothing can be more unfortuitous than the process now adopted by the peasant-farmers, no skill or ingenuity being exerted, and no sort of contrivance used to lessen labour, or economise time and material. This defective management is mainly attributable to the wretched government, and the consequent insecurity of property from the oppressions of the local authorities. The mines are rented from the crown for about 2000 toman annually, and wrought almost exclusively by the inhab. of the surrounding villages. The produce is either sold to merchants resorting thither, or sent for sale to Meshed; but the miners practise every possible deception on purchasers; and the gems cannot, according to Mr. Fraser, be procured at a rate which would yield any considerable profit on a sale in Europe. Iron and rock-salt are also wrought within the district. Agriculture is little understood; the soil is tilled only once in 3 or 4 years, the ground being left fallow during the intervening time; one fifth of the produce is claimed as the property of the Shah.

Nishapur lays claim to high antiquity. It is said to have been destroyed by Alexander the Great, and rebuilt by Shapur: afterwards, during the Seljuk dynasty, it was one of the four royal cities of Khorassan; but in 1269 it was destroyed by the Tartars, who massacred most of its inhab. It was again pillaged by Jheugiz-khan; and more recently, in 1749, by Nadir Shah, from whose ravages it has never recovered. (J. B. Fraser's *Khorassan*, pp. 395-422; Conolly's *Travels to the N. of India*, i. 211-214; Kincaid's *Persia*, p. 185.)

NIVELLES (Flem. *Nymet*), a town of Belgium, prov. S. Brabant, cap. arrond., on the Thienne, 17 m. S. Brussels. Pop., in 1836, 7,814. It is said to have had, in the 16th century, a pop. of 30,000; and it is still half a league in circuit, exclusive of its suburbs. It is not well built; but it has a remarkable church, in which are two finely carved pulpits, and on the tower is a colossal statue, called Jean, which strikes the hours. It is the seat of a court of primary jurisdiction, and the residence of a receiver of taxes with manufactures of woollen stuffs, coarse lace, cotton, and lucca cloths, hats, paper, and oil; and sends two deputies to the states of the prov. It originated from a remarkable Benedictine convent, founded by St. Gertrude in 645, the abbesses of which enjoyed the title of princesses of Nivelles. (*Dict. Géog.*)

NOANAGUR (*Navanagara*, "The New City"), a town of Hindostan, prov. Gujrat, dom. of the Gulcower, and cap. of the most considerable subordinate chieftain in the Gujrat peninsula; on the Nagul, near its mouth, in the Gulph of Cutch, 63 m. N.W. Joouagar. It is 4 m. in circuit, and is defended by a stone wall, of no great strength, and a ditch. Many of its inhabs. are weavers, and manufacture large quantities of coarse and fine cloths, which are sent to Surat, and various other commercial towns. The water of the river is supposed to be peculiarly adapted to dyeing cloth, for which branch of industry the town is also celebrated.

NOCERA DEL PAGANI (an. *Nuceria Affaturna*), a town of the Neapolitan dom., prov. Principato Citra, on the Sarno, 8 m. N. W. Salerno. Pop. 7,000. The walls and citadel of the ancient city are on a hill above the present town, which consists of detached groups of houses, interspersed with trees and gardens. Nocera is the see of a bishop; it has some fine cavalry barracks, several public schools, and manufactures of linen and other fabrics. Nuceria was of great antiquity, and is said to have been founded by the Pelagian inhabs. of Italy. (*Cramer's Anc. Italy*, ii. 212.) It was sacked and burned by Hannibal in the 2d Punic War. It is supposed to have derived its surname of Pagani, from a colony of Saracens, settled in it by the Emperor Frederick II. (*Swinburne's Tour*, ii. 109; *Cramer*, p. 46; *Hampold*, ii. 539, &c.)

NOGENT-LE-ROTHOU, a town of France, dép. Eure-et-Loir, cap. arrond., on the Huise, 32 m. W. S.W. Chartres. Pop., in 1836, 5,813. It stands at the foot of a mount, on which is the château, formerly the residence of the virtuous minister of Henry IV., the famous Maximilian de Bethune, duc de Sully; to whose memory a monument has been erected in the town.

Nogent is well built, and has manufactures of woollen fabrics and cotton thread, with dyeing houses and tanneries.

NOIRMOUTIERS, an island off the W. coast of France, dép. Vendée, of which it forms a canton; in about lat. 47° N., long. 2° 13' 45" W.; separated from the main land by a channel about 1 m. in breadth, but which at ebb tide may be passed by horses and vehicles. Area of the island about 70 sq. m. Pop., in 1826, 7,027. It is in no part much above, and in many parts below high water mark; being protected against inundations on the W. by a range of natural sand-hills or *dunes*, and

## NORD (DEP. DU).

on the S. by artificial embankments. A portion of the surface is very fertile; and corn, beans, &c. are grown for exportation; a little wine is also grown, but the chief product of the island is salt, from extensive marshes and salt-pans. In 1837, 16,259,000 kilogr. of salt, 12,313 hect. of wheat, and 4,621 hect. of beans, were sent from the island, mostly to other parts of France. The town of Noirmoutiers, with about 2,200 inhabs. is on the E. side of the island. It is tolerably well built and paved; defended by an old castle founded in 830, and several adjacent batteries; and has a harbour capable of receiving vessels of from 50 and 60 tons. (*Anglo*, &c.)

NOLA, a town of the Neapolitan dom., prov. Neapolitano, in a wide and fertile plain, the *Campania Felix* of the ancients, 14 m. E.N.E. Naples. Pop. 9,000. Though ill built and dirty, it has numerous churches and convents, an hospital, a college, and public seminary, large cavalry barracks, an old palace of the counts of Nola, and a good market-place.

In antiquity Nola was one of the most considerable cities of Magna Græcia. It is said by Pliny (lib. iii. cap. 5.), and by Silius Italicus, to have been founded by a colony of Chalcidians:—

Hinc ad Chalcidicam transfert citis agmina Nolan.  
Campi Nolasæ sed, crebris circumdata in orbem  
Turribus, et cæcis faciem tuteatur aditu  
Transita vallo ——— *Poncia*, lib. xii. p. 161.

But Velleius Paterculus (lib. i. cap. 7.) states that Nola was founded, along with Capua, by the Tuscan; and the many fine Etruscan vases that have been found here seem to corroborate this statement. It was besieged by Hannibal soon after the battle of Cannæ; but Marcellus, who had thrown himself into the town, having made an unexpected assault upon the Carthaginian army, Hannibal withdrew from the siege. It is, however, principally celebrated in ancient history from its having been the place where Marcus Agrippa, the faithful friend and successful general of Augustus, breathed his last, anno 12 n.c.; and where Augustus himself expired, a. d. 14, in the 75th year of his age. But, with the exception of its vases, it has now but few remains of antiquity. In the days of its prosperity it had two marble amphitheatres; of which, however, nothing now remains but the brick walls, the marble having been taken away to be employed in the construction of modern edifices. (*Swinburne*, i. 97; *Ancient Universal History*, xiv. 39. 8vo. ed., &c.)

The famous Giordano Bruno was a native of Nola, where he was born about the middle of the 16th century. He appears, at a very early period, to have become dissatisfied alike with the prevailing systems of philosophy and religion, and attempted to innovate in both. In 1583 he came to London, where he resided in 1584, his most celebrated work, *Spaccio della Bestia Trionfante*, dedicated to Sir Philip Sydney, of which there is a very flimsy notice in the 380th number of the Spectator. Having returned to the Continent, he resided some time in Germany; but, being anxious to revisit his native country, he arrived at Venice in 1598. Here he was arrested and thrown into prison, on the convenient charge of heresy and atheism. From Venice he was transferred to Rome; where, sentence having been pronounced against him, he was committed to the flames on the 17th of Feb., 1600! An elaborate estimate of the philosophy of this victim of the implacable hatred of the Inquisition may be found in the *Historia Critica Philosophiæ* of Brucker (vol. v. cap. 2.), and in Enfield's compendium of the same work. (See, also, *Biographic Universelle*, art. BRUNO; and *Tiraboschi*, tomo vii. pp. 476-483.)

NORCIA, a town of Central Italy, Papal States, deleg. Spoleto, in a high valley near the source of the Nar, and 14 m. E.N.E. Spoleto. Pop. 4,000. It has a brisk trade in wine, oil, truffes, tuncips, and other rural produce. It is identical with the ancient *Nursia*, noted for the coldness of its climate:—

"Qui Thierim, Fabacique bibunt, quos frigida mikit,  
Nursia." *Æneid*, vii. 715.

NORD (DEP. DU), or Department of the North, so called from its being the most N. dep. of France, lying principally between the 50th and 51st degs. of N. lat., and the 2d and 4th of E. long., having N. and E. the North Sea and Belgium, and S. and W. the dépts. Aisne and Pas-de-Calais. Shape very irregular; length N.W. to S.E. 115 m., by a breadth varying from 4 to nearly 40 m. Area 505,863 hectares. Pop., in 1836, 989,938, it being the most populous of all the French dépts. Surface almost an uninterrupted plain; the highest hill being no more than 360 ft. above the sea. The shore is bordered with sandy downs (*dunes*), as in Belgium and Holland. The Aa and Yser water the N., the *lys* and Scheldt, the central, and the Saubroe the S. parts of the dep. The arrond. of Dunkirk (*Dunkerque*), has a good deal of marsh land, called the *Wauwinkes*, and the *Mobres*; but it has been mostly drained, and rendered cultivable. The soil,

except along the coast, is generally very fertile. In 1834, the arable lands were estimated to comprise 359,570 hectares, meadow lands 95,832 hectares, orchards 16,334 hectares, and woods, &c., 35,827 hectares. This dep. is among the best cultivated in France. The properties, as elsewhere throughout that country, are, in general, small, sires of 221,552, subject to the *contrib. foncière*, in 1835, 192,776 were assessed at less than 5 fr.; but it has, notwithstanding, more large properties than most other depts. The largest farms are round Douai; the smallest generally about Lille. In the wooded tracts they run mostly from 13 to 22 hectares; but in the marshy region called the *Wateringues*, they vary up to between 60 and 70 hectares. Leases are seldom for more than 9 years, except in the arrond. of Avesnes, where they are frequently from 18 to 27 years, or even longer. (*Hugo*.) On the large farms horses are used for the plough; but spade husbandry is common on all the smaller holdings, and nearly universal on the lands appropriated to flax, hops, tobacco, or potatoes. Fallows are rare, and the cultivators are not here, as in most parts of France, so addicted to routine practices as to reject all new and improved methods of culture. All kinds of corn are cultivated, but principally wheat and oats. In 1835, nearly 6,000,000 hectolitres of grain were harvested, besides about 1,500,000 hectolitres of potatoes; but from the density of the pop. but little more corn is usually grown than is required for the home demand. Kitchen vegetables are good and plentiful; and beet root, oleaginous grains, hops, chicory, flax, hemp, wood, and fruits, are also extensively raised. *Hugo* states that there are 500 oil mills in the dep., which annually produce 470,000 hectolitres of oil; and that the produce of flax is 3,385,000 kilog. a year. Tobacco is variously estimated at from 3 to 4 millions kilog. a year. The pastures are very good, especially on the Sambre and in the N. According to the official tables, there were, in 1840, about 214,000 black cattle, and 193,000 sheep in the dep. The cows are of the fine Flemish breed, and it is estimated that they supply 7,000,000 kilog. butter, and 1,500,000 kilog. cheese a year. The annual produce of wool is about 745,000 kilog.; a good deal is of very fair quality, the sheep being partly Merino, and partly of the long and fine woolled Flanders breed. The inhabs. of the coast are actively employed in the herring fishery, and at Dunkirk and Gravelines many vessels are fitted out for the cod and whale fisheries.

Dunkirk is the centre of the marit. trade; but every week 3 or 4 vessels leave Gravelines with a cargo for the English market of from 500,000 to 600,000 eggs, produced in this and the neighbouring depts. Iron, marble, building stone, &c., are found here; but the principal mineral product is coal, of which about 6,000,000 quintals a year are raised. Manufactures highly important. Nearly half the beet-root sugar produced in France is raised in this dep.; the quantity made in it being estimated, in 1836, at 21,172,000 kilog. Lille is one of the chief seats of the French cotton trade; and it also occupies the pop. of Roubaix and Turoing.

Lace and linen fabrics at Valenciennes, carpets, stuffs of hemp, cordage, arms, &c. Mardange, Cambrai, &c.; hardware, cutlery glass and earthenware, hats, paper, soap, chemical products, barrels, tiles, and bricks, are among the other chief manufactures. A great many distilleries, breweries, sugar and salt refineries, dyeing and bleaching establishments and tanneries, are spread over the dep. No portion of France has its commerce so much facilitated by navigable rivers, canals, and good roads. The dep. is divided into 7 arronds.; chief towns, Lille (Lisle) the cap., Avesnes, Cambrai, Douai, Dunkirk, Hazebrouke, and Valenciennes. It sends 12 mems. to the Ch. of Dep. No. of electors (1838-9), 6,667. Total public revenue (1831), 38,810,224 fr. This dep. was annexed to the French crown by Louis XIV. (*Hugo*, art. *Du Nord*; *French Official Tables*; *Dict. Géog. Univ.*)

NORDHAUSEN, a town of Prussian Saxony, gov. Erfurt, cap. circ., on the Zorge, 49 m. W. Halle. Pop., in 1838, 12,163. It is surrounded with old walls flanked with towers, and is generally built in an antiquated style. It has several churches, one of which are two paintings by L. Cranach; 3 hospitals, a gymnasium, an orphan asylum, a theatre, &c., and is the seat of a circ. council, a board of taxation, and judicial courts for the town and circ. It is, for its extent, one of the most flourishing commercial towns in the Prussian dom., having numerous distilleries, the refuse of which support great numbers of hogs and cattle. Woollen cloth, sealing-wax, vitriol, soap, mineral waters, and cream of tartar, are made at Nordhausen, which is further noted for its peculiar manufacture of fuming sulphuric acid. It has also numerous oil-mills, some marble works, and a considerable trade in corn, produced in its vicinity. It was the native place of the celebrated philologist Wolf. (*Von Zedlitz, Der Preussische Staat*, iii. 243.; *Berghaus*, &c.)

NORDKÖPING, (Swed. *Norwäpung*), a town and port of Sweden, lan Länköping, on the Motala, near its mouth in the Baltic, 85 m. S.W. Stockholm. Pop., in

1836, 11,440. After Stockholm, it covers more ground than any other Swedish town, but it has no public building worthy of notice. It has straight and broad streets, and is well situated for trade, having a commodious quay, close to which vessels can lie. It has several churches, a synagogue, public school, house of correction, and savings' bank, and manufactures of brass and hardware goods, linen, cotton, and coarse woollen fabrics, gloves, starch, paper, leather, &c., and several sugar refineries. A profitable salmon fishery is also carried on here in the river. (*Forsell*; *Stein's Hand-book*.)

NORDLINGEN, a town of Bavaria, circ. Middle Franconia; on the Eger, 48 m. S.W. Nuremberg. Pop. 6,300. It is surrounded with old bastioned ramparts. The cathedral, a handsome Gothic edifice, has some curious monuments and paintings, and a tower 345 ft. in height. The town-hall is ornamented with fresco paintings of the battle of Nordlingen, in 1634; in which, after an obstinate and doubtful conflict, the Austrians and Bavarians, under the Archduke Ferdinand, defeated the Swedes and their allies, under the famous Bernard, Duke of Weimar. The town has flourishing carpet factories, and a considerable trade in feathers, geese, and hogs. (*Berghaus*.)

NORFOLK, a marit. co. of England on its E. coast, having N. and E. the German Ocean, S. Suffolk, and W. Cambridge, a point of Lincoln, and the inlet of the sea called the Wash. It is of a circular shape, and contains 1,295,360 acres, of which about 1,200,000 are supposed to be arable, meadow, and pasture. Surface generally flat, and where most diversified merely undulating. Soil very various: in the W. parts of the co., contiguous to Cambridge, and the bottom of the Wash, there is a considerable tract of marsh-land included within the Great Level of the Fens; and there is also some marsh-land in the S.E. corner of the co. contiguous to Yarmouth. But, with these exceptions, the rest of the co. consists principally of a light sandy loam, especially suitable for the turnip and barley husbandry. Climate dry and early; but in spring, the E. winds are often very severe. Few cows, in the county, have been so much improved as this. Little more than a century ago, the greater portion of it consisted of wastes, commons, sheep-walks, and warrens of little or no value. But, through the judicious application of marl, which is found in the greatest abundance in all parts of the co., and the extension of the turnip husbandry, introduced by Lord Viscount Townshend in the reign of George II., followed up by the introduction of the drill husbandry, and an improved rotation of crops, it is now, perhaps, the best farmed co. in England, and is a striking example of what may be accomplished by intelligence, perseverance, and industry. The usual rotation in the turnip land is, 1st, turnips; 2d, barley; 3d, clover, or clover and rye grass; and 4th, wheat. Turnips form the basis of the system; and are sown with marl, to have made the co. On some estates no oats are allowed to be raised, and barley is, in all respects, the leading crop corn. Tenants are strictly prohibited from taking two white crops in succession, and the land is kept remarkably clean, and is not injured by overcropping. Ploughing is wholly executed, as in Scotland, by ploughs drawn by 2 horses or 2 oxen. The grazing husbandry of Norfolk is very inferior to the arable, though it has been latterly a good deal improved. Great numbers of galloways, and other Scotch cattle, are purchased at the great fairs in the co. to be turnip fed, and otherwise fattened, for the market of the metropolis. The stock of sheep is very large, amounting to between 700,000 and 800,000 head. Vast quantities of turkeys are raised in this co. and Suffolk, which furnish the greater part of those supplied to London, especially at Christmas. Estates of all sizes, from 40,000, a year downwards. Farms mostly large; and, in fact, the great improvements of which Norfolk has been the theatre never could have been effected by small farmers. Leases vary from 7 to 14, and in a few instances to 21 years. Farm buildings generally good; barns very large. Average rent of land, in 1810, 14s. 4d. an acre. Minerals, with the exception of marl, of no importance. The woollen manufacture, especially the worsted branch, has been long extensively carried on in this co., especially at Norwich, where various descriptions of shawls, crapes, silks, &c. are also manufactured. (*See Norwich*.) But owing to the superior facilities for the successful prosecution of manufacturing industry enjoyed by Bradford, Paisley, and other towns in the N. engaged in the same departments, the manufactures of Norfolk are rather on the decline. Principal rivers, Great and Little Ouse, Nen, Waveney, Yare, Wensum, &c. A navigable communication admitting vessels drawing 10 ft. water has recently been effected between Norwich and Lowestoff. (*See Lowestoff*.) Norfolk has no fewer than 38 hundreds and 713 parishes. Principal towns, Norwich, Yarmouth, and King's Lynn. It sends 12 mems. to the H. of C.; viz. 4 for the co., 2 for the city of Norwich, and

2 each for the bors. of King's Lynn, Thetford, and Yarmouth. Registered electors for the co., in 1839-40, 16,033, being 8,474 for the E. and 7,559 for the W. division. In 1831, Norfolk had 74,793 inhab. houses, 84,232 families, and 390,054 inhab., of whom 189,323 were males, and 200,731 females. Sum expended for the relief of the poor, in 1838-39, 177,567. Annual value of real property in 1815, 1,516,651*l.*; profits of trade and professions in do., 523,011*l.*

NORFOLK, a borough-town and port of entry of the U. States, Virginia, co. Norfolk, on Elizabeth River, 8 m. from Hampton Roads, in Chesapeake Bay, and 90 m. S.E. Richmond; lat. 36° 52' N., long. 76° 10' W. Pop., in 1830, 9,816. It stands on low and somewhat marshy ground; its principal streets are well paved and clean, but the others are generally irregular and inconvenient; and neither the public nor private buildings can boast of much elegance, though of late years it has been a good deal improved. It has places of worship for various sects, a marine hospital, an orphan asylum, a lyceum, Lancasterian school, theatre, &c. The harbour is deep, capacious, secure, and easy of access; its entrance, rather more than 1 m. in width, is defended by three strong forts. At Gosport, in the township of Portsmouth, near Norfolk, is one of the most important navy-yards in the U. States, in which is a noble dry dock of hewn granite, constructed at a cost of 974,356 dollars. The total tonnage belonging to the port of Norfolk, in 1838, amounted to 16,263 tons; of which 13,455 were engaged in the coasting trade, and 1,107 in steam navigation. (*Official Report on Commerce and Navigation; Encyc. of Geog., American edit.*)

NORMANDY, one of the provs. of France under the old regime, now distributed among the depts. of Seine Inférieure, Eure, Orne, Calvados, and La Manche.

NORTHALLERTON, a parl. bor. market-town, and par. of England, in the liberty of Altonshire, N. riding co. York, on a small trib. of the Whisk, 134 m. S.S.E. Darlington, and 31 m. N.W. York. Area of parl. bor., which comprises the townships of Northallerton, Rombay and Brompton, 3,340 acres. Pop., in 1831, 4,839. The town, which is on level ground, and is almost entirely of a main street along the great N. road from London to Edinburgh. It is wide, well paved, and lighted with gas; a market-house stands near the centre of the town, and at its N. extremity is a fine open space, in which are the church and churchyard. The former is a large cruciform structure, of considerable beauty, with a square tower at its W. end; the living is a vicarage, in the gift of the dean and chapter of Durham. A grammar-school has been founded here under the same patronage, and there is a large national school for children of both sexes. There is also a place of worship for Wesleyan Methodists, with an attached Sunday-school. The register-office for the N. riding of the co. was built here in 1736; and there is a court-house, in which the general co. sessions of the peace are held. A gaol has also been built, within the present century, on the plan of Howard, the discipline and arrangements of which are said to be, in the whole, very efficient: the number of prisoners averages about 60, and the cost of each is 1*s.* 5*d.* per diem. (*Grand Returns, and Prison Inspector's 4th and 5th Reports.*) "Northallerton is not a corporate town, and is under the jurisdiction of the co. magistrates. No manufactures are carried on, nor are there any local advantages likely to attract them. Linnen-weaving, however, employs a portion of the pop., both in Northallerton and the surrounding villages, its chief seat being at Brompton." (*Parl. Bound. Rep.*) A branch of the Darlington Joint-Stock Banking Company, a private bank, and a savings' bank are established here. The town has been a great thoroughfare; but it has lost this advantage from the recent opening of the Great N. of England Railway, which passes at some distance westward. It has, however, very large weekly cattle and corn markets on Wednesdays, and large fairs for horses, cattle, sheep, and cheese, Feb. 14., May 5., Sept. 5., Oct. 3., and 2d Wednesday in Oct. Northallerton sent 2 mems. to the H. of C. from the 15th Charles I. down to the passing of the Reform Act, which deprived it of one of its mems. "The elective franchise was formerly attached to about 210 burgage-houses, mixed up and conjoined with the other buildings from one end of the town to the other." (*Bound. Rep.*) The electoral limits were enlarged, as above mentioned, by the Boundary Act, and in 1839-40, there were 281 registered electors.

At a short distance from Northallerton is Standard Hill, celebrated as having been the scene, in 1138, of a sanguinary conflict between the Scotch, under David I., and the English, under the Earls of Albemarle and Ferrers. It was called the battle of the Standard, from the circumstance of the victory of the English being attributed to their possessing a standard whence were displayed the banners of St. Peter of York, St. John of Beverley, and St. Wilfred of Rippon, the whole being surmounted by a consecrated host; but the true cause of the defeat of the Scotch was their consternation at the supposed

death of their king. (*Parl. Papers; Priv. Inform., &c.*)

NORTHAMPTON, a central co. of England, having at its N. extremity the co. of Lincoln; on its E. and S.E. side, Cambridge, Huntingdon, Bedford, and Buckingham; S. Oxford; and W. and N.W. Warwick, Leicestershire, and Rutland. It stretches N.E. and S.W. from Banbury to near Crowland, a distance of 66 m. Area, 650,240 acres, of which about 580,000 are supposed to be arable meadow, and pasture. Surface beautifully diversified with gently rising hills, fine valleys, and extensive woods: it is traversed nearly in its whole extent by the Nen, which rises near Daventry. Though of various qualities the soil is in general very fertile, and is, in many parts, strong and well adapted for the culture of wheat and beans, which are the principal crops. The climate is mild and salubrious, and there are more gentlemen's seats in this than in most other counties. Agriculture, though still capable of material improvement, is, on the whole, in a comparatively advanced state. About half the co. is in grass; and great numbers of heavy horses, and of cattle, mostly short-horns, and sheep, are bred. Estates are generally large; but there are few large farms; and the circumstance of their being let only from year to year tends to perpetuate the routine practices that keep their ground in this and other counties. Farm-houses and offices are mostly inferior, and inconveniently placed; and this is also true of cottages. This is one of the cos. in which there is a great waste of horse labour, 5 horses being usually employed to do the same work that might be as well done by 2, or at most 3. Average rent of land, in 1810, 21*s.* 5*d.* an acre. The woodlands are very extensive; and a good deal of wood is used as fuel. Except limestone, which is very abundant, and dates, dug up at Collyweston, minerals are of little importance. Boots and shoes are extensively produced in the town of Nottingham, and in Wellingborough, and other places; but the want of coal is an all but insurmountable difficulty to the progress of manufacturing industry. Exclusive of the N. and S. of England have the sources in Northamptonshire. Principal towns, Northampton, Peterborough, and Wellingborough. This co. is divided into 20 hundreds, and 306 par., and sends 8 mems. to the H. of C.; viz. 4 for the co., 2 for Northampton, and 2 for Peterborough. Registered electors for the co. in 1839-40, 8,734, being 4,127 for the N., and 1,607 for the S. division. In 1831, Northampton had 36,322 inhab. houses, 39,163 families, and 179,336 inhab., of whom 87,949 were males, and 91,387 females. Sum assessed for the relief of the poor in 1838-39, 83,183*l.* Annual value of real property in 1815, 947,578*l.*; profits of trade and professions in do., 185,204*l.*

NORTHAMPTON, a parl. and mun. bor., market and manufacturing town of England, cap. of the above co., built Sepulchre, on the great N. road, and on the N. bank of the Nen, crossed here by a stone bridge of 3 arches, and 2 others of inferior size, 29 m. S.S.E. Leicester, and 59 m. N.W. London. Area of parl. and mun. bor. (which comprises 4 par.), 1,520 acres. Pop., in 1831, 10,844; ditto in 1831, 15,351. The town, which comprises 4 principal streets, meeting in a very large open market-place, is well-built, paved, and lighted with gas; the houses in the principal street along the line of the great north-road are of stone, large, and substantial; but in the smaller streets are many inferior houses, almost entirely occupied by journeymen-shoemakers, and other workmen employed in shoemaking. The pars. of All Saints' and St. Giles's comprise the principal portion of the respectable classes of society. St. Peter's is a small par., inhabited principally by the inferior tradespeople and working-classes. St. Sepulchre's is extensive, but chiefly occupied by artisans and labourers. (*Mun. Bound. Rep.*) There were formerly 7 par. churches, of which 4 still remain. That of All Saints', in the centre of the town, (rebuilt, in 1680, on the site of one destroyed by fire,) is a large and handsome, though somewhat incongruous, building, with a central cupola supported by 4 Ionic columns, and a tower at its W. end, rising above an Ionic pediment: a fine organ, and a full length statue of late Spencer Perceval are the principal ornaments of interior. St. Giles's, at the E. end of the town, is a large cruciform structure, partly of Norman, and partly of later English architecture, with a square tower rising from the intersection of the nave and transepts. St. Peter's, at the W. end of the town near the castle, erected shortly after the Norman conquest, consists of a nave, with side aisles separated from it by piers and arches, with a square western tower, and is altogether "a remarkably fine and curious specimen of enriched Norman." (*Rickman, p. 214.*) St. Sepulchre's, an almost equally ancient edifice, built by the Knights-Templar, at the N. end of the town, comprises a circular part, forming the body of the church, a square chancel with side-aisles, and a square tower surmounted by a spire at its W. end. The remains of the old church of St. Gregory form a school-house; but the two others have entirely

disappeared, and of the numerous religious houses existing in Northampton before the Reformation, two only, St. Thomas's and St. John's, both in the later English style, now remain, having been converted into almshouses for the aged poor. The Wesleyan Methodists, Baptists, Presbyterians (now Unitarians), Rom. Catholics, and the Society of Friends, have their respective places of worship; the castle-hill meeting-house was, for 22 years, the scene of Dr. Doddridge's ministrations, during which period he was also master of the Presbyterian academy in this town. Attached to the various churches and chapels, are numerous Sunday schools, furnishing religious instruction to between 2,000 and 3,000 children of both sexes. A central national school, serving as a model-school for the co., is attended by about 400 boys and girls; a Lancastrian school, by upwards of 500 children; 2 infant schools (one of which is supported by the Wesleyan Methodists), have 250 children; besides which, the corporation charity-school, Dryden's charity-school, and the girls' school in King's-well Street, provide clothing and education for 120 children of both sexes. The free grammar-school, in Marefare, was founded in 1512. Among the other buildings of the town, by far the most handsome is the Shire Hall, on the S. side of the market-square; it is of Grecian architecture, and comprises 2 large courts, and other apartments well adapted for the business of the assizes. The town-hall is an ancient structure of brick, adjoining All Saints' church; and near it is the borough, now dissolved. On the E. side of the town is a large co. gaol, built in 1791 on the plan of Howard; but, notwithstanding its size, the cells are not sufficiently numerous to allow of the entire seclusion of prisoners. The silent system, however, accompanied by hard labour, is strictly enjoined; and the town-warden has been greatly improved within the last few years. The yearly expense of each prisoner to the co. amounts to 7*l*. This gaol is used also, by agreement, between the co. and borough magistrates, as a place of confinement for prisoners belonging to the borough. (*Prison Inspector's 3d Report*, iii. 80.) The theatre in Marefare, built at the beginning of the present century, is a neat building, and, though small, is sufficiently large for a town in which dramatic entertainments are little relished. The barracks form a large enclosure on the W. side of the road leading to Leicester; and in the E. suburbs is the infirmary, a large and respectfully built edifice, completed in 1793, and furnishing excellent accommodation for patients. A race-course was formed N. of the town in 1778, and the races, which take place in autumn, are invariably well attended. About  $\frac{1}{2}$  m. S. on the London road is an ancient cross, one of those erected at the halting-places of the funeral of Queen Eleanor, on its passage from Hardeby, in Lincolnshire, to Westminster Abbey.

"The borough is evidently in a flourishing condition." Its fairs and markets are resorted to by the inhabs. of the agricultural districts; and the shops are numerous, respectable, and thriving. The principal manufacture is, that of boots and shoes; and a large proportion of the lower orders, men, women, and children, are employed in this craft, which has thriven and increased during the last 30 years, without being affected by the various changes which have occurred within that period. In 1831, upwards of 1,300 men (exclusive of women and children) were employed in this trade; and we are assured that the wages of the journeymen at present amount to the weekly sum of 2,000*l*. "The fixed prosperity of this trade has been assigned as the cause why the pop. of the borough was nearly doubled during the 20 years preceding 1831, and is stated to be still rapidly increasing." (*Mun. Bound. Rep.*) These shoes are sent in large quantities to London, and furnish the chief supply of the shops that deal in cheap, ready-made shoes; they are, also, extensively exported. Leather currying and saddlery are extensively carried on; but the stock-levy and lace trades, once very considerable, have greatly declined since the introduction of machinery at Leicester and Nottingham. There are also 3 foundries, and the manufacture of lig. brass and iron work is prosecuted on rather an extensive scale. The Northampton Union Bank, Northampton Banking Company, a private bank, and savings' bank, are established here; and the town has two weekly newspapers, one of which is amongst the oldest provincial papers in England. The prosperity of Northampton was materially promoted by its situation on the great mail-coach road between London, Leicester, Nottingham, &c., and its coach and posting establishments were very considerable. These, however, are now all but extinguished, in consequence of the opening of the Birmingham and other railways, leading to the great towns in the midland and N. counties. About  $\frac{1}{2}$  m. W. the town is the Blisworth station of the Birmingham railway, 62*½* m. from London, by which the metropolis may be reached from Northampton in about 3 hours; and it is supposed by many that the facility of communication thus afforded will go far to indemnify the town for the loss of its business as a posting station. The

Nen, also, and the numerous canals uniting with that river, give to Northampton the advantage of a water communication with the German Ocean, London, Liverpool, Manchester, and Bristol.

Northampton is a borough by prescription, and has received several royal charters, the last being granted in the 86th Geo. III. By the Mun. Reform Act it has been divided into 3 wards, and is governed by a mayor and 5 other aldermen, with 18 councillors; having also a commission of the peace under a recorder, as well as a court of record for civil suits. Corporation revenue in 1835, 4,806*l*, exclusive of 83*l*. accruing from the sale of property. The assizes for the co. are held here in spring and summer; and the quarter sessions take place in Jan., April, July, and Oct. The borough has sent 2 mems. to the H. of C. since the reign of Edward I.; the right of voting, previously to the Reform Act, being in inhabitant-householders occupying a distinct dwelling for 6 months previously to the election, and not having received alms for 12 months. (*Bound. Rep.*) The electoral limits were left untouched by the Boundary Act, and in 1839-40, it had 2,057 reg. electors. Northampton is likewise the principal polling-place and election town for the S. div. of the co. A large cattle market is held every Saturday, and there are smaller markets on 2 other days. Extensive horse and cattle fairs attended by jobbers from all parts of England, Feb. 20th, April 6th, May 4th, and Aug. 5th; other fairs, Aug. 26th, Sept. 19th, Nov. 28th, and Dec. 19th.

After the Norman conquest *North-Hamtun*, which, according to the Domesday Survey, had then only 40 burgesses, was given by William I. to Simon St. Liz, who built a castle here (now marked only by an earth-mound, on the W. side of the present town). Numerous synods and parliament met here during the succeeding reigns; and, at the beginning of the 13th century, Northampton was considered of sufficient importance to have a mint. In the reign of Henry III. an attempt was made to establish a university here, consisting of emigrant students from Oxford and Cambridge; but, though the scheme was at first sanctioned by the king, a mandate was afterwards issued to compel the students to return to their old universities, and to forbid the continuance of the establishment. In the wars of the Roses, its neighbourhood was the scene of a great battle (fought 10th July, 1460), between Henry VI. and the Earl of March (afterwards Edward IV.), in which the former was defeated, and taken prisoner. In 1642, the town was seized by Lord Brooke, who fortified it for the parliament. In 1663, Northampton suffered greatly from a flood, and in 1675 was nearly destroyed by fire, the loss of property being estimated at 150,000*l*. To this calamity, however, may be attributed the increased width and regular arrangement of the streets, for which it is remarkable above most other provincial towns. (*Parl. Reports; Private Information*.)

**NORTH-FLEET.** See GRAVESEND.

**NORTHUMBERLAND**, a maritime co. of England, being the most northerly of the kingdom, having N. a small detached portion of Durham, by which it is separated from Scotland, E. the German Ocean, S. Durham, and W. Cumberland, and the cos. of Roxburgh and Berwick, in Scotland. Area, 1,197,440 acres, of which about 800,000 are supposed to be arable, meadow, and pasture. It exhibits every variety of surface and soil. It is divided from Scotland and Cumberland by the Cheviot Hills, and a portion of the Pennine, or great central range of mountains, which stretch out into extensive moors, and cover a large portion of the W. parts of the co. with their ramifications. There are, however, very extensive tracts of low land along the coast, and in the valleys of the Coquet, Tyne, and other rivers, the soil of which consists, for the most part, of a strong clay loam, and is very fertile. The Cheviot Hills are mostly covered with fine verdure, affording excellent pasture for the peculiar and valuable breed of sheep, called by their name, and now so widely diffused; but the mountains and their offshoots belonging to the Pennine range are mostly covered with bare earth, and are bleak, dry, and covered with heath, and interspersed with swampy morasses. The climate varies with the elevation and nature of the soil; but along the coast and in the valleys it is dry and early. Northumberland is distinguished by its improvements, and is now one of the best cultivated cos. of the empire. Wheat and oats are the principal corn crops; but barley, beans, and peas are, also, extensively raised. Turnips are an important crop in the coast district; they are universally drilled, and their culture is no where better understood. Cattle are of various breeds; but the improved short-horns are now, perhaps, the greatest favourites. Estates of all sizes, but mostly large. Farms, also, large, and their occupiers distinguished by their superior intelligence and enterprise. Farms mostly held on leases, varying from 7 to 14 and 21 years. Farm-houses and cottages, good. Average rent of land in 1810, 15*½* 1*½* an acre. With the exception of those carried on at Newcastle (which see), manufactures

are of no importance. Pit-coal forms the staple produce of Northumberland, and is raised and shipped in vast quantities from the Tyne, for the supply of London and other ports on the E. coast, and for exportation. In proof of this, we may mention that of 7,475,877 tons of coal shipped coastwise from the different ports of the United Kingdom in 1840, 2,281,343 were shipped from Newcastle. (*Parl. Paper*, No. 250, Sess. 1841.) The pitmen, who are a numerous and important class, receive wages varying from 15s. to 25s. a week, and are honourably distinguished among the working classes by their superior comforts and enjoyments. Their houses are generally clean, roomy, and well furnished; they live well, are but little influenced by political agitation, and are more orderly and decidedly less addicted to ardent spirits, rock-fighting, and such like demoralizing sports, than they were 30 years ago. (*Minutes of Committee of Council on Education*, p. 61.) Exclusive of its coal, Northumberland has mines of lead and iron, and abundant supplies of limestone and sandstone; the quarries of the latter at Gateshead Fell supplying the "Newcastle grindstones," so famous in most parts of the world. Principal rivers, Tyne, Coquet, Alne, Blyth, Wansbeck, and Till. Principal towns, Newcastle, Tynemouth, Shields, Morpeth, &c. It returns (in Berwick) 10 members to the H. of C., viz. 4 for the co., 2 each for the bors. of Berwick and Newcastle, and 1 each for Morpeth and Tynemouth. Registered electors for the co. in 1838-39, 8,012; being 2,742 for the N., and 5,270 for the S. division. The co. is divided into 6 wards and 88 pars.; and had, in 1831, 35,726 inhab. houses, 48,364 families, and 222,912 inhab.; of whom 106,147 were males, and 116,765 females. Sum expended for the relief of the poor in 1838-39, 61,918*l*. Annual value of real property in 1815, 1,291,413*l*. Profits of trade and professions in do., 436,404*l*.

**NORTHWICH**, a market-town and township of England, par. of Great Budworth, hund. of its own name, co. Chester, on the Weaver, 164 m. E.N.E. Chester, and 155 m. N.W. London. Area of township, 200 acres. Pop., in 1831, 1,431. It has an antiquated appearance, with badly paved streets. The church, which is subordinate to that of Great Budworth, is a large building, with a semicircular choir, remarkable for the curious decorations on the roof of the nave. There are places of worship also, for Wesleyan-Methodists and Independents, with attached Sunday-schools. A grammar-school was founded in 1558; it is handsomely endowed, and the government is vested in 12 trustees, who appoint both the masters and the free scholars. There is, also, a charity-school for 12 poor children. Northwich is one of the *wiches* or salt-towns of Cheshire, and vast quantities of salt are annually produced in the town and its vicinity. The salt-mines are very extensive; they have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt-mines in the world. In its solid state, when dug from the mines, the salt is not sufficiently pure for use, and is sent to Frodsham and other places on the S. side the Mersey, where it is refined, by being dissolved in sea-water, and afterwards separated by evaporation and crystallization. By far the largest quantity, however, of the salt now produced in Cheshire is obtained from the brine springs. The brine is first pumped up, principally by means of steam-engines, from very deep wells, and is collected in reservoirs, where it is sometimes saturated or strengthened by an admixture of crushed rock-salt. The business has greatly increased within the last few years, and it is estimated that above 230,000 tons are annually produced in Northwich and its vicinity. A considerable number of the inhab. are also employed in the cotton manufacture. It has every facility for water-carriage by its position on the Grand-Trunk Navigation, and it is close to the Grand-Junction Railway. It is one of the polling-places at elections for the N. div. of Cheshire. Markets on Friday: a large cattle fair, April 10.; other fairs, Aug. 2, and Dec. 6. (*Parl. Papers*, &c.; *Stat. Account of the Brit. Empire*.)

**NORTON, CHIPPING.** See CHIPPING-NORTON.

**NORWAY** (Norw. *Norge*, Germ. *Norwegen*), a country of N. Europe, forming the W. portion of the great Scandinavian peninsula, and at present united to the crown of Sweden. It extends, including Norwegian Lapland, between the 58th and 71st degs. of N. lat., and the 5th and 31st of E. long.; having E. Russian Lapland and Sweden, S. the Skagerrack, separating it from Denmark, and W. and N. the North Sea, and the Atlantic and Arctic Oceans. Its entire length from the Naze, its most S. promontory, to the North Cape, is upwards of 1,100 m. Its breadth varies greatly; in Norrland, near its N. extremity, it may average about 50 m.; but towards the S. it is as much as 250 m. The area, pop., &c., of Norway, have been estimated as follows:—[See *next col.*]

In 1835, the pop. amounted to 1,194,827, viz. 585,381 males, and 609,446 females, the ratio of the two sexes being as 100 to 104. The increase between 1825 and 1835 was 13.6 per cent., or about 14 per cent. annually. The rural pop. in 1835 amounted to 1,065,825; the remaining

129,002 individuals lived in towns of 3,000 inhab. and upwards, of which there are only 11. The increase of the rural pop. during the previous 10 years had been 14 per cent.; that of the town pop. 11 per cent. (*Statistical Journal*, July, 1839.)

**Physical Geography.**—The chief physical characteristics of Norway are its *fjelds* and *fjords*; the first being lofty mountain plateaux in the interior, and the second deep indentations or arms of the sea all round the coast. Nearly the whole of the country is covered with mountains. The main chain, called the *Kjølen* (or keel), forms the line of separation between Norway and Sweden, as far S. as lat. 63°; but thenceforward it tends to the S.W., under the names of Dovrefjeld, Langfjeld, &c., forming the watershed between the rivers flowing into the Skagerrack on the S.E., and the North Sea and Atlantic on the W. Many of the Norwegian mountains rise to from 6,000 to 8,000 ft. above the level of the sea. The Sneeketta, (lat. 62° 35', long. 9° 40'), 8,120 ft. in height, has been long considered the most elevated point of land; but it is now supposed that the Hurringer Fjeld, in the prov. Bergen, overtops the former by at least 700 ft. (*Laing*, p. 53.) The *fjords* have been sometimes compared to the Scottish *firths*; but they are generally smaller than the latter, and rather resemble the Scottish salt-water *lochs*. They are most numerous on the W. coast, where the Sogne and Hardanger Fjords, with their continuations, stretch inland for at least 100 m. in a direct line; and are of the greatest use as means of communication. Norway has numerous rivers, some of which, as the *Glommen*, *Lougen*, *Dræmmon* Nid, &c., all taking a S.E. direction, are of large size; but their courses are so beset with cataracts, that they are of little service for navigation. Lakes are numerous in the E. half of the country, but none of them can be compared in respect of extent to the lakes of Sweden. The W. coast is lined in its entire extent by a vast number of islands. The principal of these are the *Loffoden* group, which has been *ante*, p. 191.) The shores of Norway (like the W. coasts of almost all countries in high latitudes) are iron-bound, and difficult of access; and at the S. extremity of the Loffoden Isles is the celebrated Marlstrom, which inspires the Norwegian fishermen with as much terror as Charibdis did the ancient navigators of the Mediterranean; and, perhaps, with more reason.

**Geology.**—The formations of Norway are for the most part primary. The mountains were long supposed to consist almost exclusively of granite, but in reality this rock is far from common. The most abundant rock is gneiss; next to which, though by no means so widely diffused, is mica slate, resting upon and alternating with the gneiss; and in beds subordinate to both, are limestone, quartz, and hornblende. Upon the high table lands, the ground is often covered with blocks of a conglomerate rock, in which pebbles of quartz, felspar, and other crystallized substances are embedded, and which, being smooth and rounded, have evidently been, during a remote but lengthened period, subject to violent friction. Mr. Lyell (*Principles of Geology*, i. 336.) denies the occurrence of volcanic action and earthquakes in the Scandinavian peninsula; but his opinion, though entitled to great weight, differs from the statements of some recent travellers, from which it would seem that earthquakes are not unfrequent, and that the physical appearance of the country, especially of its fjords, almost demonstrates that it has at a distant period been upheaved by volcanic action. (See *Laing's Norway*, pp. 75, 76—114, &c.)

The climate must, of course, vary greatly, according to the elevation of the surface, as well as the difference of latitude; but generally the summers are short, and the changes sudden and extreme. From lat. 58° to 59° the average temp. is about 49° Fah.; and there is 10

constant snow-region. The same vegetables and fruits grow as in England, except apricots and peaches. Beech woods cease at 59°. From 59° to 60° the average temp. is about 44° Fahr.; all kinds of grain grow here on the best soils, and the same fruit trees as before, but at 60° the plum ceases to ripen. From 60° to 61° the average temp. on the coast is 43°; in the interior, 41°. In this division the pine and Norway fir become the predominant forest trees, with birch, hazel, and aspen. The elm ceases; and beyond 61° the oak is not seen in perfection. The principal crops are rye, oats, flax, and hemp; but wheat ripens in favourable situations. Between 61° and 62°, the average temp. is about 40°; all the common fruits still ripen; as will wheat, in certain places; but this grain is very precarious and little cultivated. N. of 62° the ash is scarcely seen. The region between 62° and 63° comprises the highest land in the country, and the upper 5,000 ft. of the Doone Field is covered with perpetual snow. The average temp. of the valleys in this zone is about 39° Fahr. Beyond 63°, peas begin to be precarious, cabbage ceases to come to perfection, flax scarcely ripens, and wheat is not seen, except near the sea coast in small quantities; but the pine and fir tribes, birch, mountain-ash, and aspen flourish. From 63° to 64°, the harder fruits ripen in sheltered situations only, and oats begin to be a precarious crop. From 64° to 65°, rye, oats, and barley ripen; but beyond 65°, neither oats nor any fruit, except currants, succeed; and the pine begins to degenerate. Respecting the climate of the country further N., see LAPLAND, *ante*, p. 139.

Stoves begin to be lighted in Christiania in the middle of Sept., and cannot be dispensed with till the middle of May; the summer then advances rapidly, and the thermometer, in July, often rises at noon to above 60° Fahr.; but the heats are of short duration; frosts frequently occurring in the latter end of August. The W. coast, though proverbially rainy and damp, is not unhealthy; in the interior, the atmosphere is usually dry and bracing. In some places vegetation is so quick that the corn is sown and cut within six weeks.

*Land, Agriculture, &c.*—Norway is essentially an agricultural and pastoral country. In 1835, of a total male pop. of 585,381, of whom 434,267 were above 10 years of age, 309,000 were connected with agriculture, either as proprietors, farmers, or farm-servants, journeymen, country paupers, &c. 28,903 were estimated to be engaged in navigation and the fisheries; 23,145 in commerce and manufactures; 1,192 were government officers, 2,104 pensioners, and 4,720 pauper inhab. of towns. Only about 100th part of the entire surface is supposed to be under culture, or otherwise productive. As Norway is a country where the feudal system was never established, the land is mostly the property of those who cultivate it. Such land is termed *odal*, a word in its origin probably the same with the German word *ad*, or noble, since it carries an equivalent meaning in all its applications. Odal land is noble land, held from or under no superior, not even the king; but by the same right by which the crown itself is held. It is possessed, consequently, without charter, and is not subject to fines, escheats, forfeitures, nor personal suit or service; nor to any of the burdens affecting land held by feudal tenure direct from the sovereign, or from his superior vassal. The succession to land is not vested in the eldest male heir. On the contrary, all the kindred of the udalman in possession are what is called *odelsbaarn* to his land, and have, in order of consanguinity, a certain interest in it, called *odelsbaarn ret*. Hence, if the udalman in possession should sell or alienate his land, the next of kin is entitled to redeem it on repaying the purchase money; and if he should decline to do so, it is in the power of the one next him to claim his *odelsbaarn ret*. Formerly the power to redeem estates was unlimited in point of time; but as a power of this sort, by rendering the title of the occupier insecure, prevented him from making any improvements, the right of redemption has latterly been limited to within 5 years of the sale; and it has also been ordered that the purchaser shall be indemnified for his improvements. But though this is an improvement on the former law, no doubt the better plan would be to abolish altogether the privilege of redemption, by making the sale absolute and final.

In 1835 the number of taxed agriculturists was 103,192, of whom 72,624 were proprietors, enjoying the *odels ret*, leaving 30,568 individuals, with only the limited possession or use of a farm.

Farms generally consist of 3 divisions; the in-field, or acres inclosed for the crops and best hay; the mark, or outfield, also enclosed for pasturing the cattle; and the *seater*, a tract of unmeasured grass land, which is sometimes 30 or 40 m. distant, and on which chalets are erected, and the cattle are pastured for 3 or 4 months in summer. A farm of average size is stated by Laing to have comprised 290 acres, exclusive of the *seater*. Of this extent, 148 acres, comprising the in-field, were cleared; only about one-third, however, yielded corn and

potatoes, the remainder being always in grass for hay. The out-field is usually half cleared, being fenced off and ploughed in patches; and it is in this division that the housemen or cottiers, paying from 3 to 4 dols. each of rent, and working at about 8 skillings (3s.) a day, with their food, have their houses and their fenced pieces of land. The farm referred to above, supported 20 cows, 7 horses, and a score or two of sheep and goats. The accommodations for the cattle were very good, the cow-house being floored with timber, and lighted by glass windows: the cows were tended by a woman. The rent was 200 dols. a year; the taxes, including tithe, poor-rate, and all other direct assessments, amounted in all to about 36 dols.; the indirect taxes, including excise and other duties, were inconsiderable. A property like this is reckoned worth about 4,000 dols.; and the prices of ordinary estates vary from 2,500 to 4,500 dollars. Almost all the houses are of wood: they are generally comfortable; and owing to the facility with which they may be constructed, there is but little difference between the residence of a public functionary, a clergyman, or a gentleman of large property, and that of a rustic or peasant proprietor. The division of property among children prevents the erection of any splendid mansions, or any thing more expensive than is proportioned to the property upon which it stands.

Except in a few favoured spots the arable land is, generally speaking, sandy and poor. Hence, if a few days of warm sunshine succeed each other without rain, as is frequently the case in the early part of summer, the roots of the corn and grass are apt to be burned up. In autumn, on the contrary, the decreased warmth prevents the corn from ripening, and not unusually, even in favourable seasons, it is injured by violent autumnal rains. Mr. Malthus says there are three nights about the end of August, distinguished by the name of *iron nights*, on account of their sometimes blasting the promise of the fairest harvests. (i. p. 375.) The crops are, in consequence, extremely precarious. Even in the best years a considerable supply of corn has to be imported; and in bad years the inhabs., especially in the interior, have to sustain the greatest privations.

In addition to the depressing influence of the soil and climate the peasantry are said to be deficient in industry, and wedded to routine practices; and a considerable influence is also ascribed, in the production of dearths, to the great consumption of corn in distilleries. We believe, however, that the latter complaint is wholly without foundation. The demand for corn for distillation makes, no doubt, a greater quantity be sown in ordinary years than if it were prohibited; so that in bad years, when distillation almost wholly ceases, there is a greater supply to meet the necessities of the people. Rye is the crop most extensively cultivated, and next to it oats, flax, and potatoes. The agricultural implements, which are usually made by the peasants themselves, are better than could, under such circumstances, be expected: even thrashing machines are pretty common.

All over Norway there are corn magazines, to which the farmers may send their surplus produce, and whence, also, they may be supplied with loans of corn; the depositors receiving at the rate of 12½ per cent. of increase on the corn deposited for a twelvemonth, and the borrowers replacing the quantities advanced at the expiration of the same period, with 25 per cent. increase. These depositories are found to be useful in consequence of the extreme precariousness of the crops. The difference between the increase allowed on the corn received, and that charged on the corn given out, pays the expenses. In the north, and even in other parts, in years of scarcity, the inner rind of the fir tree, kiln-dried, and ground, is used, together with corn meal, for bread. Some travellers have, strangely enough, and without sufficient information, denied this fact; but, according to Laing, the use of this material is more extensive than is generally supposed. The inner rind next the wood is taken off in flakes, like foolscap paper, steeped in warm water, and hung to dry in the sun. When dry it is pounded in small pieces, mixed with corn, and ground on the hand-mill. The extended cultivation of the potatoe since the peace, has probably placed the inhabs. of the lower country beyond the necessity of generally using it; but those in the higher parts use it, more or less, every year. It is not unpalatable, but is costly. The value of the tree, left to perish, would be a sack of flour, if the English market were open.

The Norwegians starve, and we shiver in our dwellings, though each country has the means of relieving the other with advantage to itself; and all for the sake of supporting colonies and other interests, which add little to the well-being of the people of Great Britain." (Laing, 340, 341.)

The most profitable branch of rural industry is cattle breeding. The cattle are small in the bone, thin skinned, usually red or white, and obviously of the same stock with the common unimproved breed in England, France,

and Germany. The cows give excellent milk, and dairy produce enters largely into the food of every family. Goats are a favourite stock, and on every farm they appear more numerous than sheep. Hogs are not numerous. The horses are, in general, inferior to those of Sweden. The real Norwegian pony, however, met with in the N. of the country, is an admirable little animal, fast going, hardy, and fit for a great deal of work. A few are occasionally imported into Scotland. The live stock suffers frequently from wolves and bears, the hunting of both of which is actively pursued; but that of the latter not so much as formerly, the price of bear skins having greatly fallen. The elk, and many kinds of game, are found; and in the N. large herds of rein-deer constitute the chief wealth of the Laplanders. Aquatic birds are so abundant, that the search after their eggs occupies a large share of the attention of the inhabs. of the coast.

From the want of markets, and of other facilities for commerce, the Norwegian farmer is seldom able to convert his surplus produce or savings into money. His object, indeed, is not to raise produce for sale, but to supply himself with the various materials required for the food, drink and clothing of his family. "The food of the labourers who work for gentlemen or large farmers, consists of black rye bread and salted butter or cheese, for breakfast; and boiled barley and a herring, or some other fish, with beer, for dinner. Once a week, and sometimes twice, they have fresh meat. The common people live nearly in the same way, only not quite so well; and some who have large families are often in great distress." (*Clarke's Travels*, x. 448.) Mr. Laing says that the labourers get frequently at their meals an allowance of home-made potatoe or corn spirit. The latter article is especially abundant, being distilled, without let or hindrance, on every farm. Great quantities are drunk, its price being only about 14d. a gallon. The farm labourers, called housemen, live, as has been stated, in cottages on the mark or outfield, at a fixed rent for 2 lives, under the obligation of furnishing a certain number of days' work on the main farm, at a certain rate of wages. A system, in some respects similar, prevails in some of the best cultivated districts of Scotland; but, according to Mr. Laing, the Norwegian houseman is better off than the Scottish married farm servant. Land, he says, being of less value in Norway, the houseman has more of it; in fact, it constitutes a complete little farm, keeping generally 2 cows and some sheep, and producing a full subsistence for a family.\* The law of the country has especially favoured the class of housemen. In default of a written agreement registered in the par. court, the houseman is presumed to hold his possession for his own life and that of his wife, at the rent last paid by him. He may give up his land and remove, on giving 6 months' notice, before the ordinary term, and is entitled to the value of the buildings put up at his own expense, which he may have left; but the landlord cannot remove him or his widow, so long as the stipulated rent and work are paid.

**Fisheries.**—Above the parallel of lat. 65°, agriculture and cattle rearing cease to be the primary occupations of the pop. The inhabs. of Norrland and Finmark, amounting to 91,000 persons, subsist chiefly by fishing, when they are not supported on the produce of herds of rein-deer. The Lofoden Islands (see *ante*, p. 191.) are the principal seats of the cod-fishery; and the average value of the fish caught there during the winter has been estimated at 86,500*l.* The winter fishery lasts from Feb. to April; after which the fishermen are either employed by the Russian merchants, or retire to their homes to begin the herring fishery. Besides these general fisheries, in every firth, even at 100 m. from the sea, an abundance of cod, whiting, haddocks, flounders, herrings, &c. is caught daily for use and for sale, by the seafaring peasantry.

**The Forests and Mines of Norway** might be rendered two of its principal sources of national wealth. Fir timber, deals, &c. are among the chief exports. But the want of navigable rivers, canals and roads occasions great difficulties in the conveyance of timber to the coast; for it is only during the spring thaws that the rivers or torrents are deep enough to float the timber down to the fjords. No doubt, however, were the timber trade of this country placed on a proper footing, by doing away with the impolitic preference given to American timber, a great stimulus would be given to its importation from Norway; and the advantages thence arising would, it may be fairly presumed, lead to the formation of improved means for supplying the shipping ports with timber and deals. The manufacture of the latter is the principal branch of industry carried on in the country. They are mostly shipped from Christiansia, Drammen, &c. "The forests are of the most essential service to the Norwegians, who apply their products to an infinite variety

of purposes. Their *sumnum bonum* seems to consist in the produce of the fir. This affords materials for building their houses, churches, and bridges—for every article of their household furniture—for constructing sledges, carts, and boats—besides fuel for their hearths. With its leaves they strew their floors, and afterwards burn them, and collect the ashes for manure. The birch affords, in its leaves and tender twigs, a grateful fodder for their cattle, and bark for covering their houses. The bark of the elm, in powder, is boiled up with other food, to fatten hogs; sometimes also, though rarely, it is used in the composition of their bread." (*Clarke*, x. 344., 8vo. ed.)

No coal has yet been discovered in Norway; but Berendish, between the N. Cape and Spitzbergen, appears to consist principally of that mineral. Some are occasionally brought thence by Tromsøe and Hammerfest whalers; and, were the forests raised to their due importance by better means of conveyance, it is probable that coal might be supplied to the country in quantities which would render the cutting down of the trees for fuel in a great measure superfluous. The iron of Norway, though inferior to that of Sweden, is of excellent quality, and very generally found. Copper is found at Romsås, and near Kongsberg a silver mine, which has been wrought for upwards of 200 years, and about the middle of last century, accounted the richest in Europe. In 1768, it produced ore to the value of 79,000*l.*; it has since, however, materially declined. Lead, cobalt, arsenic, and a little gold are met with in various places. At Waløe is a salt mine, producing about 20,000 tons a year. Alum, asbestos, marble, slate, building stone, &c., are among the other mineral products.

**Manufactures** are almost wholly domestic, the division of labour being carried to a less extent in Norway than in, perhaps, any other European country. The *bouder*, or agricultural peasantry, build their own houses, make their own chairs, tables, ploughs, carts, harness, iron-work, basket-work, and wood-work; in short, except the window glass, cast iron ware, and pottery, every thing about their houses is of their own make. The Norwegian peasant, indeed, uniting most trades in his own person, his principal tool for executing all kinds of work in wood being the knife he carries in his girdle. The shoemaker and tailor go round and cobble and sew for a few weeks at each village, getting their maintenance, and being commonly paid over or above, in potatoes, meal, butter, or other produce. Spinning-wheels and looms are at work in every cottage and house in the country; the farmers and country people spinning their own flax and wool, and weaving their own linen and woollen clothes. An official report, in 1829, made the total number of manufacturing establishments 337, out of these 138 were distilleries and 80 tobacco factories, principally in Christiansia, Drammen, and Bergen. There are, in fact, very few fabrics of clothing materials; and few Manchester or Glasgow fabrics are seen. No doubt, however, were greater facilities afforded to the Norway timber trade by Great Britain, our manufactures would, at no very distant period, supersede the ruder fabrics of the Norwegian peasantry.

**Commerce.**—Foreign trade is in a very depressed state from various causes, but principally from impolitic restraints. Bergen and Trondhjem were formerly members of the Hanseatic Association, on the decline of which these towns retained, and still hold separately, the same privileges they enjoyed in conjunction with the other members of that body, though Christiansand and some other minor towns have succeeded, after a long struggle, in obtaining a share of the commercial monopoly. The merchants and shopkeepers in Norway are all licensed burgesses of Bergen, Trondhjem, or other privileged towns, to which they pay a certain tax; and each has a certain tract or circle, belonging to his factory, within which no other person is entitled to buy or sell. The imports consist principally of coffee, sugar, tobacco, corn, spices, brandy, wines, tea, &c., and the exports of fish, timber, and other native produce. The trade of Norrland and Finmark is, however, different from that of the rest of the kingdom. The privileged traders do not supply the inhabs. of these provs. with necessities, except during the winter fishing season; and as no other Norwegian dare interfere, the trade of these provinces is now almost wholly in the hands of the Russians, whose ships have been, since 1828, allowed admission, free of duty, into every port N. of Tromsøe.

Owing to the thinness of the population, and the bad state of the roads and other means of communication, there is but little internal trade. Even in the largest towns, such as Christiansia and Trondhjem, there is nothing that can be called a market. It is extremely difficult to get a joint of fresh meat; and a pound of fresh butter is an article not to be purchased even in the midst of summer. Fairs are held at certain seasons of the year, and stores of all kinds of provisions that will keep are laid in at these times; and, if this care be neglected,

\* Dr. Clarke, however, says, that in the neighbourhood of Christiansia, the housemen have seldom land to keep a cow (x. 480.); and we understand that this is frequently the case in other parts.

great inconveniences are suffered, as scarcely anything is to be bought retail. Persons who make a temporary residence in the country, as small merchants, not possessed of farms, complain heavily of this inconvenience." (*Malthus*, l. 372.) Latterly, however, some improvements have been made in the facilities of interchange; and the inconveniences depicted by Mr. Malthus have been in so far diminished.

The *Bank of Norway*, established in 1816, has its head office in Trondhjem, and branches in Bergen, Christiania and Christiansand. Its principal business consists in advancing in its own notes, upon first securities over land, any sum not exceeding two thirds the value of the property, at 4 per cent. interest. The notes of this bank are at only a trifling discount when compared with silver; and its paper is in general use in Norway instead of silver for sums above a mark. The mark or ort of 24s. = 9½ English; 5 marks = 1 specie-dollar. Money being scarce, internal traffic is almost wholly conducted by barter. Provisions are generally cheap; and a dollar has been, in this respect, estimated as equivalent to a pound sterling in England; but it should be added, that the Norwegians, especially the innkeepers, never omit an opportunity of overcharging travellers. The most usual mode of travelling in this country is with the *carriole*, a little carriage formed somewhat like a shell, and slung between the shafts and two cross bars, horsed as in Sweden, by the farmers along the road, at the order of the station-master. The price of posting in this manner is about 4d. a mile. Steamers ply along the coast between Christiania and Bergen, but there is no similar communication further N.

*Government.*—Though Norway be under the same crown with Sweden, she is no more connected with that country than Hanover was formerly with Great Britain. The constitution differs from that of Sweden in many important respects. The Swedish government is in part aristocratical; that of Norway is an hereditary monarchy, with a democratic assembly only. This, which is called the *Storting*, consists of a certain number of members, between 75 and 100; about one third of whom are returned by the towns, and the rest by the rural districts. Every native Norwegian of 25 years of age, who is a burgess of any town, or possesses property, or the life-rent of land to the value of 30*l.*, is entitled to elect and be elected; but for the latter privilege he must not be less than 30 years of age; nor an officer of the crown (which has no representative or organ in the Norwegian *storting*); and he must have resided in Norway for 10 years. The country is divided into election districts and sub-districts, according to their pop. The mode of election is double, being performed through the intervention of election-men. In the towns one election-man is chosen by every 50 voters; in the rural sub-districts by every 100 voters: the choosing of these takes place in the parish church at the end of every third year. The election-men afterwards meet at the place appointed for the district or provincial election, and there elect among themselves, or from among the other qualified voters of the district, the representatives to the *storting*. In the proportion of one fourth of the number of election-men for the towns, and one tenth of those for the rural sub-districts. Substitutes (being those who have the next number of votes) take the places of both election-men and mems. of the *storting*. In the event of their unavoidable absence from duty. The *storting* meets for 3 months once in 3 years, *suo jure*, and not by any writ from the king or the executive. It may be convened at other times, but in that case it can pass only temporary acts, which must be ratified during the next ordinary session, otherwise they do not become law. Each *storting* settles the taxes for the ensuing three years; enacts, repeals, or alters laws; opens loans on the credit of the state; fixes the administration of the revenue; impeaches and tries before a section of its own body all state ministers, judges, and its own members, &c. This body, when elected, divides itself into two houses. One, called the *lagthing*, has functions corresponding generally to those of our House of Lords, and is composed of one fourth of the total number of members of the *storting*; the other three fourths constitute the *oddisting*, or lower house; and all proposed enactments must originate in this division. A bill which has passed both houses usually becomes law, by receiving the sanction of the king. But the Norwegian *storting* enjoys a right which no other legislative assembly in Europe possesses. If a bill pass through both divisions in three successive *storthings*, on the third occasion it becomes the law of the land without the royal assent; and this right was exerted when the Norwegians abolished their hereditary nobility in 1821. Each member of the *storting* has an allowance of 1*½* dollar a day during its session.

The mode of assembling the people in the country for public business is simple, but curious. A *budstick*, or message-stick, about the size and shape of a constable's baton, with a spike at one end, is made hollow to hold a piece of paper, on which are written the official notice to

meet, with the time, place, and object. This is delivered from the court-house of the district to the nearest householder, who is bound by law to carry it, within a certain time, to his nearest neighbour; he must transmit it to the next; and so on. If the owner be not at home, the bearer is to stick it "in the house-father's great chair by the fire-side;" and if the door be locked he must fasten it to the outside. He who, by neglect in passing the budstick, has prevented others from attending, pays a fine for every person so absent.

*Justice, &c.*—The Norwegian peasantry were never *adscripti glebae*, subject to local judicatories, as in feudal countries, but subordinate only to the general jurisdiction of the country. The small kings, expelled in the ninth century by Harold Haarfager, seem never to have attained the powers of the great feudal lords in other countries, but were always in some degree dependent upon the general things, or courts, of the people. Trial by jury is a very ancient institution in Norway; but many of the details in the administration of justice originated with the Danes. The latter instituted the courts of mutual agreement, one of which exists in each parish, the arbitrators being chosen by the householders every third year. Norway is divided, for legal purposes, into 4 *stifts* and 64 *sorenskriveries*. In each of the latter divisions is a legal court, which sits once a quarter, and in which the *sorenskriver*, who presides, has only a vote as a member of the jury, a majority of whom decides the case. The *stifts amts*, consisting each of three judges, with assessors, and established in the chief towns or *capitals*, are the courts of appeal from the foregoing. The *hoests-rett*, in Christiania, composed of a president and eight assessors, is the highest court, and one of final resort. The special courts are the *rigs-rett*, or lagthing, the ecclesiastical, and the military tribunals. Judges are responsible in damages for their decisions. Capital punishment has been abolished; slavery in chains, for a longer or shorter period, being the ordinary sentence for all kinds of crimes.

The religion is the Lutheran; but much ceremony still remains in the forms of worship. Norway is divided into 5 bishoprics and 336 parishes: the latter divisions are very extensive, but several are frequently under the cure of one priest. The incomes of the par. priests amount to from 800 to 1,600 *dollars*, those of the bishops to 4,000 *dollars* a year. (*Lathing*, p. 180.) The former are paid by means of rents from glebe lands, a small tithe of corn from each farm, or of fish in some parts, and fees, and other unfixed sources of revenue. There are no dissenters; all sects of Christians are, however, tolerated, but Jews are excluded from settling in Norway, nor are even suffered to remain in the country for more than a few hours at a time.

In 1837, 176,733 persons, or about one seventh part of the pop., were receiving *public instruction*. Schoolmasters are settled in each parish, who live either in fixed residences, or move at stated intervals from one place to another, and who frequently attend different schools, devoting one day only in the week to each. They are paid by a small tax levied on householders, besides a personal payment from each scholar amounting, in the case of agricultural servants, to about 8 *skilling*, or half a day's wages in the year. Instruction in the primary schools is limited to reading, writing, arithmetic, and singing, with sometimes the rudiments of grammar and geography. Almost every town supports a superior school; and in 13 of the principal towns is a *herde skole*, or college, the instruction in which includes theology, Latin, Greek, Norwegian, German, French, English, mathematics, history, geography, &c. Christiania has a university, founded by the Danes, in 1811, which is modelled on the system of the German universities, but differs from them in the professors not receiving fees; and in which the number of students varies from 600 to 800. (*Bremser*.) There are, also, a number of drawing and architecture, commerce and navigation, and other special schools. Sunday-schools have been widely established; and the Society of Public Good maintains a public library in most parts of the kingdom.

The press in Norway is altogether free. Every man is at liberty to print and publish what he pleases, being responsible, however, for what he does print. No tax exists on newspapers; and somewhat more than 20 are published in the kingdom, besides several scientific journals. But, notwithstanding these aids to science and advancement, Norwegian literature is not in a very flourishing state, and can by no means bear to be compared with that of Denmark or Sweden.

The army of Norway consists of about 10,000 infantry, 1,000 cavalry, 1,000 artillerymen, and 150 engineers. In all, 12,150 men. A militia is raised throughout the interior, into which all males, between 27 and 30 years of age, must enter; and on the sea coast there is a kind of marine militia, in which all seafaring men, and inhab. of sea ports of a certain age, must be enrolled. The naval force consists of 5 brigs and 117 gun boats. (*Atm. de Gøtha*, 1841.)

The public revenue, for the three years 1839—1841, was  
E c 2

estimated in the budget of the former year at 2,130,000 dollars, the expenditure for the same period is fixed at 2,415,236 dollars; the deficiency will be made up from the reserve funds in the hands of the government.

**People, &c.**—The Norwegians are members of the widely spread Teutonic race. The men are, in general, rather small in stature, but well made, and appear to have great muscular power. The Gludbrandsdal peasants are said to be the most athletic, but they are decidedly, as a body, shorter and slighter of limb than the mountaineers of Delecarlia, in Sweden. Their complexions, hair, &c., are fair, and resemble more of the Danes, and other N. German tribes, than the Swedes. The dress of the men varies greatly in the different districts, being, for the most part, more gay and fanciful than that of the women: in the towns, however, the upper classes have fully adopted the costume common in the rest of Europe. "The peasants possess much spirit and fire in their manner, are frank and undaunted, yet not indolent; never fawning on their superiors, yet paying proper respect to those above them. The principal mode of salute is by offering the hand; and when we gave them a trifle, instead of returning thanks by a word or a bow, they shook our hands with great frankness and cordiality." (*Cox's Travels in the North of Europe*, v. 7.) They are generally addicted to drinking, and the standard of morals is said to be, in other respects, higher in Sweden than in Norway. Women are very generally employed in field-labour; and beggars are numerous, especially in the towns. The average number of illegitimate births is about 1 in 5; and in one district it was, from 1826 to 1830, as much as 1 in 3. (*Laing*, 151.) But illegitimate children are most commonly legitimised by a legal act, and are seldom or never abandoned by their parents. The Norwegians are extremely fond of dancing, music, and dramatic entertainments, which are the principal amusements introduced at their festivities.

**History.**—Norway is interesting as the original seat of the Northernmen, who made such frequent descents on the coasts of England and France in the dark ages, and who were the ancestors of that remarkable people the Normans, who conquered and carried their institutions to England and other of the fairest portions of Europe.

Little is known of the history of Norway before the end of the 9th century, when Harold Haarfager united the whole country under his dominion. Christianity was introduced by Olaf I. in the succeeding century. In 1387 Norway was annexed to Denmark, to which it remained attached till 1814, when the Allied Powers gave it to the Swedes in indemnity for Finland. The Norwegians, indignant at the transfer, took arms, and elected Prince Christian Frederick of Denmark for their king; but the latter resigned the crown in the same year, and the country has since been united to Sweden; and this union will probably be maintained without difficulty so long as the Swedish cabinet attempts no rash or violent changes in the internal administration of the country. (*Official Reports; Laing's Norway* is an able work, but its statements are obviously much too favourable, and must be received with great modification; *Bremner's Excursions*, vol. i.; *Coxe, Inglis, Clarke, Barrow, &c.*, passim; *Diet. Géog.*)

**NORWICH**, a city of England, being a co. of itself, and an important manufacturing town, locally situated in hund. Humbleyard, co. Norfolk, of which it is the cap., on the navigable river Wensum (crossed here by 10 bridges), 56 m. N.E. Cambridge, and 96 m. N.N.E. London; lat. 52° 7' N., long. 1° 16' E. Area of the city and co. 5,920 acres: pop., in 1811, 37,256; ditto, in 1821, 50,284; ditto, in 1831, 61,116; and probably, in 1841, 72,000. The co. of the city is of an irregular circular form, with an average diameter of about 54 m., the city itself standing a little E. of its centre on the slope and summit of a hill, gently rising from the river. The buildings are, in a great measure, circumscribed by the remains of the ancient fortifications which still exist, particularly on the W. and N. sides of the city. The streets, with the exception of Giles Street, and one or two more, are narrow, and so irregularly laid out, as to preclude the possibility of any general description. It has, however, many handsome houses, open spaces, &c., and is well paved, watched, and lighted with gas; and its appearance from a distance is remarkably striking. The castle and cathedral are the principal public buildings; but it has no fewer than 36 par. churches, besides chapels and other edifices. The castle (supposed to have been built at intervals between the 10th and 12th centuries, by Canute, Roger Bigod, and others,) occupies a commanding eminence near the cattle-market in the centre of the town, and is a very imposing object at a distance: the part now extant forms a large square, on the E. side of which is an entrance tower, recently restored on the original plan. The entire building formerly occupied an area of 23 acres, and had three nearly circular and concentric lines of defence formed by a wall and ditch: the inner ditch, now laid out in gardens, still remains, in-

closing the inner ballium, and is crossed by a semi-circular bridge of one arch, 40 ft. in diameter, forming one of the largest and most perfect Saxon arches in the kingdom. In 1793 a co. gaol was commenced on the Castle-hill; and at the same time the ditch was enclosed with iron palisades and gates. Within the precincts, also, a new co. hall has recently been erected in the Tudor style. These modern additions, however, are quite incongruous with the ancient and venerable appearance of the original Norman fabric. The cathedral, originally built in 1096, but subsequently so repaired and enlarged that it did not assume its present form till the 16th century, is one of the largest and finest ecclesiastical edifices in the kingdom. The plan is almost wholly Norman. It consists of a nave, with side aisles, 2 transepts, and a choir with a semicircular E. end: the whole length from W. to E. is 411 ft., that of the transepts from N. to S. being 191 ft., and the breadth of the nave and choir, 72 ft. The cloisters form a square of 174 ft. within the walls adjoining the S. side of the nave. From the intersection of the cross formed by the nave, choir, and transepts, springs a lofty Anglo-Norman tower of 4 stories, highly ornamented and surmounted by an elegant spire, rising 317 ft. from the basement of the church. The W. entrance is extremely beautiful, and is the best point of view from which the cathedral can be seen; but the friable nature of the stone used in its construction has caused a decay of the more salient ornaments, and thus greatly diminished the external effect. The appearance of the interior is, on the whole, grand and imposing; the architecture, however, is of various tras, from the Anglo-Norman to the English perpendicular style; and modern alterations and additions have not always been in the best taste. The ecclesiastical establishment consists of a dean and 6 prebendaries, now 5, and having a nett revenue of 5,240*l.*, besides 8 minor canons with separate allowances; but it is to be subjected to various retrenchments. The bishop's diocese comprises the whole of Norfolk, with part of Suffolk, and the revenue amounted, in 1838, to 4,465*l.* The episcopal palace stands N. of the cathedral, on the site of that built by the founder: it was erected in 1318, and, after undergoing repairs, and receiving considerable enlargements from successive prelates since the Restoration, has become a tolerably commodious residence, attached to which is a large and well-laid out garden, comprising some ruins of the hall belonging to the ancient palace. Near the W. front of the church is an ancient chapel, dedicated to St. John the Evangelist, which had underneath a charnel-house: it is now used as a free grammar-school. Near it are the two ancient gates of St. Ethelbert and Erpingham; the former is in the decorated English, and the latter a fine specimen of the late perpendicular style. Among the churches, which are here more numerous than in any city except the metropolis, a few deserve notice as good specimens of ancient architecture. St. Peter's, Mancroft, at the corner of the market-place, is a large edifice in the perpendicular style, surmounted at its W. end by a lofty tower; the inside is remarkably light and elegant, and it has a fine altar-piece and E. painted window. The churches of St. Andrew, St. George Colegate, St. Lawrence, and St. Saviour, present similar architectural features, having high towers either of stone or flint. Those of St. Ethelred, St. Benedict and St. Julian, have round towers, and belong apparently to the early Norman era; but they have been much altered and mutilated. Norwich abounds, also, with the remains of other ecclesiastical edifices. The common-hall, in St. Andrew's parish, consists of the nave of a church attached to a monastery of Black Friars; the workhouse till very lately occupied an old Flemish convent, near which is the Dutch church, now used as a chapel to the workhouse, and St. Giles's hospital comprises portions of the former church of St. Helen's. There are 2 R. Catholic chapels, 7 places of worship for Baptists, 3 for Independents, 2 for Calvinist-Methodists, 5 for Wesleyan or Primitive Methodists, 1 for Swedenborgians, 1 Unitarians; besides which, the Society of Friends have 2 meeting-houses, and the Jews a synagogue. Attached to the various places of worship are numerous Sunday schools, of which about a half are supported by the Established Church, and the rest by dissenters; the whole furnishing religious instruction to upwards of 7,000 children; besides which, there are several endowed charity-schools, with national, Lancastrian, and infant schools, either wholly or in part supported by subscription, and attended by about 3,500 children of both sexes. The free grammar-school, founded in 1318, and restored by Edward VI., is maintained out of the funds of a corporation charity, called the Great Hospital: it has an upper and under master, and possesses fellowships and exhibitions at Calus College, Cambridge. The boys' and girls' hospitals, founded in the 17th century, are supported by the produce of estates in trust of the corporation, and furnish clothing and instruction to upwards of 100 children. Doughty's hospital, established

In 1517, and under the same patronage, provides for numerous infirm and aged persons; but the principal corporation charity is St. Giles's hospital, near the cathedral, otherwise known as the 'Great,' or 'Old Man's hospital,' maintained by rents and other property, averaging 7,000*l.* a year, and providing clothing, food, and a small stipend for 165 inmates, besides servants. It appears, however, that till very recently these trusts were most extensively abused for political purposes. (Comp. Char. Comm. 27th and 29th Report, with Mun. Corp. Report, App. iv.)

Among the charitable institutions of Norwich supported by subscriptions, the first place is due to the Norfolk and Norwich hospital, occupying a large brick building, erected in 1771, and enlarged in 1802: it has accommodation for about 120 in-patients, and has about the same number of out-patients. Bethlelem hospital is a well-endowed innatic establishment, established in 1713; and at Thorpe, about 2 m. distant, is the county lunatic asylum. The other principal institutions of this kind are the dispensary, eye-infirmary, magdalen asylum, lying-in charity, and blind asylum, with numerous minor benevolent associations, bible and tract societies, provident clubs, &c.

The buildings devoted to the purposes of municipal or civil jurisdiction comprise the guildhall, a large old building of the 15th century, but subsequently much altered and enlarged, though even now it is little worthy of so large a town; 2. St. Andrew's, or the New Hall, a noble fabric, previously mentioned as having formed part of an old Dominican church; 3. the County Hall, in the castle precincts, a fine and commodious building of perpendicular architecture and recent construction; 4. the new city gaol and brewery, a modern and well constructed edifice outside the wall, near St. Giles's Gate; and, 5. the co. gaol and house of correction, on the castle-platform, a large but plain building, well adapted for its purpose, the establishment being conducted on the system of silence, separate confinement, and hard labour; the criminal prisoners average about 80, the weekly cost of each being 2*s.* 11*d.* (Prits. Inspec. 4th Rep.) A commodious corn exchange was erected in 1828; and the cavalry barracks in Pockthorpe are substantially built of red brick, enclosing an area of 10 acres. Norwich has also, a large workhouse, belonging to the united par.: the sum expended for the relief of the poor amounted in 1839 to 14,576*l.*

Among the literary establishments is the public library, originally formed in 1784, and now occupying a handsome structure in the Grecian style, lately erected on the site of the old city gaol; the Norfolk and Norwich Literary Institution, occupies a building of recent erection, and has a good library and a numerous body of subscribers. In the same building is a museum, but not connected with the above society. A society, called the Norfolk and Norwich Art-Union, has occasional exhibitions. Concerts are held in the common hall in St. Andrew's par., and the musical festivals are held in St. Andrew's Hall. Norwich has also a neat modern theatre, and assembly-rooms, 2 news-rooms, and a mechanics' institute. Two newspapers, (the "Norfolk Chronicle," and "Norwich Mercury,") are published every Saturday.

Norwich has been celebrated for its manufactures since the era of Henry I., when the Flemings first settled here, and introduced the spinning and weaving of long woollen stuffs, called *worsted*, from the name of the village in which the business was first established: the worsted and bomazine trade was also greatly increased during the 16th century, by the immigration of Flemish weavers from the Low Countries. Norwich, however, appears to have attained its greatest prosperity at the close of the 18th century, when the value of its goods exported to the E. Indies, Russia, and other places abroad (consisting chiefly of camlets and camelotes, callamances, worsted satins, figured stuffs, lastings, damasks, and shawls), have been estimated to amount to 1,000,000*l.* a year, or to 1-14th part of the British manufactured goods exported at that period. (*Handloom Weavers' Report*, part ii. p. 303.) We believe, however, that this estimate is beyond the mark; and since then the manufactures of Norwich have materially declined, or rather, perhaps, have not kept pace with their progress in Lancashire and the West Riding of Yorkshire, &c.: the greater facilities enjoyed by the latter, in the command of coal, the absence of corporation privileges, and the greater scope given to competition and improvement, have enabled them to produce, at cheaper rates, several articles that were at one time peculiar to Norwich. In fact, the greater part of the yarn now used in making Norwich fabrics is spun at Bradford, in Yorkshire; and the worsted manufacture of the West Riding is now decidedly more extensive and valuable than that of Norfolk.

The principal fabrics that are at present manufactured in and about Norwich comprise bandanas, bombazines and paramattas, flannel, or ornamental shawls and shawl borders, gauzes and crapes, princettas (a fabric of mixed warp, with a worsted shock), silk, silk shawls,

woollen shawls, jacquard, coach-lace, lustrs, shalls and mousselines de-laine, fringes, &c., with sacking and horse-hair. In 1839, there were in the city and its vicinity 5,075 looms, of which 1,021 were unemployed; and of the 4,054 looms then at work, there were 3,338 in the weavers' houses, and 656 in shops and factories: indeed, by far the greater part of the looms belong to families having only one or two. The labourers at these looms comprise 2,211 men, and 1,648 women, with 195 children. In the same year, two silk mills employed 731 hands, three worsted mills 385 hands, two woollen mills 39 hands, and one cotton mill 130 hands, making a total of eight mills wrought by a power (chiefly steam) of 1514 horses, and employing 1,285 persons. With respect to the weavers' wages, no general reduction has been made since 1829; and the rates of payment for the various fabrics are, on the whole, pretty fairly adjusted according to the labour: if there were full employment at the present scale, the weavers would be able to secure for themselves a comfortable maintenance; but they are usually out of employ 4 months a year, so that wages are really a third less than they appear to be. The gross wages of the weavers when fully employed, range between 8*s.* and 25*s.*, those engaged on flannels, shalls, and fine bombazines, earning from 15*s.* to 25*s.* a week; but when "play-time" and expenses have been deducted, the average nett wages of the hand-loom weavers are said to amount to only 7*s.* 2*d.* a week; but this, we believe, is speaking generally, below the mark. A power-loom factory of mohair (or Angora wool) has been established at Lakenham (one of the out townships), and employs about 400 hands, chiefly children. As respects the health of the weavers, Dr. Mitchell reported to the hand-loom commissioners, that Norwich is most favourably situated, the ground being on a bed of gravel over a substratum of chalk; that the working people, weavers included, have a fresh and healthy complexion; and that the physical condition of the weavers is much better than that of the same class in Spitalfields. Epidemics, however, occasionally prevail, as in Bethnal Green; but not to the same extent, or so continually, owing to the better air and house-ventilation usual in Norwich. The prevalent diseases are dyspepsia, consumption, female diseases, and those belonging to children, which last are attended with a large mortality. (*Handloom Weavers' Rep.*, ii. 320.) On Sunday, the work-people, especially the women, are well dressed; in general they attend divine service, and drunkenness prevails less than in most large towns. Frugality, however, is said to be little practised; few save any thing when they have the means; and when work is scarce, they are in the greatest distress. The industry and morals of the people have suffered materially from their frequent strikes and riots; from the disunion among the master-manufacturers; the party spirit which pervades all classes, and the electioneering abuses, for which Norwich is pre-eminent. (*Handloom W. Rep.*, ii. 332-336.)

Besides its worsted and silk manufactures, Norwich has iron and brass foundries, snuff-mills, vinegar-works, malt-houses, breweries, oil, mustard, and corn-mills; but they are not on an extensive scale. The excise duty collected in this district amounted, in 1839, to 183,193*l.* The trade of the town consists in the exportation of its manufactures, chiefly to London and other English ports, but partly also abroad, in exchange for corn, coal, and various other articles of consumption. The town has, since 1833, had the important advantage of being accessible to vessels drawing 10 ft. water, by means of the canals connected with the Lowestoft navigation (*see* LOWESTOFT); and its trade will also, no doubt, be materially promoted by the Eastern Counties' Railway. A branch bank of the Bank of England is established here, and there is a joint-stock bank, called the East of England Banking Company, besides 2 private banks and a savings' bank. The Norwich Union Insurance Company is an establishment of great importance; but which has been shown by a late investigation to have been grossly mismanaged.

Norwich, which claims to be a bor. by prescription, and received its principal charter constituting it a separate co. in 1403, was governed before the Mun. Reform Act by a mayor, 24 aldermen, and 60 common councillors; but by the provisions of that act it is divided into 8 wards, and has a mayor, with 15 other aldermen, and 48 councillors. The bor. has also a commission of the peace under a recorder, and a sheriff's court for the recovery of debts to any amount: the assizes and quarter sessions for the co. are also held here. Norwich has returned 2 mems. to the H. of C. since the 25th Edward I., the right of election, down to the Reform Act, being vested in the freemen and freeholders not receiving alms. The electoral limits were left untouched by the Boundary Act, except that the castle precinct was included. Registered electors, in 1839-40, 4,334. Norwich is likewise a polling-place and principal election-town for the E. div. of Norfolk. Markets are on Wednesday and Saturday, but chiefly on the latter, for corn and cattle;

large horse and sheep fairs, day before Good Friday, Easter-Monday, and Whit-Monday.

Norwich is supposed to have risen from the decay of an old Roman town, now known as Caistor St. Edmund's, probably the *Veniſa Icenorum* of antiquity. A royal fortress was erected here by the East-Angles in the 6th century, and a town was gradually formed round it, which, even before the Norman Conquest, was so important as to have a mint and 25 par. churches, with 1,320 burgesses. William the Conqueror bestowed the castle on Roger Bigod, one of his Norman followers, who probably erected the present keep. It continued in the possession of his descendants till the reign of King John, when it was seized by the king, and finally surrendered to the crown in 1224. In the reign of Henry I., a colony of Flemings came over, who were joined by a still greater number of immigrants in 1336, from which time Norwich became an important seat of manufactures. In 1403, Henry IV. separated the city from the co., and made it of itself with peculiar privileges. Its prosperity, however, owing to plague, scarcity, and frequent fires, had begun to decline, when, in 1568, a fresh immigration took place of 4,000 Flemings, who had fled from the persecutions of the Duke of Alva. In the civil wars of Charles I., Norwich declared for the parliament, and was occupied by its forces till Cromwell became protector. It is remarkable in ecclesiastical history for its numerous convents and other religious establishments, the funds of which have in most cases been converted to charitable uses, and placed in the trust of the corporation. Among other distinguished persons, Norwich has given birth to Matthew Parker, archbishop of Canterbury in the reign of Elizabeth; John Cosin, bishop of Durham; Dr. Kaye, one of the founders of Gonville-and-Caius College, Cambridge; Dr. Samuel Clarke, the author of the famous work on the Attributes; and Beloe, the translator of Herodotus. (*Parl. Papers; Comm. Reports, &c.*)

**NORWOOD**, a populous village of England, hinds. Brixton and Wallington, co. Surrey, on the top and sides of a steep range of hills, 5½ m. S. London. Pop. estimated at about 6,000. It is very irregularly laid out, chiefly on a wide and elevated common, commanding an extensive view of the metropolis northward, and of the plains of Surrey southward. The neighbourhood is studded with villas, belonging partly to merchants and others engaged in business in the city, and partly to persons retired from active pursuits. Of late years, Norwood has been much frequented in consequence of the discovery of a mineral spring at a place called *Bau-tieu*, or Beulah; where large gardens, laid out with terraces, plantations, &c., have been opened to the public for fêtes, picnic parties, &c. On the N. acclivity of the hill is a handsome church, opened in 1825 (subordinate to Lambeth), with a Corinthian portico and steeple. There are, also, places of worship for Wesleyan Methodists and Independents, with attached Sunday-schools. A school of industry, established here in 1812, furnishes instruction in reading, writing, and needle-work to nearly 300 girls. Here also is a large national school for children of both sexes, and a Lancastrian school, attended by about 200 boys. But the principal ornament of Norwood is the South-Metropolitan Cemetery, lately opened. It comprises about 40 acres, has 2 fine chapels, is beautifully laid out, and cost in all from 70,000l. to 75,000l.

**NOTO**, a city of Sicily, intend. Syracuse, cap. distr., on a hill near the Noto, and 16 m. S.W. Syracuse. Pop., in 1831, 11,556. It stands near the site of the ancient *Nectum*, now called *Vecchio Noto*, the surviving inhabs. of which removed thither after the destruction of their city by an earthquake in 1693. Noto has large squares and regular streets, and is one of the best built, most agreeable cities of the island. Besides many handsome private residences, it has various ecclesiastical buildings, a council-house, lyceum, hospital, &c. Some, however, of its public buildings, being on too magnificent and expensive a scale for a provincial town, are unfinished. There is in this city an excellent private museum, especially of medals and coins, and also of antiquities, minerals, &c. The ruins of an amphitheatre and of a gymnasium are the principal remains of the ancient city, which stood about 4 m. N.W. the modern town. It is rather unhealthy, but is surrounded by a very fertile tract of country, in the produce of which it has an active trade. (*Smyth's Sicily*, p. 177.; *Russell's Tour*, 1381-40.; *Ortolani, Dizionario della Sicilia*, &c.)

**NOTTINGHAM**, a central co. of England, in the basin of the Trent, having N. the cos. of York and Lincoln, E. the latter and Leicester, and W. Derby. It is oval-shaped. Length, N. to S., 50 m. Area, 535,680 acres; of which about 470,000 are arable, meadow, and pasture. The Trent partly traverses and partly bounds the co. on the E., and it is also traversed by its important tributary, the Idle. Excepting the vales of the Trent and Belvoir, the surface is mostly hilly and uneven; but the hills do not rise to any considerable height. The soil in the vales is either a sandy or a clayey loam, and is

very fertile; elsewhere it is principally sandy and gravelly. The climate is reckoned peculiarly dry and good. The ancient forest of Sherwood, the scene of the exploits of Robin Hood and his companions, anciently covered the greater part of the hilly portion of this co. along its W. side; but it has long since been disforested, and now contains some magnificent seats and parks. Agriculture, though still susceptible of material improvement, is, on the whole, good. The vale of the Trent is famous for its crops of oats; but wheat, barley, beans, peas, and cabbages are also extensively grown. There is a considerable extent of grass and meadow land; and irrigation has been extensively practised, particularly on the estate belonging to the Duke of Portland. The breeding of heavy black horses is pursued to some extent. Cattle, principally of the short-horned variety. Estates of all sizes; many small. Farms generally small, and mostly held at will. Average rent of land, 19s. 11½d. an acre. Coal is abundant in the W. parts of the co. Nottinghamshire is the grand seat of the manufacture of bobbinet, or Nottingham lace, and also of the manufacture of cotton and silk stockings. It is divided into 6 wards, 1 liberty, and 285 parishes. It returns 10 members to the H. of C., viz. 4 for the co., and 2 each for the boroughs of Nottingham, Newark, and East Retford, which are its principal towns. Registered electors for the co. in 1839-40, 7,360; being 3,746 for the N., and 3,614 for the S. division. In 1831, the co. had 44,936 inhab. houses, 47,111 families, and 225,327 inhab.; of whom 110,457 were males, and 114,871 females. Sum expended for the relief of the poor in 1838-39, 53,273*l.* Annual value of real property in 1815, 751,626*l.* Profits of trade and professions in do., 314,501*l.*

**NOTTINGHAM**, a parl. and mun. bor., and extensive manufacturing town of England, and co. of itself, locally situated in the above co., of which it is the cap. hind, Broxtow, on the Leen, about ¾ m. from its junction with the Trent, crossed here by an old bridge of 19 arches, 14 m. E. by S. Derby, and 108 m. N.N.W. London. Area of parl. bor., which is co-extensive with the co. of the town, and comprises three parts, 2,610 acres. Pop., in 1821, 40,415; do., in 1831, 50,680; and estimated in 1841 to exceed 60,000. The town stands partly at the bottom and partly on the sides of a steep red sandstone rock, the summit of which is crowned by a modern building, called the castle, occupying the site of a castle built by the son of William the Conqueror, and demolished by order of Charles II. The streets, many of which rise above each other in successive terraces, are very narrow, and irregularly laid out: two long thoroughfares run nearly parallel N. and S., crossed at right angles by other streets; and considerable improvements have taken place in the N. part of the town. All the streets are well paved, and lighted with gas; there is a good supply of water from two companies, and the police is tolerably effective. The market-place is spacious, and surrounded by handsome buildings, has, at its E. end, the new exchange, a quadrangular building of four stories, erected at the beginning of last century, and much improved within the last few years: the lower part comprises shops, butchers' stalls, &c., the upper stories being used for assemblies and public business. The county hall, on the high pavement, near St. Mary's church, is another very conspicuous edifice, comprising two law courts, a grand-jury room, and other apartments, for the business of the assizes. Behind it, and connected by a long covered passage, is the co. prison, built on the edge of a rock, below which, at a depth of 70 ft., is the densely crowded and low quarter, called the Marsh. "The building has been altered and enlarged at various times, but is even now very ill suited for carrying on any efficient system of prison discipline: the supervision and control of the prisoners is hence no easy task; and the entire management is susceptible of great improvement." The borough house of correction, or "St. John's" prison, so called from occupying the site of an old monastery, is more conveniently situated for its purpose; and shortly after the passing of the Gaol Acts was re-constructed, on the principles of classification. It comprises two sides of a square, each three stories high, possesses considerable capabilities, and is in an efficient state, both as respects discipline and general management. At Lenton, about ½ m. from the town, is a small gaol, belonging to the Honour of Peveril; but "it is small, insecure, and totally unfit for its purpose: indeed, its abolition would be a public benefit." (*Prison Inspectors' 3d Rep.*, ii. 36-39.) The town-hall is a large building, three stories high, of which the lower part is used as a brewhouse, while the upper apartments are used for corporate business, and other purposes. The other public buildings consist of a small theatre, little frequented, the yeomanry riding-house, now used as a circus, and the grand stand, on the race-course N. of the town: with eight churches and chapels, besides numerous places of worship for dissenters.

St. Mary's church, standing on a bold eminence, 170 ft.

Above the level of the adjacent meadows, is a cruciform structure, in the perpendicular style, with an elegant square tower, rising from the intersection of the nave and transepts. A few years ago it underwent a thorough repair, on a plan consistent with its original architecture, and is now the handsomest church of the town: the living is a vicarage, of the annual value of 700*l.*, with a glebe-house, in the gift of Earl Manvers. St. Peter's, near the market-place, is a building of mixed architecture, partly Saxon and partly Gothic, with tasteless modern additions, being remarkable chiefly for its lofty spire. St. Nicholas, erected in 1678, on the site of a more ancient edifice pulled down during the parliamentary wars on account of its proximity to the castle, is of brick, with stone corners: it comprises a nave with 2 side-aisles, and has a light appearance outside, as well as good interior accommodation. St. James's Church, on Standard Hill, in the district called the Park, is a modern edifice in the perpendicular style, with a low embattled tower. St. Paul's Church, of Grecian architecture, with a Doric portico, is capable of accommodating upwards of 2,500 persons. It was formerly subordinate to St. Mary's, but has recently been made an independent district parish church. Trinity Church, a handsome Gothic structure, with a tower and spire, fitted to accommodate 1,400 persons, is now nearly completed. There are numerous places of worship for dissenters, including a Rom. Catholic chapel, meeting-house for the Society of Friends, and Jews' synagogue, connected with which, as well as the churches, are above 30 Sunday-schools, attended by above 5,000 children of both sexes. The Blue-coat School furnishes clothing and instruction to 60 boys and 20 girls; a national school had, in 1834, 570; and 3 Lancastrian schools, 484 children: there are also 4 other subscription-schools, and 5 infant-schools. The free-grammar school was founded in 1513, and before the close of the last century had fallen into disuse; but in 1807 the establishment was revived, and it now furnishes the means of a respectable classical education to between 50 and 60 boys.

The other charities of Nottingham comprise, 1. Plum-tree hospital (founded in the reign of Richard II., and subsequently enlarged,) for 13 aged widows, besides out-pensioners; 2. Collins' hospital, which provides ample accommodation for 24 poor men and women, with a stipend and allowance of coals; and, 3. Lambly hospital, for decayed burgesses or their widows; besides which, several other charities confer essential benefits on the humil and aged of both sexes. On Standard Hill is the general hospital or infirmary, standing in a spacious enclosure, and comprising a centre and two wings, with large, airy wards for patients, about 1,300 of whom are relieved, on an average, every year. The lunatic asylum, opened in 1812, is in New Sneinton, and has good accommodation not only for pauper but other patients. Nottingham has likewise 2 dispensaries, and several other benevolent institutions, with bible, tract societies, &c.; and there are few towns in which so much is expended in the relief of the sick and necessitous of the working classes. The three parishes of Nottingham are formed into a poor-law union: the maintenance of the poor, in 1839, cost 18,556*l.*

The chief literary establishment of the town is the public library and news-room in the Market-place, which has a collection of more than 8,000 vols., a museum of mineralogy, lecture-rooms, &c., with an attached literary society. A mechanics' institute, established in 1824, has a considerable library, with apparatus, &c. Nottingham, also, issues 3 weekly newspapers, the *Journal, Review, and Mercury*.

Nottingham is celebrated as being the great centre of the bobbin-net and lace manufacture, besides which it enjoys, in common with Derby and Leicester, a large share of the hosiery-business. The first attempt at the manufacture of lace by machinery dates as early as 1768; but though this was followed by many subsequent attempts to shorten the tedious process of making lace on the pillow, it was not till 1809 that Mr. Heathcoat, of Tiverton, discovered the correct principle of the bobbin-net frame, and obtained a patent for his invention. Steam-power, first introduced in 1816, and becoming general in 1822-23, gave a great stimulus to the trade, which was further increased on the expiration of Heathcoat's patent. Prices fell in proportion to the increased production; and the Nottingham lace-frame soon became the organ of general supply, rigallung and supplanting, in plain nets, the most finished productions of France and the Netherlands: so much so that large quantities were smuggled into those very countries from which lace was formerly smuggled into England. But the great object of the manufacturer is not so much to produce very fine, and, consequently, high priced lace, for which the demand must at all times be very limited, as to improve the fabric and lower the cost of the inferior qualities for which the demand is comparatively extensive. At present (1841) there are supposed to be about 1,600 bobbin-net and warp-lace frames employed in the town and its

immediate vicinity: the wages paid to the individuals engaged in the trade vary from 1*s.* 6*d.* to 5*s.* per week for children, 7*s.* to 15*s.* per do. for young people and inferior men, 15*s.* to 20*s.* per do. for power and hand-frame men on plain work; and 20*s.* to 40*s.* per do. for men working hand-frames, weaving patterns.

The health of the power-machine workmen is said to be, on the whole, good; the factories are neither hot nor confined; and the workmen have only to superintend, not work the machines. Hand-machine labour is much heavier; but as it is the custom to work by shift, each man is seldom more than 6 hours a day at the frame. Hand-machines used to be let out at a weekly rent to the workmen by capitalists; but they are now much reduced in numbers; and nearly all those that now exist are the property of those who work them, either by their own hands, or by the aid of journeymen.

Subordinate to its other departments, the town had, in 1839, 3 cotton mills, 2 worsted mills, and 3 silk mills; employing, in all, nearly 900 hands. Nottingham has likewise very extensive establishments for making bobbin-net and stocking-frame machinery, large bleaching-works, malthouses, and breweries: the Nottingham ale has obtained considerable celebrity. There are 2 banking companies, and 3 private banks. The Nottingham Canal connects the town northwards with the Cadnor Iron and coal district, and southwards with the Trent, and the great canal system of the N. midland counties. It has also very extensive railway communication, by means of the Midland Counties' Railway (opened in June, 1840), which is united southward with the Birmingham line at Rugby, and with the North Midland Railway, at Derby. It is 57½ m. long, and cost about 1,300,000*l.*

Nottingham claims to be a bor. by prescription, but received charters from Henry II., and many subsequent monarchs, Henry VI. having granted to it the additional privilege of being a co. of itself. It is divided, under the Municipal Reform Act, into 7 wards; and is governed by a mayor, 13 other aldermen, and 42 councillors: it has likewise a commission of the peace, under a recorder. Corporation revenues, in 1839, 13,718*l.*, exclusive of 2,440*l.* accruing from the sale of property. A court for the recovery of debts under 40*s.* is held monthly; the assizes, both for the bor. and co., are held in spring and summer; and quarter sessions for the S. div. of the co., in Jan., April, June, and Oct. Nottingham has sent 2 mems. to the H. of C. since the 12th Edward I., the right of election down to the Reform Act being in the freemen, (by birth, apprenticeship, and purchase,) and in freeholders to the amount of 40*s.* The electoral limits were not altered by the Boundary Act, Reg. electors, in 1839-40, 5,436. Nottingham is also a polling-place for the N.W. div. of the co. Markets on Wednesday and Saturday, but principally on the latter. Large fairs for cattle, cheese, &c., March 7th, 8th, and 9th; Oct. 2d, 3d, and 4th; 3 other smaller fairs.

The origin of Nottingham is involved in obscurity; but so early as in the time of Alfred, it was of sufficient importance to give its name to the co. The castle was built by William Peveril, the natural son of William the Conqueror. Edward III. held several parliaments here, in one of which were enacted the laws relating to the settlement of the Flemish manufactures. Nottingham was the chief place of rendezvous for the troops of Edward IV. and Richard III. during the wars of the Roses; and it was here, in 1642, that Charles I. formally raised his standard against the parliament. The inhabs., however, being attached to the republican cause, the king was soon compelled to abandon the town and castle to the parliamentary forces. Nottingham has been the scene in more recent times of disturbances among the working classes. In 1811, when considerable distress prevailed among the weavers in consequence of our exclusion from the continental markets, combinations were formed among the workmen for the purposes of breaking the frames, which they erroneously supposed had thrown them out of employment; and to such an extent did they proceed, as to call for the most vigorous interference of the legislature. Disturbances of a minor nature have occurred several times since that period; but the only serious riot of late years took place on the 8th Oct. 1831, during the agitation preceding the passing of the Reform Act, when the rioters burnt down the castle. (*Parl. Papers; Private Information.*)

NOVARA (an. *Novaria*), a city of the Sardinian continental dom., cap. division, prov. and maid. of its own name, on an eminence between the Gogna and Terdopina, 52 m. N.E. Turin, and 27 m. W. by S. Milan. Pop., in 1838 (ex. garr.), 18,524. It is surrounded by ramparts and ditches, and defended by a castle. Though the streets are mostly narrow, it is, on the whole, tolerably well built, and has many handsome residences. The cathedral, the Dominican church, and that of St. Gaudenzio, and the large barracks, are the principal public edifices. Novara has numerous convents, several hospitals and colleges, a theatre, and a government loan bank. It is a bishop's see; and has manufactures of silk and

linen fabrics, leather, &c., and 3 large annual fairs. Under the French it was the cap. dep. Agogna. (*Dict. Géog.*)

NOVA SCOTIA, one of the British colonies of N. America, consisting of an oblong-shaped peninsula, between lat. 43° and 46° N., and long. 61° and 67° W., connected with New Brunswick by a low sandy isthmus, only 14 m. across, and separated from Cape Breton by the narrow strait called the Gut of Cansewauk. It is about 200 m. in length, and of very various breadth. Area, according to Halliburton, 15,620 sq. m., about 1-5th part of which consists of lake, rivers, and salt-water inlets. Pop., in 1838, 155,000. The coast-line is extremely irregular, forming numerous capes and bays. Capes George and Cansewauk are the chief promontories on the N.E. side, and at the S. extremity is Cape Sable. The basin of Minas is a deep inlet on the N.W. side of the peninsula, forming a part of the Bay of Fundy, which separates Nova Scotia from New Brunswick. St. Mary's and Argyle Bays are on its S.W. side; Pictou, Antigonish, and Chedebucto Bays form the chief irregularities on the N. coast; and the E. coast, from Cape Cansewauk to Cape Sable, is indented with almost innumerable small bays, harbours, and rivers. Rocks and islands fringe its shores, and the aspect of the entire Atlantic coast is exceedingly picturesque. Deep water is found, almost without exception, close to the rocks and islands; and the peninsula presents towards the Bay of Fundy bold and almost precipitous cliffs. The interior is intersected in almost every direction by streams, rivers, and lakes; but, with the exception of Annapolis River and Lake Rossignol, connected with the sea by the river Mersey, most of them are of very inferior size. The peninsula has no elevations deserving the name of mountains; its highest point, Mount Ardoise, between Windsor and Halifax, not rising more than 700 ft. above the sea. A pretty high ridge of hills skirts the shore of the Bay of Fundy.

As respects geological constitution, "the greater part of Nova Scotia may be described as a low range running from S.W. to N.E., resting on solid rocks of granite, trap, and slate alternately. Towards the E. end of the peninsula are beds of sandstone, graywacke, gypsum, limestone, and many other kinds of rock; and on these strata there is usually a rich deep soil. The barren tracts are chiefly of sand or clay; and in these parts, especially about Pictou, are the great coal-fields of the peninsula. Iron is abundantly interspersed among the coal strata; and different varieties of lead and copper ore are met with, though in smaller quantities. Near Pictou are several brine springs, one of which is saturated with salt in the proportion of 12 to 88 of water." (*Report on Brit. N. America*, App. B., p. 140.)

The climate of Nova Scotia, with respect to temperature, bears a general resemblance to that of Lower Canada, and is subject to the same great and sudden variations. The greatest degree of heat observed at Halifax by Captain Moorsom was 95° Fah., and the extreme of cold 10°. The difference of temperature within 24 hours often exceeds 50°, and a difference of 69° has been known to occur within the same period. These changes, however, are seldom so frequent or extreme in the interior, or in those parts of the prov. less immediately on the Atlantic. Notwithstanding the occasional lowness of temperature, the maritime situation of Nova Scotia tends to abridge the duration of the frost. The severe weather usually sets in about the middle of December, and it is not uncommon for the frost to break up at the end of January. The quantity of snow not only varies greatly from year to year, but is also very unequally distributed throughout the prov. The snow-storms are very heavy, some having been known to continue for 60 or 70 hours without intermission. (*Moorsom*, p. 169.) The severity of winter ends late in March, when chill, damp, east and north-east winds succeed, caused by the breaking-up and passage along the coast of vast fields of ice from the Gulf of St. Lawrence. Hence the most disagreeable season in this country is from the vernal equinox to the end of April. Spring approaches tardily and irregularly, the close of May often arriving before the fields are fully clothed with verdure. A very warm summer occupies 3 months, dating from the early part of June. May and June are marked by the prevalence of fogs, especially on the eastern coast, while July and August are usually remarkable for a continuance of calm serene weather. Autumn, the most beautiful season of the year, may vie with that of any country. September and October are very similar to the same months in England; but in November, and even December, there are days which, for beauty, warmth, and mildness, are equal to the loveliest mornings of an English May. (*Moorsom*, p. 167.) Westerly and N.W. winds are most prevalent; the fine bear to the wet days a proportion of 8 to 5. The extreme variations of temperature common in this country have not that injurious influence on health which one might naturally expect. Rheumatic and inflammatory complaints are far more prevalent than any other; and a

considerable annual mortality occurs from pulmonary consumption. Intermittent fevers, however, so common in Canada and the United States, are here wholly unknown; typhus occurs only in a mitigated form, and the ravages of the yellow fever have never been felt. Nova Scotia, therefore, may, on the whole, be termed a healthy country. Its inhabitants often live to extreme age; many attain ninety and even a hundred years. (*Murray's Brit. America*, li. 119.)

As respects agriculture, Nova Scotia is estimated to comprise somewhat more than 5,000,000 acres of land available for tillage; the proportion of land under cultivation at present being to the wilderness as to 36. The first large public grants of land appear to have been made in 1760; and in less than 13 years from that time, nearly 8,000,000 acres (including the whole of Prince Edward's Island, then a part of Nova Scotia) were granted in lots, ranging from 20,000 to 150,000 acres, to individuals or companies in England. These grants contained conditions of improvement; but the grantees, after having incurred some expense in trying to settle their extensive properties, abandoned the land to its few inhabs., or suffered it to remain absolutely waste. Efforts made to escheat these lands to the crown were repeatedly baffled by the influence of the absentee proprietors; and thus the province was effectually closed against immigration, either from England or the neighbouring colonies. Large grants of escheated land were, however, made on the breaking out of the American war to refugee royalists; but these were seldom occupied, and are now, for the most part, uncultivated, opposing serious obstacles to the cultivation of the lands around them. Licensed occupiers, however, and squatters, have improved some portions of these tracts; and to them the progress made by the colony in population and agriculture is almost entirely ascribable. The system of selling in lots not exceeding 1,000 acres was introduced in 1827; and the average price of unimproved land, in 1830, amounted to 2s. 3d. an acre. The largest portion of it, however, has been acquired, not by actual or intending settlers, but by speculators, who, tempted by the low price, have purchased, on account of the timber, or with a view to profit from a future sale. Indeed, out of 5,750,000 acres that have been granted in Nova Scotia, only about 400,000 are under cultivation. (*Report on British N. America*, App. B., pp. 12, 13, and 129.)

The total quantity of land still ungranted in Nova Scotia was estimated by Mr. Morris, in 1838, at about 2,500,000 acres; but of these not above 1-8th part is fit for tillage. The country, as respects the quality of land and the state of agriculture, may be divided into three distinct sections. The E. division, formed by a line from the mouth of the river Philip to that of the St. Mary, presents a strong upland soil, well adapted for grain, and varied with strips of rich intervalle land along the sides of its rivers. "The upland consists principally of a strong loamy clay, intermixed more or less with sand and gravel, the soil of the intervalle being a rich sand, alluvial loam. The lands about Pictou are very rich and productive, 7 successive crops of wheat being frequently raised without the use of manure. Agriculture, however, is only imperfectly understood, and no proper use is made of the resources of the soil. In the S. district the land is almost wholly upland, with very little intervalle or marsh; the soil is extremely rocky, varying from a strong loam to a light sand. Good returns of wheat and the coarser grains are obtained in some places; but the state of the farms generally exhibits the very reverse of intelligence. The unskillful use of manure, the indiscriminate employment of sea-weed, and, in many instances, the total neglect of any manure whatever, have retained those lands in a poor and backward state which better management would have rendered comparatively productive." (*Moorsom*, p. 183.) The N.W. division comprises upland, intervalle, and marsh land; the first two being poor, and scarcely susceptible of any improvement. The marsh land is of two kinds,—one called salt-marsh, being little more than a flat surface of spongy soil, overflowed at spring-tides, and covered with a long rank grass, sometimes converted into hay; the other, called the dyke-marsh, owes its formation to the impetuosity of the tide in the Bay of Fundy, which brings along with it fine loamy particles, which it leaves behind as it recedes, and thus, in course of time a succession of layers raises the surface to the level of spring-tides, when an embankment or dyke, called an *aboiteau*, is formed to prevent any farther overflow. A newly-enclosed marsh is usually left untouched for the first three or four years; in the third year it is fit to receive the plough, and is then sown with wheat, the first crop averaging about 60 bushels an acre; and on long cultivated marshes the returns average about 40 bushels of wheat and 24 tons an acre of hay. The crops usually cultivated are wheat, oats, and barley, with smaller quantities of peas, buckwheat, and rye. Potatoes are universally cultivated, and

form the staple article of food throughout the province. Crops of beans or cabbage are rarely seen, and horticulture meets with very little attention.

The average produce per acre of medium farm land is estimated at 28 bushels of wheat, 40 of oats, 200 of potatoes, and 2 tons of hay; but all calculations of this nature are very vague, and little to be depended on. Good dairy-farms are found in the N.W. division. Hired labour is difficult to procure, and too expensive to allow of its adoption, except by the more wealthy. Labourers (who do not exist here as a separate class, but comprise the more indigent of the new settlers) are usually hired during the 6 months of summer, for which they receive from 15s. to 18s., with board and lodging; but a part of the payment is made in produce. (For further information, see Moorsom's work, pp. 176—222., from which the above remarks are mostly derived.)

The forests of Nova Scotia abound with good timber: pine and birch, oak, beech, ash, and maple, are the most common trees; and many of the Inhab. have for years been supported by the timber-trade. The exports of timber in 1837 were valued at 143,736l. The principal wild animals of the province are the moose-deer, caribou, bear, loup-cervier, fox, martin, otter, mink, and squirrel. Hunting and trapping were once extensively pursued; but in proportion as the country has become settled, the number of animals has gradually but rapidly decreased, so that the exports of furs in 1837 were not estimated at more than 4,330l. The rivers abound with many varieties of freshwater fish; besides which, cod, herrings, mackerel, halibut, and other kinds of sea-fish, are found in the deep bays of the coast. Chedabucto Bay and Annapolis Basin are the principal stations for the herring and mackerel fishery; but the Inhab. share, also, in the whale, seal, and cod fisheries; and this branch of industry has for some years been on the increase. The fish of all sorts (chiefly cod) exported in 1837 was valued at 181,950l.; besides which, the exports of train-oil were estimated at 20,280l. The fisheries are said to employ about a third part of the Inhab.; but this is, no doubt, an exaggerated statement. Another important branch of employment in Nova Scotia is mining. Coal and iron are abundant, and are pretty extensively wrought by the General Mining Association, to which all the Inhab. have been let. The total value of the coal produced in Nova Scotia and C. Breton amounted in 1839 to 25,000l.

Gypsum, which abounds in the W. districts, is highly prized in the United States as manure, and the quantity exported thither from Nova Scotia in 1837 amounted to 22,325 tons, valued at 6,738l. A stone is found in many parts of the prov. extremely well adapted for grindstones, which are celebrated all over America under the appellation of "Nova Scotia blue grinds;" the exports to the United States were valued, in 1837, at 12,085l. The manufactures are quite unimportant: the weaving of coarse woollen cloths, called *homespun*, is pretty general throughout the colony; and carding-mills are established in some parts. Carpets, also, are woven in small quantities, and ropes are made of hemp imported from N. Europe. Crust and saw-mills are very numerous; besides which, there are several breweries and tan-yards. The position of Nova Scotia, on the extreme W. side of N. America, gives it great commercial advantages; and its trade, especially with the U. States, has been for some years steadily on the increase. The exports, chiefly to Canada, the U. States, and Great Britain, consist of fish and fish-oil, timber, coals, &c.; the whole being valued, in 1837, at 478,461l. The imports during the same year comprised corn and flour, British manufactures, colonial produce, &c., and were valued at 790,765l. The trade principally centres in Halifax, which see. Subjoined is an

ACCOUNT of the Ships and their Tonnage that entered and left the Ports of Nova Scotia in 1839:—

Countries.	Inwards.		Outwards.	
	Ships.	Tons.	Ships.	Tons.
Great Britain	97	27,486	102	29,739
British Colonies	2,417	49,521	2,815	179,712
United States	1,211	136,860	1,266	139,427
Foreign	181	18,079	49	5,439
Total	4,006	532,136	4,232	354,177

The means of internal communication have been improved within the last few years, and some of the roads are stated by Moorsom to be equal to the secondary roads in England. They are partly supported by annual grants from the House of Assembly, and the Inhabitants of each district are compelled to furnish, either personally or by substitute, a certain quantity of labour for the same purpose: this system, however, has not been found successful; and large tracts are still left uncultivated, owing either to the absence or wretched

condition of the roads. (*Report, App. B. p. 135—140.*) A water communication has been effected between Halifax and Windsor; but the want of any such communication is severely felt by those whose settlements are at a distance from Halifax, the chief market in the colony for agricultural produce.

The constitution of Nova Scotia is a representative provincial government. The lieutenant-governor, who is subordinate to the governor-general of British N. America, is commander within the prov., and the supreme civil, as well as military authority. Under him is a council of 12 mems., of whom the bishop and chief justice are mems. *ex-officio*, and the rest appointed by the crown. The legislative assembly is a body of 41 mems., elected by 40s. freeholders. It is elected, like the British H. of C., for 7 years, but may be prorogued or dissolved by the lieutenant-governor. It meets every year, and all money bills must originate in this assembly; other bills require the consent of the governor and council before they become law. For the purposes of election, Nova Scotia is divided into 10 counties (including Cape Breton). The counties have 2 mems. each, and the other representatives are returned by the towns. Justice is administered by a court of queen's bench, sitting at Halifax, and by district courts in the different counties. The common and statute laws of England are in force, together with statutes passed by the local legislature, and approved by the queen in council. The laws, according to M'Gregor are, on the whole, judicious; and, as far as they go, calculated to promote the prosperity of the colony. But there is too frequent a recurrence to courts, and the harmony of society is often broken by a love of litigation.

The provincial revenue, amounting to somewhat more than 60,000l., is raised by duties of 2s. per cent. *ad valorem* on property generally, with an additional rate on wine and spirits, and by duties on imported goods, lighthouse dues, rents, &c. Taxation, however, is extremely light; the cost of defence being defrayed by Great Britain, and the Inhab. being burdened only with the civil government and local improvements. The military force consists of three regiments of the line, the expense of whose maintenance to England is estimated at about 120,000l. a year.

The Church of England is the established religion, and the colony is divided into 32 par., each of which has a rector salaried by the crown or the Society for the Propagation of the Gospel. Nova Scotia was made a diocese in 1787, the diocese extending over New Brunswick and Prince Edward Island, Newfoundland, and the Bermudas. The bishop draws no revenues from the colony, and holds spiritual jurisdiction only over the members of his own church. The Presbyterians, however, are the most numerous body, and a synod of 17 members meets annually at Halifax. There are numerous Rom. Caths., consisting principally of the Acadians and Irish settlers. The Baptists and Wesleyan Methodists are also an important body; and a complete toleration is granted to all religious denominations.

Among the establishments devoted to education, the principal is Windsor College, partly supported by the provincial government and partly by subscription; but it has not met with much success. The Presbyterians have an academy at Pictou, and the Baptists have another at Huxton, attended by about 50 students. There are eight schools at Halifax, furnishing instruction to 1,000 children. An episcopal school at St. George's is attended by 120 boys and 100 girls; and there is a large grammar-school at Sydney. The prov. comprises, also, 600 common schools, and 30 combined English and Latin schools, attended altogether by about 20,000 children. These schools are supported by grants, subscriptions, &c., and 40 other schools are maintained by the Society for the Propagation of the Gospel.

Of the pop. of the prov., the Indians do not now exceed 600; There are about 6,000 Acadians (or descendants of French settlers, before the country was ceded to the British), and about 2,000 free negroes; the remainder of the pop. consists of Germans, or their descendants, British emigrants, chiefly from the N. of England and Scotland, a few Irish, and the descendants of refugee loyalists from the U. States. The Acadians congregate in settlements of their own, mixing little with the other colonists.

Nova Scotia was discovered, by John Cabot, in 1497. It was first settled by the French, who called it Acadia. It subsequently fell under the English, having been, in 1627, granted by James I. to Sir W. Alexander, and named Nova Scotia. In 1632, it was restored to France by the treaty of St. Germain's; but it several times subsequently changed masters, and was not finally established in the quiet possession of the British till 1768. At the peace of 1763, the boundaries of this colony were so defined, as to include New Brunswick and Cape Breton; but, in 1784, the former was made a separate government. HALIFAX (which see) is its capital and the seat of government. (*M'Gregor's Brit. America, i. 259*)

—427.— *Moorson's Letters from Nova Scotia*, passim; *Murray's Brit. America*, vol. ii.)

NOVELLARA, a town of N. Italy, duchy of Modena, in the plain of the Po, 16 m. N.W. Modena. Pop. 4,070. It is the cap. of a principality annexed to Modena in 1737, and has some silk and leather manufactures.

NOVGOROD, a gov. of Russia in Europe, between the 57th and 61st degs. of N. lat., and the 30th and 42d of E. long.; having E. the gov. of Volodga, S. those of Jaroslavl, Tver, and Pskov; W. the latter and Petersburg, and N. the last named and Olonetz. Length, N.E. to S.W., about 400 m.; breadth, varying from 40 to 160 m. Area, estimated at 43,880 sq. m. Pop., in 1838, 825,400. The surface, which in the N. is low and level, rises gradually towards the S.W., where the Valdai plateau reaches an elevation of 1,000 ft. above the sea. The gov. is well watered; principal rivers, Volkhof, Msta, Chexna, Molodga, Lovat, &c., some of which run towards the Wolga, and others towards the Lake of Ladoga. Among the lakes are those of Blelo-Osero, Voje, and Ilmen. The climate, especially in the N., is more severe than in the gov. of Petersburg, not being tempered by the sea breezes. Except in a few districts, the soil is not eminent for fertility, and night frosts often spoil the crops. Scarcely any orchard trees are met with; but hemp and flax are grown for exportation; and in 1832, 868,000 *chetverts* of corn, principally rye, oats, and barley, were raised. Timber is an important product; a large part of the gov. is covered with forests, those belonging to the crown covering 2,737,200 *deciatines*. Few cattle are reared. Next to agriculture, fishing is a principal occupation. The salt-springs of Staraja-Rouss furnish an adequate supply of salt for this gov. and that of Tver. Manufacturing industry is very backward; there are a few copper, glass, tile, leather, woollen cloth, and other factories; but in 1832 there were not, in all, 50 manufacturing establishments in the gov.: the pop. have, however, a turn for commerce, and the different fairs and markets are well attended. Novgorod is divided into 10 districts; Novgorod, Tikhvine, and Valdai are among its chief towns. Except some Lutherans among the Finnish inhab., the pop. is principally of the Greek church. Education is very little diffused. The cap. has a gymnasium; and there are schools there and in other parts of the gov.; but the young persons of all descriptions at school in 1835 amounted to only 1,086! The gov. is not supposed to possess a printing-press. Civil public revenue estimated at 2,733,000 roubles. This territory was made a separate gov. in 1776.

NOVGOROD, (called *Feliki*, or "the Great,") a city of Russia, and formerly the most important in that empire, cap. of the above gov., on the Volkhof, near its exit from the Lake Ilmen, 100 m. S. S.E. Petersburg, and 305 m. N.W. Moscow. Lat.  $58^{\circ} 31' 32''$  N.; long.  $31^{\circ} 16' 24''$  E. Its pop., which, in 1839, amounted to 8,634, was estimated to have amounted in the height of its prosperity, in the 15th century, to 400,000, though this, probably, is much beyond the mark. At this period, Novgorod, with London, Bergen, and Bruges, constituted the four principal foreign depots of the Hanseatic League; but the fall of the League, and still more the massacres perpetrated by the bloodthirsty barbarian Ivan Vassilievich II., in 1570, proved fatal to this great emporium; and it soon after fell into all but irremediable decay. La Motraye, who visited it early in the last century, gives the following description, which will apply nearly as well in the present day. "Nothing is more deceitful than the view of Novgorod from a distance: its extent, and the number and height of its towers and spires, seem to announce one of the finest cities in Europe; but on nearing it, the traveller perceives that its walls and houses are only of wood; and on entering, he finds it ill built and wretchedly paved. Only the churches and a very few private residences are of stone or brick. There may be from 80 to 85 churches, including those of the monasteries; besides which, the castle, a large fortress bristling with artillery, is the remaining principal edifice." (*La Motraye, in Schnitzler, la Russie*, p. 170). The town, in fact, though comprising a large space, consists principally of scattered groups of miserable habitations, separated by ruins or by fields, which, it is evident, had once been covered with houses. It is divided into two parts by the Volkhof, here crossed by a handsome bridge of 11 arches, which is almost the only modern structure in the city. The piles, &c., of this bridge are of granite, the rest is chiefly of timber; its entire length is 270 yards, and the breadth of its central arch 85 ft. In the *Torgovaia*, or market-town, are the governor's residence, an anc. palace of the czars, and most of the shops and warehouses. The *Sofuskaia*, on the opposite bank of the Volkhof, is about 14 m. in circuit, and surrounded by an earth rampart and a ditch. In it are the *kremi*, or citadel, the cathedral of St. Sophia, the archbishop's palace, and the various tribunals. The citadel is in many respects similar to the *kremi* of Moscow, having a stone wall, flanked with many round and square towers. The cathedral, built

between 1044 and 1051, and repaired in 1832, is of stone, somewhat on the model of St. Sophia at Constantinople. It has some remarkable bronze gates, with sculptures in *alto-relievo*, representing passages from scripture history; and many of the paintings on its walls are curious, being said to date from a period previously to the revival of the arts in Italy. Novgorod is the seat of a military governor, whose authority extends over the adjacent prov. of Tver. It has a few manufactures of sailcloth, leather, and vinegar, and some trade in corn. Though not the original capital of Rurick, it became the seat of the Russian government in 864. In the beginning of the 11th century the inhabs. obtained considerable privileges that laid the foundation of their liberty and prosperity; and as the city and its contiguous territory increased in pop. and wealth, they gradually assumed an almost absolute independency; so that, in effect, Novgorod, in the middle ages, should rather be considered a republic, under the jurisdiction of an elective magistrate, than a state subject to a regular line of hereditary monarchs. During the 12th, 13th, and 14th centuries, Novgorod formed the grand *entrepôt* between the countries E. of Poland and the Hanseatic cities; and its wealth and power seemed so great and well established, and the city itself so impregnable, as to give rise to the proverb—

"*Qui contra Deum & magnam Novogordiam!*"

"Who can resist the Gods and Great Novgorod?"

But in 1477 it was obliged to submit to Ivan I., great duke of Russia. In 1554 it was visited by the famous Richard Chancellor, who describes it as the "great mart town of all Moscovie, and in greatness beyond Moscow." But not long after it was subjected, as already stated, to the scourge of the destroyer, and fell, never to rise again. The foundation of Petersburg took from it all hope of ever recovering any portion of its ancient prosperity. (*Schnitzler, La Russie*, 152—174; *Cox's Travels in the N. of Europe*, ii. 77—90, 8vo. ed.)

NOVI, a town of N. Italy, Sardinia dom., div. Genoa, cap. prov. and mand.; in the fertile plain of Marengo, at the foot of the Apennines, 14 m. S.E. Alessandria. Pop., in 1838, 10,278. Few remains exist of its old castle; its streets are narrow and ill-paved, and its public edifices undeserving of notice. It has, however, a handsome square. It is the seat of civil and commercial tribunals; and has a college and hospital, and manufactures of the best silk twist in the division. It is also an *entrepôt* for goods passing between Italy and Germany. On the 16th of Aug., 1799, an obstinate conflict took place near this town, when a French army, under Joubert, who fell in the action, was defeated by the Austro-Russian army, under Suwarrow.

NOVI-BAZAR, a town of Turkey in Europe, prov. Bosnia, cap. Sanjak, on the Ratchka, 130 m. S.E. Bosna-Serai. Pop. estimated at from 8,000 to 10,000. It is a town of considerable traffic, the residence of a pacha and a R. Cath. bishop, and has some warm baths. Our acquaintance with it is, however, very limited, as it is seldom or never visited by travellers from W. Europe.

NOYON, (an. *Noviomagus Veromanduorum*), a town of France, dép. Oise, cap. canton, on the Yorse, a tributary of the Oise, 42 m. E. N.E. Beauvais. Pop., in 1838, 3,473. It is well built, and surrounded with numerous gardens. The cathedral, erected under Pepin and Charlemagne, is 340 ft. in length, its main entrance being flanked by two towers upwards of 200 ft. in height. Noyon has manufactures of fine linens, tulle, hosiery, leather, copperas, &c., and a brisk general trade. It was erected into a bishopric in 531. Charlemagne held his court in this town for a considerable period, and in it Hugh Capet was proclaimed king. But it is chiefly remarkable for its having been the birth-place of the famous reformer John Calvin, born here on the 18th of July, 1509. (*Hugo's Guide du Voyageur*.)

NUBIA (an. *Ethiopia*), an extensive tract of E. Africa, between the S. boundary of Egypt and the N. limit of Abyssinia; bounded E. by the Red Sea, W. by the desert of Libya, between lat.  $18^{\circ}$  and  $24^{\circ}$  N., and long.  $33^{\circ}$  and  $36^{\circ}$  E. Estimated area, 360,000 sq. m. Pop. unknown. The country is divided into Lower Nubia, or Nubia Proper, extending from Egypt to the N. frontier of Dongola, and thence to the junction of the river Atbara or Tacazzé with the Nile; and Upper Nubia, which includes Shendy, Halfay (an. *Meroë*), and Sennar. (*Encyc. Britannica*, art. *Nubia*; *Ritter's Africa*, &c.)

Nubia is situated almost entirely in the basin of the Nile. Rocks and mountains are the characteristics of Lower Nubia; and the mountains here press so closely on the river that there would be but little ground left for tillage, if they were not interrupted by lateral plains, the productiveness of which, however, is diminished by the continual encroachments of the deserts. Numerous rocky islands dot the stream, and in some places congregate so as to form rapids, hardly deserving the name of "Cataracts," by which they are usually designated. Some of these islets are rendered productive (like the high banks of the Nile) by means of the artificial irri-

gation effected by *sakkeas*, or Persian water-wheels. Between the river and the Red Sea extends the stony and sandy Nubian desert, interspersed here and there with small fertile spots, or oases. On the coast of the latter are a few inconsiderable towns. In *Upper Nubia* the country wears a somewhat different aspect. Instead of one river, several streams flow through it to pour their waters into the majestic Nile. The land is also much more elevated, being situated on the lowest of the *tableaux* on which, according to Ritter, this part of Africa is placed. The S. extremity of Nubia has an elevation of 4,000 ft. above the level of the sea; but northwards the elevation gradually lessens, and the Nubian desert forms the gradual transition from the lower course of the Nile to the higher and more southern lands of Africa.

**Mountains.**—Ranges of mountains, forming a continuation of the line traversing Egypt, skirt the entire Nubian coast of the Red Sea; but they are not nearly so high nor so important as some travellers have stated. Those through which the Nile forces its bed, are figured in most maps as running parallel to its course, as in Egypt; but the numerous so-called cataracts, and the many valleys which intersect the hills, prove that these ranges traverse the Nile parallel to each other from E. to W., crossing the current of the river, instead of accompanying its course from S. to N. *Gebel Snigrè* (*Chiggrè*, in Bruce) and *Gebel Suficha* take the former direction. From Faka, on the river Atbara, to Suakin, on the Red Sea, stretches another lateral chain, called the *Orbay Langay*. Several inconsiderable chains and detached rocky hills, offshoots from this chain, are distributed over the E. desert skirting the Red Sea.

The *Climate* of Lower Nubia, though intensely hot, is healthy, on account of its dryness; the plague has never been known to reach beyond the desert; but the higher districts are subject to those violent tropical rains which contribute in some degree to the regular swelling of the Nile: the N. limit of these rains is between lat. 17° and 17° 30' N. In Berber and Shendy they continue throughout March and the two succeeding months. The deserts E. and W. of the Nile are subject to violent storms of wind. The *geological structure* of the rocks in Lower Nubia consists of granite and syenite, interspersed with black marble, of which last the second cataract is formed. Slate (in the E. desert), porphyry, sandstone, and limestone, have also been enumerated. In the upper countries coarse grey granite, primitive quartz, and mica-slate are likewise often mentioned by travellers. Along the coast of the Red Sea gold and silver mines are said to exist; but the Pacha of Egypt has made more than one unsuccessful attempt to open them. Neither have the "Emerald" Mountains, which pass the Egyptian frontier, yielded any treasure to modern adventurers.

**Animals.**—The S. parts of Merôé seem to be the N. boundary of the natural habitation of the African elephant. Tigers and lions have been seen in the valleys of Shendy, where crocodiles also abound. Wild dogs and foxes are exceedingly numerous, Ruppell having discovered four new species. The hippopotamus seldom ascends the Nile higher than Dongola. Antelopes, of three species, occupy the banks of the White Nile and the desert W. of Dongola. The giraffe (*zerafa*, "the elegant") inhabits the mountains of Dender, near the Atbara. The principal birds of Nubia are the occipital vulture, the red-throated shrike, and several curious specimens of the family of great-legged thrushes. Bustards are also abundant, with partridges, quails, and several other species of game.

Mirbel having, very properly, classed Nubia with Barbary and Egypt, and placed them in the S. Transition Zone, the *botany* of Nubia assimilates very nearly with that of those countries. (See EGYPT, sec. *vegetable productions*, l. 744.) The great elements to vegetation here, as in other hot countries, are locusts, clouds of which sometimes darken the air, and settling on the land, strip it of every remnant of verdure; on these occasions, the inhab. catch, and eat them, "out of self-defence."

**Description of Lower Nubia.**—The Nubian valley of the Nile, which ascends as high as the 7th cataract, and ranges between the 9th and 24th degrees N. lat., comprises 13 states, each governed by its melek, or chief subordinate to the pacha of Egypt. Ten of these states are in Lower, and 3 in Upper Nubia. Between the 1st and 2d cataracts, in the states of Kenon and Wady Nubia, the Nile flows through a rocky bed, and precipices enclose the river within very narrow limits, scarcely allowing of cultivation on either side; but at short intervals occur those excavated monuments which will hereafter be more minutely described. El-Kalabshéh, the largest village on the W. bank, occupies the site of the an. *Talmis*; and opposite to it is that of *Contra-Talmis*, the ruins of which have occupied the attention of modern travellers. At Sebouh, lat. 22° 50' N., the river inclines to the N.W., flowing past Derr, which, though a mere village of 200 houses, is the cap. of the 5 states N. of Dongola. Ipsamboul, with its well-known excavated temples, is near the centre of the state, called Wady Nuba, on the

W. bank of the Nile, in lat. 22° 20' N. The second cataract, which occurs about 35 m. below Ipsamboul, is formed by numerous rocky islets intercepting the stream, on each side of which in this vicinity stretches an extensive and not unfruitful plain.

Through the district of Batn-el-Hadjar, the Nile passes between a chain of syenite hills, those on the W. side having at their foot many deserted villages and monasteries; only the E. side of the valley is now inhabited. The district of *Sakkot* has many poor villages on both banks of the river, possesses numerous antiquities, and is joined southward by *Mahass*, where the most cultivated spots, hitherto situated on the E. bank of the river, are transferred to the opposite shore. Remains of castles, churches, and houses afford evidence that this distr. was formerly well peopled. The course of the Nile here is tortuous; but S. of the 3d cataract, forming the N. boundary of Dongola, it runs in a pretty direct channel as far as Old Dongola, in lat. 18° 10' N. The stream then takes a sweep to the N.E., preserving that direction for about 100 m., through the highly fertile distr. of Sheygha, ascending beyond the 4th cataract to the island of Mokrat, which divides the stream. The state of Berber commences southward of the 5th cataract, and in this district the villages stand at a considerable distance from the river. Berber, or El Mekhair, the cap., is near the E. bank, about 17 m. below the junction of the Tacazzé with the Nile.

*Upper Nubia*, is a triangular tract lying chiefly between the White Nile, or Bahr-el-Abiad, the Blue Nile, or Bahr-el-Azrek, and the Tacazzé or Atbara. It is now divided into the 3 states of Shendy, Halfay, and Sennaar. From the Berber frontier, for some considerable distance southward, the soil of Shendy consists of fertile plains, stretching out from both sides of the Nile on elevated ground, at some distance from the river. Shendy-el-garb "on the W. bank" is a large and not ill built village, with about 6,000 inhabs.; Shendy "on the E. bank" is the cap. of the prov.; and being a place of rest for the caravans from Sennaar, possesses regular and well-stocked markets. N. of Shendy are some ruins, supposed to be those of the ancient *Merôé*. *Halfay* lies between Shendy and Sennaar; and, before the Egyptian conquest by Ismael, the son of Mehmet Ali, belonged to the melek of Sennaar: its chief town, having the same name, lies N. of the confluence of the White with the Blue Nile, which takes place at Khartum. W. of the Bahr-el-Azrek is the distr. of Sennaar, or Fungl: it is a flat and fertile tract, with some large villages, mostly composed of conical houses, similar to those of the S. African tribes. Six days' march S. of Khartum is Sennaar, the *entrepôt* of the caravan merchandise for Kordofan, Darfur, and Abyssinia. Its environs are *white* plains, with a long ragged mountain, about 15 m. W. of the town (Sennaar). The most considerable port upon the Red Sea is Suakin, whence merchants embark their goods for Arabia, &c.

**Population, Languages, &c.**—The inhab. of the different parts of Nubia differ considerably in personal appearance; and those southward are much darker than those in the states bordering on Egypt. The marked features of the whole race, however, are long oval countenances, curved noses, somewhat rounded towards the top, rather thick lips, but not so far protruding as those of the negroes, retreating chins, scanty beards, lively dark eyes, strongly frizzled hair, and well-knit, muscular bodies. The Noubas, properly so called, are about the best looking of the race; both men and women have good features and well-proportioned persons, their disposition and character also being, according to Burckhardt, more susceptible of improvement than those of the Dongolese, who are described as dirty, idle, and ferocious. (See DONGOLA, l. 701.) The people inhabiting the valley of Sheygha, E. of Dongola, are the most powerful of the Nubian tribes N. of Sennaar. They are good horse-soldiers, and were employed as such by Ismael Pacha, on his expedition against the negroes of the S. The common people are almost naked, wearing nothing but a hip-cloth. They usually speak the Arabic language; and the leammennan literature. The Berbers present, perhaps, the worst specimens of Nubian character—treachery, dishonesty, and drunkenness, are prevailing features among the men; and the women, who in the better parts of the country are modest and observant of conjugal fidelity, here indulge in the greatest profligacy, and pay no attention to the marriage vow. The inhab. of Upper Nubia are of Arabic descent, speak the language of the Arabs, and resemble them in their love of a restless roving life. A pastoral pop. inhabits the banks of the Tacazzé, which, also, are visited by mountaineers, when in search of pasturage, during the dry season. The E. desert is infested by wild nomadic tribes, constantly at war with each other, and remarkable for adroitness in thieving and treachery towards strangers.

**Productive Industry and Commerce.**—The cultivated

portions of the Nubian valley being, on account of the height of its banks, beyond the inundation of the Nile, the land can only be watered by artificial means. Even in the lateral valleys, the few canals cut through them are rarely full; and the water, both from them and the Nile, is raised by Persian wheels. Dhourra is reaped in December and January; next follows a crop of barley, and then dhourra again. Tobacco is universally raised. Although the S. districts present some excellent land, agriculture offers few charms for the inhab.; and Sennar and Shendy are celebrated only for being the *entrepôts* of the chief commerce of E. Africa. The town of Shendy, having Soudan and Abyssinia to the S., Egypt and the Arabian Gulf to the N. and E., and Darfur to the W., is the centre of much of the trade with those countries. Markets are regularly held there twice a week; and at one of them Burckhardt saw from 4,000 to 5,000 cows, as many camels, nearly 100 asses, and several horses for sale. In Shendy are several forges for iron and silver. The merchants from the W. pay regular visits to Sennar; they exchange Indian goods for gold, which they transport to Djidda and the E. The price of gold at Sennar is estimated at 12 denars an ounce, and at Shendy 16 denars. Every two months merchant caravans arrive at both these places, frequently consisting of 500 or 600 camels, laden with dhourra; others, comprising about 100 camels, trade in various products, as well as slaves. The traffic in slaves is extensively carried on, upwards of 5,000 being annually imported from the Interior of Africa; of these 2,500 are disposed of in Arabia, 1,500 in Egypt, and 1,000 in Dongola and other parts of Lower Nubia. The Arabs of the Desert supply the caravans with senna of the best quality, ostrich feathers, and charcoal.

*History, Government, &c.*—It has been supposed that the country of the Ethiopians was among the earliest in which advances were made towards civilisation, and that the arts descended from Merœ to Egypt. But we have little or no authentic information respecting the state of this country in antiquity; and it was not till the 6th century that the wandering ancestors of the Nubians appear to have settled under a regular government. At that period mention is made of Silco, king of the Nubates and the Ethiopians (Lefronne, *Journal des Savans*, 1825); under whom they were converted to Christianity, the country divided into ecclesiastical districts, and the whole subjected to the Patriarch of Alexandria. After the loss of Abyssinia, the kings of the Nubas resided at Dongola; but in the 14th century their power ceased, and Nubia was divided into several petty states. In the succeeding century the Mohammedan conquerors reached and subdued the country, Christianity was suppressed, and Mohammedanism took its place.

Down to the year 1821 the people of Nubia were independent, living under their own Meleks, or chiefs; but at that period Ibrahim Pacha reduced them to a dependency on Egypt. This change is so far fortunate for travellers, that with the permission of Mohamed Ali, the whole country is open to their researches, and no danger is to be apprehended, except from the climate and the dishonesty of the natives. The same system of military despotism and oppressive taxation that exists in Egypt has been extended to Nubia; but it is a question whether the people be now more heavily taxed than formerly by their petty chiefs, while, in other respects, their condition is improved.

*Monumental Remains of Nubia*—*Ip-samboul*.—Of all the relics of ancient art which the valley of the Nile abounds over the whole distance from Merœ to Memphis, none have excited more admiration than the excavated temples at Ip-samboul, lat. 22° 19' 47" N.; long. 31° 32' 54" E. According to Champollion, the great temple, "*c'est un merveille, qui serait une fort belle chose même à Thèbes*." It is wholly cut out of the solid rock, and presents a facade supported by four seated colossi, of exquisite workmanship, and not less than 61 ft. in height. They represent Rameses the Great, and are all portraits, for the faces bear a perfect resemblance to the figures of that king at Memphis, and elsewhere. The interior is not less grand than the entrance: 16 apartments have been enumerated; the first of these is sustained by eight pillars, against which rest the backs of as many figures of Rameses, each 30 ft. in height. The walls of this immense hall are covered with innumerable bas-reliefs on historical subjects, the most striking portraying the conquests of the same prince in Africa. The other apartments afford some curious particulars that supply many conjectures relative to Nubian and Egyptian religious history, which it remains for future students in hieroglyphics to verify. The whole is terminated by a sanctuary, at the back of which are seated five statues, representing Amœn, Ra, Phrœ, Ptah, with the never absent Rameses the Great. The smaller of these excavations is a temple dedicated to Hathor by Nofre-Ari, wife of Rameses the Great, whose facade has six colossi, each 35 ft. high, carved out of the rock. They represent Rameses and his wife, having at their feet

statues of their sons and daughters, all of whom have their names and titles. The front of this temple is free from sand, and access is much easier to its interior than to that of the greater. A passage leads to the pronaos, which is 35 by 3½ ft., supported by six square pillars, three on each side: to this chamber succeeds a vestibule, which leads to the adytum, or sanctuary, containing the remains of a sitting statue cut in the rock, which, however, is not in such good preservation as the rest of the structure. The bas-reliefs adorning the sanctuary are painted, the figures yellow, and are enclosed by a border of three colours: the colour of the ceiling is blue.

We are indebted to Burckhardt and Belzoni for bringing these splendid temples to light. The entrance of the great temple is so blocked up with sand that it is only passable by a person divesting himself of nearly all his clothing, and creeping on his hands and knees; and then the heat within is more intense than that of a Turkish bath, the want of air being almost insupportable.

Besides the excavated temples of Nubia, of which Ip-samboul does not present the only specimen, there are others, partly hewn out of the solid rock, and partly built. Those of Girfeh (lat. 23° 31' 4" N.; long. 32° 50' 3" E.), Semna, Dendera, and Gebel-el-Birkel (lat. 18° 31' 41" N. Russell) are of this class. The interior of these temples is cut out of the solid rock, while the exterior chambers and appendages are formed of stone-work. From the primitive character of the masonry, the rudeness and decay of the sculptures, and the decomposition of the walls, it has been concluded that the temple of Gebel-el-Birkel is older than many of the temples of Egypt, or even of Nubia. This site is also remarkable for 13 pyramids, lying in the desert to the E. of the town, differing from those previously known, their sides presenting small temples with gateways and enclosures. Opposite to Birkel, on the other side of the Nile, at Nonri, is another assemblage of pyramids. The age of all these vast masses of stone, many of them exhibiting little else to the modern traveller than mounds of debris, no doubt belongs to the remotest antiquity. At Semna and Dendera, we find specimens of a more perfect class of temples than those before mentioned, and which belong to the last epochs of Nubian art. That at the latter place has the proportions of Grecian structures, and in the pillars have been recognised a mixture of the Greek and Egyptian styles.

*Ruins of Merœ*.—The tract of country enclosed by the Nile and the Tacazzé, or Atbara, and terminating at the confluence of these rivers, was the island of Merœ of ancient geographers; and near Assur on the Nile, in the prov. of Shendy, the ruins of the ancient capital of Ethiopia have been recognised. Nothing remains but the Necropolis; which consists of a vast assemblage of pyramids, similar in every respect to those of Birkel. (For a particular account of which we refer the reader to *Hoskins' Travels in Ethiopia*, p. 66, et seq.) We must not, however, omit to notice the infernaces drawn from these and other Nubian monuments by those whose acquaintance with antiquities entitles their opinions to respect. They conclude that art and civilisation, instead of ascending the Nile from Egypt, descended to it from Ethiopia. The decay in which the mounds of Merœ are now found, produced entirely by the slow hand of Time, the sculptures of their interior, exhibiting religious rites of a purer and simpler stamp than those of Egypt, and other circumstances which nice observers have supposed they have detected, prove, according to the authorities referred to, that they have been the models of the more stupendous Egyptian structures. The excavated temples, too, furnish, it is alleged, proofs of the remotest attempts at architecture. But, how plausible soever, these conclusions amount to no more than probabilities; and it would not be difficult, were this the proper place, to show that they must be received with great limitations and modifications.

NUDDEA, a district of British India, presid. Bengal, chiefly between lat. 23° and 24° N., and long. 88° and 89° E.; having N. the districts Moorshedabad and Rajshajee, E. Jessore, W. Beerbhoom, Burdwan, and Hooghly, and S. Calcutta and the 24 Pergunnahs. Length, N. to S., about 80 m.; average breadth, nearly 40 m. Area, 3,105 sq. m. Pop., in 1822, estimated at 1,187,160. Its natural features are the same, with those of the rest of the delta of the Ganges, by many arms of which it is intersected. The culture of the soil has greatly increased since the establishment of the perpetual settlement: total land revenue, in 1829-30, 11,66,951 rupees. Gang-robbery formerly prevailed to a great extent in Nuddea; but under the British rule, it has decreased so as to be now of rare occurrence.

NUDDEA, a town of British India, presid. Bengal, Bengal, cap. of the above distr., at the commencement of the Hooghly river, 80 m. N. by W. Calcutta. It is the residence of the collector and judge for the district, and was formerly the cap. of a *talaship*, and a celebrated seat of Hindoo learning, but it has now fallen into decay. (*Parl. Reports*, &c.)

**NUNDYDRORG**, a celebrated hill-fortress of Hindostan, prov. Mysore, on a hill 1,700 ft. in height, 100 m. N.E. Mysore; lat. 13° 22' S., long. 77° 44' E. The hill on which it stands is inaccessible, except on one side: the fort has within it several barracks, magazines, &c., besides a Hindoo temple, in which worship is paid to the bull Nundy, whence the name of the fortress. Nundydrorg was taken by the British in 1791, after an obstinate defence of 3 weeks.

**NUNEATON**, a market-town and par. of England, Atherstone div., hund. Hemlingford, co. Warwick, on the Anker, 84 m. N. by E. Coventry, and 90 m. N.W. London. Area of par. 7,020 acres. Pop., in 1831, 7,799. The town is large and well built; consisting principally of a long main street, whence another diverges, in which is the market-place. The church is a Gothic structure, with a square tower; the living is a vicarage, in crown patronage. There is also a modern-built chapel-of-ease; and the Wesleyan Methodists, Independents, and Baptists have their respective places of worship. A free school was founded, by the inhab., in the reign of Edward VI.; and there is another endowed school, called "Smith's Charity School," besides which, there are two or three other day schools and Sunday-schools. The inhab. are principally engaged in riband-weaving, and, in 1838, there were 3,200 looms, nearly all employed. The engine-trade is confined to four firms; and there are scarcely any engine-looms in the place that are not their property, though some are worked on the premises of the weavers. Floret gauze ribands are the staple article of manufacture; but they are occasionally laid aside for figured satins, sarsnets, and lustrings. (*Handloom Weavers' Report*.) Matting is carried on to a considerable extent; and there is a silk factory, which, however, was unemployed in 1839. Coal is procured in the neighbourhood, where are also some extensive stone quarries. The government of the town is vested in a permanent constable and three others, annually elected at a court-leet. It is one of the polling-places at elections for the N. division of the co. Markets on Saturday: fairs, May 14., Feb. 18., and Oct. 31., for horses and cattle. (*Parl. and Comm. Reports*, &c.)

**NUREMBERG** (Germ. *Nürnberg*), a city of Bavaria, circ. Middle Franconia, on the Pegnitz, a tributary of the Regnitz, 93 m. N.N.W. Munich. Lat. 49° 27' 31" N.; long. 11° 4' 40" E. Pop., in 1838, with its suburbs, estimated at 40,400, of whom about 1-10th part are Rom. Catholics. It stands in a sandy but fertile plain, at an elevation of about 1,000 ft. above the sea; and is divided by the Pegnitz into 2 nearly equal parts, the Sebald-side and the Lawrence-side, each deriving its name from its principal church. Nuremberg covers more ground than any other city of Bavaria, and is, next to the capital, the most populous. "It is surrounded by feudal walls and turrets, and these are inclosed by a ditch 100 ft. wide, and 50 ft. deep, lined throughout with masonry. Its arched gates are flanked by 4 massive cylindrical watch-towers, no longer of use as fortifications, but picturesque in a high degree, and serving to complete the coronet of antique towers which encircle the city, as seen from a distance. The stranger arrived within its walls might fancy himself carried back to a distant century, as he treads its irregular streets, and examines its quaint gable-faced houses. Its churches and other public edifices are singularly perfect, having escaped unharmed the storm of war, sieges, and even of the Reformation, which its inhab. adopted at an early period, without any outbreak of fanaticism or iconoclasm. Its private buildings, including the palace-like mansions of its patrician citizens and merchant-nobles, having been built of stone, are equally well preserved, and many are still inhabited by the families whose forefathers originally constructed them. Though built with narrow but highly ornamented fronts and acutely pointed gables, they are often of large size, inclosing 2 or 3 courts, and extending back from one street to another." (*Murray's Handb. for S. Germany*.) The most elevated position within the town, near its N. extremity, is occupied by the *Reichsseite*, or Imperial castle, a building of great antiquity, and a frequent residence of the German emperors in the middle ages. A portion of this castle is fitted up for the accommodation of the King of Bavaria, when he visits the town; and comprises a picture-gallery, the paintings in which, however, except one by A. Dürer, are generally of the most ordinary merit. The 2 principal churches are highly deserving of notice. That of St. Sebald, a fine Gothic edifice, with an elegant choir, built in 1337, has numerous sculptures and carvings by Adam Kraft and V. Stoss, many old paintings and stained glass windows, and the remarkable shrine of St. Sebald. This, which still stands in the centre of the church, though the latter is devoted to the Lutheran service, is the masterpiece of the celebrated artist Peter Vischer, who, with his five sons, was employed on it for thirteen years. "It is a miniature Gothic chapel, entirely of bronze, consisting of a rich fretwork canopy, supported on pillars, beneath which the relics of the saint repose in an

oaken chest, encased with silver plates. The workmanship is most elaborate. The figures of the 12 apostles occupy the niches around the shrine, and are truly first-rate works of art. Above them are 12 smaller figures of fathers of the church; while about 70 fanciful representations of cupids, mermen, animals, &c., distributed among flowers and foliage, are scattered over the other parts. The miracles of the saint are the subjects of the bas-reliefs under the coffin. In a niche below, at one end, is an admirable statue of the artist himself, in a mason's dress, and at the opposite end is a figure, equally excellent, of St. Sebald." (*Handb. for S. Germ.*) The church of S. Lawrence, founded in 1274, is the largest in the town; and has some very handsome entrances, fine stained glass, curious carvings, &c.; and above all, a repository for the sacramental wafer, a tapering spire of Gothic open-work, 64 ft. in height, executed by A. Kraft, with a minuteness more commonly bestowed on ivory than on stone. The church of St. Giles, erected in 1718, in the Italian style, has a fine altar-piece by Vandyck, various bas-reliefs, escutcheons, &c.; the R. Catholic church, finished in 1361, and distinguished for its rich decorations; and the church of the Teutonic knights, begun in 1784, are the other principal ecclesiastical edifices: the Gothic chapel of St. Maurice, constructed in 1313, has been converted into a picture gallery, and filled with rejected paintings from the gallery of Munich, &c. The *Rathhaus*, or town-hall, in the Italian style, is one of the most remarkable edifices in the city; it was chiefly built in 1619, but includes the ancient town-hall, dating from 1340. In the latter are the great hall and the council-chamber; the walls of the former apartment being ornamented with several oil-paintings by Albert Dürer, and those of the latter having many concealed doors "leading to subterranean passages, which extend from the Rathhaus under the streets to the town ditch, beyond the walls." (*Handb.*, p. 56.) Nuremberg has a gymnasium, founded by the famous reformer, Melancthon, whose statue is placed in its front; an arsenal, barracks, a theatre, many hospitals and asylums, a savings' bank, a charity for distributing food to the poor, a house of correction, &c. It has also several fountains, some of which are worthy notice, especially the "Beautiful Fountain" (*Schöner Brunnen*), in the great market-place; a Gothic obelisk, or spire of open-work, with statues of various historical characters. Among the other remarkable objects in and near the city are the house of Albert Dürer, now occupied by a society of artists; St. John's churchyard, in which is Dürer's tomb, together with those of many distinguished natives; a succession of stone pillars between the cemetery and the city, ornamented with curious bas-reliefs, &c. Nuremberg is the seat of a high police court, a civil court of justice, a commercial court of appeal, and a forest board. It has a royal, and other high schools, several Latin and numerous inferior schools, a teachers' seminary, an academy of arts, a polytechnic, and a high commercial academy (*Handlungs Institut*); a number of public libraries, including the city library of 40,000 printed vols., and 800 MSS. (*Adrien in Statist. Journ.*, 1841); societies of national industry, and medical and natural science, an agricultural union, and collections of every description in the arts and sciences. There are but few pictures by the celebrated native artist A. Dürer; but those by other artists are very numerous.

Nuremberg has given birth to many distinguished men, including, among others, the famous painter Albert Dürer, born here in 1471. Several important inventions in the arts are said to have been made in this city. The famous machine for drawing wire is supposed to have been constructed by Rudolph, a native of this city. (*Beckmann's Hist. of Inventions*, li. 236.) Gunlocks are supposed to have been first fabricated here in 1517; and Beckmann says that the circumstance is probable, though he doubts whether the locks were of the precept construction. (iv. 608.) Owing partly to these inventions, but more to the freedom and industry of its inhabitants, Nuremberg early rose to great eminence as a manufacturing and commercial town. It was, in fact, the continental Birmingham of the middle ages, during a portion of which period it is said to have had 70,000 inhab. Cannon are said to have been cast here as early as 1356; and in the same century it furnished paper and playing-cards. It had, also, a very extensive commerce, being a principal entrepot for the produce of both the N. and S. of Europe. It still is, and has long been celebrated for an extensive manufacture of wooden clocks and toys, which it exports to all parts of the world. It also produces various species of metallic goods and jewellery, with telescopes, mirrors, mathematical and musical instruments, sealing-wax, and lacquered wares; lead pencils, alabaster, horn, and ivory articles; brushes, woollen yarn, lawn, paper, parchment, brandy and liqueurs, chicory, &c. Printing is also carried on to some extent.

Though considerably declined, it still ranks as one of

the principal commercial cities of Bavaria; and its commerce will, probably, receive some augmentation from the opening of the canal between the Danube and Rhine, now in progress. The first railroad for steam-carriages in Germany was completed in 1835-36, between Nuremberg and Fürth, a distance of 4½ in., now traversed in 15 minutes.

Nuremberg, supposed to have been founded in the 9th century, became, in 938, the seat of the Germanic diet. Until 1417, it had a *burggraf*, or resident governor, appointed by the emperor, and the ancestors of the present royal family of Prussia make their first appearance in history in that capacity. It was subsequently governed much in the same way as Venice, by a merchant-aristocracy, consisting of about 30 families, who appointed the executive officers among themselves. It was at the summit of its prosperity in the 15th and 16th centuries. The famous *Æneas Sylvius*, afterwards Pope Pius II., who had travelled over the greater part of Europe, celebrates the wealth of this city; and says in his work *De Morib. Germ.*, published in the 15th century, that the kings of Scotland would wish to be as well lodged as the meanest burghesses of Nuremberg. *Cuperebant tam egregie Scotorum reges, quam mediocres Nurembergæ cives habitare.* (p. 1,055.)

Nuremberg early embraced the doctrines of the Reformers, and is celebrated in the history of the Reformation. A diet assembled here in 1524, was of great service to the cause of the Reformers; and here, on the 23d of July, 1532, a treaty was signed, by which full toleration was granted to those professing the new doctrines. The city preserved its privileges as a free town of the empire to the peace of Presburg in 1805, when it was annexed to Bavaria by Napoleon. (*Berghaus, Allg. Länder, u. Volk.*, iv. 145-147; *Murray's Handbook for S. Germany*, 54-62; *Dict. Geog.*; *Stein, Cannabich*, &c.)

## O.

OAKHAM, a market-town and par. of England, hund. of same name, co. Rutland, of which it is the cap., 17 m. E. by N. Leicester, and 83 m. N. by W. London. Area of par. 3,130 acres. Pop., in 1831, 2,390. It is tolerably well built. The chief public buildings are the co. hall (forming the only remaining part of a castle built in the reign of William the Conqueror), a fine church with a lofty spire, and a large edifice belonging to the Rutland Agricultural Association. The free school, founded in 1584, and closely connected with that established at Uppingham, is under the control of 14 official governors; it is well endowed, and has 34 exhibitions at Oxford and Cambridge; it has two masters, and the school is open gratuitously to the children of the poor inhabs. An hospital for old men was incorporated with it by Queen Elizabeth, and endowed with alienated church property, now producing above 3,000*l.* a year. Another hospital once existed here, but it has fallen into decay. A boy's national school is established, and there is a well attended Sunday-school. Oakham is of very little importance with respect to trade, its chief dependence being on its markets and the retailing of goods for domestic consumption. It is connected by a canal with Melton-Mowbray, and has a considerable traffic in coal. The assizes, quarter and petty sessions are held here; and Oakham is the election-town for the co. Markets on Sat.; fairs for cattle and sheep, March 15, 2d Sat. & April, May 9, Sat. in Whit-week, Sat. after Oct. 10, and Dec. 15.

OAKHAMPTON, a decayed bor., market-town, and par. of England, hund. Lifton, co. Devon, on the Oke, a trib. of the Torridge, and near the N. border of Dartmoor, 20 m. W. Exeter. Area of par. (including the villages of Chisacot, Meldon, and Keggbar) 12,570 acres. Pop., in 1831, 2,055. It is old and irregularly built. The church stands on rising ground about 1 m. westward; and there is an ancient chantry chapel in the market-place, with places of worship for Wesleyan Methodists and Independents. It has a small endowed free school and two subscription schools, with minor charities for the relief of the aged poor. "The town is not flourishing;" the inhab. depend chiefly on retail trade, a few, however, being supported by serge-weaving. It also derives some advantage from its situation on the great road between Exeter and Falmouth. (*Muns. Corp. Report.*) The bor. was not incorporated till the 21 James I., and having fallen to decay, it was considered too insignificant to be included in the provisions of the Mun. Reform Act. It, however, sent two mems. to the H. of C. from the reign of Charles I. down to the Reform Act, when it was disfranchised. Markets on Sat.; fairs, 2d Thurs. after March 11, May 17, 1st Wed. after July 5; Aug. 5, and Christmas day.

GUAXACA, a city of Mexico, the cap. of the same name, on the Rio Verde, 205 in.

S. S. E. Mexico, and 160 m. S. S. W. Vera Cruz, lat. 17° 5' N.; long. 97° 8' W. Estimated pop., 40,000. It is built in the form of a parallelogram, about 2 m. in length, and 1½ m. in breadth, including its suburbs, which are laid out in gardens and planted with nopal trees. The streets, which are broad, straight, and well paved, are lined with good houses of a greenish kind of stone; and on the whole it is the neatest, cleanest, and most regularly built city of Mexico. The public buildings are in general handsome, solidly constructed, and richly decorated: the town-hall, cathedral, and bishop's palace form 3 sides of the principal square. There are several churches and convents; and numerous fountains are supplied with water conveyed by aqueducts across the valley from the neighbouring hills of St. Felipe. The climate is peculiarly good, the thermometer seldom falling below 63° or rising higher than 78°; but it is exposed to earthquakes, and suffered considerably during the last that happened in Mexico. Oaxaca was founded by Nuno del Mercado, one of the companions of Cortez, and received its name from the trees called *guaces* that abound in its neighbourhood.

The state of which Oaxaca is the cap. is remarkable for its extreme fertility, and for the richness and variety of its products. The cerealia and the sugar-cane are raised with great facility, and cochineal is extensively cultivated. Considerable attention is likewise paid to the culture of silk. The mineral riches of the state have been very little explored. (*Ward's Mexico*, ii. 389; *Mod. Trav.* &c.)

OBAN, a parl. bor. and sea-port of Scotland, co. Argyre, on a bay of the same name, in a secluded but beautiful situation, 61½ m. N. W. Glasgow. Pop., 1,480. The only public buildings are a new quoad sacra church connected with the establishment, and a dissenting chapel. It has no manufactures, and no trade, except in such articles as the limited consumption of the place and neighbouring district require. It is visited by the steam-boats between Glasgow and Inverness, and those that ply between either of these places and Staffa, Iona, &c.; the harbour is excellent; and the inhabs. engage extensively in fishing. The magnificent ruins of the royal palace of Dunstaffnage, stand on a promontory 3 m. N. the town. The town had no parl. representative till the passing of the Reform Act, in 1832; which united it with Campbellton, Inverary, Irvine, and Ayr, in sending 1 mem. to the H. of C. Registered voters, in 1840-41, 51.

OBI, a large river of Asiatic Russia, in the governments of Tomsk and Tobolsk, rising by two principal sources on the N. W. side of the Little Altai chain near the frontiers of the Chinese empire; lat. 51° N.; long. 89° E.; flowing first N. W. and then N. into the Gulph of Obi, after a course of about 2,700 m.; but if the Irtysh, which joins it in lat. 60° 50' N., and is the longest and widest stream and most direct from the source, be considered the main river, its length will exceed 3,000 m.; the area of its entire basin has been estimated at 1,357,000 sq. m. The Obi, which is the upper branch, has numerous affluents, the principal of which are the Tom, Tchelim, and Ket, joining it on the E. or right bank. After its junction with the Irtysh, it attains a breadth in some places of nearly 20 m. with a depth varying from 2 to 7 fathoms, and has a very rapid current, forming in the lower part of its course numerous islands, and flowing over rocky ledges that greatly impede navigation during the few months that the river is free from ice. The Irtysh rises within the Chinese empire, in lat. 47° N. long. 89° 10' E., on the W. side of the Great Altai chain, and pursues a course nearly W. N. W. of 240 m. to lake Taigan, through which it flows, and then turns N. ward for about 10 m., after which it has a general N. W. direction, passing Semipalatinsk and Omsk, as far as Tobolsk. Below this point it makes a curve N. E. ward of about 300 m., and joins the Obi at Samarova. Both the Obi and Irtysh abound with fish, which might be made a lucrative article of trade, as there is scarce navigation during the greater part of the year along the Northern Ocean to Archangel. (*Stem's Geographie*, lii. 87; *Dict. Géog.*)

OCANA, a town of Spain in New Castle, prov. Toledo, 36 m. E. Toledo and 34 m. S. by E. Madrid, on the great road leading from Madrid to Granada. Pop., acc. to Minano, 5,013. It is an ancient town of considerable size, surrounded by ruined walls, sit. on the summit and sides of a steep hill. Streets generally narrow and ill-built, but there are two or three squares which give it a tolerably respectable appearance. It has four parish churches, three decayed monasteries, an hospital, cavalry barracks, and a school of primary instruction; but the only object worth notice is the *Fuente vieja*, a fountain and aqueduct of stone, on 19 arches, supposed to have been constructed by the Romans, which supplies the town with excellent water. Ocana, in the days of its prosperity under the Grand Masters of the Order of St. Iago, established here in the 13th and 14th centuries, carried on a considerable trade in gloves; but its industry

at present is confined to the manufacture of hard soap, the tanning of leather, and the weaving of coarse woollen and linen cloths. A festival and fair is held on the 8th Sept. and eight following days, which is much frequented, especially by Jewish traders. During the peninsular war Odeña was the scene of a disastrous and obstinately contested battle (Nov. 19, 1809), between the Spaniards under Arceizaga and the French under Mortier and Victor, which terminated in the total defeat of the former. (*Milano: Sir A. Brooke's Spain and Morocco*, ii. 291; *Mod. Trav.*)

ODENSEE, a town of the Danish dom., Isl. Funen, of which it is the cap., on a small river, about 2 m. from the bottom of Stegestrand bay, a deep gulph to which it has been united by a navigable canal, 88 m. W. by S. Copenhagen; lat. 58° 24', long. 10° 24' 30" E. Pop. 8,700. It is well built; and has one of the finest cathedrals in Denmark, in which many of the Danish kings are buried, an old episcopal palace, with a library of 6,000 vols., a gymnasium, and a convent with an extensive library of Danish books, the collection of which commenced with the introduction of printing into the kingdom. It is the residence of the governor and of the bishop, and has a patriotic society. Most of the gentry of the island reside here for a part of the year, and the inhabs. are said to be the best educated and informed of his Danish majesty's subjects. (*Englis.*) It is celebrated for its manufacture of gloves and leather accoutrements: it has also manufactures of cloth, with extensive breweries and distilleries, soap works, &c. It is the most ancient town of Denmark; and was a place of great note long before Copenhagen was in existence. (*Strin; Englis. Coze, &c.*)

ODER, a large and important river of Germany, traversing the centre of the Prussian dom. It rises in Moravia, about 15 m. E. Olmutz, lat. 49° 35' N., long. 17° 35' E., at an elevation of 1,800 ft. above the sea. It runs, at first, generally N.E. to Oderberg, near which it leaves the Austrian dom.; it thence flows in general N.W. to near Oderberg in the Middlemark of Brandenburg, from which point its course is mostly N.N.E. to the Great Haaff, an inlet of the Baltic, which it enters by numerous mouths near Stettin. In the lower part of its course it forms numerous islands. Its principal tributaries are the two Neisses, the Oppa, Katzbach, and Bober, on its W., and the Malpanne, Bartsche, and Netz with the Wartha, on its E. side; the Wartha being by far its most considerable affluent. It is subject to sudden floods, and frequently inundates the plain country through which it flows. It is navigable for small boats as far as Ratibor in Prussian Silesia, and for barges from 40 to 50 tons as high as Breslau. Next to this city, Frankfort, Stettin, Glogau, Crossen, Kustrin, and Schwedt, are the principal towns on its banks. It is connected with the Havel and Elbe by the Finow canal, with the Spree by Frederick-William's canal, and with the Vistula by means of the canal from Nakel on the Netz to Bromberg. It is of the highest commercial advantage to the country through which it flows; as to which, see article PRUSSIA, in this vol. (*Dict. Géog.; Berghaus, &c.*)

ODESSA, a celebrated city, sea-port, and emporium of S. Russia, gov. of Kherson, on the N.W. coast of the Black Sea, about half way between the mouths of the Dniestr and Bug; lat. 46° 28' 54" N., long. 30° 43' 22" E. Pop., in 1838, 69,023. The rise of this emporium has been quite extraordinary; its foundations having been laid, by order of the Empress Catherine, so late as 1792, after the peace of Jassy. It was intended to serve as an entrepôt for the commerce of the Russian dominions on the Black Sea, and has, in a great measure, answered the intention of its founders. It has been said, indeed, that a better locality might have been chosen; and in proof of this, it is stated that there are no springs nor fresh water within 3 m. of the town; that the vicinity is comparatively barren and without wood; and that not being on or near the mouth of any great navigable river, its communications with the interior are difficult and expensive. That these considerations have great weight is clear; but, on the other hand, the situation has the advantage of being central and salubrious; the bay, or roadstead, which is generally open and easy of access, is extensive, the water deep, and the anchorage good; the port, which is artificial, being formed by two moles, is fitted to accommodate above 200 ships, and has a lazaretto on the model of that of Marseilles; the inconvenience arising from the want of water has been alleviated by the cutting of a canal, by which it is conveyed to the town; and, on the whole, we doubt whether any position could have been chosen so well suited to serve as an entrepôt. The vicinity is by no means so barren as has been represented. Latterly, indeed, it has been signally improved by the formation of many gardens, and by the planting of extensive vineyards.

The town is well built of soft calcareous stone; but the houses being, for the most part, detached from each other, there are few handsome streets. But a more serious defect

is, that the streets are generally unpaved; and after rain the ground is so deep that, according to Mr. Elliott, "it is not uncommon for gentlemen to be obliged to leave their carriages in quagmires in the middle of the streets, and to send oxen to drag them out." (*Trav. in Austria, Russia, &c.*, i. 255.) But some of the principal streets are now either paved or macadamised; and in this respect the city has been materially improved. The warehouses for corn are very extensive. The city is defended towards the sea by some batteries, and on its E. side is a citadel, which commands the town and port. The space, comprising the city and a small surrounding district, to which the franchise of the port extends is bounded by a rampart. Though it cannot be called a manufacturing town, Odessa has some fabrics of coarse woollen and silk goods, and has extensive tallow refineries, breweries, distilleries, rope-walks, &c.

Among the public buildings may be specified the church or cathedral of St. Nicholas, with a cupola, the exchange, the palace of the governor, the barracks, R. Catholic church, an hospital 2 stories in height, a large and commodious building, with public baths, large hotels, &c. On the quay facing the port, in the centre of the esplanade, is a statue in bronze in honour of the Duc de Richlieu, to whose enlightened administration much of the prosperity of the city is ascribable. Of the various institutions which the city owes to the duke, the Lyceum, which bears his name, founded in 1817, is one of the most important. Its organization has been modified of late years; and at present it is divided into the faculties of philosophy and jurisprudence, and has attached to it a gymnasium with 4, and a primary school with 3 classes.

In 1835 it had 259 pupils, and a library with about 7,000 vols. There are also schools for the education of young ladies, founded in 1826 and 1835; a Jewish school, attended by about 400 pupils; an institution for the study of the eastern languages; schools of navigation and commerce; an orphan school, &c. The inhabs., as in other commercial towns that have had a rapid rise, are a very motley race, consisting of Russians, Greeks, Jews, Poles, Italians, Germans, French, &c.

In 1817, a ukase conferred on Odessa, for a period of 30 years, the important privilege of being a free port; and her commerce has since rapidly increased. Not being at the mouth of any great river, nor having any considerable manufactures, she is not a port for the exportation of what may be called articles of native growth; but in consequence of her convenient situation, excellent port, and the privileges which she enjoys, she is, as already remarked, the emporium where most of the produce of Southern Russia destined for foreign countries is collected for exportation, and where most of the foreign articles required for home consumption are primarily imported. The shallowness of the water at Taganrog, and the short period during which the sea of Asoff is navigable, tends to hinder foreign vessels of considerable burden from entering the Strait of Yenikale, and occasions the shipment of a considerable portion of the produce brought down the Don in lighters to Caffa and Odessa, especially the latter. All the products brought down the Dniestr, the Bug, and the Dniepr, are exported from Odessa; but owing to the difficult navigation of the first and last mentioned rivers, by far the greater part of the corn brought to Odessa from Podolia, the Ukraine, &c., is conveyed to the town in carts drawn by oxen. The roads traversed by these carts are only practicable at certain seasons of the year; and nothing would contribute so much to increase the commerce of the port, and the prosperity of S. Russia, as the opening of improved communications with the interior; whether by removing obstructions in the channels of the rivers, constructing canals, or railways, or good common roads.

Among the articles of export from Odessa, corn, especially wheat, occupies, as every one knows, a high rank; but tallow is also a most important article; and next to it are linseed, wool, iron, hides, copper, wax, caviar, potash, beef, furs, cordage, sail-cloth, tar, butter, fish-glass, &c. We subjoin an official

Account of the Value of the Exports from, and Imports into, the Port of Odessa in the different Years from 1802 to 1839 inclusive.

Years	Exports.	Imports.	Years	Exports.	Imports.
	<i>Rbls.</i>	<i>Rbls.</i>		<i>Rbls.</i>	<i>Rbls.</i>
1802	1,334,000	719,000	1825	20,029,000	8,424,000
1803	2,339,000	1,223,000	1826	14,711,000	10,000,000
1804	3,390,000	2,156,000	1827	18,479,000	12,769,000
1805	3,390,000	2,156,000	1828	1,673,000	6,193,000
1806	1,855,000	2,165,000	1829	6,794,000	7,156,000
1807	7,290,000	4,886,000	1830	27,031,000	14,374,000
1808	14,664,000	4,516,000	1831	30,065,000	12,551,000
1809	27,717,000	4,204,000	1832	29,108,000	14,983,000
1810	41,956,000	19,710,000	1833	24,552,000	14,581,000
1811	30,555,000	14,191,000	1834	16,472,000	14,817,000
1812	15,226,000	5,988,000	1835	23,581,000	17,535,000
1813	25,581,000	7,759,000	1836	34,361,000	18,282,000
1814	16,068,000	6,065,000	1837	33,448,000	19,221,000
1815	13,008,000	7,216,000	1838	38,280,000	21,509,000
1816	15,913,000	8,554,000	1839	48,626,500	
1817	15,059,000	6,946,000			

The great amount of the exports in 1814 and 1817 is ascribable to the failure of the corn crops in Italy and Western Europe during those two years, and to the consequent high price and ready demand for the wheat of Odessa, Dantzig, &c. The small amount of the trade in 1828 and 1829 is accounted for by the war with Turkey having interrupted all communication with the port by the channel of Constantinople. Subjoined is an

Account of the arrivals of wheat at Odessa since the beginning of the present century.

Year	Arrived	Chetwerts.*
1801	—	55,142 chetwerts.
1802	—	285,106 —
1803	—	494,433 —
1804-18	—	2,090,000 average 184,836 chets. a year.
1814-25	—	2,800,000 average 680,000 chets. do.
1824-35	—	7,279,000 average 727,900 chets. do.
1834	—	691,000 —
1835	—	374,100 —
1836	—	478,700 —
1837	—	950,498 —
1838	—	1,441,000 —
1839	—	1,193,000 —
1840	—	680,000 —

The small amount of the wheat brought to Odessa in 1835 was owing to the almost total failure of the crops in S. Russia in the course of that year. The price of the best wheat in Odessa is rarely under 2s. or 2s. a quarter, and, during the 3 years ending with 1840, it was 34s. 6d. free on board: the freight and other charges on importing a quarter of wheat from Odessa to England may be estimated at about 16s. a quarter. Constantinople, Genoa, Leghorn, Marseilles, and Malta are the principal markets for Odessa wheat; but, when our crops are deficient, considerable quantities are shipped for England. In 1839, the exports from Odessa comprised, among other things, 1,210,232 chetwerts of wheat, nearly 200,000 do. rye, oats, &c., 155,194 do. linseed, 118,000 pounds wool, and 223,192 pounds tallow. The subjoined account of the merchants belonging to Odessa inscribed in the different guilds affords an additional illustration of the progress of its commerce since 1808.

	Merchants.			
	In 1st Guild.	2d Guild.	3d Guild.	Total.
In 1808	39	30	155	204
1815	53	13	190	256
1843	57	11	213	281
1828	64	31	302	397
1838	67	54	614	735

The great articles of import into Odessa consist of sugar, coffee, and other colonial products; cottons, silks, woollens, and other manufactured goods; oil, wines, and spirits; spices and dye-stuffs; cotton-twist and raw cotton; lemon-juice; tin and tin-plates; cutlery, timber for building and firewood, &c. About 800 ships from foreign parts enter and leave Odessa in ordinary years. Including Maltese and Ionian, nearly 200 ships under English colours have arrived in the port in a single season; but their number is very fluctuating, depending essentially on the state of the corn trade.

A tribunal of commerce was established at Odessa in 1824, whose jurisdiction extends over all disputes connected with trade. There is no appeal from its decisions except to the Senate. There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They register all transactions, and receive 1 per cent. from each party as commission. There is a discount or loan bank, established in 1828, and marine and fire insurance societies. Most articles of provision are cheap; and fish, which costs next to nothing, is excellent. Fuel, however, is scarce and dear. (*Official Reports; Private Information; Schützler, Le Havre, p. 73A, &c.*)

ODEYPOOR, or ODEYPORE, a city and rajaship of Hindostan, prov. Rajpootana, the city standing in a basin surrounded with rugged hills, 135 m. S.S.W. Ajmere, and 165 m. N.W. Oojein; lat. 24° 35' N., long. 73° 44' E. It has, at a distance, an imposing appearance. On the W. it skirts a large lake, the palaces and garden residences on the brink of which are all of marble, with sculptures that are both highly finished and display considerable taste. (*Hamilton.*) It is protected from inundation by an extensive embankment stretching along the lake. Images, toys, and other articles in marble, crystal, &c., are sent from Odeypoor into the neighbouring provs. The rajaship, or principality, of which this city is the cap., called also Mewar or Chittore, holds a high rank among the Rajpoot states. It has N. Joudpore; E. the territories of Kotah, Sindia, &c.; S. many small principalities of Malwah, Guzrah, &c.; and W. Sarowry. Area estimated at 111,784 sq. m.; and pop. at 800,000. The surface is hilly and well watered, producing sugar, indigo, tobacco, rice, wheat, barley, &c. Fuel is abundant;

and there are mines of iron, copper, lead, and sulphur. The last mentioned product being, however, of inferior quality. The pop. consists principally of Rajpoots, Jaats, Brahmins, Bheels, and Meenas. The *raja*, or chief, claims to be of the purest dynasty in India, and is held in great reverence by the Mohammedans, because of his supposed descent from the Persian sovereign, Nushirvan. In prosperity and power, however, this state is much inferior to those of Jeypoor and Joudpore; and for a lengthened period previously to its becoming subsidiary to the British, it had been wretchedly mismanaged. The treaty of 1818 secured to the British, as the price of their protection, 3-8ths of the public revenue.

Chittore, the ancient cap., is the only other town in this principality worth notice. It is on the summit of a scarped rock, 68 m. E.N.E. Odeypoor. Heber says 'It is still what would be called in England a tolerably large market-town, with a good many pagodas, and a neatly built, but apparently busy bazaar.' It was, however, formerly famous for its splendour and riches, and has many interesting Hindoo temples, palaces, and other buildings. It was several times taken by the Mohammedans, and by Akbar, after a siege, an account of which is given in the second volume of the *Miscell. Trans. from Oriental Languages*. See also Dow's *Hist. of Hindostan*, ii. 356, 357; *Heber's Journal*, 274-284.

ODIHAM, a market-town and par. of England, co. Southampton, hund. of its own name, 21 m. N.W. Winchester, and 40 m. W.S.W. London. Area of par., 7,850 acres. Pop. in 1831, 2,647. It is pleasantly sit. on the N. side of a chalk down, and comprises a principal and well built street, met by two others of inferior size. The church, a large brick structure, has a square tower at its W. end; the living is a vicarage, in the gift of the chancellor of Salisbury Cathedral. It has, also, 2 places of worship for dissenters, with attached Sunday-schools, a free school for 20 boys, and a large national school, and almshouse for 12 poor persons. Odiham has a considerable retail trade, and some of the inhabs. are supported by spinning worsted and winding silk. It also derives some advantages from its situation on the Basingstoke Canal. Petty sessions are held here, and it is one of the polling-places at elections for the N. division of Hampshire. Markets on Friday; cattle fairs, March 23. and July 31.

About a mile from the town are the remains of an old castle, in which David I. king of Scotland, was imprisoned; and close to the town is a ruined gate, the only existing portion of a royal palace. Lilly, the celebrated grammarian and first master of St. Paul's School, London, was a native of Odiham.

OEDENBURG (Hung. *Sopronum*), a royal free town of Hungary, cap. co. of its own name; in a wide and fertile plain near the S.W. border of the Neusiedl-lake, 49 m. W. Raab, and 37 m. S.S.E. Vienna. Pop. in 1837, 12,500. Principally of German extraction. It is generally well built: the town-proper, which is not extensive, is regularly laid out, and tolerably well paved; and the suburbs are in every respect much superior. The only relic of its ancient fortification is a huge watch tower, which, according to the *Austrian Nat. Encycl.*, is the loftiest in Hungary. It has several Rom. Cath. churches, some of which are interesting specimens of Gothic architecture; a Calvinist church; Dominican and Ursuline convents; Rom. Cath. and Lutheran high schools, two hospitals, two large barracks with a good riding school, a military academy, theatre, &c. It is the residence of the superintendent of the Calvinist church for Hungary beyond the Danube. The inhabs. refine sugar, weave cotton and woollen goods, manufacture potash, and saltpetre; and trade in wine (grown in the vicinity), corn, tobacco, wax, honey, and cattle, for which it is an extensive market. Numerous Roman antiquities have been discovered in its vicinity. (*Oesterr. Nat. Encyc. Berghaus, &c.*)

OEELAND, an island of the Baltic, belonging to Sweden, near its S.E. extremity, being separated from the prov. of Calmar, in which it is included, by the Straits of Ölsund, a channel varying from 2 to about 20 m. in breadth. It is long and narrow, extending between lat. 56° 12' and 57° 22' N., and long. 16° 20' and 17° 10' E. Area estimated at 300 sq. m.; and the pop. at 31,000. (*Horschtmann's Stein.*) The W. shore of the island is low, the E. hilly; in the centre is a plateau, elevated about 150 ft. above the sea; principally of a calcareous or sandy formation. It is principally appropriated to pasturage, only a small portion of the land round the coast being under culture. Fishing and navigation form the principal occupations of the inhabs., who send their fish, butter, cattle, &c. to the mainland, receiving corn, manufactured goods, &c. in return. The forests are rather extensive; and the deer, roebuck, and wild boar, are pretty abundant. About 800 hands are said to be employed in an alum mine, the produce of which is supposed to be worth 50,000 dollars a year. Borgholm, on the W. side of the island, is its chief town and seat of commerce. A royal edict of 1820 conferred the freedom to pursue any trade or calling, without authority from

\* A chetwert is equivalent to about 6 imperial bushels, or 3-fifths of a quarter.

any guild or company, on all handicraftsmen settling in this town. (*Horachmann's Stein*, 1. 589.; *Dict. Géog.*)

OELS, a town of Prussian Silesia, gov. Breslau, cap. circ., and principality of Oels; on the river of the same name, a tributary of the Oder, 17 m. N.E. by E. Breslau. Pop., in 1838, 5,800. It was formerly fortified, but is now merely enclosed by a lofty wall. It has a large ducal castle, in which are some extensive collections in art and science, several churches and hospitals, a theatre, and numerous public schools and charitable institutions. It has manufactures of woollen and linen fabrics. (*Von Zedlitz, Der Preuss. Staat*, &c.)

OESEL, an island of the Baltic, belonging to Russia, and included in the gov. Livonia or Riga, extending across the mouth of the Gulph of Riga, principally between lat. 58° and 58° 40' N., and long. 21° 40' and 23° E. Area, estimated at 1,150 sq. m. Pop., including the inhabs. of the adjacent islands of Moen and Runoe, about 35,000, all Estonians except some German landed proprietors, and a few Swedes. The coasts are bold; the island is well watered, and its climate is milder than that of the neighbouring continent. The soil is mostly stony, calcareous, or loamy; but with manuring it becomes tolerably fertile, producing wheat, rye, barley, oats, peas, &c.; a considerable extent of the surface is covered with forests. Rearing cattle and fishing are the principal occupations of the inhabs.; and the seal fisheries are of some importance. Manufactures quite insignificant. People all Lutherans. Arensburg, on the S.E. coast, with about 1,800 inhabs., is a bishop's see, and the centre of the commerce of Oesel. This island belonged to the Teutonic knights, when their order possessed Livonia; it afterwards belonged to Denmark and Sweden; but was ceded to Russia with the rest of Livonia in 1721. (*Schnitzler, La Russie; Dict. Géog. Universelle*.)

OEFN. See OFEN.

OFFENBACH, a town of Central Germany, being the principal manufacturing town of the Grand Duchy of Hesse Darmstadt, prov. Starkenberg, on the Mayn, 5 m. E. by S. Frankfort, and 17 m. N. by E. Darmstadt. Pop., in 1838, 7,600. It is well built, and has a castle, 4 churches, and a synagogue. Its manufactures consist of silk and cotton stockings; cotton fabrics; carriages, and other vehicles; tobacco and snuff; lacquered iron ware, sealing-wax, jewellery, toys, umbrellas and parasols, a few carpets, and other woollen fabrics, &c. Next to Mayence (*Mentz*) it has the largest general trade of any town in the Grand Duchy. Some good wine is grown in its environs. (*Berghaus*, &c.)

OHIO, one of the U. States of N. America, being at present by far the most important in the basin of the Mississippi. It is situated between lat. 38° 30' and 42° N., and long. 80° 28' and 84° 42' W., and derives its name from the magnificent river Ohio, which forms the whole of its S.E. and S. boundary, separating it from Virginia and Kentucky; on the E. it has Pennsylvania, W. Indiana, N. Michigan and Lake Erie. Length and breadth about 200 m. each. Area, estimated at 38,850 sq. m. Pop., in 1840, 1,519,437. Ohio comprises about one third part of the country sloping from the Alleghanies in Pennsylvania down to the Mississippi. It has no very elevated hill ranges, but consists almost wholly of a table land from 600 to 1,000 ft. above the sea, the central portion of the state being the highest. This, also, which is its least fertile portion, is in parts interspersed with swamps and marshes. The declivity towards Lake Erie is much more abrupt than the S. slope of the state, and the country is here also in parts marshy; that portion of the surface which declines towards the Ohio, and is the most extensive, is diversified with hills and valleys; and, on the whole, nine tenths of the state are susceptible of cultivation, nearly three fourths being pre-eminently fertile. The hills are generally cultivable to their summits; and the river bottoms are exuberantly productive. In the S. and S.E., along the Ohio, the country is broken with abrupt hills. Next to the Ohio, the chief rivers are, its tributaries, the Scioto, Miami, and Mushingum, and the Maumee, Sandusky, and Cuyahoga, tributaries to Lake Erie. The Scioto, traversing the centre of the state, is a fine navigable stream, which has been ascended by boats to near its source, where it is separated by a portage of only a few miles from the Sandusky. The Mushingum, rising near the headwaters of the Cuyahoga, is about 200 m. in length, for 75 of which (from the Ohio to Zanesville) it is navigable by small steam vessels, and for 110 m. by batteaux. The Miami is navigable for 75 m., and the Maumee for 18 m.; but most of the rivers flowing N. are greatly interrupted by cataracts. In the tract between the Scioto and Miami, and in some districts along the country was almost covered with noble forests of large and valuable trees, and these still remain uncleared in N. and N.W. parts of the state. The geological formations are nearly all secondary, comprising limestone, lla-

ssiferous, and ferriferous rocks, sandstone, greywacke, &c., in horizontal strata. The soil is generally very productive. In the sheltered valleys of the S. the climate is very mild; but in the central and N. parts, the cold of winter is considerably more severe than in the states on the Atlantic in the same latitude; but, upon the whole, it is very healthy.

In 1836, the value of taxable property was estimated at 94,338,000 dollars, of which rural lands and buildings gave 58,166,800 dollars; town-lots and buildings, 15,768,600 dollars; horses and cattle, 14,535,500 dollars; and merchants' capital, &c., 7,462,400 dollars. Ohio is rapidly becoming a thickly settled country of moderate-sized freehold properties: in respect of the magnitude of its farms, their general equality in point of size, and the dispersion of the pop. over the whole state, Ohio bears a close similarity to the states of New England. (*Finis's Géog.*, 1. 391, 392.) Indian corn, wheat, rye, oats, barley, tobacco, orchard fruits, and kitchen vegetables, are the staple products. On the rich alluvial soils, more than 100 bushels of Indian corn are sometimes produced on an acre, though from 40 to 50 bushels may be considered an average crop. The soil is, in general, highly suitable for wheat; and a larger quantity of that grain is raised in this than in any other state of the Union, the produce in 1840 being estimated at above 2 millions of quarters: in consequence, it furnishes large quantities of flour for exportation. Hemp is grown to some extent. Tobacco of the finest quality is raised E. of the Mushingum river; and the tobacco crop was, in 1837, estimated at 25,000 hhds., though it has been raised for exportation only within a few years. The vine and mulberry have been introduced; and wine and silk will, perhaps, at no very distant period, be added to the products of Ohio. Hogs form one of the staple exports; Cincinnati (*see Vol. I. p. 610.*), being the principal pork-market of the union. The stock of pigs, in 1840, was estimated at 2,084,998. Large droves of fat cattle are sent every autumn to the markets of the E. and S. In 1840, the stock of sheep was estimated at 1,495,000, yielding 3,667,000 lbs. of wool; being the largest stock of sheep in any state of the Union, New York and Pennsylvania excepted.

Iron ore is pretty extensively wrought in the E. part of the state, where, also, bituminous coal is found. Salt, lime, and marble are the other chief mineral products. Some of the salt springs on the Mushingum are said to be so rich, as to yield 1 lb. of salt per gallon of brine.

Ohio takes a decided lead among the W. states in manufacturing industry. Cotton yarn, cotton and woollen stuffs, iron, glass, and cabinet wares, paper, hats, shoes, linseed and castor oils, whiskey, &c., are the principal products. It was estimated, in 1836, that about 2,000,000 lbs. of wool were annually wrought up in domestic manufactures. Cincinnati, Zanesville, Steubenville, and Chillicothe are the principal manufacturing towns. Ship and steam-boat building are important branches of industry. The sailing vessels are laden at spring flood, and sent down the rivers to the sea; both vessel and cargo being usually disposed of in the West Indies or some foreign port. A good deal of timber is sawn and cut in this state; and this, with flour, corn, hemp, flax, cattle, beef, pork, tobacco, smoked venison, hams, and spirits, are the principal exports. The N. and E. counties send a good deal of agricultural produce to Montreal; and since the construction of the Ohio and Pennsylvania Canals, several of the W. and S. counties have an active trade with New York and Philadelphia; but by far the greater portion of the foreign trade of Ohio centres in New Orleans.

The great extent of her canals, and other internal communications, renders Ohio in this respect a rival to New York. The Ohio Canal, completed in 1832, is 307 m. in length, extending from Portsmouth on the Ohio to Cleveland on Lake Erie, directly connecting the basin of the Mississippi with that of the St. Lawrence, and having several navigable lateral feeders to Columbus, Lancaster, Zanesville, &c. The Miami Canal, 65 m. in length, from Cincinnati to Dayton, was completed in 1830; and a continuation of the same to meet the Erie and Wabash Canal (*see INDIANA*), is in progress. The Mahoning and Beaver, having a length of 77 m. within the state, and the Sandy and Beaver, are the other chief canals. The tolls paid on the Ohio and Miami Canals in 1839 amounted to 504,396 dollars. The Mad-river and Erie Railway, from Dayton to Sandusky, intended to be 153 m. in length, of which nearly a third part is now (1841) completed, is the principal work of its kind; but there are other railways in the state.

Ohio is divided into 73 counties; Cincinnati is by far its most important town, but Columbus is its cap. and seat of gov., and the General Assembly meets there annually in Dec. The representatives, whose number cannot be less than 30 nor more than 72, are elected once a year; and the senators, whose numbers are about half as many, every two years. The right of suffrage is vested in all white inhabs. of the U. States, above the age of 21, who have resided in the state one year next preceding the

election, and who have paid a state or co. tax. The governor is chosen for two years. There are courts of common pleas in each co.; and a supreme court, consisting of 4 judges, whose salaries, like that of the governor, are 1,500 dollars a year each. The judges are elected for 7 years by a joint ballot of both houses of the General Assembly.

In 1790, the pop. of this state was only about 3,000; whereas, in 1840, or half a century afterwards, it amounted to 1,519,467—a rate of increase quite unexampled in any other part of the world, and unequalled except by some of the other states of this valley. This extraordinary increase has been principally brought about by the settlement of immigrants from the E. states, attracted thither by the superior fertility of the soil, but partly also by the influx of immigrants from Europe.

Slavery is altogether abolished. The prevailing religious sects are Presbyterians, Methodists, and Baptists. Education is extensively diffused. In the townships that reported in 1839, there were 7,305 schools, attended by 254,619 pupils of all sorts; and the non-reporting districts were nearly as extensive. Ohio University, at Athens, had, in 1840, 90 students; and Miami University, at Oxford, 135: besides which, there are superior colleges at Cincinnati, Gambier, Hudson, New Athens, Granville, &c. The total public debt of Ohio, in 1839, amounted to 12,019,850 dollars. (*Amer. Almanac, &c.*) This territory was first settled in 1789; in 1800, Indiana was separated from Ohio; and the latter was erected into a state in 1802. (*Darby's U. States; Flint; Encyc. of Geog., Amer. ed.; Encyc. Americain; Amer. Almanac; Official Returns.*)

Ohio, a river of the United States. See MISSISSIPPI.

OHLAU, a town of Prussian Silesia, gov. Breslau, cap. circ. on the Oder, 17 m. S.E. Breslau. Pop., in 1838, 4,000. It was formerly one of the strongest fortresses of Silesia, but its works were, in great part, demolished after its cession to Frederick the Great, in 1741. It has a royal palace, with a gallery of paintings, several Lutheran and Rom. Cath. churches, an hospital, orphan asylum, workhouse, manufactures of woollen cloth, &c. A good deal of tobacco is grown in its neighbourhood. (*Von Zednitz; Berghaus.*)

OISE, a dep. of France, reg. N., formerly comprised in the Ille-de-France; between lat. 49° 5' and 49° 45' N., and long. 1° 40' and 3° 10' E.; having N. the dep. Somme, E. Aisne, S. Seine-et-Marne and Seine-et-Oise, and W. Eure and Seine Inférieure. Length, E. to W., 63 m.; average breadth, about 35 m. Area, 382,569 hectares. Pop., in 1836, 357,725. Surface gently undulating. A range of hills traverses the dep., dividing the basin of the Somme from that of the Seine, but no summit rises to any considerable height. Principal rivers, the Oise, Terren, and Eppe, all of which have a S. direction. The Seine, whence the name of the dep., rises in the Belgian prov. of Hainault, near the frontier of Ardennes; and after a generally S.W. course of about 190 m., through the deps. Du Nord, Aisne, Oise, and Seine-et-Oise, joins the Seine at Conflans St. Honorin, about 12 m. N.W. Paris. It is navigable from Channy in Aisne to its mouth, a distance of 75 m. Some pools and marshes exist in the E. and S.E. of the dep. In 1836, the arable lands of this dep. were estimated to comprise 389,486 hectares; meadows, 29,927 h.; vineyards, 2,601 h.; orchards, gardens, &c., 15,388 h.; forests, 80,578 h.; and heaths, waste, &c., 15,709 h. In 1835, of 214,149 properties subject to the contrib. foncière, 109,027 were assessed at less than 5 fr.; and 34,666 at from 5 to 10 fr. The number of large properties is, however, greater than in most deps. Soil principally calcareous, everywhere requiring manure: agriculture is considerably advanced, and is improving. Fallows are decreasing, and agricultural implements are made more effective. More corn is grown than is required for home consumption: it is principally oats and wheat. Peas, beans, &c., are raised in large quantities for the Paris markets. Pear and apple orchards are numerous, and a great deal of cider of good quality is made. Some wine is grown, but of inferior quality. The rearing of cattle is an important branch of rural economy; and the fat calves, known in Paris as *veau de Pontoise*, are from this dep. In 1830, the stock of horned cattle, calves, &c., was estimated at about 96,500 head, and that of sheep at 538,000. The latter have been improved by crossing with the Merino, Southdown, and Leicester breeds, and yield annually about 800,000 kilogr. wool. (*Hugo.*) Butter and cheese, including the cheese of Songeons, are valuable products. Hogs and poultry are numerous. Mineral products, excepting limestones, are few, and of little importance. Oise is distinguished for its manufacturing industry. Woollen fabrics, especially at Beauvais and Crevecoeur; table-linen, cotton, and hempen cloths, woollen and cotton yarn, cotton stockings, lace, metallic and glass wares, and fans, horn, wooden and ivory articles at Mery, &c., are among the principal goods manufactured. This dep. is divided into 4 arrondis; chief towns, Beauvais, the cap., Clermont, Compiègne, and

Senlis. It sends 5 mems. to the Ch. of Dep. Registered electors in 1838-39, 3,105. Total public revenue in 1831, 14,000,236 fr. (*Hugo, art. Oise; Dict. Geog.; French Official Tables.*)

OLIBANA (an. *Lipana*), a town of Spain, in Andalusia, prov. Seville, in a mountainous district, 48 m. S. E. Seville. Pop., acc. to Milfrano, 6,000. It is, acc. to Captain Scott, "a wretched place, containing some of the rudest-looking and least scrupulous inhabitants of the serranía de Ronda." A par. church, hospital, three decayed convents, and a Moorish castle, are its principal buildings; and the view from the last is very commanding over a great extent of mountains, intersected by well wooded valleys. A few oil-mills are established here; but the pop. is almost wholly occupied in rearing hogs for the Seville market. (*Milfrano; Scott's Ronda and Granada*, ii. 151.)

OLDENBURG (GRAND DUCHY OF), a state of N.W. Germany, consisting, exclusive of some portions of country inclosed by the Duchy of Holstein, of an oblong-shaped territory, between lat. 52° 30' and 53° 43' N., and long. 7° 35' and 8° 50' E.; having N. the North Sea, and surrounded on all other sides by the Hanoverian dom., except on a small portion of its E. frontier, where it adjoins the territory of Bremen. Length, N. to S., 80 m.; breadth varying from 10 to nearly 50 m. It is divided into 3 provinces, as follows:—

	Area in sq. m.	Pop., 1837.	Chief towns.
Oldenburg	2,103	217,857	Oldenburg.
Lubeck	166	20,062	Eüten.
Birkenfeld	145	21,451	Birkenfeld.
Total	2,412	265,570	

The natural features, climate, &c., of this duchy are similar to those of the adjacent kingdom of Hanover. (*See p. 960.*) It is almost a perfect level, except towards the S., where are some hills, though none rises above 300 or 400 ft. The principal rivers are the Weser on the N.E. boundary, its tributaries, the Hunto, Haase, Leda, Jahlde, &c. There are many small lakes, the principal being the Drümmersee, in the S. The coast is so low that dykes are necessary, as in Holland and Friesland, to prevent inundations of the sea. Here, and on the banks of the rivers, the soil is alluvial and rich; but in most parts of the grand duchy it is either marshy or sandy; and the country does not produce sufficient corn for home consumption, the deficiency being mostly made up by potatoes and pulse. The industry of the inhab. is, however, principally rural; flax, hemp, hops, and rapeseed; together with cattle, horses, salt beef, butter, and bacon, are the chief exports. The horses and cattle are of superior breeds; large flocks of sheep are pastured on the heath lands, but their wool is of inferior quality. In this district, also, good many bees are kept. Next to tillage and grazing, taking fish, with which the rivers abound, is a chief employment of the pop. Timber, fit for ship-building and carpenter's work, grows in the hilly district in the S. of the duchy, where the forests are estimated to cover an extent of nearly 170 sq. m.; but in other parts the fuel used consists almost wholly of turf, which is very abundant in the marshes. Iron is the only other mineral product of much utility. The spinning of linen yarn, and the domestic weaving of linen and woollen stuffs, are the chief branches of manufacturing industry; but these are pursued only as auxiliary occupations by the agricultural pop. Though the country produces oily seeds, animal fat, &c., in considerable quantities, neither candles, soap, nor oil are made to any extent, all being imported from foreign countries, to which the raw materials are sent. Neither is the trade of the grand duchy at all extensive; it has but a small seafaring pop., and its commerce is principally confined to a coasting traffic with the neighbouring countries of Denmark, Hanover, Holland, Lubeck, &c.

The government is an unlimited monarchy, except in respect to the distribution of the taxes, which is under the control of the states, composed of deputies of the nobles, citizens, and peasantry. For administrative purposes, the Grand Duchy (exclusive of Lubeck and Birkenfeld) is divided into 6 circles and 28 districts, each of which has its own judicial courts. The court of chancery, and other high courts of appeal, are in Oldenburg or Jever, except for the principality of Lubeck, which has its own superior courts in Eüten. Total public revenue estimated at 850,000 rix dollars a year. The pop. is principally Lutheran, but there are about 68,600 R. Catholics, and a few Calvinists and Jews.

Oldenburg holds the 10th place in the full diet of the Germ. Confed., in which it has 1 vote; and the 15th in the committee, in which it has 1 vote in conjunction with Anhalt and Schwarzburg. Its contingent to the army of the Confed. consists of 2,829 men. The House of Oldenburg is connected with the reigning families of Denmark and Russia. This duchy was erected into a sovereign state in 1773, but Birkenfeld was not united to it till 1813.

## OLDENBURG.

OLDENBURG, a town of N.W. Germany, cap. of the above Gd. Duchy, and residence of its sovereign, circle of same name, on the Hunte, a tributary of the Weser, 24 m. W.N.W. Bremen. Lat.  $53^{\circ} 8' 24''$  N.; long.  $8^{\circ} 13'$  E. Pop., in 1837, 5,564. It is fortified, and divided into the Old and the New Town, the latter being pretty well built. The ducal castle is an imposing building, with a fine park. The chancery-chamber, and other buildings for the use of the government, St. Lambert's Church, in which the sovereigns of Oldenburg are interred, some other places of worship, the observatory, and the barracks, are the principal public edifices. It has a gymnasium, a military school, and a ducal library of 24,000 vols. Its manufacturing industry is quite insignificant; but it has some trade in wool, timber, &c. (*Berghaus, Allg. Länder und Völkerk.*, iv. 419-430.; *Dict. Géog.*)

OLDHAM, a parl. bor., market-town, and township of England, par. of Prestwich, hund. Salford, co. Lancashire, near the source of the Irk, and not far from its junction with the Medlock,  $\frac{1}{2}$  m. N.E. Manchester, and 162 m. N. N.W. London. Area of parl. bor. (which includes with Oldham the townships of Chadderton, Crompton, and Royton), 11,180 acres. Pop. in 1831, 40,463; do. of Oldham township, 32,381. The town has entirely risen since 1760, when it comprised only about 60 thatched tenements; it now consists of many well-built streets, extending on the side of a hill on the road from Manchester to Leeds; and is well paved, lighted with gas, and well supplied with water. The chief thoroughfare runs from E. to W., and is crossed by two or three others in an opposite direction. The principal edifices are the town-hall, built in 1810, a small theatre, the "Terrace Buildings," comprising a public room, market-house, &c., and a large gas establishment. The church, which is subordinate to that of Prestwich, is a modern Gothic structure, completed in 1830, at a cost of 22,000*l.*; there are also 2 chapels-of-ease within the town, the livings of which are in the gift of the rector of Prestwich. There is a Roman Catholic chapel; and 11 other places of worship belong to different denominations of dissenters, among whom Methodists are the prevailing body: and attached to the churches and chapels are numerous Sunday-schools, which, in 1839, furnished religious instruction to 12,827 children of both sexes. The town has a small endowed grammar-school, and a large blue-coat school, founded, in 1807, by the late Mr. Henshaw, hat-manufacturer. This school, however, owing to a long Chancery suit respecting the property, which amounted to 40,000*l.*, was not opened till 1833. The school-house is at Oldham-edge, and the establishment supports, clothes, and educates 110 boys. There are likewise 2 large national schools, and several Lancastrian as well as infant-schools, wholly, or in part, supported by subscription. The other public institutions consist of 3 benevolent societies, a bible and tract association, subscription library, lyceum (with schools, news-rooms, &c.), and 2 mechanics' institutes.

Oldham owes its present consequence entirely to the cotton manufacture, of which it was early a considerable seat. In 1785 there were within the chapelry 6 cotton mills; but such and so rapid has been the increase of the manufacture in the interval, that in 1839 it had 290 factories, set in motion by a steam-power equal to 2,942 horses, and employing 15,291 hands. It had then, also, 200 hand-loom weavers, chiefly of silks similar to those manufactured in Manchester. (*Factory Comm. Rep.*) Hat-making (once the staple manufacture of Oldham) is also very extensively carried on, employing 2,800 hands; and about 1,400 men are engaged in collieries, that have been opened during the last few years within the chapelry. The beds vary from 3 to 5 ft. in thickness; the coal is of excellent quality, and furnishes the chief supplies for Manchester, Ashton, Rochdale, and other manufacturing towns, with which it is connected by the Oldham and Rochdale canals, which latter also communicates with the Ayr and Calder Navigation. The Manchester and Leeds Railway passes within 2 m. of Oldham, and a branch railway up to the town is in course of construction. Besides the Oldham Banking Company, it has branches of one or two other banks, and a savings' bank. The affairs of the township are regulated by commissioners, according to an act passed in 1826. Petty sessions are held twice a week; and there is a court of requests for the recovery of small debts, once a month. The Reform Act conferred on Oldham, for the first time, the important privilege of returning 2 mems. to the H. of C. The electoral limits comprise with the township three outwards, as above mentioned. Registered electors, in 1839-40, 1,402. Markets on Saturday: fairs May 2d., July 8th., and first Wednesday after October 18. (*Buckingham's Stat. of Lanc.*; *Bain's Hist. of Lancashire*; *Parl. Rep.*)

OLERON (ISLE OF), an island off the W. coast of France, dcp. Charente-Inferieure, opposite the mouth of the Charente, lat.  $46^{\circ}$  N., long.  $0^{\circ} 30'$  W., 7 m. S. the Isle of Ré, and 2 m. from the nearest point of the continent. Area estimated at about 160 sq. m. Pop., in 1836,

## OLONETZ.

435

16,402. It is tolerably fertile, producing various kinds of corn, timber, red and white wines (a portion of which is converted into brandy), and considerable quantities of salt, from salt-pans along the coast. Château d'Oleron, the cap., on its S.E. side, is a fortified town, with a pop. of about 2,600.

OLIVA, a town of Spain, prov. Valencia, 33 m. S.S.E. Valencia and 218 m. S.E. Madrid, built amphitheatrically on the side of a hill, 14 m. from the Mediterranean, in a well watered and productive district. Pop., acc. to Mifano, 5,587. Its chief public buildings are 2 churches, one of which has a collegiate establishment, a hospital, an ancient palace, and 2 prisons. Its manufactures are confined to hemp and linen fabrics. In the neighbouring river Molinet are found fine eels and leeches, the latter of which are exported in considerable quantities to France. (*Minano*.)

OLIVENZA, a town of Spain, prov. Estremadura, close to the frontiers of Portugal, and about 6 m. from the left bank of the Guadiana, 14 m. S. S. W. Badajoz, and 211 m. W.S.W. Madrid. Pop., acc. to Minano, 10,447. It is surrounded with walls and strongly fortified; it has 7 par. churches, 7 convents (now applied to secular uses), 3 hospitals, and a poor-house. The surrounding country, though very imperfectly cultivated, produces abundant crops of wheat, barley, and other grain, with pulse, wine, &c.; and the town is much resorted to by traders from Alentejo, who come to exchange manufactured goods for farm produce. Olivenza was attached to Portugal till 1801, when it was ceded to Spain, to which it is still attached, notwithstanding the order for its restitution by the Congress of 1815. (*Minano*.)

OLMÜTZ, a town of Moravia, of which it was formerly the cap., being one of the strongest fortresses of the Austrian dom., cap. circ. Olmütz, on the March, 40 m. N.E. Brünn. Pop., in 1837 (ex. garrison), 12,782. It is well built, but the loftiness of its buildings darkens the streets. The cathedral is a fine Gothic edifice, in which its founder, Wenceslaus III. of Bohemia, is buried: some of the other churches also deserve notice. The archbishop's palace, deanery, town-hall, theatre, arsenal, barracks, a military hospital, an hospital for lying-in women and orphans, and a large conventual establishment comprise the other chief public buildings. Olmütz is the seat of a university, founded in 1581, and restored in 1827. In 1833 it had, in all, 692 students. It still possesses a library of about 50,000 printed vols., and many hundred MSS.; it had formerly a rich library of Slavonic literature, but this was carried away by the Swedes, and lost towards the end of last century. It has a gymnasium, an episcopal seminary, an academy of nobles, a military school, and numerous inferior schools, and is the residence of the high military authorities, and the seat of the superior judicial courts for the circle. It has some manufactures of woollen, linen, and cotton fabrics, earthenware, leather, and vinegar; and an active transit trade with the neighbouring Austrian provs., Prussia, Poland, &c., especially in cattle. Olmütz was taken by the Swedes in the 30 years' war; and was besieged unsuccessfully by Frederic the Great in 1758. Lafayette was confined here in 1794. (*Oesterr. Nat. Encyc.*; *Berghaus*.)

OLNEY, a market-town and par. of England, co. Buckingham, hund. Newport, on the W. side of the Ouse, crossed here by a bridge of 4 arches, 16 m. E.N.E. Buckingham, and 50 m. N.W. London. Area of par. 3,140 acres. Pop., in 1831, 2,344. The town consists of one long street, lined with stone houses. The church is a large Gothic structure, with a spire 185 ft. high, seen from a great distance: the living is a vicarage in the patronage of the Earl of Dartmouth. The Baptists and Independents have their respective places of worship, which, as well as the church, have well attended Sunday-schools. Almshouses for necessitous females are supported at the sole expense of a benevolent Quaker lady. Lace-making was long the chief employment of the inhabs.; but it has been for many years declining. More recently silk-weaving and the manufacture of hosiery were attempted on a small scale, but they also have been abandoned. Olney derives its principal celebrity from its having been for a lengthened period the residence of the poet Cowper: the "substantial brick-built house" in which he resided still stands near the centre of the town, and the arbour in which he studied is in excellent preservation, and is an object of great attraction. The latter years of the poet's melancholy existence were not, however, passed here, but at East Dereham, in Norfolk. It is rather singular that though the vicarage of Olney be not worth 100*l.* a year, it has been held by some rather distinguished persons, including Moses Browne, Scott the Biblical Commentator, and Newton the friend of Cowper.

OLONETZ, a gov. of European Russia, between the 60th and 65th degs. of N. lat., and the 30th and 43d of E. long.; having N. and N.E. the gov. Archangel, S.E. and S. Volodga, Novgorod, and Petersburg, and W. Lake Ladoga and Finland. Area (including Lake Onega)

estimated at nearly 62,400 sq. m. Pop., in 1838, 239,000. The W. part of this gov. resembles Finland, in being alternately mountainous and marshy, or covered with lakes. Of the latter, Onega (which see) is by far the largest. For principal rivers, the Onega, by which the lake Ladoga discharges itself into the White Sea, Vodka, Svir, Suna, &c. For 23 weeks in the year the mean temp. is below 32° Fah., and mercury sometimes freezes. Bleak winds are almost constant; but the country is tolerably healthy. Soil thin, stony, and not very fertile. Except in the district of Kargopol, into which some improvements have been introduced, agriculture is very backward. The produce of corn, in 1832, was estimated at 269,000 *chetverts*, a quantity insufficient for the wants of the pop. The peasantry are supported chiefly on turnips, carrots, and other vegetables, of which their bread partly consists, and on the produce of the chase, fisheries, &c. Hemp and flax are grown for exportation; but the principal source of wealth consists in the forests, which are of great extent, those belonging to the crown covering 8,596,798 dectinines. Pasturage is not abundant, and few cattle are reared. Marble, granite, serpentine, alabaster, &c., are found; and there are mines of iron, copper, and even silver, though they are but little wrought. The poverty of the country obliges many of the inhabs. to emigrate annually into the adjacent govts. to take charge of cattle, hew millstones, &c.; and in summer the number of absentees is estimated at about a third part of the entire pop. These circumstances are hostile to manufacturing industry; and, exclusive of the royal cannon foundry at Petrozavodsk, it has only a few tanneries and iron forges. It exports raw produce to Petersburg and Archangel: from which cities, corn, salt, spirits, and colonial and manufactured goods are imported. Olonetz is under the same military jurisdiction as Archangel. Its inhabs. are principally of the Greek church, and subordinate to the archbp. of Novgorod. Total public revenue estimated at only 284,110 rubles. (*Schnitzler, La Russie; Possart; Russland, &c.*)

OLORON, or OLERON (an. *Iluro*), a town of France, dép. Basses-Pyrénées, cap. arrond., on the summit and declivity of a hill beside the Oleron, across which it communicates with the town of Ste. Marie by a lofty bridge, 13 m. S.W. Pau. Pop., in 1836, 6,637. It has a court of primary jurisdiction, a board of customs, and a chamber of manufactures; with manufactures of woollen cloths, yarn, hosiery, paper, and leather; and an active trade in French and Spanish wool, sheep-skins, *jambons de Bayonne*, and other salted meats, cattle, and timber. It is the general dépôt for the timber of the Pyrenees destined for the dockyard of Bayonne.

OLOT, a town of Spain, in Catalonia, near the small river Fluvià, 53 m. N.N.E. Barcelona; lat. 42° 12' N.; long. 2° 45' E. Pop., acc. to Miñano, 13,845. It is tolerably well built on level ground, at the foot of a range of volcanic hills, and has several squares and streets adorned with fountains; its public buildings consist of two par. churches, cavalry barracks, and an hospital. It has considerable manufactures of cotton-cloths and woollen caps, with extensive tanneries and soap-factories, and some paper-mills. Well attended markets are held twice a week; and Olot is one of the most thriving towns of Catalonia. Its neighbourhood is peculiarly interesting to geologists, on account of the extinct volcanoes with which it abounds, scattered over a tract measuring about 15 m. from N. to S., and about 6 m. from E. to W. Mr. Lyell, who visited it in 1830, says, "There are about 14 distinct cones with craters in the vicinity of Olot; and the largest, called Santa Margarita, is 455 ft. deep, and about a mile in circumference. These volcanic rocks, also, have often a cavernous structure; and at the base of the same hill adjoining the town, are the mouths of about 12 subterraneous caverns, here called *bufadores*. In 1421 the whole of Olot, except a single house, was thrown down by an earthquake; but this calamity may, perhaps, be ascribed more to the cavernous nature of the subjacent rocks than to the extraordinary violence of the movements on that spot; for Catalonia is beyond the line of those European earthquakes which have within the period of history destroyed towns throughout extensive areas." (*Miñano; Lyell's Geology*, iv. 34-49.)

OMER (ST.), a strongly fortified town of France, dép. Pas de Calais, cap. arrond., on the Aa, and at the union of several great roads, 40 m. N.W. Arras, and 29 m. E. by N. Boulogne. Lat. 50° 44' 46" N.; long. 2° 25' 18" E. Pop., in 1836, 18,789. It is partly built on a hill, but principally in the low and marshy plain at its foot. The circ. of its ramparts is about 2½ m.; beyond its moats and glacis are several strong and extensive outworks; and from the town, being half surrounded by marshes, the greater part of its vicinity may be readily laid under water. Its streets are broad and regular, but being lined generally with mean-looking houses of yellow brick, it has a dull appearance. It is, however, well furnished with public fountains. The cathedral of Notre-Dame, an edifice completed towards the middle of the 15th century, is of Gothic architecture, and 373 ft. in length internally. In it

are several colossal statues, a fine painting by Reubens, the tomb of St. Omer, a superior organ, &c. The abbey of St. Bertin, in which the last of the Merovingian kings died, was destroyed during the phrenzy of the Revolution, and only some ruins of its church exist. The college, formerly the Jesuit's church; the military hospital, occupying the building formerly a seminary for the English and Irish Rom. Catholic clergy; the town-hall, arsenal, and powder magazines, several hospitals and prisons, the theatre, and some convents, are the other principal public buildings. The ramparts are planted with elms, and form fine promenades; as do the banks of the canal of Neuf Fossé, which connects St. Omer with Aire, and the Aa with the Lys. It is the seat of a sub-prefecture; and has courts of primary jurisdiction and commerce, a chamber of manufactures, a communal college, and a public library of 16,000 vols. Its manufactures consist of common woollen cloth, woollen yarn, lace, basket-work, fishing-net, soap, starch, glue, tobacco-pipes, &c.; it has also many distilleries, breweries, paper-mills, and tanneries, and an active trade in corn, wine, oil, flax, &c. Beyond the walls are 2 suburbs, the inhabs. of which are principally gardeners. Near the town is a lake, on which are some curious floating islands, held together principally by the trees which grow on them, and affording pasturage for sheep and cattle.

This town was originally called Sithiu; it took its present name from St. Omer, who founded its cathedral about 645. It was walled at the end of the 9th century; and was long an object of contention between the Burgundians and French, to whom it finally fell in 1677. (*Hugo, art. Pas de Calais; Diet. Géog.*)

ONATE, a town of Spain, in Biscay, prov. Guipuzcoa, 28 m. E.S.E. Bilbao, and 194 m. N.N.E. Madrid. Pop., acc. to Miñano, 12,000. It stands on the side of a hill in the valley of its own name, and is well built with regular streets, most of them terminating in a large square, which has a remarkably fine town-hall, a par. church, with a tower 190 ft. high, and a large building with a Doric portico, formerly used as a convent of Jesuits: in the centre of the square is an elaborately ornamented fountain. There are two other par. churches, and several deserted convents, a well supported hospital, and a college of handsome architecture, attended by between 150 and 200 students. Iron is extensively wrought in the neighbouring mountains, and within the town are iron-foundries, nail-factories, &c. The late civil war, however, which chiefly raged in the Basque provs., gave a great shock to its industry, from which it is only slowly recovering. The surrounding district is extremely productive, and has numerous mineral springs and quarries of Jasper and limestone. (See BISCAY.)

ONEGA (LAKÉ), a considerable lake of Russia, being next to that of Ladoga, the largest in Europe, in the centre of the gov. of Olonetz, between lat. 60° 50' and 62° 50' N., and long. 34° 20' and 36° 20' E. Length, N.W. to S.E., 130 m.; breadth varying from 30 to 45 m. Area variously estimated at from 3,300 to 4,300 sq. m. It receives numerous rivers, and at its S.W. extremity discharges itself into the Lake Ladoga by the Svir. Its shores, which are generally rocky, present several deep bays and gulphs; and there are numerous islands near its N. extremity. Its navigation is impeded by sandbanks, but it is less subject to storms than Lake Ladoga. Principal towns on its banks, Petrozavodsk and Povenetz. (*Schnitzler, La Russie; Possart; &c.*)

ONTARIO (LAKE), the smallest and most easterly of the five great lakes of N. America, in the St. Lawrence basin, partly belonging to Canada, and partly to the State of New York (U. States); between lat. 43° 10' and 44° N., and the 76th and 80th degs. of W. long. It is of an elongated oval shape; length, W. to E., 172 m.; greatest breadth, about its centre, nearly 60 m. Area, estimated by Darby at 5,400 m. Its surface-level is about 334 ft. below that of Lake Erie, and 231 ft. above the tide-level in the St. Lawrence. Its depth is said by Darby to average 490 ft.; but in some places it is upwards of 600 ft. in depth (*Stevenson*); and it is navigable throughout its whole extent for vessels of the largest size. The St. Lawrence, (under the name of the Niagara river), enters it near its S.W., and leaves it at its N.E. extremity, where it is much encumbered with small islands. Lake Ontario has many good harbours; and as it never freezes, except at the sides, where the water is shallow, its navigation is not interrupted like that of Lake Erie. It is, however, subject to violent storms and heavy swells. Its banks are in general level, and mostly covered with wood, though now variegated with partial and increasing cultivation. Toronto, Kingston, Newcastle, and Niagara, are the principal towns on the British side (see TORONTO, &c.); and Oswego, Genesee, and Sackett's Harbour, on the American side. This lake receives numerous rivers, including the Trent and Humber on its N., and the Black River and Genesee on its E. and S. shores. It communicates by the last-named river, and by the Oswego Canal, with

the Erie Canal, and consequently with the Hudson and N. York; the Niagara River and the Welland Canal, at its S.E. extremity, unites it with Lake Erie, and the Rideau Canal connects it with the St. Lawrence below Montreal. Numerous sailing vessels and steamers of large size navigate this lake, which is the centre of an extensive commerce; as to which see OSWEGO, Toronto, &c. (*Darby's New York Gaz.*; *Stevenson's Civil Engineering of N. America*, 49, 50.)

ONTENIENTE (an. *Foniente*), a town of Spain, prov. Valencia, on the Clariano (a trib. of the Júcar), crossed here by a handsome stone bridge, 35 m. N. by W. Alicante, and 47 m. S. S. W. Valencia. Pop., acc. to Miñano, 12,000. It is tolerably well built, with a fine central square, and several wide though steep streets; its principal public buildings being three par. churches, five decayed convents, an hospital and college now partly in ruins. It is a place of considerable industry, chiefly exerted in weaving llinens and woollen fabrics; besides which there are several fulling, corn, oil, and paper-mills. In the neighbourhood is an extensive *huerta*, or irrigated tract, which is very productive. A great fair is held here in November.

OOCII, a town of N.W. Hindostan, prov. Mooltan, rajpaship of Bhawalpoor, in a fertile plain 4 m. E. the Chenab (an. *Chenab*), where it is joined by the Gura, or united Sutlej and Beas; lat.  $29^{\circ} 11' N.$ , long.  $70^{\circ} 50' E.$  Pop. 20,000. "It is formed of three distinct towns, a few hundred yards apart from each other, and each has been encompassed by a wall of brick, now in ruins. It is a mean place: the streets are narrow, and covered with mats as a protection from the sun. It is highly celebrated in the surrounding countries for the tombs of two saints of Bokhara and Bagdad. These are handsome edifices, about 500 years old; but an inundation of the Achesines, some years back, swept away one half of the principal tomb, with a part of the town." (*Burns's Trav. to Bokhara*, &c., 1, 79—82, &c.) Oochi is built on an elevated mound of clay, apparently composed of the debris of former houses, the best places of high antiquity.

OJOJEIN (Hindoo *Ojogin* or *Avanti*), the *Ozene* of Ptolemy and the *Perlipiti*, a city of Central India, prov. Malwah, and the former cap. of Scindia's dom., on the Siprah, a tributary of the Chambul, 34 m. N. by W. Indore, and 1,698 ft. above the sea; lat.  $23^{\circ} 11' N.$ , long.  $75^{\circ} 51' E.$  It is of an oblong form, about 6 m. in circuit, and fortified with a stone wall and towers. Within this space is some waste ground, but the greater part of the surface is thickly covered with buildings and very populous. The streets are broad, airy, paved, and clean; the houses of brick or wood, and tiled or terraced. Four mosques, some mausoleums, Scindia's palace, an extensive and commodious edifice, but without any claim to magnificence, an ancient Hindoo gate, and some Hindoo palaces, are the principal public edifices. In a temple to Mahadeo is an extraordinary sculptured image of the bull Nundi. The pop. of Ojojein includes a great many Mohammedans, who are actively engaged in trade. The imports are principally fine white cloths, turbans, and dyed goods; European and Chinese produce from Surat; assafoetida, &c. from Siude; cotton, coarse cloths, opium and other drugs, are exported, and diamonds in transit from Bundelcud to Surat.

Ancient Ojojein, which stood about 1 m. northward, was destroyed at an uncertain period by some physical catastrophe. On digging to a depth of 15 or 18 ft., brick walls, stone pillars, and other antiquities have been discovered, frequently in good preservation. Adjoining these subterraneous ruins, is what has been called the Cave of Bhilrity, a palace now in great part buried by an accumulation of the surrounding earth, but of which many portions remain entire, including a long gallery, supported by pillars curiously embellished with figures in relief. Elsewhere around Ojojein, there are various temples, &c. worthy of notice; and about 4 m. N. is an elegant summer palace, cooled by artificial cascades, built in the 16th century, and but little injured by time. (*Forbes, Hunter, &c., in Mod. Trav.*, x, 220—228; *E. I. Gaz.*)

OOSTERHOUT, a town of Holland, prov. N. Brabant, arrond. Breda, cap. canton, 3 m. N.E. Breda. Pop. about 6,300. It has numerous potteries and brick-kilns, and is the seat of three large annual fairs, at each of which the sale of woollen and linen fabrics, shoes, &c., is estimated to amount to 40,000 florins.

OPORTO, or PORTO, an important commercial city and sea-port of Portugal, on the N. bank of the Douro, about 2 m. from its mouth, 174 m. N. by E. Lisbon, lat.  $41^{\circ} 10' 30'' N.$ , long.  $8^{\circ} 37' 18'' W.$  Pop., in 1827, including Villanova and Gaya, on the opposite side the river, 80,000. The town has 4 suburbs, which, with the city itself, cover an area of about 2 sq. m. It is built amphitheatre-wise, partly on the sides and tops of 2 hills, but partly also on a plain near the river, from which it has a strikingly beautiful appearance. A wall, flanked at intervals with towers, encircles the town, which is further protected by a fort; but these fortifications

have not been kept in good repair, owing to the city being naturally secure against an attack by sea, and one on the land side not being apprehended. An elevated quay extends the whole length of the town: it has on one side a row of houses, and on the other a strong stone wall, with rings, booms, &c. for securing vessels during the heavy swells of the river. It is generally well built, the houses are all white-washed, and though it has many narrow and dirty streets, it is said to be (which, however, is no great recommendation) the cleanest and most agreeable town in Portugal. From the quay rises a broad well-paved street, flagged on both sides, and leading to two cross streets of equally fine proportions; but the streets on the slope of the hill are mostly irregular, contracted, steep, and dirty. At the E. end of the city the houses, which overhang the side of the river, are built on so steep an acclivity as to be accessible only by steps cut out of the rock. On the summit of the hills are several fine broad streets, lined with good houses, with gardens attached, occupied by some of the principal merchants. Oporto has several squares, the largest of which are the *Praca da Constitution* and the *Campana da Cordaria*, lined with three rows of trees, and much frequented as a public promenade. There are 9 parish churches, and a great many other churches and chapels. The cathedral, built in 1165, is a large and fine, though rather heavy edifice: the church, *dos Clerigos*, has the highest steeple in Portugal, except that of Mafra; the rest exhibit no features worth notice. There are also 17 convents, now luckily unoccupied, or applied to secular uses. The other public edifices comprise a modern-built episcopal palace, a town-hall (*senado da Comarca*), court-house, with attached prisons, royal hospital, *casapia*, or pawnbroking establishment, and a very pretty theatre, with extensive warehouses belonging both to the Oporto company and the British merchants. The English factory is a handsome building, in one of the principal streets, comprising reading-rooms, ball-rooms, &c., and a residence for the British consul. Oporto has several establishments for public instruction, the principal of which are the Academy of navigation and commerce, the school of medicine and surgery attached to the hospital *de la Misericordia*, the episcopal seminary, school for foundlings, and 4 colleges, with numerous schools for primary and higher instruction. It has a large tobacco factory, a soap-boiling establishment, with roperies, tanneries, and fabrics of cotton, silk, linen, and wool: besides which there are ship-building yards for the construction and repair of merchant-vessels; but in none of these establishments is there any great display of activity. The harbour within the bar, across the mouth of the Douro, can only be entered, at least by vessels of considerable burden, at high water; and it is rarely practicable at any period of the tide for any vessel drawing more than 16 ft. On the N. side the entrance is the castle of St. Joan de Foz, near which, on high ground, is a lighthouse, with a fixed light. The ordinary rise of spring tides is from 10 to 12 ft., and of neaps from 6 to 8 ft. The bar being liable, from the action of the tides, and from sudden swellings and *freshes* in the river, to perpetual alterations, should never be attempted by any vessel without a pilot.

The swellings or *freshes*, now alluded to, most commonly occur in spring, and are caused by heavy rains, and the melting of the snow on the mountains. The rise at such times often amounts to 40 ft.; and the rapidity and strength of the current are so great that no dependence can be placed on anchors in the stream. Fortunately, a fresh never occurs without timely warning, and it is then the practice to moor with a cable made fast to stone-pillars erected on the quay for that purpose. On the opposite side of the river, but connected by a bridge of boats, are the towns of Gaya and Villanova, which may be considered as suburbs of Oporto. The former of these is said to occupy the site of the ancient *Cala*: more eastward is Villanova, inhabited chiefly by coopers, porters, and other labourers, employed by the merchants; and between these towns are immense vaults or warehouses for storing wine previously to its shipment.

Commerce.—Owing to her situation on the Douro, which is navigable partly by barges and partly by boats about 100 m. inland, Oporto is the emporium of a large portion of Portugal, and enjoys a pretty extensive commerce. The famous and well-known red wine called Port is produced on the banks of the Douro, about 50 m. above Oporto, and has derived its name from its being exclusively shipped at this city. The exports of port, which is the great article of trade, have varied during the last 10 years, from about 16,500 to above 40,000 pipes. England is by far the largest consumer of port. The high discriminating duties on French wine, imposed in the reign of William III., originally introduced port into the British markets, and gave it a preference, to which, though an excellent wine, it has no natural claim: this preference first generated, and its long continuance has

state so confirmed, the taste for port among the great bulk of the population, that it bids fair to maintain its ascendancy as an after-dinner wine, notwithstanding the late equalisation of the duties. In 1840, for example, 2,658,534 galls. port were entered for consumption in the United Kingdom; whereas the entire entries of French wines during the same year, including champagne, claret, sauternes, &c., amounted to only 341,841 galls. l. At an average of the three years ending with 1840, the shipments of port wine from Oporto for England were 25,964 pipes a year. Next to England, Brazil, the U. States of America, and Hamburg, are the principal importers of port. The other articles of export from Oporto are oil, oranges, and other fruits; wool, refined sugar, cream of tartar, shumac, leather, cork, &c. The imports are sugar, coffee, and other colonial products, principally from Brazil; corn, rice, beef, salt fish, and other articles of provision; cotton and woollen goods, hardware, tin plates, &c. from England; hemp, flax, and deals from the Baltic, &c. Subjoined is a

STATEMENT of the Shipments of Port from Oporto during each of the Three Years ending with 1840, specifying the Quantity shipped for each Country.

	1838.	1839.	1840.	Annual Average of the 3 Years.
	<i>Pipes.</i>	<i>Pipes.</i>	<i>Pipes.</i>	<i>Pipes.</i>

Total . . .	37,975	33,905	33,190	34,790

The climate of Oporto is damp and foggy in winter, less so in the vicinity of the Atlantic than from its position in the midst of woods and mountains. The cold is severe for the latitude, though it seldom freezes; and in summer, on the other hand, the heat would be intense, if not moderated by winds blowing regularly from the E. in the morning, S. at noon, and W. at night. The soil in the vicinity is not fertile, nor is Oporto supplied with provisions from its own immediate neighbourhood; but there are many beautiful and pleasant gardens, producing, according to their exposure or elevation, the fruits of N. or S. Europe. The neighbouring mountains exhibit many traces of metallic ores; and along the S. bank of the river are veins of copper and beds of coal. (*Dalrymple's Travels in Portugal*, 126-128.)

Oporto was occasionally the residence of the ancient earls of Portugal, till Alphonso I., in 1174, created Lisbon from the Almoravars, and made the permanent seat of his kingdom. The city received many important privileges from John II. at the close of the 15th century; but most of them were withdrawn, in consequence of an insurrection of its inhabitants in 1577. In 1805 it was taken and sacked by the French, who retained it till 1809, when the British crossed the Douro, and compelled them to retreat. It afterwards became, in 1831-32, the scene of an obstinate and long-protracted conflict between the late Don Pedro and his brother Miguel. The siege of Oporto lasted upwards of a year, during which a considerable portion of the town was battered down by Don Pedro's artillery, a great deal of property was wantonly destroyed by Miguel's troops, many of the wine-stores were blown up, and several of the wealthiest merchants were ruined by the annihilation of all trade. (*Dalrymple's Portugal*; *Balbi, Essai Stat. de Portugal*; *Diet. Géog.*; *Mod. Trav.*)

OPPELN (Slav. *Oppolitz*), a town of Prussian Silesia, cap. reg. and citr. Oppeln, on the Oder, 51 m. S.E. Breslau. Pop., in 1838, 6,821. It is walled, and has, in general, lofty and massive houses, with an old Gothic cathedral, several other R. Catholic and Protestant churches, various schools, a royal salt magazine, and several good hotels. It is the seat of government for the regency, of a board of taxation, a municipal tribunal, &c.; and has a gymnasium and a society for the promotion of the public good. (*Von Zedlitz*; *Berghaus*.)

OPPIDO, a town of the Neapolitan dom. prov. Calabria Ultra, cap. cant., on a hill close to Mount Aspromonte, and 14 m. N.E. Reggio. Pop. about 9,000. The old town of Oppido, supposed by Cluverius to occupy the site of the ancient *Manerivium*, was utterly ruined by the great earthquake of 1783. The modern town, which is also a bishop's see, was built in the vicinity of the former.

Oppido is the name of another Neapolitan town, prov. Basilicata, 12 m. N.E. Potenza. Pop. 5,000. (*Crasen's Tour*, &c. pp. 275-76.)

ORANGE (an. *Araucio*), a town of France, dep. Vaucluse, cap. arrond. on the Meyne, a tributary of the Rhone, in a fine plain about 5 m. E. the latter river, and 10 m. N. Avignon. Pop. in 1836, 5,897. It has several

par. churches, a Protestant church, a communal college, hospital, &c., and many good private houses and public fountains; but the widest thoroughfare being only 12 or 13 ft. across, scarcely any vehicles enter its streets; and the road from Lyons to Avignon, instead of passing through, goes round the town. It has manufactures of handkerchiefs, coloured linens called *toiles d'Orange*, serge and silk twist.

Orange is indebted for its celebrity to its Roman antiquities. The principal of these is a splendid triumphal arch, situated a short way out of the town. It has been conjectured that this structure was erected by Marlus; but from its profusion of ornament it would seem to date from a much later period; and, according to Woods, is probably not prior to the age of Hadrian. (*Letters of an Architect*, i. 146.) In many of its details it presents more of the Grecian than the Roman style of architecture; but from the absence of any inscription, its date is wholly conjectural. It is about 64 ft. in length and breadth, and rather more in height. It has 3 arched passages, the central and largest of which is 23½ ft. in height. The archways are flanked by fluted Corinthian columns, and the whole structure is profusely covered with groups of figures and other sculptured ornaments. This monument was a good deal injured in the middle ages, from having been converted into a fortress; but it is, notwithstanding, in a state of tolerable preservation; and of late years it has been repaired, and surrounded by a palisade. Extensive remains of a theatre, and the traces of several other Roman buildings, also exist here.

Orange was long the cap. of a small principality of the same name that gave the title of Orange to the family which now occupies the thrones of Holland and Nassau. The king of Holland, however, retains merely the title of Prince of Orange; the town and principality having been ceded to Louis XIV. at the peace of Utrecht. The principality, 12 m. in length by 9 m. in breadth, is very productive of wine, oil, saffron, madder, fruits, and aromatic plants; its inhabs. are distinguished by their industrious habits. (*Hugo, Guide du Voyageur*; *Frossard, Tableau de Nîmes*, &c.; *Artaud, Arc d'Orange*; *Woods*, &c.)

OREBRO, or EREBRO, a town of Sweden, in the centre of the country, cap. län. Orebro, at the W. extremity of the lake Hjelmar, 100 m. W. Stockholm, lat. 59° 17' 12", long. 15° 13' 20" E. Pop., in 1836, 4,135. "The houses are built chiefly of wood, not merely of logs clumsily put together, as is the case in Russia, but of logs covered with boards neatly finished, the workmanship of which would not disgrace the tools of any of our English carpenters. Their exterior planking is invariably painted a deep red colour, with white doors and window-frames. The roofs are generally covered with turf; but there are several well-built brick houses stuccoed white." (*Barrow's Excurs. in the N. of Europe*, 162.) Streets wide and clean, and some of them are paved with granite. In the principal church is a monument in honour of Englehardt. From its central position, Orebro becomes sometimes the seat of the Swedish diet. The inhabs. manufacture woollen cloths, stockings, &c., and carry on an active trade with Stockholm, by the lake Hjelmar, the canal of Arboga, and the lake Mälar. The town also is an entrepôt for the iron of the interior. (*Stein's Hand-book*; *Barrow*, &c.)

OREL, a central prov. of European Russia, to the S. of Kalouga and Tula. Area, 16,780 sq. m. Pop., 1,366,000. Surface undulating; soil, extremely rich and fertile. Principal rivers, Desna, an affluent of the Dnieper; Sosna, an affluent of the Don; and Oka, an affluent of the Volga. Forests very extensive; occupying nearly a third part of the surface. Agriculture is the principal dependence of the inhabs.; and owing to the excellence of the soil, the return, notwithstanding the bad husbandry, is frequently 7, and sometimes 10 times the seed. Manufactures have made little progress, but distilleries are numerous. Instruction very defective; there being in the entire government, in 1832, only 39 schools, and 4,266 scholars. The public revenue amounts to about 10,500,000 roubles, of which the spirit and beer duties yield 6,336,663 roubles! (*Schnitzler, La Russie*, &c. 346, &c.)

OREL, a city of European Russia, cap. of the above gov., on the Oka, where it receives the Orlyk; lat. 52° 57' 58" N., long. 39° 57' 18" E. Pop., according to the official accounts, in 1830, 31,466; having been only 20,000 in 1820. This rapid increase is owing to its favourable situation for commerce, in the centre of a rich country, on a navigable river communicating, partly by the aid of canals, with the Baltic on the one hand, and the Black Sea and the Caspian on the other. Orel may be reckoned the entrepôt of the commerce between Russia, Little Russia, and the Crimea; and at the same time the depôt for corn, both of its own and the adjacent fertile governments. The principal articles of commerce are corn, hemp, tallow, butter, bristles, leather, wax, honey, cloth, horned cattle, &c., which its merchants chiefly buy in the southern provinces. Immense quanti-

ties of most of these articles are shipped upon the Oka, partly to be landed at Serpuchof for the consumption of Moscow, and partly to be forwarded to Petersburg. It has an ecclesiastical seminary, attended by a great number of pupils; a gymnasium, &c. It has also establishments for the spinning of cotton, manufactures of cloth and coarse linen, with tanneries, distilleries, tallow-melting houses, rope-works, &c.; and is the seat of some important fairs. It is built of wood, and palisaded; and the inhabs. are distinguished for their industry and wealth. (*Schnitzler, La Russie, &c.*, p. 351; *Lyall's Travels*, i. 59, &c.)

ORENBURG, a very extensive government of the Russian empire, mostly in Europe, but partly in Asia, lying between the governments of Astrakhan on the W., and that of Tobolsk on the E., and having Persia on the N., and the country of the Independent Kirghises on the S. Area estimated at about 184,000 sq. m. Pop. 1,771,000. (*Kappeler*.) It is divided into two unequal portions by the Oural Mountains, and the river Oural has its source and termination in this government. It is also traversed by the Biela and other affluent of the Wolga, and is bounded on the E. by the Emsa. Soil very various; in part mountainous, in part arid saline steppes, but the larger portion is decidedly fertile. Forests very extensive. Climate in extremes; being exceedingly hot in summer, and proportionally cold in winter, particularly to the E. of the Oural Mountains. Notwithstanding the backwardness of agriculture, the produce of corn is estimated at about 4,000,000 chetwerts. The principal wealth of the inhabs. consists in their horses, cattle, and sheep; of all which, but especially the first two, they have vast numbers. They have also camels, hogs, &c. The river Oural teems with fish, which are taken in great numbers, and are sold to enrich the banks. Mines important and valuable, yielding some gold, with large quantities of iron and copper, in the working of which many individuals are employed. A manufactory of arms was established in the district of Troitsk, in this government, by workmen from Rhenish Prussia. The salt-mines of Iletsch furnish annually about 500,000 poods, and a large supply is obtained from the salt-lakes. A considerable commerce is carried on with the Kirghises and other people to the S. of Orenburg, which principally centres in the town of that name. In 1833 there arrived at the latter 14 caravans, with 2,547 camels; and during the same year there were despatched 13 caravans, with 4,709 camels and 264 draught-horses. The value of the imports was 3,551,158 roubles, and of the exports 3,577,921 do. (*Schnitzler, La Russie, &c.*, p. 701.)

ORENBURG, the principal city of the above government, and the residence of the military governor, on the N. bank of the river Oural, lat. 51° 46' N., long. 55° 45' E. Pop. 18,000 or 20,000.\* It is well built, and regularly fortified. Principal edifices, cathedral and custom-house. In 1825 a school was established here for the special use of the Mohammedans, and the study of their language. The seat of the commerce alluded to in the preceding article is on the southern side of the river, in a vast bay erected exclusively for that purpose, and protected by a camp of Cossacks.

ORFORD (formerly *Orford*), a decayed bor., market-town, and par. of England, hund. Plumersgate, co. Suffolk, at the confluence of the Aisle with the Ore; 16 m. E. by N. Ipswich, and 80 m. N.E. London. Area of bor., 2,740 acres. Pop., in 1831, 1,302. It was formerly of much greater importance than at present, having, in 1359, sent 3 ships and 62 men to Edward III. at the siege of Calais. Its decay is attributed to the loss of its port, the sea having receded from this part of the coast. It is now, having lost its privilege of sending mems. to the H. of C., sunk into insignificance; though its large ancient church, decayed town-hall, assembly-house, and fine old castle, attest its former consequence. Its present inhabs. are chiefly supported by the oyster-fisheries in the neighbouring rivers. Orford claims to be a bor. by prescription, but has received several royal charters. Its corporate officers are a mayor, 8 portmen, and 12 capital burgesses; but it was considered too unimportant to be included in the provisions of the Mun. Reform Act. It sent 2 mems. to the H. of C. from the reign of Richard III. down to the Reform Act, by which it was disfranchised. Sudborne Hall, a seat of the Marquis of Hertford, is about 1 m. N.E. from the town. Markets on Monday; fair, June 24.

ORLA, (an. *Hyria*), a town of the Neapolitan dom., prov. Otranto, cap. canton, 21 m. E. by N. Taranto. Pop. 5,000, principally of Greek origin. It is a city romantically situated upon three hills, in the centre of the plains. The castle and cathedral stand boldly on the highest points. (*Swinburne*.) Orla is a bishopric, and is very ancient. (*Cramer's Anc. Italy*, li. 310, &c.)

\* The official returns quoted by Schnitzler make the pop. only 2,868; but this is no doubt an error, and most probably refers either to houses or families. According to the same returns, the births in 1823 were 600, and the deaths 639, showing that the pop. cannot differ materially from what is stated above.

ORIHUELA, an episcopal city of Spain, prov. Valencia, on both sides the Segura, crossed here by two bridges, 14 m. E.N.E. Múrcia, and 98 m. S.S.W. Valencia. Pop., according to Milfano, 25,551. It is situated at the foot of a ridge of bare rocks, near the head of a very fruitful *vega* or vale, forming a continuation of the *huerta* of Murcia. The streets are broad, but not paved; and there is not a single fountain in the town. Its principal buildings are, a cathedral (with an attached chapter of 5 dignitaries and 17 canons), 5 par. churches, 2 of which are in the suburbs, and 5 dependent churches (*anjos*), 2 hospitals, a founding asylum, public granary, and cavalry barracks. The inhabs. are remarkable for their superstition, demoralisation, idleness, and poverty. The greater part are engaged in agriculture; and the town is a considerable mart for corn and oil. It produces linens and hats, and has numerous tanneries, corn and oil mills, soap-houses, and starch manufactories. A large fair is held in October. The neighbouring *huerta*, about 17 m. in length by 5 m. in breadth, can scarcely be exceeded in beauty and fertility. "Even the vale of Murcia yields in beauty and fertility to Orihuela, because the latter is so abundantly supplied with water as to be independent of rain. The cypress, silver elm, and pomegranate are here seen mingled with the mulberry, orange, and fig; and here, also, the palm, rising in rich clusters, lends novelty as well as beauty to the enchanting scene." (*Ingles*, li. 220.) The *huerta* yields also very plentiful crops of wheat, barley, and canary seed, hemp, flax, garden vegetables, &c., and is deservedly called the "garden of Spain."

Orihuela, the an. *Orgetis*, is supposed to have existed prior even to the Carthaginians, from whom it passed successively to the Romans, Goths, and Moors. In 1057 it was made the capital of a small kingdom subject to the caliphate of Cordova. In 1228 it became annexed to the Moorish kingdom of Murcia, and finally, in 1265, fell by conquest into the hands of James I., the Christian king of Aragon. (*Ingles*, li. 216—220; *Mod. Trav.*; *Milfano*.)

ORINOCO, a large river of S. America, in Columbia, for a knowledge of which we are chiefly indebted to Humboldt, who explored the greater part of its course in 1800—1802. Its sources have not been traced, but are supposed to lie in about lat. 3° 30' N., long. 64° W.: it has a circular course running first W., then N., and latterly E., to its embouchure in the Atlantic, opposite to and S. of Trinidad; its length, including windings, is estimated at 1,380 m., being nearly equal to that of the Danube. In lat. 3° 10' the river runs over a ledge of rocks, forming a cataract called the Raudal de Guahariboes, about 50 m. above the station of Esmeralda, the highest point attained by Humboldt. About 15 m. below this station it is joined on the S., or left bank, by the Cassiquari river ("two or three times broader than the Seine near the Jardin des Plantes"), which unites with the Rio Negro, an affluent of the Amazon, and thus connects the Orinoco and the latter by a navigable water communication. Its course from this point is W.N.W. to the junction of the Guaviare, after which it becomes a broad and deep river, flowing N. by E. over a rocky bed, in which are the two large cataracts called the *Raudalls*, or rapids, of Maypures and Apures, joining together an archipelago of islands, which fill the bed of the river for several m., and in some places do not leave a free passage of 20 or 30 ft. for its navigation, though its breadth at this point exceeds 8,000 ft. (*Humboldt's Pers. Narr.*, v. 138.) About 50 m. below these falls the Orinoco receives from the W. bank the waters of one of its principal affluents, the Meta; and about 70 and 120 m. lower still, the large rivers Arauca and Apure. At the junction of the Apure, where the rocky country terminates, the main stream deflects eastwards, and runs E. by N. past Angostura, to the delta at its mouth, the only considerable affluents in this part of its course being the Caura and Carony, joining it from the S. The delta has its apex about 130 m. from the sea: the S.E. or principal channel, called *Bocca de Navios*, runs eastward into the Atlantic, and is divided for a distance of about 46 m. into two channels, by the island of Imataca, the E. end of which is about 35 m. from Point Barima, at the mouth of the river, in lat. 8° 45' N., long. 60° W. The N., or smaller channel, divides itself into a number of branches, called *Bocas chicas*, or small mouths: most of them are sufficiently deep for vessels of considerable burden; but they cannot be navigated without the aid of the neighbouring Indians, who alone are acquainted with the deep and safe channels formed in the alluvial soil near the mouth of the river. The greatest distance between the mouths of the Orinoco is estimated by Humboldt at 47 nautical leagues, or 140 m.: two of the northern mouths fall into the Gulf of Paria.

The affluents of the Orinoco are very numerous, many of them contributing an immense volume of water to the principal river. Those on the W. and N. banks, however, are the only rivers available for navigation, except in the lower part of its course, where it receives

Caura and Carony. The Guavare, which is supposed to connect itself with the Rio Negro by a natural channel, in the same way as the latter river is connected with the Orinoco, appears to have a navigable course of more than 200 m. The Meta rises in the Andes, E. of Bogota, and is navigable for about 500 m. The Apure rises in the Andes, by several sources, between the 6th and 8th parallels of N. lat.; and after a course of nearly 500 m., enters a low and swampy district, through which it forms many different channels. In the neighbourhood of which are extensive *llanos*, furnishing very rich pasturage.

The tides of the Orinoco, at the lowest season, in March, are perceptible as far as Angostura, about 280 m. from Pt. Barima; but the rise is not material above the juncture of the Carony, about 160 m. from the mouth. The annual swell of the Orinoco commences in April and ends in September, during which it remains with the vast body of water which it has acquired the five preceding months, and presents an astonishingly grand spectacle. At the distance of 1,300 m. from the ocean, the rise is equal to 13 fathoms. In the beginning of October the water begins to fall, imperceptibly leaving the plains, and exposing in its bed a number of rocks and islands. At the beginning of February it is at its lowest ebb, and continues in this state till the beginning of April. It abounds in fish of various descriptions. Amphibious animals are also found in great numbers on its shores; caymans, or round-mouthed crocodiles, are met with in great abundance throughout the river, and are, not without justice, an object of dread to the natives. Scorpions and mosquitoes are stated, likewise, to be so abundant as to offer the greatest hindrances to European travellers. The Indian tribes above Angostura are described as a miserable, savage race, little improved by the efforts of the Jesuit missionaries; and the ferocity of the natives along the upper part of the river prevented Humboldt and Schomburgk from ascertaining its farthest sources. (*Humboldt's Pers. Narr.* v.; *Geog. Journal*, x. 242—247.)

ORISSA, a prov. of Hindostan, now wholly included in the British presid. of Bengal and Madras, between the 18th and 23d degs. of N. lat., and the 83d and 87th of E. long.; having N. the provs. Bengal and Bihar, W. Gundawanah, S. the Godavery, and E. the Bay of Bengal. Length, N. E. to S. W., about 400 m.; average breadth, 70 m. Area, 28,000 sq. m. Pop. uncertain. Orissa Proper is almost wholly included in the British district of Cuttack, which see. (I. 667; see also *Asiatic Researches*, xv., for a detailed description of the prov.) The shore of Orissa is in general low and sandy; the interior remains in a very wild state, being composed of rugged hills and uninhabited jungles, pervaded by a pestilential atmosphere. The population consists, for the most part, of castes considered impure by other Hindoos; including Ooreas, and other hill tribes, quite distinct in language, features, and manners, from the Hindoos of the plains. Principal towns, Cuttack, Juggernauth, and Balasore. Orissa has been continually subject to foreigners since 1558, when it was conquered by the Afghans. In 1578 it was annexed to the Mogul empire; in 1756 it was transferred to the Maharrattas, and in 1803-4 it was occupied by the British. (*Hamilton's E. I. Gazetteer*.)

ORISTANO, a town of the isl. of Sardinia, div. Cagliari, cap. prefecture, near the mouth of the Tisri (an *Thirus*), in the Bay of Oristano, on the W. shore of the island, 30 m. N.N.W. Cagliari. Pop., in 1838, 5,791. It is in a fertile, but unhealthy plain, and is not fortified. Its steeples and turrets give it a tolerable appearance from the sea; but it is straggling, unpaved, and ill-supplied with water. It has a cathedral, a spacious edifice, with a detached octangular belfry, one of the most striking objects in town. There are several other churches, and convents, an hospital, a Tridentine seminary, and a Piarist college. The Tisri is crossed here by a bridge of 3 arches. The Bay of Oristano, the mouth of which is 5 m. across, affords excellent anchorage during the prevalence of winds blowing off shore, but those from the W. throw in a heavy sea. The E. shore of the bay is shoal, but near its N. side vessels anchor in 6 or 7 fathoms water. Many of the inbab. are occupied in the manufacture of salt, and the tunny fishery; and some tolerable wine is grown near the town. Oristano was founded about 1070. (*Smyth's Sardinia*, 294, 295, &c.)

ORIZABA, a town of Mexico, in the state of Vera Cruz, in a valley remarkable for its fertility, 70 m. W.S.W. Vera Cruz, and 140 m. E.S.E. Mexico. Pop. between 8,000 and 10,000, including whites and Indians. It is laid out in wide, neat, and well-paved streets; though so great is the power of vegetation, that grass grows in almost every part of the town. Coarse cloths are made here in small quantities, and there are several tanneries. The valley in which Orizaba is situated is well clothed with forest trees, above which rises the now extinct and snow-covered volcano of Orizaba, to the height of 17,380

ft. above the Atlantic. The neighbourhood produces all the tobacco consumed in Mexico; and within the town is a large government manufactory of that article.

ORKNEY AND SHETLAND ISLANDS. These islands, which are most probably the *Thule* of the ancients, lie in two groups to the N. of Scotland, and form between them a co. The Orkneys (*Orcades*), the most southerly group, are separated from the co. of Caithness by the Pentland Frith, about 6 m. in breadth. They are comprised between the parallels of 58° 44' and 59° 24' N. lat., and 2° 25' and 3° 20' W. long. There are about a dozen principal islands; Pomona, or Mainland, being decidedly the largest. But, including the smaller islands (provincially *halmes*) and islets, the total number is estimated at about 67, of which about 40 are uninhabited. They are supposed to comprise an area of about 281,600 acres, and had, in 1831, a pop. of 28,847.

The Shetland, or Zetland, Isles, the most northerly group (perhaps the *Uliana Thule* of the ancients), are separated from the Orkneys by a channel 48 m. across, and lie principally between the parallels of 59° 52' and 60° 50' N. lat., and 30' and 10' 40' W. long. Including islets, they are supposed to exceed 100 in number; but the mainland or principal island is a good deal more extensive than all the others put together. Between 30 and 40 are inhabited. They are about twice as extensive as the Orkneys; their total area being estimated at 563,200 acres. In 1831 they had a pop. of 28,392.

The aspect of these islands is very similar; but the Shetland group is the more wet and barren of the two. They are generally fenced, particularly on the W. side, with high, black, precipitous cliffs, against which the sea, when vexed by storms, dashes with astonishing fury. They are destitute of high mountains; the altitude of Mount Rona, in Shetland, the highest, not exceeding 919 ft. Their general appearance is that of dreary, heathy wastes, interspersed with rocks, varied sometimes with swamps and lakes, and, in a few places, with beds of movable sand. In some parts, however, particularly in Orkney, the land is abundantly fertile, producing good crops of corn and luxuriant herbage. Some of the islets, or holms, appear like gigantic pillars, rising perpendicularly from the sea: these are the resort of vast numbers of sea-fowl; and in the breeding season hunting for eggs and young birds forms one of the principal and most dangerous employments of the natives. Climate similar to that of the outer Hebrides, except that the days are a little longer in summer and shorter in winter. During the latter, the aurora borealis is uncommonly brilliant. The cultivated lands bear but a very small proportion to the others, being supposed not to exceed 25,000 acres in Orkney, and 22,000 in Shetland. Farms generally very small; few having more than 10 acres of arable land, and many not nearly so much. Agriculture is considered, particularly in Shetland, of subordinate importance, and, though a good deal improved, is still very backward. In Shetland, most part of the ground is turned over with the spade; but in Orkney, ploughs are in pretty general use. Oats, and barley, or bigg (*Hordeum horreolense*), are the only white crops cultivated; and, except on a few improved farms, they follow each other alternately as long as the land will bear any thing, which it does for a very long time when well manured with sea weed. The barley of Orkney is a great deal more abundant, and of a much better quality, than could have been anticipated; and, besides supplying the home demand, considerable quantities are exported. Potatoes are cultivated in all the islands, and form an important part of the food of the people. Turnips have also been planted, and have succeeded very well. At present no trees can be made to grow, and hardly a shrub is to be met with; which is the more singular, as the trunks of large trees are not unfrequently found imbedded in moss and sand, both in Orkney and Shetland. The hardy, little trees, known in the name of *Shetlics*, are bred in Shetland, and are exported in considerable numbers. The stock kept in the islands is estimated at from 10,000 to 12,000: they are never housed, nor receive any food, except what they gather for themselves. Some of them are exceedingly well proportioned, active, and strong for their size. The horses of Orkney are in inferior estimation. Cattle very small, sometimes not weighing more than from 35 to 40 lbs. a quarter: they are shaggy, and not well shaped; but they are hardy, feed easily, and, when fattened, their beef is fine and tender. The stock in both groups of islands is supposed to amount to about 45,000 head. The native sheep are of the small dun-faced breed; they yield short wool, which, though generally soft and fine, is sometimes as hairy as that of a goat. Recently the black-faced and Cheviot breeds, and even pure Merinos, have been introduced into Orkney with considerable success. The stock in both groups of islands is believed to exceed 135,000. A small breed of swine is very abundant; they roam at large, and are not a little destructive. Rabbits are abundant in both sets of islands, but particularly in the Orkneys; as many as 36,000 skins having been ex-

ported in a single season from the port of Stromness. Fowls are plentiful, and large quantities of eggs are exported from Orkney. The fisheries, however, in Orkney, as well as Shetland, are the grand object of pursuit. The islands are periodically visited by vast shoals of herrings; while the surrounding bays and seas are uniformly well supplied with cod and other species of white fish. *Di-vitæ eis sunt a mari, ab omni parte summa piscandi commoditate objecta.* (Buck., lib. 1. § 80.) Brassay Sound, in Shetland, has always been one of the principal stations of the Dutch herring fishers; but the fishing there is now principally carried on by the islanders. During the year ended the 5th of April, 1840, 19,396 barrels herrings, and 9,988 cwt. cod, were cured in Orkney; and 25,685 barrels herring, and 40,501 cwt. cod, in Shetland. About 100,000 lobsters are supposed to be annually shipped from the Orkneys for London. Vessels from British ports bound for the N. whale fishery mostly touch at Orkney or Shetland, and, besides taking on board supplies of provisions, usually complete their crews with seamen belonging to the islands, whom they put on shore on their way back. Rye straw grown in Orkney has been found peculiarly well fitted to serve as a substitute for the straw used in Italian plait; and the manufacture of this straw into plait has been carried on for several years to a considerable extent, and with pretty good success. Kelp, though comparatively unprofitable, continues to be extensively produced. Woolen stockings and gloves, sometimes of extraordinary fineness, are exported from Shetland. Messrs. Anderson, in their valuable work on the Highlands, give the following account of the

Sums received in Orkney, in 1833, for Farm Produce, Manufactures, Fish, &c. exported.

	L.	s.	d.
Bere, or bigg, 5,178 bolls, at 15s. per boll of 6 bushels, or 20s. per quarter	3,883	10	0
White oats, 1,515 bolls, at 12s. do. of do., or 10s. per quarter	909	0	0
Malt, 10,696 bushels, sent to Leith, say 3s. per bushel	1,601	8	0
Pork, 254 do., at 5s.	35	2	0
Buttermilk, 40 bolls, at 14s. per boll of 140 lbs.	28	0	0
Imperial			
Horses, cows, and oxen, 954, 1 quarter horses, at 3s.; 3 quarter cows, at 3s.	4,290	0	0
Do. not entered at Custom-house, about 246, at do.	1,104	0	0
Eggs sent to Leith, 50 tons, 100 doz. per cwt., 10s. per doz. at 6d.	2,500	0	0
Sheep and swine, 40 of each at 1l.	80	0	0
Butter, about 2,000; hides, about 700.	2,700	0	0
Rabbit-skins, more than 2,000 doz., at 5s. 6d. per doz.	600	0	0
Feathers, about	250	0	0
Kelp, supposed scarcely to exceed 500 tons, at 4l. 10s.	2,250	0	0
Straw manufacture, including rent, cutting, planting, &c.	4,800	0	0
Herrings, 34,000 barrels, at 10s. per barrel	17,000	0	0
Cod, fished by about 40 sloops of 30 tons, 14 tons each, at 15s. per ton	7,950	0	0
Lobsters, caught by 432 men, in 216 boats	1,800	0	0
Wh. le fishing, about 25 ships, taking 20 men each, 500 men, at 15l.	7,500	0	0
Hudson's Bay Company pay annually for the wages of men employed in Hudson's Bay, about	1,500	0	0
<b>Total</b>	<b>60,114</b>	<b>0</b>	<b>0</b>

There is no similar account for Shetland; but the sums received by its inhabitants do not differ materially from those received by their neighbours in Orkney. The shipping of the islands is considerable. In 1836 there belonged to the Orkneys 77 ships, carrying 4,218 tons and 323 men; and there belonged at the same time to Shetland 101 ships, carrying 3,967 tons and 744 men, exclusive of a great number of boats engaged in the fisheries.

The people of these remote islands being of Scandinavian and not Celtic origin, neither the Gaelic dress nor language has ever prevailed amongst them. All of them now speak English; but, of old, Norse was the prevalent language. The cottages of the poorer ranks are in general miserable hovels, affording accommodation in winter to cows and fowls, as well as to the family. Owing to the scarcity of or exhaustion of moss, the want of fuel is in some islands severely felt. On the whole, however, the inhabitants are decidedly better off than those of the Outer Hebrides, being comparatively industrious, civilised, and well fed. Kirkwall in Orkney, and Lerwick in Shetland—the only towns of consequence in the islands—had, in 1831, the former a population of 3,065; and the latter 2,750. The society in both is good, and the inhabs. hospitable.

Shetland and some parts of Orkney suffer much from the exaction of tithes. They are not only charged upon the produce of the land, but on that of the fisheries; and being generally farmed, they are rightly collected, are productive of much irritation, and are a formidable obstacle to improvement. Seeing the good effects that

have resulted every where else in Scotland from the abolition of tithes, it is singular that they have not been commuted here. The few tithes, payable to the crown, or rather to its donatory, Lord Zetland, have also contributed materially to check improvement. Marl, though neglected, is common in Orkney. Lead ore also has been met with, and limestone is of frequent occurrence. These islands are divided into 40 pars. The gross rental of Orkney amounted, in 1810, to 9,495*l.*; and that of Shetland to 6,741*l.*

The Orkneys are divided into 18, and the Shetlands into 22 parishes. They send 1 mem. to the H. of C. Registered electors in 1839-40, Orkney, 374; Shetland, 182; making together a constituency of 556. Inhabited houses in both islands, in 1831, 10,296; families, 1,818. Pop. 58,239. Annual value of real property, in 1815, 20,530*l.* (For further information, see *Wallace's Description of the Orkney Islands*, 8vo., 1700; *Borrv's Hist. of Orkney*; and *Sheriff's Agricultural Survey of Orkney*; *Edmonston's View of Zetland*, 2 vols. 8vo.; *Hibbert's Description of the Shetland Isles*; and *Sheriff's Agricultural Survey of Shetland*, &c.)

ORLEANS (an. Genabum, and afterwards Aureliani), a city of France, in the centre of the kingdom, cap. dep. Loiret, on the Loire, 34 m. N.E. Blois, and 64 m. S.S.W. Paris. Lat. 47° 54' 12" N.; long. 2° 45' 49" E. Pop. in 1836, 40,972. Orleans is a large, but not a beautiful city; and its environs, though rich and highly cultivated, are less agreeable than the country round Tours or Blois. The city itself has few good streets; but there is one spacious and elegant avenue, terminating in a noble bridge. The great square is also magnificent. (*Inglist's Tour*, p. 365.) The bridge across the Loire, the foundations of which were laid in 1751, is 354 yards in length, and has 9 arches, the central one being 104 ft. in width. On either side the river are spacious quays; and from the bridge, the *Rue Royale*, one of the handsomest streets in France, leads in a direct line to the *Place du Martyr*. In this square is the monument erected to Joan of Arc; consisting of a bronze statue of that heroine, 3 ft. in height, on a pedestal, upon the sides of which are 4 bas-reliefs in bronze, representing the principal actions of her life. A few remains of the ancient fortifications of Orleans exist, but their place is now principally occupied with plantations and public walks, one of which is a fine promenade called the *Mail*. In the old parts of the city the houses are chiefly of timber, and the public thoroughfares narrow, dirty, and wretchedly paved; but several new and tolerable streets have been opened of late years, and various improvements are in progress. (*Hugo*.) The cathedral, one of the finest Gothic edifices in France, is in a great measure hidden by the surrounding houses. It was begun in the 13th century; but destroyed by the Hugonots, but rebuilt by Henry IV. It has a fine western portal, flanked with two towers, built by Louis XV. in the most gorgeous style. At the intersection of the nave and transepts is an elegant spire; the side entrances, the lofty vaults, the high altar, and the carving of some parts of the interior also possess great beauty. Some of the other churches and chapels are handsome; but, though still numerous, several of them have been converted into warehouses. The old town-hall, an edifice of the 15th century, is now appropriated to the museum: in its court-yard is an old tower, serving to support a telegraph. The Palace of Justice, a handsome edifice erected in 1821, the theatre, *abbatoir*, prison, large infantry barracks, corn-hall, intendency, and general hospital, are the other principal public edifices. There are several private buildings, curious for their Gothic architecture and decorations; the most remarkable of these are the houses of Agnes Sorel and Francis I. The city is surrounded by extensive suburbs, and its vicinity is sprinkled with numerous villas.

Orleans is the seat of a bishopric, of a royal court for the *déps.* Loir-et-Cher, Indre-et-Loire, and Loiret; of tribunals of primary jurisdiction and commerce, a court of assize, the forest-direction for the basin of the Loire, a *conseil de prud'hommes*, and a chamber of commerce. It has a royal college; an *académie universitaire* (for the 3 *déps.* specified above); a society for the promotion of science, *belles-lettres*, and art; a public library of 25,000 vols.; a museum, with an extensive collection of paintings of the French school; cabinets of natural history, &c.; a botanic garden; courses of medicine, &c. at the general hospital; of drawing, architecture, botany, &c.; maternity and Bible societies; schools of mutual instruction, &c.; and a departmental assurance company. Its former university, founded in 1512, had, amongst its illustrious students, De Thou, Erasmus, Calvin, and Theodore Beza.

Orleans is well situated for commerce, but its trade is less flourishing than before the Revolution. It has declined, while Havre and Paris have risen as commercial towns. Its manufactures comprise fine woollen cloths, flannels, woollen yarn, hosiery, cotton yarn, refined sugar,

vinegar, and wax candles; and besides its trade in these, Orleans deals extensively in corn, wines, timber, wool, cheese, and colonial produce. It has a large general fair in June, which lasts 15 days, and one in Nov., lasting 8 days.

D'Auville has shown conclusively that Orleans occupies the site of the an. *Gernabum*, the emporium of the Cornutes, taken and burned by Cæsar. (*Notice de l'Ancienne Gaule*, p. 345.) It subsequently rose to great eminence, and was unsuccessfully besieged by Attila and Odoacer. It became the cap. of the first kingdom of Burgundy, under the first race of French kings. Since the time of Philip of Valois, in the 14th century, it has usually given the title of duke to a member of the royal family. It was besieged by the English in 1428-29, who were ultimately obliged, through the efforts of Joan of Arc, to raise the siege and retire. In 1563 it was besieged by the Catholics; and during the progress of this siege the Duke of Guise was assassinated. (*Hugo, art. Loiret; Dict. Géog.*, &c.)

ORMSKIRK, a market-town and par. of England, hund. W. Derby, co. Lancaster, 11½ m. N.N.E. Liverpool, and 180 m. N.W. London. Area of par., which comprises 6 townships, 30,043 acres. Pop. of Ormskirk township, in 1831, 4,351. The town is well-built, paved, and lighted with gas, consisting of 4 principal streets, meeting each other at right angles in a large market-place, in which is the town-hall, built in 1779. The church is a large edifice (rebuilt in 1729), with a tower and steeple, detached from each other, and standing side by side: the living is a vicarage, in the gift of Earl Derby, lord of the manor. The out-townships have 3 district churches. The Wesleyan Methodists, Independents, and Unitarians have their respective places of worship; and at Scarsbrick is a Rom. Cath. chapel. Attached to the churches and chapels are 7 Sunday-schools, 3 of which are also national day-schools. A grammar-school, endowed in 1614, is supported by an income of about 140*l.*; and there are 3 infant-schools. The other charitable institutions consist of Lathom's almshouses and apprenticeship-fund, 3 benevolent societies, a savings' bank, and a dispensary, opened in 1797. The principal business of the inhab. is in weaving light cottons and silks, silk-winding, hat and rope-making: in 1839, one cotton-mill employed 58 hands. Within the parish, also, are considerable coal-mines, the produce of which is sent to Liverpool and other places by the Drylin Navigation, and by the Leeds and Liverpool Canal, which passes within 3 m. of the town. The local government of Ormskirk is in the county and manorial police; and courts-leet are held by the lord of the manor (Earl Derby) once a year. Petty sessions, also, are held here; and it is one of the polling-places at elections for the S. division of Lancashire. Markets on Thursday; large cattle-fairs, Whit-Monday and Tuesday, and 10th Sept.

About 3 m. E. Ormskirk is Lathom House, once the seat of the Stanleys, Earls of Derby, and celebrated for the siege which it sustained under the Countess of Derby in the civil wars of the 17th century: it is now the property of Lord Skelmersdale. A battle was fought near the town in 1644, between the royalists and parliamentarians, when the former were defeated with great loss. (*Parl. Papers; Buttersworth's Stat. of Lancashire.*)

ORMUZ (an. *Oxyria*), an island situated at the mouth of the Gulph of Persia, in lat. 27° 12' N., long. 56° 25' E., about 12 m. in circ. It resembles, when viewed from the sea, a mass of rocks and shells violently thrown up from the bottom to the surface of the ocean. The fort, which is in tolerable repair, is built on a narrow projecting neck of land; and this, with a wretched suburb, has a pop. of not more than 500 persons. The remains of aqueducts, walls, &c. on a plain near the suburb, mark the seat of the former capital. The harbour is sheltered on three sides by land, and has good anchorage ground. A range of hills intersects the island from E. to W., and the rocks consist almost entirely of fine crystallised salt, which might be exported in unlimited quantities. The geological formation of the island indicates the former existence of volcanic action, and sulphur, iron, and copper, are found in large quantities, though few attempts have yet been made to apply these mineral riches to any useful purpose. (*Kinnaird's Persia*, p. 12, 13.)

This island, at present so inconsiderable, would not have been worth notice but for its former celebrity and importance. It had, however, owing to its advantageous situation, become, previously to the appearance of the Portuguese in the East, a great emporium, being, in fact, the centre of the trade of the Persian Gulph, and of the contiguous countries, and possessed great wealth, population, and prosperity. It was taken by Albuquerque, the Portuguese viceroy, in 1515; and was held by the Portuguese till 1622, when it was wrested from them by Shah Abbas, assisted by an English fleet. The booty acquired by the captors on this occasion is said to have amounted to 2 millions sterling! Subsequently the trade of the island was diverted to Gombroon and other places; and this once rich and flourishing emporium gradually

fell into that state of irreparable decay in which we now find it. (*Modern Universal History*, ix. 301, &c., 8vo. ed.)

ORNE, a dep. of France, reg. N.W., formerly included in the prov. of Normandy and Perche; between lat. 48° 12' and 48° 48' N., and long. 10° E. and 12° W., having N. the depts. Calvados and Euro. E. the latter and Eure-et-Loir, S. Sarthe and Mayenne, and W. Manche. Length, E. to W., 80 m.; breadth very variable. Area, 610,561 hectares. Pop. in 1836, 441,881. A chain of hills runs E. to W. through this dep., separating the basins of the Orne and Saine from that of the Loire; but its summits do not reach a height of more than from 1,500 to 2,000 ft.: the hills are mostly covered with thick woods. The dep. is abundantly watered. Principal rivers, the Orne, Dive, Vie, &c., running N., and the Sarthe, Mayenne, and Huine, S. The Orne, whence the name of the dep., has its source near Stez, and flows generally N. through the depts. Orne and Calvados to the English Channel; which it enters after an entire course of about 90 m., 15 m. below Caen, from which city it is navigable. Small lakes are supposed to occupy 1,300 hectares; and there are numerous marshes. The soil is very various; and in several places there are distinct traces of volcanic action. In 1834, 333,400 hectares were estimated to be arable, 131,045 in meadows, 11,121 in orchards, 72,000 in woods, and 18,253 in heaths, wastes, &c. In 1835, of 147,135 properties, subject to the contrib. *foncière*, 63,854 were assessed at 5 fr. and under, and 26,128 at from 5 to 10 fr. Agriculture is extremely backward. On the small farms, which are extremely numerous, spade husbandry is very general. Except oats, not enough of corn is produced for home consumption, the efficiency is, in part, made up by potatoes and lucubriferous Hemp and flax are among the principal products; in some cantons beet-root for sugar is grown. Large quantities of cider and perry are made, from a portion of which brandy is distilled. The best horses of Normandy are reared in this dep. Cattle, hogs, and poultry are fattened for the Paris markets, and honey is an important product. The sheep, which are of an inferior breed, are supposed to yield 450,000 kilog. wool a year. Iron mines are wrought in some parts; manganese, building and other stone, and porcelain clay, being the other principal mineral products. Metallic and linen goods are those chiefly manufactured. L'Aigle is celebrated throughout France for its needles and pins, copper and brass wire. The coarse linen cloths made at Mortagne amount annually to about 12,000 pieces, of from 80 to 100 cils each; and Alençon is particularly famous for a fine and highly prized species of lace, termed *pointe d'Alençon*. Muslins, calicoes, hair cloths, paper, glass, and beet-root sugar are among the other manufactures. Orne is divided into 4 arrondis.; chief towns, Alençon, the cap., Argentan, Domfront, and Mortagne. It sends 7 mems. to the Ch. of Dep. Registered electors in 1838-39, 2,312. Total public revenue in 1831, 10,414,592 fr. (*Hugo, art. Orne; Dict. Géog.; Official Tables.*)

ORONTES, (Arab. *El-Aassy*, "the rebellious.") a river of Asiatic Turkey, in Syria, which rises in a natural rocky basin on the E. side of the mountain chain of Antilibanus, near the village of El-Itas, within the pach. of Damascus, about 50 m. N. of that city. It runs N.N.E. as far as the lake Radez, through which it flows, and then takes a N.N.W. direction through the beautiful vale of El-Ghab, as far as lat. 35° 15', where it receives the waters of lake Antakiah, near the city of that name (the ancient *Antioch*), and then suddenly deflects westward, falling into the Mediterranean, near Soveidia, or *Selucia*, after a course of about 340 m. At its mouth is a bar, over which there is from 3½ to 9 ft. water during winter. (*Geog. Journ.* viii. 230.) "The Orontes in the winter season inundates a part of the low grounds, through which it flows in the upper part of its course, thus insulating the villages and cutting off all communication between them, except by boats. In summer the inundation subsides; but the lakes remain half dried up, and give birth to swarms of gnats and flies, which, coupled with the exhalations from the marshes, oblige the inhabitants to retire into the mountains with their cattle, goods, and chattels." (*Robinson's, Pal. and Syria*, ii. 247.) "This river is not navigable; and the rapidity of the stream in many parts of its course, its sudden and numerous windings, its frequent shallows, its various bridges, and the many changes to which it is subjected in the vicissitudes of the seasons, appear to be insuperable obstacles to any plan for making it navigable, or for using it to any considerable extent for trading purposes. In fact, the Orontes is scarcely available at all, even for small craft; and to reach Antioch in a steamer would be a work of consummate difficulty, and, when accomplished, by no means worth the trouble and expense incurred." (*Bowring's Stat. of Syria*, p. 49.) Its use, therefore, is chiefly confined to the irrigation of the surrounding country, which is effected by means of water-wheels similar to those described in the article HAMAH, i. 983.

The river abounds with fish, and produces a species of eels much in request with the Greeks; they are salted and sent in every direction to serve during the fasts before Easter. They are said to produce 60,000 piastres a year to the proprietors of the mills at Antioch, in passing through which they are taken. (*Barker's Rep. in App. to Bourning's Stat.*) The valley of the Orontes has on several occasions been visited by earthquakes, the last of which, in Jan. 1837, nearly destroyed several cities, and occasioned the loss of many thousand lives. (*Robinson's Syr. and Pal.*, ii.; *Geog. Journal*, vii. and viii.; *Mod. Trav.*)

ORTHEZ, or ORTHES, a town of France, dép. Basses-Pyrénées, cap. arrond., on the Gave de Pau, across which it communicates with a suburb by an old bridge of two arches, 24 m. N.W. Pau. Pop., in 1836, 5,267. It is well laid out and built, but ill supplied with water. It has manufactures of spollen stuffs, brass and iron wire, and copper wares; with dyeing houses, tanneries, &c.; and an extensive trade in hams of a superior kind, improperly termed *jambons de Bayonne*, goose-feathers, and cattle. It suffered much during the religious wars. One of its governors, a Viscount d'Orthez, is justly famous for being one of the few who refused to carry into effect the orders of the court for the detestable massacre of St. Bartholomew.

Near this town, on the 27th of Feb. 1814, the Anglo-Spanish army, under the Duke of Wellington, defeated a French force under Marshal Soult. The action was well contested and bloody: the French lost nearly 4,000 men, killed, wounded, and prisoners, and the allies, 2,300. (*Napier's Peninsular War*, vi. 564.)

ORTONA, a sea-port town of Central Italy, k. of Naples, prov. Abruzzo Citra, cap. canton, on the Adriatic, 11 m. E.N.E. Chieti. Pop., in 1832, 6,000. Its chief edifices are its cathedral and other churches, convents, &c.; and a palace, once the winter residence of Margaret, daughter of the Emp. Charles V. It was anciently the principal port and naval arsenal of the Frentani (*Strabo*, v. 241.; *Pliny*, iii. 11., &c.), and it has still a few insignificant remains of antiquity; but its harbour has now ceased to exist. Vessels anchor in soft ground about half a league from shore, in from 10 to 15 fathoms water, or nearer if requisite, in less water; but the station is exposed to N. and E. winds; and there are various rocks and shallows. (*Norie's Sailing Directions*.)

ORVIETO (the an. *Iherbanum*, afterwards *Urbs Vetus*), a town of central Italy, Papal States, cap. deleg. of same name, close to the junction of the Paglia and Chiane, about 5 m. from their union with the Tiber, 11 m. N.E. the Lake of Bolsena, and 59 m. N.N.W. Rome. Pop. about 7,000. It stands on an isolated and scarped tufa rock; and is clean, well built, and embellished with fine palaces. Among the latter are the bishop's palace; the Gualterio, with frescoes by Domenico Albano, L. Signorelli (?), &c.; and the *palazzo Petrangeli*, with paintings by Pietro Perugino. The cathedral, founded in 1290, is a remarkable Gothic edifice, very rich in bas-reliefs, mosaics, paintings, and statuary, with a large and handsome circular window. It has several other churches, a Jesuits' college, and a large well, dug by order of Clement VII., which is shown as a curiosity. Various Etruscan antiquities have been discovered here; and a light white wine is grown near the town, which has acquired greater celebrity than it deserves. The inhab. carry on some trade in cattle, wine, and silk. (*Dict. Géog.*; *Wood's Letters of an Architect*, i. 319. 322.)

OSIMO (an. *Auzimium*), a town of central Italy, Papal States, deleg. of Ancona, 8½ m. S.S.W. the city of that name. Pop. about 7,000. It is well built, having a handsome bishop's palace, a cathedral, several churches and convents, a college, &c. In antiquity this was one of the most important towns of Picenum. It was included among the cities of the Pentapolis, and was taken by Belisarius from the Goths, after an obstinate defence. (*Cramer's Anc. Italy*; *Dict. Géog.*)

OSNABURG (Germ. *Osnabrück*), a town of the kingd. of Hanover, cap. prov. and principality of its own name, on the Hase, a tributary of the Ems, 83 m. W. by S. Hanover. Pop., in 1838, 11,500. It is walled and divided into the Old and New Town. "The palace, the town-house (in which the treaty of Westphalia was concluded in 1648), the court of justice, and the cathedral, (in which some relics supposed to have belonged to Charlemagne are kept), are all good buildings; and there are a great many good-looking private houses, belonging to merchants. Though not the largest, it is undoubtedly the best situated and the handsomest town of the Hanoverian dom." (*Hodgskin's Trav. in the N. of Germ.*, 1819, i. 310.) But other authorities represent the town as irregularly and ill built. There are 2 Lutheran and 2 Roman Catholic churches, a Lutheran orphan-house, 4 hospitals, a work-house, a Catholic and a Lutheran gymnasium, and a house of correction. Osnaburg is a place of considerable trade, from being in the centre of a country where great quantities of the linen cloths termed Osnaburges are made, and which are brought thither for

inspection, stamping, and sale. (*See HANOVER, i. 962.*) But it is in a great measure indebted for its trade in these fabrics, and in cattle, to its position on the high road between Bremen and the Lower Rhine. It has, also, manufactories of woollen cloths, tobacco, chicory, soap, paper, leather, &c. No court has been kept up in Osnaburg since the time of Ernest Augustus, father of George I.; but the nobility of the prov. generally reside here; and without either having a university or being a royal residence, it is in some degree celebrated for the literature and polish it was inha. It is the seat of a B. Catholic bishop; and its civil governor, nominated by the King of Hanover, is called, though without having any ecclesiastical duties to discharge, the Prince-Bishop of Osnaburg; this dignity was held by the second son of George III. *Berghaus, Allg. Länder, &c.*, iv. 234.; *Hodgskin's Trav. in N. Germ.*, i. 308. 318., &c.

OSSUNA, a town of Spain, in Andalusia, prov. Seville, 42 m. E. Seville. Pop., acc. to Miñano, 16,000. It is built amphitheatre-wise on the declivity of a lofty hill, on the top of which stands the par. and collegiate church. It has, also, four hospitals and two sets of barracks. The town formerly possessed a university, which attained considerable celebrity in the time of Cervantes; but at the close of last century it was in a state of decay, and suppressed in 1824. Ossuña is neat and pretty, surrounded by orchards, among which are some fine public walks; but it has an insufficient supply of water. The climate is good except in summer, when, during the prevalence of the *Solano*, or E. wind, the thermometer often rises to 111° Fahr. The inhabs. are principally employed in agriculture, and the neighbourhood has the reputation of being one of the most productive grain districts of Andalusia. It is, also, celebrated for its capers, large quantities of which are pickled and sent to Seville and Cadiz. (*Miñano*.)

OSTEND, a fortified sea-port town of Belgium, prov. W. Flanders, cap. canton, on the shore of the North Sea, 14 m. W. by N. Bruges, 27 m. E.N.E. Dunkirk, and about 60 m. E. the North Foreland. Lat. 51° 13' 57" N., long. 2° 55' 8" E. Pop., in 1836, 12,161. Few English travellers speak in favourable terms of Ostend. It is, however, neatly and regularly built, and has a lively appearance, the houses being painted of different colours. (*Barrow's Trav.*, 285.) It is also a favourite watering place of the Belgians, and is occasionally resorted to by the royal family. It has no public edifice worth notice, except a good bathing-house, with reading-rooms, &c., on the *levee*, a sloping glacis of stone-work, originally erected to serve as a dyke, having on its summit a favourite promenade. Ostend is strongly fortified by ramparts, a broad ditch, and a citadel; but it is ill supplied with water, which is assigned as a reason for its being in parts rather dirty. The interior harbour, which is large and commodious, is bordered by a broad quay; but ship of considerable burden can only enter the port at high water, and in strong off-shore winds is difficult of access. There are 2 lighthouses which, when brought in line, mark the channel that leads into the port. The exports consist of corn, clover seed, cattle, and other farm produce; and the imports of sugar, coffee, and other colonial products, wines, spices, English manufactured goods, &c. We subjoin an

ACCOUNT of the Ships that entered and left the Port of Ostend, in 1836 and 1837; specifying the Countries to which they respectively belonged.

	1836.		1837.

Totals	533	548	557	567

And this number is exclusive of the steamers conveying the mails to and from England.

The cod and herring fisheries, especially the former, are carried on to a considerable extent from Ostend. In 1836 the produce of this fishery amounted to 7,841 tons salt fish, and in 1837 to 8,799 tons. The aggregate value of the imports by sea, in 1840, amounted to 9,333,537 fl. Exclusive of its trade, Ostend has some sugar and salt refineries, and sailcloth, soap, tobacco, and other factories, with rope-walks, building-docks, distilleries, &c. It is connected by a canal and railroad with Bruges, and by the great Belgian railroad with Antwerp and other

cities of the interior. It is the seat of a tribunal and chamber of commerce, and the residence of a military commandant and of an English consul.

During the ever-memorable struggle made by the Dutch to emancipate themselves from the blind and brutal despotism of Old Spain, Ostend sustained one of the most celebrated sieges of which history has preserved any account. It continued from the 4th of July, 1601, to the 28th of September, 1604, when the garrison capitulated, on honourable terms, to the ablest of the Spanish leaders, the famous Marquis of Spinola. This siege is supposed to have cost the contending parties the lives of nearly 100,000 men! (See *Watson's Philip III.*, i. 92—188. *See* ed. *Official Returns*, &c.)

OSTERODE, a town of central Germany, kingd. of Hanover, princip. Grubenhagen, on the Söse, a tributary of the Leine, at the foot of the Harz, 49 m. S. S. E. Hanover. Pop., in 1837, 4,600. It is walled, and has several churches, an hospital, a gymnasium, &c.; but its principal public edifices are the royal granaries, which supply about 56,000 scheffel of corn annually, at 16 groschen (2s.) the scheffel, to the miners and other labourers of the Harz. Osterode has manufactures of woollen and cotton goods, table linens and long cloths, hats, tobacco, soap, white lead, copper and wooden articles, with breweries, distilleries, tanneries, &c. (*Horchelmann's Stein*; *Berghaus*.)

OSTIA, a decayed town and sea-port of Italy, Papal States, on the left or S. arm of the Tiber, a little below where it divides into two branches to inclose the Isola Sacra, about 3 m. from its mouth, and 15 m. W. S. W. Rome, lat. 41° 45' 35" N. long. 12° 10' 35" E. This miserable little town, which has scarcely 100 inhab., and which, in fact, is all but uninhabitable from malaria, was in antiquity a flourishing emporium. It was for a lengthened period the sea-port of Rome; and was founded by Ancus Martius in that view, who is, also, said to have constructed the salt-works in its vicinity.—*In ore Tiberis Ostia urbs condita, salinae circa factae.* (*Livius in Anco*, lib. i. cap. 33.) In the course of time Ostia rose, with the rise of Rome, to be a place of great wealth, population, and importance. It was taken by Marius, who appears to have treated it with great severity. (*Livii Epist.*, lib. lxxix.) But it soon recovered from this disaster, and continued for a lengthened period to engross the whole trade of Rome carried on by sea. But its port had never been good; and, owing to the gradual accumulation of the mud and other deposits brought down by the river, it ultimately became inaccessible to ships of considerable burden, who were obliged to anchor on the coast in an exposed and hazardous situation. Many efforts were made at different periods to obviate these inconveniences, but apparently without much success; and at length the emperor Claudius determined to construct a new port (*Portus*) at the mouth of the N. or right arm of the Tiber. This harbour was wholly artificial, and was formed at a vast expense by moles projecting into the sea. (*Sueton. in Claud.*, cap. 20; *Dio Cassius*, lib. lx.) Mannert, in his article on Ostia, says that the port constructed by Claudius was repaired by Trajan, and continued to be the port of Rome as long as the Roman empire existed! This statement is, however, in all respects, wide of the mark. The truth is, that the same circumstances (the accumulation of sand and mud at the mouth of the river) that had destroyed the harbour of Ostia very soon began to choke up the new port; and instead of attempting to improve the latter, Trajan judged it more expedient to construct a totally new harbour at *Centum-cellæ*, now Civita Vecchia, though the latter was more than double the distance of the former from Rome! (*Plinii Epist.* lib. vi. ep. 31., and *art. CIVITA VECCHIA* in this work.) The harbour formed by Trajan is at this moment the best by far on the W. coast of central Italy; the great works, the construction of which is described by Pliny, still remain entire, and evince the superior discernment and power of its illustrious founder. The port of Claudius, as well as Ostia itself, is now at a considerable distance from the sea; and its harbour, which, according to *Bergier* (*Hist. de Grande Chémise*, II. 356.), could not have been executed by any European monarch, is a shallow, noisome pool:—

"Tantum ævi longinqua valet mutare vetustas."

OSTUNI, a town of the Neapolitan dom., prov. Otranto, cap. canton, on the brow of a steep hill, 21 m. W. N. W. Brindisi. Pop. about 6,000. It is a bishop's see, but remarkable for little more than the number of its churches and convents. Its climate is said to be highly salubrious. (*Craven's Tour*, &c., 123, 124.)

OSWEGO, a town and port of entry of the U. States of N. America, state of New York, cap. co. of its own name, on the S. shore of Lake Ontario, at the mouth of the Oswego River and Canal, which connect the lake with the Erie Canal, 330 m. N. W. New York. Pop., in 1830, 2,703; but, in 1835, it had increased to 4,000; and is now (1841) probably 8,000. It stands on both sides

the Oswego River, here crossed by a wooden bridge 700 ft. in length, and is laid out in streets 100 ft. wide, running at right angles. The court-house, the Oswego hotel, various churches, an incorporated academy, two banks, and a lighthouse, were the principal public buildings in 1836: it had at the same time several large grist and saw mills, tanneries, cotton factories, iron-works, &c.; many wholesale and retail stores, and 2 weekly newspapers. The harbour is formed by two piers, one 1,219, and one 250 ft. in length, projecting from each side, the opening between them being 250 ft. in width. Within the piers are from 10 to 20 ft. water. The harbour is protected by a large pentagonal fortress and some smaller forts.

Oswego has a wet basin and slips for the repair of large vessels; and is, next to Sackett's Harbour, the best port on the American side of Lake Ontario. Its situation necessarily renders it a considerable emporium; and, notwithstanding the imperfect state of the Welland canal, it already commands a large portion of the trade between the state of New York and Upper Canada. In 1835, the total burden of the vessels entering the port amounted to 153,249 tons. In 1838, 6,582 tons shipping belonged to this port. (*New York Gazetteer*, &c.)

OSWESTRY (corrupted from *Oswaldstree*), a market-town and par. of England, hund. of its own name, co. Salop, on the borders of Wales, 16 m. N. W. Shrewsbury. Area of par., 13,680 acres; pop. of township in 1831, 4,478. The town, which was formerly surrounded with walls, is well-paved and lighted; its chief public buildings are a town-hall, prison, theatre, and a fine old church, remarkable for its lofty spire-towered tower. The living is a vicarage, in the gift of Lord Clive. The Independents, Baptists, Wesleyan Methodists, Welsh Calvinists, and Primitive Methodists, have their respective places of worship, to which are attached Sunday-schools, furnishing religious instruction to upwards of 700 children. A grammar-school has been established here, and "is free for all boys born in the parish to be instructed in grammatical learning in the English, Latin, and Greek languages. The present annual value of the endowment is 330*l.*; but the number of free scholars seldom exceeds 20, besides whom there are about 24 pay-boys residing with the master. There is also an extremely well-regulated national school, attended by about 230 boys and 150 girls." (*Mun. Corp. Report*.) Oswestry, which from 1661 to 1691 was the great mart for woollens called Welsh webs, has still a few manufactures of flannel and coarse linen cloth; but its principal dependence is on its retail trade with an extensive agricultural district. The bor., which received its first charter in 21 Richard I., is divided, under the Mun. Reform Act, into 2 wards, and the corporation consists of a mayor, 5 other aldermen, and 18 councillors. Corporation revenue, in 1839, 411*l.* Quarter and petty sessions are held under a recorder, and there is a court for the recovery of small debts. Oswestry is one of the polling-places at elections for the N. division of Salop. Races are held near the town in September. Markets on Wednesday: large cattle fairs, 15th March, 12th May, Wednesday before 24th June, 15th Aug., and 10th Dec.

*Oswaldstree* (more anciently called *Masefield*) is supposed to have derived its name from Oswald, king of Northumbria, killed here in battle in 642, and subsequently canonised. It was surrounded by walls by Edward II., in 1277, and became highly important as one of the keys to the principality of Wales. At the W. end of the town, on a lofty hill, are some remains of its castle, supposed to have been built about the time of the Norman conquest. (*Pennant's Tour in Wales*, i. 333, &c.; *Parl. Reports*.)

OTAEITE. See POLYNESIA.

OTLEY, a manufacturing and market-town, par., and township of England, W. Riding co. York, upper div. wap. Skyrack, on the Wharfe, 94 m. N. W. Leeds. Area of par., comprising 12 townships, 23,060 acres. Pop. of par. township in 1831, 3,161. The town, though small, is well-built, and delightfully situated in a picturesque river valley. The church is large, but has few remains of its original architecture: the living is a vicarage in the gift of the lord chancellor. There are places of worship for Independents, Wesleyan and Primitive Methodists, with attached Sunday-schools. A grammar-school was founded here in 1611, and there is a national school for children of both sexes. Otley formerly enjoyed a considerable share in the woollen trade; but it has long since been removed to situations nearer to the coal districts, and better placed for inland navigation. Within the par., however, there were, in 1839, 2 cotton mills, 4 woollen-mills, and 10 worsted-mills, moved chiefly by water-power, and employing 1,182 hands, chiefly in the townships of Grisley, Yeadon, and Rawden. Tanning and malting are carried on in the town to a pretty considerable extent, and it has large markets and fairs for corn and cattle, besides an agricultural show held in April. The Archbishop of York is lord of the manor, and holds courts-baron for the recovery of small debts.

Petty and quarter sessions are held here by the magistrates under the archbishop's commission. Markets on Friday: cattle fairs, Wednesday in Easter week, and every fortnight after till Whit-Sunday, and then every 3 weeks till 1st Aug.

OTRANTO (an. *Hydruntum*), a sea-port town of Italy, near its S.E. extremity, kingdom of Naples, prov. of its own name, cap. canton, on the Strait of Otranto, close to the point of Italy nearest to the Greek peninsula, 24 m. S.E. Lecce, and 44 m. W.S.W. Cape Linguetta, in Albania. This petty town, of 1,600 inhab., has little to interest the English reader, except the celebrated "Castle of Otranto," with the name of which every lover of romance is familiar. "The castle, however, is far from realising the expectations created by the perusal of the work bearing its appellation. It is now, what it ever was, the citadel of the town, a fort of no considerable extent or power, but not entirely deficient in picturesque beauty, especially on the land side. Two large circular towers rise from the rich foliage of the trees which fill the town ditch, and among which a very high palm is conspicuous." (*Craven's Tour*.) The castle, which comprises prisons, stables, a mill, a chapel, &c., was built by Alphonso of Aragon, who otherwise fortified the town, as a bulwark against the Turks. Otranto has a very ancient cathedral, in which are some columns taken from temple of Minerva in the vicinity; an archbishop's palace, and a few Roman antiquities. In 1480 it was taken and sacked by the Turks. Under Napoleon, it gave the title of duke to Fouché. (*Craven's Tour in the S. Provinces of Naples*, 142, 144.; *Burgess's Greece*, i. 28, 30.; *Dict. Géog.*)

OTTAJANO, a town of the Neapolitan dom., prov. Napoletano, at the E. foot of Mount Vesuvius, 12 m. E. Naples. Pop. estimated at 6,000. It has 3 churches, a castle, and some other public buildings. Its inhabs. are principally engaged in agriculture, having but little taste for commerce. Several antiquities found here are supposed to have formed part of a palace anciently belonging to the Octavian family, from whom the town is conjectured to have derived its name.

OTTERY ST. MARY, a market-town and par. of England, co. Devon, hund. its own name, on the Otter (whence it derives its name), 14½ m. E. by N. Exeter. Area of par. 9,470 acres. Pop., in 1831, 3,849. It is large, but irregularly built; containing many vestiges of antiquity, among which is a house formerly inhabited by Sir Walter Raleigh. The church is a large and curious structure, built like Exeter Cathedral, with 2 towers opening into the body of the church, and serving as transepts; a lady-chapel occupies the E. end, and in the interior is a fine arched monument. The living is a vicarage, in the gift of the Lord Chancellor. The Independents and Wesleyan Methodists have likewise their respective places of worship, with attached Sunday-schools. A grammar-school was founded here by Henry VIII.; but it has for many years been an almost useless appendage to the town. Two day-schools are supported by subscription, and an infant-school is attended by about 60 children. Almshouses are established here, and there are numerous minor charities for the relief of the poor within the par. Ottery St. Mary, which had formerly a considerable share in the manufacture of serges and coarse woollen cloths, is now chiefly supported by agriculture and retail trade. A silk-mill, however, has been established within the last few years, which, in 1839, employed 325 hands. Petty sessions for the hund. are held here. Markets on Tuesday; fairs, Tuesday before Palm-Sunday; Whit-Tuesday, and Aug. 5., for cattle and sheep.

OUDE (*Ayodhya*), a prov. and kingdom of Hindostan, under the protection of the British, between the 26th and 28th degs. of N. lat., and the 79th and 83d of E. long. It has N. Nepal, to the S. every where else surrounded by the territories of the Bengal and Agra presidcs., having W. the provs. Delhi and Agra, S. Allahabad, and E. Bahar. Area estimated at about 25,300 sq. m. Pop. probably 5,000,000. This country is an extended plain, bounded northward by the lower Himalaya ranges, and W. and S. by the Ganges, being well watered by several tributaries of the latter. When properly cultivated, the soil is extremely productive, yielding crops of wheat, barley, rice, and other grains, sugar, indigo, opium, and all the richest crops raised in India; and Heber states, that from Lucknow to Sandee the country is as populous and well cultivated as most of the Company's provs. But Oude was for a lengthened period so wretchedly mismanaged by its native authorities, that, from being one of the richest states of Hindostan, it had become, a few years ago, one of the poorest and most miserable, being especially distinguished for anarchy and disorder. The total revenue is estimated at between 18 and 19 million rup. a year, and its collection is farmed out to the highest bidders. Large tracts of the country are also in jaghire, or feudally conferred for military service; the annuls, or revenue collectors, and the zemindars, are so independent of the royal authority, that they yield only a

very imperfect obedience, and so late as 1830 Oude was distracted by civil war between the sovereign and his military chieftains. A full account of the condition of the country at that period may be found in the *Report on E. I. Affairs*, 1832. (*Political Appendix*, p. 396-420.) Under the new king, however, great ameliorations have been effected, and the standing army has been reduced from 50,000 men to less than half that number. The subsidiary troops furnished by Oude to the Anglo-India army amount to 10,000 men. The foreign relations and treaties of the state are wholly conducted through the British resident at Lucknow. It has been secured, ever since 1765, by the British government from foreign aggression; and it is to be regretted that we did not also so far interfere in its internal concerns as to introduce regularity and efficiency into the administration, and to repress disorders. (*See Crawford's Letter in Rep. Polit., Appendix*, pp. 92, 94.)

OUNE, a town of Hindostan, in the above prov. and kingdom, of which it was the former cap.; on the Goggra, across which an iron bridge, the materials having been brought from England, is said to have been recently thrown, 74 m. E. Lucknow; lat. 26° 48' N., long. 82° 4' E. It extends for a considerable distance along the banks of the river, stretching as far as Fyzabad. It is said by Hamilton to be tolerably populous; but, except along the river's brink, it consists wholly of ruins and jungle, among which are the remains of what are called Hindoo temples. Hindoo pilgrims still visit Oude; and did so in great numbers, until Aurangzobe demolished most of their places of resort. A mosque erected by that monarch, and 2 tombs, greatly venerated by Mohammedans, are now the principal and almost sole remaining public edifices. (*Mod. Trav.* ix. 312-315, &c.)

OUENARD, or AUDENARD, a town of Belgium, prov. E. Flanders, cap. arrond. on the Scheldt, 14 m. S.S.W. Ghent. Pop. in 1836, 5,539. It is generally well built, and has one of the handsomest town halls in the Netherlands, several churches, an hospital, 2 orphan asylums, a convent, a college, and other schools, including one for spinning yarn. It has some manufactures of cotton and woollen fabrics, with breweries and tanneries. On the 11th of July, 1798, a powerful French army, commanded by the Dukes of Burgundy and Vendôme, was defeated in the vicinity of this town, and obliged to make a disorderly retreat, by the allied army under the Duke of Marlborough and Prince Eugene.

OUNDLIE, a market town and par. of England, co. Northampton, and hund. Polbrook, on the Nen (crossed here by 2 bridges, one of which has 5 arches), 25 m. N.E. Northampton, and 67 N. by W. London. Area of par., 5,300 acres; pop., in 1831, 2,308. The town, though small, is neat and well built, having a good market-house. The church is large and handsome, with a square tower, having octagonal turrets at the angles, and surmounted by a lofty spire; the living is a vicarage, in the gift of the Lord Chancellor. A grammar-school, established in 1541, is attended by about 60 boys. Two charity schools furnish clothing and instruction to 42 boys; and a national school is attended by about 130 children of both sexes. There are also 2 almshouses. Petty sessions for the hund. are held here once a fortnight. Markets on Thursday; fairs, Feb. 25.; Whit-Monday; Aug. 21., and Oct. 12., for horses, sheep, &c.

OURAL, or YAIK, the *Rhymnus* of the ancients, a large river of the Russian empire. It rises in the Oural Mountains, whence its name, in the district of Troitsk; and, after a lengthened south-westerly course past Orsk, Orenbourg, and Ouralsk, pours its waters by various mouths into the northern part of the Caspian Sea. It is shallow, and of little use for navigation; but teems with fish, which, at the proper season, afford a rich harvest to the Cossacks of the Oural. It is reckoned one of the bulwarks of the Russian empire against the incursions of the nomades of the Tartar steppes.

OURAL, or URAL MOUNTAINS, an extensive mountain-chain, extending, including its subsidiary portions, nearly under the same parallel from the N. border of the Sea of Aral to the shores of the Arctic Ocean, or from about the 48th to about the 60th degree of N. lat. It forms, during the greater part of its course, the boundary between Europe and Asia. Where highest, it attains to an elevation of about 6,400 ft. above the level of the sea; but the ascent to the summit, particularly on the European side, is so very gradual, that its height does not appear nearly so great as it really is. Its breadth varies from 1 to 6 geo. miles. It is very productive both of the precious and the useful metals; being estimated to afford, at an average, about 300 pounds of gold, 200,000 lbs. of copper, 5,500,000 lbs. of forged, and 8,500,000 lbs. of cast iron. (*See art. RUSSIA; Schnitzler, La Russie, &c.* p. 652.; *Humboldt's Fragmens de Géologie, &c.* ii. 315., &c.)

OURFA, (an. *Edessa* or *Callirhoë*) a fortified city of Asia Minor, parh. Diarbeker, 81 m. S.W. the city of that name, and 112 m. N.E. Aleppo. Pop. 30,000, 3-4ths of whom are Turks and Arabs, and the rest Armenians and Jews.

It occupies the slopes of two hills, in the valley between which is a fountain and large basin containing a number of fish accounted sacred by the inhabs. The houses are substantially built of hewn stone, and surmounted by terraces; gutters two or three feet in width run through the middle of the streets, and on each side are tolerably clean pavements. The mosques, which are numerous, have all lofty, and many of them handsome minarets; there are churches also for the adherents of the Greek and Armenian creeds. The bazaars are of tolerable size, and covered in from the weather, some being occupied by cloth merchants, others by goldsmiths and other artisans.

Ourfa is a place of considerable industry: large quantities of cotton fabrics are made in it; its goldsmiths' work and morocco leather are highly esteemed, and the produce of the neighbourhood, especially wheat and barley, is sent to Aleppo and the N. of Syria, and, by way of Bir, across the Euphrates. "The general trade with Aleppo is carried on almost entirely by about twenty Turkish and Christian merchants. They employ a capital not exceeding 50,000 dollars; but they trade on credit, both at Ourfa and Aleppo, for a much greater amount. Three-fifths of this are for British manufactures, principally cotton twist, calicoes, a few prints, muslins, and nankeens; the remaining 2-5ths being for colonial produce, and different articles in the country. The inland duty paid at Ourfa by the rayas is invariably 5 per cent. on the invoice cost; and the price of carriage from Aleppo ranges between 80 and 100 piasters per Aleppo cantar on every kind of goods." (*Bouring's Report on Syria*, p. 44.)

The ancient *Edessa* was for a lengthened period the cap. of the prov. Osroene, in Mesopotamia. It is said to have been one of the numerous cities built by Seleucus Nicator, and continued under his successors as long as they remained possessors of Syria. It was taken by the Arabs during the caliphate of Abubekr, in the 7th century, and, after many vicissitudes, Selim I. united it, in 1517, to the Ottoman empire. (*Oliver, Voyage dans l'Empire Ottoman*, iv. 210-233.)

OUSE, a river of England, co. York, one of the principal affluents of the estuary of the Humber, and which, indeed, may be considered as representing the various rivers that join it before it falls into that great estuary. The Swale, the remotest branch of the Ouse, has its source in the mountain of Shunner Fell, on the borders of Yorkshire and Westmoreland, one of the most elevated in the great central range. Pursuing a S.E. course, the Swale is joined a little below Boroughbridge by the Ure, from Akrigg, Middleham, and Ripon. A little lower down, the united river takes the name of the Ouse, and flowing past York, receives at Cawood its important tributary, the Wharfe, which, flowing through Tadcaster, has its source near Arncliffe. From Cawood the Ouse flows S.E., with many windings, to Goole, where it unites with the Humber, receiving the Derwent from the N., and the Aire and Don from the S. The Ouse is itself navigable for considerable vessels as far as York, and for barges to Linton; and the Aire, Don, and Derwent, have been, partly by improvements in their channels, and partly by canals, rendered navigable to a great distance. The Ouse is, in fact, connected not only with the ports on the Humber, but, by an internal navigation, with Liverpool, London, and Bristol.

Exclusive of the above, another river, called the Great Ouse, rises in Northamptonshire, near Brackley; its course at first is E., a little inclining to the N., through Bucks; it then passes Olney and Harrold, and, after many windings, reaches Bedford, where it becomes navigable. It then traverses the cos. of Huntingdon and Cambridge, and the N.W. corner of Norfolk, falling into the estuary of the Wash at King's Lynn. From Huntingdon Sluice to Denver Sluice, a distance of about 20 m. in a direct line, the Ouse is now called the New Bedford river, from the greater part of its water flowing in the great channel or drain of that name, dug in the reign of Charles II. The principal affluents of the Great Ouse are the Nen, Cam, Little Ouse, Lake, Wissey or Stoke, and Nar.

OVERTON, a parl. bor. of N. Wales, co. Flint, hund. Maylor, on the Dee (crossed here by a handsome stone bridge), 14 m. S. Chester, and 158 m. N.W. London. Pop. of parl. bor. and par., 1,746. The town is sit. on rising ground above the river, and is on the whole well built. The church is a venerable structure, picturesquely situated; and in the church-yard are some yews which, for size and beauty, are ranked among the wonders of the Principality. The town has little trade; and would be unworthy notice, were it not that it enjoys the privilege, in connexion with Flint and 6 other towns, of returning 1 mem. to the H. of C. Registered electors for the united bors. in 1839-40, 1,053; ditto for Overton, 44.

OVEDO (*Ovetum*), an ancient city of Spain, cap. of the prov. of Asturias, in a plain at the confluence of the two small rivers Ovia and Nora, 60 m. N. by W. Leon,

lat. 43° 19' N., long. 5° 57' W. Pop., according to Miliano, 10,476. It is an old-fashioned city, with many narrow and irregular streets; but it has several good squares, that forming the market-place being large and handsome. The town is supplied with water by a magnificent aqueduct of 41 arches, communicating with the fountains in the public squares. The principal public buildings are the cathedral, the collegiate church, and 3 par. churches, besides a district church, 3 hospitals, and 4 colleges. The cathedral (supposed to have been founded in the 8th century) is a large structure of Gothic architecture, and one of the most elegant in Spain, very similar to that of Toledo, though much smaller: it is surmounted by a beautiful, though unfinished, tower; and at the W. end is a noble open porch. (*Cook's Sketches in Spain*, ii. 96.) It contained many valuable vases, &c., taken away during the peninsular war: it has also a large mausoleum, in which are deposited the remains of 14 kings and queens of Asturias. The university, founded in 1580, is well endowed, and has a large library: the university buildings are among the finest in the town. Oviedo has a weekly market, and 3 annual fairs; but its trade is chiefly confined to the neighbourhood. A few tanyards, manufactories of hats, horn combs, and metal buttons are established here, and domestic weaving is carried on to a considerable extent. A manufacture of arms was, till lately, supported by the government; but within the last few years it has been abandoned.

Oviedo is supposed to have been founded about A. D. 750. It afterwards became a place of refuge, during the persecutions of the Moors, for great numbers of Christian clergy, and hence acquired the name *Civitas Episcoporum*. The pope in 901 made Oviedo an archbishop's see; but afterwards this honour was transferred to St. Jago, since which time the bishops of this city have been merely suffragans. The foundation of the university improved the condition of the inhabs.; and for upwards of 150 years Oviedo was a popular resort for literary monks and others desiring to avail themselves of the advantages offered by the ecclesiastical seminaries. When Mr. Townsend visited the town, it swarmed with mendicants, encouraged by a wealthy clergy; but since the French war, and the suppression of the conventual establishments, the importance both of the town and university has very much diminished. (*Townsend*, li. 1-14.; *Mod. Trav. in Milano*.)

OWIYHIEE. See POLYNESIA.

OXFORD, an inland and central co. of England, of a very irregular shape, bounded S. and S.W. by the Thames, by which it is separated from Berks, and having W. Gloucester, N. Warwick, N.E. Northampton, and E. Buckingham. Area, 483,840 acres; of which above 400,000 are said to be arable, meadow, and pasture. Surface, a good deal diversified. The S. division of the co. is traversed by the range of the Chiltern hills; but elsewhere it is mostly flat, or merely undulating. Soil very various: in the N. it consists of a deep, red, fertile loam; in the middle district it is comparatively sandy, gravelly, and poor; and, in the S., thin and chalky soil predominates. The co. is extremely well watered; for, besides being bounded, as already stated, for a lengthened distance by the Thames, it is traversed by the Windrush, Evenlode, Cherwell, and Thame. Oxford is principally in tillage; but though numerous improvements have been effected of late years, its agriculture is far from being in a very advanced state. This is accounted for principally, perhaps, from the tenants not being bound to follow any particular mode of husbandry, and not being restricted in the sowing of wheat, so that the land is frequently foul and over-wrought. There is, also, in many parts, a great want of drainage. The soil is particularly suitable for barley, which is the principal crop; but large quantities of wheat are also raised. Turnips extensively cultivated. Dairy husbandry is, in some districts, carried on upon a large scale; and the sheep stock is supposed to exceed 300,000 head. There are a few large estates, and farms are generally small: it is commensurate to grant leases for 7 and 14 years. Average rent of land in 1810, 20s. 6d. an acre. Manufactures and minerals of no importance. Principal town, Oxford. The co. is divided into 14 hundreds, and 217 parishes. It sends 9 mems. to the H. of C., viz. 3 for the co., 2 for the city, and 2 for the university of Oxford; and 1 each for the bors. of Banbury and Woodstock. Registered electors for the co., in 1839-40, 5,721. In 1831, Oxford had 29,334 inhab. houses, 31,770 families, and 152,186 persons, of whom 76,387 were males, and 75,799 females. Sum expended for the relief of the poor, in 1838-39, 70,847. Annual value of real property in 1815, 790,866*l.*; profits of trade and professions in ditto, 312,809*l.*

OXFORD, a parl. bor. and city of England, cap. of the above co., and the seat of one of the two great English universities, on the left bank of the Isis, near its confluence with the Cherwell, which are both crossed by numerous bridges, (one of which, on the London road, is a handsome stone structure, of 5 arches.)

52 m. W.N.W. London, lat. (Observatory)  $51^{\circ} 45' 39''$  N., long.  $1^{\circ} 15' 29''$  W. Pop. of par. bor. (which includes, with the old bor. the par. of St. Clement's and a portion of that of Cowley) in 1831, 21,345. The city stands on a plain, in the midst of meadows thickly planted with trees, and is surrounded on 3 sides by the above-mentioned rivers: it has an imposing external appearance from whatever side it may be viewed; but more especially from the adjacent high ground on the London and Abingdon roads. The High Street is one of the finest in England; not only for its width and regular arrangement, but for the beauty and magnificence of the churches and collegiate edifices lining it on both sides: the towers of Magdalen and All Souls' Colleges, the noble fronts of University and Queen's Colleges, and the University Church, are its chief and most admired features. Three other streets meet it at its W. end; one of which, called the Corn-Market, leads northward to the airy suburb of St. Giles's; and the second passes southward by the town-hall, and the noble building of Christ-Church, towards Abingdon; while the third, called Queen Street, runs westward in continuation of High Street, into the low and densely peopled pars. of St. Ebbe and St. Thomas. Parallel to and N. of High Street, is another fine, though not long line, called Broad Street, in which are Balliol, Trinity, and Exeter Colleges, the Ashmolean Museum, Clarendon Rooms, Sheldonian Theatre, &c.; and between High Street and Broad Street is an oblong space, occupied by a quadrangular building, forming a hollow square, round which are the academical "schools," the upper stories being occupied by the Bodleian Library and Picture Gallery. Between the schools and St. Mary's Church is the Radcliffe Library, a circular Grecian edifice, surmounted by a dome, and contrasting rather strangely with the Gothic structures by which it is surrounded. St. Giles's and Beaumont Streets are lined with substantial private dwellings; besides which, St. John's and Worcester Colleges, and the Taylor-building, a large structure of Corinthian architecture, now in course of construction, greatly contribute to the embellishment of this part of Oxford. The other streets are mostly narrow, irregular, and crooked. Some new streets, however, with good substantial houses, an entire new suburb, and several hundred smaller tenements, have been erected within the last 20 years, and the city has thus been greatly improved. (*Municipal Bound. Report*.) The principal thoroughfares are well paved, cleaned, lighted with gas, and plentifully supplied with water. The police, a very efficient body, is regulated and maintained by the university. The town-hall, a long stone building, with little pretension to architectural elegance, is open below for the accommodation of farmers and corn-factors, the upper stories being divided off into court-rooms, and apartments for municipal and judicial business. A large and commodious new sessions-house, however, is in course of erection near the old castle, which has been converted into a modern gaol. The arrangements of the co. prison are very imperfect; its size does not admit of classification or solitary confinement to any great extent, and hard labour is only partially enforced. There is likewise a city bridewell, comprising about 50 cells; but its management is said to be unsatisfactory. (*Prison Inspector's 4th Rep.*, part ill. p. 193-201.) The market-house is a modern range of buildings, entered from the High Street, and, with its aisles, arcades, and shops, forms one of the greatest improvements made in the city. The Radcliffe Infirmary erected towards the middle of the last century by the trustees of the fund left by Dr. Radcliffe, is in the N. suburb, not far from the observatory, which owes its origin to the same founders. It is a plain stone building, within a spacious enclosure, capable of accommodating between 150 and 200 patients; besides medical officers, &c. The only other edifices, exclusive of those devoted to public worship, are the house of industry, a large structure near the Infirmary, built for the reception of the poor belonging to 11 parishes (the expense of whose maintenance amounted, in 1839, to 3,195*l*.) a small music-hall, and 2 sets of almshouses.

The city is divided into 14 pars., and is the seat of a bishopric. The cathedral church connected with Christ-Church College, presents the styles of different ages, from the 12th to the 16th century: it is built in the form of a cross, and measures, from E. to W., 154 ft.; the length of the transepts being 102 ft., and the height from the floor to the roof, 42 ft. At the intersection of the nave and transepts rises a tower, surmounted by a spire 146 ft. in height. The carvings of the choir are very elaborate, though somewhat heavy; and in some of the windows are fine specimens of painted glass. Unfortunately it is so hemmed in by college buildings and gardens, that no view of the whole can well be obtained. The cathedral establishment is identical with that of Christ-Church College; and the sum annually divided by the dean and 8 canons amounts to 12,550*l*., besides which, each has a handsome residence. The income of the bishopric

amounted, at an average of the 3 years ending with 1831, to 2,648*l*. a year; but it is to be increased to about 4,000*l*. a year. St. Mary's Church (used by the university for the academical sermons, Bampton lectures, &c.) is a fine structure, in the perpendicular style, surmounted by an elaborately ornamented tower and spire, 180 ft. high. The side towards the High Street, however, is disfigured by an incongruous porch, with twisted columns. The interior was renovated in 1826, and is handsomely fitted up. It is likewise a par. church, the living being in the gift of Oriel College. Carfax, or St. Martin's, the corporation-church, facing the W. end of High Street, is an oblong stone building, with a low tower. All Saints, in the High Street, is in the Grecian style: the roof is entirely supported on the side walls, and the whole is surmounted by a tower and spire: the living is in the gift of Lincoln College. St. Peter's-in-the-East, near Queen's College, is the oldest church in Oxford. Mr. Rickman says that its original portions are Norman; but it has had many introductions and alterations, mostly in the perpendicular style, which have greatly altered its exterior appearance. The interior has recently been restored and beautified, so as to correspond with that of the original building: the living is in the gift of Merton College. St. Mary Magdalen, at the juncture of the Corn-Market with Broad Street, is in the decorated style; it has recently undergone a thorough repair, and is about to be enlarged by the addition of a large aisle and lofty tower, to be erected by subscription, in commemoration of the martyrs Craumer, Hooper, and Ridley. The other churches of Oxford deserve no particular description. The Roman Catholics have a small chapel; and there are places of worship for Wesleyan and Calvinist Methodists, Independents, and Baptists. Most of the churches have their attached charity-schools, besides which there are various Sunday-schools, attended by great numbers of children of both sexes. The Diocesan national schools give instruction to about 600 boys and 300 girls; and a school of industry is attended by 200 girls. A few schools, also, are supported by Dissenters. Most of the parishes have considerable funds for the relief of the aged and sick poor; and there are dispensaries, lying-in charities, clothing-societies, provident clubs, &c., to aid the numerous indigent persons in the town and neighborhood.

The great glory of Oxford, however, consists in its buildings devoted to collegiate education; which far surpass those of Cambridge in number, and in extent and beauty. Most of them are built in the style peculiar to the 15th and 16th centuries; but a few, as Queen's and Worcester Colleges, with parts of Christ-Church and Magdalen Colleges, partake more of the Grecian style, introduced late in the 17th century. They are chiefly built in hollow squares, round which are the member's rooms; and the quadrangles of Christ-Church, All Souls, Magdalen, New, and Brasenose Colleges are very large and imposing. The chapels, halls, libraries, and gardens of these establishments are likewise extremely beautiful; nor must we omit to mention the shady promenades, called the Christ-Church Meadows and Magdalen Walks, which are of great extent and beauty.

Oxford is in a very great degree depends, and has during many centuries depended, for its prosperity on the University. Till the opening of the Birmingham and Great Western railways, it enjoyed considerable advantages from being on the great roads leading northward to Birmingham, Shrewsbury, &c., and westward to Cheltenham, Gloucester, and South Wales. Between twenty and thirty coaches used daily to pass through the town, and its inns were among the largest in England; but this source of wealth is now almost extinct, and owing to the opposition of the University no railway has hitherto been brought near the city. It is believed, however, that this will speedily be the case; and there can be no doubt that Oxford will gain incomparably more by such a speedy means of communicating with the metropolis and other great towns, than she has lost by the annihilation of her posting business. There are no manufactures; and the trade of the place is chiefly confined to the supply of the academic pop. It has the advantage of a canal navigation by the Isis to London, and by the Oxford Canal northward, which channels supply it with coal, and all the more bulky articles of domestic consumption. (*Parl. and Mun. Bound. Rep.*) It is also the mart for an extensive agricultural district, and its weekly corn-market is one of the largest in the midland counties. Oxford has four private banks, with a savings' bank; and two weekly newspapers, the "Oxford Journal," and the "Oxford University Herald." Races are held during August in the Port-meadow, W. of the town.

The corporation of Oxford claims to exist by prescription; but it has also received many charters, the last of which was granted in 3 James I. It is divided, according to the Mun. Reform Act, into five wards, and is governed by a mayor, nine other aldermen, and 30 councillors. Corp. revenue, in 1839, 2,914*l*., exclusive of 61*l*.

accruing from the sale of property. Quarter and petty assizes are held by the recorder; besides which, there is a mayor's court for the recovery of small debts, and a court of hustings. The assizes for the co. are held here: the quarter sessions take place on the Mondays after Jan. 4, April 5, June 28, and Oct. 18. The vice-chancellor of Oxford is a magistrate *ex officio* within the bor., and exercises jurisdiction over the town as well as the University. The city has sent two members to the H. of C. since the reign of Edward I.; the right of election down to the Reform Act having been in the free burgesses (becoming so by birth, apprenticeship, purchase, or gift). The limits of the bor. were enlarged by the Boundary Act so as to include with the old bor. the par. of St. Clement's and a part of Cowley par. E. of the Cherwell. Reg. electors, in 1839-40, 2,773. Oxford is likewise the election town for the co. Markets on Wedn. and Sat., but chiefly on the latter. Fairs, May 3, Mond. after Sept. 1., and Thurs. before Michaelmas-day.

Oxford (originally called Oxnaford, or Oxeneford) lays claim to very high antiquity. It suffered much during the ravages of the Danes, and was the residence of Canute, and of his son Harold Hæfod. William the Conqueror stormed the town in 1067. Soon after, the castle (remains of which are still existing contiguous to the co. gaol) was built, by Robert de Oillgi, one of the Norman barons. Henry I. built a palace here, which continued to be a favourite regal residence during several successive reigns; but it was pulled down at the dissolution of the religious houses. Oxford had a share in the civil wars of Stephen and Henry II., which were terminated by a council held in it in 1154. The history of the city is henceforward closely connected with that of the University, which now began to attain a high celebrity. Hot disputes on points of scholastic doctrine prevailed between the reigns of Henry III. and Edward III.; and in the middle of the 14th century a large body of the students removed to Stamford, in Lincolnshire. (See *Gutch's Annals*, anno 1348.) Pestilence at the same time made great ravages; the city was almost deserted, and the University, too, was ruined. The introduction of the doctrine of Wycliffe, at the close of the 14th century, occasioned a great commotion in the academic body; the city suffered much during the wars of the Roses, and Oxford was again visited by plague in the reign of Henry VII. The troubles of the Reformation, and the spoliation of the academic houses by Henry VIII., drove many of the students from their habitations; but that monarch may be said to have resuscitated the university by the establishment of the cathedral of Christ-Church, as well as by the foundation of professorships for the learned faculties. The forms of popery were restored under Queen Mary; and during this period Oxford acquired an unenviable notoriety by the martyrdom of the three great reformers, Cranmer, Ridley, and Latimer, in 1555-56. In the following reigns the city and University gradually recovered from their previous depression, and the latter received from James I. and Charles I. many important privileges. Oxford warmly espoused the cause of the royalists during the reign of Charles I., who made it his head-quarters after the battle of Edgehill. For a lengthened period after the Revolution, Oxford was attached to the party of the Jacobites; and since the accession of George III. down to the present time, the University has, speaking generally, supported what are called high church and high Tory principles. (*Ackerman's History of the City and University of Oxford*; *Ant. Wood's Antiq. of Oxford and Athenæ Oxon.*; *Brewer's Account of Oxfordshire*, art. *Oxford*; *Parl. Papers*; *Priv. Inform.*)

**OXFORD (UNIVERSITY OF).** This celebrated university lays claim to very high antiquity; but its exact origin is unknown. Tradition has assigned its foundation to King Alfred, about the year 890; and University College is supposed to have been the nucleus round which, in the course of 9 centuries, have been formed the present assemblage of colleges and halls. Mr. Hallam and Mr. Dyer countenance this opinion, which, however, seems to rest on no very solid grounds. But there can be no question that Oxford was known as a school of ancient learning as early as the reign of Edward the Confessor, for Ingulphus, abbot of Croyland, says of himself, that "he was sent to study at Oxford, where he made greater progress in the Aristotelian philosophy than most of his contemporaries, and became well acquainted with the rhetoric of Cicero." (See *Conringius de Antiq. Academ. Diss.*, lib. ch. 7.) During the reigns of Henry I. and II., Oxford appears to have comprised a theological school of some note, and civil law was studied in it as early as the middle of the 12th century, about which time doctors both of divinity and law were first created; but we do not find it designated as an university till the 3 John, 1201, which is of earlier date than the application of the term either to Paris or Cambridge. The earliest charter was granted by John, and its privileges were confirmed and extended by subsequent monarchs, the act by which it was created a corporate body, by the style or title of

"The Chancellor, Masters, and Scholars of the University of Oxford," having been passed in the 18th Elizabeth, 1570. The statutes, however, by which the university is now either nominally or really governed were drawn up during the chancellorship of Archbishop Laud, and received the sanction of Charles I. in 1636. (*Ant. Wood's Antiq. of Ox.*, transl. by Gutch, ii. 403.) The university was sanctioned, also, by Papal authority; and Oxford is mentioned in the Constitutions of Clement V. (A. D. 1311), with Paris, Bologna, and Salamanca. Collegiate foundations date from a very early period; and University, Balliol, Merton and Oriel Colleges, were founded prior to the reign of Edward III. The number of colleges or endowed establishments, however, was for some centuries small, in comparison with that of the halls or inns, in which the students lived, chiefly at their own expense, under the supervision of a tutor, or principal. For the establishment of these halls, of which there were about 300 in the early part of the 14th century, nothing more was necessary than the agreement of a number of students to form themselves into a society, under a doctor or master of their own choice; for the chancellor could not refuse his sanction to the establishment. Pestilence, however, and the decline of the scholastic philosophy, and other causes, led to a diminution in the number of students, in consequence of which, also, the halls decreased in number. The Reformation still further thinned the ranks of the students, and at the beginning of the 16th century the university was almost entirely deserted, and the halls fell to decay; a circumstance which gave to the secular colleges a preponderating weight, and allowed them so to extend their circuit, and increase their numbers, that they were subsequently able to comprise within their walls nearly the whole academical population, though, previously to the 15th century, these endowed establishments appear to have rarely, if ever, admitted independent members. (See *Edin. Review*, lib. 411.) In 1546, the number of halls had fallen to only eight; and Antony Wood informs us that in 1551 the ancient halls were "either laid waste, or had become the receptacles of poor religious people, turned out of their cloisters." Many of these buildings were purchased by the colleges, which were thus considerably extended, and began to provide for the accommodation of members *not on the foundation*. Six colleges were founded in the 16th century, chiefly on the sites of old halls or deserted houses. After this period, one fresh college (Wadham) was founded; and 3 out of the 8 surviving halls (namely, Broadgates, Gloucester, and Hert halls) were changed, by endowment, into Pembroke, Worcester, and Hertford colleges, of which, however, the last is now extinct. The Earl of Leicester, chancellor of Oxford during the reign of Elizabeth, obtained from the university the privilege of nominating the principals of the halls; and this right, which was, in effect, a veto on the institution of new halls, was vested by statute in his successors. Of the five still existing halls, Magdalen and St. Edmund's are the best attended by students; and they are the only examples in the country of unendowed academical houses; for the establishments called halls at Cambridge differ in no respect from the colleges. In the 18th century an enactment was made compelling all students to become members of some college or hall; and by the regulations of Leicester (which were confirmed by Laud), it was made necessary for them to enter under a particular resident tutor. The business of instruction was originally carried on by the doctors and masters of arts (all of whom had the liberty of teaching), or else by the salaried professors of the university. The tutor, therefore, was at first rather a moral guardian than a professed teacher; and his duties did not consist in teaching the sciences constituting the *trivium* and *quadrivium*, but in inculcating his pupils with good principles, instructing them in the rudiments of religion, especially in the doctrines of the 39 articles, and making them conform generally to the statutory regulations of the university. These duties the tutor still performs; but he has, also, become an acknowledged teacher, giving daily instruction in language, science, &c., to those under his charge; and bye-statutes enacted at different times have rendered an attendance on the professors' lectures merely optional, and wholly unnecessary either for the acquisition of the university degrees, or for a participation in academical honours. Indeed, out of 28 professors, only 12 now give lectures; and, excepting those of one or two professors, they receive little attention from the great body of students. The following are the existing collegiate institutions of Oxford, with the dates of their foundation, and the number of foundation-members, independent members, &c. in 1841. (See Mr. Madden's valuable little work *On the Origin of Universities*, pp. 80-92.) [See Table, next page.]

The buildings belonging to all or most of these societies, are of great extent and beauty. Christ-church, New College, All-souls, Magdalen, and Queen's Colleges, are very large, comprising several quadrangles, and lay

Colleges and Halls.	Date of Foundation.	Founders.	Visitors.	Details of Foundation.	Members in 1841.	
					M. A.	Total.
University	872 ? 1249	King Alfred and William of Durham.	The Crown.	A master, 13 fellows, 2 travelling fellows, 17 scholars (6 open), and 4 exhibitors: 10 benefices	119	238
Baliol	1268 ?	John Baliol, father of John Balliol, king of Scotland.	The Archbishop of Canterbury (elected by the college).	A master, 12 fellows, and 14 scholars (all open); several exhibitions for natives of Scotland. 20 benefices	151	238
Merton	1264	Walter De Merton, Bishop of Rochester, who removed it from Maldon in Surrey, in 1268.	The Archbishop of Canterbury.	A warden, 24 fellows, 14 post-masters ( <i>portmaiter</i> ), chaplains, and 2 bible-clerks: 18 benefices	70	149
Exeter (originally called Stapledon Hall)	1314	Walter De Stapledon, Bishop of Rochester.	The Bishop of Exeter.	A rector, 25 fellows, 19 scholars (5 open): 12 benefices	152	346
Oriel	1326	Edward II., at the suggestion of Adam De Brome, his almoner.	The Crown.	A provost, 18 fellows, and 17 exhibitors (all open): 13 benefices	168	328
Queen's	1340	R. Eggesfield, confessor to Philip IV., consort of Edward III.	The Archbishop of York.	A provost, 12 fellows, and 6 scholars on the old foundation; 8 fellows, 4 scholars, and 4 exhibitors (all open), on the Michel foundation: 28 benefices	180	303
New	1386	William of Wykeham, Bishop of Rochester, founder of Winchester School.	The Bishop of Winchester.	A warden, 70 fellows and scholars, 10 chaplains, 3 bible-clerks, and 16 choristers: 36 benefices	76	158
Lincoln	1427	Richard Fleming, Bp. of Lincoln.	The Bishop of Lincoln.	A rector, 12 fellows, 8 scholars, 12 exhibitors, on Lord Cresse's foundation: 10 benefices	71	151
All Souls	1437	Henry Chichele, Archbishop of Canterbury.	The Archbishop of Canterbury.	A warden, 40 fellows, 2 chaplains, and 4 bible-clerks	83	107
Magdalen	1456	William of Waynflete, Bishop of Winchester and Lord Chancellor of England.	The Bishop of Winchester.	A president, 40 fellows, 50 scholars, called <i>domer</i> , 2 schoolmasters, 4 chaplains, 8 bible-clerks, and 16 choristers: 38 benefices	136	174
Baen-nose College and King's Hall	1509	William Smith, Bishop of Lincoln, and Sir R. Sutton of Prestbury in Cheshire.	The Bishop of Lincoln.	A principal, 28 fellows, and 8 scholars, 2 bible-clerks, and 15 exhibitors, on a separate foundation by W. Hulse: 42 benefices	223	399
Corpus-Christi	1516	Richard Fox, Bishop of Winchester, and Lord Privy Seal.	The Bp. of Winchester.	A president, 20 fellows, 20 scholars, 2 chaplains, and 4 exhibitors: 22 benefices	92	127
Christ-Church	1525 and 1532	Cardinal Wolsey: King Henry VIII. refounded it and gave it the name of Henry VIII.'s College. It was made a cathedral church in 1545.	The Crown and Chancellor of the University.	A dean, 8 canons, 101 students, 8 chaplains, 8 bible-clerks, and 8 chorists: 91 benefices	509	914
Trinity	1554	Sir Thomas Pope of Titchingen, in Hertfordshire.	The Bp. of Winchester.	A president, 12 fellows, and 13 scholars ( <i>all open</i> ): 9 benefices	122	284
St. John's	1555	Sir Thomas White, alderman of London, and founder of Merchant-Tailors' School.	Ditto.	A president, 50 fellows and scholars, 1 chaplain, 2 bible-clerks, 6 singing men, and 6 chorists: 29 benefices	136	250
Jesus	1571	Queen Elizabeth, on the endowment of Dr. Price.	The Earl of Pembroke (hereditary).	A principal, 10 fellows, and 18 scholars, all natives of Wales: 28 benefices	55	135
Wadham	1613	Nicholas Wadham of Thinfield, in Somersetshire, and Dorothy his wife.	The Bp. of Bath and Wells.	A warden, 15 fellows, and 15 scholars ( <i>all open</i> ), 10 exhibitors on Dr. Hody's foundation, 2 chaplains, and 2 bible-clerks: 9 benefices	98	267
Pembroke	1624	Thomas Tesdale, and Richard Whitwick, B.D.	The Chancellor of the University.	A master, 11 fellows, and 29 scholars or exhibitors: 13 benefices	109	180
Worcester	1714	Sir Thomas Cooke of Bentley, in Worcestershire.	The Bps. of Oxford and Worcester, and the Vice-Chancellor of Oxford.	A provost, 21 fellows, 16 scholars, 3 exhibitors, and 2 bible-clerks: 8 benefices	113	247
St. Mary Hall	1333	Oriel College.	The Chancellor of Oxford, who appoints the Principals.	None	23	74
Magdalen Hall	1487	Bishop Waynflete, the founder of Magd. College.		None	49	173
New Inn Hall	1392	William of Wykeham, who gave it to New College.		None	4	64
St. Alban Hall	1547	Merton College.	The Provost of Queen's College.	None	8	26
St. Edmund Hall	1269 and 1559	The Canons of Ousey: afterwards William Benger, provost of Queen's College, which society has the appointment of the Principal.		None	52	99
19 Colleges, } 5 Halls }	- - -	- - -	- - -	- - -	2,799	5,515

(Oxford Calendar for 1841; and Chalmers's History of the Colleges and Halls of Oxford.)

claim to considerable architectural elegance. The libraries and dining-halls of these establishments are on a large scale, and the rooms within the colleges are capable of accommodating several hundred students. Oxford, indeed, from the great number of its fine academic buildings, has a very imposing appearance when seen either near or at a distance; and it has been not inappropriately called a city of palaces, lying in external and internal beauty with the finest cities.

Each college, as in Cambridge, is governed by its own statutes; and its principal or head must, in most cases, be in orders, as a living commonly forms the chief part of his *salutium*. The direction of the college is vested in the principal and senior fellows (technically

called the *seniority*); but in matters affecting discipline the principal is the supreme arbiter, and he appoints the deans and tutors, who are immediately responsible to him for the conduct of the members *in statu pupillari*. The fellowships and scholarships are, in most instances, reserved for the natives of certain towns and counties, or for those who have been educated at certain schools; so that birth or interest, more than any positive amount of scholarship, usually procure the candidate's election. At Baliol, Oriel, Lincoln, and Wadham Colleges, however, the fellowships and scholarships have been either wholly or in part thrown open to general competition, and the candidates for these usually comprise the most promising students of the University.

Most of the colleges have *exhibitioners*, or students, receiving annual allowances from charities held in trust by the fellows, by city companies, trustees of schools, &c.; and at Christchurch there are *servitors*, an inferior class of students, somewhat resembling the *stipendiaries* of Cambridge. All Souls' College has no undergraduate members, except its bible-clerks, and cannot be considered as an establishment for education, though it has 40 fellows, *bonæ voluntatis, et in arte constanti medicorum docti*. New College is connected with Winchester School, which owes its origin to the same founder, and, like King's College, Cambridge, has little connexion with the rest of the University; but it has not, like the last-named college, the privilege of examining its own members for academical degrees. Residence in college, which, at Cambridge, is to a certain degree optional, is compulsory at Oxford on all under-graduates who have not passed their examination for the B.A. deg.; and hence the out-college men at Oxford comprise the senior, not the junior portion of the academic population. Attendance at chapel and the tutors' lectures is enjoined on each student, and omissions in either case are visited by impositions, rustication (in the winter), and even expulsion. At the end of each term, also, examinations are held within the colleges on the subjects of the tutor's lectures: these trials (called *collections*) have no necessary connexion with the public examinations, though they in some measure familiarize the student with the method pursued in the Academic schools. With respect to college lectures, however, it seems to be generally received, and, we are inclined to think, a well-founded opinion, that, as at present conducted, they confer but little benefit on the student, who is indebted for his degree and distinction, should he acquire any, almost entirely to his own exertions, or to the assistance of a tutor, procured at an expense of from 50*l.* to 70*l.* a year. The degree of attainment requisite for passing the University examinations has, since 1801, been determined by statute; and every candidate must belong to some college or hall, and must have been under collegiate instruction. It is usual, also, for the students to consult their tutors before they put down their names in the list of those to be examined. On admission to the University, each member is required to subscribe his assent to the 39 articles of the Church of England, the act of supremacy, and certain sections of the University statutes; and hence Oxford is exclusively resorted to by parties professing the established religion; whereas, at Cambridge, the education furnished by the University, though not the degrees, may be participated in by all parties, dissenters as well as churchmen.

There are at Oxford four terms in each year, two of which (Michaelmas and Hilary terms) last three, and two others (Easter and Trinity terms) last from three to four weeks each. By statute, however, the two first mentioned terms may be kept by six weeks' residence, and the two latter by three weeks each; though by those who have taken the first degree in arts, or have passed the examination for that degree (having previously resided 12 terms), any term may be kept by a residence of three weeks. *Stipendiary* terms (occupying the same time as the *twelve* terms, at Cambridge) are required for the degree of B.A. from all, except the sons of British and Irish peers, baronets, knights, and their sons, if so entered in the *University books*; but of these the term of matriculation is reckoned as one, the day of admission to the degree as another, and two others are dispensed with by a regular order of the governing body; so that, in fact, a residence of 12 terms in Oxford, as of 9 terms in Cambridge, is all that is necessary for the B.A. degree. The examinations for this, the lowest degree, are conducted in a large square building, known as "the schools," and consist of two trials, the first, or preliminary examination, called the *little-go*, or *responsions*, and the second the examination for the B.A. degree, both under masters of arts appointed by the vice-chancellor and proctors. There are seven public examiners of candidates for the B.A. degree, and three examiners, or masters as they are called, of the *little-go* schools. The *little-go* examination, which commonly takes place at the completion of the eighth term from matriculation, comprises a mere grammatical and elementary examination, offering few impediments except to the dullest or idliest students. To have failed in this examination is, in Oxford phraseology, said to have been *plucked*; and three successive failures are considered as tantamount to a disqualification from further university pursuits. The next examination, or that for the degree of B.A., is the last to which the student is subject during his probationary residence: the lowest acquirements for the degree comprise a knowledge of the rudiments of religion, sacred history, the doctrines of the thirty-nine articles, the *libera humaniores*, including, at least, two works of Latin and two of Greek authors, (usually Herodotus or Thucydides, with a few Greek plays, and portions of Livy or Tacitus, with

Virgil or Horace,) with a fair knowledge either of Aldrich's *Logic* or Euclid's *Elements*. For honours, however, (of which, since 1830, there have been four instead of three classes as previously,) a very extended course of reading is necessary; the number of classical works on the candidate's list (each being compelled to send in an account of them) often amounts to twelve or sixteen, of which Aristotle's *Ethics* and Rhetoric commonly form two; and the amount of historical and metaphysical knowledge requisite for the honourable distinction of a *first-class man* is so great as to require intense labour during the three years' probation. It has been alleged, however, that the education of first-class men at Oxford is more extensive than solid, owing to its not being bottomed on any sound philosophical basis; but it may be doubted whether there be any good foundation for this statement. Classics are the favourite studies of the under-graduates, and till recently the pursuit of physical science was, if not discouraged, at least not encouraged. Hence mathematics form an unimportant part of the general examination for the B.A. degree; but for the honours in *disciplina mathematica* an amount of knowledge is required, varying from that of pure mathematics (including differential equations,) to a somewhat extended acquaintance with physics, astronomy, &c. The highest mathematical degrees, however, may be generally obtained by persons whose attainments than the *wranglers* of Cambridge. (See Prof. B. Powell on the *State of Math. Studies in the Univ. of Oxford*; *Journ. of Education*, vii. 46.; and *Stat. Account of the Brit. Empire*, vol. ii.) Of those members who, during the last six years, have taken the degree of B.A., the *passmen* (those not ambitious of honours) have averaged at each examination about 100, those receiving honours in classics, 78, and in mathematics only 18. A few of the students aim at distinction both in classics and mathematics; and there are occasional instances of men having attained a *double first-class*, the highest honour that the University can bestow. The examinations for the degrees are held twice a year, during the Easter and Michaelmas terms, and last about three days. A large part of the examination is now carried on by written questions and answers, the oral examination being principally confined to theology. About 300 students pass at each of these examinations.

The annual prizes of the University, which are subjects of considerable competition among those *in statu pupillari*, comprise three of 20*l.* each, given by the chancellor for the best compositions in Latin verse, Latin prose, and English prose; the first being confined to under-graduates, and the others to those who have exceeded four, but not completed seven years. Sir Roger Newdigate's prize of 50*l.* is for property for an annual prize for English verses on ancient sculpture, painting, or architecture, confined to under-graduates; a prize of 20 guineas was founded, in 1825, by Dr. Ellerton, for the best English essay, by bachelors of arts, on the doctrine or duties of religion; and two other theological prizes of 30*l.* each were founded by Mrs. Denyer, in 1836, for the best discourses written on selected subjects by clerical members of the University under the standing of 10 years. The University has likewise several public scholarships. The principal of these are the Vinerian scholarship and fellowship, five Craven scholarships for under-graduates, four scholarships of 30*l.* a year each, established by Dean Ireland, and tenable for four years, the Boden scholarships for the encouragement of Sanscrit literature, three mathematical scholarships founded in 1831, the Kennicott scholarships for proficiency in the Hebrew language, and the Eldon scholarships of 200*l.* a year, tenable for three years by bachelors of arts studying the profession of the law. Several scholarships have, also, within the last few years, been established with the view of encouraging mathematical studies; and they are usually held by those who have attained honours in the mathematical schools of the University. These prizes and scholarships are contested for with great spirit, and the holders of them are usually among the ablest of those *in statu pupillari*. The prize compositions are in most cases recited in the Academical or Sheldon theatre, at the Commemoration or Act held in Trinity term for conferring honorary degrees. After the degree of B.A. has been taken, there are no farther examinations except for degrees in medicine; but certain exercises, now merely nominal, are performed in the schools, and the candidate must have had his name on the books of some college or hall for a certain number of terms, during some of which also he must reside in Oxford. Subjoined is a summary of the different periods at which the several degrees, &c., may be acquired in the course of a student at Oxford:—

B. A.	16 terms	12 in residence.
M. A.	28	— 13 or one after B.A.
B. C. L.	28	— 17
B. M.	28	— 17
B. D.	56	— 14

D. M. 40 terms, or one after B. A.  
D. C. L. 36 — but usually honorary.  
D. D. 68 —

B. Mus. chiefly honorary, but dependent on the D. Mus. performance of a musical exercise.

The orders in the different colleges rank as follows:—

1. The heads or principals, most of whom are D.D. 2. The fellows, D.D., M.A., or B.A. 3. Noblemen who have graduated. 4. Graduate members not on the foundation. 5. Under-graduate noblemen. 6. Gentlemen-commoners. 7. Scholars. 8. Commoners. 9. Bible-clerks and servitors.

The expences of academical residence vary greatly according to the taste and habits of the student; but about 200*l.* a year may be assumed as the average outgoings of the more economical commoners, and an additional expence of 50*l.* a year is incurred by those who engage the services of a private tutor. The payments to the college for living, tuition, &c., are usually called *bartels*, and in the case of commoners range from 70*l.* to 100*l.* a year; but those of noblemen and gentlemen-commoners are on a considerably higher scale, and their annual expences are consequently much greater.

The University of Oxford is governed, as before stated, by the *Corpus statutorum*, drawn up by Archbishop Laud. The highest officer is the chancellor, anciently elected for 3 years, but since 1434 for life. This office, however, as well as that of the high steward or seneschal, is little more than an honorary dignity conferred on some distinguished nobleman; and the chancellor's duties are ordinarily performed by the vice-chancellor, who is, in fact, the supreme executive and judicial authority resident in the university. He is annually selected by the chancellor from the heads of houses, and approved by convocation; but in practice the office is held for 4 years, and 14 deputies are appointed, called pro-vice-chancellors, to take the duties of the office in case of the vice-chancellor's absence or illness. The proctors (two masters of arts, of at least 4 and not more than 10 years standing) are the conservators of the peace and discipline of the university; they rank next to the vice-chancellor, and have an extensive police jurisdiction over the town. They are assisted in their duties by four pro-proctors, and have at their command a large constabulary force. They are annually nominated by the colleges, each college taking its turn, according to a cycle fixed by the statutes. The business of the university, in its corporate capacity, is transacted by the doctors and masters at large, in two distinct assemblies, called *convocation* and *congregation*. The former consists of regents either *necessary* or *ad placitum*, including resident doctors, heads of houses, professors and tutors of colleges, its business being chiefly confined to the granting of degrees and dispensations; the vice-chancellor has a negative on its proceedings, and the proctors *conjunctly* have the same privilege. Convocation is the legislative assembly of the university, comprising all doctors and masters resident or not, whose names are on the books of a college or hall; and its business is unlimited, extending to all subjects affecting the credit, interest, and welfare of the corporate body. The statutes, however, cannot be altered, nor any new laws be enacted, before the matter has been referred to the *hebdomadal meeting* of the vice-chancellor, proctors, and heads of houses, who, if they approve of the measure, draw up the terms in which it must be promulgated in convocation. The *hebdomadal meeting* was first instituted in the reign of Charles I.

The public professorships of Oxford are of 2 classes, those established by royal foundation, and those supported by private endowment. The regius-professorships of divinity, civil law, medicine, Greek, and Hebrew, were founded by Henry VIII., and canopies in Christchurch cathedral are attached to the chairs of Divinity and Hebrew. George I. also founded a regius-professorship of modern history in 1724, which was confirmed by George II. in 1728. There is also, as at Cambridge, a *margaret*-professorship of divinity. The other professorships are, 1. of natural philosophy, founded by Sir W. Sedley, in 1618; 2. geometry and astronomy, established by Sir H. Savile; 3. moral philosophy, by Dr. White, in 1621; 4. ancient history, by W. Camden, in 1622; 5. anatomy, in 1626; 6. Arabic, by Archbishop Laud, in 1636; 7. botany, in 1632; 8. poetry, in 1708; 9. Anglo-Saxon, in 1750; 10. common law, by Charles Viner, in 1751; 11. clinical medicine, in 1772; 12, 13. 14. anatomy, practice of medicine, and chemistry, by Dr. Aldrich, in 1793; 15. political economy, in 1835; and 16. Sanscrit, by Colonel Boden, in 1830. There are also lectureships or readerships of Arabic, anatomy, experimental philosophy, mineralogy, and geology; there being, in all, 28 professors or readers.

The lectures are delivered either in the public schools, or in a building near them, formerly the university printing-office. An edifice, however, is in course of erection, the funds for which are provided by the munificent bequest of the late Michael Angelo Taylor: it will be,

when completed, one of the finest buildings belonging to the university, and will comprise several large lecturing theatres for the professors, besides a noble picture-gallery for the reception of the numerous portraits and other pictures belonging to the university.

The public orator, who delivers the *Crewelian oration* alternately with the professor of poetry, is chosen by convocation, and his office is to write public letters and make addresses on grand occasions in the name of the university. The archives are kept by a registrar, elected also by convocation; this office was first established in 1634. The Clarendon press is superintended by delegates, of whom the vice-chancellor and proctors form 3 *ex officio*; the rest are heads of houses. The present building, opened in 1829, is of great extent, the bible department is on a magnificent scale, and the editions of classical and other works printed at this establishment are celebrated both for beauty and accuracy. The Bodleian library, founded by Sir Thomas Bodley, is the property of the university, and its affairs are regulated by the vice-chancellor, proctors, and the five *regii proctors*, its officers being a librarian, 2 under-librarians, and 2 assistants. It has received many valuable additions from the libraries of Selden, Archbishop Laud, Bishop Tanner, Browne Willis, Hearne, Gough, Malone, &c.; and it now comprises, exclusive of about 300,000 printed books, a great number of valuable MSS.: it is entitled, also, to a copy of all new works published in the United Kingdom. It is said, however, to be of less utility than might have been supposed. Owing to a justifiable apprehension of fire, the library is very inadequately warmed, and is very uncomfortable in winter; and the books are not allowed to be removed from the library. But though this be a very proper regulation as respects the rare and more valuable works, all the more common works might be lent out here as in Edinburgh, on lodging a deposit equal to their value, without any loss to the library, and with very great advantage to the students. The Radcliffe library, founded by Dr. Radcliffe, in 1718, and erected at an expence of 40,000*l.* under private trustees, and has little or no connection with the university. The books in this collection are principally on medicine and natural history. An observatory was erected in 1772, out of the funds left by the same munificent individual, and the observer (commonly the Savilian professor of astronomy) is appointed by the Radcliffe trustees. The Ashmolean museum was built in 1683, for the accommodation of a rich collection of natural objects and articles of virtue, brought together by Elias Ashmole: large additions are annually made to it; and in the department of natural history, this museum is inferior only to the British Museum, and that of the Zoological Society. It is under the care of official visitors, appointed by Ashmole's will.

The few remarks we ventured to make, under the article CAMBRIDGE, on the system of education followed in that university, apply with little variation to Oxford. This, like its sister institution, is essentially a scholastic establishment, and is well fitted to make good Greek and Latin scholars, and perhaps good divines. But it is obviously quite unsuitable, as a place of instruction, for the *élite* of the youth of such a country as ours. It must be entirely changed, or it either stands forth legions capable of appreciating the various interests of this vast empire, or individuals capable of promoting and extending those manufacturing and commercial pursuits, to the success of which we are mainly indebted for our unparalleled increase in wealth and population.

The university of Oxford received, in 1603, the privilege of sending two representatives to the H. of C.; the right of election is vested in the vice-chancellor, doctors, and other members of convocation, of whom there were, in 1840, 2,799. (*Gutch's ed. of Wood's Antiquities of the University of Oxford*; *Ackermann's Illustrat. Hist. of Oxford*, 3 vols.; *Mudden on the Origin of Universities*; *Ingram's Memorials of Oxford*, 3 vols.; *Oxford Calendar*; *Edinburgh Review*, vols. 31., 35., and 53.; and *Private Information*.)

OXUS (called by the natives AMOO or JIUNON), a river of central Asia, flowing westward through the territories of Budukshan, Kunduz, Bokhara, Khiva, &c., into the Aral Sea, and extending between long. 58° and 74° E., estimated length, 1,300 m. This great river was, in 1838, traced up to its source by Lieut. Wood, who ascertained that it rises in the mountain lake of Sir-i-kol, within the district of Pamir, lat. 37° 27' N., long. 73° 40' E., at an elevation of 15,600 ft. above the sea. (*Wood's Journey to the Orus*, p. 354.) Its course hence is S.W. for about 70 m. to Langer Kish, where it turns westward. In long. 71° 40', it passes the ruins of the ancient city of Balkan, near the town of Ishkashm, and is deflected northward by a large offset of the Western Himalaya chain. After another turn southward, its course is pretty regularly W.N.W. through extensive plains, and at the point where Sir A. Burnes crossed it on his way to Bokhara, he found it to be upwards of 800 yards in width, about 20 ft. in depth, with muddy waters, and a current of about 2½ m. an hour,

and from Kharjoo downwards, for 300 m., it is made available for commercial communication. (*Burnes' Travels*, ii. 214, and *Grog. Journal*, iv. 309.) The river passes about 20 m. N.E. Khiva, which is situated in a verdant plain, irrigated by numerous canals supplied from its waters. It forms at its mouth a pretty extensive delta, the apex of which is about 50 m. from its principal and only navigable embouchure in the Aral Sea, the breadth of coast from the W. to the E. mouth being about 45 m. The Oxus has numerous tributaries; few of which, however, have been satisfactorily explored. A large river, called the Kokcha, rises in the Hurdo-Koosh, near the celebrated lapis-lazuli mines of Budukshan, and, flowing N.W., joins it at Kilapack on the S. bank. About 75 m. lower its waters are further augmented by the Ghori, an important stream rising in the Hurdo-Koosh, near the celebrated pass of Baulian, and having a general direction northward, passing in its course the large cities of Ghori and Kunduz. The only other affluent explored by Europeans is the Kulin, partly traced by Moorcroft, and joining the Oxus on its S. side, about 30 m. below the tributary last mentioned. Several tributaries flow in from the N. bank, bringing considerable volumes of water; but their extent is almost wholly unknown. The Oxus, according to Moorcroft, begins to rise in April, and remains full till July, when it again falls. When at its height it inundates the plain on either side, but especially on the right bank, the extent of the floods being marked by a belt of sedge, weeds, &c., and then by a thick jungle of dwarf trees and brushwood. (*Moorcroft and Trebeck's Travels*, ii. 498.)

The Oxus, regarded by some critics as the Araxes mentioned by Herodotus as flowing through the territories of the Massagete (i. 201–205; iv. 11.), was supposed by Strabo and Ptolemy to fall into the Caspian; and the traces of a valley, nearly resembling the dry bed of a river, have induced some modern geographers to adopt the opinion, that in the course of ages the Oxus formed for itself a new channel, running into the Aral Sea. But, however confused our information respecting this river, it undoubtedly formed the boundary line between the more civilised and settled nations of W. Asia and the wandering hordes of Tartary. The Oxus was the northern limit of the territories subdued by Cyrus and Alexander, and it seems to have been used, at a very early period, as a channel for commercial intercourse between India and the countries bordering on the Caspian and Euxine. The Oxus is mentioned by Strabo as one of its principal affluents; but his account is inconsistent, and unworthy of credit. (*Strabo*, xi.)

## P.

**PACIFIC OCEAN (THE)**, a vast expanse of water, extending between Asia and America (sometimes, though improperly, called the **SOUTH SEA**), and covering a large portion of the surface of the globe. Its extreme S. limit is the Antarctic circle, from which it stretches northward through 132 degrees of lat. to Behring's Straits, which separate it from the Arctic Ocean. Its greatest breadth from E. to W., measured along the equator, is about 10,100 m. Its shape is very irregular; but it becomes gradually narrower, as it extends northward, till at length the sea of Kamtschatka has a breadth of only 170 m. The American coast is pretty uniform, though high and bold, presenting the long range of the Andes close down to the shore. Its chief indentations are the Gulf of California and Bay of Panama; besides which, at the N. and S. extremities, it is broken and rugged, forming numerous islands and fords, similar to those of other high latitudes. The coast-line of Asia, on the contrary, is extremely irregular, formed into deep bays, and subdivided by groups of islands into separate gulphs or seas, as the sea of Okhotsk, separating Kamtschatka from Siberia, the channel of Tartary dividing Saghalien from the main land, and the Yellow Sea separating the peninsula of Corea from China; besides which numerous straits are formed between the islands of the Asiatic archipelago, as the Straits of Sunda, between Sumatra and Java; the Straits of Macassar, between Borneo and Celebes; Torres Straits, between New Guinea and Australia; Bass's Strait, between Australia and Van Diemen's Land, &c. The equator divides this vast expanse of water into the two grand portions of the N. and S. Pacific Oceans, both being remarkable for the numerous groups of small coralline and volcanic islands with which they are studded, and which constitute a separate portion of the world, entitled *Polynesia*, to which the reader is referred for further particulars. These numerous islands form several archipelagos, in which are reefs and sandbanks, that render the navigation extremely difficult and dangerous. The reefs are sometimes of great ex-

tent, stretching from island to island, upwards of 600 m. Earthquakes are felt in most of the islands; and all the archipelagos seem to be the seat of extensive volcanic action. (*Lyell's Geology*, iii. 236–239.)

The general motion of the Pacific Ocean is from W. to E., or from the coast of America to that of Asia; and this movement is very powerful in the vast and uninterrupted extent of its waters, though it gradually decreases as it approaches the shores of Asia, while its temperature increases: its average velocity is stated by Capt. Beechey to be about 28 m. a day. (*Grog. Journal*, i. 210.) Near Cape Corrientes, in Colombia, the sea, owing to this cause, appears to flow constantly from the land; and from Acapulco, in Mexico, ships are carried with great celerity to the Philippine Islands. In returning, however, it is found advisable to take a course N. of the tropics, in order to have the advantage of the variable winds and polar currents, as well as of a counter-current, which sets eastward in about lat. 10° N. In the S. Pacific, the Polar currents being less interrupted by land, proceed with less deviation from their general course than those in the N. hemisphere; and carry icebergs nearer to the tropical regions than is usual N. of the equator. The equatorial current, as it approaches the shores of Asia, is interrupted and broken by the vast chain of islands, shoals, and submarine banks, which stretch from China to New Zealand. The general direction is changed and modified by the form of these lands, and the vast mass of New Holland is one cause of those dangerous currents around its shores, noticed by Cook, La Perouse, and Flinders. A current, also, sets eastward in the lat. of the Japanese islands, but turns northward about 150 m. from the shore, and probably joins the stream that runs N.N.E. through Behring's Strait; besides which there is a variable current on the E. side of Australia, setting southward from August to April, and northward during the rest of the year. The N.E. trade wind prevails uninterruptedly between lat. 50° and 23° N.; and, with the currents, enables vessels to sail from America to Asia with great rapidity, and almost without changing the sails. The S.E. trade wind, which is not met with near the American coast, varies in its extent at different seasons; but it commonly prevails between the equator and 26° S., so that the region of calms in the Pacific extends over only 5 degrees of lat., or somewhat less than in the Atlantic. In this region, however, there are occasionally severe storms, attended with lightning and heavy rain. (*See Bennett's Whaling Voyage*, i. 190.) These winds are still stronger in the numerous straits of the Asiatic Archipelago, and in the neighbourhood of the Philippine Islands, and immediately N. of Australia, their violence becomes extreme, and even dangerous. The attraction of great masses of heated land also causes local variations in the wind, as is the case in New Holland, on the W. side of which there prevails a constant W. wind. Every island has, likewise, its land and sea breezes. In lat. 40°, on both sides the equator, tempests and variable winds prevail; but it may be remarked generally, that N. of lat. 40° N., winds from W. and N.W. are more prevalent than any others, whereas in the regions S. of the trade winds, the prevailing winds are from S.W., and often extremely violent. Winds from the S., however, are found along the coast of Peru, and may be attributed in some measure, at least, to the strength of the polar current in the S. hemisphere. They are generally light, though steady; and N. of Guayaquil they always blow from S. S.E., extending westward as far as the Galapagos. (*Traill's Phys. Geography*, 95, 198; *Mallet-Brau*, i. 337, 385; and *Hall's America*, ii. App.)

Vessels in sailing northward from the coast of Chili are favoured both by wind and tide, so that they may safely run near the shore; but those going in the contrary direction sail south-westward, by means of the trade winds, till they arrive in the region of the variable winds, and are obliged to run as far as about lat. 28° S. before they can reach a port. Navigators traversing the ocean between Asia and America sail westward from Mexico, touching at the Sandwich Islands, and entering the Chinese sea between the islands of Luzon and Formosa; but from the ports of S. America the ordinary track is westward, between the Marquesas and Society Islands, beyond which it assumes a W.N.W. direction, and joins the former in lat. 20° N., and long. 125° E. The voyage from Asia to America is effected by seeking the region of the variable winds N. of lat. 30°, and making the coast of California; but from Sydney the course is pretty direct E. as far as the coast of America, where the principal winds and currents are favourable for reaching its principal ports. One track for vessels sailing from Sydney to India is through the islands N. of New Guinea; the other, however, by Bass's Straits, is more common, and is the only one used in making the passage from India to New South Wales. (*See Berghaus's Physical Map of the Pacific Ocean*, and vol. i. 572, of his *Geography*.)

This ocean, which received its name *Pacific* from Ma-

gellan, in consequence of the prosperous weather with which he met while navigating its surface, was not known to the ancients, nor was the existence of so vast an ocean at all suspected by Europeans, till, in 1513, Vasco de Balboa beheld it from the summit of the mountains near the Isthmus of Panama. Magellan traversed it from America to Asia in 1521, and at the close of the same century, Sir Francis Drake explored a great portion of the W. coast of America, in the view of ascertaining whether this ocean had any other communications with the Atlantic than by the Straits of Magellan and round Cape Horn. The Pacific was pretty extensively explored during the 18th century; and to the observations of Behring, Anson, Byron, Bougainville, Cooke, Vancouver, Broughton, and La Pérouse, we are principally indebted for the grand outlines of our best maps of this ocean. These navigators have been succeeded in the present century by Entrecasteaux, Krusenstern, Beechey, Fitzroy, Bennett, &c., and means are now provided for the formation of a perfect accurate chart of this sea so thickly studded with rocks and islands. Meanwhile the intercourse of the seafarers with Europeans, and the efforts of European missionaries, have introduced among some of them the arts of civilised life; trade has gradually extended itself along the American shore as well as in the different islands; and in Australia, and very recently in New Zealand, the British have established numerous and very flourishing colonies. For particulars respecting the trade of its various ports, the reader is referred to the articles MANILLA, CANTON, and NANGASAKI, on the coast of Asia; to ACAPULCO, PANAMA, GUAYAQUIL, CALAO, VALPARAISO on the W. side of America; and to SYDNEY, and ZEALAND (NEW), in Australia. (*Math. Brun's Geog.* i. and iii.; *Dict. Geog.*; *Hall's S. America*, vol. ii. Appendix; *Geog. Journal*, l. 133—222; *Bennett's Whaling Voyage*, &c.)

#### PADANG, *See* SUMATRA.

PADERBORN, a town of Prussian Westphalia, reg. Minden, cap. circ. at the source of the Pader, a tributary of the Lippe, 52 m. E.S.E. Münster. Pop., in 1834, 7,895, principally R. Catholics. It is walled, is tolerably well built, and has a good cathedral and several other R. Cath. churches, a Lutheran church, synagogue, gymnasium, episcopal seminary, female teachers' seminary, and numerous almshouses, and other charities. It has a few manufactures of starch, leather, &c.; but its trade is insignificant. It was erected into a bishopric by Charlemagne, who is said to have made it his head-quarters during his wars with the Saxons. It was the temporary residence of several succeeding emperors, and the palace they occupied still exists. Paderborn was subsequently one of the Hanse towns. In 1622 it was taken and pillaged by the Duke of Brunswick; and in 1802 it was annexed to Prussia. (*Jürgenhaus*; *Dict. Geog.*, &c.)

PADIHAM, a town and chapelry of England, par. of Whalley, co. Lancaster, and upper div. of hund. Blackburn, on the Calder, a tributary of the Ribble, 15½ m. E. Preston. Area of township, 1,700 acres; pop., in 1831, 3,521. The town, though small, is respectably built, and has an appearance of considerable activity. The church, subordinate to that of Whalley, was rebuilt in 1766; but its old tower, built at the close of the 15th century, is still remaining. The Wesleyan Methodists and Unitarians have their respective places of worship; Sunday-schools are established. The tann, are principally employed in the manufacture of cotton goods. A market once held here has been for some years discontinued. Fairs, 8th May and 26th Sept.

PADSTOW (corrupted from *Patrickstone*), a seaport, market-town, and par. of England, co. Cornwall, and hund. Pyder, on the W. side of the estuary of the Camel, 11 m. N.W. Bodmin, and 220 m. W. by S. London. Area of par., 3,270 acres; pop., in 1831, 1,822. The town, which is situated in a richly cultivated vale, sheltered by bold rocks and hills, has been considerably improved by the erection of new houses; but the streets are inconveniently narrow, and many of the buildings are antiquated. The church is in the perpendicular style; the living is a vicarage in the patronage of the descendants of Dr. Prideaux, the learned author of the famous historical work on the "Connection" of the Old and New Testaments, a native of the town, where he was born in 1648. The Wesleyan Methodists have also a place of worship, and there are 2 Sunday-schools, besides a small endowed national school. Facing the river are good quays and a custom-house, the gross amount of customs' duty in 1840 being 2,018*l.* The entrance to the harbour is between Stepper Point, on the W., and Pentire Point, on the E., close to the former. The passage is narrow, and rather difficult, especially spring ebbs. It has from 13 to 18 ft. water at Land's End and Hartland Point. (*Purdy's Sailing Directions for the English Channel*.) In the reign of Edward I., Padstow furnished 2 ships for the siege of Calais; and in the time of Leland it carried on a considerable trade with Wales; at present

about 80 ships, of the aggregate burden of about 4,500 tons, belong to the port. The town was incorporated by Queen Elizabeth; but the charter has lapsed by desuetude.

PADUA (Ital. *Padova*, an. *Patarium*), a city of Austrian Italy, gov. Venice, cap. deleg. of its own name, in a low and rather marshy situation, between the Brenta and Bacchiglione, at the termination of the canal of Monselice, 24 m. W. Venice; lat. 45° 24' 7" N., long. 11° 52' 15" E. Pop. circa, 45,000. (*Austrian Encyc.*) It is of a triangular shape, is surrounded with walls and a broad ditch, and intersected by canals. Mr. Rose speaks very slightly of Padua, and represents it as a city which, beyond all others, disappoints the expectations of the traveller. (*Letters*, i. 51.) It is, certainly, dull, damp, and gloomy, having numerous narrow, dirty, unromantic streets, bordered by arcades, without any leading thoroughfare; there are three or four squares or open spaces, which, however, are all of very limited dimensions, excepting the Prato della Valle, the principal public promenade. This, which occupies what was once a marsh, bears some resemblance to a London square, but the interior is differently laid out; being surrounded by a circular stream of running water, the banks of which are fringed with a double row of statues representing distinguished natives of Padua. The houses, though old, are generally well built and lofty. The principal public buildings are the churches, of which there are said to be nearly 100. The cathedral, a large brick edifice of Grecian architecture, was intended to have a stone front, which, however, has not yet been built. There is in it little remarkable; except a monument to Petrarch, his portrait, and some Madonnas, one of which is by Titian. The church of St. Anthony, begun in 1250 and finished in 1424, 326 ft. in length by 160 ft. in width, is a vast ugly pile, exhibiting 7 domes, a small octagonal tower above the gable of the front, 2 small octagonal towers, near the choir, and a lofty cone in the centre surmounted by an angel. (*Wood's Letters of an Architect*, l. 246.) The splendid shrine of the saint, with *mezzo-reliefs* in white marble; and 2 fine bronze panels, by Riccio, are the principal objects of interest within. The church of S. Giustina, begun and finished during the 16th century, is partly modelled on the foregoing, but is far handsomer. It is of brick, 367 ft. in length, by 252 ft. in the transept, and 82 ft. in height inside. It was built from a design by Palladio; its interior is generally admired. Forsyth says, "it is rich in the bones of 3,000 saints, and the disparted bodies of two apostles;" and it possesses a less questionable, if not so precious a relic, in a fine painting of Paul Veronese, the Benedictine Abbey, to which this church was attached, is now converted into a barrack. The churches of the Eremittani; the Ammizata, with some fine frescos by Giotto; la Madre dolente; S. Gaetano, &c., have all valuable works of art, or are remarkable for their architecture. The Palace of Justice, or town-hall, is one of the most striking edifices in Padua; it has a saloon, 276 ft. in length, 86 in breadth, and 75 in height, being one of the largest in Europe, unsupported by columns. The roof is of dark carved wood, shaped like a reversed keel, and sustained by a number of iron ties. The walls are ornamented with frescoes, originally the work of Giotto. In the hall is a monument in honour of Livy, a native of Padua; and at the entrance are two basalt statues, brought from Egypt by Belzoni, who also belonged to the city. The tower of Ezzelin, still used as an observatory; the theatre, the museum of antiquities, &c., the mayor's, and several other official and private palaces; the *café Pedrocchi*, one of the oldest and best establishments of its kind in Europe; several good hotels; and the university buildings, are among the most conspicuous of the remaining public edifices; but, according to Mr. Woods, the last mentioned structure hardly surpasses mediocrity.

The university of Padua, founded in the 13th century, was in the height of its popularity during the 15th and 16th centuries, when it was not only frequented by vast numbers of students from all parts of Europe, but even by some from Mohammedan countries. Its medical school was particularly celebrated. Fallopius, Fabricius ab Aquapendente, Morgagni, &c. have been among its medical teachers; and Galileo, Guglielmini, &c. among its professors of philosophy. Dante, Petrarch, and Tasso were of the number of its pupils. Harvey took his doctor's degree here in 1602, Evelyn also studied here in 1645, and it was resorted to by many other distinguished foreigners. Defects of discipline and the quarrels of the students seem to have been the first causes of the decline of the university, which has for more than a century been in a languishing state. But it has still to boast of several distinguished professors, and ranks as the second seminary of its kind in Italy, that of Pavia being the first. It

\* It is said in *Cicero's Italy* (li. 132.), that Vesalius was professor of anatomy at Padua from 1537 to 1552; but this is an error. He was offered the chair of anatomy, vacant by the death of Fallopius, in 1564, the same year in which he died. (*Biographie Universelle*, art. Vesale.)

has faculties of theology, law, medicine, and philosophy, and 35 professors, with between 400 and 500 students. It is governed by a senate, composed of a rector and 12 other individuals chosen from its general assembly; which includes, with the directors, deans, and professors, all the doctors who have graduated at Padua, and reside in the city. The university library comprises about 70,000 vols., and it has a fine botanic garden, one of the oldest in Europe. Padua has a celebrated society of arts and sciences, an episcopal seminary, with an extensive library, formerly belonging to the Benedictine Abbey, a city-school, 2 gymnasia, a high female school, agricultural, veterinary, and various other schools, a famous chemical laboratory and cabinet of mineralogy, and several libraries and museums of the arts, &c., this city being the seat of one of the 5 sections of the literary union of Austrian Italy. Among the charitable institutions are a civil and military hospital, a workhouse, foundling and orphan asylums, a *monte di pietà*, &c. Padua is a bishop's see, and the seat of the council and superior judicial courts for the deleg. It has been celebrated, both in ancient and modern times, for its woollen manufactures; but these have greatly declined since the time of the Venetian republic, to which they once supplied a considerable revenue.

It has still, however, manufactures of woollen cloth, broad silks, silk ribands and leather, and an extensive trade in wine, oil, cattle, garden vegetables. The fair of St. Anthony, which lasts 15 days, from June 13th, renders the city for a time a scene of bustle and gaiety; and the inhabs. derive some benefit from Padua being, for a part of the year, the residence of the Venetian nobility. It is very ancient, being said to have been founded by Antenor, after the siege of Troy—

"Hic tamen ille urbem Patavi, sedesque locavit  
Teucorum, et genti nomen dedit;" *Æneid.*, l. 242.

and Mela enumerates the *Patavium Antenoris* among the principal cities of that part of Italy. (Lib. ii. cap. 4.) The historian Livy was a native of Padua; and the alleged *patavinity* of his style has long been a topic for critical discussion. Padua was taken by Alaric Attila and the Lombards; but being restored by Charlemagne to something like its former grandeur, it became, under his successors, flourishing and independent. In 1318, it came into the possession of the Carrara family; and in 1405 was united to the Venetian territory. Under the French, it was the cap. dep. *Brenta*. (*Est. Nat. Encycl.*; *Berghaus*; *Von Raumer's Italy*, i. 197, 198.; *Eustace, Clava. Tour*, i. 144–158.; *Wood's Letters of an Architect*, i. 245–250.; *Rose's Letters from the N. of Italy*.)

PAIMBOEUF, a sea-port town of France, dep. Loire Inférieure, cap. arrond., on the Loire, 22 m. direct distance N. Nantes, of which it is, in fact, the deep-water harbour. Pop., in 1836, 3,450. It consists principally of one good street, fronting the quays which border the river. It has a fine mole 200 ft. in length, a school of navigation, a communal college, and court of primary jurisdiction. Vessels of more than 200 tons trading with the port of Nantes stop here to load or unload their cargoes. (*Hugo, art. Loire Inférieure*.)

PAINSWICK, a market town and par. of England, co. Gloucester, hund. Brisley, on the S. declivity of Sponnebed Hill, 6 m. S. Gloucester, and 90 m. W. by N. London. Area of par., 6,514 acres. Pop., in 1831, 4,999. The town is small and regularly built, the streets being neither paved nor lighted. The church, which is large, has at its W. end a fine tower and spire 174 ft. in height; but the building is rendered unsightly by the strange admixture of Doric and Ionic pillars, with the more ancient architecture in the Gothic style. There are, also, 2 places of worship for Dissenters, and 6 Sunday schools, furnishing religious instruction to about 500 children of both sexes. The town has an endowed free school for 26 boys, besides which 3 subscription schools, and an infant school, are attended by 300 children. The inhabs. are principally employed in the manufacture of woollen cloth, especially broad cloth and kerseymers: in 1839 there were 9 mills at work, employing 219 hands. About 70 families are employed in hand-loom weaving, the weekly wages of a family averaging 10s. 10d., in 1838. Markets on Tuesday; fairs, Whit-Tuesday and Sept. 19, for sheep and oxen.

At the top of Sponnebed Hill is an ancient fortification, called Kinsbury Castle; its form is that of a parallelogram, enclosing about 3 acres within a double trench, and commanding the adjacent country. The discovery of numerous coins and other antiquities have led to the supposition that this fortress is of Roman origin.

PAISLEY, a parl. bor., market and manufacturing town of Scotland, co. Renfrew, partly on an eminence and partly on a plain, on both sides the White Cart, 3 m. S. Renfrew Ferry, on the Frith of Clyde, and 8 m. W. by S. Glasgow. The surrounding country is nearly a dead level, except on the S., in which direction the "Braes of Gleniffer" rise to a height of 760 ft. within little more than 1 m. of the town. Pop. of the town and par. in 1755, 6,799; in 1801, 31,179; in 1831, 57,466. Pop. of the town only, in 1831, 46,199; in 1841, 49,828.

Paisley, inc. its suburbs, is spread over a tract of ground comprising an area of about 2½ sq. m.; but the boundary of the parl. bor. embraces an area of about 6 sq. m. Its main street runs from E. to W. for nearly 2 m., and forms part of the road from Glasgow to Beith, and the towns on the coast of Ayrshire. Another long line of road passes through it from N. to S. That part which lies E. of the river is called the New Town; the first houses in this important addition to the bor. having been erected in 1779. But, though well built, Paisley is not so handsome as some of the larger Scottish towns. Of late years, however, its appearance has been greatly improved by the substitution of numerous substantial houses for low thatched cottages. Improvements of this description are in rapid progress; but still, in passing along the streets, one observes a singular alternation of handsome with mean edifices. The streets are generally paved, and are lighted with gas; and the town is well supplied with water from the Gleniffer Braes, by means of reservoirs constructed under an act passed in 1836. The police is efficient. In the neighbourhood are many elegant villas and baronial seats. The most important of the public edifices is that for the civil business of the town and county, including the gaol and bridewell, erected in 1820 at an expense of 28,000*l.* It is a quadrangular building, in the castellated style. The original parish of Paisley has been divided into four distinct parishes, with seven parishes *quoad sacra*, having no fewer than eleven places of worship connected with the established church. Of these the Abbey Church, which is a collegiate church, is the most imposing and magnificent. It consists of the nave of an ancient monastery, being the only portion of that once splendid building which now remains. The High Church, on an eminence in the Old Town, or "the borough," as it is commonly called, is an elegant building, with a lofty spire. The other churches require no particular notice, if we except St. George's, a spacious Grecian structure; the Episcopal Chapel, a handsome building of chaste Gothic; and one of the Secession churches, an elegant Grecian edifice. The New Town is connected with the bor. by 3 bridges; and the river is also crossed by the line of the Glasgow, Paisley, and Greenock railway, which passes through the town. About 2 years ago, barracks were erected in one of the suburbs for the accommodation of a battalion of infantry.

In addition to the eleven churches (one of which is a Gaelic chapel), there are no fewer than 7 Presbyterian dissenting churches, besides 2 Baptist places of worship, 2 Methodist chapels, and one each, belonging to the Independents, R. Catholics, Episcopians, Unitarians, and New Jerusalemites; and there are two or three additional dissenting chapels in Johnstone, a large village within the par. Within the parl. bor., 19,812 persons belonged, in 1836, to the established church; 22,420 to other religious denominations; the remainder not being known to belong to any Christian denomination. Paisley is the seat of two seminaries for theological instruction; one connected with the Reformed Presbyterian Synod, the other with the Relief Synod; the Professor of Divinity in each being a minister in the town. The number of students at both seminaries may average 40. Each hall has attached to it an extensive collection of theological books. (*New Stat. Acc. of Scotland—Renfrewshire*, p. 247, 248.)

The grammar-school is a royal foundation (though the endowments have nearly disappeared), established by James VI., in the 16th century, and confirmed by subsequent royal deeds: it is an efficient seminary. There are, exclusive of Sunday schools, 64 other schools in the town and parish, none of which are parochial or endowed, with some trifling exceptions. A Philosophical Institution, similar to a mechanics' institution, was founded here in 1808 for the delivery of courses of lectures on different branches of science and literature. A small library and a museum are attached to it; but the institution is not in a very flourishing condition. There are various printing presses; and the town has 2 weekly newspapers. Among the eminent characters that Paisley has produced may be named Alexander Watson, the celebrated American orthologist, and Robert Tannahill, the Scottish poet. Dr. Witherspoon, author of various theological works, and afterwards president of the college of New Jersey, was, for ten years, one of the ministers of the town. The "Public Subscription Library" contains about 5,000 volumes, and is supported by 200 subscribers. The Trades Library, supported chiefly by workmen, is a valuable collection. There are various others, generally of religious books.

Poor rates were introduced into the bor. so early as 1740; and into the Abbey par. in 1785. The annual assessment in each is nearly 3,000*l.* The number of paupers in both, including occasional and permanent poor, is about 1,800, including children. The whole sums left for charitable purposes do not exceed 3,000*l.* There is an hospital or poor-house in the bor., erected in 1752. The number of inmates, old and young, is about 200. The children are boarded and educated in the

country. A public infirmary, which can accommodate about 45 patients, was erected about 30 years ago. The town was visited by cholera asphyxia in 1832: number of cases, 796; of deaths, 446. Cholera reappeared in 1834: number of deaths, 140.

**Manufactures.**—Paisley was early distinguished by its manufactures. The first impulse given to this department was by pedlars or travelling merchants, who, soon after the Union, bought the goods made here, and sold them in England; and a good many of whom, having made some money, settled in the town. The articles then manufactured were striped linen cloths, handkerchiefs, and Bengals: these were succeeded by plain lawns, some of them chequered with cotton, and others ornamented with a great variety of figures; by linen gauze; and by white sewing-thread, known by the name of *Onance* or *Nun's thread*: in fact, this species of thread, so long as it was made in Scotland, was principally produced in Paisley.

In 1760 the making of silk gauze was first attempted, in imitation of that of Spitalfields; and it soon attained to great importance, both in the town and villages round, to the distance of 20 m. This trade afterwards declined; but not till the Spitalfields manufacturers had been driven out of the market, and some of them had transferred their establishments to Paisley. It has again revived; and "Paisley now furnishes nearly all the silk gauzes used in the kingdom, with the exception of those imported from France." (*New Stat. Account, ut supra*, p. 267.)

In 1785, when the silk gauze trade experienced a temporary interruption, many of the principal houses in the town entered into the muslin manufacture, which rose to a great height of prosperity. This branch has considerably declined; but the fabrics, which are chiefly designed for the London market, are of first-rate excellence in point of taste and elegance of execution. The ornamenting of muslins by the needle-work has lately become a considerable employment.

The shawl manufacture is one of the staple branches carried on in Paisley. Imitation shawls of all kinds have, at different times, been made here, — such as Thibet shawls, Cashmere ditto, and Zebras; the last being so called from their resemblance to the skin of the zebra. The genuine Cashmere wool is imported for making the Cashmere shawls; and the first Cashmere shawl made in Britain was manufactured in Paisley. It is a curious and not easily explained fact, that the yarn is generally spun in France, and that the attempts to produce it here have not been very successful. Edinburgh had long the lead in this manufacture, but it has been nearly beat out of the field; and Paisley is at present without a rival in this department. Damask and embroidered shawls are also extensively manufactured; and a beautiful and ingenious kind of shawl, *Chenille* (caterpillar), from its variegated colour and the softness of its feel. This shawl is often labelled in shops with the words *velour au soie* (silk velvet), a name descriptive of its appearance. But the shawls now chiefly made are, 1st, those wholly of silk; 2d, half silk and half cotton; and, 3d, wholly cotton. The manufacture of these varieties has been increasing with astonishing rapidity for some years past; several makers effecting sales to the amount of from 40,000l. to 60,000l. a year. The total sales in 1834 were estimated at 1,000,000l. sterling; and the trade has greatly increased since. Machinery has been advantageously employed in finishing the shawls, in the operation of *clipping*, which was formerly performed, in a comparatively clumsy way, by the hand. The Jacquard loom has also been recently introduced. All the trades depending on and subordinate to the shawl branch have necessarily increased; in particular that of dyeing. "Fifteen years ago," to quote from the *New Statistical Account*, written in 1837, "perhaps 40 or 50 hands were employed as dyers; now, ten times that number at least are engaged." (P. 267.) Crape dresses are manufactured to a considerable extent. Paisley has, in fact, been long the centre of the manufacture of ornamental or fancy goods. (*Wilson's Survey of Renfrewshire*, p. 255.)

Instead of the linen-thread formerly made in this town, a pretty extensive cotton-thread trade has sprung up, which employs several factories; and the annual value of the thread may be about 100,000l. sterling. But while so large a quantity of cotton-yarn is exported from Paisley, it imports from Lancashire a considerable portion of the yarn used in making the finer muslins; and yarn is not unfrequently sent thither by the Manchester manufacturers to be woven into those fancy muslins for which Paisley is so famous. The cotton manufacture employs altogether about 13 mills, with nearly 3,000 hands. There is also a silk mill, with about 320 hands.

"The number of looms in Paisley at present (1837) is ascertained to be about 6,000; of these, 5,700 are employed by Paisley manufacturers; the remaining 300 work to Glasgow houses. About 2,000 looms are employed in the country by Paisley capital, chiefly in the neighbouring villages. The number of apprentices to

the looms in Paisley is at present 728; the number of harness-weavers is 5,350; plain weavers, 650; female weavers, 40; in all, exclusive of apprentices, 6,040." (*New Stat. Acc.*, p. 268.) Besides the above, there is in the New Town a power-loom factory for cotton cloth used in printing. The printing of silks and other fabrics has lately been attempted, but on a small scale.

The town has 4 iron foundries, 3 brass foundries, 1 large tan-work, 3 breweries, 2 distilleries, 1 large soap-work (which has been in operation for nearly 70 years), 7 extensive bleachfields in the neighbourhood, and various other minor branches of business. The foregoing accounts, generally speaking, are confined to Paisley and its suburbs, and do not include Johnston, Elderslie, and other villages at some distance, though within the limits of the original par. of Paisley. (*Ibid* Johnston, in this work.) Still, however, we regret to have to state that Paisley, during the last 10 years, has done little more than keep its ground, and that neither its pop. nor its manufacturing industry has materially increased. During that period, its manufacturing pop. has frequently, indeed, been involved in extreme distress; occasioned sometimes by fluctuations of demand, but more frequently, perhaps, originating in the improvident loans made by the banks to individuals without capital; which has tempted the latter to engage in the most hazardous speculations, generally to their own ruin, and in most instances, also, to the great injury of the town.

Renfrew, or Renfrew Ferry, 3 m. from the town, is, properly speaking, the port of Paisley; but the White Cart, which falls into the Clyde, 3 m. from the bor., and only a few hundred yards W. of Renfrew, is navigable to Paisley for vessels of 80 tons. Much has been done to improve the navigation of this river. A railway has recently been opened between the town and Renfrew Ferry, on which locomotive waggon regularly ply. This railway has a rise of 16 ft. in the whole distance (3½ m.). A railway from Glasgow, recently opened, passes through the town, where it divides itself into two branches, one going to Ayr, with a subsidiary branch to Kilmarnock; the other leading to Greenock. The Glasgow, Paisley, and Johnston Canal, opened in 1811, commences at Port Eglinton, near Glasgow, passes Paisley, and terminates at Johnston, a distance of 11 m. There were conveyed along this canal, in 1840, 396,248 passengers, and 76,393 tons of goods. But it will, no doubt, be injured by the opening of the railway. The first light iron passenger-boats were established on this canal in 1831. In addition to the Paisley Commercial Banking Company, there are three branch banks; and a Savings' Bank, or Provident Bank, instituted in 1815. The neighbourhood of the town produces coal, ironstone, fire-clay, and potters' clay; and there are manufactures of sulphate of iron, or copras, alum, muriate of potash, and sulphate of ammonia. (*New Stat. Acc.*, p. 157—159.)

Previously to the passing of the Reform Act in 1832, Paisley, notwithstanding its great wealth and importance, had no parliamentary representative; but the Act in question conferred on it the important privilege of sending 1 mem. to the H. of C. Registered voters in 1840-41, 1,257. Municipal revenue, 3,977l. 13s. 4d. No. of councillors, 16. The sheriff courts of the county were transferred from Renfrew, the capital of the shire, to Paisley, so early as 1705.

Paisley is very ancient, and is supposed to occupy the site of the Roman station *Tandauria*. In 1164, Walter, son of Allan, Lord High Steward of Scotland, founded a monastery here, of which nothing remains but the nave and its collateral appendages, now used as the parish church. This abbey, the precincts of which were enclosed with a wall about 1 m. in circ., was the burial-place of this noble family till they became kingly of Scotland. At the Reformation, this property passed into the hands of a branch of the noble house of Hamilton, now represented by the Marquis of Abercorn, in whose possession (with a slight interruption) it has ever since remained. Paisley, in 1483, was regularly constituted under the jurisdiction of the abbot. The "Black Book of Paisley" has lately been ascertained to be simply a MS. copy of Fordun's "Scotchchronicon." The "Charterulary of Paisley" was printed in 1832 by the Maitland Club of Glasgow. Sir William Wallace is said to have been born at Elderslie, about 2 m. S.W. of the town. (In addition to the works already quoted, see *Chalmers's Caledonia*, vol. iii.; *Crawford's Hist. of Renfrewshire*, 3d ed., 1818; *Bowen's Reports*, and *Prin. Inform.*)

**PALAWAN**, an island of the E. archipelago, 4th div., about midway between Borneo and N. Philippines. It is long and narrow, extending between lat. 8° and 11° N., and long. 117° and 120° E.; having N.W. the China Sea, and S.E. that of Sooloo. Length, N. to S., 275 m.; average breadth about 32 m. It is little known to Europeans; but its W. appears to be loftier than its E. side, and inhabited by a savage people, who seldom approach the coast. Palawan produces corries, wax, tortoise-shell, ebony, and lake wood: the sea-slug abounds around its shores.

PALEMBANG. See SUMATRA.

PALENCIA, a city of Spain, k. of Leon, cap. prov. of its own name, on the Carrion (crossed here by 2 bridges), 57 m. S.E. Leon, and 118 m. N.N.W. Madrid. Pop., according to Mifano, 10,813. It is agreeably situated in an extensive valley near the canal of Castile, and comprises several straight and pretty wide streets, with a spacious square, having colonnades on two of its sides. In the environs, also, are several well-planted walks, or *alamedas*. Its principal public buildings are the cathedral (one of the largest Gothic structures in Spain), 5 parish churches, a well-endowed hospital, a poor-house, (formerly a palace, built by the Cld.) founding asylum, and bishop's palace. Palencia had a university prior to the establishment of that at Salamanca; and it still possesses a superior seminary, with about 60 students, of grammar and philosophy. It has manufactures of woollen goods, blankets, coverlets, and serge, which meet with a ready sale throughout Spain; and of hats and earthenware, with tanneries, &c. A fair is held annually in September.

PALEMO (an. *Panormus*, from *pan*, all, and *ormos*, a station for ships, from the number of vessels that frequented its port), the cap. city, and principal seaport of Sicily, on its N. coast towards its W. extremity; lat. (observatory)  $36^{\circ} 47' 44''$  N., long.  $13^{\circ} 20' 15''$  E. Pop., in 1831, 173,478; but in consequence of the prevalence of cholera, it is now (1840) said to be under 140,000. It is built along the S.W. side of an extensive bay, in a plain which, from its luxuriance, and from being surrounded by mountains on three sides, has been termed the "golden shell" (*conca d'oro*). In front of the city, the numerous steeples, cupolas, and towers of which give it a noble appearance from the sea, is the Marina, a raised platform or terrace, extending above 1 m. along the bay, and about 80 paces in breadth. At the E. extremity of this walk is the Flora, a public garden, laid out in walks, interspersed with statues, fountains, and summer-houses. People of all ranks are admitted, and in fine evenings it appears the rendezvous of the whole city. Adjoining the Flora is the botanical garden, at the entrance of which is a building similar to an ancient temple, in which botanical lectures are delivered. The garden is well laid out, and contains an extensive collection of valuable plants. On the W., Palermo extends to the foot of the rocky and abrupt mountain Pellegrino, but on the E. a reach of well cultivated grounds ascends gradually to Cape Zafarana, which bounds the bay on that side. The city is surrounded by an old wall, of little or no strength, some of the bastions being occupied by gardens, while others have been cut away to increase the breadth of the Marina. It is, however, defended by a citadel and several other forts, which are tolerably strong towards the sea; though from being much scattered they would require a large garrison, and could not hold out against a force investing the city by land.

Palermo is regularly built, and, if better finished, might be esteemed an elegant city. Two large streets, the Cassaro and Strada Nuova, each upwards of a mile in length, intersect each other at right angles, dividing the city into four equal parts, and each leading to one of the four principal gates. These streets are well paved with large flat blocks of lava, and are faced throughout their whole length with handsome buildings. The central space where they meet is an octagon (*Piazza Ottangolosa*); each of its sides consists of an edifice three stories in height, combining the Doric, Ionic, and Corinthian orders; and it is besides enriched with statues and fountains. A coup-d'œil of similar magnificence to that enjoyed from this piazza is, perhaps, not to be met with in any other city of Europe. (*Russell's Sicily*, 43.)

There are several other public places or squares adorned with obelisks, jets-d'eau, and sculpture, of which the principal are the column of St. Dominic, and the superb fountain opposite the pretorian palace. But all the streets, except those above named, are irregularly laid out, narrow, and ill built. The houses are almost all high, and a number of them have balconies with iron railings. These projections lessen the symmetry of the architecture, but this is more than counterbalanced by the convenience they afford of enjoying the cool evening breeze in so warm a climate. Almost every house has a common stair; and each story of apartments forms, as in the old houses of Paris and Edinburgh, the separate residence of a family. Several of the mansions of the nobility are admired for their architecture, but their interior is usually deformed by a multiplicity of false ornaments. Many have marble columns, either in front, or in the large court, which they generally inclose; but their effect is frequently destroyed by the meanness of the adjoining buildings. Altogether Palermo presents an incongruous mixture of pomp and poverty, exemplified in noble ranges of palaces disgraced at their bases by shops and stalls, and in showy equipages parading the same streets with sturdy mendicants vociferously demanding food, or sluggishly taking

their sleats on the pavement. Swarms of priests, nobles, officers, and other loungers, yawn on chairs before the coffee-houses; and artisans of every kind at their respective employments outside their shop doors, usurp the sides of the streets, obliging foot passengers to walk in the centre among the numerous carriages. The constant calling out this occasions on the part of the coachmen, added to the hurry of business, and the groups round the ice-water stands, form an animated and singular if not a pleasing scene.

The supply of water is peculiarly abundant, and most of the houses have fountains, even in their second and third stories; hence the city is in general clean, except after heavy rains, when, from the lowness of its site, it becomes extremely muddy, and recourse is sometimes had to movable iron bridges for crossing the streets. There is an excellent supply of provisions of every description; and during the absence of the moon, the principal streets are tolerably well lighted. The city, excepting on the site of the ancient port, where malaria is generated in autumn, is healthy. The temperature of winter seldom falls below  $50^{\circ}$  Fah. In summer, however, the thermometer keeps for months between  $80^{\circ}$  and  $90^{\circ}$ ; and then the inhab. generally shut up their houses and shops a little before noon, keeping them shut for 3 or 4 hours, an interval during which all is silence and stagnation. The *Sciocco* is very oppressive, but fortunately not of frequent occurrence.

Palermo has a great number of public edifices and institutions. Convents and churches are particularly numerous; of the former there are even said to be nearly 701. Most of the churches are sumptuous; but they discover no taste, and offend the eye by a profusion of ornament. A striking monotony reigns in their construction, being generally built with an elevated façade, a large nave, and 2 side aisles, bounded by lateral chapels, dedicated to various saints, and decorated with pillars, paintings, statues, flowers, and candelabra. Some, however, as that formerly belonging to the Jesuits, must be exempted from this censure. The cathedral, erected about 1180, by Archbishop Waller, an Englishman, is externally of Gothic architecture; and, though not in the best taste, is a tolerable specimen of the style of the 12th century. It has, however, been spoiled by the modern addition of a cupola; and its interior has been somewhat recently altered to the Greek style. Within are many fine red porphyry sarcophagi, of considerable antiquity, in which have been deposited the remains of different sovereigns of the island, including Roger the founder of the Norman kindg. of Sicily, the emperor Frederick II., &c. The church of St. Giuseppe, also on the Cassaro, is profusely and richly ornamented, and has some fine columns of grey Sicilian marble, nearly 60 ft. in height. The royal palace, the residence of the viceroy, is a spacious building of mixed Arabic and Norman architecture. It has many spacious apartments, a gallery with some good paintings, and a neat armoury; on its summit is the observatory erected in 1748, whence Piazzì discovered the planet Ceres. Attached to the palace is the beautiful little church of St. Peter, which, with its crypt and superb mosaics, forms one of the most complete specimens of Saracenic magnificence extant. The square in front has a statue of Philip V. of Sicily, surrounded by four other statues. The tribunal of justice and the custom-house occupy a large edifice on the Marina, formerly the palace of the Inquisition, abolished in 1782. The public prison, in one of the main streets, built round a large court yard, though well supplied with water, is dirty, and in many respects badly provided. The Jesuit's College, a magnificent edifice in the Cassaro, with various schools, and a fine library, in which the Sicilian parliament formerly held their sittings; the university, the archbishop's palace, and the principal government pawn-bank, a spacious building, with a neat portico, are among the remaining most remarkable edifices. There are several theatres, but they are generally ill constructed, and not to be compared to those of Naples, Paris, or London.

At the N. W. extremity of the city is the arsenal, from which a fine mole, fully 1-4th m. in length, having a lighthouse and battery at its extremity, projects S. into 9 or 10 fathoms water, forming a convenient port, capable of accommodating a great number of vessels. This important work cost about 1,000,000. sterling; but the lighthouse, though a splendid structure, is said to be very ill lighted. Ships that do not mean to go within the mole may anchor about half a m. from it, in from 16 to 23 fathoms. There is an inner port, reserved for the use of the arsenal, with large naval magazines, prisons for galley-slaves, &c. There is also a small cove in front of the town, called the *Cala felice*, the representative of the two ancient harbours, and capable of accommodating vessels of from 150 to 200 tons. On its E. side is the pratique office; the lazaretto, a dirty and inefficient establishment, is in a rocky bay at the back of the mole.

Few indications exist of the ancient splendour of the city, except the remains of a naumachia, and some ves-

tiges of an amphitheatre. In the senatorial hall are preserved fragments of various marbles, &c.; and in the royal palace are two ancient bronze rams, brought thither from Syracuse, and said to have been made by Archimedes! (*Smyth's Sicily*, p. 73.)

In the neighbourhood are many fine specimens of Moorish architecture; the principal being the Saracenic fortress of Kuba, now used as cavalry barracks; and the Zisa, a palace erected in the 9th or 10th century, still in good repair, and occasionally used as a royal residence. Near the latter is a Capuchin convent, with a *cadaveri*, or receptacle for the reception of dead bodies. A royal residence, in the Chinese style, stands outside the walls, near M. Pellegrino; and about 10 m. E. Palermo, near the bay, is La Bagaria, the favourite residence of many Sicilian nobles. Several of the villas of the nobility are richly adorned, both by nature and art: that of Prince Palagonia, however, is chiefly noted for its statues of all sorts of monsters.

Palermo is the see of an archbishop, who is primate of Sicily; the seat of an Intendant and council of Intendency; a departmental council; a supreme court of justice, with 14 judges; a civil and criminal court for the Intendency; and a tribunal of commerce. It has a university, the second in the Neapolitan dom., attended by about 600 students, comprising several eminent names among its professors. It has a library of upwards of 30,000 vols., a printing press, several museums; but only a few lectures are given, and the education is worthless in the extreme. Palermo has also a high female seminary, second to that of Naples; a college of nobles, an episcopal seminary, and many inferior schools; numerous charities, including 2 large hospitals, a lunatic and a foundling asylum, houses of industry for mendicants, &c.; public baths, and several public libraries and scientific associations. Silk manufactures were established here in the 11th century, and they still form the chief branch of manufacturing industry, though much less flourishing than formerly. Cotton fabrics are also produced, with oil-cloth, leather, &c.; and there is here a glass work, the only one in Sicily. The tunny fishery employs from 900 to 1000 boats, and 3,500 fishermen. But the principal resources of the inhab. depend on Palermo, being the residence of the viceroy and the seat of government, and on her trade. The latter, indeed, is but trifling, compared to what it would be were Sicily under an enlightened government, capable of calling forth its vast resources. But even at present it is far from inconsiderable. The great articles of export are shunac, fruits of various sorts, including oranges and lemons, wine, manna, brimstone, &c. Subjoined is a

STATEMENT of the Quantities and Values of the principal Articles exported from Palermo in 1839.

Articles.	Quantities.	Value in Pounds Sterling.
Almonds and cream of tartar - - - cwt.	4,799	4,607
Barilla - - - - -	6,965	2,369
Brimstone - - - - -	39,365	16,811
Cardamoms - - - - -	22	1,394
Corn, grain, pulse, and rice - - - qtrs.	242	242
Essences - - - - -	6,755	1,683
Fish, salted - - - - -	1,475	1,584
Fruits: - - - - -		
Dry and pickled - - - - -	88,845	112,119
Oranges and lemons - - - boxes	164,168	32,926
Linsced - - - - -	5,737	9,561
Other seeds - - - - -	2,478	1,507
Liquorice paste - - - - -	4,533	8,513
Manna - - - - -	3,737	41,107
Oils: - - - - -		
Linsced - - - - -	10,845	1,055
Olive - - - - -	77,984	7,804
Rags - - - - -	18,343	9,967
Shunac - - - - -	217,929	255,794
Silks - - - - -	2,610	2,610
Skins - - - - -	86,000	1,574
Wine and spirits - - - - -	694,440	66,115
Other articles - - - - -		14,922
Total value - - - - -		624,961

Of the above, goods to the amount of 290,122, went to the U. States of America; 128,562, to Great Britain and her colonies; 59,446, to France; 25,674, to the Baltic; 12,737, to Belgium and Germany; 37,418, to the Italian States; and 1,005, to other countries.

The imports consist principally of sugar and other colonial products; cotton, linen, silk and woollen fabrics; earthenware, hardware, and other manufactured goods; dye stuffs, spices, &c.

The city funds, derived principally from landed property, the land-tax, and taxes on consumption, are said to amount to about 100,000, a year; but for many years past the expenditure has exceeded this sum, and the city is now deeply in debt.

Sicilian writers have made many absurd and ridiculous statements concerning the foundation of Palermo; but the most rational and generally received opinion, con-

firmed by the authority of Thucydides and Polybius, is, that it was founded by a colony of Phœnicians; the beauty of the situation, and the convenience of the port, whence, as already seen, it derived its name, being powerful inducements to a trading people, to make it a settlement. (*Thucyd. lib. vi.*; *Polybius*, lib. i. cap. 38.) It subsequently fell into the hands of the Carthaginians, who made it the capital of their Sicilian dominions. Soon after the beginning of the first Punic war, it passed into the hands of the Romans, who established a colony in it (*Strabo*, lib. vi.), conferred on it various privileges, and allowed it to be governed by its own laws. In a subsequent age, the Saracens made it the capital of their Sicilian territories; and since their time, with the exception of some short intervals, it has been the capital of Sicily. It was the residence of the court of Naples during their exclusion from that city from 1806 to 1815. (*Smyth's Sicily*, 70-89, and *Append.*; *Swinhurne*; *Brydone*; *Russell*; *Simond*; *Von Raumer's Italy*, ii.; *Part. Reports*, &c.)

PALESTINE. See SYRIA and PALESTINE.

PALHANPOOR, a fortified town of Hindostan, prov. Gujrat, cap. of a Mohammedan principality, 88 m. N. N. W. of Ahmedabad. Lat. 24° 11'; long. 72° 20' E. Pop. 30,000 (?) It is about 14 m. in circ., and is surrounded by a brick wall, flanked with towers, the gates being defended by outworks, mounted with small cannon. It is of considerable political importance, being a frontier town on the desert separating Gujrat from Sind and Cutch, and on the main route from Rajpootana southward. The state, of which it is the cap., extends from 30 to 40 m. round, including two towns, and about 130 villages, and producing a yearly revenue of about 24 lacs rup. (*Hamilton, E. J. Gaz.*)

PALMA. See MADRICA.

PALMAS, the principal town of the Canary Islands, which see.

PALME, or PALMI, a town of the Neapolitan dom., prov. Calabria Ultra, i. cap. distr. on the Gulf of Gioja, 24 m. N. E. Reggio. Pop. about 7,000. It was partially destroyed by the earthquake of 1783, but has since been restored. It is well built; its streets being regular, and its houses mostly of stone, and in good taste. In its centre is an elegantly sculptured and well supplied fountain. It has some manufactures of silken and woollen fabrics, and trades in oil, liqueurs, &c. (*Craven's Tour*, 292.)

PALMYRA, (the Tadmor of the Scriptures, by which name it has always been designated by the Arabs, a celebrated city of antiquity, and the cap. of the region of Palmyrene in Syria, in an oasis in the midst of deserts in the modern path. of Damascus, 147 m. S. E. Aleppo, and 187 m. S. S. W. Damascus, lat. 34° 29' N., long. 38° 48' E.

This once famous city is now all but deserted, not having more than 100 inhabs., and it derives its whole importance from its classical associations and the number and magnificence of its ruins. These, which stand near the E. declivity of a mountain range running from N. to S., may occupy a space of about 3 sq. m., though it is probable that the ancient city extended over a larger area, exclusive of the tombs on the tops and sides of the adjacent hills. The oasis, in which the city is situated, is traversed by two streams, which, though hot and sulphureous, are said to be wholesome, and not disagreeable. But the water used in the ancient city was of the best quality, being brought from a considerable distance by a large subterranean aqueduct, of which there are still some remains. The first view of the city is described by all travellers as extremely magnificent. "On opening upon the ruins," says Captain Mangles, "as seen from the Valley of the Tombs, we were much struck with the picturesque effect of the whole, presenting altogether a most imposing sight. It was rendered doubly interesting by our having travelled through a wilderness destitute of a single building, from which we suddenly opened on these innumerable columns and other ruins, the snow-white appearance of which, contrasted with the yellow sand, produced a very striking effect." (*Irby and Mangles's Travels*, p. 262.) The ruins are not, however, to be compared, as respects the size of the gates, columns, and temples, with those of Babel and Thebes; but they are more remarkable than either for their vast extent, and they are less encumbered with modern fabrics than most other ancient remains.

The ruins now extant comprise the fragments of two or three temples, several gateways, (one of which is more perfect than the rest), colonnades, sepulchres, &c. With respect to the antiquity of these ruins, it is difficult to form a conjecture: the tombs are evidently the oldest, but even these do not date as far back as the Christian era. The other buildings are considerably more recent, and most of the fine and expensive edifices appear to have been constructed during the three centuries ending with the reign of Diocletian.

On approaching the city a ruined mosque, built by the

Saracens, introduces the stranger to a fine gateway, having a lofty central arch, flanked by two others of smaller size, which lead directly to a grand avenue, which, from the remains, must have been nearly 1 m. in length, and bordered on either side by rows of Corinthian columns, of which, however, only 114 now remain. This avenue leads to a gateway, beyond which are ranges of pillars supporting a frieze and entablature, supposed by Mr. Addison to be the ruins of two noble gateways, that may have led from the central avenue to other colonnades now entirely destroyed. A circular colonnade, of which eighteen columns only are now standing, has in its centre a small but richly ornamented building, with niches for statues; and immediately beyond it are the prostrate remains of a magnificent building, constructed of a species of marble superior to that found in other parts of the ruins. It appears to have comprised two very large rooms; but whether it were a temple or palace, is difficult to determine. By far the most extensive ruin, however, is the Temple of the Sun, the grand entrance to which was supported by four fluted Ionic pillars, and adorned with rich carvings of vine-leaves and clusters of grapes in bold and spirited relief, beautifully chiselled. The outer precinct, which encloses a quadrangular space of 220 sq. yards, is formed by a lofty wall, adorned with pilasters both within and without. Inside this court are the remains of two rows of noble marble pillars, each 37 ft. in height, and another row of columns 50 ft. in height, appears to have encircled the temple, which, however, was only 100 ft. in length by 45 ft. in breadth: it has since been converted into a mosque, and its interior is disfigured by passages from the Koran written round the walls.

The sepulchres, which are, perhaps, the most interesting of all the ruins, occupy the tops and sides of the surrounding eminence, some presenting mere heaps of rubbish; others half fallen, exposing their shattered chambers; while one or two still exist almost entire. They are built in the shape of square towers, from 3 to 4 stories in height, each forming a sepulchral chamber, with recesses divided into compartments for the reception of the bodies. Some of the chambers are ornamented with Corinthian pilasters and sculptures, in almost perfect preservation, executed in high relief; the walls are of white stucco, and the ceilings are divided into diamond-shaped compartments, delicately ornamented with white stars on a blue ground: over the doorways are tablets with inscriptions both in Greek and Palmyrene. A few of the streets may be traced with some difficulty, and the foundations of houses are distinguishable in some places; but not a vestige remains of the old walls destroyed by Aurelian, though a wall still exists that has been made of materials from the sepulchres, and was probably erected soon after the demolition of the older fortifications. The inscriptions are both in Greek and in the unknown Palmyrene language; all of those on the columns are honorary, generally to the effect, that the senate and people inscribed them in honour of an individual whose pedigree is given through several generations. The inscriptions on the tombs are in Greek, and tolerably perfect. Fac-simile copies of them are given in the great work of Messrs. Wood and Dawkins, which also contains drawings of all the principal buildings of Palmyra.

*History.*—The earliest accounts of the existence of Palmyra, are derived from the sacred writings, which state that "Solomon built Tadmor in the wilderness and all the stone cities which he built in Hamath" (2 Chron. viii. 3, 4.); and his motive for thus founding it was, according to Josephus, "because in that place were fountains and wells of water. He gave it the name of Tadmor, which is still prevalent among the Syrians; but the Greeks name it Palmyra." (*Ant. Jud.* i. viii. ch. 6.)

Pliny has noticed the city, and the peculiarities in its situation to which it owed its rise and importance: *Palmyra urbs nobilitas tibi, divitiis soli et aquis amœnis; vasto undique ambitu arvens incultis agros; ac velut terris exempta a rerum natura, privata sorte inter duo imperia summa, Romanorum Parthorumque, et prima in discordia semper utrinque cura.* (*Hist. Nat.*, lib. v. cap. 25.) The fertility of the oasis round Palmyra made it a suitable situation for small towns; but its position in other respects was still more advantageous, from its being the resting-place of the caravans between the Persian gulph and the great cities on the Euphrates and Tigris, and Aleppo, Damascus, and the ports on the Mediterranean. Palmyra thus became a principal emporium of the commerce between the Eastern and Western worlds; and to this, no doubt, is to be ascribed the wealth and importance to which she early attained. Being situated between the empires of Rome and Parthia, it was an object of great importance with the Palmyrenians to preserve a strict neutrality, and to keep on good terms with them both. But after the victories of Trajan had established the unquestionable

preponderance of the Roman arms, Palmyra became a dependency of Rome, and attained to the rank of a colony. "It was during that peaceful period, if we may judge from a few remaining inscriptions, that the Palmyrenians constructed those temples, palaces, and porticoes\* of Grecian architecture, whose ruins, scattered over an extent of several miles, have deserved the curiosity of our travellers." (*Gibbon*, cap. 9.)

The most splendid period of the history of Palmyra was that which immediately preceded her fall. Valerian, emperor of Rome, having been made prisoner by Sapor, king of Persia, Odenathus, a citizen of Palmyra, who had attained to the principal direction of her affairs, joined the Roman forces, and had a large share in avenging the insult offered to the majesty of Rome. He attacked the Persians, drove them beyond the Euphrates, penetrated as far as their capital city Ctesiphon, and captured the treasures and women of the great king. For these services, the senate, with the approbation and applause of the Roman world, conferred on Odenathus the title of Augustus, and associated him in the empire with Gallienus. These honours, however, he enjoyed only for a brief period, being soon after (A.D. 263.) assassinated by his nephew. The vacant throne was seized by his young, warlike, and beautiful widow, the famous Zenobia, who broke the alliance with the imbecile Gallienus, and assumed the title of Augusta, Queen of the East. The accounts that have come down to us of this extraordinary woman are so very flattering that we may not unreasonably suspect them of being exaggerated, in the view, perhaps, of enhancing the merit of her conqueror Aurelian. But, if she was highly accomplished, there can be no doubt. "Her manly understanding was strengthened and adorned by study. She was not ignorant of the Latin tongue, but possessed, in equal perfection, the Greek, the Syriac, and the Egyptian languages. She had drawn up, for her own use, an epitome of Oriental history, and familiarly compared the beauties of Homer and Plato, under the tuition of the sublime Longinus. The success of Odenathus was, in a great measure, ascribed to her incomparable prudence and fortitude." (*Gibbon*.)

Zenobia, who boasted of being the descendant of Cleopatra and the Ptolemies, sent, after the death of her husband, on pretence of this relationship, an army into Egypt, which she annexed to her dominions. But her troops were unequal to a contest with the disciplined legions of Aurelian. After being defeated in 2 great battles, Zenobia shut herself up in Palmyra. But, seeing that it must fall into the hands of Aurelian, she attempted to make her escape; and being intercepted in her flight, the city soon after surrendered. The victor sullied the glory of his conquest by ordering the execution of Longinus, author of the famous treatise on the sublime, and other advisers of the unfortunate queen; but, in other respects, the city was treated with great lenity. Unhappily, however, as soon as it was understood in Palmyra that the emperor, with his captive princess, had crossed the Hellespont, the citizens rose in rebellion, and, having massacred the Roman governor and garrison, proclaimed their independence. The instant Aurelian heard of this revolt, he at once, without a moment's hesitation, began to retrace his steps, and hastened to the ill-fated city with an irresistible force, and an insatiable thirst for vengeance. The exact mode he learned from his own words:—*Mulieribus non peperimus, infantes occidimus, senes jugulavimus, rusticos interecimus; cui terris, cui urbes deinceps relinquemus? Parvulum est tui qui remaneret.* (*Flavius Vopiscus in Hist. August.*, p. 218.) At the same time the walls of the city were rased to the ground, and, in the words of Gibbon, "the seat of commerce, of arts, and of Zenobia, gradually sunk into an obscure town, a trifling fortress, and, at length, a miserable village. Zenobia herself was taken to Rome to grace the triumph of Aurelian, who, however, behaved towards her with a generous clemency seldom exercised by the ancient conquerors, and presented her with an elegant villa at Tibur, where the Syrian queen insensibly sunk into a Roman matron, her daughters married into noble families, and her race was not yet extinct in the fifth century." (*Decline and Fall*, li. 44–48.) Palmyra afterwards fell with the surrounding country under the power of the Mohammedans; but history is entirely silent respecting the causes and period of her total desolation. (*Wood and Dawkins on the Ruins of Palmyra*; *Addison's Damascus and Palmyra*, li. 284–323.; *Irby and Mangle's Travels*, p. 262–267.; *Mod. Trav.*)

PAMIERS, a town of France, d p. Ari ge, cap. arrond., on the Ari ge, 11 m. Foix. Pop., in 1836, 5,972. It is well situated, and is generally well built and laid out. The cathedral, several other churches, the bishop's palace, a Carmelite convent, the court-house, and a large

\* According to Stephanus Byzantius, these were mostly erected by the emperor Adrian; but there is no evidence that such was really the fact, though he may have done so to some extent.

civil hospital, are its principal buildings. No remains exist of its castle, built during the crusades, and called *Apamea*, from the Syrian town of that name, whence, by corruption, the present name of this town. (*Hugo, &c.*)

**PAMPELUNA, or PAMPLONA**, a fortified city of Spain, cap. kingd. of Navarre, on a hill near the left bank of the Arga, 48 m. S. Bayonne, and 195 m. N. E. Madrid: lat. 42° 49' 57" N.; long. 1° 39' 45" W. Pop., according to Mifano, 15,000. It is surrounded by a strong wall, with bastions, but derives its principal defence from 2 castles, one within and the other outside the walls, the latter, the citadel, being situated on a rock (of which the only accessible part is covered by a morass), and encircled by a deep ditch. The interior comprises several wide and straight streets, lined on both sides with trottoirs; 3 public squares, in the largest of which bull-fights are held; 6 public fountains, supplied with water from a fine aqueduct 3 m. in length; and the *Tacomeria*, a public walk. Outside the walls are 3 other planted walks and 6 bridges across the river, connecting the town with the suburbs. The houses are irregularly built; and the public edifices, which comprise a cathedral, 4 parish churches, 2 palaces, a prison, poor asylum, and small theatre, are more remarkable for antiquity than beauty. Within the citadel are extensive barracks and magazines, and a curious corn-mill, turning 5 sets of stones, and capable of grinding 360 quintals of wheat a day. Pampeluna is a place of little industry, confined chiefly to the manufacture of coarse linen cloths, parchment, and white wax. Its trade, also, has long been in a languishing condition; and the town exhibits few signs of activity, except at its fair in July, which is much frequented both by the French and Spaniards. The surrounding country abounds with many varieties of grain and fruit; but agriculture is much neglected, and is only slowly recovering from the ravages inflicted during the late civil war.

Pampeluna, supposed to have been built by Pompey, after the defeat of Sertorius, and called by him Pompeiopolis, was taken in the 5th century by the Goths, from whom it passed to the Moors. After the foundation of the kingdom of Navarre, it was made its capital city, and sustained several sieges. The most memorable event connected with the town, however, is the contest that took place for its possession between the English and French at the close of the Peninsular war. In June, 1813, on the sudden retreat of the French army from Vittoria, the road to Pampeluna was alone open; and this fortress was hastily garrisoned and provisioned. It was forthwith invested by the British; but the approach of Marshal Soult, with an army, towards the close of July, promised it an early deliverance. It was in the vicinity of Pampeluna that the obstinate conflicts of the 27th and 29th July took place; and the French being compelled to repass the Pyrenees with great loss, Pampeluna was cut off from all supplies, and surrendered on 31st October.

**PANAMA, or DARIEN, (ISTHMUS OF)**, the narrow neck of land which connects the continents of N. and S. America, forming a prov. of the Colombian republic of New Granada, between the 8th and 10th degs. of N. lat. and the 77th and 81st of W. long., having E. the Colombian prov. Choco, W. the of Veragua, N. the Atlantic, and S. the Pacific Ocean. Its shape is that of an arc, the convex side facing the N.; length, W. to E., about 300 m.; general breadth about 40 m., but, where narrowest, not more than 28 m. from sea to sea. Pop. of prov. in 1835, 72,668. The Cordillera, or chain of the Andes, is here interrupted by several remarkable breaks of low and level land, through which it has been proposed to carry a canal or railway; but near the city of Panama its summits rise to 1,000 or 1,100 ft. of elevation, and further E. they are considerably more lofty, and are generally covered with dense forests. The isthmus is extremely well watered; and though without any river of considerable length, several of its streams are partially navigable. The dry season lasts from Dec. to April, and the wet during the rest of the year. The quantity of rain is prodigious; but a very remarkable phenomenon occurs throughout the isthmus, in the height of the rainy season, of which no satisfactory explanation has yet been offered. On the 20th of June the rain ceases for five or six days, and the sun shines out during the whole day with the utmost splendour; nor is any instance known of irregularity in the recurrence of this singular break in the ordinary course of the season. (*Geog. Journ.*, i. 78.) The temperature and salubrity vary greatly. Porto Bello is one of the hottest and most unhealthy places in the world. On the opposite coast, at Panama, the thermometer in the rainy season does not rise higher in the day time than 87°, and though at other times it is very sultry, it can hardly be called unhealthy. Rice, maize, coffee, cocoa, and some sugar, are cultivated; but most part of the sugar used is imported in skins from Central America, or Caica. Storax, caoutchouc, various dyeing drugs, and the finest timber trees, abound in the forests. Near Panama is a considerable extent of cultivated

land; but round Porto Bello, and on the E. coast, most part of the surface is uncultivated. Elsewhere, the landlords keep their estates chiefly in grass, to save trouble; few of the inhab. are industrious; and many, indeed, depend almost wholly on the chase. Doves of wild hogs, deer, and a variety of other wild animals, are met with; monkeys are frequently used as food, as are sharks, guanas, &c. Horses are small, but hardy; mules are, however, the favourite beasts of burden, and fetch sometimes 120 dollars each.

The isthmus was formerly famous for its gold mines; but these are now all but exhausted and abandoned. The pearl-fishery in the Bay of Panama is still carried on, and with some success. The trade of the isthmus, notwithstanding its favourable position, is at a very low ebb. On the Pacific some little traffic is carried on with various ports both N. and S.; but, on the Atlantic, almost the only communication is with Jamaica and Cartagena. The inhab. are said to be less advanced in civilisation even than their neighbours; and their education and morals seem to be quite bad. The isthmus is divided into seven cantons; chief towns, Panama, the cap., Chagres, Portobello, Nata, and Carreto. (*Geog. Journal*, i. 69—101.)

The isthmus of Panama, from its narrowness, appears, on the map at least, to be the most advantageous point for establishing a direct communication between the Atlantic and Pacific Oceans. At first it was supposed that this might be effected by a canal, but the difficulties in the way of such an undertaking would not be easily surmounted; and the general opinion seems to be, that the preferable plan would be to construct a railway from Chagre, on the Caribbean Sea, across to Panama. It is believed, however, that the project for connecting the two oceans by means of the river San Juan and the lake Nicaragua, presents, on the whole, greater facilities. See NICARAGUA (Lake of).

**Colony of Darien.**—The place marked New Edinburgh, in Arrowsmith's map on the W. coast of the Gulf of Darien, derived its name from its being the site where, in 1698, the Scotch attempted to form a settlement. This colony was projected by a Scotch gentleman of the name of Paterson, the founder of the Bank of England, and was zealously patronised by all classes of his countrymen, who formed a joint stock company, and subscribed large sums to carry the project into effect. It was, however, extremely ill-suited for a country in the then situation of Scotland; and provoked the well-founded hostility of the Spaniards, and the bitter, though unreasonable and unfounded jealousy of the English West India merchants and ship-owners, who either were, or pretended to be, seriously alarmed lest this new settlement, in an unoccupied and unhealthy country, should seriously injure their commerce and navigation. The selfish opposition of these interested parties to the project, having been abetted by the English parliament, the king disavowed the company, and even issued orders to the governors of the West Indian and American colonies, charging them not to permit any intercourse with the Scotch at Darien! In consequence of these vindictive measures, and of the threatened hostilities of the French and Spaniards, the settlement was abandoned. This event was most acutely felt by the Scotch, whose pride was mortified by the failure of a scheme, of the success of which they had formed the most exaggerated expectations; and many of whom were ruined by the loss of the sums they had embarked in the project. It further inflamed the existing prejudices against the English, and against the projected union of the two kingdoms, which happily, however, was not long after effected. (*Laing's History of Scotland*, iv. 261—277; *Burnett's History of his Own Times*, iii. 299, &c. ed. 1753.)

**PANAMA**, a city and sea-port of Colombia, repub. New Granada, cap. of the above prov., on the Pacific, 43 m. S.E. Chagres, and 480 m. N.W. Bogota. Lat. 8° 57' N.; long. 79° 30' W. Pop. about 11,000. It stands on a rocky peninsula, projecting into the Bay of Panama, and has a very imposing aspect from the sea. Its plan is not strictly regular, but the streets are tolerably well ventilated, and it is said to be cleaner than most Spanish American cities. It is encircled by irregular and very strong fortifications, constructed at different periods. The houses are partly of wood, straw, and other fragile materials; but many are substantially built of stone, the larger having court-yards, or *patios*, in the old Spanish style. The public edifices are a cathedral, four convents, a nunnery, and a college; but most of them are falling into ruin, and a large and fine Jesuits' college is in a state of total dilapidation. Its roadstead is exposed to northerly gales; but Mr. Lloyd says there are a number of islands, a short distance from the main land, which afford secure anchorage, and from which supplies of provisions, including excellent water, may usually be obtained.

Panama is still the centre of some trade, not only with the ports on the Pacific, but also with the W. India islands, &c. Previously to 1740, when the trade with the

Pacific first began to be carried on round Cape Horn, it was the principal entrepôt of trade between Europe and W. America. From that period, however, it has fallen off; and its decay has been peculiarly rapid since the independence of S. America, and the opening of the other ports of the Pacific. Its situation is, however, highly favorable; and should a canal or railway be carried across the isthmus, it will probably attain to greater commercial distinction than ever.

Old Panama, founded by the Spaniards in 1518, stood about 3 m. to the E. of the present town. It was destroyed by the buccancer Morgan, in 1670; shortly after which the existing city was commenced. (*Lloyd in Geog. Journal*, i. 85, 86; *Hall's S. America*, &c.)

PANIANY, a commercial town and sea-port of British India, Presid. Madras, prov. Malabar, on the Panian river, 38 m. S. Calicut. It has numerous mosques, being principally inhabited by Moplahs, or fishermen of Arabian descent. Before Tippoo Saib captured this town, its trade was very considerable, the merchants trading direct with Surat, Mocha, Madras, and Bengal. It still exports teak, cocoa nuts, iron, and rice; and imports wheat, pulse, sugar, salt, catichu, and spices; but the mouth of its river is closed by a bar which only admits boats of small burden.

PAPA, a considerable market-town of Hungary, beyond the Danube, co. Wesprim, 82 m. S. E. Vienna. Pop., in 1837, 13,232. It was formerly fortified, and has a large castle belonging to the Esterhazy family. It has also numerous churches, one of which is a very handsome edifice, built with immense blocks of stone; Rom. Cath., Lutheran, and Calvinist colleges; manufactures of earthenware, glass, and paper, and an active trade in agricultural produce. (*Borghaus; Oesterr. Nat. Encyc.*)

PAPAL STATES (THE), STATES OF THE CHURCH, or POPEDOM, an independent country of Europe, occupying the greater part of Central, with a portion of N. Italy, being principally comprised between lat. 41° and 45° N., and long. 11° and 14° E.; having N. Austrian Italy, from which it is separated by the Po; W. Modena, Tuscany, and the Mediterranean; S. and S. E. the Neapolitan dom.; and N. E. the Adriatic. It is very irregularly shaped; the length of a line drawn from its N. to its S. extremity may be about 270 m. Its breadth is very various. The area, pop. (exclusive of about 10,000 Jews), subdivisions, &c. are as follow:

Legations, Delegations, &c.	Area in sq. m.	Pop. in 1833.	Chief Cities.
Comarca di Roma	616	285,456	Roma.
Legation of Bologna	1,425	322,228	Bologna.
Ferrara	1,065	210,883	Ferrara.
Forlì	1,187	191,399	Forlì.
Ravenna	1,901	156,524	Ravenna.
Urbino	1,655	225,806	Urbino.
Velletri	636	56,550	Velletri.
Deleg. of Ancona	641	158,159	Ancona.
Macerata	1,033	240,130	Macerata.
Camerino	592	36,592	Camerino.
Ascoli	477	78,946	Ascoli.
Fermo	567	89,494	Fermo.
Perugia	1,721	294,652	Perugia.
Spoleto	1,562	116,759	Spoleto.
Rieti	660	59,594	Rieti.
Orvieto	-	21,877	Orvieto.
Viterbo	1,656	113,011	Viterbo.
Civita Vecchia	174	19,601	Civita Vecchia.
Frosinone and Pontecorvo	895	139,979	Frosinone.
Benevento	89	23,040	Benevento.
Total	17,215	2,732,086	

The Apennines, which intersect the papal territories nearly in their centre, have here an average height of about 4,000 ft.; but Monte della Sibilla rises to 7,210 ft. (*Bruguière*); and several other peaks are not greatly inferior in elevation. The provs. of Perugia, Spoleto, Camerino, and the others constituting what was formerly called the March of Ancona, are those principally covered with the ramifications of the Apennines, which, in this part of Italy, approach more nearly to the Adriatic than the Mediterranean, leaving, however, an extensive plain on either side: that on the N., between the Po and the Adriatic, comprises the legation of Ferrara, and the greater part of the legations of Bologna, Ravenna, &c. It includes the *Val di Comacchio*, a very extensive marsh, but, with this exception, is highly fertile and productive. The plain to the S. of the Apennines is of still more ample dimensions, embracing all the vast undulating tract known by the names of the Campagna and Maremma, extending between the declivity of the mountains and the sea from the frontiers of Tuscany on the one hand, to those of Naples on the other. The S. portion of this great plain, or that next Naples, consists of the district called the Pontine Marshes (an. *Pomptina Paludes*), which, notwithstanding the vast sums expended upon it, is still very imperfectly drained. We have elsewhere fully described the present state of this vast and

naturally fruitful plain, famous in antiquity for its fertility, but now, unhappily, the seat of pestilence and death. (*See ante*, p. 37.)

The Po, which forms their N. boundary is the largest river of the Papal states; but by far the most celebrated is the Tiber. The latter rises at St. Albano, in Tuscany, and runs generally S. or S. E., but with a very tortuous course, to within about 25 m. N. N. E. Rome, whence it flows mostly S. S. W. to its mouth in the Mediterranean, 15 m. below Rome, after an entire course of about 200 m. Before entering the sea the Tiber divides into two arms, enclosing the small island of *Isola sacra*. At Rome the greatest breadth of the Tiber is only about 400 ft., or scarcely one third part of the breadth of the Thames at Blackfriars Bridge, and nearly approaching that of the Seine at Paris. It is justly entitled to its ancient epithet *fluvius*, being almost constantly loaded with yellow mud, from the crumbling and disintegration of its banks. Its principal affluents are the Topino, Nar, and Tevereone on the left or E., and the Clitana on the right bank. It is navigable for boats to near Perugia. Except the Tiber, no river of any consequence falls into the Mediterranean in this part of Italy. The country to the E. of the Apennines has, however, a great number of rivers, though none of them be of any very considerable magnitude, falling partly into the Po and partly into the Adriatic. Several of the most celebrated Italian lakes are in the Papal States, as those of Perugia, (an. *Lacus Thrasimicus*) Bolsena, and Bracciano, (which see). The lakes of Vico, Albano, Nemi, Gabil, &c., though insignificant in point of size, are interesting from the classical associations with which they are connected. They are situated in a mountain region, and evidently occupy the craters of extinct volcanoes.

*Geology*.—The primary rocks in the Apennine region consist mostly of serpentine, mica, claystone, and quartz. Gneiss is met with in various places along the coast. Mountain limestone is frequent, and, indeed a large portion of the country consists of calcareous formations; but the region round the cap. is of volcanic origin, and abounds with volcanic products, as sulphur, alum, &c. Rome is principally built of volcanic tufa, which composes the general soil of the Campagna. Some sulphur springs also exist at Poretta, N. of the Apennines, and various kinds of mineral springs are common elsewhere.

*Climate*.—In the legations N. of the Apennines, the thermometer often sinks in winter to 10° Reaumur, and oranges, lemons, &c., do not flourish in the open air. But the greater portion of the Papal States is situated within the 2d Italian region. Vegetation is here scarcely interrupted at any period of the year. The air in the mountain districts is pure and salubrious; but the plains of Ferrara and Bologna, the Campagna di Roma, and the Pontine Marshes, are at that season very unhealthy: the latter especially are subject to malaria. The origin of malaria has been a subject of much dispute, and we have already noticed some of the circumstances that have conspired to reduce the Campagna to its present all but desert state. (*See ante*, p. 57.) In antiquity it was bordered along the shore by dense forests; and it is believed, by many, that the destruction of the woods has been a principal cause of the increase of malaria. "The ancients," says M. Simon, "planted, or preserved these woods, under an idea, probably erroneous, that they screened them from certain winds carrying noxious vapours; but though mistaken as to their real mode of agency, they were quite right in supposing them useful. To the destruction of the woods the increase of malarial fevers has been clearly traced; the one having uniformly followed the other. During the decline, also, and after the fall of the Roman empire, those stupendous aqueducts, which in earlier times brought whole rivers to Rome, having been broken and overturned, in some places poured their waters over the land, which became a marsh; and the population, diminished by wars, was further and still more reduced by pestilence. The country became more unhealthy as it was less inhabited; in the course of a few centuries the millions of ancient Rome dwindled down to 30,000; and it was not before the 16th century, under Leo X., that the scanty pop. grew more numerous. Another cause of the increase of malaria is, that sandy ridges gradually thrown up on both sides the mouth of the Tiber for many leagues, various outlets, natural and artificial, are thus choked up; and hence the Pontine marshes, formerly confined to a narrow space near the promontory of M. Circeio, now extend under other names all along the coast." (*Tour in Italy*, pp. 350—359.)

*Agriculture*.—It has been estimated that of 690,000 *rubbi* of productive land (about 2,656,000 acres, or less than  $\frac{1}{2}$  part of the entire surface), 242,000 are arable, 132,000 in pasture, 14,600 in vineyards, 1,400 in gardens, &c., and 170,000 in woods. In the March of Ancona, and other mountainous districts, and round the towns and

villages, both the properties and farms are small; but it is otherwise in the Campagna and the plain of Bologna. The whole of the Campagna is divided into about 60 estates, varying from 500 to 1,000 hectares and upwards each. The largest of these vast estates, which are mostly held in mortmain, belongs to the chapter of St. Peter. The value of land is very various; the rent in the Campagna varies from  $\frac{1}{2}$  to 4 scudi per hectare. Beyond the maremma, as the pop. increases in density, the rental rises to perhaps 20 scudi per hectare, for land on which there are olive, vine, or mulberry plantations; or where there are adjacent markets for corn. In the neighbourhood of Rome, where the land is rented at a fixed price, it readily sells for 40 years' purchase; while lands farmed on the metayer principle do not generally sell, owing to the greater difficulty of collecting the rent, for more than 33 or 35 years' purchase. Lands in the maremma are frequently rented by middlemen, who underlet them in smaller portions to the actual cultivators. But speaking generally, land is everywhere held under the metayer system, the occupier paying a certain proportion, generally a half of the produce, to the owner. The soil is mostly fertile; but owing to the badness of the government, which oppresses the occupiers with injudicious taxes; the want of capital, skill, industry, and markets; the ignorance of the cultivators, the number of holidays, and the prevalence of the metayer system, agriculture is in the most wretched state. The implements of husbandry made in the country are as rude as those described by Virgil; and various household duties prevent the introduction of improved implements from abroad. The cultivated part of the maremma produces wheat, maize, beans, and vines; but the lands often lie fallow for from 3 to 7 years; and Mr. Maclean states that, from what fell under his observation, not 1 acre in 8 is under the plough or hoe (*Notes on Italy*, 68.). In the more populous and best cultivated parts there is usually an annual change from spring grasses to corn produce; but by far the greater part of this region is in a state of nature. Formerly all the farms were let with a considerable stock of horses, cattle, &c.; but the proprietors, when in want of money, parted with them. In whatever direction the traveller may enter the Campagna from Rome, he would pass over at least from 20 to 30, and frequently from 50 to 60 m., without meeting with a single field cultivated by resident inhabs. In fact, though it embrace an area of about 4,000 sq. m., or 2,560,000 acres, it is not supposed to have a resident pop. of more than 16,000 or 18,000 inhab., mostly wandering shepherds. There is on each estate a *casale*, or large building, where the implements of husbandry are kept; but neither bakehouses nor kitchen gardens exist throughout the whole tract, the labourers being wholly supplied at a few scattered depôts with provisions, sent thither from Rome. The shepherds are in about as depressed a condition as possible; they have a sickly, enervated appearance; their clothing consists principally of sheep-skins, worn with the wool outside; and they sleep either on the ground in the open air, or in some of the ruins with which the country is strewed. They are paid, not in money, but in cattle pastured with those of the farmer. The harvests in the Campagna are reaped by peasants from distant mountainous districts, who come to it in companies of from 20 to 100 individuals. Even in favourable seasons,  $\frac{1}{2}$  or  $\frac{1}{3}$  of their number are attacked by fever; and in unhealthy seasons, the proportion is much larger. Many die in the hospitals of Rome, or in the Campagna; others perish on the road home; and others again return condemned to pass the remainder of their days a prey to intermittent fever, or other diseases brought on by the climate; and yet such is the poverty of the pop. in the mountainous districts, that the chance of realising a few scudi continually tempts new adventurers to undergo the same risks.

In 1800, on the estate of Prince Rospiigliosi at Zagorolo, land was let at a low fixed rate in lots of 1 rubbo each (about 4½ m.) to the peasantry to cultivate as they pleased; and this plan, it is alleged, had the best results. Cultivation extended for a considerable distance round Zagorolo into the plain beneath; and the climate of the neighbourhood was improved. Were such a plan followed round the other centres of civilization, a considerable portion of the Campagna would, probably, soon lose a portion of its desolate and pestilential character, but neither the proprietors nor farmers show, in general, much disposition for change or improvement; and till the government and public economy of the state be completely changed, it were idle to expect that they should evince any such disposition. In order to arrest the depopulation of the Campagna, Pope Pius VII., in 1802, laid an impost of 5 pauli per rubbo on the uncultivated land immediately round the towns, and deducted 5 pauli per rubbo from the tax on cultivated lands. But this miserable attempt to extend industry by fiscal regulations (though it appears to be approved by M. Sismondi) necessarily failed. The regulation, which never was acted upon, speedily became obsolete; and the peasantry

of the Campagna generally remain in the same condition as before the French invasion. (*Sismondi, Etudes sur l'Economie Politique*, ii. 12-128.)

In the mountainous parts of the Papal States, where the country is divided into small farms, and rather thickly inhabited, peas, beans, and kitchen vegetables, which form a large proportion of the food of the peasantry, occupy most part of the land; the remainder being appropriated to wheat, maize, &c. Little skill is evinced in agriculture; the crops being generally raised only for the supply of the cultivators, no one thinks of raising those products for which his land may be the best fitted, till after he has provided an adequate supply of grain or other produce for the use of his family. In the mountains near Rome, white crops are taken from the grounds for 2 or 3 years successively, without any manure being applied to the land; 3 crops of wheat may be succeeded by maize or kidney beans for 2 years, and once in 5 or 6 years, a crop of hemp or flax is, perhaps, raised. The grain is trodden out by horses, and winnowed by hand, immediately after harvest. The wages of a man in harvest time, amount, at Poli, to about 2 pauli a day, with bread and *piquette*, or weak wine; but they are generally higher the nearer the district to the capital. The herdsmen in the Apennines take charge of the cattle belonging to many different persons, and tend them on the mountains, night and day, receiving at the end of the season payment from each proprietor, at the rate of 2 scudi per month for every score of cattle. Besides sheep and *piccinetti*, the food of the peasantry in the mountains principally consists of cheese from goats' or ewes' milk, onions, garlic, and other vegetables, and *polenta*, a kind of basty-pudding, made with maize, pulse, &c. Goats' flesh and pork are sometimes eaten by the labourers, but very little other animal food. (*Graham's Three Months in the Mountains*, 7-16.; &c.)

The provs. of Ferrara, Bologna, Romagna, and those forming the March of Ancona, produce rye, wheat, barley, and maize in abundance. Rice is grown in the legs of Ferrara and Bologna, but there only. Hemp and flax are cultivated along the Adriatic; and saffron, coriander, aniseed, wood, and great quantities of kitchen vegetables in the same districts and the N. provs. The export of hemp is supposed to average 30,000 lbs. a year. Tobacco is grown in several places, especially at Chiaravalle, near Ancona; but being a government monopoly, its culture is confined within narrow limits; Serriatori states that for 300,000 lbs. of tobacco exported, 1,000,000 lbs. are imported. The sugar-cane, indigo, and cotton, are cultivated near Terracina, though neither be grown to any great extent. Olive plantations were long among the most productive investments; but they are now less so than those of the white mulberry. The olive is abundant in the S. provs.; and though the Roman oil be badly made, and mostly consumed at home, a million lbs. have occasionally been exported in favourable years. Vineyards are said not to yield returns proportioned to the outlay. The vines tolerably well cultivated in the vicinity of Velletri; the plants in regular lines being tied to trellages of large reeds; but the most extensive growths are the light, white, unscud wine of Orvieto and Montefiascone, near Viterbo; they do not, however, bear transport well, and are seldom met with out of the country. The timber of the dense forests in the deleg. of Viterbo is not turned to much account from the distance of markets, and is cut principally for smelting iron ore, making charcoal, &c. Cork trees abound in the country about Cisterna, Velletri, &c.

The rearing of live stock is, as has been said, the principal branch of rural industry. The number of sheep in the Papal States is estimated at 2,000,000. There are two varieties; the *negretti*, a small short-legged variety, in every respect resembling the breed of Dauphiny, except that their wool, though good, is of a bluish colour; and the *piccinelle*, a variety with wool of a whiter shade, resembling that of the breed of Aragon. Still, however, it would seem from the statements of Serriatori that the total quantity of all sorts of wool exported from the Papal States does not exceed 800,000 lbs. a year, sent to Tuscany, Piedmont, France, and England. The ewes are mostly kept for their milk, and the greater part of the lambs are killed, the mutton not being good. About 1,000,000 lbs. cheese and 400,000 lamb-skins are annually exported, principally to the other states of Italy. Cattle breeding is extensively carried on in the marshes of the Po, in the provs. Bologna, Perugia, &c.; and about 40,000 oxen are exported. Many buffaloes and hogs are kept in the marshes; and about 100,000 ox and buffalo skins are annually exported. The horses are mostly of good breeds, and are exported to Tuscany and Lombardy. Goats are extensively reared, their flesh and lamb being the principal animal food. In Perugia and other delegs. great numbers of poultry, and in Forlì, Macerata, &c., many bees are kept. (*Châteauey, Italy and its Agric.*; *Bouring's Report on the Roman States*; *Graham*; *Sismondi*; *Sismondi, Etudes sur l'Economie Politique*; *Serriatori, Statist. d'Italia, Part vi.*)

The fisheries on the coast are almost wholly conducted by Neapolitan fishermen. Mining industry is also at a very low ebb. The government works the mines of alum at Tolfa, but the rest are left to private speculators. Iron ore is pretty abundant in some places, but only a few traces of other metals have been discovered. About 4,000,000 lbs. of sulphur are raised in Romagna at Pesaro, &c.; and 100,000 lbs. of vitriol at Viterbo, half of which is exported. Lime, building stone, potters' clay, variegated and statuary marbles, filler's earth, bitumen, naphtha, and coal are met with; but the last, though under the French it was raised in considerable quantities, is no longer made use of. From 70 to 80 million pounds of salt are annually made at Cervia, Comacchio, Corneto, and Ostia, rather more than the half of which is sent to the adjacent states.

*Manufactures*, though in the most depressed and backward state, serve almost entirely for home consumption. Woollen fabrics are the principal, and include cloths, cassimeres, serges, woollen caps, blankets, and carpets. Rome, Spoleto, Matalien, Perugia, Norcia, &c., are the chief places in which these are made; but since their manufacture has ceased to be bolstered up by government premiums, their production has greatly diminished, and their total yearly value does not exceed 300,000 scudi. Hats, of the value of 200,000 sc., are made principally at Rome; good felt cloth at Fabriano; silk goods at Rome, Bologna, Camerino, Perugia, Pesaro, &c.; leather and gloves at Rome; and paper, about 3,500,000 lbs. a year, are the other most important manufactures. Bologna was formerly famous for its crapes, but the value of the exports of these does not now exceed 30,000 sc. a year. The iron furnaces are estimated to yield 18,000,000 lbs. pig, and about 2,000,000 lbs. a year bar iron; rasps, files, nails, needles, pins, screws, &c., are made in various towns; glassware, to the value of 90,000 scudi, copper goods to 80,000 do.; earthenware to about 150,000 do., &c. Roman musical strings enjoy a high and deserved celebrity, and are exported to most countries of Europe. The most flourishing branch of manufacture is the refining of sulphur, a product which, under a free system, might be supplied in unlimited quantities. (*Serristori, Statistica; Bouring's Rep.*) Such is the meagre catalogue of Papal manufactures. "Many a town of Great Britain, of only 30,000 inhabs., produces a greater quantity of manufactured goods than the three million inhabs. of the Pontifical States!" Notwithstanding the enormous sacrifices made by the Papal government, the protections, the prohibitions, the premiums given for the encouragement of what is called native industry, scarcely a valuable discovery has been introduced: the woollen spinning, in some cases by hand, in others by machinery, is far behind its state in England, Belgium, Prussia, or France. The looms, such as were generally employed in the 14th century, are little better than those used by the Indians of the Deccan; the rowing and carding are wholly done by solitary workmen, and with the ancient teasels and hand cards; the shearing with the antique hand shears, such as have been employed from immemorial time; and in some places the fulling is performed by men employed to trample on the cloth, a process probably not now to be found in any other part of the civilized world. (*Bouring's Rep.*, p. 84.)

*Commerce*.—From the circumstance of the Apennines dividing the country into two portions, between which there is little communication, some provs. are exporting while others are importing the same kinds of produce. The N. provs. have generally a superabundance of corn, while in the S. provs. the crops are insufficient for home consumption. On the other hand, oil is exported from the S., while in the N. legations, the Marche, &c., 3,000,000 lbs. are annually imported from S. Italy and Tuscany. Besides the articles of export previously specified, about 3,000,000 lbs. rags are sent every year from the N. legs., partly to Genoa as manure for orange trees; planks are sent to Spain, France, and America; organized silk, about 200,000 lbs., chiefly to France and England; about 450,000 lbs. lined; 3,000,000 lbs. charcoal; 1,000,000 lbs. potash, with vinegar, cork bark, tartar, woad, tallow, bones, honey, works of art and antiquities, are the other principal exports. The imports, in addition to those already noticed, are raw sugar, about 10,000,000 lbs. a year, and other colonial products from England and France, coarse wool for mattresses, cheese and butter from Lombardy, salt fish, pilchards, &c., from England, to the amount of 8,700,000 lbs. a year; about 2,000,000 lbs. of iron ore from Elba, and the same quantity of lead annually from England, and metals and manufactured goods of most kinds from N. and W. Europe. (*Serristori, Statistica d'Italia*.) Serristori estimates the total annual value of the imports at nearly 7,000,000 and that of the exports at above 5,000,000 scudi. The importation of salt, tobacco, alum, and some other kinds of native produce, including wheat when the price is under 14 sc. the rubbio on the Mediterranean, or 12 sc. on the Adriatic, is prohibited; as is the export of hempsed and wheat, when the price is above 16 sc. in the Me-

diterranean, and 14 sc. in the Adriatic ports, and other grains in proportion. The importation of such books as would communicate any useful information, as to politics, political economy, or philosophy, is of course absolutely forbidden. Notwithstanding the low state of manufacturing industry, high duties are levied on manufactured goods when imported. Woollen cloth, woollen and cotton fabrics, and cambrics, pay 100 sc.; dyed or stamped cottons, 50 sc.; and porcelain, 20 sc. per 100 lbs. The principal seats of the foreign trade are Ancona and Civita Vecchia. In 1838, 1,292 ships, of the aggregate burden of 66,828 tons, with cargoes of the value of 1,109,300 sc. cleared from the former port; and in 1837, 1,520 ships, burden 133,402 tons, cleared out of the latter. (*Parl. Reports, 1838; Bouring's Reports, &c.*)

Accounts are kept in *scudi* (crowns), = 4s. 3d. each, and divided into 10 *paoli*, and 100 *bajocchi*. The Roman *libbra* or pound of 12 *oncie* and 288 *danari* = nearly 12 oz. avoird. The *barile* of wine, of 32 *boccali*, and 128 *fogliette* = about 13 galls.; the *barile* of oil contains only 28 *boccali*. The Roman foot = 11.7 Eng. inches; the palm of architects = about 8.5 inches; the Roman mile = 1628 Eng. yards. Generally the measures of Rome have less capacity than those of the N. legations.

The Government is wholly ecclesiastical, no one being eligible to fill any civil office who has not attained the rank of abbot. The pope enacts all laws, and nominates to all clerical appointments. He is assisted, however, by the High College of Cardinals, comprising about 70 members; and the different branches of the government are conducted each by *Congregazioni*, with a cardinal at its head. Each leg. and deleg. is governed by a cardinal, assisted by 2 assessors, and a council of 4 individuals nominated by the pope, half of whom are changed every 5 years. The jurisdiction of the temporal nobles is provisionally retained in some provs., but all the judicial officers of the nobility must be confirmed by the pope, and are subject to the general laws. In each cap. of a deleg. there is a tribunal of primary jurisdiction, which also decides in appeal on certain matters that first come before the district officers. The proceedings in these courts are public, but there is no jury. There are 4 courts of appeal, 1 at Bologna, 1 at Macerata, and 2 in Rome; and a supreme tribunal of final resort, that of *l'Editore Scatissima*, with a single judge, 5 tribunals of commerce also exist. Every town has its own jurisdiction and magistracy, and a municipal council of from 18 to 48 mems., according to the pop. The laws in force are nominally those of the Justinian code; but the pope has power to alter or annul any previous law, and which is incomparably worse, the provincial judges have extensive discretionary powers. Criminal proceedings in the Papal States are very dilatory; and in all cases the accused is thrown into prison, whence there is no liberation on bail. In 1832, 2,708 criminals were confined in the various prisons, of whom 580 had been convicted of homicide, 384 of other offences against the person, 255 of burglary, and 1,072 of other offences against property, and 76 of state offences. Brigandage is less frequent than formerly; and the government has stationed five military posts along the road from Velletri to Terracina, for the protection of travellers. Still, however, the vice and the law are equally defective, and assassinations and other crimes of violence are daily taking place without the perpetrators being ever brought to justice. The whole frame of government is, in fact, a tissue of abuses.

On the fall of Napoleon, the alienation of church domains was confirmed; but the compensation since made to their former owners, and the restoration of suppressed churches and convents, have cost the government prodigious sums, and are the principal causes of the wretched state of the finances. (*Von Raumer's Italy*.) Within the limits of the Papal States there are no fewer than 8 archbishops and 59 bishops' sees; and it is estimated that in Rome there is a clergyman for every ten families. It is needless to add that this super-abundance of priests, instead of promoting religion and morality, is, in fact, a principal cause of their low state in the city. The outward deportment of the Papal court is, however, at present highly decorous. "Those times so disastrous, and disgraceful, when the Popes had so many nephews, and those nephews built so many splendid palaces and villas, called by the Romans, in derision, 'miracles of St. Peter,' are now almost as much forgotten in Rome, as the times when horses were made consuls, and eunuchs emperors." (*Lyman's Polit. State of Italy*.)

*Public Instruction*.—There are 2 chief universities—in Rome and in Bologna, each having at least 38 professors; and 6 universities of secondary rank—at Ferrara, Perugia, Camerino, Macerata, Fermo, and Urbino,—each at least with 17 professors. The university of Rome was, in 1839, attended by 843 students (*Serristori*); that of Bologna, which ranks, in Italy, second only to Pavia, is usually attended by from 500 to 600 students; that of Perugia by about 300; and those of

Camerino, Macerata, and Urbino by about 200 each. Altogether, upwards of 2,600 students annually attend the universities. (*Journal of Education*, viii, 203.) There are various other high colleges in Rome, &c., the principal of which is the Gregorian (*see* ROME). Secondary schools exist in most towns; but there is no general system of elementary instruction, and it has been estimated that only 1 in 60 of the pop. attend public schools. The truth is, that education in the Papal States is in the most degraded state imaginable. It is wholly in the hands of the clergy; and is conducted on the principle, "If we may so call it, of imbuing the pupils with the grossest prejudices, and of proscribing every study or pursuit that might tend to expand or enlighten their minds, or make them acquainted with their rights and duties. The university education, excepting, perhaps, in so far as respects medicine, is altogether contemptible. Even theology is not efficiently taught; and philosophy, politics, and political economy are as little relished in Rome as in Morocco.

The censorship of the press is severe in the extreme; and the gazettes published in the different towns insert nothing not approved by the censors. The journals, of which there are several, devoted to *Belles Lettres*, antiquities, the fine arts, &c., being under a less severe surveillance, occasionally display originality and learning; but the literature of the Roman States is, like their government, emasculated and imbecile. "The Eternal City prohibits all the best works on mental philosophy. She has not one eminent man of science; and if she had a Cuvier or a Buckland, she would not permit him to lecture or to publish his discoveries to the world till they had been subjected to the pruning knife of some ignorant censor. The apathy and timidity, the dread of independent thinking and free inquiry manifested by the Papal government, seems, however, to admit of easy explanation. Its dogmas, its rites, its principles of action were framed in accordance with the opinions of the 12th century. It does make some changes silently, by dropping a few untenable pretensions; but it can make no great and marked change without abandoning its professed character of being the depository of immutable truth. The rulers of Rome, therefore, finding themselves unable to raise up their old institutions to the level of modern knowledge, endeavour to keep down this knowledge to the level of their institutions. They see the props and stays of their system dropping off, and one source of influence falling after another, and their prudence counsels them to shut out, as far as they can, the light which is sapping their authority, and to look upon innovations, even of the most harmless kind, with suspicion. They are religious *Conservatives* in the strictest sense of the term." (*Maclear's Notes on Italy*, p. 97.)

**Charitable Institutions.**—The Papal States are literally overrun with all kinds of charitable institutions. In Rome, especially, the sums expended on charitable foundations are, in proportion to its extent, twice as large as in Paris; so that, as Serristori exclaims, "*Dovrebbe crederci che negli Stati Pontifici, e molto più in Roma non esistesse mendicizia.*" (*Statist.* p. 39.) But nowhere are the pernicious consequences of indiscriminate charity better exemplified than in the Roman States, where mendicity, wretchedness, and want prevail to a frightful extent. The universality of beggary removes all sense of shame; and a large proportion of the pop. are degraded enough to prefer subsisting on alms to making any attempts to provide for themselves. There is a *monte-di-pieta*, or government pawn-broking establishment, with a capital of 230,000 scudi, in Rome; and others in most of the principal cities; where also savings banks have been established with considerable success. (*Bourving's Rep.*, pp. 88—90.)

**The army.** If so it may be called, is under the direction of a cardinal-president, and a board of 3 general officers; and consisted, in 1840, of a permanent force of 14,680 men. (9,300 infantry, 800 cavalry, &c.); and a body of reserve and national guard, together amounting to 5,600 men.

The principal fortresses garrisoned by the Pope are those of Rome, Civita Vecchia, Urbino, Castel Franco, Terracina, and Ancona: by the treaty of Vienna, the Emperor of Austria has the right to garrison Ferrara and Comacchio. The naval force consists of a solitary ship of war, manned by 33 men. (*Almanach de Gotha*, 1840; *Quintini, Italie et ses Forces Milit.*; &c.)

The taxes are very heavy, and are imposed in the most possible manner. The principal consists of a land tax; heavy duties are also laid on most articles consumed in towns and villages; and all sorts of grain, except rye, maize, barley, and oats, pay a heavy tax when ground at the mill. Salt, tobacco, alum, and vitriol, are monopolies in the hands of government. The customs' duties are probably, however, on the whole, the most oppressive and injurious. The lottery, also, notwithstanding its demoralising influence, is a fertile source of revenue; and contributes, in fact, about one tenth part of the entire public revenue!

The public revenue and expenditure was as follows in 1835:—

REVENUE.	EXPENDITURE.
Direct taxes - - - Scudi.	Treasury charges - - - Scudi.
Customs, &c. - - - 2,553,558	Customs do. - - - 880,349
Stamps and registry 577,910	Stamps, &c. do. - - - 79,071
Post-office - - - 288,065	Post-office - - - 163,460
Lotteries - - - 896,266	Lotteries - - - 396,011

	8,814,961
	Deficit in the Revenue 616,838

But, according to the *Ann. de Gotha*, 1841, the accounts for the preceding year were more satisfactory.

**History.**—The rise of the Popedom as a temporal power, dates from 755, when Pepin, king of the Franks, invested the pope with the exarchate of Ravenna; to which Charlemagne added the provs. of Perugia and Spoleto. Benevento was given to the pope by the emperor Henry III. in 1053; and in 1102 the marchioness Matilda of Tuscany bequeathed to the holy see the provs. forming the "Patrimony of St. Peter." In 1297, Forlì and the rest of Romagna, and in 1364, Bologna, became portions of the Papal Dominion; and at the end of the 14th century the pope acquired full jurisdiction over Rome and Sabina. Ferrara was acquired in 1598, Urbino in 1626, and Orvieto, in 1649.

The French invaded the states of the church in 1797, after which the N. legations were annexed to the Cisalpine republic. In 1798, Rome was taken by the French, and in 1810 the whole of the Papal States were included in the kingdom of Italy. Since 1815, most part of the pope's former dominions have been restored; but his authority, especially in the N. legations, is far from being well established, and his power as a temporal prince, depends wholly on the support given him by Austria. (*Percival, Hist. of Italy*; *Sismondi*; *Maclear, Notes on Italy*; *Von Raumer's Italy and the Italians*, &c.)

**PAPUA, or NEW GUINEA**, a very large island, or perhaps a dense cluster of islands, in the E. Archipelago, third division; between the equator and the 9th deg. of S. lat., and the 130th and 150th degs. of E. long.; having N. and E. the Pacific Ocean, W. and S.W. the sea in which Gilolo, Ceram, the Aroo Isles, &c., are situated, and S. Torres Straits, separating it from Australia. It is indented by several deep bays; but even its coast line is in many parts unknown, and its interior has been but little explored, and is, in fact, a *terra incognita*. The coast, viewed from the sea, rises gradually into hills of considerable elevation; but no mountains of any remarkable height have yet been discovered. The whole island being covered with palm trees and timber of a large size, little can be said respecting its soil, which, however, is presumed to be fertile. The cocoa-nut, the two species of the bread-fruit tree, pine-apples, and plantains are found here: nutmeg-trees also grow wild; but it is not known whether they produce good spice. It is said that there are no quadrupeds in Papua, except dogs, wild cats, and hogs; and that to the E. of Gilolo no horned animals of any description are to be found. The woods abound with wild hogs, which the natives kill with spears and bows and arrows, in the use of which they are very expert. There is reason to believe that gold is found in the interior of the island. The natives of Papua appear to consist of two distinct races; those in the W. being identical with the negroes of the E. Archipelago, while the inhabs. of the E. part of the island belong rather to the sallow complexioned long-haired natives of the South Sea Islands (*see* POLYNESIA). The Papuan negroes, of whom a brief notice is given in the art. ARCHIPELAGO, EASTERN (I. 149.), continue, for the most part, in their original state of nakedness and barbarism, devoid of homes or clothing, and subsisting principally on the precarious produce of the chase, or on the spontaneous products of the forests. On the N.W. coast, which has been the most frequently visited by Europeans, the dwellings of the natives are raised on posts, as in other parts of the Archipelago and among the Ultra-Gangetic nations of the Asiatic continent. These tenements accommodate many families, who live in cabins on either side of a wide common hall that occupies the centre of the building. The cabins are miserably furnished; a mat or two, a fire-place, an earthen pot, with perhaps a china plate or basin, and some sago flour. As they cook in each cabin, and have no chimney, the smoke issues at every part of the roof; and at a distance the whole building seems to be on fire. Their clothes are very

scanty, but they contrive to sustain themselves so as to attract the attention of European observers. Their hair is not so short, close, and woolly as that of the African negro, and they wear it bushed out round their heads to the circumference of 24 and 3 ft.; and, to make it more extensive, comb it out horizontally, occasionally adorning it with feathers.

The men in general wear a portion of the inner bark of the cocoa-nut tree, resembling a coarse kind of cloth, fastened round the middle; and the women use blue Surat bafas in a similar manner. Boys and girls go entirely naked till puberty. All are fond of glass and coloured china beads, and wear them about their wrist, &c. The women, as generally happens among savages, lead a laborious life; and Forrest says that he has often seen them labouring hard in fixing posts in the ground for staves, in making mats, or in forming pieces of clay into earthen pots, while the men were sauntering about.

In the interior the inhabs. are supposed to practise gardening and some sort of agriculture, as they supply the inhabs. on the coast with food, in exchange for axes, knives, and other coarse cutlery. The natives on the coast purchase these from the Malays and the Chinese, particularly the latter, from whom they also buy blue and red cloths. In exchange the Chinese carry back missoy bark, slaves, ambergrease, sea slug (*biche de mer*), tortoise-shell, small pearls, birds of paradise, and many other species of dead birds, which the Papuas have a particular method of dressing.

The Dutch may have some trade with Papua; but Mr. Earl says that no intercourse whatever takes place between it and the British settlements in Australia, Singapore, or elsewhere in the East.

The inhabs. of the more westerly islands of the E. Archipelago buy the Papuas for slaves; and the natives of the W. coast of Papua make slaves of those of the E. and sell them to strangers. With a similar view, probably, they were formerly, and perhaps still, are accustomed to assemble in great numbers, and make war on the inhabs. of Gilolo, Ceram, Amblo, and other islands still farther W.

The Arahians, in their early voyages, appear to have come into contact with the Papuas, whom they constantly describe as cannibals. Papua was discovered by Europeans in 1511, and frequently resorted to by the Portuguese during the 16th century. Towards the end of the 18th century, Forrest, McCluer, and other British navigators visited it; since which it has been but little noticed.

PARA, formerly called *Belem*, a city and seaport of Brazil, cap. prov. of same name at the confluence of a considerable river, with the great estuary of the Tocantins, or Rio Para, on its S. side, opposite the island of Joanes or Marajo, estimated about 60 m. from the Atlantic, and 300 m. W.N.W. Maranhão; lat.  $1^{\circ} 30'$  S., long.  $48^{\circ} 22' 34''$  W. Pop. estimated at 20,000, incl. comparatively few negroes. It stands in a fertile plain, and is one of the finest Brazilian cities, its streets being straight, and the houses almost all of stone, and both solid and elegant. The cathedral, and governor's palace, are said to be magnificent edifices. There are several other churches, but only 2 convents appear to exist at present, that of the Mercurianos having been converted into barracks, and the Jesuit's college into the episcopal palace and seminary. Parahá has a judicial tribunal, royal college, botanic garden, hospital, theatre, and arsenal. The harbour is confined, and is said to be diminishing in depth; the approach from the ocean is also rather difficult, and it is always expedient to take on board a pilot at the mouth of the estuary. The principal articles of export are cocoa, of which it exports about 60,000 bags; caoutchouc, of which it is the principal mart; with isinglass, rice, drugs, and cotton, amounting in all from 250,000 to 350,000 l. a year. The sugar grown in the neighbourhood is bad, the soil not being favourable for the cane. The communication with Great Britain is principally with Liverpool. Ships of war have been built here; and timber used to be exported to Lisbon for the use of the arsenals. The climate of Para is very hot; and thunder-storms occur almost daily. It was formerly deemed very unhealthy, but in this respect it has latterly been materially improved. (*Mann's Trav. in Brazil*, 403, 404.; *Mod. Trav.*, xxx.: *Dict. Géog.*)

PARAGUAY, an indep. state of S. America, principally between the 21st and 27th degs. of S. lat., and the 54th and 58th of W. long.; having N. and E. Brazil; S. E. and the territory of La Plata; and W. the latter repub. and Bolivia. Shape nearly oblong; length N. to S. about 460 m. Estimated area, 74,000 sq. m. Estimated pop. 300,000 (*American Almanac*, 1841); principally whites of Spanish descent, native Indians, negroes, and mixed races originating from the foregoing, those of the Indo-Spanish descent greatly preponderating. Paraguay is an inland peninsula, inclosed E. and S. by the Paraná and its tributary the Yaguarí, and W. and N.W. by the rivers Paraguay and Blanco. A mountain

chain, the Sierra Amambay, enters Paraguay on the N., runs through it near its centre to near lat. 26°, and then divides into two branches, inclosing the basin of the Tibiquari. From the undivided chain many rivers flow on either side to join the Paraná or Paraguay; but none of them require any special notice, though in the rainy season they are all swollen so as to inundate a considerable extent of country. Respecting the Paraná and Paraguay, see PLATA (RIO DE LA). There is but one lake, that of Ypaó, worth mention; extensive marshes, however, abound in the W. The climate is temperate, but damp. Paraguay, in point of fertility, forms a striking and favourable contrast to the adjacent parts of the Argentine republic. It is well wooded, and diversified with undulating hills and verdant vales. Mr. Robertson, who entered it at Neembucú, states, "I was glad to meet with much more frequent traces of cultivation and industry than were to be found in the solitary tracts over which I had heretofore sped my monotonous way. Wiltewashed cottages often peeped from among the trees, and around them were considerable fields of the cotton, yucca, and tobacco plants. The Indian corn and sugar-cane were also frequently to be seen in the vicinity of the farm-houses of a better character than the cottages; and there was abundance of wood and of the prickly pear. With the latter, the cultivated country, as well as the potoeros or paddocks, were invariably well fenced." (*Letters from Paraguay*, i. 259, 260.)

Almost half the entire territory is national property. It consists of pasturage lands and forests, which have never been granted to individuals, the estates of the Jesuit missions, and other religious corporations; and a great number of country houses and farming establishments confiscated by the dictator. The latter has paid great attention since the commencement of his reign to the improvement of agriculture, and to rendering the government property productive; and has, by so doing, created a branch of revenue which, aided by time and a wise government, may be found sufficient of itself for all the wants of the state. He has let a part of these lands at a very moderate rent, and for an unlimited period, under the single but indefinite condition, that they shall be properly cultivated, or turned into pasturage. On other parts of these lands he has established large farms, where thousands of cattle and horses are bred. These supply his cavalry with horses, and his troops with provisions; besides which, they also furnish great numbers of oxen for the consumption of the capital. For these the dictator requires a high price, and will allow no one to undersell him. The farming establishments are objects of peculiar solicitude to the dictator; and every month the master herdsmen are obliged to make a detailed report concerning them. (*Reugger and Longchamp's Reign of Francia in Parag.*, 174-6.)

The arbitrary measures of Francia have certainly produced a salutary result on farming economy at large throughout Paraguay. Before the establishment of his sway, the farmers never thought of cultivating any article beyond tobacco, the sugar-cane, and yucca-root; while the gathering of the maté or Paraguay tea engrossed almost all hands. In 1830, an extent of country, 80 leagues in circumference, was devastated by locusts, and a famine impended over the inhabs. To avert this, the dictator compelled the proprietors to sow a second time, a large portion of the land which had been laid waste, and the harvest that followed was most abundant. On the complete success of this experiment, Francia determined to extend his measures to the whole country, so that, ultimately, every farmer was under the necessity of employing himself in that particular branch of agriculture which the dictator pointed out! By these violent regulations, which, perhaps, were, at the outset, the best suited for the country, a total change in its rural economy has been produced; it is no longer customary to import common necessities from Buenos Ayres and the adjacent provs. The migration of the rural pop. has been forbidden. Rice, maize, yucca, kitchen vegetables, are now cultivated on a more extended scale; and the growth of cotton, which had formerly been wholly received from Corrientes, suffices for the consumption. The breeding of horses and horned cattle has been equally encouraged; and instead of receiving cattle from Entre-Ríos, as previously, the farmers have now a surplus stock. The prohibition to interfere with the forests, and the total suspension of the intercourse between Paraguay and other countries, contributed very much to produce these results, as they turned to the cultivation of the soil all the industry which used to be applied to navigation, the cutting down of timber, and the collection of the yerba maté.

The latter, or Paraguay tea, is the leaf of the *Ilex Paraguayensis*, an evergreen about the size of an orange-tree, growing wild and in great abundance in the dense forests in the N. and E. provs. to which the natives resort in great numbers for its collection. It is difficult to

penetrate the country where it is found; but the profits derived from the article are ample. Paraguay tea being in as general demand throughout La Plata, Chili, and many parts of Peru, as the teas of China are in Europe. Its collection is undertaken by merchants in Assumption, who each employ a master-workman or *ahilitador*, and from about 20 to 50 peons, the master providing axes, knives, tobacco, mules, bulls for slaughter, and other provisions, with money advanced to him by the merchant. The boughs of the *yerba*, with the leaves attached, are first hewn down and scorched; the leaves being then roughly removed, and dried by being placed over a wide arch of wood work, underneath which a large fire is kindled; and, together with the small twigs, they are afterwards ground to powder by a rude wooden mill. The tea is next weighed and stored by the overseer, who pays the peons for it, at the rate of 2 rials or 1s. each arroba of 25 lbs. It is next rammed tightly into bags of bull's hide, which are left to dry in the sun, and contain from 200 lbs. to 220 lbs. each; and in this state it goes to market. Mr. Robertson estimates that for six months' work, the peon may obtain about 57l. in wages; but he has run in debt to his master perhaps 12l. before entering the woods, and as much more while employed there, for neither of which sums he has got half the value. Of the remaining balance of 33l., he spends perhaps 12l. in ornaments for his horse, 5l. more in personal decorations, and the rest in gambling, to which all are very much addicted. "In a month the peon re-sells his horse-furniture and personal apparel; and in a fortnight after that he is left without a farthing; and in a week more he is to be found again naked in the *yerbales*." (*Robertson's Letters*, l. 134, 159.)

*Manufactures* received a considerable impulse from the dictator's prohibition of foreign commerce. The people had previously imported cotton, woollen, and almost all other manufactured goods; and there used to be no such thing as a good workman in Paraguay. But the exercise of ingenuity was excited, not only by necessity, but by terror. The dictator caused a gibbet to be erected, and threatened a poor shoemaker to hang him up, because he had not made some belts of the size he required; and once he sentenced an unfortunate smith to hard labour, because he had improperly placed the sight of a cannon 1 (Reutter, &c., p. 50.)

Francia, next to personal aggrandizement, appears to be actuated by the vulgar, short-sighted, barbarous policy of wishing to render Paraguay dependent solely on her own internal resources, and wholly unconnected in any way with any other S. American state. Except in special cases, he permits no ingress or egress of individuals or merchandise to and from Paraguay; and this system of exclusion will probably be kept up as long as he lives. While Paraguay remained a Spanish prov., the yearly value of its exported produce fell little short of 1,500,000 dollars. 8,000,000 lbs. Paraguay tea were annually sent to Santa Fé and Buenos Ayres, besides 1,000,000 lbs. tobacco, large quantities of timber, cotton, sugar, molasses, spirits, &c. But the only trade, if so it may be called, which has been carried on of late years, has been upon account of the dictator. "When he wants an assortment of foreign goods, a permit is sent over to the adjoining prov. of Corrientes for a vessel to proceed to the opposite port of Neembucú. On her arrival there, the invoice of the cargo is immediately forwarded to him at Assumption, from which place, after selecting such articles as he requires, he orders a quantity of yerba-maté to be sent on board in payment. There is no appeal from his own valuation: no one is allowed to go on shore, and the ship is sent back as soon as the yerba is delivered. This article is in such demand, from his having stopped the trade in it, that the people of Corrientes are glad to get it upon his own terms. In the same manner, for a short period, he allowed a peddling traffic to be carried on between the Brazilian missions beyond the river Uruguay and the port of Ytapua, but that trade he altogether stopped about 10 years ago." (*Parish's Buenos Ayres*, &c., 234, 235.)

The government of Paraguay is an anomaly in the present times. It approaches as near to an absolute despotism as can well be conceived, the dictatorship of Sylla in ancient Rome being the only model with which it may be compared. The state is nominally republican, having a so styled congress of several hundred members; but the entire power centres in the dictator, who is not only commander-in-chief, but head of the church, the law, and every other branch of the administration. The country is divided into 20 sections, or *comandancias*, exclusive of a territory in the S. E., called the Missions, occupying 600 sq. leagues, and governed by a special officer. Besides Assumption, the cap., there are but four towns in Paraguay; the other collections of houses being mere villages. There is no law save what is dic-

tated by the caprice of the dictator; and his punishments are as barbarous as his policy is tyrannical and oppressive. The military force comprises about 3,000 men, principally cavalry; besides which, there is a militia, comprising every free male citizen, 17 years of age, and capable of bearing arms. The naval force consists of only a few brigantines and gun-boats. The amount of the public revenue is uncertain: it is derived from state property, the greater part of which has been confiscated by the dictator; tithes in kind upon all articles of produce, the right to levy which is sold each year to the best bidder; taxes upon shops and store-houses in the cap.; the *droit d'habaire*, or right to the property of all foreigners dying in Paraguay; fines, postage, sale, stamp and commercial dues, &c. The principal state expenditure is for war-stores, and the support of the army. There is no public debt. Public education is not much encouraged by the dictator; but there are many primary schools for male children, and, according to Reutter and Longchamps, "it is a rare occurrence in this country, where no printing-press exists, to find a free man who cannot read and write." Morals are at a very low ebb.

Paraguay was discovered in 1526 by Sebastian Cabot. The Jesuits afterwards established many missions in the S. part of the country; and were supposed to have effected astonishing improvements in the condition and habits of the natives; but no sooner had they been expelled in 1768, than the fabric they had been so long in raising fell straightway to pieces, and the Indians relapsed into their former barbarism. In 1776 Paraguay became a prov. of the viceroyalty of Buenos Ayres. In 1810, the Buenos Ayres revolutionary troops were defeated by the Paraguayans; but the latter soon afterwards deposed their governor, and, in 1813, proclaimed Paraguay a republic under two consuls. In 1814 the second consul, Dr. Francia, found means to get himself made sole dictator for 3 years, and at the expiration of that term, for life. In 1826 Francia declared Paraguay independent, and its independence was formally recognised by the emperor of Brazil in 1827. (*Robertson's Letters on Paraguay*; *Reutter and Longchamps*; *the Reign of Dr. Francia*; *Parish's Buenos Ayres*, &c.)

PARAMARIBO. See GUIANA (DUTCH). PARGA, a fortified town and sea-port of European Turkey, in Albania, sanjak Delvino, on the Ionian Sea, near the mouth of the Panar (an. *Acheron*), 48 m. S.W. Yannina, and 13 m. E. Paxo; lat. 39° 15' 45" N., long. 20° 24' S. E. Pop. 4,000. It is built amphitheatrically on the side of a steep rock, surrounded on three sides by the sea, the summit of which is crowned by an almost impregnable fortress, commanding a magnificent view of the surrounding coast and country. It is surrounded by strong walls, and has a double harbour. The streets are narrow, steep, and dirty; it has no public buildings of importance, and many of the houses are in ruins. The inhabs. export oil, tobacco, different kinds of fruit, and some tolerably good wine, all being the produce of the fertile and well-watered tracts surrounding the town. Sir J. C. Hobhouse states that the Pargiotes were among the worst of the Albanians, and that their connexion with the Christian states had taught them only the vices of civilisation without diminishing their ferocity. (*Albania and Turkey*, p. 139.)

The opinions of General Campbell and Colonel Leake are much more favourable; and Colonel de Bosset, who had excellent opportunities of estimating their character, pronounced them to be spirited and independent, though at the same time temperate, docile, and, if well treated, easy of command. The Albanians, however, mostly withdrew from the town on its being ceded to Ali Pacha, and the present inhabs. are principally Turks.

Parga is hardly mentioned in history until 1401, when it entered into an alliance with Venice, which continued nearly four centuries, until the subversion of the latter in 1797. Parga, being independent of Ali Pacha, tyrant of Albania, afforded an asylum to refugees from his violence, and was the seat of frequent rebellions against his government; so that it became an object of importance for him to annex it to his dominions. In 1814, it was besieged by Ali, but being assisted by the British in Corfu, Ali was obliged to give up the siege, and the Pargiots had reason to believe that they would be incorporated with the republic of the Ionian Islands. The British government did not, however, agree to this arrangement: they felt the importance of Parga to Corfu; but the dread of continued dissensions with the Albanians led to a negotiation for its surrender, on Ali paying a pecuniary indemnity to such of the inhabs. as should refuse to remain after a change of government. In consequence of this agreement, which was severely, and perhaps justly, censured, most of the Pargiots withdrew to the Ionian Islands; and Ali had to pay, in all, about 200,000*l.* by way of compensation. The cession took place in 1819.

PARIS (an. *Iutetia* or *Lucotetia*), a cele-  
H h

\* Francia retained Bonpland, the companion of Humboldt, without any just cause, in confinement in Paraguay for nine years!

brated city of W. Europe, the metropolis of France, being the next European city to London in magnitude and importance, in the dep. of the Seine, of which, with its suburbs, it occupies the largest portion, on the Seine, about 110 m. (direct dist.) from its mouth, 210 m. S. S. E. London, and 159 m. S. S. W. Brussels; lat. (observatory)  $48^{\circ} 50' 14''$  N., long.  $2^{\circ} 20' 15''$  E. Pop., in 1826 (exclusive of troops and temporary residents), 890,431, and, in 1836, 909,126. The city stands in a plain, surrounded on several sides, but especially N. and N. E., by considerable eminences; and the geological constitution of the district is so peculiar that the French geologists have called it the Paris basin, in the same way that the English have called the tertiary formations near the English metropolis the London basin. Here are found alternate strata, abounding with marine and freshwater shells, and containing also many fossil remains of extinct animals. Gypsum (known in England as *plaster of Paris*) is found in large quantities; and S. of the Seine is quarried good building-stone, of which, indeed, some of the principal edifices of Paris are formed: the older quarries, all of which were subterranean, have been converted into catacombs, or repositories for the bones of the dead, removed from the public graves that once abounded, greatly to the injury of health, of the city.

Paris, like London, is situated on both sides a considerable river, which runs through it from S. E. to N. W., and divides it into two parts, of which the largest is on the N. side; the most ancient part of the city being, however, confined to the small islands within the channel of the river. In the course of centuries it has so extended itself, that it now occupies an area of about 14 sq. m., including the Champs Elysées, and other open spaces at its W. extremity. Many of the best streets are parallel to the river, and the open spaces, or quays along its banks, present an agreeable feature of which London is almost wholly destitute. A few of the streets more recently built are wide, and lined on each side with *trottoirs*; but, generally speaking, the streets are narrower, and less regular, than those of the British metropolis. The style of building, however, in the best streets, is probably superior to that of London. "The houses are very high, and many of them comprise 7 stories, including the ground-floor; for there are *no sunk stories*. All the tenements have rich heavy cornices one story below the roof, and the fronts are invariably coated with plaster, and repainted from time to time. The town has, therefore, in its better parts, a gayer and handsomer appearance than London; but internally, the houses (which are of great extent, inhabited by many families, and in some cases, formed round internal courtyards, accessible by *porte-cochères*), want the many comforts and conveniences which are found in English houses." (*MacLaren's Notes*, p. 12.) As in London, the fashionable part of Paris is at its W. end, while the districts of an opposite character are mostly in the E. and S. The *boulevards*, a succession of open, circular roads, similar to the "Circular Road" which surrounds Dublin, encircle the more densely peopled portion of the city. They occupy the site of the old fortifications built in the reign of Louis XIII., are from 60 to 70 yards in width, and, being planted with trees, form agreeable places of resort for all classes of the inhabs.

The city was originally divided into 4 quarters (*quartiers*), but as it increased, new allotments became necessary, though the old name was re-

tained; and hence we find that there are at present 48 *quartiers*. For electoral and municipal purposes, however, Paris is divided into 12 *arrondissements*, each comprising 4 *quartiers*, and each sending 1 mem. to the Ch. of Dep.

The following table exhibits the pop. belonging, in 1826 and 1836, to the different *arrondissements*, with the names of the *quartiers* comprised in each, the order of succession being from W. to E. on each side, the Seine.

Arrondissements.	Quarters.	1826.	1836.
I. N. of the Seine.			
I.	Quartiers du Roule, des Champs Elysées, de la Place Vendôme, des Tuilleries.	72,101	82,758
II.	Quartiers de la Chaussée d'Antin, du Faubourg du Palais Royal, du Faubourg Montmartre.	78,659	90,292
III.	Quartiers Foissonnière, de Montmartre, de St. Eustache, du Mail.	54,167	57,059
IV.	Quartiers de St. Honoré, des Marchés, du Louvre, de la Banque de France.	51,759	50,123
V.	Quartiers de Bonnes-nouvelles, du Faubourg St. Denis, du Faub. St. Martin, de Montorgueil.	78,569	82,231
VI.	Quartiers du Temple, des Lombards, de la Porte St. Denis, de St. Martin des Champs.	90,481	94,108
VII.	Quartiers des Arcs, de St. Avoise, du Mont-de-Pitié, du Marché St. Jean.	73,905	68,407
VIII.	Quartiers des Quinze-Vingts, de Popincourt, du Faub. St. Antoine, du Marais.	79,755	82,091
IX.	Quartiers de la Cité, de l' Arsenal, de l'Île St. Louis, de l'Hôtel-de-Ville.	57,795	71,730
S. of the Seine.			
X.	Quartiers des Invalides, de la Monnaie, de St. Thomas d'Aquin, du Faub. St. Germain.	90,625	89,175
XI.	Quartiers du Luxembourg, du Palais de Justice, de l'Ecole de Justice, de la Sorbonne.	65,743	58,767
XII.	Quartiers de l'Observatoire, de St. Jacques, du Jardin des Plantes, de St. Marcel.	97,222	82,561
		890,431	909,126

"Paris, however," observes Mr. H. Lytton Bulwer, "is divided into quarters as well by its manners as its laws, and these different districts differ as widely one from the other in the ideas, habits, and appearance of their inhabs. as in the height and size of their buildings, or the width and cleanliness of their streets. The *Chaussée d'Antin* breathes the atmosphere of the Bourse, and the *Palais Royal* is the district of bankers, stock-brokers, generals of the empire, and rich trades-people; and it is the quarter fullest of life, most animated, most rife with the spirit of progress, change, luxury, and elegance. Here are all the new buildings, arcades, and shops, and here are given the richest and most splendid balls. How different is the *quartier St. Germain*, the district of the long and silent street, of the meagre repast, and the large, well-trimmed garden, of the great court-yard, of the broad and dark staircase, inhabited by the administrations and the old nobility, manifesting no signs of change, no widening of streets, no piercing of arcades or passages: it hardly possesses a restaurant of note, and has but one unfrequented theatre. Further E., on the same side of the Seine, is the *quartier* of the students, at once poor and popular, inhabited by those eloquent and illustrious professors who give to France its literary glory. Then there is the *Marais*, the retreat of old-fashioned judges and merchants, where the manners have been changed almost as little as

the houses by the philosophy of the 18th century: here are no carriages, no equipages; all is still and silent; you are carried back to the customs of the grand hotels in the time of Louis XIII. Then there is the Faubourg St. Antoine, the residence of those immense masses that reigned under Robespierre, and which Bonaparte, after Waterloo, refused to summon to his assistance. And behold the ancient city of Paris surrounded by the Seine, and filled by a vast and wretched population; there, proud amidst the sordid roofs around them, rise the splendid towers of Notre Dame, that temple of the 12th century which, in spite of the Madeleine, has not been surpassed in the 19th; there is the Hôtel-Dieu, the antique hospital as old as the time of Philip Augustus, and there is the Palais de Justice, where sat the parliament of Broussel, remarkable in the chronicle of De Retz!" (*France, Social, Lit. and Pol.* i. 44—47.)

**Barrières, Boulevards, &c.**—Paris, as defined by the walls erected in the reign of Louis XVI., is of an irregular oval shape, its greatest length from N. W. to S. E. being 44 m., and its greatest breadth from the Barrière de la Villette northward to the Barrière d'Enfer southward about 24 m. In these walls are 88 gates, at each of which is a toll-house for the collection of the *octrois*, or local dues on goods entering the city; and on the outer side of the walls are well-planted walks, called "the outer boulevards," abounding with *gingettes*, wine-shops, &c., the favourite resort of the lower orders, the wine drunk here not being subject to the town dues. Between the outer and the inner or great boulevards, already noticed, are the suburbs or *faubourgs*, forming some of the best built quarters of Paris.

**General Condition of Streets, Houses, &c.**—The streets in the interior of Paris, except those of more modern construction in the fashionable quarters N. W. the Tuileries, have been formed more or less on the model of the narrow lanes and alleys constructed before the general introduction of carriages, at a time when the absence of police and the frequency of popular tumults rendered it necessary to defend the streets at night with cross barriers or chains. Much attention, however, and large sums of money have lately been devoted to the improvements of the great thoroughfares; *trois-tiers* of basaltic stone from Auvergne have been laid down in many of the streets; and more recently the asphalté-pavement has been successfully introduced in the Rue Rivoli and on the Boulevards. Gas has been provided by two or three chartered companies; and the quarters of the Tuileries, Chaussée d'Antin, and Palais Royal, as well as the arcades and principal shops N. of the Seine, are now brilliantly lighted with gas. But in the streets of other quarters, and even in the best streets S. of the river, may still be seen the melancholy oil-lamps, or *reverberiers*, suspended by a cord across the street, emitting only sufficient light to make darkness visible, till midnight, when all the lights are extinguished, and the town is plunged in obscurity, rendered more annoying and dangerous from the inefficiency of the night police. (*Maclaren's Notes*, p. 22.) With respect to cleanliness, Paris, though greatly improved, is still very far from what it should be. The sewers, which were begun at the commencement of the 15th century, were at first wholly open, running through the middle of the streets, either directly into the Seine, or into its tributaries, the brook Mènil-montant northward, and the Bièvre southward. In some of the closer and less wealthy districts this nuisance still remains; but by far the larger part of Paris is now supplied with subterranean drains, arched with stone, some of them being of great size. Drainage, however, for separate houses is still far from being common; there is a general want of water-closets; and domestic filth is in many cases allowed to accumulate, greatly to the injury of the public health, and in spite of police regulations not strictly enforced. The houses, also, which are always five, and often seven, stories in height, though without cellars, consist, as in Edinburgh, of separate stories; and sometimes a single story, or floor, is divided into different sets of apartments, occupied by different individuals or families, the access to the different stories being from a common staircase, usually very dirty, and often, indeed, filthy to a degree revolting to an Englishman; and as water is seldom introduced into the houses by pipes, but is brought by porters from the public fountains in the streets, we need not be surprised at the deficiency of cleanliness. The more modern houses, however, are provided with better means for insuring this advantage; and in the new quarters we do not observe that *mélange* of inmates, from the prince au premier to the poor scotchess au système, that distin-

guishes the houses of Paris from those of most other capitals of Europe. The broader streets have a externally a pleasing appearance, owing to the regularity of the houses, the great number of windows (for which there is scarcely any tax), and the general use of balconies and "external shutters called *persiennes*, formed of thin bars of wood, turning on hinges, and folding back on the walls when not in use." (*Maclaren*, p. 28.) The streets S. of the Seine are gloomy and monotonous: in the chief hotels of the nobility few windows face the street, and large *porte-cochères* lead to an inner court yard, round which the building is arranged.

**Principal Streets, Places, and Parks.**—The leading street of Paris, corresponding with the Strand or Oxford Street of London, is the Rue St. Honoré, running westward from the *Marché des Innocens*, and forming, with its continuation, the Rue Faubourg St. Honoré, a line of streets nearly 2 m. in length. The houses in this faubourg are large and handsome, belonging chiefly to the higher classes; but those in the part nearer the centre of the city consist principally of shops and residences of persons in trade. The Rue St. Honoré is connected eastward with the Rue St. Antoine, terminating in the Place de la Bastille, in which is the model of the projected Fontaine de l'Éléphant. These streets entirely intersect the capital from W. N. W. to E. S. E., and the continuous line measured from the Barrière du Roule westward, to the Barrière du Trône eastward, is exactly 5 m. in length. From N. to S. runs another and almost equally important avenue, formed N. of the Seine by the Faubourg and Rue St. Martin, crossing the river and isle of Paris by two bridges (the Pont Notre Dame and Petit Pont), the part S. of the river consisting of the Rue and Faubourg St. Jacques, terminating in the Barrière d'Arcueil, from which to the N. end of the line at the Barrière de la Villette is a distance of 3½ m. The Rue St. Denis runs parallel to the Rue St. Martin, connecting the Pont-au-Change with the N. Boulevards at the Porte St. Denis; and more westward, running in the same direction, are the Rue de Richelieu, Rue de Castiglione, and Rue de la Paix connected with the Place Vendôme, the Rue de Luxembourg, and the Rue Royale and Tronchet, which run into the square containing the church of La Madeleine. These again are crossed by other streets running from W. to E., the principal being the Rue St. Augustin, which connects the Bourse with the Boulevard des Capucines; and opposite to the Gardens of the Tuileries is the Rue de Rivoli, a noble well-paved street, lined on its N. side by government buildings and fine hotels; it is about 4 m. in length; and lined throughout its whole extent with colonnades. The chief streets S. of the Seine and parallel to its banks are in the Faubourg St. Germain, comprising the Rue de Grenelle, a handsome avenue lined with several large and handsome government-buildings, the Rue St. Dominique, Rue de l'Université, and Rue de Bourbon, the last running close to and in a line with the Quai d'Orsay. Most of the streets at the E. end of Paris are narrow and irregularly built: the *Quartier Latin*, S. of the Seine, comprises several collegiate edifices; but the streets are confined and crooked, in fact, little better than mere lanes and alleys. Indeed, the only handsome streets of Paris, except the Boulevards, are to the W. of the Palais Royal on both sides the river. The quarters of the Tuileries, the Place Vendôme, and the Chaussée d'Antin, are the most fashionable districts N. of the Seine; but the houses, or *hôtels*, of the noblesse are chiefly in the Faubourg St. Germain. Besides the streets just mentioned, Paris has about seventy squares, or *places*, the principal of which are—1. the Place de la Concorde, an open space W. of the garden of the Tuileries, in the centre of which is the obelisk lately brought from Luxor, in Egypt; 2. the Place Vendôme, an octagon surrounded on three sides by handsome buildings, with Corinthian fronts, and having in its centre a noble column, formed on the model of that of Trajan at Rome, covered with bronze castings, representing the achievements of the grand army in 1805, and surmounted by a statue of Napoleon; 3. the Place des Victoires, originally formed in 1685, and having in its centre an equestrian statue of Louis XIV. on a marble pedestal, with bas-reliefs; 4. the Place de Grève, where public executions were formerly carried into effect, and having on one side the Hôtel de Ville; 5. the Parvis Notre Dame, in front of the cathedral of that name, and having on its S. side the Hôtel-Dieu; and 6. the Place de la Bastille, in the Faubourg St. Antoine, occupying the site of the Bastille destroyed 14th July, 1789: in its centre is the Colonne de Juillet, a large Doric column, erected in commemoration of the revolution of 1830, 130 ft. in height, surmounted by a colossal figure of the Genius of France. Paris has also 65 fountains, communicating by pipes with the Seine and the Canal de l'Ouëre: some of them, as the fountains of St. Sulpice, St. Eustache, Grenelle, the *Château d'Eau* in the Boulevard de Bondi, and that in the *Marché des Innocens*, are worthy of notice from their architect-

tural beauty; though the supply of water from them be not only insufficient, but of bad quality. In consequence of the great depth to which the *calcaire grossier* of the Paris basin penetrates, there are no springs in the city itself, though aqueducts bring pure water from a distance; but pipes, leading as in London to each house, are of very modern date, and only partially introduced.

Exclusive of several handsome gates and barriers, Paris has four splendid triumphal arches; those of St. Denis and St. Martin in the N. Boulevards, erected in honour of Louis XIV.; the *Arc de Carrousel*, forming the principal entrance to the palace of the Tuileries, built in 1806 on the plan of that of Septimius Severus at Rome, being 60 feet in width, by 45 feet in height; and, the *Arc de l'Etoile*, at the W. end of the *Avenue de Neuilly*, commenced by Napoleon in 1806, and only recently completed. The latter is a most magnificent monument, and is, indeed, by far the most stupendous structure of the kind ever erected, either in ancient or modern times. It consists of a single arch 90½ ft. in height, 48 ft. in width, and 73 ft. in depth, arising from two smaller transverse arches; the whole structure being 147 ft. in length by 73 ft. in depth, and 162½ ft. in height! It stands quite separate from any other building, so that it is seen to the best advantage. It has numerous colossal groups of sculpture, depicting most of the great battles gained by the French during the revolutionary war. The effect of this prodigious structure is grand in the extreme, and is worthy the genius and magnificence of its founder.

Continuous to the *Arc de l'Etoile* is the garden of the Tuileries, an enclosed space of sixty-seven acres, laid out by the celebrated Le Nôtre in broad walks and angular beds, and profusely ornamented with vases, statues, &c. It is a favourite resort of the Parisians, and is separated by the Place de la Concorde from the Champs Elysées, an open space about 1,000 yds. in length by 100 yds. in breadth, planted by Colbert in 1670, with pavilions along the sides provided with seats and entertainments. These parks, for so they may be called, constitute with the *Avenue de Neuilly* the Hyde Park of Paris, and, like it, are thronged on Sundays and festival days. S. of the Seine is the *Champ de Mars*, an oblong space bordered by a double avenue of trees, and used for reviewing troops, horse-racing, &c. It was the scene of the celebrated *Fête de la Fédération*, 14th July, 1790, as well as of the Champ de Mai during the 100 days. Races are held in it in May and September; but English sportsmen consider them as very inferior. Several minor gardens are dispersed in the different faubourgs; besides which, near the E. and W. suburbs respectively, are the *Parc des Vincennes*, about 2½ m. in length by 2 m. in breadth, and the *Bois de Boulogne*, a favourite resort of carriage company, as well as of duellists and suicides. Duels, however, have become much less frequent since the enactment of the law allowing damages to the family of the deceased party.

**Palaces and Government Buildings.**—Paris contains 4 royal palaces; but only one of these, that of the Tuileries, is inhabited by the royal family: the Louvre has not been the residence of a French monarch since the minority of Louis XV., and is now formed into a national museum and picture gallery; the Palais Royal, built by Cardinal Richelieu, and the favourite abode of Louis XIII. and Anne of Austria, consists principally of shops, cafés, restaurants, and *estaminets*, crowded at all times, day and night, by almost every class of the Parisians; and the Palais du Luxembourg, built for Marie de Medici, widow of Henry IV., is now devoted to the use of the Chamber of Peers. The palace of the Tuileries, erected in the 16th century, on the site of a manufactory of tiles (*tuilerie*, whence its name), was greatly enlarged by Henry IV., Louis XIII. and XIV.; and additions have since been made to it by Napoleon and Louis Philippe. Its architecture is of a somewhat mixed character; but the earlier parts may be taken as a good specimen of the revived Italian style. Wings extend from the main building on the side towards the Place du Carrousel, one of which, on the S. side, connects it with the museum of the Louvre; and on the garden side are arcades extending through the central portion of the building, at the sides of which are handsome pavilions formed into state apartments, remarkable for their lofty windows, flanked by Corinthian pilasters. The general effect is extremely grand, especially on the garden side; but its grandeur results more from its great length and the variety of outline it presents, than from any excellence or originality in the details. The state-rooms are on the first floor, running the whole length of the garden front, the principal being the *Salle du Conseil*; the state dining-room, known as the *Galerie de Diane*, from which other rooms lead to a vast saloon and state ball-room in the centre of the building, called the *Salle des Maréchaux*, adorned with portraits of the great marshals of France, and unquestionably one of the finest rooms of the kind in Europe. The court of the Tuileries, on the E. side of the palace, was formed chiefly by

Napoleon, and forms a wide space, separated by an iron railing from the Place du Carrousel, and now used for the inspection and review of the troops on duty in different parts of Paris. S. of the Place du Carrousel is the long gallery of the Louvre, connecting it with the Tuileries. The pictures are deposited in a splendid range of rooms on the first floor, facing the river, above 3 m. in length; but nearly the whole interior of the palace, which forms a hollow square, is appropriated to the reception of museums, &c., which will be subsequently noticed. A portion of the basement story, however, in the S. wing, is divided into apartments for the residence of officers, attendants, &c. As respects its external architecture, the Louvre, is undoubtedly one of the finest regal structures in Europe. Its E. front, facing the Place du Louvre, consists of a magnificent colonnade formed by 28 coupled Corinthian columns, rising above the basement story, and surmounted by a beautiful cornice and line of balustrades. The S. or river front, though much less ornamented, is still extremely handsome, being faced with 40 Corinthian pilasters, above which rise a balustrade and central pediment. The N. and W. fronts are quite plain, and form a striking contrast to those just described. The internal courtyard of the Louvre is a perfect square, each side being 400 ft. in length. The buildings surrounding it are of the Corinthian and Composite orders, highly adorned with sculpture. The *Palais Royal*, which stands to the N. of the mass of buildings just noticed, has towards the Rue St. Honoré a front with 2 wings, united by a screen which encloses a court-yard somewhat resembling the Horse Guards or Admiralty of London, not elegant, though of a very impure style. Round the oblong space, at the back of the palace, the father of the present king of France erected large houses and handsome colonnades, occupied by jewellers, tailors, *marchands-de-mode*, show-makers, printers, *restaurans* (the principal of which are Vercy, Vêlon, and the frères Provençaux), keepers of *cafés, estaminets*, or smoking-rooms, &c. The gardens are tastefully laid out, the whole being "brilliantly illuminated with gas; and hence the Palais Royal is the perpetual rendezvous of the idle and curious, as well as of the little *rentiers* of the capital. The *Palais du Luxembourg*, where, during the Republic, the Directory held its sittings, and which, since the re-establishment of the monarchy, has been used by the Chamber of Peers, is a stately edifice, facing the *Rue de l'Angivard*, with 2 wings, connected by a screen and gateway; being remarkable for strength and solidity, as well as for the beauty of its proportions. The interior comprises several handsome apartments, the most interesting being the *Salle des Séances*, a semicircular chamber of no great size, round which are arranged chairs for the peers, while the flat side is occupied by the president's seat, and tables for clerks, &c.; this room, however, is much too small for its present purpose, and a larger and more commodious building is now being erected. The gallery of the Luxembourg, which once boasted of a fine collection of old pictures, since removed to the Louvre, is now appropriated to the reception of works by living French artists; the gem of the modern gallery being "the bathing nymph," by Julien. The gardens behind the palace, laid out in the old French style, have a sheet of water in the centre. Among the buildings devoted to the use of the government and legislature, the first place is due to the Palais Bourbon, erected chiefly by the Prince de Condé, between 1722 and 1789; it was occupied during the revolution by the *Council of Five Hundred*; but at the restoration of the Bourbons was restored to the Condé family, with a proviso for the accommodation of the deputies in that portion of the building previously occupied by the Council. The Chamber of Deputies was purchased from the family in 1829; and a treaty has lately been completed for ceding the entire property of the Palais Bourbon for the use of the legislature. The Corinthian portico fronting the *Pont Louis XVI.*, the pediment of which has lately been completed and exposed to public view, is of fine proportions; but, when compared with the building to which it is the entrance, it is much too large, and leads to no apartments of any great size, except the chamber itself, a semicircular room ornamented with 20 Ionic columns of white marble, having gilt capitals. The president's chair and the tribune form the centre of the axis of the semicircle, round which rise successively the seats and desks of the 459 deputies, to the height of the basement supporting the columns. The walls are adorned with pictures and statues; and a spacious double gallery, capable of accommodating 700 persons, runs round the semicircular part of the chamber, fitted up with tribunes for the royal family, corps diplomatique, &c., and seats for the public. The place of each deputy is marked at the beginning, and retained to the end of each session; but when a member addresses the assembly, he does not, as in the British H. of C., speak from his place, but ascends the tribune near the president's chair. The

sittings are held chiefly by daylight. The library of the Deputies, a long and handsome gallery, contains about 44,000 vols., chiefly reports and law-books, both French and English, including also a few rare MSS.

Some of the government offices are extremely handsome edifices, especially the *Hôtel des Finances*, an insulated structure of vast size in the Rue Rivoli; and the *Hôtel du Quai d'Orsay*, a noble stone building, on the plan of the Farnese palace at Rome, and unquestionably one of the most magnificent in Paris, comprising about 800 rooms, allotted into offices for the Council of State, the Cour des Comptes, and for the departments of the Interior and Public Instruction. The *Hôtel des Affaires Étrangères*, in the Rue des Capucines, is a building of considerable extent, but with few pretensions to architectural elegance. The *Hôtel des Monnaies*, or Mint, S. of the Seine, a little W. the Pont Neuf, built in 1771, has 2 fronts, the principal of which facing the river, has a length of 300, with a height of 78 ft. All the operations of coining are carried on within this building; and it is the place of assay for all gold and silver articles made in Paris. In one of the apartments is a superb collection of medals and casts belonging to all eras of French history. Among other buildings nearly or more remotely connected with the government of Paris are the following: 1. The *Hôtel de Ville*, in the Place of the same name, commenced in 1549, but not completed till 1605, having a singularly unorth front, with 2 side pavilions, higher than the rest of the edifice, and 2 gates leading to a quadrangle, in which is a bronze statue of Louis XIV. It comprises some fine apartments, particularly the *Grand Salle*, at one of the windows of which Lafayette, in 1830, introduced Louis Philippe to the people as the best of Republicans. Its exterior is now undergoing extensive repairs. 2. The *Palais de Justice*, in the Isle du Palais, an edifice in a mixed style, erected between the 14th and 18th centuries, on the site of a still more ancient structure: in the interior a central staircase leads to a grand saloon, called the *Halle des Pas Perdus*, which comprises apartments for the Court of Cassation, the Cour Royale, and Cour d'Assise. 3. The *Hôtel de la Légion d'Honneur*, on the Quai d'Orsay. Paris has 8 prisons, among which those of St. Pelagie and St. Lazare are the most extensive and best managed. The prison for juvenile offenders in the Rue de la Roquette, and *Abbaye* are small, and very inefficiently regulated, the latter being now exclusively employed for the detention of military offenders.

**Religious Edifices.**—The sacred buildings of Paris, like those devoted to secular purposes, exhibit a great variety of styles; but from the close of the 16th century downwards, the Grecian has prevailed. The first place, however, both as respects antiquity and grandeur, must be ceded to the *Cathédrale de Notre Dame*, erected between 1010 and 1407: it is a cruciform structure, with an octagonal E. end, and double aisles surrounding the choir and nave; a third aisle also being occupied by a series of 7 external chapels. At the W. end are two lofty towers, evidently intended to have been the bases for steeples; but the tower usually seen at the intersection of the nave and transepts was destroyed during the revolution. The length of the church externally is 442 ft., the breadth 162 ft., and the length of transepts 352 ft.: the towers are 235 ft. high. The exterior, though not without beauty, is heavy, owing to the absence of steeples, pinnacles, &c., which give a light appearance to the majority of Gothic buildings. The W. front, however, with its 3 large gates and circular window, and the noble gateway on the W. side of the church, are highly worthy of admiration. The inside of the church has a very splendid and imposing appearance, owing to its numerous aisles and chapels; but the uniformity of its towers, entirely destroyed by the embellishments of the choir, which, though in themselves beautiful, are wholly unsuited to the rest of the building. The church of *St. Germain des Prés*, built about 50 years after Notre Dame, is cruciform, with a circular E. end. A considerable portion of the old building has gone to decay; and, out of three towers, only one remains; but the interior contains some good modern decorations, valuable pictures, old monuments, &c. There are 6 other churches, either wholly or in part of Gothic architecture; the most interesting is the church of *St. Germain l'Auxerrois*, not only from its structure, but its associations with the less peaceful periods of the history of Paris, especially those of the massacre of St. Bartholomew. Among the more modern churches in the Grecian style, the largest and most splendid is that of St. Genevieve, now called the *Panthéon*, in the quarter of the university. It was commenced in 1764 by Louis XV. The portico is composed of 24 fluted Corinthian columns, 60 ft. in height, supporting a triangular pediment 120 ft. broad by 24 ft. in height, in which is a sculptured composition, by David, representing the genius of France (a colossal figure 14 ft. high), surrounded by the great men

of the nation: on the frieze beneath is inscribed in gold letters—

"AUX GRANDS HOMMES, LA PATRIE RECONNOISSANTE."

The plan of the church is a Greek or equilateral cross, the exterior having no windows, and being ornamented only by a frieze and cornice. In the interior a gallery and colonnade line the nave and transepts on both sides, forming so many smaller naves and aisles. Semicircular windows rise above the colonnades, throwing a strong light into all parts of the building; and from the centre of the cross rises a dome 282 ft. in height, the lower part of which is encircled by a Corinthian peristyle of 32 columns, each 36 ft. high. The inside is now perfectly empty, without any embellishments, except its architectural decorations; but it is intended that it shall be enriched with statues of Voltaire, Rousseau, Lagrange, and other illustrious individuals, whose remains have been deposited in the spacious vaults beneath the pavement. The total length of the Pantheon, including the portico, is 352 ft.; interior length from E. to W. 205 ft.; length of transept 265 ft.; uniform breadth 104 ft. On the whole, this church is a work of great merit: its general proportions are good, and there is much grace and elegance in the outline, as well as grandeur and simplicity in the design; but it is by no means entitled, either from size or composition, to be compared with St. Paul's. Among the other churches, the most deservedly celebrated is the Madeleine, at the N. end of the Rue Royale, on the model of the Parthenon of Athens, but larger, being 324 ft. in length, and 138 in breadth, while its archetype is only 228 by 100 ft. It is altogether a very noble structure, and is remarkable for purity and elegance of design. Paris has, in all, twelve parish churches, corresponding with the arrondissements, and 29 district churches, besides six others unattached, and several belonging to hospitals, convents, &c.; but none of these, except that attached to the *Hôpital des Invalides* (for which see *Hospitals*), requires any particular description. There are also several places of worship for dissenters from the Roman Catholic religion; 2 of which belong to the French Lutherans, 2 to Calvinists, and 5 to Independents; besides which, there are 3 English churches and 5 chapels, 2 American chapels, 2 Jews' synagogues, and a Greek church; but none of them have any claims to architectural beauty except the church of the Visitation, in the Rue St. Antoine, and the Gothic church belonging to the British embassy, in the Rue d'Aguesseau. The Roman catholic clergy of Paris comprise an archbishop, 12 vicars-general, 3 metropolitan and 4 diocesan officials, 16 canons of Notre Dame, 34 honorary canons, with curés and vicars to the different churches.\* The Protestant clergy comprise 3 Lutheran and 5 Calvinist pastors, 4 French independent ministers, an English bishop, 5 English episcopal clergymen, and several ministers of other denominations. Paris still comprises several convents for females; but those of the present day bear but a very slight resemblance to the old nunneries; and are now little more than religious boarding schools for young ladies, or lodging houses for the numerous *sœurs de charité*, who devote themselves to the nursing of the sick in the hospitals, &c. There are, also, 14 societies, some of which are liberally supported, for the promotion of religion at home and abroad, as well as of religious education.

Judging from the statements of the most intelligent travellers, it would seem, whatever may be the other wants of the French capital, that an increase of church accommodation is not one of them. "Had I not looked into the almanack, I should never have found out which day was Sunday. The churches are open every day, and of course afford no criterion. The shops are open too; carts and carriages are plying on the streets, and boarding schools to vaudevilles at the theatres houses for the ballets at the opera. Your first impression is that Sunday has been blotted out of the French calendar. On closer inspection, you discover there is a difference between this day and the other days in the week, though I am sorry to say it is a small one. In making a circuit about 12 o'clock through the Palais Royal, the Rue Vivienne, Boulevard des Italiens, Rue de la Paix, and Rue Rivoli, I found about 1 shop in 20 shut or half shut. At 4 o'clock, on a shorter tour, I found about half of them shut, and at 6 o'clock, 3-4ths. The thoroughfare of carriages is perhaps also rather less, and that of loaded carts decidedly so. Some of the working classes, I understand, and in the evening to a theatre perhaps in the morning, and on a cheap café, and playing at dominos. "On Sunday-week I went to the once celebrated Café de Mille Colonnes, (now sunk to the character of an *estaminet*, or smoking-house,) to get a cup of coffee. It was about seven; I found two or three parties playing at billiards, and a score of little groups, of two, or three,

\* The curés in France are the incumbents of livings, the *vicaires* being the merely salaried servants of the curés; in the same way as the alldiary curates of England are the dependants of the rectors and vicars, though protected by the bishop.

or six individuals, busy with dominoes. Two of the parties near me consisted each of a man, with his wife and daughter. The greater proportion, however, of the working classes, ply their labours on Sunday till dinner-time, then rest in the afternoon; and that they may not want their holiday, go beyond the barriers, where wine is cheap, and spend the Monday in drinking and dancing. The over-rigid observance of the Sunday in Scotland, which sometimes disgusts young minds with religion altogether, is a light evil, when compared with this." (*MacLaren's Notes*, p. 17.)

**Cemeteries.**—The Parisians formerly interred their dead, like the ancient Romans, along the sides of the roads leading out of the city; but, as the grave increased, and its boundaries were extended, these grave-yards became included within its precincts, and were at length almost in the centre of the town. They were, however, both few and small; so that the inhabs. were compelled to have recourse to other modes of interment; and, accordingly, large trenches (similar to those opened during the prevalence of the plague in London) were dug for the reception of corpses thrown in till the holes were filled, when they were covered over, and others opened close to them. This disgusting method of burying necessarily rendered the neighbourhood of these cemeteries extremely unhealthy; and at length the government issued a prohibition against all funerals within the town, and ordered the formation of cemeteries at a distance from the city-walls, at the same time ordering that the bones in the old grave-yards should be deposited in the subterraneous quarries or catacombs under the Quartier St. Germain. Paris has now 5 large and well-laid out cemeteries, similar in many respects to those which have since been formed on the same model near London, Liverpool, Leeds, and other large towns of England. The Père-la-Chaise, outside the E. barrier, is the finest of the Parisian cemeteries; and its advantageous situation on the slope of a hill, the number, as well as beauty, of its monuments, and the celebrity of many of those whose remains have been brought thither, make it one of the most interesting sights in the French metropolis. The Catacombs are very extensive, running under about 14 part of Paris S. of the Seine; they are arranged into galleries lined with piles of bones, and the entrance is near the Barrière de l'Enfer; but, being deemed unsafe, they are no longer shown to visitors. (*Dulaure*, ix. 211—240.)

**Hospitals and benevolent Institutions.**—Hospitals for the relief of the sick, and *hospices* for the aged, infirm, or foundlings, existed in Paris from a very early period; but being exclusively under the direction of ecclesiastics, the objects of the founders were grossly perverted, and the revenues of these establishments applied to improper uses. No improvement took place till the revolution; when, by a decree of convention in 1793, the two old and only remaining hospitals were ordered to surrender a portion of the inmates of their crowded and unhealthy wards to the convents and other houses that had become national property. An administration, consisting of a general council and administrative committee, was formed in 1801, for the purpose of improving the condition of the public charities of Paris: taxes on places of amusement and graves in the cemeteries were applied to defray the necessary expenses; and from that time to the present these institutions have progressively increased both in number and utility; so that at present there are 13 hospitals and 21 *hospices*, having altogether about 20,000 beds, and supported in 1837 by a revenue of 18,696,320 fr., or 747,852 sterling, chiefly arising from portions of the *octroi* dues, contributions from the theatres, dues from the *Mont-de-Piété*, interest of funded property, &c. The *Hôtel-Dieu* is entitled to the first notice, on account of its antiquity; for it is known to have existed in the middle of the 12th century, and even at that early period to have had some valuable endowments. It was enlarged between the reigns of Henry IV. and Louis XVI.; and since the revolution the buildings have been so much improved, that at present the *Hôtel Dieu*, with its subordinate establishment in the *Rue de Faubourg St. Antoine*, furnishes accommodation for upwards of 1,000 in-patients. In 1837, 26,412 patients were admitted into this establishment, the average mortality being 1 in 8.6. It is in every respect extremely well appointed, and has among its medical officers the most celebrated physicians and surgeons of Paris: indeed, the *Hôtel-Dieu* may be considered as the great normal hospital of France. The hospitals next in importance are those of *La Pitié*, *La Charité*, *St. Antoine*, *Beaumont*, *des Enfants Malades*, and *des Féléréens*; the whole number of these establishments under the civil administration amounting to 16, exclusive of 3 military hospitals, regulated by the minister of war. These hospitals, however, are, with two or three exceptions, situated in close neighbourhoods, and, from the antiquity of the buildings, ill planned; but the interior management is extremely good, and may bear a comparison with that of the first London hospitals. Among the *hospices*, the principal are the *Bicêtre*, for infirm old men, the *Salpêtrière*, for aged women, 2 *hospices des incurables*, and 1

for orphans and foundlings. There are also numerous *maisons de santé* in and about Paris, which receive patients at certain fixed scales of payment, and may therefore be called hospitals for the middle classes. A great number of minor institutions for the relief of the sick and poor are supported by private subscription.

Of all the establishments, however, in the French capital devoted to the support of the aged and infirm, by far the most important, both on account of the grandeur of its buildings and the benefits which it confers on its inmates, is the *Hôtel des Invalides*, intended for the support of disabled officers and soldiers, or those who have been in active service upwards of 30 years. The edifice, situated at the S. end of an avenue leading over the Pont des Invalides from the Champs Elysées, and begun in 1675, is a conspicuous object from a distance on account of its gilded dome, lantern, and spire rising to a height of 323 ft. above the floor. It is composed of 5 courts of equal form and size, surrounded by buildings 5 stories in height, and covers a space of nearly 7 acres; and is, on the whole, a very heavy building, without any exterior beauty. The church of the establishment is indebted for its noble appearance principally to its magnificent dome supported by 20 pairs of Composite pillars. Besides about 170 pensioned officers, there are about 3,000 sub-officers and privates, who are boarded, lodged, and clothed, and receive a monthly stipend varying according to rank. The dormitories contain each from 50 to 60 beds; besides which there are large infirmaries for the sick. All, except field-officers, mess at public tables, and all wear the same uniform. Their only duty is to mount guard within the precincts of the hotel; and when the king comes within its walls, they have the exclusive privilege of guarding his person. On the whole, the *Hôtel des Invalides*, though by no means so beautiful a building as Greenwich Hospital, near London, is entitled to rank with it as one of the grandest national institutions of Europe. And it is now more than ever deserving of notice from its containing the remains of the emperor Napoleon, perhaps the greatest general, and perhaps, also, the greatest man of modern times.

**Commercial Establishments.**—Paris, till 1826, though abounding with fine public edifices, had no structure specially devoted to the transacting of commercial business. The merchants previously met in the *Hôtel Mazarin*, and afterwards in the *Palais Royal*; but the inconvenience to which they were subject led, in 1808, to the formation of a plan for constructing an exchange sufficiently large for the multifarious business of so great a capital. The form of the *Bourse*, which stands in a spacious square at the E. end of the Rue St. Augustin, is a parallelogram, 212 ft. in length by 126 ft. in width, surrounded by a peristyle of 66 Corinthian columns. The *Salle de la Bourse*, or great hall, on the ground-floor of the building, 116 ft. in length by 76 ft. in breadth, is surrounded by arcades of Doric architecture. A grand staircase leads to a spacious gallery supported by Doric columns, and to the hall of the Tribunal of Commerce. Corridors run round both the upper and lower hall, communicating with various rooms devoted to commercial purposes: and on the whole the arrangements are of the most complete description. The hours for transacting business are from 1 to 5; but the galleries and corridors are open from 9 till 5. The *Banque de France*, erected by Mansard in 1720, possesses little architectural beauty. The present establishment was founded in 1803, and received the exclusive privilege for 40 years of issuing notes payable to bearer. Its capital consists of 90,000,000 francs in shares of 1,000 francs each. The notes issued are for 1,000 and 500 francs. The customary rate of discount varies according to circumstances, but averages 4 per cent.: the bank, however, discounts no bills that have more than three months to run. It opens, also, *comptes courants* with all requiring them, and charges no commission, its only remuneration for such transactions arising out of the use of money placed in its hands. The government of the bank is vested in a council of 20 elected by the 200 largest proprietors; the governor and deputy-governor are appointed by the king. The institution is flourishing, and enjoys unlimited credit. The public establishments connected with wholesale trade are called *halles*, the principal of which is the *Halle au Blé*, or corn-market, a circular building, completed in 1767. The *Halle aux Vins*, on the Quai St. Bernard, S. of the Seine, near the Jardin du Roi, is an immense inclosure, having an area of 31,100 sq. yards, walled on three sides and fenced towards the quay by an iron railing about 950 yards in length. This great market is divided into streets called after the principal French wines; there are 7 in piles of buildings, four in front and three behind, one of which is fire-proof, and used solely as a store-house for spirits. The warehouses and vaults will contain 400,000 casks. Wines entering this *dépôt* are not charged with the *octroi* till taken out for consumption; but they pay one franc per cask for warehouse room, &c. The hall is open from six to six in summer, and from seven to five in winter; and the counting-houses of some

of the principal wine merchants are within the premises. The quantity of wine taken out of the hall in 1836 amounted to 532,402 hectolitres, and of spirits to 86,910 hect. The other wholesale markets are the *Halle aux Draps* and the *Halle au Cuir*, the *Halle aux Peaux*, near the *Quai de la Tourneille*, being now exclusively used by the chiffonniers for the sale and exchange of rags, &c. The *Mont-de-Piété* of Paris is a government establishment, enjoying the exclusive privilege of lending money on moveable effects at the rate of 9 per cent. a year, or 3 per cent. a month. The money which it lends is borrowed from government at the rate of 3 per cent.; and the whole is under the management of a board of commissioners.

**Markets, &c.**—Paris has 36 markets, the principal of which is that of St. Germain, opening on the Rue de Seine, and constructed from the designs of Blondel, which has served as a model for all the others since built. It is a parallelogram, 500 ft. in length by 480 ft. in breadth. One of the most celebrated markets is the *Marché des Innocens*, in the centre of which, as already observed, is one of the noblest fountains in the capital; this, in fact, is the Covent Garden market of Paris, and has at least an equally fine and abundant show of fruit and vegetables; but connected with it, and in its immediate neighbourhood, are several other markets for fish, cheese, eggs, &c.; and indeed it may be termed a "quarter of markets." The *Marché du Vieux Linge* (old clothes market), built in 1809, partly on the site of the old Temple (the prison of Louis XVI. immediately prior to his execution), comprises four galleries containing 1,898 stalls or shops, in which are exhibited for sale all kinds of old clothes, shoes, iron, tools, &c., and, while, and whole, not unlike the Rag Fair or Monmouth Street of London. The other markets are, generally speaking, commodious, but they require no particular description. Paris has, also, five *abattoirs* (built in consequence of a decree of Napoleon, 9th Feb. 1810), where the animals necessary for the consumption of its inhabitants are killed. The *abattoir* of Montmartre is about 1074 ft. long and 384 ft. broad, and that of Ménil-montant is nearly as large; the other three (two of which are S. of the Seine) are inferior both in size and arrangement.

**Internal Consumption.**—All estimates respecting the consumption of provisions in a populous city must, of course, be extremely vague; but, perhaps, with regard to Paris, there is less uncertainty, owing to the octrois or duties levied on most articles coming across the barrier. It is very difficult to form any estimate of the consumption of bread, on account of the permitted exportation of wheat into the neighbouring districts, whenever the price outside the barriers exceeds that of the *Halle au Blé*, but the daily consumption of flour is supposed to amount to about 1,700 sacks. Cattle, sheep, &c., chiefly come from Normandy, the Isle of France, and Linnoussin. It appears, however, that, though, in 1826, the average consumption of each inhabitant was estimated at 63·4 kilogr., the allowance to each in 1836 amounted to only 59·4 kilogr., a result ascribable wholly, or almost wholly, to the increased price of butcher's meat, occasioned by the oppressive duties laid on foreign cattle when imported, and the inadequacy of the home supply. (See art. FRANCE.)

The following table, though not complete, gives a tolerable idea of the consumption of Paris in 1836.

Wines	922,563 hect.	Official	1,233,779 kilogr.
Spirits	36,441 —	Cheese, dry	1,244,527 —
Claret and perry	18,155 —	Grapes	618,920 —
Vinegar	17,611 —	Sea-birds	4,771,383 fr. val.
Beer	111,811 —	Oysters	1,219,659 —
Oxen	72,350 head.	Fish	541,745 —
Cows	17,442 —	Poultry and game	8,387,276 —
Calves	77,583 —	Butter	11,732,090 —
Sheep	578,476 —	Eggs	1,225,861 —
Pigs	91,929 —	Hay	7,312,723 bottles.
Fish and prepared meats	210,773 kilogr.	Straw	11,555,813 —
Meat, coarse	819,921 —	Oats	1,003,945 hect.
Sausages, hams, &c.	3,301,518 —		

Among other articles of consumption, the tobacco sold in Paris during the same year amounted to 708,793 kilogr. Fuel, which is here one of the most costly articles of domestic expenditure, consists principally of wood; but large quantities of coal and charcoal are also made use of.

**Industry, Commerce, and Trade.**—Paris, besides being the political cap. of France, is one of the chief seats of the national industry and commerce. Many branches of industry are conducted on an extensive scale; the advantages resulting from the greater subdivision of employment, the greater command of scientific assistance, and of skilled workmen, being more than sufficient to counterbalance the higher wages and heavier expenses in other respects attending their prosecution in so great a city. Still, however, it is ludicrous to suppose that a city like Paris, without coal, and without the command of water power, should ever be able to come into successful competition with such places as Manchester, Glasgow, or Birmingham. The articles produced in

Paris are, in fact, chiefly those of virtù, jewellery, the fine arts, or those immediately ministering to the luxurious wants of a great capital. In these, however, a great increase has taken place during the last 10 years; and in 1838 the prefect of the department estimated the value of its manufactures exported to foreign countries at 80,000,000 fr., and of those sent into other parts of France at an equal sum. Two large manufacturing establs. belong to the government, and, like all similar establishments, are carried on at a heavy loss. One of these, the *Manufacture Royale des Gobelins*, so called from the place where it is carried on having originally belonged to a family of the name of Gobelin, who amassed great wealth as dyers; but the property having changed hands, it was converted into an establishment for weaving tapestry; and, becoming celebrated for the beauty of its products, was purchased by Colbert for Louis XIV. in 1662, since which it has been a government monopoly. The pieces of tapestry are most exquisitely executed, and the effect of some of them is scarcely inferior to that of the best oil paintings. The manufacture of a single piece frequently occupies three or four years, costing from 15,000 to 18,000 francs. Some splendid carpets are likewise manufactured in this establishment. Its products are chiefly destined for the royal palaces and public buildings, or for presents by the king to other monarchs: a few of the inferior pieces of tapestry are allowed to be sold, but the sale of carpets is forbidden. A drawing-school is attached to the manufactory, and lectures are annually delivered by the most celebrated chemists on the chemical principles of dyeing. The royal manufactory of tobacco is conducted on a very extensive scale, in a handsome modern house on the *Quai des Invalides*. The sale of tobacco, chased by the government, in 1838, amounted to 5,885,000 kilogr., besides 135,000,000 cigars; and about one fifth part of the entire produce of tobacco in France is manufactured in this establishment. The royal manufactory of Sèvres porcelain, though about 6 m. from Paris, and not in the department of the Seine, may be noticed in this place: it has been the property of the crown since 1759. Some of the articles furnished by this manufactory bring very high prices, and are esteemed alike for elegance of form, and the beauty and brilliancy of the paintings. An exhibition takes place in September, when there is an extensive shew of foreign china and earthenware, as well as of specimens in different stages of progress. The sale of tobacco in Paris is in the Rue Rivoli. Among the other manufactures of the cap., jewellery, works in gold, silver, bronze, and steel, watchmaking, the manufacture of chemical products, hats, carpets, artificial flowers, and the compounding of all kinds of bonbons and sweetmeats, furnish employment to a vast number of persons; besides which, Paris has 28 woollen factories, employing upwards of 1,200 hands, and producing broad-cloth, cashmere shawls, *schals*, flannels, &c., one establishment for weaving silk shawls, and 24 factories for cotton or mixed goods of cotton and worsted. The manufacture of both silk and cotton stockings is likewise conducted on a most extensive scale. With respect to the wages of workmen in Paris, there has been a considerable fall since the revolution of 1830: stone-cutters, carpenters, masons, &c., receive from 3 to 4 francs a day, and a few of those engaged in the more delicate branches of handicraft may earn from 5 to 6 francs per day of 12 hours. Those engaged in the cotton and woollen factories receive only about 1½ franc per diem, and work for 14 or 15 hours; and the wages of females, in whatever branch they are employed, scarcely exceeds that rate. Young women in shops receive their food, washing, and lodging, with wages varying from 160 to 400 fr. a year. The expenses of living to these classes range between 17 and 28 sous a day, and lodging may cost about 100 fr. a year. The Parisian workmen scarcely ever work on Sunday, and they are quite as fond as those of London of keeping holiday on Monday, devoting both these days to amusements in the galleries, theatres, &c. A great number of workmen belong to benefit societies, of which there are about 170; and the moral condition of the labouring classes has been greatly improved by the establishment of fire and life insurance companies, savings' banks, infant and primary schools, as well as by the abolition of lotteries and gambling-houses. In 1838, 30,697,998 fr. were paid into the Paris Savings' Bank, and 21,379,500 fr. were taken out.

The export trade of Paris consists chiefly in the transmission to foreign countries of its different manufactures. The following is an official statement of the value of the exports from Paris from 1828 to 1837 inclusive:—

1828	65,972,467 fr.	1833	95,374,381 fr.
1829	64,737,731 —	1834	98,315,940 —
1830	64,231,108 —	1835	119,411,528 —
1831	66,738,574 —	1836	134,695,469 —
1832	66,911,035 —	1837	137,000,000 —

The retail trade of Paris is on a very extensive scale, and it is estimated that there are 6,506 retailers of food and drink: that 5,000 are employed in making and selling

articles of dress or ornament, 3,000 in building and furnishing houses, 850 in printing, publishing, and selling books, &c., 1,570 in trades connected with the fine arts, 350 in trades connected with mechanics, optics, &c., and about 650 in keeping hotels, restaurants, cafés, &c.; but these statements are all very vague, and not to be relied on. The tradesmen's licences, issued in Paris, during 1838, amounted to 73,281, including hawkers; and the returns to government from this source were estimated at 8,321,254 francs.

Paris has also 42 banking firms, 128 stock and insurance brokers, 1,000 physicians and surgeons, 260 apothecaries, and about 400 persons keeping seminaries and pensions for children of both sexes.

*Seine, Bridges, Quays, and Navigation.*—Paris has not like London, a deep broad river, navigable to the city by sea-borne vessels of large burden; but the Seine is, notwithstanding, a striking feature in Paris on account of its bridges and quays, as well as advantageous from its extensive boat-navigation. It enters Paris from the E.S.E. about 34 m. below its junction with the Marne, at Charenton, and in its course forms a slight arc northward, its whole length from the *Barrière de la Rapée* at the E. end, to the *Barrière de la Grenelle* at its W. extremity, being 8,000 metres, or nearly 5 m., in which space it forms 3 islets, the smallest but highest up the stream being the *Isle Louvier*, used as a dépôt for wood-fuel, the Isle of St. Louis, about 700 yards in length, and the Isle du Palais, the site of the ancient *Lutetia*, about 5 furlongs in length by 2 do. in breadth. The river is crossed by 24 bridges, of which five are on the suspension plan, three of iron and stone, one of wood, and the rest of stone. These structures, though usually on a level with the quays, and on the whole convenient, will not bear to be compared with the bridges of Sta. Trinità at Florence, or St. Angelo at Rome, much less with the noble bridges crossing the Thames. "The Parisians," says Mr. Woods, "boast of their bridges, but without great reason: the *Pont d'Austerlitz*, sometimes called *Pont du Jardin du Roi*, is fine for an iron bridge; the *Pont Neuf*, which crosses two branches of the Seine, and has 12 arches, has little pretension to beauty; the *Pont des Arts* is a light, not to say slight construction of iron, for foot passengers; the *Pont Royal* is a well constructed stone-bridge of 5 arches, but hardly a handsome one; the *Pont de la Concorde* is a stone structure of 5 very ugly-looking flat arches, and the *Pont de Jena* is a caricature of flattened elliptical arches, and apparent lightness, its entire merit being confined to some ingenuity in the construction in order to obtain this effect, which, nevertheless, is certainly a blemish." (*Lectures of an Architect*, l. 22.) The islets in the river are connected with the N. and S. banks by 10 bridges, some of stone and others of wood, of inferior size and little beauty. The banks of the Seine are not blocked up, like those of the Thames, with coal-wharfs, ware-houses, and irregularly built houses, running close down to the water's edge, but have fine open quays, affording uninterrupted walks, extending on both sides the river from one end of the city to the other, Paris being in this respect greatly superior to London. Wharfs and landing-places are formed in different parts, particularly towards the E. end of the city. *Dépôts*, for fire-wood are to be found along the river, and on all the outskirts of the town, and the boats along the wharfs on both sides the Isle du Palais furnish supplies of wood and charcoal. The navigation of the river is effected by large boats called *coches d'eau*, by barks, and within the last few years by steamers, the number of which is progressively increasing. From the higher parts of the river about 11,000 boats arrive every year with fruit, corn, and flour, hay, wine, paving-stones, bricks, &c., besides about 4,000 barks laden with timber, charcoal, and fire-wood. Barges of from 40 to 60 tons burden come from Rouen with colonial produce, cotton goods, cider, salt, foreign corn, &c., and 2 steam-boats ply daily between Rouen and Paris, and 2 others during summer between Paris and Montreuil. The river dues are light, and do not average more than 700,000 francs a year, exclusive of the octrois.

*Canals and Railways.*—The canals N. of the Seine consist of 2 or 3 branches, connected with an undertaking for uniting the waters of the Seine and Oureq, with the view not only of making an inland navigation, but also of supplying the capital with water of better quality than that of the Seine. The Canal de l'Oureq receives the waters of the Oureq about 28 m. N.E. Paris, and after collecting several minor streams, falls into a basin in the N.E. suburb of the city, from which branch several canals almost encircling the N. side of Paris. These canals, however, are less used for navigation than for supplying the city with water. Several railroads are in course of construction from Paris; those to St. Germain and Versailles are already open, are much frequented, and will, apparently, be profitable undertakings. The principal projected railways are intended to connect Paris with Orleans, and with Rouen and

Havre. Other railways will, in all probability, be formed within a few years; and there is reason to hope that the country may, at no distant period, possess some considerable portion of the facility and speed of communication which distinguish England and Belgium from the other countries of Europe.

*Establishments for Education.*—The university of Paris, which appears to have been established early in the 13th century, though some writers have traced its antiquity up to the time of Charlemagne, comprised, before the revolution of 1789, 10 great and 26 minor colleges, which had each faculties of divinity, law, physic, and arts. The professors appear to have been attached to colleges rather than to the university as an abstract body, and the number of students living in the colleges was very considerable. The income of the university arose out of a 28th part of the rent paid by the farmer-general of the royal posts and messageries, which, with the students' fees, made a large income; and the extensive buildings, still remaining, testify the importance once attached to these institutions, at the same time that the literary annals of France prove that, speaking generally, the various functionaries performed their duties pretty efficiently. At the revolution, however, the colleges were abolished, their estates confiscated, and the whole establishment was remodelled. Further alterations were made by Napoleon; but the present system dates from the restoration of the Bourbons. The university of Paris, as now constituted, is in fact the central establishment for education in France, and has under its direction all the faculties, colleges, and schools of the country: indeed, it may be considered as a mere government establishment, since the minister of public instruction is *ex-officio* rector of the university, which has jurisdiction over the five royal and two private colleges of Paris, the royal colleges of Versailles, and all the institutions and pensions within certain limits. There are four faculties for higher degrees granted by the Academic Council; but no students can be admitted to them without having previously taken the degree of bachelor of letters. Professors are attached to each faculty, and deliver gratuitous courses of lectures, a certain attendance on which, as well as other exercises, is necessary for obtaining degrees. Candidates for the degree of bachelor of letters must produce certificates of having studied at least one year in one of the colleges of the university, in some authorised institution, or under the charge of a regular tutor. Examinations are publicly held four times a year under four professors appointed by the Academic Council: they include numerous oral questions on philosophy, literature, history, and the elements of mathematics, with papers for written composition and the translation of Greek and Latin authors. The examination of each candidate must last 14 hours, but may be protracted at the pleasure of the professors. All the higher degrees are granted only after severe trials, and numerous candidates are annually rejected. The number of regularly-entered students in law is about 3,200, and in medicine 2,200. There are seven colleges in Paris, all of which have a certain number of attached bursaries, and receive boarders as well as day-pupils. The following table exhibits the numbers and classes of the students in the different colleges in 1840-41.

Colleges.	Bursars.	Free-boarders.	Out-door Pupils.	Total.
College Louis le Grand	62	451	563	1,076
— de Henri IV.	85	408	326	820
— de St. Louis	91	214	576	451
— de Charlemagne	none	—	738	738
— de Bourbon	none	—	980	980
— Stanislas	30	111	44	275
— Rollin	47	742	—	389
Total	315	1,586	3,287	5,219

At the end of each academical year, in August, a grand distribution of prizes takes place in the public hall of the Sorbonne to the most deserving pupils of these colleges, and the degree of emulation thus excited among more than 5,000 students is immense. The minister of public instruction presides at this ceremony, the professors deliver Latin orations, and the company comprises the most distinguished functionaries and literati of France.

Paris, besides its colleges, has 28 institutions and 93 pensions for boys, with 22 institutions and 48 pensions for girls.<sup>1)</sup> These are similar in all respects, except in size; the institutions being on a larger scale, and the course of study more general and more advanced in them than in the pensions. The conductors of these establishments must be at least graduates of letters, and are bound by law not only to follow a course of study prescribed by the university, but to send their pupils daily to one of the Royal colleges in order to attend the professors' lectures. It is their duty, also, to assist them in their studies, and prepare them for the lessons to be

gone through in the public class-rooms of the college. All the permanent students of the colleges wear a military-looking uniform, and are summoned to their duties by beat of drum. There are no colleges for girls, and their education varies according to the system followed in each particular establishment; the mistresses, however, of the different schools are obliged to pass an examination before persons authorised by the university. (See a valuable paper on the *Present State of superior Education in Paris*, in the *Statistical Journal of London*, iv. 50.—66.)

Among the other establishments for education, the highest is the College of France, founded by Francis I. in 1539, and augmented at different periods. It consists of professors only, called *Lecteurs du Roi*, among which are Biot, Thénard, Elie de Beaumont, Michelet, Lacroix, Joubert, St. Hilaire, Chevalier, and other distinguished scholars and men of science. All their lectures are gratuitous, and open to everybody. The museum of natural history, in the *Jardin des Plantes*, has likewise an attached corps of 13 professors, who deliver courses of lectures on different departments of natural history, chemistry, agriculture, &c. These lectures are, also, perfectly open and gratuitous; as are those delivered on Oriental literature at the *Bibliothèque du Roi*, on painting, sculpture, &c. at the *Loyal school of fine arts*; and on various branches of practical science at the *Coursier des Arts et des Métiers*. One of the best of the educational institutions to which the revolution gave rise is the *Ecole Polytechnique*, established in 1794-95, for the promotion of mathematical and physical science and the graphic arts, and the preparation of pupils for the artillery, engineering, and mining departments. The school is under the control of the minister of war; but the details of management and instruction are left to a general council. The most distinguished masters in every branch of science are hired by government; and no students are admitted without having previously undergone an examination, to prove their competency in the classics and elementary mathematics. The pupils, of whom there are about 300, study two, sometimes three years; and no one can enter the higher departments of the military service without a certificate of attendance at this establishment. The present king has founded 24 scholarships, 12 of which are in the gift of the minister of war, 8 of the minister of the interior, and 4 of the minister of marine. The establishment is supported by government; but the pupils pay an annual sum for board and lodging. The mathematical education at this institution is excellent, much superior, indeed, to what it is in most other institutions of the same kind. Another seminary of great importance, and closely connected with Paris, though not within the cap, is the *Maison Royale* of St. Denis, established by Napoleon, and furnishing an excellent education to between 600 and 700 young ladies, the daughters, sisters, and nieces of members of the legion of honour; of whom 400 receive their instruction gratuitously. This institution is in every respect admirably conducted, and might serve as a model for a large college of females; it has, also, two succursal houses, in which 400 pupils are gratuitously instructed. There are also several normal schools, with lectures, &c., for the purpose of forming teachers in the primary schools. The adult primary schools in the department of the Seine are attended by about 2,500 pupils; and the primary schools for children were attended, in 1833, by 12,650 boys and 11,250 girls; the expense of these establishments being estimated at more than half a million francs a year. There are at present, also, between 20 and 30 infant schools in Paris, supported by subscription, and attended by about 5,000 children.

**Literary Institutions.**—Among the many chartered and private literary societies of Paris, the highest place is due to the Institute, unquestionably the first establishment of the kind in Europe. A decree of the Convention, in 1793, annihilated the old *académies*, including among others, the *Académie des Inscriptions et des Belles Lettres*, the most celebrated academical institution that ever existed. In 1795, however, the *Institut* was formed, in the view of combining the literary and scientific academies into one body. In 1803, Napoleon divided the Institute into 4 classes; and in 1832 a fifth was formed of moral and political science. The titular members, of whom there are 217, receive pensions from government, ranging between 1,200 and 1,500 fr. a year, besides whom there are 45 free academicians, 31 associates, and 219 corresponding members. The magnificent building in which this learned body meets is on the Quai Conti, near the Pont Neuf: it was built at the close of the 17th century, after the designs of Leveau, at an expense of 2,000,000 fr., left by Cardinal Mazarin, who intended it should be a college for natives of 4 provinces then recently annexed to the crown of France. The principal room of the palace (formerly used as a church) is now appropriated to the sittings of the different classes, and fitted up with benches forming a semicircle facing the president's chair.

The Mazarine library comprises 160,000 printed vols., with 4,500 MSS.; and the more recently formed library of the Institute has upwards of 100,000 vols., chiefly scientific works. At one end of this library is Pigalle's celebrated marble statue of Voltaire. The interior is adorned with busts, bas-reliefs, &c.; and this palace is, on the whole, one of the finest public edifices in Paris. The *Bureau des Longitudes* is another important public body, formed in 1795, for the discovery of the best methods of ascertaining the longitude, and for the general improvement of navigation: its meetings are held at the Observatory (near the *Barrière d'Arcueil*), a building well suited for astronomical observations, and furnished with every description of philosophical instruments, and a good library of scientific works. The Bureau produces annually the celestial almanack, called the *Connaissance des Temps*, for the use of navigators; and another work of a more general character, the *Annuaire du Bureau des Longitudes*. The Royal Academy of Medicine, formed in 1776, and restored in 1820, is charged with making reports to government on all matters of public health: this establishment, as definitively organised in 1835, consists of 175 resident, and 25 country members, with 22 foreign associates. The following are among the principal learned societies of Paris supported by private subscription:—

- \* Société Royale des Antiquaires.
- \* — Royale d'Agriculture.
- \* — Géologique de France.
- \* — de Géographie.
- \* — Grammaticale.
- \* — Philomatique.
- \* — Philotechnique.
- \* — de Statique Univ.
- \* — d'Horticulture.
- \* — Asiatique.

- Société Entomologique de France.
- Société d'Histoire Naturelle.
- Athénée Royale de Paris.
- \* Institut Historique.
- Athénée des Arts.
- Académie de l'Industrie Française.
- \* Société pour l'Encouragement de l'Industrie Nationale.

**Libraries, Museums, and Picture Galleries.**—By far the most celebrated library of Paris, and probably the largest and most valuable that any where exists, is the *Bibliothèque du Roi*, or royal library. This vast collection of books is deposited in the old Hôtel de Nevers, a long, inelegant-looking edifice in the Rue Richelieu. It was begun in the middle of the 16th century; and at the death of Louis XIV. it had 70,000 vols.: it was afterwards greatly increased by the addition of MSS. and printed books from the suppressed convents; and it is said to comprise at present about 700,000 books and pamphlets, 40,000 MSS., 100,000 medals, 1,600,000 engravings, and 300,000 maps or plans; though there is reason to think that these numbers are, in some instances, considerably overstated. It is open from 10 till 3 daily (except Sundays, and during a recess of six weeks in September and October), and every facility is given for literary research, except that the books may not be removed from the building. Among the libraries attached to public establishments, the following are the largest:—That of St. Geneviève, comprising 200,000 printed vols. and 30,000 MSS.; the two libraries of the Institute, consisting together of 260,000 vols. and 4,500 MSS.; that of the Arsenal, 190,000 vols. and 6,500 MSS.; that of the Chamber of Deputies (50,000 vols.); and that of the *Bibliothèque de la Ville* (50,000 vols.), all open to the public. Paris has also several valuable museums, belonging either to the government or the university. The Museum of Natural History, in the *Jardin des Plantes*, may be said to stand at the head of every institution of the kind, not only in France, but elsewhere; it is conducted at an annual expense of 300,000 fr., and gives employment to upwards of 160 persons. The Botanic Garden, exclusive of a large collection of exotic plants from all climates, comprises buildings fitted up as dens for carnivorous animals, with menageries for foreign birds and beasts, which are all provided with habitations suitable to their modes of life. This collection of living animals, perhaps the largest in Europe, has enriched the museum with many new species, and enabled zoologists to improve the study of comparative physiology. Large additions to the menagerie have recently been made, and the collection is constantly on the increase. The Amphitheatre of Anatomy and Museum of Natural History occupy a large space at the end of the garden: on the first floor of the latter is a superb collection of reptiles and birds; the second floor is devoted to the reception of mammalia, birds, insects, mollusca, &c., arranged according to the system of Cuvier (who here pursued those studies that have gained him an imperishable fame); and on the third story is arranged a general herbal, comprising upwards of 50,000 species, besides special collections amassed by Tournefort, Justier, Humboldt, Decandolle, &c., the entire number of specimens amounting to nearly 400,000. Along the E. side of the garden runs a long gallery, in which is deposited a noble museum of geology and mineralogy, only recently formed, and even now second to none in Europe. The Museum of Comparative Anatomy is kept

\* Those marked with an asterisk publish memoirs and bulletins of their proceedings.

in a detached building W. of the garden; and the number of preparations, which fill 15 rooms, considerably exceeds 15,000. The menagerie is open every day; and the museums may be seen by tickets twice or three times a week. Paris has many minor collections of anatomy, mineralogy, &c., attached to the School of Medicine, and to its numerous literary societies; but none of them are sufficiently extensive to require description. The *Conservatoire des Arts et des Métiers*, in the Rue St. Martin, deserves notice, both on account of its great extent and the astonishing variety of instruments and machines, specimens of manufacture, models of patents, &c., deposited therein; in fact, this gallery of practical science is one of the most interesting exhibitions in Paris; and having been re-arranged and newly catalogued, may now be seen to great advantage. It is open during two days in the week; but the library is accessible 7 or 8 hours a day.

The great glory of Paris, however, as respects the fine arts, is the gallery of the Louvre, comprising a most extensive and valuable collection of pictures and statues. During the latter years of the reign of Napoleon, this gallery was the richest and most magnificent by far of any that has ever existed, having then to boast of the *chef-d'œuvre* of Rome, Florence, and, in fact, of the greater part of continental Europe, carried off by the conquering legions of France. But victory having deserted the eagles of Napoleon, these treasures were again restored to their former possessors, and the Louvre has no longer to glory in the Apollo Belvidere, the Venus de Medici, and other matchless productions. Still, however, the collection is a very noble one. Eighteen large halls, on the ground-floor, are filled with pieces of sculpture, including the choicest treasures of the Villa-Borghese, and many works that once embellished ancient Rome. Many of them are of great value; especially the *Diane à la Biche*, standing on a pedestal adorned with most exquisite bas-reliefs; a statue of Mars, supposed to have been modelled from a picture by Zeuxis, once in the temple of Concord at Rome; the celebrated Fighting Gladiator, by Apollonius of Ephesus; the Hermaprodite of the Villa-Borghese; a statue of Jason, erroneously called Cincinnatus; and the magnificent group of Sileus and the Infant Bacchus discovered in the garden of Sallust at Pompeii. Five other rooms in the basement story are devoted to the reception of works by modern sculptors; a large apartment was filled in 1830 with a collection of Egyptian antiquities, and a large gallery has since been opened, called the *Musée de la Marine*, comprising models and sections of vessels, plans of ports, and other naval curiosities. The great picture gallery, which is on the first floor, is approached by a grand staircase painted by native artists, and comprises a suite of nine apartments, the walls of which are lined by upwards of 1,200 pictures by artists belonging to the French, Flemish and Dutch, Italian and Spanish schools. Among the pictures of the French school are 15 admirable landscapes by Claude, the best of which is the well known "Disembarkation of Cleopatra;" 16 compositions, chiefly scriptural, by N. Poussin, among which may be distinguished an "Assumption" and "Holy Family;" and 17 beautifully coloured marine paintings by Vernet. Among the Flemish and Dutch pictures, which, like those of the French school, occupy three apartments, the most distinguished specimens are Gerard Dow's Dropsical Woman; several pictures by the Vandycks, particularly a sketch of the "Dead Saviour in the Virgin's arms;" 14 fine studies by Rembrandt, including his "Venus and Cupid;" and 38 pictures by Rubens, the principal of which are, the "Flight into Egypt," and a composition known to connoisseurs as the *Viège aux Anges*. The schools of Italy and Spain occupy the three remaining apartments, which, indeed, contain the gems of the gallery. The following have been specified as those more particularly entitled to notice:—Raphael's "Belle Jardinière," and Holy Family, painted for Francis I., who paid for it upwards of 45,000 francs; Leonardo da Vinci's portrait of "Mona-Lisa;" Correggio's group of "Jupiter and Antiope;" Domenichino's "St. Cecilia;" Guido's "Infant Saviour on the Virgin's knee;" Guercino's "Repentance of St. Peter;" a magnificent battle-piece, and the "Witch of Endor," by Salvator Rosa; Murillo's "Infant Jesus;" and Espagnoletto's "Adoration of the Shepherds."

The Louvre is open every day except Mondays, and on Sundays the concourse of visitors is particularly great. Owing to the want of room, the pictures of the ancient masters are removed from the Grand Gallery, or are covered over, from the 1st of Feb. to June, to make way for the annual exhibition of the works of the modern artists! This arrangement has been much objected to, and is, perhaps, the most defective of any connected with the fine arts in Paris. It is to be hoped that it may speedily be obviated, by providing some other place for the modern exhibition. The French metropolis comprises several valuable private collections, especially that of Marshal Soult, which has some fine specimens of the

Spanish school: the gallery of the Palais Royal consists chiefly of works by modern artists.

*Literature and Periodical Press.*—Paris is the great centre from which emanate all the most important publications of France, and in which is congregated all the most distinguished French writers. The increase of publications appears to have been regularly progressive from 1817. And within the last 20 years a great number of highly important and valuable new works, especially in history, philosophy, and science, have issued from the French press, as well as several republishings of old standard works. These large undertakings are mostly conducted at the expense and risk, not of one, but of several publishers, on a joint stock principle. The periodical press of Paris is well conducted, and has great influence. In 1838, 247 periodical works were published, exclusive of 66 political papers. The principal magazines are the *Revue de Paris* (which appears weekly), and the *Revue des Deux Mondes*, *Revue du Nord*, and *Revue Britannique*, published monthly.

The following table exhibits the circulation, in 1838, of the 9 principal newspapers of Paris:—

La Sincère	-	-	-	11,667
La Presse	-	-	-	9,700
Le Constitutionnel	-	-	-	9,375
Le Moniteur Parisien	-	-	-	6,500
La Gazette de France	-	-	-	5,006
La Quotidienne	-	-	-	5,535
Le National	-	-	-	5,335
Le Journal des Débats	-	-	-	3,166
Le Journal du Commerce	-	-	-	3,100

The sale, however, of the "Presse" and "Constitutionnel," has considerably diminished since this return. The "Moniteur Universel" is the official morning journal of the government. "Galignani's Messenger," a well conducted daily paper, in English, is extensively circulated in the principal cities and towns of continental Europe. The royal printing-office of Paris employs about 400 workmen. The censorship of the press, which was early introduced, and was exercised, though with considerable indulgence, down to the revolution of 1789, was finally abolished after the revolution of 1830.

*Theatres and other Amusements.*—Paris may be regarded as the dramatic capital of Europe. Every Parisian, even of the lowest class, esteems himself, more or less, a critic of the drama; and the fondness for this species of entertainments makes the 14 theatres be almost nightly crowded to excess; indeed, the receipts of the theatres have for some years been steadily on the increase, and amount at present to nearly 9,000,000 fr. a year, of which a tenth goes to the support of public hospitals and charities. The most fashionable spectacles of Paris are the Italian and French operas. The former of these (which has been held in the Odéon since the destruction by fire of the old Salle Favart, but will soon be removed to the Théâtre de la Renaissance) is strictly confined to the representation of Italian operas, and its administration for many years has secured an almost unprecedented amount both of vocal and instrumental talent. The French opera house, belonging to the *Académie Royale de Musique*, is partly supported by the government; the operas are represented by the pupils of the academy; the dancers in the ballet are the first in Europe, and the stage mechanism is brought to matchless perfection. These theatres are supported chiefly by the higher classes, and as fashionable resorts may be considered analogous to the Italian opera in London. The other theatres, five or six of which are nightly crowded almost to suffocation, are supported by the middle classes, the small *rentiers*, and wealthy tradespeople. Vaudevilles and musical farces are the most popular entertainments; but among the lower classes frequenting the Porte St. Martin and Ambigu Comique, there is a marked predilection for the horrible, as depicted by Victor Hugo, Dumas, &c. The following is a list of the theatres now open in Paris, with the amount of accommodation in each:—

Académie Royale de Musique	-	1,940	Théâtre du Palais Royal	950
(Maison d'Italian Opera)	1,650		Théâtre de la Porte St. Martin	1,800
Théâtre Français	1,250		Théâtre Gaîté	1,800
— de l'Opéra Comique	1,800		— des Folies Dramatiques	1,100
Théâtre des Variétés	1,240		Théâtre de la Porte St. Antoine	1,250
— de la Renaissance	1,800		Gymnase Dramatique	1,500
Théâtre de l'Ambigu Comique	1,900		Cirque Olympique (for horsemanship)	1,500

The theatres, however, are by no means the only amusement of the Parisians; for they seem to be equally attached to their concerts, balls, and guinguettes, which abound in every part of the French metropolis. The Concerts Musard are in high estimation, and those of Strauss in the *Jardin Turc*, near the Porte St. Martin, are almost equally celebrated. The *Bal masqué* of the opera deserves notice also, as being the nearest approach made by the French to the almost insane revelries of an Italian carnival.

*Hotels, Clubs, &c.*—Paris abounds with excellent hotels,

cafés, and restaurants; about a dozen of which may vie in respectability and amount of accommodation with similar establishments in the W. end of London. They are uniformly clean, and in many cases elegantly furnished. "Indeed," says Mr. Maclaren, "in the interior of these establishments, two peculiarities immediately strike the eye of a stranger—the profuse use of mirrors and marble. Many apartments are furnished with three or four mirrors of very large size; and you will see a restaurant panelled all round with mirrors, each 3 or 4 ft. broad. The tables in these places are almost invariably alab of marble, and the tops of cabinets and even basin-stands are of the same substance. In the cafés here, also, there are no fires visible, as in the London coffee-houses; but the stoves are so managed as always to maintain an agreeable warmth throughout the apartments." (Notes, p. 14. and 26.) The *restaurants*, or dining-houses, are frequented by all classes of the inhabitants, female as well as male. In fact, however it may be accounted for, whether it have originated in its greater advantageousness in an economical point of view, in the taste of the people for society, or whatever else, home, in the English sense of the word, has but few charms for the bulk of the Parisians, who may be said to live in public, dining in restaurants, spending their evenings on the Boulevards, or in the theatres or cafés, and, appropriately, it must be allowed, ending their days in the public hospitals! At the principal restaurants (such as Vêry's, Vêfours, the *lits* *des* Provençaux, and the Rocher de Cancale) the bills of fare, and the prices of dishes, and the charges are necessarily high; but at many houses of great respectability diners may be had for two or three francs, including half a bottle of *vin ordinaire*. Beanne and Pomard, however, are the wines commonly drunk by persons in good circumstances. The houses of the *traiteurs* are frequented almost exclusively by the tradespeople and lower classes; but they also supply dinners to people at their own houses at a fixed price for each dish. Clubs, similar to those of London, have been established within the last few years; the largest and most respectable is the Club Anglais, the habitual resort of the leading men in the fashionable and diplomatic circles. The Jockey Club is frequented by sporting men, and a still more heterogeneous assemblage may be found at the Cercle. It may be remarked, also, that these clubs have been much more numerously attended since the suppression of the salons and other licensed gambling-houses, which till very recently infested the metropolis of France.

**Local Government.**—Paris, with its environs, forms the small department of the Seine, of which the form is nearly circular, and the diameter about 15 m. At the head of it is a prefect, under whom are twelve mayors, one for each of the twelve divisions of the town, and two sub-prefects for the country quarter. As to the administration of justice, the courts of Paris are less comprehensive than those of London, their jurisdiction comprising only the cap, and seven adjoining depts.; but in all other respects Paris is as much the common centre of public business for France, as London is for England. The Court of Cassation is the supreme court of appeal from all the tribunals of France, and the *Cour des Comptes* has authority to examine all the public accounts of the kingdom. The *Cour Royale* confines itself to the trial of criminals in the dep. of the Seine; besides which there is a tribunal *de premiere instance*. Paris is likewise the permanent residence of the sovereign and royal family; the place of meeting for the legislature; the seat of all the ministerial bureaux, and of the public offices generally. It is the seat of an archbishop, and the headquarters both of the royal guards and of the first of the twenty-two great military divisions of France. It has also a numerous corps of national guards, or volunteers, composed of twelve legions, comprising about 30,000 men. For mercantile purposes it has a chamber and several courts of commerce. Finally, it is the centre of almost all associations for public purposes, such as those for the promotion of national industry, for the management of prisons, for the diffusion of vaccine inoculation, &c. As already stated, Paris sends 12 mems. to the Chamber of Deputies, 1 for each arrondissement. Total number of electors, in 1838-39, 16,871.

**Population, Health, &c.**—In 1836, when the pop. amounted, excl. troops and foreigners, to 909,126, there were 28,942 births and 24,067 deaths, showing an increase during the year of 1-180th part of the gross pop. Of the births, 14,645 were males and 12,043 females: the illegitimate being, in the same year, to the legitimate births as 1 to 13. This gives but an indifferent view of the morality of the French cap.; but it is favourable compared with the fact, that, of the whole number of children born, 4,792 were abandoned by their parents, and sent to the Foundling Hospital! We are glad, however, to have to state, that the admissions to this hospital have been of late years progressively diminishing; and that, in this respect, there has been a material improvement. Of the children

produced in 1836, no fewer than 4,772 were born in hospitals, and these, of course, were mostly abandoned. Of the deaths in 1836, 9,060, or between  $\frac{1}{10}$  and  $\frac{1}{8}$  of the whole, took place in the public hospitals, 64 in prisons, and 289 were found dead, and deposited in the Morgue, or public dead-house, in the Isle de la Cité. The suicides in Paris, during the last 15 years, have averaged about 240 a year, or about 1 in 93 of the deaths during that period, a proportion about double that of London. The most densely peopled arrondissements are the 2d, 8th, and 12th; those most thinly peopled being the 4th and 9th. Of the entire pop. of the city it is supposed that nearly a half are working people, the rest being composed of tradesmen, professional men, and persons of independent property. There are about 80,000 servants, and nearly the same number of paupers; but the latter have been gradually on the decrease for some years.

Nearly 15,000 patients are constantly in the hospitals, and about 60,000 pass through them annually, of whom about 4-5ths are discharged cured. The foundlings may average about 20,000; and about the same number of aged and infirm persons are supported by public charity. The pop. of the prisons is very fluctuating, but may be taken at about 4,000 at an average. The climate of Paris is not so variable as that of London, but the winters are sometimes very severe; snow does not lie long, fogs are not frequent, and on the whole the climate is favourable. There has been a great improvement in the health of the inhab. since the revolution, though it be far short of the improvement that has taken place in London during the same period. As was to be expected, the least densely peopled arrondissements, and those occupied by the wealthier classes, are by far the healthiest.

**Fortifications.**—During the course of the present year (1841), it has been, after much opposition, determined to fortify Paris, by surrounding it on all sides with a continuous chain of fortifications. The sum of 140 millions francs (5,600,000*l.*) has been voted for the execution of the works, which have been already commenced. We believe, however, that most military men are of opinion that the fortifications in question will not oppose any effectual resistance to an invading army; and that it is, in fact, impossible successfully to defend so great a city. It is true, the fortifications may be serviceable as a means of overawing the Parisians; and it has been suspected that this has been with many the real motive that made them approve of their construction.

**History.**—When Gaul was invaded by Cæsar, Paris, then called *Lutetia*, was the chief town of the Parisii, a Belgic tribe, and was afterwards included by Augustus in the province of *Lugdunensis quarta* or *Senonia*. It attained no importance, however, till the middle of the 4th century, when it took the name of *Parisiis*, and became the see of an archbishop. It was the favourite residence of the Emperor Julian, who, in his *Misopogon*, terms it his *παλις Ἀλεξάνδρæ*; being taken by the Franks, under Clovis, in 494, it became the capital of his new kingdom. As late as the close of the 9th century, the walled part of Paris was limited to the island of the Cité, though considerable suburbs were extending themselves along both banks of the Seine. It was greatly enlarged by Louis VI. and VII.; still more so by Philip Augustus; and after the battle of Poitiers, in 1356, new walls were raised on the N. side of the Seine. The treaty of Troyes, in 1420, gave Paris into the hands of the English, who held it till 1436, when it was recaptured by the French, and the English garrison put to the sword. The pop. of Paris, in the 15th century, is estimated by Dulaure at 150,000, and great architectural improvements had been gradually taking place; but the police was so bad, that both life and property were insecure, and mortals were almost at their lowest possible ebb. The city was further improved by Francis I., the circuit of the walls was greatly enlarged by Charles IX. and Henry IV., under whose reigns the entire suburb of St. Germain was rebuilt. In the religious wars of the 16th century, Paris was the scene of a *revolt* against the troops of Henry III., known as "the day of the barricades." It was held by the Leaguers, from 1585 to 1594, when it surrendered to Henry IV. The palace of the Luxembourg and the Palais Royal were built in the reign of Louis XIII., and the walls were so extended as to include nearly the whole space within the present boulevards; but the police was still wretchedly inefficient, and disorders were of almost daily occurrence, particularly in the most turbulent quarter of the University. In the 17th century, Paris was the principal scene of the tumults of the *Frondeurs*, supported by the inhabs. against the French and Swiss guards; but notwithstanding these disturbances, the city still increased, churches, convents, and hospitals were built, the palace of the Tuilleries was finished, the quays and boulevards were laid out, sewers formed, and other improvements effected at a great expense. The most memorable scenes connected with the history of the French Revolution, from the destruction of the Bastille, in 1789, to the assumption of imperial power by Napoleon, were un-

acted in the metropolis, which has long had a preponderating, though not always a beneficial influence, over the affairs of the kingdom. Under the government of Napoleon, Paris was greatly improved, and many of those scientific and other establishments were either formed or remodelled, which have contributed to increase its literary and scientific renown. The work of improvement proceeded slowly during the reign of Louis XVIII. and Charles X.; but since the revolution of 1830, which placed the Duke of Orleans on the throne, great activity has been evinced by the legislature in raising solid as well as splendid monuments, some of which, as the Madeleine, the Arc de l'Etoile, and the ministerial hotel on the Quai d'Orsay, may vie in magnificence with the finest European structures. At the same time, new pavements, bridges, sewers, markets, public gardens, and prisons, attest that no department of the metropolis is neglected by the government; and whenever gas is generally introduced, and water more generally diffused in private houses, Paris will be one of the most comfortable as well as handsomest and most luxurious capitals of Europe. (*Dulaure, Histoire de Paris; Paris and its Historical Scenery, 1; Metropolitan Magazine, 1837; Gallignani's New Paris Guide; Plantas's Picture of Paris; Dictionnaire de la Conversation et de la Lecture, art. Paris, and Private Information.*)

PARMA (DUCHY OF), an indep. state of N. Italy, between lat. 44° 20' and 45° 8' N., and long. 9° 20' and 10° 30' E. (exc. the detached distr. Guastalla), having N. Austrian Italy, from which it is separated by the Po. W. the Sardinian dom., S. the latter and Tuscan Lunigiana, and E. Modena. Area estimated at 2,268 sq. m. Pop., in 1833, 465,673. This duchy, lying between the Po on the N., and the Apennines on the S., is partly and principally included in the great plain of Lombardy; but a large portion of its surface is covered with the ramifications and slope of the Apennines, the crest of the ridge, here about 4,000 ft. in height, forming its S. boundary. It slopes to the N., and all its rivers fall into the Po. The soil, which is very fertile in the plain, where it is watered by numerous canals, is stony and arid in the mountainous districts. It is principally held by metayers; but while in the surrounding states such agreements are entered into between the metayer and his landlord as they may approve, in this duchy the law interposes to protect the tenant, who might be inclined to subscribe to peculiarly onerous conditions. Thus, a landlord may stipulate for more than half, but not for more than 2-3ds of the produce. If the landlord furnish the cattle, the farmer has a right to, at least, 1-3d of the profit thence arising; and if the tenant furnish the cattle, no lease is binding that does not leave him 2-3ds the produce. (*Von Raumer, Italy, 1, 307, 308.*) Along the Po, the farther we advance to the E., the soil becomes deeper, richer, better watered, and more fertile. The dairy is here the great object of attention, and the famous cheese which derives its name from this duchy, is still made to a great extent in the neighbourhood of Pavla, Lodi, &c. Farms are very small, and the husbandry inferior to that of Modena. (*See ITALY (AUSTRIAN), ante, 64.*)

The acorns of the numerous oaks, along the banks of the Po, feed an immense number of hogs, which are generally preferred to those of any other part of Italy: in consequence many are sent to Tuscany and the Papal States, whither, also, and to Genoa, great numbers of fat oxen are sent. The sheep of the duchy are indifferent: the superior flocks pastured in the Parmese Apennines in summer, belong to Lombardy, Tuscany, and other adjacent states. Both poultry and bees are abundant. Maize, wheat, beans, tobacco, fruit and wine, are the principal products of the plain country. The only raw materials manufactured are silk and hemp; but according to Serristori, the produce of the former only amounts to 100,000 lbs. a year. Rice is grown in the districts of Guastalla, and near Parma. In the mountains but little corn is grown; and the climates too cold for the vine. Chestnuts and skimmed milk, with cheese made from the milk of goats and ewes, form the principal food of the population. Potatoes were not introduced into the mountain districts when the duchy was visited by Châteaueux. The inhabitants of these districts make a good deal of charcoal; but their principal revenue is derived from their migrations: for all the active inhabitants quit their homes at the favourable season, to work in Lombardy and Tuscany. The money they gain and save from this source forms almost all the capital circulating among them. (*Châteaueux's Italy and its Agricul. Trans., p. 55.*)

Iron, copper, vitriol, and petroleum, are found in the mountains; but the principal mineral product is salt, of which about 12,300 quintals are made annually. Manufactures, excepting such as are domestic, are of trifling importance; silk fabrics are the principal, and are made in all the larger towns. There are several iron forges; and hats, glass, earthenware, paper, and gun-

powder are made in Parma, Piacenza, and San Donino. The value of the imports, which consist mostly of woollen and linen cloths, colonial goods, and articles of luxury, is estimated at 748,000 lire; while the value of the exports, including 8,000 head of cattle, and 27,000 hogs, is estimated at only 168,500 lire a year. (*Serristori, Statist.*) But it is hardly necessary to say that there can, in fact, be no such discrepancy between them; and either the one statement or the other, or perhaps both, must be completely erroneous. Except the Po, there is no navigable river, nor is there any canal, except for irrigation, within this duchy.

The government is an unlimited monarchy, hereditary in the male line, but at present vested in a female, this duchy having been assigned, by the treaty of Vienna, to the Archduchess Maria Louisa, ex-empress of France. At her death, however, it will fall, under the existing arrangements, to the Duke of Luca, or his heirs. The administration is conducted by a cabinet of six ministers. The duchy is divided into five districts: chief towns, Parma, the cap., Piacenza, Borgo San Donino, Borgo Taro, and Guastalla. There are 38 inferior courts of arbitration, consisting of a single judge, and courts of primary jurisdiction and appeal in Parma and Piacenza. Criminal trials take place in public, but without the intervention of a jury. The judges composing the courts decide by a majority of votes. The code of Parma, promulgated since 1820, is bottomed upon the Code Napoleon, but has much that is peculiar to itself. Secret societies are prohibited, and associations for definite objects, if consisting of more than 20 members, require to be authorised by government. All games of chance are prohibited, under penalty of fine and imprisonment. Public provision is made for the poor; and beggars are either punished with imprisonment, or sent to a workhouse. If death ensue from a duel, the challenger is liable to imprisonment for from 10 to 20 years, and the challenged from 8 to 10. (*Von Raumer, 1, 314—316.*) The Rom. Cath. is the state religion; but others are tolerated. Public instruction is furnished by about 360 elementary schools, attended by nearly 10,000 pupils; there are also secondary schools in most of the towns; and superior academies in Parma and Piacenza. The military force consists of about 13,900 men, chiefly infantry. The public revenue, derived from state property, territorial and personal taxes, patents, communal and river dues, custom duties, octrois, in Parma and Piacenza, amounted, in 1831, to 6,895,840 lire. The public debt, in 1833, amounted to 10,700,000 duc. (*Serristori, Statist. d'Italia.*)

This territory anciently formed part of Cisalpine Gaul. Charlemagne gave it to the Holy See; but during the quarrels between the popes and the emperors, Parma and Piacenza became independent republics. They afterwards fell successively under the dukes of Milan, the Farnese family, and the Spaniards. By far the most celebrated of its native sovereigns was the famous Alexander Farnese. Though he served one of the most odious tyrants, Philip II., Farnese was alike generous and brave, and was certainly the most skilful and accomplished general of his age. In 1601, Parma was ceded to the French; and in 1605, it was principally included in the dep. Taro, belonging to the kingd. of Italy. (*Serristori, Statistica d'Italia; Ranpoldi, Châteaueux; Raumer, &c.*)

PARMA, a city of N. Italy, the cap. of the above duchy, on the little river of its own name, a tributary of the Po, here crossed by 3 bridges, 35 m. S.E. Piacenza, and 33 m. S.W. Mantua; lat. 44° 48' 17" N., long. 10° 29' 45" E. Pop. circa 36,000. Its walls are between 3 m. and 4 m. in circ.; it is surrounded by a glacis which forms a favourite public promenade. It is well built and laid out, especially its principal thoroughfare, which forms a part of the Flaminian way (via Flaminia). It has many good public and private edifices; they are mostly, however, of brick, and none is remarkable for beauty: many of them are, also, in a decaying condition, and its streets are "dull and dreary." The Farnese palace, though an immense pile, is little more than half the original design; it is raised on open arcades; and, though partly in a ruinous state, it serves for the residence of the archduchess, and accommodates the academy of arts. In the new picture gallery belonging to it, no longer are several masterpieces by Correggio, Parmegiano, Raphael, the Carracci, &c. The academy has also a museum, in which are many interesting antiquities from the buried city of Velia (18 m. S. Piacenza), and an extensive and well arranged library. Attached to the palace is the large Farnese theatre, designed by Vignola on the model of the ancient theatres, 300 ft. in length, and capable of accommodating some thousand persons. It is built entirely of wood, and is well constructed for hearing; but it has been long disused, and is said to be in a very dilapidated and ruinous state. Another, but smaller theatre, exists on the same floor; and a third, built by the present archduchess, was finished in 1820.

The cathedral, an edifice of the 11th century, though in a mixed and semi-barbarous style, is, on the whole, a

magnificent building: its fine dome is ornamented with one of the last and most celebrated productions of Correggio. The city has a great number of other churches, several of which possess some fine works of art. It is a bishop's see, and a seat of the high court of revision for the duchy, besides several inferior courts; and was, till 1802, the seat of a university: it has now a superior school of divinity, medicine, and philosophy, attended by about 420 students; a college of nobles, founded in 1600; an episcopal seminary, some inferior schools, and several hospitals and other charities. The principal and most extensive establishment in the city is the famous printing-office of the Bodoni, established in 1765: it has produced some of the best specimens of typography, especially some of the most splendid editions of the classics of which modern Europe has to boast. The city is supplied with water by a conduit, said to be 50 m. (?) in length. The *Palazzo Giardini*, and a large public cemetery, are situated without the walls. Parma has some silk and other fabrics; but its manufactures and commerce are comparatively insignificant.

Parma became a Roman colony A. D. C. 569. It suffered greatly in the civil war between Antony and Augustus; and was colonized anew by the latter, from whom it received the name of *Julia Augusta Colonia*. It was anciently much celebrated for its wool.

Velleribus primis Apulia, Parma secundis  
Nobilis. MARTIALI. xiv. Ep. 53.

(*Condor's Italy*, li. 26—39; *Rampoldi's Dict. Géog.*, &c.)

**PARNASSUS**, a mountain-chain of Independent Greece, prov. E. Hellas, and nom. Phocis, famous in Grecian poetry and mythology, the favourite resort of Apollo and the muses, and especially sacred to Bacchus. It runs from W. N. W. to E. S. E., forming the connecting link between Mount Pindus and Mount Helicon; but the only part of it that requires any particular mention is its culminating point N. of Delphi, now called *Liakura*, lat.  $39^{\circ} 31' 57''$  N.; long.  $22^{\circ} 38' 36''$  E. According to M. Peytier, it rises 8,068 ft. above the sea, and being covered with snow during the greater part of the year, would have been rather an uncomfortable residence for the muses, who inhabited its lower regions, especially the laurel groves in the vicinity of the Castilian fountain. Dr. Clarke, who ascended this celebrated mountain, describes its summit as somewhat resembling that of Cader Idris in N. Wales; and adds that "after having been for years engaged in visiting the tops of mountains, he must still confess that he never saw any thing to compare with the view from the summit of Parnassus. The Gulph of Corinth had long looked like an ordinary lake, and it was now reduced to a pond. Northwards, beyond all the plains of Thessaly, appeared Olympus, with its many tops, clad in shining snow, and expanding its vast breadth distinctly to view. The other mountains of Greece, like the surface of the ocean in a rolling calm, rose in vast heaps according to their different altitudes; but the eye ranged over every one of them. Helicon was one of these; and it is certainly inferior in height to Parnassus. One of the principal mountains in the Morea, now called *Tricala*, not far from Patras, made a great figure in that mountainous territory; it was covered with snow, even the lower ridges not being destitute of it. We looked down on Achaia, Argolis, Elis, and Arcadia, as upon a model. The higher region of the mountain is of limestone, bleak and destitute of all herbage, except a few alpine plants." (*Travels*, vii. 261.) From the sacred town and temple of Delphi the mountain appears to have two summits, one of which was sacred to Phœbus and one to Bacchus—

"Parnassus gemino pecti æthera colle,  
Mons Phœbo Iliomque sacor." *Lucan*, v. 72.

Running down the cleft between these two summits is the famous *Pons Castalius*, the genuine source of poetical inspiration. It is thus alluded to by Virgil, in connection with the neighbouring mountain—

"Sed me Parnassi deserta per ardua dulcis  
Rapat amor. Juraque, quæ nulla priorem  
Castallant molli devertit græcia cilio." *Georg.* lii. 293.

Even at present it is by no means unworthy its ancient renown. Mr. Dodwell says, "it is clear, and forms an excellent beverage. The fountain is ornamented with pendent ivy, and overshadowed by a large fig-tree." Higher up the mountain is the Corycian cave, which, during the Persian war, afforded a retreat to the less adventurous Greeks after the battle of Thermopylae. (*Æliad*, viii. 36.) It is described by Mr. Raikes, the first modern traveller who has visited it, as a chamber 330 ft. in length, and nearly 200 ft. in breadth, with a roof studded with stalactites. Above this cave, and at a distance of about 80 stadia from Delphi, stood the town of Tithorea, taken and burnt by the army of Xerxes at the close of the Persian war. The ruins were found by Dr. Clarke, near the modern village of *Velizia*. For further particulars see *DELPHI*.

**PAROS**, a famous island of the Grecian Archipelago, group of the central Cyclades, to the W. of Naxos, from which it is separated by a strait, 5 m. across; Mount St. Elias, the most elevated point in the island, being in lat.  $47^{\circ} 2' 46''$  N.; long.  $25^{\circ} 11' 25''$  E. Pop. 8,000. ? It is oval-shaped, being about 12 m. in length by 8 in breadth. Though rugged and uneven, it is, speaking generally, extremely fertile; and, if well cultivated, would support four or five times its present pop. It produces considerable quantities of cotton, with corn, wine, oil, &c. Tournefort says that the butchers' meat is good, that there are a great number of hogs, and that pigeons and partridges are extremely abundant. (i. 203. 4to. ed.) Port Naussa, on the N.E. coast of the island, is one of the best harbours in the Archipelago, and was used, in 1770, as the rendezvous of the Russian fleet. Parecechia, on the site of the ancient city of Paros, on the W. coast of the island, is the capital. Its harbour is open to the W., and there are some sunken rocks in its vicinity, on one of which the *Superbe*, a French line-of-battle ship, was lost, in 1833. The present town consists of mean houses, though, however, are interesting, from their chiefly consisting of fragments of the old city, including portions of the shafts and capitals of columns, &c.: the cathedral church is said to be the best in the Archipelago.

Paros was famous in antiquity for its beautiful snow-white marble, whence Virgil has called the island *niveam Paron*. (*Æneid*, iii. v. 126.) The finest of the ancient statues, including the Venus de Medici, the Apollo Belvidere, and the Antinous, were formed out of this material. Indeed, the best sculptors used no other, *omnes autem tantum candido marmore usi sunt a Paro insula*. (*Plin. Hist. Nat.*, lib. xxxvi. cap. 5.) The quarries were situated about 4 m. from the city of Paros, and remain exactly in the state in which they were left by the ancients. Dr. Clarke says they had been wrought with infinite skill; and that the blocks had been cut out with such precision that there was not the smallest waste. (vi. 138. 8vo. ed.)

According to Thucydides (lib. i.), Paros was originally settled by Phœnicians. It early attained to great wealth and consideration, and established colonies in Thasos and other islands. During the first Persian war, it sided with the Persians; and after the defeat of the latter at Marathon, the city of Paros was unsuccessfully besieged by Miltiades. Themistocles, however, rendered it tributary to Athens. It produced several distinguished individuals, among whom may be specified Archilochus, the inventor of Iambics.

In modern times, the only event of importance connected with the history of Paros is the discovery of the "Parian, or Arundelian Chronicle." This is a chronological account, cut in marble, of the principal events in the history of Greece during the period of 1318 years, beginning with Cærops, and ending with the archonship of Diognetus, anno 264 B.C. The chronicle for the last 90 years is, however, obliterated; and the inscription is in many parts a good deal defaced.

The marble slab on which this chronicle is cut was purchased on the spot, in 1624, for the Earl of Arundel, whence it is now frequently called the Arundelian Chronicle; and being brought to England in 1627, the inscription was soon after copied, translated, and published by Selden and other eminent scholars. Unfortunately the marble afterwards met with the most barbarous treatment, having been broken, and a part of it employed, as is alleged, to repair a chimney in Arundel House. The portion that escaped this worse than Gothic usage was presented in 1667 to the university of Oxford, of which it is one of the most precious relics. (*Robertson on the Parian Chronicle*, pp. 43—48.)

For a lengthened period the Parian Chronicle was regarded as of unquestionable authority, and was referred to as such by all inquirers into ancient history. In 1788, however, its authenticity was assailed, in a singularly clear, able, and ingenious dissertation, by the Rev. John Robertson, who contended that it was altogether spurious, and had been fabricated in modern times. As was to be expected, this dissertation elicited various answers, by Mr. Hewlett; Porson, the celebrated Greek scholar; Gough, the antiquary, &c.; and at present it seems to be generally concluded by the ablest critics and scholars, that the objections of Robertson have been satisfactorily disposed of, and that there is no good or sufficient reason for doubting that the Parian Chronicle was really compiled about 264 years B.C.

**PARSONSTOWN**, or BIRR, an inland town of Ireland, King's Co., on the confines of Tipperary, on the Birr, a branch of the Lesser Brosna,  $\frac{7}{8}$  m. above its confluence with the Shannon, and 62 m. W. S. W. Dublin. Pop. in 1821, 5,406; in 1831, 6,925. It has a large square, in which is a pillar surmounted by a statue of the Duke of Cumberland, erected in commemoration of

• The *Dictionnaire Géographique* says that the famous sculptors Phidias and Praxiteles were natives of Paros. In point of fact, however, the former was born at Athens, and the birthplace of the latter is unknown.

the victory of Culloden, in 1746, and some good streets. Its public buildings are the parish church, a fine R. Cath. chapel, the cathedral of the see of Killaloe, 3 meeting-houses for Independents, 1 for Quakers, and 2 for Methodists, a fever hospital, a dispensary, a court-house, and a bridge. Near it are large barracks. It has various schools, and is the seat of a manor court, general sessions and petty sessions: it is also a constabulary station, and has two distilleries, a brewery, and an extensive retail trade. The river is navigable for 2 m. from the Shannon, for barges. Markets on Saturdays; fairs, Feb. 11., May 5., Aug. 25., and Dec. 10. Post-office revenue in 1830, 5671.; in 1836, 1,2671. Branches of the provincial and agricultural banks were opened in 1833 and 1836.

Close to the town is Birr Castle, the seat of the Earl of Rosse, the head of the noble family of Parsons, whence the town has its name, and to whom it is greatly indebted. The castle, which is of considerable antiquity, has been completely modernised, and greatly improved by its present proprietor.

PASCO, or CERRO DI PASCO, the principal mining town of Peru, dep. Junin, prov. Huanuco, in an irregular hollow on the table land of Bombon, nearly 14,000 ft. above the level of the sea, and 60 m. S. by W. Huanuco. Pop. varying at different seasons from 4,000 to perhaps 12,000. It is a mean, wretched place, which, previously to the establishment of the Peruvian Mining Company, in 1825, had not a house with a chimney, fire-place, or glazed window; and even now its dwellings are principally covered with thatch, a frequent cause of destructive fires. The town — of which the very adobes, or unburned bricks, partly used in some of the houses, contain silver — is so burrowed under, that a person is in no small danger of inadvertently falling into old mines, or rather pits, sometimes superficial, sometimes deep and fathomless, and half-filled with water. There are several hundred well-known mines, from which silver has been and still could be extracted in large quantities, provided a perfect drainage were effected. But during the revolution a great many of the mines were allowed to fill up with water, and only about 30 are now wrought for eight months a year. From 1825 to 1836 inclusive, 2,190,555 marcos of silver were reduced to bars in the foundry at Cerro Pasco; the produce in the latter year having been 237,840 marcos. These mines have the advantage of being near a coal mine, which has of late years been opened; but turf, dung, timber, &c., are the kinds of fuel most commonly used. The miners choose whether they will be paid in money or a proportion of the ore. In the former case they get four reals, or 2s. a day; but they prefer of course payment in ore, if the mine be productive; and sometimes realize, in this way, very high wages. But the gambling nature of the pursuit has the worst effect on all parties engaged in it. The miners are almost universally profligate, and involved in debt; and but few of the undertakers have made fortunes. (*Smith's Peru as it is*, ii. 1–20.)

PAS-DE-CALAIS, a dep. of France, reg. N., formerly comprised in the provs. of Artois and Picardy, between the 50th and 51st degs. N. lat., and 1° 35' and 3° 10' E. long.; having N.E. and E. the dep. du Nord, S. Somme, W. the English Channel, and N. the Strait of Dover, or *Pas-de-Calais*, whence its name. Area, 655,645 hectares. Pop., in 1836, 655,215. There are several chains of hills, but none of any considerable height. The Scarpe, Lys, and Aa, rise in this dep.; besides which the principal rivers are the Liane, Canche, and Authie, having mostly a N.W. course. Except about Boulogne, the coasts are generally low, and in some places bordered with sandy downs, which are, however, prevented from increasing in height by being carefully planted. The soil is, for the most part, good; and agriculture is, on the whole, well conducted. Of the surface, in 1834, 492,374 hectares were supposed to be arable; 46,210 in pasture; 21,852 in orchards, gardens, &c.; 43,707 in woods, and 18,845 in heaths and wastes. Near Boulogne, farms vary in size from 85 to 250 acres; but, in general, they do not exceed 140 acres. Few are cultivated by the proprietors, being usually let to farmers who pay a money rent, and are also charged with the payment of the land-tax. All kinds of corn, but principally wheat and maalin, and large quantities of beans, peas, and oleaginous seeds, are raised. About 1,522,000 hectol. of potatoes were grown in 1835; and a good deal of land is devoted to the growth of beet-root. The annual produce of beer is estimated at 360,000 hectol.; of cider, at 36,000 h.; and of malt spirits, at 11,000 h. In 1830, there were estimated to be nearly 200,000 oxen and cows, and 300,000 sheep in the dep.; the produce of wool averaged about 652,000 kilogr. a year. The farmers, though not prosperous, are contented with their condition; and there are few paupers requiring permanent relief. In 1835, of 232,002 estates subject to the *contribución foncière*, 101,918 were assessed at less than 5 fr., and 29,402 at from 5 to 10 fr. Some coal is met with;

but the greater part of that made use of in the dep. is brought from Belgium; and wood and turf are the principal species of fuel. About 8,984,000 kilogr. of beet-root sugar were made in this dep. in 1836, a greater quantity than in any other French dep., that of the North excepted. Arras is famous for lace and gingerbread. A portion of the pop. of Boulogne and Calais is occupied in the manufacture of tulle; in the arrond. of Bethune many hundreds are employed in making linen stuffs and yarn; and manufactures of cotton stuffs and yarn are pretty general. Spirits, leather, gunpowder, soap, glass and earthenware, tobacco pipes, &c. are also produced. Artesian wells (so named from the prov. Artois) originated in this dep. The *Pas-de-Calais* is divided into 6 arrondis.; chief towns, Arras, the cap.; Bethune, Boulogne, Montrens, St. Omer, and St. Pol. Calais and Boulogne are the principal sea-ports, and have a considerable coasting trade, and share in the cod, herring, and mackerel fisheries. The dep. sends 8 mems. to the Ch. of Dep.; number of electors in 1838–39, 4,512. Total public revenue (1831), 18,813,372 fr. (*Hugo, art. Pas-de-Calais; Diet. Geogr.; French Official Tables; and Parl. Reports on Agriculture*, 1834.)

PASSAU (an. *Castra Bavaia*), a fortified frontier city, principally belonging to Bavaria, circ. Lower Bavaria, of which it is the cap., on the Danube, where it is joined by the Inn, and also by the small river Ilz, 68 m. E. S.E. Ratisbon: lat. 48° 34' 29" N., long. 13° 28' 5" E. Pop., circa 9,000. It consists of the city proper, built in the angle between the Danube and Inn, and of three smaller portions beyond the Danube, the Inn, and the Ilz, the latter being within the Austrian dominions. These different parts are connected by bridges, and surrounded with fortifications; and are further defended by two citadels, and some inferior forts; this being, in fact, one of the most important fortresses in the line of the Danube. The citelle, in which the town is situated, is highly picturesque; and it has a striking appearance from the river, though not generally well built. The cathedral, however, is a magnificent modern edifice, in the Italian style, and several of the other churches are handsome: the old Jesuit's college, now a lyceum, the bishop's palace, several hospitals, an orphan asylum, and the post office are the other principal public buildings. On a hill, adjacent to the Innstadt, is the shrine of *Maria-hilf*, a celebrated place of Rom. Cath. pilgrimage. Passau is the seat of circle, police, and taxation boards, and has an episcopal seminary, a school of industry, manufactures of leather, tobacco, and pottery-ware, docks for ship building, and an active trade both up and down the Danube. It was long the cap. of an ecclesiastical principality, secularised in 1805. Here, in 1552, a treaty was concluded between Maurice, elector of Saxony, on the one hand, and Ferdinand, king of the Romans, on the part of the Emperor Charles V., on the other, by which the latter agreed to set the landgrave of Hesse at liberty, and to allow the Protestants full freedom of conscience. (*Berghaus; Sketches of Germany*, ii. 101, 102, &c.)

PATAGONIA, an extensive country of S. America, comprising nearly the whole of that continent S. of lat. 34° S., and having N. the territories of La Plata and Chili, S. the Strait of Magellan, separating it from Terra del Fuego, E. the Atlantic, and W. the Pacific. Little is known respecting this region beyond its coast outline. The Andes in Patagonia appear to consist of but one cordillera, the mean height of which may be estimated at 3,000 ft.; but opposite Chiloe there are some mountains probably from 5,000 to 6,000 ft. in height. (*Grog. Journ.* i. 157.) The W. coast is abrupt, very much broken, and skirted with a great number of irregularly shaped rocky islands. The E. coast has been most explored. The surface of the country appears to rise from the Atlantic to the Andes, in a succession of terraces, all of which are alike arid and sterile, the upper soil consisting chiefly of marine gravely deposits, covered with coarse wiry grass. No wood is seen larger than a small thorny shrub, fit only for the purpose of fuel, except on the banks of a few of the rivers subject to inundation, where herbage and some trees are occasionally found. This sterility prevails throughout the whole plain country of Patagonia, the complete similarity of which, in almost every part, is one of its most striking characteristics. It is stated, however, by the Indians on the Rio Negro, which forms the N. boundary of Patagonia, that near the Andes, wheat, maize, beans, lentils, pease, &c., are raised. This latter region is not, however, placed under the same circumstances as the country more to the eastward, nor is it subject to the causes which mainly occasion its sterility.

A great deal of rain falls in the Andes, and the country immediately E. of the mountains is thickly wooded, and is injured by too much rain. This results from the moisture which the W. winds, that prevail throughout most part of the year, bring with them from the Pacific, being condensed and precipitated in the mountains and immediately adjacent territory; so that after passing these

regions the winds are quite dry; and E. winds, which are very rare in Patagonia, are those only which convey any moisture to the desert E. of the Andes. Porphyry, basalt, sandstone, containing numerous organic remains, and a friable rock, greatly resembling, but not identical with, chalk, are among the mineral formations hitherto remarked at the most prevalent in E. Patagonia. The zoology of the country is as limited as its flora. Guanacos are met with sometimes in herds of several hundreds; and their enemy the puma, and a small kind of fox, are almost the only other wild quadrupeds at all abundant, except mice. The latter are of many species, and so numerous that, according to Mr. Darwin, Patagonia, poor as she is in some respects, can, perhaps, boast of a greater stock of small rodents than any other country in the world. (*Voyage of Adventure and Beagle*, iii. 215.) The condor and the cassowary are included among the few species of birds. The reptile and insect tribes present nothing remarkable.

The Patagonian Indians are tall and bulky, and though not absolutely gigantic, they may be said, after rejecting the exaggerations of the early and the contradictory statements of later travellers, to be the tallest people of whom we have any account, the average height of the men being probably not under 6 ft. Their heads and features are large, but their hands and feet small; and their limbs are neither so muscular nor so large-boned as their height and apparent stoutness would induce one to suppose. Colour a dark copper brown; hair black, lank, and coarse, and tied above the temples by a fillet of plaited or twisted sinews. A large mantle of guanaco skins loosely gathered about them and hanging from the shoulders to the ankles, is, with a kind of drawers and loose buskins, almost their only article of dress, and adds much to the bulkiness of their appearance. They neither pierce the nose nor lips, but disfigure themselves greatly with paint. They lead a nomadic life, living in tents formed of poles and skins, and subsisting on the flesh of the wild animals they catch. Both men and women ride on horseback, and are often furnished with saddles, bridles, stirrups, spurs, and Spanish goods of various kinds, which they obtain from Valdivia and other places in S. Chili. Their arms consist generally of a long tapering lance, a knife or scimitar, if one can be procured, and the *bolas*, a missile weapon of a singular kind, carried in the girdle, and consisting of two round stones, covered with leather, each weighing about a pound. These, which are fastened to the two ends of a string, about 8 ft. in length, used as a sling, one stone being kept in the hand, and the other whirled round the head till it is supposed to have acquired sufficient force, when they are together discharged at the object. The Patagonians are so expert at the management of this double-headed shot, that they will hit a mark not bigger than a skilling with both the stones at a distance of 15 yards. It is not customary with them, however, to strike either the guanaco or the ostrich with them; but to discharge them so that the cord comes against the legs of the ostrich, or the fore legs of the guanaco, and is twisted round them by the force and swing of the balls; so that the animal being unable to run, becomes an easy prey to the hunters. These people live under various petty chiefs, who, however, seem to possess but little authority.

Patagonia was discovered by Magellan in 1519. The badness of its harbours, which are mostly difficult and dangerous of access, and afford little or no security for vessels above the size of a brig, has hindered the formation of any European settlement, except at Port St. Julian, about lat. 49° 10' S., and long. 67° 40' W., where the Spaniards settled about 1779, but speedily abandoned the establishment. A few expeditions have been undertaken to the interior in the last century, and latterly by the officers of the *Adventure*, principally up the larger rivers; but the coasts are rarely frequented by any other than whaling vessels, and the nature of the country is not such as to hold out any hope of its ever emerging from its present state of savage barbarism. (*Parish's Buenos Ayres*, &c., 88–95; *Voyages of the Adventure and Beagle*, &c., i. vi.)

PATMOS (anc. *Patmos*), a small island of the Grecian Archipelago, belonging to the Sporades, celebrated in ecclesiastical history as the place of St. John's exile, during Domitian's persecution, 11 m. N.W. Lero, and 20 m. S. the W. extremity of Samos; its chief town being in lat. 37° 17' 2" N., long. 26° 35' 14" E. Pop., according to Burgess, about 4,000. It is of very irregular shape, about 10 m. in length, 5 m. in breadth, and 28 m. in circ. Tournefort, whose authority is entitled to the highest respect, describes Patmos as the most barren rock (*mechant lieu*) of the Archipelago (i. 438.); others, however, extol its fertility; and Dr. Clarke says, that from all he could collect on the subject, it is about as fertile as any of the neighbouring islands, were it not for the danger to which property is exposed from the continual incursions of pirates. (vi. 66., 8vo. ed.) It has numerous harbours, of which that of La Scala, on the E. side, deeply indenting the island, is the principal.

Above the landing-place is a small village, comprising about 50 houses and shops. On the ridge of a mountain, overlooking the port, is the cap. of the island, comprising about 400 substantial stone houses: its streets, however, are steep, ill paved, and extremely narrow, few being more than 8 ft. wide. The monastery of St. John's, on a mountain close to the town of Patmos, built in the commencement of the 12th century, is, in fact, a pretty strong fortress, and commands a noble and extensive view of the sea and surrounding islands. It is peopled by about 30 monks, and has an attached church, and a library containing some early printed books and numerous MSS., some of which were purchased by Dr. Clarke. The famous grotto, or cavern, covered by a chapel, where St. John is said to have written the apocalypse to the dictates of the Holy Spirit, is situated on the face of the hill, about half way between the town and the port. Clarke says that it is not spacious enough to have afforded a habitation even for a hermit; but the monks, to quash all doubts as to its being really the retreat of St. John, show the crevices in the rock through which, as they allege, the divine commands were communicated to the apostle! In point of fact, however, there is not a sentence in the apocalypse to warrant the inference that it was written in a cave; and if there had, any other cave in the island would have answered the purpose quite as well as this.

The island produces only a few grapes, and is furnished with corn and other articles of subsistence from the Black Sea, Samos, and Smyrna. The male inhabitants are chiefly seamen, and from their pretty extensive intercourse with different European nations have become more enlightened than the generality of Greeks. The women (who, according to Tournefort, are generally pretty, though much disfigured by their strange costume,) are chiefly employed in knitting cotton stockings. Tournefort mentions that for every man on the island there are at least twenty women; but this disproportion was, no doubt, occasioned by the men being mostly at sea, and is not mentioned by later writers. (*Tournefort, Voyage du Levant*, i. 431.; *Clarke*, vi. 27, &c.; *Burgess's Greece and Levant*, ii. 24–25.)

PATNA, a city of British India, prov. Bengal, prov. Bahar, of which it is the cap., with the suburbs of Gangas, 144 m. E.N.E. Benares, and about 300 m. N. W. Calcutta; lat. 25° 37' N., long. 85° 15' E. Pop. estimated at upwards of 300,000. (*Hamilton*.) Within the walls it is not much more than 14 m. in length, by 3–4ths m. in average breadth; but, including its straggling suburbs, it extends for 9 m. along the banks of the river, and 2 m. inland. The town itself is very closely built, and surrounded with fortifications in the Hindoo style, which are now, however, completely decayed. At a short distance, it has a very striking appearance; being full of large buildings, with remains of old walls and towers, and bastions projecting into the river, and backed by irregularly elevated land. It has, however, but one wide street, all the other thoroughfares being narrow, crooked, and mean. The houses are partly built of brick, and many have terraced roofs and balconies; but the greater number are of mud, with tiled roofs. E. of the city is a large suburb, with many well-built storehouses, and in the same direction are the gardens belonging to the palace of Jaffier Khan, two or three miles in circuit. The suburb of Bankipore, where the East India Company has most of its offices, and where are most of the residences of its servants, is W. of the city; here is also a remarkable edifice erected during the governorship of Warren Hastings, and originally intended for a grain magazine, but now used as a depot for military stores. Patna has a small citadel, but there does not appear to be any other public buildings worth notice; though the Hudoos, Mohammedans, Sikhs, &c. have many religious temples. The Portuguese inhab. have a Rom. Cath. church; and there is a British seminary with about 100 pupils. But though Patna is the seat of one of the 6 courts of circuit in the Bengal presidency, the residence of a zillah-judge, a collector, a commercial resident, and an opium agent, it has but few English inhab. This city is not celebrated for any particular manufacture; but most articles of foreign and domestic produce may be procured in its bazaars. The neighbouring country produces the finest opium and saltpetre, and great quantities of wheat and other grains, sugar, indigo, &c. The opium and saltpetre are monopolised by government, and produce a large revenue; but a considerable trade is carried on in the other articles. It was at this city that the English first established a factory in the eastern provinces of Hindostan; and it is indebted to the European trade for most part of its growth and prosperity. (*Hamilton's E. I. Gaz. & Itiner.*, &c. in *Mod. Trav.* ix.)

PATRAS (an. *Patras*), a town and seaport of Independent Greece, on the N.N.W. coast of the Morea, and on the E. side of the gulph of its own name, about 5 m. S.W. the mouth of the Gulph of Lepanto, 107 m. W. by N. Athens. lat. 38° 14' N., long. 21° 46' 40" E. Pop., acc.

to Burgers, about 4,000, exhibiting a decrease of nearly two-thirds since the commencement of the revolution. It is built amphitheatrically on the side of a hill rising from the shore, which has at its summit the acropolis, commanding a fine view of the surrounding coast and country. The fortifications are in good repair, and have been recently much enlarged. The interior comprises one pretty broad and well-built street, with numerous narrow lanes and alleys lined with mean wooden tenements, the overhanging eaves of which nearly meet over the street. The Greeks have a few good houses; but those of the European consuls are the best. Every considerable house is surrounded with a garden well stocked with orange, fig, pomegranate, and other fruit trees, which give the town an agreeable aspect, and conceal the greater part of the poorer habitations. The only public buildings are two hospitals and several churches; the remains of ancient buildings are but inconspicuous.

The bay in front of the town being unsafe, and exposed to heavy seas, particularly in winter, vessels go a little farther up the Gulp, where the port is situated, and where there is a mole for their security. Patras has a pretty extensive trade. The principal exports are currants (by far the most important article), oil, vanilla, wine, raw silk and cotton, wool, skins, wax, &c. The imports here, as at the other Greek ports, consist principally of colonial produce, manufactured goods, salt fish, cordage, hemp, doles, &c., chiefly from the Ionian Islands and Great Britain, Venice, Trieste, Leghorn, and Marseilles. The imports from Great Britain amounted, in 1838, to 13,490*l.*, the shipments to Great Britain in the same year being valued at 171,340*l.*; but this discrepancy is apparent only, the excess of exports being balanced by the imports of British produce from the Ionian Islands and other places. According to the tariff now in force, the rate of duty (without distinction of foreign or native flags) is 10 per cent, *ad valorem* on imports, and 6 per cent, *ad valorem* on exports.

The ancient Patra is supposed to have been founded by the Ionians. Herodotus enumerates it among the 12 towns of Achæa (l. 146.). Its inhab. took an active part, and the town suffered greatly in the Achæan war. After the battle of Actium, however, it was raised to its former flourishing condition by Augustus, who made it a colony by establishing in it some of his veterans. In Strabo's time it was a large and populous town; and in the beginning of the 2d century it was still prosperous, though remarkable for the dissoluteness of its inhabs. (*Pausanias, Achæa*, c. 21.) It was the seat of a dukedom under the Greek emperors, and in 1408 was bought by the Venetians, from whom it was taken by the Turks, in 1446. It was pillaged by the Albanians in 1770, and was the stronghold of the Ottomans from 1821 down to the period of the emancipation of Greece. (*Burgess's Greece and Levant*, i. 124-128.; *Mod. Trav.*; *Cramer's Greece*, iii. 253.)

PAU, a town of France, dép. Basses-Pyrénées, of which it is the cap., on the Pau, here crossed by a fine stone bridge of seven arches, in a fertile though marshy plain, 58 m. E. by S. Bayonne. Lat. 43° 17' 29" N.; long. 9° 22' 30" W. Pop., in 1836, (ex. com.) 11,959. It is regularly laid out and well built, consisting principally of one long and broad main street. It has, however, several squares, or open spaces, and is environed by public walks. Its principal, and by far the most interesting edifice is the castle, in which Henry IV. first saw the light on the 13th Dec. 1553; it was founded by the princes of Béarn in the 10th century, is situated on a commanding height to the W. of the town, and forms an irregular collection of massive towers, having a fine terrace on the side fronting the river. It was much injured during the Revolution, having been converted into military quarters; but it has since been completely repaired and renovated.

The chamber, memorable as the birthplace of Henry IV., retains its ancient portraits and furniture, the tortoise-shell cradle of the king. There is a marble statue of Henry in the vestibule of the castle, and another statue in bronze in the *Place Royale*. The other principal buildings comprise the prefecture, hall of justice, college, and one or two hotels.

Pau has a royal court of tribunals of primary jurisdiction and commerce, boards of taxation and forest economy, a royal college, an *académie universitaire*, a society of agriculture, a school of design and gallery of paintings, a public library of 18,000 vols., &c. Its manufactures include cotton stuffs, linen cloths or *toiles de Béarn*, &c., and it has considerable dyeing establishments and tanneries; it has, also, a pretty extensive trade in manufactured products, and in wine, Bayonne hams, salted geese, &c. It has two large weekly markets, and three important annual fairs. Ingliß says, "Pau has always enjoyed the reputation of being one of the most interesting cities of the S. of France. It is clean, airy, and abounds in every convenience and in most luxuries. It is a great resort for strangers, particularly English; and, excepting Bayonne, is probably

the most desirable of any of the towns selected by foreigners as a residence. Excellent houses are to be obtained at a very moderate expense, and the markets are both abundant and cheap. There are generally 50 or 60 English families in Pau and its neighbourhood; and the number, I understand, is upon the increase." (*Switzerland, the Pyrenees, &c.*, 309, 310.)

Besides the "great" Henry, Pau has produced several distinguished persons, among whom may be specified Marshal Bernadotte, now king of Sweden; and Viscount Orthes, governor of Bayonne, who nobly refused to execute the orders issued by Charles IX. for the massacre of St. Bartholomew. (*Lugo, art. Basses-Pyrénées; Guide du Voyageur, &c.*)

PAVIA (an. *Ticinum*), a frontier city of Austrian Italy, Lombardy, cap. deleg. of its own name, on the Ticino, 19 m. S.S.W. Milan; lat. 45° 10' 47" N., long. 9° 9' 48" E. Pop., in 1837 (ex. com.), 25,531. It is surrounded with old walls, and communicates with a suburb across the Ticino by a bridge of 7 arches, constructed in 1351. This structure, partly of stone, but principally of brick, is one of the most singular monuments of the 14th century; it is 300 ft. in length by 12 in breadth, and is covered with a curious roof, supported on 100 pillars of rough granite. At one end is the Austrian and at the other the Sardinian custom-house, the Ticino separating their respective territories. This is a magnificent venerable city; but its buildings and its fame belong to another age, and it has long been in a state of paralysis and decay. From the bridge, the *Strada Nuova* or *Corso* extends through the centre of the city to a superb gate, begun under the viceroyalty of Prince Eugene. In this street the principal palaces of the Pavian nobility, mouldering and dismantled, are mingled with shops, churches, colleges, cafés, theatres, and hospitals. From the main street others of greater antiquity branch off at right angles, some terminating in piazzas opening before vast and sumptuous palaces, now half ruinous and dismantled. From its numerous public edifices, Pavia was formerly called the "City of a hundred Towers;" but these are now greatly diminished. It has, however, a ruined castle, once the residence of the Lombard kings, and several other buildings traced up to the time of the Lombards, particularly the church of St. Michael, in a barbarous and grotesque style. The church of *San Pietro in Cielo d'Oro*, which is said, though on doubtful authority, to contain the remains of St. Augustine, and which certainly contains those of Boethius, is in the same early and rude style; but, *tempora mutantur*, the venerable edifice is now converted into a granary or barn! The cathedral has little that is remarkable; it was begun in 1443, and is of large dimensions; but it yields in interest to the churches of the Carmine, San Francesco, S. Salvador, &c. The palace of Theodoric was destroyed in a popular tumult in the 11th century; and the tower of which Boethius was confined and wrote his famous treatise, *De Consolatione Philosophiæ*, no longer exists. On the site of the latter, however, is the Malespina Palace, at the entrance of which is a marble monument and bust of the philosopher. Previously to the reign of the emperor Joseph II., Pavia had 46 wealthy convents; but few, if any, exist at the present day. The theatre and the university buildings are almost the only other structures worth notice: the interior of the former is rendered dark and gloomy by the black marble of which it is constructed, and the latter, according to Mr. Woods, are magnificent rather by their extent than by any merit in their architecture.

The university of Pavia, the first and most frequented in Italy, was founded by Charlemagne, and restored by Galeazzo Visconti in the 14th century; but it owes its present form and institutions to the Empress Maria Theresa, and her minister Count Firmian. It has faculties of law, medicine, and philosophy; being particularly celebrated as a school of medicine. It has no faculty of theology, but in every other respect its constitution is similar to that of Padua (which see). It has at present 38 professors, 3 adjuncts, and 11 assessors; and in 1837 had 1,307 students, of which 287 belonged to the philosophical, 438 to the legal, and 582 to the medical faculty. Its revenues are derived principally from imperial treasury grants, legacies, municipal and communal funds, and fees paid by students on obtaining degrees; which last average about 150,000 *lire* a year. The whole expenditure for the university amounted, in 1837, to 250,000 *lire*. The professors have annual salaries of from 3,000 to 6,000 *lire* (120*l.* to 240*l.* sterling); and enjoy, by special privilege, the distinction of personal nobility. Several of the most distinguished names in the history of Italian literature and science, have been professors in this university. Among others, may be specified Vesalius, Cardan (a native of the city), Spallanzani, Volta, Scarpa, Tamburini, &c.; and it has still to boast of many eminent teachers. The university has an extensive library, which it chiefly owes to Count Firmian; a fine botanic garden, instituted by the French; a valuable collection of natural history, physical and anatomical

**muscum, &c.** Students are lodged and boarded gratuitously, in 3 colleges attached to the university. The *Collegio Caracci*, founded by a noble family of Novarra, receives 30 boarders from that city and district; the *Collegio Borromeo*, a stately and venerable edifice, founded by the famous Cardinal Borromeo, supports 36 students; and the *Collegio Ghislieri*, founded by Pope Pius V., receives 60 students; but the greater number of the students are extra collegians. Pavia has also a gymnasium, a high school and female school, 2 hospitals, numerous asylums, and charitable institutions, a *monte di pietà*, &c. It is a bishop's see, the seat of the superior court of the deleg., and a chamber of commerce. It has some silk manufactures, and a considerable trade in agricultural produce with Milan and the cities on the Po. It is connected with Milan by a navigable canal, traversed by boats like the Dutch trekschuyts. A good deal of the cheese, called Parmesan, is made in this neighbourhood. About 4 m. N. Pavia, is the celebrated Cortosa, the most magnificent of Italian monasteries, founded by John Galeazzo Visconti in 1396; and dissolved, and in part stripped by the French, in 1798.

Ticinum, which was an important city under Augustus, began to be called *Papia* (whence its present name), during the Gothic dominion in Italy. In modern times it has sustained numerous sieges; but it is principally distinguished, in an historical point of view, by the great battle that took place in its vicinity on the 24th of Feb. 1525, between the French army, that had undertaken the siege of Pavia, under Francis I., and the Imperialists, under the viceroy Lannoy. The French were totally defeated. Francis, who had displayed the greatest heroism, and the king of Navarre, were taken prisoners; and exclusive of many generals and persons of distinction, between 9,000 and 10,000 private soldiers were left on the field of battle. The French army was, in fact, entirely destroyed; and there was quite as much of truth as of point in the laconic epistle addressed by Francis to his mother after the battle — "Madam, we have lost' all except our honour." (*Austr. Nat. Encyc.*; *Von Rammner's Italy*; *Journal of Education*; *Wood's Letters*; *Corder's Italy*; *Robertson's Charles V.*, book iv., &c.)

**PAXO** (an. *Pazos*), the smallest of the seven principal Ionian Islands, in the Ionian Sea, 10 m. S. by E. Corfu, and about the same distance W. the main island; and its N. point being in lat. 39° 14' N., long. 20° 9' E. Area, 26 sq. m. Pop., in 1836, 5,287. It is oval-shaped, and extremely mountainous; its soil being stony, and so destitute of moisture, that in summer the inhabs. are obliged to procure fresh water from the neighbouring continent. The climate is extremely mild and agreeable; but the island produces little else than olives, almonds, and vines, the quantity of corn raised being altogether insignificant. Mules and goats are reared in considerable numbers; and fish are abundant on the coast. Port Gal, the principal port on its E. side, affords good anchorage for a few vessels; but a more secure harbour is formed by the channel between this and the neighbouring islet of Antipaxo. The town has a pop. of 4,000 persons, but in appearance is little better than a mean village.

**PAZ** (LA.), a city of Bolivia, cap. dep. of its own name, 196 m. N. N.W. Chuquisaca, lat. 17° 30' N., long. 68° 25' W. Pop. 20,000. It is situated on the E. declivity of the Andes, at an elevation of 12,170 ft. above the sea, and at no great distance from the sources of the Beni, a principal affluent of the Amazon. It has a cathedral, four other churches, several conventual establishments, and is a bishop's see, with very considerable revenues. It is the centre of a considerable trade in Paraguay tea.

La Paz was founded in 1548, and received its name in commemoration of the peace that ensued after the defeat of Gonzalo Pizarro and his associates. It suffered considerably a few years ago during a revolt of the Indians, but still ranks as a city of some wealth and importance. (*Dict. Géog.*, &c.)

**PEEBLES**, an inland co. of Scotland, having N. Mid-Lothian, E. Selkirk, S. Dumfries, and W. Lanark. Area, 204,160 acres, of which a comparatively small portion only is arable. This is almost wholly a pastoral district; the surface consisting of moorland, moor, and bog, with the exception of a limited extent of low, level land along the banks of the Tweed, which rises in and runs through the co. The highest mountains are in the S. part of the co. adjoining Dumfriesshire, where the Tweed has its source. The summit of Broadlaw rises 2,741 ft. above the level of the sea; and this, which is about 100 ft. above the altitude of the contiguous summit of Hart-fell, is the highest elevation in Scotland S. of the Frith of Forth. The hills are generally smooth, and afford good sound sheep pasture. In the low parts of the co. agriculture has been very much improved; but it is now pretty generally believed that tillage had been too much extended during the late war. The buildings on farms of any importance have been entirely renovated, principally within the last 30 years. The black-faced breed of sheep

were, at no very distant epoch, diffused over the whole co., to the exclusion of every other; but about 1795 Cheviots began to be introduced; and their numbers have since so rapidly increased, that, even in the parish of Tweedsmuir, which is the wildest and most exposed, there are now 3 Cheviots to 1 black-faced sheep. The total sheep-stock at present in the co. may be estimated at above 100,000. Property in a few hands, farms being very large; average rent of land in 1810, 5s. 7d. an acre. Neither minerals nor manufactures of any importance. Peebles is divided into 16 parishes, and returns 1 mem. to the H. of C. Registered electors in 1839-40, 863. Peebles is the only town of any importance. In 1831, this co. had 1,789 inhab. houses, 2,072 families, and 10,578 inhabs., of whom 3,342 were males, and 5,236 females. Valued rent, 51,338*l.* Scotch. Annual value of real property in 1815, 64,182*l.*

**PEEBLES**, a royal bor. and market town of Scotland, co. Peebles, of which it is the cap., and the only town, romantically situated in a mountainous pastoral district, on the Tweed, which is here crossed by a bridge of five arches, at the point where it is joined by the Edleston, 2½ m. S. Edinburgh. Pop. in 1831, 2,100. It is divided by the Edleston into the Old and New Towns. The main street runs E. and W., in a line nearly parallel with the Tweed. The houses are unusually substantial and good for so small a town. It has a par. church, with a handsome spire, 2 Presbyterian dissenting chapels, an episcopal chapel, a town-hall, and gaol. The grammar-school enjoys a high reputation, and is well attended. A scientific association established in the town, at which lectures are given, has an average attendance of no fewer than 190 mems. Though the town has no manufactures, it supports 2 banks. It is regarded as peculiarly salubrious; and is much resorted to in summer as a favourite country residence.

Peebles was long a hunting residence of the Scottish kings, particularly of Alex. III., who founded in it a monastery for Red Friars, in 1260, of which the ruins are still pretty entire. The Poem "Pebilis to the Play" was written by James I. of Scotland. Neidpath Castle, inhabited by the Earls of March till 1778, stands on a rocky promontory overhanging the Tweed, ½ m. W. of the town. Mungo Park, the traveller, practised as a surgeon in Peebles for some time previously to his second mission (1805) to Africa. Before the passing of the Reform Act, Peebles was united with Falkirk, Linlithgow, and Lanark, in sending a mem. to the H. of C.; but it was then merged in the co. constituency. (*Princeps's Description of Tweeddale*, 1815; *New Stat. Acc. of Scotland*; *Boundary Returns*.)

**PEGU**, a former kingdom of India beyond the Brahmaputra, forming at present the S. portion of the Birman empire. (See *BIRMAH*.)

**PEGU**, a decayed city of the Birman empire, and the an. cap. of the above kingdom, on the Pegu river, a tributary of the Irrawadi, 50 m. Rangoon. Lat. 17° 40' N., long. 96° 12' E. While it remained the cap. of an indep. state, it is said to have had a pop. of 150,000; but being taken in 1757 by the Birman king, Alaung Por, he razed most of its buildings to the ground, and reduced its inhab. to a state of slavery. At present it consists of only two streets, one parallel to the river, and the other leading to the celebrated Shwe-madaw, or great pagoda. This, the most famous edifice in the Birman empire, boasts of high antiquity, and is raised on successive terraces in a manner similar to the religious structures of the Mexicans, as described by Humboldt. It stands on an apparently artificial hill, the sides of which are sloped into two terraces, and ascended by steps of hewn stone. The lower and greater terrace forms an exact parallelogram, and is about 10 ft. in height; the upper and smaller terrace is of similar shape, and rises about 20 ft. above the lower terrace, or 30 ft. above the level of the ground. According to Col. Symes a side of the lower terrace is 1,391 ft. in length, and of the upper, 684 ft. The earth forming the terraces appears to have been taken from the ditch which formerly surrounded the city, and which may still be traced, enclosing a quadrangular space nearly ¼ m. on each side. The brick walls sustaining the sides of the terraces were formerly covered with plaster, wrought into various figures, but they are now in a ruinous state. The area of the lower terrace is strewn with fragments of decayed buildings, but the upper is kept free from filth, and is in tolerable order. On the second terrace is the pagoda, a pyramidal building of brick and mortar, without excavation or aperture of any sort, octagonal at the base, each side measuring 162 ft., and diminishing in breadth abruptly till it becomes of a spiral form. Its entire height from the ground is about 360 ft.; it is surrounded by two rows of small spires, a great variety of mouldings, ornaments in stucco, &c.; the whole being crowned with the *tee*, a sort of umbrella of open iron work, gilt, 56 ft. in circumference, surrounded by a number of small bells, and from the centre of which, when Symes saw it, rose a rod with a gilded pennant. At the time of his visit, also,

there were temples in miniature of the larger, at all the angles of the upper terrace, various saloons embellished with carving and gilding, numerous sculptures in masonry, idols, flying pennants, three large bells used by devotees on the N. side of the temple, many dwellings for priests on the lower terrace, &c.: probably most of these still exist, for a recent traveller states that the pagoda, with its appendages, is in tolerable preservation. (Malcolm, i. 89.) Pegu has several other temples, but they are mostly in ruins; and the site of the ancient city is almost wholly under water, probably from neglect of the drains and sluices. Mindjere Praw, king of Birmah, in 1790, endeavoured to restore to Pegu a portion of its former importance, by transferring thither the provincial government from Rangoon, but he did not succeed. Zangnamang, however, on the opposite side of the river, is a prosperous town, and adjacent to it, for many miles, is a succession of thriving villages. (Malcolm's *Travels in S.E. Asia*, i. 88, 89; Symes in *Mod. Trav.*; *Asiatic Researches*, &c.)

PEKING or PEKIN, (Chiu. *Pih-king*, meaning "the northern capital,") the modern metropolis of the Chinese empire, prov. Pechelee, in a vast sandy plain, between the Pei-Ho (which has its embouchure in the Gulph of Pechelee), and its important affluent the Hoen-Ho, within about 5 or 6 m. of each, and being united to the Pei-Ho by a canal, 562 m. N. by W. Nankin, and 100 m. W.N.W. the Gulph of Pechelee, in the Yellow Sea; lat. (observatory) 39° 54' 13" N., long. 116° 27' 45" E. We know nothing certain of the population, except that it is very great: some writers estimate it at two millions, and others at three millions; we believe, however, that even the smallest of these estimates is beyond the mark, and that probably it does much exceed, if it be not under, 1,500,000. Klaproth estimates it at 1,300,000. A large portion of the space within the walls is occupied by gardens and enclosures; and there is no heaping up of one family above another as in European towns.

The city is divided into two principal portions, exclusive of the suburbs. The most northerly portion, which is nearly a perfect square, is called *nei-tching*, or the inner city; it contains the palace of the emperor, and the principal government officers, and is mostly occupied by Manchos, whence it is sometimes called the "Imperial," and sometimes the "Tartar city." The other, or more southerly portion, denominated the *wai-tching*, or outer city, is a quadrilateral rectangle, entirely occupied by Chinese, and is at once the seat of business and the residence of the great bulk of the population. Both divisions are surrounded by walls, the extent of which may be about 18 m. The walls of the Chinese city are 30 ft. in height, and 25 ft. broad at the base, and 12 ft. on the top, the slope being mostly on the inner side; but those of the Imperial city are 40 ft. in height. Square towers project from the outer side at intervals of about 70 yards from each other, and each of the 16 city gates is surmounted by a tower nine stories in height, with port-holes for cannon.

The principal streets are of great width, and perfectly straight, (*trées au cordeau*, Duhalde), running between opposite gates in the divisions of the city to which they respectively belong; those in the northern being, for the most part, better built, and preferable to those in the southern division. The other streets, however, are very narrow, and are, in fact, mere lanes branching off at right angles from the principal thoroughfares. It is singular, that though the great roads leading to the capital be paved with large blocks of granite, the streets are not paved, which makes them dusty and disagreeable in hot, and dirty, and, in parts, all but impassable in wet weather. "En général," says M. Hyacinthe, "l'inégalité, le mauvais entretien des rues, ou plutôt des sentiers, qu'on est obligé de suivre dans les rues, est un juste sujet de blâme contre la police Chinoise." (P. 12.)

The houses, which rarely exceed a story in height, are built of brick, and covered with tiles; but, according to Sir John Barrow, "they are void of taste, grandeur, beauty, solidity, and convenience;" none but the great shops have either windows or openings in the front wall; but most of them have a sort of terrace, with a raised balcony or parapet-wall, on which are placed pots of flowers, shrubs, or stunted trees. The houses in the smaller streets or lanes, many of which are occupied by public functionaries, are very similar to those in the larger streets; and the regularity with which the streets intersect each other, the uniformity in the size and appearance of the houses, and the absence of towers, spires, domes, and even of chimneys (of which not one is to be seen), give the city an extremely monotonous appearance, resembling, in fact, a vast encampment. (Barrow, 93.)

The shops, in the principal streets, make an ostentatious display of painting and gilding. Sky-blue and green, mixed with gold, are the prevailing colours upon the walls. The goods are not only displayed within, but exposed in heaps in front of the houses. Before these are generally erected wooden pillars, whose tops are

much higher than the roofs of the houses, bearing inscriptions in gilt characters describing the goods to be sold, and assuring the buyer he will not be cheated! To attract more notice they are generally hung with various coloured flags, streamers, and ribands, exhibiting the appearance of a line of shipping, dressed in their different colours. Lanterns of horn, muslin, silk, or paper, are arranged before the doors, and exhibit such variety of form, that the Chinese appear to have exhausted on them all the powers of imagination. The streets are peculiarly crowded, in consequence of the number of trades that are carried on in the open air. The numerous movable workshops of tinkers and barbers, cobblers and blacksmiths; the tents and booths where tea, fruit, rice, and other eatables, are exposed to sale; the wares and merchandise arrayed before the doors; the troops of dromedaries laden with coals from Tartary; the wheel-barrow and hand-carts stuffed with vegetables, leave in the broadest streets only a very narrow space unoccupied." Room, indeed, is scarcely allowed for the frequent processions of men in office, with their numerous retinues and strange insignia, or for the pompous trains which attend at funerals and marriages. With the confused voices of the multitude buying and selling their various commodities, are mixed the cries of jugglers, conjurers, fortune-tellers, mountebanks, quack-doctors, comedians, and musicians. It is, however, a curious fact, that the crowd and bustle are wholly confined to the great thoroughfares; the cross streets and lanes being perfectly still and quiet. "Women are frequently seen among the crowd, either walking, or riding on horses, which they bestirle like men; but they are all Tartar females, whose manners alone admit of such exposure: the Chinese ladies being more rigidly confined to the house in the capital than in the rest of the empire." (Barrow's *Travels*, p. 94—98.)

At the four points, where the great streets intersect each other, are singular looking erections, somewhat resembling triumphal arches, but, in fact, monuments to the memory of those who had deserved well of their country, or who had attained an unusual longevity! They are built sometimes of stone, but more generally of wood, and consist invariably of a large central gateway, with a smaller one on each side, covered with a narrow roof, and painted, gilt, and varnished.

The northern city, which comprises the residence of the emperor and the principal government officers, consists of three inclosures—an outer, a middle, and an inner. The latter contains the imperial palace and the houses of the different members of the imperial household, the second is chiefly inhabited by Chinese merchants, and the third, or outermost enclosure, constitutes the open city. The inner portion, or that comprising the imperial palace and its dependencies, including gardens and pleasure grounds, occupies an oblong space about 2½ m. in circuit. This sacred inclosure, or "forbidden city," is surrounded by a high wall, similar to that surrounding the city, being, like it, flanked with towers, and faced with yellow tiles. Each side of the wall has a large gate surmounted by a tower; the walls leading to the principal halls, being paved with large slabs of white and grey stone. The "Meridian gate," through which alone the emperor can pass, is by far the most splendid of all the approaches to the palace: here he distributes presents to foreign ambassadors, views the captives that may have been taken by his "invincibles," and shows himself whenever he dispenses mercy. In the *Tae-ho-mun*, or "gate of extensive peace," which is a superb building of white marble, 110 ft. in height, the emperor receives congratulatory visits of ceremony from the various officers of his court: but by far the most sacred, as well as richest and most magnificent portion of the palace is the *Kaen-ting-kiong*, or "tranquil palace of heaven," the emperor's private retreat, which none may approach without special permission.

It is used also as a cabinet, where the great officers of state assemble for consultation, and where candidates for office receive their appointments. The palace of the empress is also very extensive; and beyond it is a gate leading to the imperial flower-garden, laid out in walks, filled with pavilions, temples, and groves, and interspersed with canals, fountains, lakes, and beds of flowers. Near the empress's palace is a library, alleged, by the Chinese, to comprise a collection of most books published in the empire. Within the precincts also is a temple, to which the emperor comes on certain stated occasions to obtain blessings from the manes of his ancestors, and to show his filial piety. Six palaces are occupied by the princesses of the imperial family; and other ranges of building constitute the residences of the emperor's stewards, &c.; besides which there are halls for councils, courts, &c., and a large printing establishment. (Gutzlaff's *China Opened*, i. 62, 63.)

The reader, however, would form a very inaccurate notion of these buildings, if he supposed they bore any considerable resemblance to European palaces, or that the magnificence of the buildings at all corresponded with

their imposing names. The truth is, that there is but little of pomp or splendour in the imperial residence. "The buildings that compose the palace, and the furniture within them, if we except the paint, the gilding, and the varnish, that appear on the houses even of plebeians, are equally void of unnecessary and expensive ornaments. Those who should rely on the flimsy relations, in which the missionaries and some travellers have indulged, in their descriptions of the palaces of Peking, and those of Yuen-min-yuen, would experience, on visiting them, a woful disappointment. These buildings, like the common habitations of the country, are all modelled after the form of a tent, and are magnificent only by a comparison with the others, and by their number, which is sufficient, indeed, to form a town of themselves. Their walls are higher than those of ordinary houses, their wooden columns of greater diameter, their roofs are immense, and a greater variety of painting and gilding may be bestowed on the different parts: but none of them exceeds one story in height, and they are jumbled and surrounded with mean and insignificant hovels. Some writer has observed, that the king of England is worse lodged at St. James's Palace than any other sovereign in Europe. Were I to compare some of the imperial palaces in China to any royal residence in Europe, it would certainly be St. James's; but the apartments, the furniture, and conveniences of the latter, bad as they are, infinitely transcend any of those in China. The stone or clay floors are, indeed, sometimes covered with a carpet of English broad-cloth, and the walls papered; but they have no glass in the windows, no stoves, fire-places, or fire-grates in the rooms; no sofas, bureaux, chandeliers, nor looking-glasses; no book-cases, prints, nor paintings. They have neither curtains nor sheets to their beds; a bench of wood, or a platform of brickwork is raised in an alcove, on which are mats or stuffed mattresses, hard pillows or cushions, according to the season of the year; instead of doors they have usually screens, made of the fibres of the bamboo. In short, the wretched lodgings of the state-officers at the court of Versailles, in the time of the French monarchy, were princely palaces in comparison of those allotted to the first ministers of the Emperor of China, at the capital as well as at Yuen-min-yuen." (*Barrow*, 194.)

The second enclosure, in the northern city, is called *Huang-ching*, or the "august city," about 6 m. in circ., surrounded by walls 20 ft. in height, and entered by 4 large, and 3 smaller gates. This section of the city comprises several idol temples, a depository of military stores, extensive public granaries, and a military seminary. It has also an artificial mountain in the centre of an extensive park. The third inclosure, or that called the "imperial city," contains the offices of the 6 superior tribunals of the empire. The Russian mission, the temple of *Yang-ko-Kung*, or "of eternal peace," the largest and most sacred edifice in the city, having connected with it an institution for the instruction of lamas for the service of Tibet. Here also is the National College, in which is concentrated all the learning and literature in China. All the literati of the empire, all the colleges and principal schools, are subordinate to this establishment, which nominates the examiners of the compositions required of candidates for civil offices. Manchoo, Chinese, and Russian literature meets here with equal attention, and all religions are sanctioned within its precincts. (*Gutzlaff's China Opened*, i. 65.) Indeed, it is somewhat strange that Peking, the cap. of the most exclusive empire in the world, should comprise, besides its numerous temples and pagodas, a magnificent mosque, a Greek church and convent, and a Rom. Catholic chapel!

The S. division of the city is the grand emporium of all the merchandise brought for sale from other provs., and as this portion is not subject, like the other, to the rigour of military discipline, it is frequented by those who are in search of business, amusement, or repose. Its buildings do not, however, require any special notice. But it should be stated that it contains an enclosure, where sacrifices are offered up to the god of agriculture, and where the imposing ceremony of the emperor holding a plough annually takes place.

There are suburbs round most of the gates of the city, some of which extend more than a mile from the wall, and comprise several large temples, with a few other public buildings.

The streets are not lighted at night. Sir John Barrow says that the cross-lanes were generally watered, but that that did not appear to be the case in the main streets. A large sheet of water, comprising several acres, within the N. division, furnishes an abundant supply to that part of the city, and to the palace; and a small stream, which runs along the W. wall supplies that neighbourhood. There are, besides, numerous wells; but the water of some of these is dreadfully nauseous; and, when mixed with tea, the well water is, to Europeans at least, particularly disgusting. But good potable water is brought from beyond the barriers. (*Hyacinthe, Ville de Peking*, p. 13.)

"Although Peking cannot boast, like ancient Rome or modern London, of the conveniences of common sewers to carry off the filth and drags that must necessarily accumulate in so large a city, it enjoys one important advantage rarely found in capitals out of England: no kind of filth or nastiness, creating offensive smells, is thrown out into the streets, a piece of cleanliness that perhaps may be attributed rather to the scarcity and value of manure than to the exertions of the police officers. Each family has a large earthen jar, in which is carefully collected every thing that may be used as manure; when the jar is full, there is no difficulty of converting its contents into money, or of exchanging them for vegetables. The same small boxed carts, with one wheel, which supply the city with vegetables, invariably return to the gardens with a load of this liquid manure. Between the palace of Yuen-min-yuen and Peking, I have met many hundreds of these carts. They are generally dragged by one person and pushed on by another; and they leave upon the road an odour that continues, without intermission, for many miles. Thus, though the city be cleared of its filth, it seldom loses its fragrance. In fact, a constant disgusting odour remains in and about all the houses the whole day long, from the fermentation of the heterogeneous mixtures kept above ground, which in our great cities are carried off in drains. To counteract these offensive smells, they make use of a variety of perfumes, and strongly-scented woods and compositions." (*Barrow*, 98.) This statement is completely borne out by that of Hyacinthe, who speaks of the *puanteur insupportable d'urine* felt in walking along the streets.

About 10 m. from Peking is a large park, belonging to the emperor, having an extent of at least 12 sq. m.; it exhibits all the great features of nature, lakes and rivers, mountains, rocks, and forests thrown together in the boldest and most irregular manner. It comprises 30 distinct palaces, and a village of no inconsiderable size; but these palaces are ill-arranged, falling to decay, and wholly unworthy of the name.

The highest class of inhabs. is composed of the Manchoo troops and officers, most of whom are in poor circumstances, though a few possess considerable property. Next to these rank the Chinese merchants, many of whom are extremely wealthy; and below these are the artisans and other labourers, most of whom come from the provinces to procure employment. The poor are employed in cleaning and watering the streets, gardens, &c., and in cultivating the ground; but, notwithstanding the general discouragement of pauperism, and the severity of the police, it is alleged that there are in Peking many thousand persons, who, being without employment, have recourse to robbery and cheating. The cross streets are shut, and the others are patrolled at night; and in consequence, says Duhalde, *la paix, le silence, et le secret régnaient dans toute la ville*.

Hired carriages and sedan-chairs are common in all the public thoroughfares; but the males of the higher classes almost universally ride on horseback, though many of them keep their private carriages.

Peking is indebted for its importance to its being the residence of the emperor and the seat of government; and a very large proportion of its inhabs. depend for subsistence on employment in one or other of the departments connected with the army, the administration, or the court. It is to China in respect of literature what Paris and London are to France and England. The printing and bookselling business is very extensive. A great many works, especially upon history, issue from the imperial press, and are sold at a low price to the booksellers.

It is not distinguished by any peculiar manufacture, unless it be that of coloured glass; nor has it any foreign commerce or trade, other than that directed to the supply of its own wants. This, however, is necessarily very considerable. The country round the city being sandy and poor, a large portion of its supplies are brought from a distance, partly from sea by the Pei-ho, but principally by the Grand Canal and the Eu-ho, which connect it with Nankin, and most of the E. provinces. Mutton and beef, however, which constitute the principal food of the Manchoes, are brought principally from Mongolia. The Chinese prefer pork; and hogs, consequently, form a principal article of import. Geese, ducks, and chickens are the common domestic fowls; and in winter the shops are well supplied with partridges, pheasants, and other game.

A considerable portion of the taxes imposed on the different provinces is paid in kind; and a part of the rice and other grain so collected, being sent by canal to the capital, is stored in public granaries, whence it is issued to the troops, and others engaged in the public service. But notwithstanding this resource, it not unfrequently happens that the supply of corn proves deficient, and that numbers of the inhabs. are involved in the greatest privations. Tea, of excellent quality, is the common beverage; but they also use a strong spirit made of rice.

The *Pei-ho* is navigable for vessels of considerable burden to Tientsin, nearly 40 m. from its mouth; and it may be ascended in flat-bottomed boats to within 19 m. or 20 m. of the capital. Peking might, consequently, be easily attacked from the sea. There are no forts or other obstacles to the navigation of the river, which might be effected, with the greatest facility, by the aid of steam tugs.

The early history of Peking is involved in obscurity; but it is generally regarded by native authorities as one of their most ancient cities. It is clear, however, from the statements of Marco Polo, who describes Peking under the name of Kambalu, that the N. Imperial, or Tartar city, was either built or restored by Kublai Khan. Marco Polo describes it, as it now exists, as having perfectly straight streets, lined on each side with booths and shops. The Mongol dynasty, founded by Kublai, continued to occupy this city till it was expelled from China, in 1367. In 1421, the third emperor of the Chinese dynasty of Ming transferred his residence thither from Nankin, since which it has been the cap. of the empire. (*Marco Polo, by Marsden*, lib. ii. cap. 7.)

**PELEW ISLANDS.** See POLYNESIA.

**PEMBROKE**, a maritime co. of S. Wales, the most westerly in the principality, having N. St. George's Channel and the co. of Cardigan, E. the latter and Caermarthen, and S. and W. the Bristol Channel and St. George's Channel. The coast line is very irregular, being deeply indented with arms of the sea, including Milford Haven and St. Bride's Bay. Area estimated at 390,400 acres. In the N. part of the county the highest point of the Preselly mountains rises to the height of 1,754 feet above the level of the sea; but with this exception the surface elsewhere is merely undulating. It is watered by the Cleddau, Cledyd, and other streams, and owing to the number of its deep bays, it has, in most parts, every convenience for water-carriage. The soil is very various: in the S. it rests on a limestone and sandstone bottom, and is, speaking generally, very fertile: elsewhere the soil rests mostly on a slaty rock, and though not so fertile as the other, it is still, with few exceptions, far from unproductive. Principal crops, wheat, barley, and oats. Lime, shelly-sand, or marl, may almost everywhere be had; and, in fact, were this co. well farmed, it would be one of the most productive districts of the empire; but we regret to have to add that its agriculture is very far behind. There is a great want of drainage, and of a proper rotation of crops: the land is often foul and exhausted; and the implements of husbandry, and the mode of using them, are alike bad. Latterly, however, some improvements have been introduced. Leases for 14 years have been substituted for leases for three lives; and clauses have been inserted in the leases for the preservation of over-cropping. But a vast deal still remains to be done before agriculture in this and the adjoining Welsh cos. attains to even a medium state of advancement. Owing to the great mildness and humidity of the climate, and the nature of the soil, this co. is extremely well suited for grazing and dairying; and a good deal is done in both departments: the cows used in the dairies are now generally a cross with the Ayrshire breed. There are some large estates; but property is notwithstanding a good deal subdivided: farms are of all sizes, but mostly rather small. The modern farm-houses and offices are generally good and commodious, but many are still very inferior, and very inconveniently situated. Not a few of the older farm-houses and many of the cottages have mud walls, about 5 ft. in height, with a "wattle-and-daub" chimney, and are both mean and miscable dwellings. Luckily, however, they are gradually becoming less numerous, and will, it is to be hoped, be at no distant period wholly extirpated. Average rent of land in 1810, 8s. 23d. an acre. Anthracite coal, slate, and limestone are found in large quantities. Manufactures unimportant. Principal towns, Pembroke, Tenby, Haverfordwest, and St. David's. It is divided into 7 hundreds, and 144 parishes, and returns 3 mems. to the H. of C., one for the co., and one each for the Haverfordwest and the Pembroke districts of hors. Registered electors for the co. in 1839-40, 3,637. In 1831, Pembroke had 15,779 inhab., houses, 16,595 families, and 81,425 inhab., of whom 37,952 were males, and 43,473 females. Sums contributed to the relief of the poor in 1838-39, 23,119*l.* Annual value of real property, in 1815, 22*l.*; in 1811, profit of trades and professions in ditto, 43,102*l.*

**PEMBROKE**, a parl. bor., market-town, and sea-port of S. Wales, co. its own name, of which it is the cap., on the margin of Downpoint, a creek on the S. side of Milford Haven, 29 m. W. S. W. Caermarthen, and 205 m. W. London. Pop. of parl. bor., which includes the connected town of Paterchurch, 6,511. The town is built on a tongue of land, dividing the creek into 2 branches, one of which runs on the N. side, while the smaller branch bends southward under the suburb of Monkton. It consists of one long street, running along the ridge of a hill, on

which are sloping gardens; and, though it be the co. town, its small size and general quietness give it more the appearance of a village. The public buildings comprise a town-hall, custom-house, and 3 churches, one of which is in the suburbs. St. Michael's, at the E. end of the town, is a cruciform structure of Norman architecture; St. Mary's is in the pluted style, and somewhat more ornamental; St. Nicholas', the parent church, is in the W. suburb of Monkton. The livings are united in a single vicarage, in the gift of Sir John Owen. There are several places of worship for dissenters, most of which, as well as the churches, have Sunday-schools for children of both sexes. Pembroke has also a small endowed grammar-school. On a high and rocky eminence W. of the town, is the castle, an octagonal structure, very surrounded by water, which, on account both of its extent and beauty, ranks among the most splendid monuments of military architecture in the principality: it was built in the 11th century, and dismantled in 1649, after a brave defence by its royalist garrison. The keep is 75 ft. high to the dome, and 163 ft. in circumference at its base, the mean thickness of its walls being 14 ft. It consists of 4 stories, and is still covered in with a vaulted stone roof. About a m. N. W. the town, and within St. Mary's par., is Paterchurch, now more commonly called Pembroke or Paterdock, from the government dock-yard transferred thither from Milford in 1814. It is pretty regularly built, and contains the houses of the persons connected with the dock-yard. It has a handsome market-place, and many good shops, most of which, however, belong to the tradesmen of Pembroke.

The dock-yard, which is defended westward by a strong battery, occupies about 60 acres of land; and when the improvements now in progress are completed, it will be one of the finest building-yards in the kingdom, capable of having on the stocks, at once, five or six first-rate ships, and several others of smaller size. There is also a small private dockyard. A very fine jetty has recently been completed, and as ships of any burden may come up to the dock, there can be little doubt that the importance of the place will rapidly increase, especially as the packet establishment has lately been removed here from Milford. The inhabs. of Pembroke consist, at present, of shop-keepers, people of small independent fortunes, and a few persons whose business is at Pembroke Dock. Pembroke serves, in a great measure, as a depot for the neighbouring district. Stone-coal is brought from a distance of about 6 m. eastward, and bituminous coal from Swansea, Llanelly, Newport, and the S. coast in general. The articles of export are confined to cattle, corn, and butter; the imports consist chiefly of articles of ordinary consumption." (*Man. Corp. and Bound. Rep.*) The bor. of Pembroke was incorporated in the 10 Henry II.; and is divided into two wards, under a mayor, 5 other aldermen, and 18 councillors. It has likewise a commission of the peace, under a recorder. Corporation revenue, in 1830, 12*l.*, exclusive of 38*l.* accruing from the sale of property. Pembroke returns 1 mem. to the H. of C., in connection with Tenby, Wiston and Milford. Registered electors of the united bors., in 1839-40, 1,179. The electoral limits of the bor. were left untouched by the Boundary Act, and, in 1839-40, it had 782 registered electors. It is also one of the polling places at elections for the co. Markets on Saturday; fairs, April 12., Trinity Monday, July 16., Oct. 10., and Nov. 30. (*Nicholson's Camb. Guide; Corp. Bound. Reports, &c.*)

**PENKRIDGE**, a market-town and par. of England, co. Stafford, E. div., hund. Cittlestone, on the Penk (a tributary of the Trent), crossed here by a stone bridge, 5 m. S. Stafford. Area of township, 14,500 acres. Pop. in 1831, 2,351. The town, which is very ancient, is supposed by some to be the Pennocrucium of the Romans. The church, formerly collegiate, is a large building, in the early English style, with a square tower: the living is a curacy in the gift of Lord Littleton. The Wesleyan Methodists and Baptists have likewise their respective places of worship, with attached Sunday-schools. There is also an excellent charity school, in which 12 boys and 8 girls are boarded, clothed, and instructed; and a national-school, established in 1816, furnishes instruction to about 200 children of both sexes. Petty sessions for the hund. are held here; and Penkridge is one of the polling-places at elections for the S. div. of the co. It is also the chief place of a poor-law union, comprising 21 pars. Market day, fairs, April 30., and first Monday in Sept., a very large horse fair.

**PENNSYLVANIA**, one of the largest and most important of the U. States of N. America, between lat. 39° 40' and 40° N., and long. 74° 40' and 80° 40' W.; having N. W. Lake Erie, upon which it has a coast-line of 50 m.; N. and N. E. the state of New York; E. New Jersey; S. Delaware, Maryland, and Virginia; and W. Ohio. It is separated from N. Jersey by the Delaware River and the upper part of Delaware Bay, which also unites it with the Atlantic. Length, E. to W., 360 m.; average breadth nearly 150 m. Area, estimated at 43,500

a. m. Pop., in 1840, 1,724,022, of whom only 31 were slaves. The Alleghany Mountains occupy all the central part of this state, covering, with their ramifications, more than half its area. The W. and E. parts are comparatively level, the W. plain being by far the larger, and watered by the Alleghany and other tributaries of the Ohio, as the E. is by the Delaware and its affluents the Schuylkill, Lehigh, &c. The centre of the state is traversed by the Susquehanna. This river, the largest of those falling into the Atlantic in the U. States, rises in Oswego Lake (New York), near the sources of the Mohawk, and runs, with a very tortuous course, generally southward, till it falls into the bottom of Chesapeake Bay, lat.  $39^{\circ} 50'$  N., long.  $76^{\circ} W.$ , after an entire course of at least 500 m. It receives numerous tributaries; but its channel is so much interrupted that it is but little available for navigation. Most of the other rivers in the state are obstructed. The soil in the E. is partly light and sandy, but in the interior plains and valleys it is a deep rich loam; there are few absolutely sterile tracts, and, in general, this is one of the most productive portions of the Union.

The climate is changeable; though, upon the whole, one of the most agreeable and temperate in the U. States. The season of frost and snow seldom exceeds three months; the winter commencing from the 1st to the 15th of December, and terminating from the 1st to the 15th of March. The heat of summer is seldom oppressive, except in low situations. Near the sea-coast the temperature of winter is severe, varying in the months of January and February from  $14^{\circ}$  to  $28^{\circ}$  Fah. The elevated parts are healthy; but the climate there is described as a compound of most others. "In spring it has the moisture of Britain; in summer, the heat of Africa; the temperature of Italy in June; the sky of Egypt in autumn; in winter the cold and snow of the North, and ice of Holland; the tempests of the W. Indies in every season, and the monthly variable winds and weather of Great Britain."

Pennsylvania yields all the fruits and products of the N. and middle parts of the Union, and is better adapted for the culture of the mulberry and grape than the greater number of the other states. Most of the finer fruits of temperate climates are raised in the greatest luxuriance, and the cider is particularly excellent. Almost every variety of grain is raised, but wheat is the staple; and Pennsylvania is emphatically a wheat-growing country, the crop of 1840 having been estimated at above 13 millions bushels. Most branches of agriculture are in a comparatively advanced state.

"The whole district of country," says Mr. Stuart, "through which I travelled was equal in point of appearance of cultivation, and in the style and size of the farm-houses and office-houses (generally of brick), to what is to be seen in the best districts of England or Scotland; but thorn hedges, and in general dropping trees, are wanting, even in this district, to make the picture of a beautiful English farm complete. The crops of rye and clover were particularly fine, and the gardens good, and in good order. In some respects, however, the farmers here have great advantages. They are all proprietors of the soil, and of course not liable to be removed; and in such easy circumstances, that every one of them keeps his own comfortable open carriage." (*Stuart's Three Years in America*, ii. 488, 489.)

Horses and cattle, especially the former, are particularly good; and this is, next to N. York, the principal wool-growing state of the Union. It is, also, remarkable for its mineral wealth, possessing vast quantities of iron, coal, and salt. Anthracite coal is found E. of the Alleghanies, in fields extending altogether over a supposed area of 624,000 acres; and though, in 1824, the trade was in its infancy, only 9,541 tons being brought to market, it has since increased with such astonishing rapidity, that in 1834, no fewer than 493,700 tons were brought to market! And the quantity is now (1840) vastly greater. Bituminous coal is said to be found nearly everywhere W. of the mountains, and large quantities are consumed at Pittsburgh, Cincinnati, &c., in the smelting of iron. Salt is obtained from springs to the amount of about 1,000,000 bushels a year. Marble, limestone, copper, zinc, &c., are also met with. Manufactures are both various and extensive. Pittsburgh, in the W. part of this state, on the Ohio, is the Birmingham of the Union; besides ironmongery of every description, including steam-engines and machinery, cutlery, nails, stoves, &c., it has numerous other manufactures. (See Pittsburgh.) Cotton stuffs, and yarn, are extensively produced in Pennsylvania, which ranks, perhaps, next to Massachusetts, as a manufacturing state. The principal foreign trade of the state centres in Philadelphia; but it is partly also carried on through New York, Baltimore, and New Orleans, so that its total amount cannot be easily ascertained. During the year ending the 30th of Sept. 1839, however, the total value of the imports is stated in the official returns at 16,000,715 dolls., while that of the exports amounts to

only 5,299,415 dolls., of which the foreign produce re-exported made 1,151,264 dolls. During the same year there belonged to the state 112,359 tons of shipping, principally owned in Philadelphia.

Pennsylvania has a very extensive system of internal communication, partly effected by private companies, but principally by the state government. The grand canal between Philadelphia and Pittsburgh, a distance of 393 m., connects the Delaware with the Ohio, and is second in importance only to the Erie Canal in the state of New York. It has, with its various branches, an aggregate length of 590 m.; and has, besides, 2 railroads connected with it, one, 82 m. in length, extending from Philadelphia to Columbia, and the other, 36 m. in extent, crossing the Alleghanies, and uniting the E. and W. divisions of the canal. All these works belong to the state; the total expense of their completion having been nearly 4,000,000, sterling. (*Stevenson's Civil Engineering in N. America*; *Amer. Alm.*, 1841.) The principal private undertakings are the Schuylkill canal from Philadelphia to Port Carbon, 108 m. in length, with 125 locks, and completed at a cost of 2,500,000 dolls.; and the Locks and canal, 25 m. in length, with which a railroad is connected, the total cost of both having been 2,000,000 dolls. The coal districts are traversed by upwards of 100 m. of railroads; in 1839, 726 $\frac{1}{2}$  m. of canals and railroads had been completed and were in operation, and 208 m. of canals were said to be in progress. Total amount of tolls collected on canals and railroads in the same year, 1,142,633 doll.

By the constitution as amended, in 1838, the legislative power is vested in a general assembly, consisting of a senate and a house of representatives. The members of the latter, whose number may not be less than 60 or more than 100, are chosen annually in each co. by all the white free male citizens, 21 years of age, who have resided for a year in the state, and are immediately previous to election in the co. for which they offer to vote, and who have within 2 years paid a state or county tax. The senators are chosen for 3 years, 1-3d being elected annually at the time of the election for representatives. The General Assembly meets every year in January. The supreme executive power is vested in a governor, who holds office for at least 3 years. Judges are appointed by the governor, with the consent of the senate, for terms varying from 5 to 15 years. The state is divided into 19 judicial districts; Harrisburg is the legislative cap.; but Philadelphia the chief city. The other principal cities and towns are Lancaster, Pittsburg, and Reading. The state militia (with a few exceptions) consists of all free able-bodied white male citizens between 18 and 45; and, in 1837, included 204,799 individuals. Pennsylvania has a university, and had, in 1839, 8 colleges, 43 academies and 15 female seminaries, besides upwards of 5,200 common schools, in which 253,719 pupils were receiving instruction. Total public revenue in 1838, 2,709,087 dollars; expenditure in the same year, 4,899,863 dollars. Total public debt at the end of 1839, 35,016,149 dollars.

The pop. of this state is very mixed, including a great number of Germans, &c., whose ancestors were originally attracted thither by the broad principles of toleration laid down by Penn. Religious creeds are no less various; Methodists, Presbyterians, Lutherans, Baptists, German Reformed, and Friends, are, however, the prevailing sects.

Previously to its conquest by the English, in 1664, this territory had been colonised by the Dutch and the Swedes. It was granted by charter to William Penn, in 1680, and taken possession of by him in the following year, and continued afterwards a proprietary government. Pennsylvania acted a conspicuous part in the revolution: the declaration of independence was drawn up in Philadelphia. (*American Almanack*, 1839-41; *Flint's Geog. of the U. States*; *Darby*; *Bradford*, &c.)

PENRITH, a market-town and par. of England, co. Cumberland, ward Leath, in a valley watered by the Eamont and Lowther, which unite their streams about 1 m. below the town, 17 m. S.S.E. Carlisle, and 43 m. N. Lancaster. Area of par., 6,640 acres. Pop., in 1831, 6,059. The town, which mostly consists of a principal street along the line of road from Kendal to Carlisle, is clean and neat, built chiefly of red free-stone, much improved of late years. The church is a large and handsome structure, nearly rebuilt in the beginning of last century: on its walls are many curious old inscriptions, and in the church-yard is a rude monument called the Giant's Tomb, consisting of 2 stone pillars 10 ft. high, and 13 ft. apart. The living is a vicarage in the gift of the Bishop of Carlisle. The Independents, Wesleyan and Primitive Methodists, and the Secession church of Scotland have also their respective places of worship, with attached Sunday-schools. A free-school was founded here by Queen Elizabeth, and there are several charity-schools. On an eminence W. of the town are the remains of Penrith castle, a square structure, surrounded by a deep foss and rampart: it is supposed to have been built during the wars of the roses, and was destroyed in

the time of the Commonwealth. Northward is an excellent enclosed race-course, on which races take place at the beginning of October. The inhabitants are principally employed in agriculture and linen-weaving; but the town has also a considerable retail trade, and large markets. Its situation, too, on the great road to the W. of Scotland, and in the neighbourhood of the lakes, occasions a large influx of visitors. Quarter and petty sessions are held here; besides which there is a court for the recovery of debts under 40s. Penrith is also one of the polling-places at elections for the E. division of the co. Markets on Tuesday and Saturday: fairs April 25th and 26th, Sept. 27th, and Nov. 11th, for horses, cattle, &c.

Penrith is a town of considerable antiquity, and often suffered in the border wars. The chief objects of interest in its vicinity are Brougham Hall, Eden Hall, Greystoke and Dacre castles, the Giant's cave, and King Arthur's round table, with other British antiquities scattered over the district. (*Tatler's Guide to the Lakes*, pp. 95-98.)

PENRYN, a par. and mun. bor., market-town, and township of England, par. of St. Gluvias, co. Cornwall, and E. div. of the county. Prior to the erection of a hill at the mouth of a small river running into Falmouth harbour, 1½ m. N.W. Falmouth (of which, indeed, it may almost be considered a suburb), and 78 m. S.W. Exeter. Pop. of new mun. bor. in 1831, 3,942; and of par. bor. (which includes the neighbouring bor. of Falmouth), 11,881. The town consists chiefly of one wide street, crossed by 3 or 4 others of inferior size, its principal buildings being the town-hall (with a small attached gaol) and a custom-house. The church is a large plain building: the living is a curacy subordinate to the vicarage of St. Gluvias, the church of which is on the opposite side of the river. The Wesleyan Methodists and Baptists have, also, their respective places of worship; and there are 3 Sunday-schools. Penryn possesses no manufacture of consequence, nor is the general trade such as to warrant the expectation that the town will increase materially in wealth or importance. The commodities imported are confined to those required for the consumption of the town, and for the use of the mines in the immediate neighbourhood. The principal and almost only export is the granite which is quarried on the moors a few miles from the town; and this trade has of late been on the decline. There appears, however, to be a considerable general trade; and the shops are very numerous." (*Parl. Bound. and Corp. Reps.*)

The bor. of Penryn was incorporated in 18 James I. Its mun. boundaries were considerably enlarged by the Mun. Reform Act; under which its corporate officers consist of a mayor, 3 other aldermen, and 12 councillors. Corporation revenue in 1830, 2,364*l.* Penryn has sent 2 mems. to the H. of C. since the reign of James I., the right of election down to the Reform Act having been in freeholders, resident leaseholders for 99 years, and householders, after a residence of six months. The Boundary Act enlarged the electoral limits of the par. bor. so as to include with the old bor. the entire par. of Falmouth, with portions of the pars. of St. Gluvias and Budock. Registered electors in 1839-40, 885. Markets on Wednesday and Saturday. Fairs, May 12, July 7, and Dec. 21.

PENZA, a government of Russia in Europe, between 52° 48' and 56° N. lat., and 42° 26' and 46° 41' E. long., having N. the government of Nijni Novgorod, E. Simbirsk, S. Saratoff, and W. Tamboff; area, 14,350 sq. m. Pop. (1839), 988,000. Surface, flat or feebly undulating; soil, extremely fertile; climate, mild. Rivers numerous, but except the Sura and the Moksha, affluents of the Volga, the others are of little importance. Produce of the corn crops estimated at from 9,000,000 to 10,000,000 chetwerts, of which large quantities are exported. Considerable attention is paid to the raising of cattle, sheep, and horses, particularly the latter. Forests very extensive and valuable. There are valuable iron mines near Troitzk; and in some parts there are quarries of mill-stones. Large quantities of coarse linen and woollen stuffs are prepared in the cottages of the peasantry; and there are besides several considerable cloth manufactories; with tan-works, soap-works, glass-works, iron-foundries, &c.; in 1832, there were six manufactories of beet-root sugar. (*Schmitzer, La Russie*, &c., p. 681, &c.)

PENZA, the cap. of the above government, on its S.E. frontier, near the Sura; lat. 53° 11' N., long. 45° 38' E. Pop., near 11,000. Houses and government offices of wood; but the cathedral, a large building, and some of the churches, are of stone. Tanning and the manufacture of soap are extensively carried on; and it has a considerable commerce.

PENZANCE, a mun. bor., sea-port, market-town, and township of England, par. Madron, near the W. extremity of co. Cornwall, and on the N.W. side of Mount's Bay, only 7 m. E. by N. Land's end, and 96 m. W.S.W. Exeter. Pop., in 1831, 6,563. The town consists chiefly of 4 streets, meeting at right angles, in the market-place: they are all badly paved, and, for the most part,

lined with mean-looking houses. A handsome town-hall, chapel of ease (subordinate to the par. of Madron), and places of worship belonging respectively to Methodists, Presbyterians, and the Society of Friends, are its chief public buildings. It has a free-school, 3 Sunday schools, a dispensary, a natural history society, and other societies, as well as the valuable museum, belonging to the geological society of Cornwall, which has its head quarters in this town. "Besides its local advantages, arising from soil, climate, and scenery, Penzance is the market-town of an extensive district, and the port from which the produce of the neighbouring mines and fisheries is exported in considerable quantities. On the whole, the town is fast increasing both in extent and prosperity, and many good houses have been erected within the last 3 or 4 years." (*Mun. and Bound. Rep.*) Tin and copper are extensively wrought in the vicinity, and the fishery of pilchards, whiting, &c. is carried on with great activity. The gross customs' duties received at this port in 1840, amounted to 29,562*l.* The harbour is not suitable, except for the smaller class of vessels, its depth at high water springs being only 12 ft., and at neaps only 2 ft. (*Parley's English Channel*, p. 80.) The pier is upwards of 600 ft. in length, having a high-house at its extremity. About 100 ships of the aggregate burden of about 5,000 tons, belong to the port. The mildness of the climate, and the fertility as well as beauty of the surrounding district, render it a desirable residence for invalids, many of whom are settled here, and for whose accommodation baths, libraries, boarding-houses, &c. have been established within the last few years. The scenery of Mount's Bay is also extremely fine, and on its N.E. side is St. Michael's Mount, a rock of conical form, having a base of nearly a mile in extent, and gradually diminishing to the summit, which is crowned with a chapel, its tower being 250 ft. above low-water mark.

The bor. of Penzance was incorporated in the 12 James I., when it was also made one of the coinage-towns of the duchy of Cornwall. The Municipal Reform Act considerably enlarged its limits; and, at the same time, it was divided into 2 wards, its municipal officers being a mayor, 5 other aldermen, and 18 councillors. It has a commission of the peace, under a recorder, and a civil court for the recovery of debts under 50*l.* Corporation revenue in 1839, 3,164*l.*, exclusive of 4,500*l.* money borrowed.

Petty sessions for the W. division of the hund. are held here, and Penzance is one of the polling places at elections for the W. division of Cornwall. Among other distinguished citizens, Penzance has to boast of Sir Humphry Davy, born here on the 17th of December, 1778. He also received his early education, and served an apprenticeship as surgeon, in the town. Markets on Thursday and Saturday: large fairs, Thursday before Advent, and Thursday after Trinity Sunday, for cattle, farming produce. (*Municipal Corp. and Boundary Reports*, &c.)

PERIGUEUX (an. *Pesuma*), a town of France, dép. Dordogne, of which it is the cap., on the Isle, here crossed by a handsome bridge, 68 m. E.N.E. Bordeaux, lat. 45° 11' 8" N., long. 0° 43' 34" W. Pop., in 1826, 9,329. It consists of the city proper, and Puy-St.-Front, which, previously to 1240, formed a separate town, but was then included within the walls. The old ramparts are now laid out in public walks, which give Périgueux a prepossessing appearance from without; but in the old city the streets are narrow, and rendered gloomy, by the large, lofty, and antique buildings with which they are bordered. The quarter termed the New Town is, however, much more pleasant, and Périgueux has the advantage of many planted promenades, including the *Cours de Fourny*, in the highest part of the town, and an elegant public garden bequeathed to the city by a wealthy citizen. The cathedral of St. Front is probably one of the most ancient churches in France, if not in Christendom. It appears to have been founded towards the end of the 4th century, and restored about the beginning of the 6th; and portions of the edifice are still supposed to date from these remote epochs. Its architecture is partly Roman and partly Gothic, and, though it has little elegance to boast of, it is altogether a bold and majestic structure. (*Guide du Voyageur*, &c.) A church, formerly belonging to the Jesuits, and having a remarkable piece of carving; the prefecture, town-hall, hospital, barracks, and a handsome theatre, are the other principal buildings. Périgueux is a bishop's see, the seat of tribunals of primary jurisdiction and commerce, and has a communal college, a museum of antiquities, a botanic garden, and a public library of 16,000 vols., with manufactures of coarse woollens, hosiery, and liquors, and a considerable trade in cattle, poultry, game, *gâtés-à-la-Périgord*, &c. Its hog-market is considered the largest in France. Here are several Roman antiquities, including the remains of a more extensive amphitheatre than that of Nîmes. The town continued long in the possession of the English; and was a stronghold of the Calvinists

during the religious wars. (*Hugo, art. Dordogne; Dict. Géog., &c.*)

PERM, an extensive gov. of the Russian Empire, extending from the 56th to the 62d deg. of lat., and from 52½ to 64 degs. E. long., having W. the gov. of Viatka, and E. that of Tobolsk. It is divided by the Oural chain into two unequal portions, the larger, or that on the W. side, being 1½ Europe, and the smaller or that on the E. side, in Asia. Neither the area nor the pop. has been exactly ascertained, but the former may be taken at about 58,000 sq. miles, and the latter at 1,450,000 or 1,500,000 individuals. More than 3-4ths of the surface is covered with dense forests. The W. side of the government is traversed by the Kama, one of the principal affluents of the Volga; the rivers on the E. side of the Oural mountains fall into the Obi. The climate is very severe, and the soil beyond the 60th deg. of lat. is hardly susceptible of cultivation. The mines in the Oural mountains furnish employment to about 100,000 work-people, and yield large quantities of gold, silver, copper, iron, salt, &c. (*See RUSSIA.*) The corn produced in the government is insufficient for the consumption of the inhabs.

Perm, the chief town of the government, is situated on the Kama, lat. 58° 1' N., long. 56° 29' 15" E. Pop. 10,000. It is built entirely of wood, and is the seat of an archbishopric, and has several public establishments. The inhabs. are principally employed in smelting the iron, copper, and other products, of the adjacent mines.

PERNAMBUCO, a city and sea-port of Brazil, inferior only to Rio Janeiro and Bahia in commercial importance, cap. prov. of its own name, on the Atlantic, at the mouth of the Capibaribe, 210 m. N.E. Bahia; lat. 8° 4' 7" S., long. 34° 51' 44" W. Pop. estimated at 62,000. It consists of the separate towns of Olinda, Recife, Boa-Vista, and St. Antonio; the first of which is on the mainland, and the others lie S. from it on a succession of low sandy banks, separated by saltwater creeks and different arms of the river, but connected with each other by two bridges. Recife, or Pernambuco proper, the most southerly, about 4 m. S.W. Olinda, is defended by the principal forts, and comprises the dock-yard and the larger merchants' warehouses. Most of its streets are narrow; its houses are chiefly of brick, and sometimes from three to five stories in height, but usually less lofty. Several churches, the port admiral's residence, and the custom-house, are among its most conspicuous public buildings. St. Antonio, the residence of the greater number of the provincial authorities, has broad streets and large houses, the ground floors of which are appropriated to shops, warehouses, stables, &c. When Koster visited Pernambuco, the shops were without windows, the only light being admitted by the door. There existed, also, very little distinction of trades, all kinds of goods being sold by the same person; the bridges of the city were crowded with shops; neither the streets of this town or those of Boa-Vista were paved, but it is probable that since that period many important improvements may have taken place. In St. Antonio are the governor's palace, formerly the Jesuit's convent; the treasury, town-hall, prison, barracks, several convents and churches handsomely decorated within, and several good squares; and it has a gay and lively appearance. A long embankment connects this town with the main land. Boa-Vista is extensive, but irregularly laid out; it has one handsome street, and comprises the residences of many of the richer inhabitants of the city, surrounded with gardens, various churches and convents, &c. Olinda is beautifully situated on small hills, the sides of which are alternately either broken down abruptly, or covered with a most luxuriant tropical vegetation; amid which, the white cathedral, the convents and churches, the bishop's palace, and numerous villas, have a most picturesque effect. But Olinda is in a state of decay, having been deserted by many of its pop. for Recife and the other parts of the city.

The harbour of Pernambuco is defended from the swell of the ocean by an extensive reef (*recife*); which, according to Koster, continues along the whole coast from Maranhão, at a variable distance from the shore, and has numberless breaks, through which ships approach the land. This reef, which is said to be of coral, "is scarcely 16 ft. broad at top; it slopes off more rapidly than the Plymouth breakwater, to a great depth on the outside, and is perpendicular within to many fathoms." (*Graham in Modern Traveller, xxx. 228.*) This natural break-water forms the harbour; for, though at high water, the waves beat over it, they strike the quays and buildings of the town with diminished force. Along the sandy neck of land between Olinda and Boa-Vista, however, which is uncovered by the reef, the surf is very violent; and the harbour itself is not considered very safe. It consists of 2 parts: the Poco, capable of receiving vessels of 400 tons and upwards, entered across a bar on which there are from 17 ft. to 30 ft. water; and the Mosqueira, much better protected than the former, but on the bar of which there are but

7 ft. water at ebb tide. Vessels trading with Pernambuco ought not to draw more than from 10 ft. to 12 ft. water. (*Blunt's American Coast Pilot, 519.*) The harbour is defended by several strong military works, the principal being the stone forts of Do Buraco, and Do Brum; and has at its entrance a lighthouse with a revolving light.

The exports consist principally of cotton to the extent of from 60,000 to 70,000 bags a year; sugar to the extent of from 20,000 to 25,000 cases; and slides and dye-woods. At an average, the value of the exports may amount to from 600,000, to 700,000, a year. In 1835, 247 vessels from foreign ports arrived at Pernambuco, of which 59, of the burden of 11,554 tons, were from England. The value of the imports from England, in the course of that year, was estimated at about 500,000, consisting principally of cotton and linen manufactures, hardware, earthenware, &c.

PERNAU, a fortified sea-port town of Russia, gov. Livonia, at the confluence of the Pernau with the N. angle of the Gulph of Riga, lat. 58° 21' 20" N., long. 24° 28' 15" E. Pop. 9,000. It comprises an old and a new town, and two suburbs; and has three churches, and a Latin school. There is a bar at the mouth of the river, which can only be crossed by the smaller class of vessels; those of larger burden having to load and unload in the roads, where the anchorage is not very good. It has a considerable export trade, especially in corn, hemp and flax, linseed, &c.; the aggregate value of the exports amounting to about 2,500,000 or 3,000,000 roubles a year.

PERONNE, a fortified town of France, dép. Somme, cap. arrond., on the Somme, 29 m. E. by N. Amiens. Pop. in 1836, 4,029. It has a handsome town hall, a Gothic par. church, in which one of the Merovingian kings is interred; but the edifice possessing the greatest interest of its old castle, in a tower of which Charles the Simple was confined by a count of Vermandois, and subsequently Louis XI. by Charles the Bold, duke of Burgundy. The latter circumstance forms the basis of one of the finest episodes in Scott's novel of *Quentin Durward*.

Peronne has been frequently besieged by the Spaniards, but unsuccessfully; and it had not been taken till it was stormed by the British about a week after the battle of Waterloo. At the castle of Applincourt, near Peronne, the famous "league" was concluded, in 1576, between Henry III. and the Duke de Guise. (*Hugo, art. Somme; Guide du Voyageur.*)

PERPIGNAN, a strongly fortified town of France, dép. Pyrénées-Orientales, of which it is the cap., on the Tet, where it is joined by the Basse, 80 m. S.W. Montpellier; lat. 42° 42' 3" N., long. 2° 49' 9" E. Pop., in 1836, 16,733. It is built partly on a declivity, and partly in the plain beneath; and is separated by the Basse from *les Blanquies*, or the new town, and by the Tet from a suburb. Each river is crossed by a bridge, that across the Tet consisting of seven arches. The fortifications of Perpignan have been improved considerably since 1815; and it is now one of the best fortified towns of France. It is surrounded with walls of brick and stone, flanked by several bastions, and encircled by ditches, beyond which are numerous outworks. It is further defended by a cordon, with a double line of ramparts, the Casillet, a defensive work of uncertain date, but similar to structures erected by the Moors in Spain; the town-hall, mint, arsenal (formerly a large convent), theatre, hall of justice, and prison, are the other chief public buildings. Perpignan is a bishop's see, the seat of tribunals of primary jurisdiction and commerce, and of boards of artillery, engineers, and customs. It has a communal college, a museum, a botanic garden, and a library of 13,000 vols., with manufactures of woollen stuffs, lace, corks, soap, and playing cards, and is an extensive entrepôt for the wines, brandies, liqueurs, wool, silk, oil, and other products of the S. of France. (*Hugo, art. Pyrénées-Orient.; Guide du Voyageur.*)

PERSEPOLIS (*the Istakhar of the anc. Persians*), a celebrated city of antiquity, and during a considerable period the cap. of Persia, and residence of its monarchs, prov. Farsistan, in a fine plain at the foot of a mountain, against which it abuts, near the Araxes, or *Bandemir*, 30 m. N.E. Shiraz; lat. 29° 59' 30" N., long. 53° 20' E. The

city appears to have covered a large surface; bricks, fragments of walls, and rubbish being found widely scattered; but the only extant ruins of any interest or importance are those of a vast building, or rather series of buildings, supposed to have been the palace of Darius, burned by Alexander the Great.

It would be impossible, without the aid of plates, to give any intelligible description of these vast ruins. We may, however, state, that they occupy the summit of a platform about 1,430 ft. in length, 802 ft. in width on the S., and 926 ft. on the N. side, and about 50 ft. in height, formed by leveling the summit of a marble rock. This platform is ascended by easy flights of steps, each step, except the rock on its W. side, and, when entire, consisted of 3 fronts or terraces, the mountain forming its E. side.

The ruins consist of the remains of vast portals or gateways (one of which is formed of two enormous sphinxes), pillars, walls, on which, but especially on the sides of the staircases, figures are cut in *basso relievo*, which are highly interesting as illustrating the costume and armour of the ancient Persians. Some of the remaining columns are 60 ft. in height, and though their capitals and form be very different from what we have been accustomed to consider classical, they are extremely beautiful. Many of the sculptures are executed with infinite skill. Numerous tombs have been cut into the mountain, on which, as already stated, the palace exists. (*Porter's Travels*, i. 582—583; *Rich's Babylon and Persia*; *Niebuhr, Voyage en Arabie*, li. 98—131.; *Mod. Trav.*, &c.)

Perhaps, however, the most curious portion of the ruins of this vast palace consists of the inscriptions in arrow-headed or cuneiform characters, similar to those on the bricks of Babylon, found in great profusion on most parts of the walls. Very discordant opinions have been entertained with respect to the nature and value of these characters; but Dr. Grotefend, who has bestowed the greatest pains on the subject, has shown that the cuneiform marks are real *alphabetical* letters; that every inscription is treble (the first being in Zend, and the others in different Persian dialects); that the inscriptions are to be read from *left to right*; and that all of them belong to the period between Cyrus and Alexander. Heron considers that these characters are the *Ἀρχαία περσικαῖα* mentioned by Herodotus (iv. 87.); but, in point of fact, notwithstanding the investigations of Grotefend, we are still far from being well informed as to the true meaning of these inscriptions.

The history of Persepolis is, for the most part, hidden in obscurity; but it seems to be an established fact that this city is identical with the *Istakhar* of Persian historians, the foundation of which is ascribed to Cyrus the Great, the *Jemsherd* of Oriental writers (whence the modern name of the ruins, *Takht-i-Jemsherd*). Herodotus, Ctesias, and the older Greek writers do not mention it, and it may not then have been a permanent royal residence. The inscriptions, however (if they have been correctly interpreted), show that it must, occasionally at least, have been visited by Darius, and the several monarchs called Xerxes. It is, at all events, certain that this city was the residence of the unfortunate Darius Codomanus, who, with his court, fled from it after his defeat at Arbela or Gungamela (*anno* 331 B. C.) by Alexander the Great. The conqueror soon after took the city, and gave it up to military execution. Alexander himself set the palace on fire, under circumstances which, if we may believe Diodorus, have been accurately as well as admirably depicted in Dryden's noble Ode. But Arrian, a far less questionable authority, has given a very different account of the matter. He states that Alexander destroyed this palace contrary to the advice of Parmenio, not in a drunken frolic, but in cold blood, and on principle, in retaliation of the destruction of the Greek temples by the Persians. (*Arrian*, lib. iii. cap. 18.) From the few notices that now exist, it appears that Istakhar was an important city under the Sassanian dynasty. In the 7th century it was taken by the Mohammedans, who, having founded Shiraz, made it the capital of Persia; and Persepolis, long on the decline, rapidly sunk to a state of total decay. It may be right to mention that Persepolis has been regarded by some writers as identical with Pasargada; and it may be fairly inferred, from the statement of Arrian (*lib. iii. cap. 18.*), that the palace destroyed by Alexander belonged to the latter; and though the question as to their identity be not free from difficulty, we are, on the whole, inclined to prefer this conclusion to the contrary theories of later writers.

PERSERIN, a considerable town of Turkey in Europe, pach. Albania, sanjak Scutari, near the Drin, at the foot of a mountain, 72 m. E.N.E. Scutari. Pop., according to the *Dict. Géog.*, 16,000; but, in Horchelman's *Strin*, it is stated at only 5,000. Its inhabs. are principally Armenians, but partly, also, Mohammedans, and partly Christians. It is the residence of a Greek bishop, and of a military governor, who occupies a fort of no great importance.

## PERSIA.

Albania is said to be principally supplied with firearms from its factories.

PERSHORE, a market town of England, co. Worcester, hind, its own name, on the W. bank of the navigable river Avon, crossed here by a stone bridge, 7 m. S.E. Worcester. Pop. of its two pars. (exclusive of the out-townships), in 1831, 2,336. The town, which consists of one principal street, nearly 1 m. in length, is well built, and paved, having many respectable and a few handsome houses. The church of Holy-cross, formerly attached to a Benedictine monastery, of which there are still some remains, is a large cruciform structure, with a lofty square tower. That of St. Andrew is small and mean looking; both livings are in the patronage of the dean and chapter of Westminster. The Wesleyan Methodists and Baptists have their respective places of worship; and there are three Sunday-schools and a national school. Some of the inhabs. are employed in the manufacture of stockings; but the town depends principally on its retail trade for the supply of the neighbouring gentry. The petty sessions for the hind. are held here; and Pershore is the chief place of a poor-law union, comprising 40 pars.; the expense of maintaining its own poor having been 570*l.* in 1839. It is also one of the polling-places at elections for the E. div. of the co. Markets on Tuesday; fairs, Easter Tuesday, June 26., and last Tuesday in October.

PERSIA, a celebrated and very extensive country of central Asia, between the 35th and 26th deg. N. lat., and the 44th and 62d deg. of E. long. The political boundaries of the country have varied at different times with the character or exploits of its monarchs: sometimes embracing Armenia and Georgia on the W., Khârezm and Bokhara on the N., and Afghanistan on the E.; and sometimes being reduced to less than its natural limits. The latter on the S. are the Indian Ocean and the Persian Gulph; on the S.W. and W. the Tigris; on the N. the Aras, the Caspian Sea, and an indefinite line in the desert, that separates Persian Khorasan from the territories of Kharezmi or Khiva, stretching from the Attrück, which falls into the Caspian, to about the 36th deg. of N. lat. and the 61st deg. of E. long.; whence a waving and undulating line drawn southwards, separates the Persian territories on the E. from those of Cabul and Afghanistan. At present, however, the actual limits of Persia are much more circumscribed. The extensive province of Beloochistan, along the Indian Ocean, is quite independent. (*See* *BELOOCHISTAN*.) The Turkish territories embrace a large portion of country to the E. of the Tigris; and the country of Talash, to the S. of the Aras, belongs to the Russians. But still, even with these deductions, its area probably exceeds 450,000 sq. m.; though, from the vast extent of its deserts, the badness of the government, and the want of industry, the pop. does not probably exceed 8 or 10 millions.

*Name.*—The most ancient name of this extensive region is that of *Elam* (*Genesis*, x. 22.). The name of *Persia*, by which it was afterwards known in Europe, appears to have been derived from that of the prov. of *Pars*, or *Phars*, which being changed by the Greeks to *persis*, was applied by them to the whole country. This designation has not, however, been adopted in the East; the Persians, both in ancient and modern times, having styled their country *Iran*. The countries occasionally subject to the Persian monarchs beyond the Gihon, or Oxus, have usually been called *Aniran*, or *Turan*, that is beyond Iran. (*Ancient Universal History*, v. 49., 8vo. ed.)

*Face of the Country.*—Persia may be considered as an elevated plateau, diversified by many clusters of hills, chains of rocky mountains, extensive plains, and barren deserts, with two extensive declivities, or lower tracts—one along the shores of the Persian Gulph and the banks of the Shat-el-Arab, and the other along the shores of the Caspian. The more southerly portion of the former consists of a succession of sandy or gravelly plains, where water is so scanty that vegetation is only seen in patches where a well or a rivulet enables the inhabs. to irrigate some portions of the soil. This region is called by the natives *Dushitizan* and *Gurnsair*, that is, the hot country; and, according to Morier, "dreariness, solitude, and heat" are its principal characteristics; but in the province of Kuzistan, to the E. of the Shat-el-Arab, this low tract is comparatively well watered by numerous streams, and its upper portion is naturally very productive. The low country along the banks of the Caspian is extremely well watered, and is covered with forests and verdure: it unites on the E. with the desert, which stretches from the E. shore of that sea to the Tartarian steppes.

The plateau, or elevated space which lies between these two lower slopes, and which rests as it were, on two great ranges of mountains, may rise to an elevation of from 2,500 to 3,500 ft. above the sea, and on its again chains of mountains rear themselves to various altitudes, seldom, however, exceeding 7,000 or 8,000 ft. above the sea, and including sometimes between their range valleys of va-

rious dimensions, and sometimes rather appearing as islands in the extensive plain.

The most striking features of Persia are its chains of rocky mountains; its long arid valleys without rivers; and, above all, its vast salt or sandy deserts.

**Mountains.**—There are two great chains of mountains, which, while they support the plateau of Persia on the N. and S., seem to be the stocks from whence all the minor ranges proceed. The most northerly of these, striking off from the Caucasus, crosses the Kur, to the W. of the plains of Mogham, and from Ardebil runs parallel with the southern shore of the Caspian Sea to Asterabad. It thence passes in an E. direction to Mashed, and, stretching S. of Balkh to the Hindoo Koosh, is lost in the range of the Himalaya, and that stupendous central knot of mountains where the largest rivers of Asia take their rise.

This immense chain, in its extent of more than 20 degs. long., sends forth every where a number of branches, which in some places sink into the plains or deserts on the E. of Persia, and sometimes connect themselves with other elevations. Of these, the Sahund Mountains, striking off from the lake Urumeah in a N. E. direction, spread themselves over Azerbaijan, and connect more or less with the spurs and branches of that extensive aggregation of mountains in which the Euphrates, Tigris, Zab, and other large rivers, have their sources, and whence they derive their supplies. The range of the Taurus may be considered as a great branch from this central knot, which spreading out in all directions, covers the pachalics of Diarbekir, Erzeroom, Bayazi, Van, and Koordistan, with piles of immense mountains. These rise to a great height between the lakes Van and Urumeah, particularly to the W. of the latter, where the Peaks of Jewar are supposed to attain an altitude of 15,000 or 16,000 ft. above the sea. From this mass a chain of mountains, varying in height and breadth, runs S. E. through Koordistan, bounding at a distance the valley of the Tigris, forming the high lands of Louriستان and the country of the Buchtarians, and giving birth to the rivers Kerah, Karoon, Abzool, &c. After passing to the S. of Shiraz, it trends still more to the E., and following at uncertain distances the line of the Persian Gulph and Indian Ocean, and occasionally almost disappearing, joins the ranges of Beloochistan and Mekran, and finally sinks into the deserts of Slnde, or is lost in the high grounds which diverge from the mountains of Afghanistan.

From these two ranges may probably be traced every ridge or knot of mountains that cover Persia as with a network of rocky lines; though many even of those which attain a great degree of altitude appear almost insulated. Among the loftiest peaks may be mentioned that of Demawend, 50 m. N. E. of Tehran, from 12,000 to 13,000 ft. above the sea; Elwund, near Hamadan, nearly as high; Sahund, near Maragha; the Koh-i-Zerd, near Isfahan, &c., which have not been measured. These mountains include among them an intricate system of valleys and plains, differing in size and productiveness, according to their nature and climate. Wherever water abounds they are fertile, but moisture is the boon of which nature is least liberal in Persia: except in some happy regions, even streamlets are rare, and of its few rivers scarcely any are navigable beyond a short distance from their mouths.

**Rivers.**—Though the Tigris, being assigned as one of the natural boundaries of Persia, can scarcely be set down as a Persian river, there are many large streams which descend from the Persian mountains to feed it. Of these the principal are the Karoon, supposed by D'Anville to be the *Chaspes* or *Euloeus* of Herodotus, the Ulai of sacred writ; but Khmeir supposes that the Kerah, or Karasii, represents the *Chaspes*; and that the greater and lesser Zab, which have their sources in the chain of Zagros and the mountainous districts of Koordistan, are the ancient *Caprus* and *Zabelus*. On the N. the Arras, or Araxes of classical writers, though a boundary line of the present Persia, derives much of its waters from Persian Koordistan; and the salt lake of Urumeah receives from the same hills, and from the Sahund mountains, a number of small rivers. The provs. bordering the Caspian are as remarkable for their moisture as the rest of the country is for its aridity; but their rivers are chiefly torrents, sometimes full and foaming, at other times nearly dry. The Kizilzozein, which rises in Ardelean, and passing by Miana falls into the Caspian in the prov. of Ghilan; the Herauz, which flows through Amol; and the Tejen, which passes by Saree, both in Mazunderan, are the largest. The Attruck and Goorgán, both considerable streams, falling into the S. E. corner of the Caspian, are fed from the N. face of the Elbruz mountains. It is a singular fact, as Sir J. Malcolm remarks, that from the mouths of the Indus to those of the Karoon and Euphrates, there is not found one river navigable more than a few miles from the ocean; and, in fact, the rivers that fall into the Persian Gulph and the Indian Ocean, on the shores of Laristan and Kerman, are mere torrents, almost dry during the long period of the summer and autumn heats.

**Lakes.**—In a country so arid there can be but few sheets of standing water, and those which do exist are chiefly salt. Of these the lake Urumeah or Shakes, in Azerbaijan, near the frontiers of Turkey, 26 m. W. Tabreez, is the most remarkable, both for size and intensity of saltiness. According to Khmeir, it may be about 300 m. in circumference, and it has several islands. So saturated is the water with the salt it holds in solution, that immense quantities are deposited, assuming the appearance of a pavement under the shallow water near the brink, and its shores are covered with saline efflorescence. Its waters, like those of the sea, appear to be dark blue, streaked with green, and are pellucid in the highest degree. The lake of Baktegan, near Shiraz, is another of these sheets of salt water, but on a smaller scale; as is the lake Zurrak, in Selstan. Excepting small pools among the mountains, which are the well-heads of streams, there are no lakes of any considerable size; but on the banks of the Caspian Sea, the beating of the surf, by damming up the mouths of streams, has given birth to some extensive lagoons.

**Deserts.**—Those which are the most striking of its physical features, Persia shares with a large portion of Central Asia and Africa: they consist of salt deserts, called by the natives *Kuwer*, and sandy wastes, as it is called, the great *Deria Kuwer*, or salt sea, as it is called, is of prodigious dimensions, and may be said to be to Persia what the great desert of Sahara is to Africa. It commences on the N. at the foot of the Elbruz mountains, in about the 36th deg. N. lat.; and, uniting with the desert of Keriman, extends S. to about the 30th deg.: on the other hand, it extends from about the 51st to the 60th deg. of long., occupying all the central and eastern portion of the country. It has a few oases, or cultivated spots; but they do not amount to 5 per cent. of its extent. The cultivated portions of the country lie round the margin, as it were, of this vast desert plateau, principally to the N.W., W., and S.W., but partly, also, as already seen, to the N., along the Caspian. S. of the desert is Beloochistan, and E. Afghanistan.

The nature of this desert varies in different places. In some the surface is dry, and even produces a few saliginous plants; in others, it is covered with a crackling crust of earth, white with saline efflorescence. A considerable portion is marshy; and during winter the melting of the snow and the increase of the torrents cause an accumulation of water in its lower parts, which, being evaporated in the hot months, leaves behind a saline incrustation in cakes upon a bed of mud. In extensive tracts sand predominates, either in the shape of level plains or wave-like hillocks, easily drifted by the wind, and sometimes so light and impalpable as to be carried to a vast distance by tempests. In some places the plain surface is broken by ridges of bare black rocks. Nothing can be more dreary than these dismal wastes. When the traveller has advanced some distance into them, the boundless expanse around, blasted with utter barrenness, and hoary with bitter salt, glistening and baking in the rays of the fervid sun, only broken here and there by masses of dark rock, distorted by the powerful refraction into a thousand wild and varying forms, impress him with a sense of desolation that cannot be described.

**Forests and Appearance of the Country.**—Although the greater part of Persia is bare of vegetation, there are a few tracts exempted from this sterility. Among these are the provinces of Ghilan, Mazunderan, and Asterabad, bordering the Caspian Sea. The strip of low land constituting these provinces, with the N. face of the lofty mountains by which it is overhung, is covered with dense forests of oak, elm, beech, sycamore, and all sorts of fruit trees, amongst which the vine grows with the greatest luxuriance. The swamps and back waters are bordered with alders of magnificent size, and amongst the underwood is found abundance of box, of a magnitude unknown in Europe. In the S. the chain of Mount Zagros, including Persian Koordistan, Louriستان, and the Buchtarian mountains, is partially covered, and in many places densely, with forests of oak, which, however, does not attain any great size; and parts of Kuzistan are overrun with low jungle, the haunt of wild beasts. The district of Behaban is rich in wood; and Khmeir praises highly the beauty of the fabled wooded vale of Ram-Hormuz in Upper Kuzistan. But except in those districts, which bear but a small proportion even to the inhabited portions of the country, its appearance is dreary in the extreme, and lacks almost every thing that gives interest and beauty to European landscapes. It has no green plains or grassy slopes, no parks nor inclosures, no hedges nor woods, no magnificent seats nor comfortable-looking cottages, and, excepting in spring, even the portions cultivated round the villages can hardly be distinguished from the brown, arid expanse, that every where meets and fatigues the eye of the traveller. And if the reader will farther figure to himself towns and villages, consisting mostly of mud houses, partly in a state of decay, and many of them wholly deserted; roads, if so we may call wretched paths,

wholly impracticable for carriages, and unsafe even for horsemen; property insecure, and tyranny and rapine every where lords of the ascendant, he will be able to form a pretty accurate notion of the state of this celebrated country. (*Fraser's Persia*; *Edinburgh Cabinet Library*, p. 29.; *Kinney's Persia*, *passim*, &c.)

*Soil*.—Lime in various shapes abounds every where, and being mingled in the glens and valleys with the remains of decayed vegetables and other detritus, forms a loamy soil of inexhaustible fertility. Indurated clay is often found to mingle with the calcareous matter. Artificial irrigation is here, almost every where, essential to the raising of crops. It is, in fact, the great business of the Persian agriculturist: and is well understood, having been practised from the remotest antiquity. Wherever, indeed, it is neglected, the land is, for the most part, barren and unproductive.

*Climate*.—This is found to vary to almost the greatest possible extent in different provinces; and the statement of the Younger Cyrus, that one extremity of his father's dominions stretched to those climates that were uninhabitable through heat, and the other into those uninhabitable through cold, is nearer the truth than might be supposed. The summer heats in the S. provs. are almost insupportable; while the cold of winter in those of the N. rivals that of Canada or Russia. In summer, however, even in the N., the heat is so great that all who can leave the towns and villages of the plains in the months of June, July, August, and September, resort to temporary lodgings or tents in the mountains. In the low provs. on the Caspian, the heat, though great in summer, is not so excessive as in the S., partly perhaps from the evaporation that takes place, as well as from the breezes from the sea: but the climate is here extremely unhealthy, and in the end of autumn putrid and intermittent fevers prevail to a great degree.

*Minerals*.—The mineral riches of Persia are almost wholly unexplored. Iron, copper, and lead are, however, known to abound in all the great mountain ranges. The first is not largely produced, and much of the required supply is imported from Russia. Copper has been worked in several places, particularly in Khorasan and Azerbaijan; but the distracted state of the country has hitherto prevented much progress being made in such undertakings. Of late, however, an enterprising native, whose mind has been enlarged and his knowledge improved by a residence in England, has commenced working mines in Karadag under favourable appearances of success; and, from the connections he has formed, he may perhaps escape the extortions to which others of his countrymen would probably be exposed. The mines of Fars and Kerman supply the greater part of the demand for lead, though some is also brought from India. Antimony is found but is little used. Gold and silver are said to exist, but there are no mines of either worth notice. The turquoise is almost the only gem found in Persia, to which it is peculiar, the mines near Nishapur yielding this precious stone in an abundance and of a beauty unknown in any other part of the world. It is found disseminated in veins, nodules, and irregular masses, in beds of porphyritic conglomerates or limestone deeply tinged with iron, and often veined with micaceous iron ore. Garnets are also found in various parts, especially near Hamadan, of great size and beauty. Rock salt is very abundant all over the country; and the mines of Khamer furnish abundant supplies of sulphur, which is also found in other places. Coal has been discovered in Azerbaijan, and naphtha is abundant, cheap, and useful.

*Vegetable and Animal Productions*.—As Persia embraces a variety of climates, its vegetable productions necessarily vary in different parts. The climate of many of the northerly provinces resembles that of Europe, so that most European fruits and vegetables are found there in great perfection and abundance, with several belonging to more southern latitudes. The forests of European trees, that cover the Caspian provs., and the woods that more thinly cover the southern mountains of Luristan and the Buchtiarees, have already been noticed; and to these may be added the stately chinâr, or *Platanus orientalis*, the Lombardy poplar, willow, jujube tree, and, in the warmer parts, the cypress and pinaster. The plains are covered with a stunted and prickly herbage, among which the camel-thorn, wild liquorice, wild rue, and many aromatic plants, are conspicuous. Among the rest, the tall stalk of the gum-ammoniac rises itself on most of the gravelly plains of Irak and Khorasan, dropping its bitter tears upon the waste. The assafœtida plant abounds in parts of Khorasan. The orchards of Persia are rich in all the fruits of Europe: cotton, tobacco, the opium poppy, figs, vines, and the mulberry abound every where. The Palma Christi (castor-oil plant) is reared for lamp-oil in the warm districts, and the manna-bearing tamarisk is found in many low moist spots.

Among the animals are found most species common to Europe, with the addition of the camel, wild ass, wild sheep (or Argali), lions, tigers (rarely), leopards, hunt-

ing leopards, tiger-cats, lynxes, and hyænas. There are many celebrated breeds of horses, of which those of the Toorkman plains and the Chaab district are held in highest repute. They have been a good deal improved by crossing with Arab horses, and though not handsome, at least in the estimation of Englishmen, have great strength, speed, and the most extraordinary powers of enduring fatigue. The Persians are extremely fond of, and take great care of their horses. They are clothed with the greatest attention, according to the season of the year; and in warm weather are put into the stable during day, and taken out at night. Next to camels and donkeys, mules are in greatest repute as beasts of burden, and form the bulk of the caravans employed in transporting goods from one part of the country to another. There is a great variety of birds, and the Caspian is well supplied with fish.

Persia is not, in general, much infested by reptiles or insects; but the black scorpion and large centipedes are met with in various parts, and the plains in some places swayed by taxes with immense Phalangid and enormous spiders, the bite of which is venomous. The voracity of the poisonous bug of Mianna are believed to be grossly exaggerated; but no words can exaggerate the swarms of gad-flies and other stinging insects which set upon the traveller who enters the jungles of Mazunderan in summer, nor the clouds of mosquitoes which are bred in its swamps and other low marshy parts of the country. Hosts of locusts, too, occasionally visit the land, destroying every green thing, and themselves supplying food to myriads of wild fowl.

*Tenures of Land, and Agriculture*.—Property in land is of a fourfold description: 1st, *Khalissa*, or crown lands; which, since the confiscations of Nadir Shah, have become very extensive; 2d, those which belong to private individuals; 3d, those granted to charitable or religious institutions; 4th, those granted by the king for military service, or in payment of salaries or annuities. Persons may become proprietors of land by inheritance, by purchase, by gift from the crown, or by reclaiming it from waste by producing the means of irrigation. In any of these cases, except the third, the proprietor's right (he not being the occupant) amounts to the privilege of exacting from the cultivator a tenth part of the produce. In the third case—that of being an assignee of crown lands—he may exact 3-10ths, which include all government dues, and what he can get from the farmers. If the assignment be on the estate of another, he can only demand 2-10ths. If the proprietor be the occupier of his own land, he makes what bargain he pleases with his cultivators; but the regulations for the protection of the husbandman have little or no practical influence. Almost the whole expense of government has to be defrayed by taxes on the land, the amount of which is perpetually varying, not only with the necessities of the government, but with the character and dispositions of the governors of the different provinces. The state of the country is such that "the cultivator rarely expects to reap the fruit of his labours. His lands and houses are liable to be plundered by the retainers of every petty chief; and he and his family may, in an instant, be deprived of all their little capital, and reduced to beggary and want." (*Kinney*, 37.) Under such circumstances, agriculture must necessarily be in the most depressed possible state. No improvement is ever dreamed of; only the most easily worked portions of the soil are cultivated, and the instruments of husbandry are of the rudest and most primitive construction. Such, however, is the fertility of the land, that, despite the want of skill and attention on the part of the husbandman, wherever the means of irrigation can be commanded, from 10 to 20 returns are said to be obtained (though we attach little weight to such statements) to be usually reaped, and in many places the produce reaches fifty and sixty fold. The grains chiefly cultivated are wheat, barley, maize, and rice; the latter being most abundant in the low and well watered provs. of Mazunderan and Ghilan. Oats are very little, if at all, raised. In the greater number of provs. there are two sorts of cultivation, wet and dry, or by means of irrigation and without this assistance. In the former, which is also by far the most extensive, the ground is roughly turned up by a wooden plough, sometimes slightly shod with iron, and drawn generally by two oxen; and the seed being sown in the fields of each individual are laid under water as frequently as may be required, or as he has a right to; for the water of each stream is portioned out by time into shares, which are bought and sold as property. The water is derived either from natural rivulets or from under-ground canals, constructed with great skill, and carried to a great distance. These are the property of those who construct them; the natural streams belong to the sovereign, or to those who have purchased them, or on whom they may have been bestowed. All disputes about irrigation, like those on other subjects, are settled by the kethkoda (magistrate) or elders of the village. The dry cultivation is conducted, as to tillage, in nearly

the same way as the other, but the grain is left to be nourished by rain only; so that, in this arid country, it must be confined to particular spots which experience or observation have pointed out as fit for it. Manure is very rarely applied to corn-land. Near cities, the melon, cucumber, and vegetable grounds are enriched with manure from the soil of the caravanserais, &c.; and in the neighbourhood of Isfahan pigeon dung is so highly valued in the culture of the fine melons, for which that district is celebrated, that pigeon-houses are built for the purpose of collecting this manure, which sells at an enormous price; but these are almost the only instances in which the land is artificially assisted. The use of lime as a manure is unknown in this, as in other Asiatic countries; and fallows appear to be the only means resorted to for the improvement of the land.

Sheep, particularly the large-tailed variety, are every where very abundant. Their flesh is almost the only meat used as food, exclusive of poultry and game; beef not being at all esteemed, nor of good quality. Sheep's wool is universally used for clothing, and sheep skins with the wool on, for jackets and cloaks. The property of the wandering tribes of Persia consists of sheep, with cattle, horses, camels, asses, &c., in large flocks and herds. Wool might become a very valuable article of export. In Kerman they have a breed of goats which yield a down, not much inferior to the Cashmere wool, which might be greatly increased all over the mountainous parts of the country.

*Manufactures* are chiefly confined to articles of home consumption. Till lately almost all the clothing of the poorer classes, both cotton and woollen, was home made; but for some years past most of the coarse chintzes and printed cottons in use have been supplied from England and Russia by way of India, Turkey, and the Caspian. Still a great deal of cotton cloth is made, both plain and printed, some of which goes to Russia and Turkey. In silk, also, a good deal is done, the fabrics resembling our gros-de-naples, taffetas, satins, velvets, brocades, and handkerchiefs, &c., produced at Cashan, Yezd, Mushed, Astrabad, Isfahan, and many other places, are not only celebrated, but in request for export to Russia and Turkey, as well as for home consumption. Besides these, shawls are manufactured at Kerman, of the wool of that country. In imitation of those of Cashmere, and which, though deficient in softness and fineness, are still a handsome fabric, and in great request both for home use and exportation. Carpets and felts for sitting on are also made in various parts, the best of the former being produced at Herat, and in the central districts of Irak, and generally by the wandering tribes. The best are made in Khorasan; but they are chiefly for use in the country, few being exported. There are also manufactures of arms, swords, daggers, guns, and of cutlery, as scissors and knives. The former are chiefly made at Shiraz and Mushed; the guns of Kermanshah, and its vicinity, are highly prized, and the cutlery of Isfahan and Shiraz has obtained some celebrity in Persia; but the knives and scissors of Birmingham are so far superior in cheapness and quality, that there is no great demand for the native wares. China ware, and all superior pottery, is imported; but a little coarse glass is manufactured in the country. There is also a manufactory of leather and saddlery at Hamadan.

*Commerce.*—In a country where there are no made roads, navigable rivers, or canals, and scarcely any sea-ports or shipping, and where there is but little security of property, it might be inferred that there can be no commerce. Yet, with all these disadvantages, Persia has a good deal of trade, and there is no inconsiderable degree of commercial spirit among its inhabitants. The means of land-carriage, as over most of the E., is by caravans of camels, mules, and small horses, called *yabooos*, for there is no superior land carriage in the country. The two latter are particularly suited to the stony roads and high mountain passes which occur in almost every day's journey; and in this way is brought the whole merchandize from Bokhara, Cabul, much of that from India, and from all the nearer countries, to the various marts; the returns being transported in like manner. The only sea-ports are Bushire, Bunderabass, or Gombroon, Congoon, and some still smaller places on the Persian Gulph; and Ezuzelle, Balfroosh, and Astabad, upon the Caspian. Of these Bushire, on the Gulph, and Balfroosh and Ezuzelle on the Caspian, are the most considerable, the former being the mart of all the trade with India, and the two latter of that with Russia; and from these the communication with the interior is kept up by caravans, as already mentioned.

The principal trade of Persia is with India, Turkey, Russia, Bokhara, and Afghanistan, and of late direct with England. From the first the imports are chiefly indigo, chintzes, muslins, and calicoes, gold and silver brocades, precious stones, china, and earthenware. Sugar and sugar-candy, cashmere shawls, iron, lead, copper. From Turkey, European goods from the Le-

vant, and specie. From Russia, iron, broadcloth, coarse and fine printed calicoes, gold lace and metal buttons. Trunks of all sizes; tea, coarse cutlery, leather, glass-ware, tea-urns, and copper in sheets, quicksilver, furs, paper, in great quantity; cochineal, &c. &c. From Bokhara black lambskins, raw hides, dried prunes, raisins, and other gems; shawls, china ware, camblot; Indian and Russian produce by that route. From England broad cloths, and narrow woollens of all sorts; cotton manufactures, imitation shawls, jewellery, arms, cutlery, watches, spectacles, earthen and glass-ware, iron, tin, copper, &c. &c. From Arabia coffee, pearls, horses, &c.

The exports are chiefly to England, silk, gall-nuts, a little wool, madder, yellow berries, occasionally a few pearls and precious stones, and specie to be converted into bills at Constantinople. To India, specie, dried fruits, tobacco, wine, drugs, dates, sulphur, torquoises, Kerman shawls, rose-water, swords, horses, greyhounds, raw silk; copper (from Turkey), saffron, &c. To Turkey, grain, raw silk, tobacco and pipe-sticks, cotton, lamb and fox skins, carpets, silk manufactures, cotton do., salt, sheep; besides foreign articles in transit from India and Bokhara. To Bagdad much the same as to Turkey; to the Uzbeks and Turkmans, Kerman shawls, and woollens; silk stuffs, gold embroidery; copper ware from Cashan. Cotton goods, arms, Hamadan leather shoes, and clothes, torquoises; sugar, raw and refined, opium, and some Indian goods; to Arabia, wheat, dates, dried fruits, rose-water, cloaks.

To Russia, raw silk and cotton, rice, grain, timber, tobacco, raw hides, lamb-skins, fish, gall-nuts, naphtha, drugs, torquoises, Kerman shawls, silk and cotton goods, brocades, besides foreign produce, as Cashmere shawls, pearls, &c.

Where no official records are preserved, where every art is put in practice to disguise the true amount of imports and exports, and where, also, the existing state of things is always changing from external or internal causes, it is impossible to arrive at any just estimate of the value of commerce. In 18-0 the export trade of Persia was estimated by Mr. Fraser at about 1,225,000*l.* a year. Since then the imports have undoubtedly increased, in spite of great distress in the country from three years of plague and famine; for, in 1835, from the best materials that can be collected, they are supposed to have nearly amounted to 34 millions sterling, and the imports of 1835 to Trebizond, of European produce, the greater part of which finds its way to Persia, exceeded a million sterling; and there is every reason to expect a gradual increase from all quarters, though doubtless liable to occasional fluctuation.

*Shipping.*—Scarcely any vessels belong to Persian owners. The trade between India and the Gulph is carried on in bottoms belonging to Indian, Arab, or Armenian merchants resident at the sea-ports; and that of the Caspian, in vessels from Astrakhan. The Russian government discouraging any vessel in that trade which is not under their own subject, the Persian or Armenian merchants who have embarked in it generally become subjects of Russia, which leads to their ultimate residence in Astrakhan. There are, however, some vessels, of from 50 to 150 tons, built at Ezuzelle.

*Money.*—The coins chiefly current in Persia are *bajogees*, or Persian *ducats*; *sahabkerans*, commonly called *koroonces*, a silver coin, nine of which go to the *bajogee*; and copper coins, called *pool-e-siah*, or black money. There are also several pieces of one or more *abbases* or *shahes*, the *abbassee* or *shahsee* being the fourth or fifth part of a *koroonce*; there are about four *pool-e-siahs* in an *abbassee*. The old *tomán* of gold, and real or *rupees* of silver, are now seldom seen, although used at times in calculation; the *tomán* being equal to 10 *koroonces*, or *ducats*. Except the Russian or Austrian *ducats*, which is in common use, there is little foreign coin now current.

*Races.*—*Population.*—The ancient Persian stock has been much intermixed in the course of ages by the settlement of other races in the country, especially by the influx of Greeks during and after the conquest of Alexander the Great; and more recently by that of Arabs and Turks. Still, however, the distinguishing characteristics of the family appear to be pretty well preserved. The complexion is fair, but not transparent, and there is little or no colour in the cheek. Hair long, straight, and almost always jet-black; beard abundant, bushy, generally black, but now and then with a reddish tinge. Features of the beard, rather effeminate. Stature little short of the European standard; body gracefully, but not very strongly formed, being, altogether, less robust than that of the European. Though early civilised, they have made no considerable progress in arts, science, or arms; and though remarkably clever, and not deficient in bravery, they have never been able to establish any thing like a free system of government, or to set any limits to the caprice and tyranny of their rulers. They have occasionally gained

some advantages over other Asiatic nations, but they have never been able to oppose any effectual resistance to Europeans. In antiquity, a small army of Greeks overthrew the Persian empire when in the zenith of its power; and, in more modern times, it has been overrun by the Arabs, and even the Afghans. At present it owes its existence to no intrinsic vigour of its own, but merely to the forbearance and jealousies of its enemies. The Persians have, in fact, contributed nothing to the improvement or civilisation of mankind; and excepting Zoroaster, have not produced a single benefactor of his species known to history.

At present the people of Persia may be divided into two distinct classes, the fixed and the nomadic. The first comprise all who live in towns and villages, and have fixed habitations; the second consists of the various tribes, indigenous and of foreign extraction, who lead a pastoral and erratic life, having no regular habitations. But the whole body of the people may more conveniently be divided into four classes: first, those who are attached to the metropolitan and provincial courts, including the functionaries of government and military; second, inhab. of towns, comprising merchants, shopkeepers, artisans, with men of the religious orders, of business or of learning; third, those employed in agriculture; and, fourth, the tribes, including the *Bedouins* (dwellers in tents), or nomads.

The officers of court are more remarkable for skill in business, versatility, politeness, and courtesy, than for probity, honesty, or good principles. Forced, in self-defence, to dissemble and control their feelings, they do so successfully, and, looking to wealth as the best means of purchasing favour in the day of adversity, as well as of enjoyment in prosperity, they stick at no means by which it may be acquired. Accordingly, they become, in general, great intriguers; and are at once deceitful, sensual, venal, treacherous, and, when they dare, arrogant and overbearing. Ministers of state are generally selected from among the men of business or meezas, who, though less arrogant than the nobles, are equally corrupt and immoral: they do not assume so much state as military chiefs, and are distinguished by a roll of paper stuck in their girdle, instead of a sword or dagger. One remarkable class of court dependants are the royal gholams, or body guards, the confidential and devoted guardians of the monarch's person; whence the name *gholam*, or slave. They are usually either Georgian captives or sons of respectable families; and resemble somewhat the *mousquetaires* of the old French government. They are employed in lucrative and confidential services, and the situation is much sought after; but their tyranny and dissoluteness know no limits, and the arrival of a gholam-e-shah in a district, creates a sensation not unlike the attack of a pestilence.

The towns-people, *sheheres*, as they are called, are a mingled race of all those which have ever conquered or had intercourse with Persia, grafted on the original stock—Turks, Tartars, Arabs, Armenians, Georgians. They are a more industrious and less depraved class than the first, but being nurtured in falsehood and deceit, they are adepts in these vices, being at the same time, however, cheerful, polite, sociable, kind masters, and good servants. The merchants are numerous and often wealthy, and, having more intercourse with foreign nations, are usually of more cultivated and enlarged minds than others of their countrymen. The shopkeepers are, of course, a grade lower.

The ecclesiastical body, which is also numerous, is, with some rare exceptions, more remarkable for hypocrisy and profligacy than for piety and morality; originating, most probably, in the want of a suitable provision to live on, and the consequent necessity of practising fraud and imposition.

The cultivators of the soil are those on whom the tyranny of their rulers falls most heavily; yet it cannot be said that they exhibit much misery. They are themselves, as well as their wives and children, for the most part sufficiently, though poorly, clad, and have abundance of wholesome, though coarse, food, as wheat or barley bread, cheese, sour milk, rice, &c. &c. Extortion and tyranny are met, as usual, by cunning and deceit; and, as the peasantry are active and intelligent, they contrive to avoid being completely fleeced.

The fourth class is an interesting and extensive one. It consists not only of the native nomads of Persia, who occupied the south-western and southern ranges of mountains long before the Mohammedan conquest, but of all those of Nomadic origin who came with the various conquerors that have overrun the country since that era, as the Arabs, Ghiznavides, Seljuks, Toorkmans, Moghuls, Toorks, Uzbeks, &c. But the greater number consists of those of Arab and Turkish origin, particularly the latter. It may be remarked, as a singular anomaly, that these nomadic tribes supply not only the principal military force of the country, but, as a consequence, probably, its only hereditary aristocracy, and, generally, its sovereign himself. Of those tribes, a

portion is always approximating more nearly to the habits of fixed life; but the greater part by far are strictly nomadic, living in tents, which they shift from place to place, according as lack of pasture for their flocks and herds, or change of season, suggests. In these their wealth consists; and though many of them cultivate a little grain, they live by the sale of the surplus of their stock, and by their produce in milk, wool, and flesh. Their character and habits are every where much the same. Being poor, they are frugal and abstemious; and, unaccustomed to more civilised manners, they are rude and blunt, fond of independence, and passionately fond of martial exercises, of the chase and war. Predatory both from inclination and education; but hospitable, comparatively honest when their faith is pledged, and brave. Their chiefs, seen among their own people and in their own country, appear to great advantage, as frank, liberal, and generous, though hasty and passionate; at court they are constrained to assume somewhat of the manners of the place, and do not shine so much as at home.

The Kurds come under the denomination of the "tribes," though less erratic in their habits. They claim a high descent; some pretending to be the descendants of the geni of the air by terrestrial women, and others the progeny of certain persons saved from the tyranny of Zohank. But their antiquity is unfixable, and, probably, they may be descendants of the Carduchi described by Xenophon.

The Toorkman tribes, inhabiting the desert on the N. of Khorasan, are likewise to be reckoned among the celloats of Persia. They are wholly addicted to robbery and pillage, their chief occupation being that of making plundering parties, which destroy whole villages, carry off the inhabs. into slavery, and their cattle and property. But to enumerate, far more to describe, the various nomades of Persia would greatly surpass our limits; and we must refer our readers, on this interesting subject, to works where it is treated of at greater length.

*National Character.*—In general, it may be said of the Persians that they "are handsome, active, and robust; of lively imagination, quick apprehension, and agreeable and prepossessing manners. As a nation they may be termed brave; though the valour they have displayed, like that of every other people in a similar state of society, has, in a great degree, depended on the character of their leaders and the nature of the objects for which they have fought." (*Malcolm's Hist. of Persia*, ii. 638.) Unhappily, however, their vices are far more prominent than their virtues. Though the despotism to which they are subject be similar to that which weighs down all the Eastern nations, they have a peculiar and distinctive character. As compared with the Turks, they are not unlike what the Irish are as compared with the English or the Scotch, being gayer, livelier, more active, more versatile, and less to be depended on. Though easily inflamed into passion, and when under its influence abusive in the highest degree, they are, speaking generally, courteous, affable, and polite. They flatter with equal skill and profusion of compliments. Their language is extravagantly hyperbolic; and a stranger, ignorant of their character, would suppose them ready to devote their fortune and life to his service. A foreigner, therefore, on his first arrival, can hardly avoid receiving the most favourable impression of their friendly disposition. A longer acquaintance, however, proves that their flattery is nothing to their insincerity. However it may be accounted for, whether it be ascribed to the despotic nature of their government and the frequency of revolutions, the influence of their religion, or whatever cause, all travellers are agreed that the Persians have reduced dissimulation and falsehood to a system, and have practised them so long and so universally, that it would be difficult for them, even if they intended it, to speak the truth. Their whole conduct is a tissue of fraud and artifice; and they rarely think of fair dealing till they find they have to do with one who sees through their impostures. "There is no deceit, degradation, or crime to which they will not stoop for gain; and their habits of falsehood are so inveterate, that untruths flow, as it were, spontaneously from their tongue, even without any apparent motive." (*Fraser's Khorasan*, p. 174.) Mr. Kinnaird's estimate of their character is, if possible, still more unfavourable. "They are," says he, "haughty to their inferiors, obsequious to their superiors, rash, vindictive, treacherous and avaricious, without faith, friendship, gratitude, or honour." (*Memoir*, p. 22.) Presents, a necessary instrument of business over all the East, are expected in Persia with peculiar avidity. Without presents no inferior can approach a superior, or any individual ask a favour from another; and the donation, being supposed to confer honour, is made in the most public place and manner possible. They are said to be, with few exceptions, incorrigible spendthrifts: their dress, horses, harems, &c., are generally arranged on a scale exceeding their means, and intended for ostentation; and the difficulties in which they are thus involved

make them resort to any expedient, however mean and discreditable, for raising money.

These statements must, however, be understood as applying more particularly to the sedentary pop., and especially to the inhabs. of cities and towns. The *Pellats* have the vigour and vices of their condition; are shrewd, hospitable, and brave; but rude, violent, and rapacious. They are not in need of falsehood and deceit; and, therefore, not much in the habit of practising them; but, if they have fewer vices than the citizens of Persia, it is evidently the absence of temptation, and the ignorance of luxury and refinement, which give them all the superiority they boast; for it is remarked that they never settle in towns, or enter them as visitors, without exceeding the inhabs. in every species of profligacy." (*Malcolm*.)

"The natives of Persia do not recline on cushions, in the luxurious manner of the Turks; but sit in an erect posture on thick felt, called a *nunna*. They have seldom, if ever, fires in their apartments, even in the coldest season, and, in order to be warm, fold themselves in a fur pelisse on a *barazane*, which is a handsome robe of crimson cloth, lined with shawls or velvet. Like other oriental nations, they rise with the sun; and having dressed and said their prayers, take a cup of coffee, or, perhaps, some fruit. They then enter upon the business of the day, if they have any; and, if not, smoke and converse until about 11 o'clock, at which time they usually have their breakfast, and then retire into the *harem*. Here they remain until about 3 o'clock, when they return to the hail, see company, and finish their business; for with these people the most important affairs are discussed and transacted in public. Between 9 and 10, the dinner, or principal meal, is served up. This chiefly consists of *pilaws*, and of mutton and fowl, dressed in various ways; of which, however, they eat but moderately. While they never taste before company; although, in private, they are the most notorious drunkards, and invariably drink before they eat. They are passionately fond of tobacco, which they smoke almost incessantly from the moment they rise until it is time for them to retire to rest: it constitutes, indeed, the principal source of amusement to a man of fortune; and were it not for his *calcan*, I am at a loss to imagine how he would spend his time. In this respect, indeed, there seems to be something peculiarly inconsistent in the character of the Persian. When without an inducement to exertion, he resigns himself entirely to luxury and ease; and the same person who, with his *calcan* in his mouth, would appear to pass the day in a state of stupor, when roused into action, and mounted on his horse, will ride for days and nights without intermission. Hunting and hawking, as well as various gymnastic exercises, are favourite amusements of the Persians. By these means their bodies become hardened and active; and as they are taught to ride from their youth, they manage their horses with great boldness and address. They frequently use the 'warm bath,' but seldom change their linen." (*Kiancir's Persian Empire*, 245.)

The Persian females, at least those of the sedentary part of the pop., are for the most part closely concealed. The wives of the great pass their time in visiting their friends, and amusing themselves with diversions of one kind and another, and with intrigues. The bath is, however, the principal scene of their enjoyment and relaxation, where, secure from interruption, they give full scope to ornament and scandal. They differ equally from us in their notions of beauty and of taste. Large, soft, and languishing black eyes constitute, in their opinion, the perfection of beauty. But they disfigure their natural charms by painting their faces, and sometimes also by tattooing their skins of various colours, while constant smoking spoils their teeth and mouths. Many of the women of Shiraz and other cities are as fair as those of Europe; but they want, owing to their confinement, the bloom so essential, in our estimation, to female loveliness. The Persian ladies would seem to be totally devoid of delicacy and refinement. "Their language," says Mr. Scott Waring, "is often gross and disgusting, nor do they feel more hesitation in expressing themselves before men than they would before their female associates. Their terms of abuse and reproach are indelicate to the utmost degree. I will not, disgust the reader by noticing any of them; but I may safely avow, that it is not possible for language to express, or the imagination to conceive, more indecent or grosser images. When they leave the house, they put on a cloak which descends from their head to their feet, and their faces are carefully veiled, so that only being left for the eyes. It is curious to see a number of tall and elegantly formed figures walking in the streets, and presenting nothing to your view but a pair of sparkling black eyes, which seem to enjoy the curiosity they excite. The veil appears to be essential to their virtue; for so long as they conceal their face, they care not how much they expose the rest of their person." Like the Mohammedans, the Persians are restricted to four legitimate wives, but they may have as many concubines as they please; the latter being acquired by purchase or

hire. Few, however, unless they belong to the richer classes, indulge in the luxury of a plurality of wives, or keep concubines. Marriages are usually celebrated with great splendour, and often entail a ruinous expense on the parties.

*Amount of Population.*—There are no existing data on which to found any thing like an accurate estimate of the amount of the population. Pinkerton supposed it might amount to about 10 millions, which Sir John Malcolm thinks may be a pretty close approximation to the truth. Another writer (Fraser) has set down the fixed population at about 7 millions, and the migratory population at from two to three millions, thus approaching to Pinkerton's estimate. But besides the loss of territory which Persia has since suffered from her wars with Russia, a great depopulation has taken place within the last ten years, from plague, famine, and various prevailing maladies, and there is reason, besides, to believe that this estimate of the migratory pop. was much beyond the mark, so that it is probable the pop. of the country subject to the shah did not exceed 8, and is certainly under 10 millions. We subjoin from the *Wormar Almanac* an estimate of the area and pop. of the different provinces; but it is needless to say that it is but little to be depended on.

Provinces.	Area in sq. m.	Pop.
Irak Ajemi - - - -	93,576	2,460,000
Chaharsaban - - - -	10,572	1,000,000
Mazanderan - - - -	7,547	850,000
Ghilan - - - - -	5,215	280,000
Azerbeijan - - - -	30,537	2,000,000
Koordistan - - - -	10,072	1,500,000
Kuzistan - - - - -	29,256	900,000
Fars - - - - -	126,160	1,700,000
Kerman - - - - -	65,306	600,000
Kohistan - - - - -	81,152	1,700,000
Khorassan - - - -	- - - -	- - - -
Total - - - - -	482,130	11,250,000

The government of Persia, like that of most Eastern countries, is, in principle at least, an absolute despotism. The shah is regarded as the vicegerent of the prophet, and, as such, is entitled to implicit obedience. His word is law; he is absolute master of the lives and properties of his subjects; and the first man in the empire may, at his command, be instantly stripped of all his dignities, bastinadoed, or strangled! the only control on his actions being the risk of provoking rebellion or assassination. The two principal ministers are the grand vizier, or *Vizier Asem*, and the lord high-treasurer, or *Ameen a Douleh*. The former superintends every thing connected with foreign relations, and, in the absence of the sovereign, commands the armies; while the latter, who is subordinate to the other, superintends the internal arrangements, the collection of the revenue, &c. The whole executive government is in the hands of these two functionaries, whose authority, so long as they continue in power, is as absolute as that of their master; but their greatness, being built on the favour of a tyrant, is of the most unstable kind, and they are very often precipitated from their slippery elevation.

The duties of a monarch, who either regards his own safety or the well-being of his people, are numerous and weighty. One of the most important is the distribution of justice. The Mohammedan law, both civil and criminal, is founded on the precepts of the Koran and the oral commentaries and sayings of the prophet's immediate successors. This is called the *Sherrah*, or written law, and is the rule in all regular courts, where persons of the ecclesiastical order, such as Moosthedes, preside. But there is also the *Urf*, or customary law, administered by secular magistrates, having the king as their head. It is more arbitrary, and the judgments of the king and his lieutenants are more summary, than those of the other court, and enforced with greater vigour. But there is an appeal to the superior functionaries, and the power of life and death rests with his majesty, who seldom delegates it, except to princes of the blood royal, or to governors of remote provinces. Theft is always punished with extreme severity.

The system of civil government is simple. Each province, or important district of a province, including some large city, has a *Bagherbeg*, or governor, usually a prince of the blood or nobleman of rank, who appoints his lieutenants, or *Ilakims*, over the districts and subdivisions; and each village has its *Kethkoda*, or magistrate, generally one of the elders or more respectable inhabitants, who is the organ by which communication is kept up with government. There are also governors of cities and towns, *Dargogas*, or lieutenants of police, and *Ketlorenters*, or chief magistrates of cities, in which each *muhdel*, or parish, has its *kethkoda*, or head, who are in general practically chosen by the people, and who look to the *Ketlorenters* as their head.

The Bagherbegs, like the Turkish pachas, are, at the expiration of a certain period, cited to court, where, admitting their conduct to have been ever so irreproach-

able, persons are not wanting to accuse them of injustice and mal-administration; and unless the demands and avarice of the court be completely gratified, their eyes are put out, and their property confiscated! Conscious, therefore, of the necessity of amassing a sufficient sum of money to answer the rapacity of the king and his ministers, and aware, at the same time, that, provided the money be forthcoming, no inquiry will be made respecting the manner in which it has been acquired, the same mode is applied by the Beglerbegs to the Hakims and other subordinate authorities; who, in turn, oppress the heads of villages and the cultivators, so that the land becomes the prey of a subordination of vultures, and venality and extortion pervade every class from the throne to the cottage. (*Kimair's Memoir*, p. 31.)

But, after all, the principal evil under which the country labours consists in the perpetual insurrections and the sudden changes of sovereigns and dynasties. The insecurity, devastation, and proscriptions, to which this state of things has led, have necessarily gone far to extinguish all industry, and many provinces that were formerly well peopled and well cultivated are now all but deserts. It has, also, prevented any idea of stability being associated with the existing state of things; and has made change, and the insecurity and falsehood inseparable from it, almost a necessary state of existence. Neither under existing circumstances does it seem reasonable to expect that any reform can be effected from within; and its subjugation by a European power would certainly be the most desirable event that could happen for the country.

The revenue of the Shah has been variously estimated, but does not probably amount to more than 1,500,000, or 2,000,000. As already stated, it is principally derived from taxes on land and farms, capitation taxes, duties on imports and exports, tributes paid by the nomadic tribes, &c.

**Religion.**—The Persians are Mohammedans of the sect called Schittes, or Sheahs, or of those who look upon Ali, the son-in-law of the prophet, as his legitimate successor. They repudiate the first three caliphs, Abubekr, Omar, and Othman, and their successors, as usurpers of the right of their patron Ali, holding that of his sons Hassan and Hussein to the caliphate as indefeasible, and acknowledging their 12 immediate descendants as the 12 high priests, or Imams, of their religion; the last of whom, Imaum Mehdee, they consider as still alive, though *ghaib*, concealed for a time, so that no other can exercise the office. This doctrine is quite opposed to that of the Turks, who belong to the sect of Sunnites, and between whom and the Persians the most rancorous and irreconcilable animosity exists as to religious doctrines.

The priesthood consists of many orders, of which the Mooshtehed is now the chief. There are seldom above four or five of this dignity, and these are elected as much by the public voice as by that of their brother Mooshteheds, by whom they must be declared, for the Shah has no voice in their appointment. The Sheikh-ul-Islam, or ruler of the faith, is next in rank, but he receives his appointment and a salary from the Shah, and there is one in all large towns. In every mosque of consequence, and at every considerable shrine or place of pilgrimage, there are at least three regular ecclesiastical officers: the Mooturelle, who manages its temporal affairs; the Muzzin, or crozier to prayers; and the Mollah, who conducts the ceremonial. If the establishment be rich, there are several Mollahs, from among whom are selected a *peesh namdz*, who recites the prayers and goes through the motions and genuflections to guide the congregation. They also preach occasionally sermons from texts of the Koran. Of all these, except the Sheikhul-Islam, the income and means of life depends chiefly on the celebrity of the individual for wisdom, virtue, and religious sanctity; so that there are no means of estimating the income of individuals: but most mosques and shrines have large property in land and villages, the gift of the crown or of pious individuals, and out of this the priesthood attached respectively to each is maintained. Besides those above enumerated, there are in every city, and in every seminary of learning, a crowd of Mollahs who live by their wit, waiting for the chance of employment, but having little of the priest but the name. They practise astrology, write letters and contracts for those who cannot do it for themselves, and descend to all manner of meanness and vice for a livelihood.

The Persians, though there are many enthusiasts and bigots amongst them, are not generally intolerant: they listen without anger to the professions or arguments of those who hold a different belief, and do not allow this circumstance to cause any interruption of social intercourse. The only exception is in the case of the Guebres, or fire worshippers, who are probably rendered odious to the modern rulers of Persia by connecting with their faith an attachment to its ancient laws and political system. This unfortunate race is now almost entirely extirpated, only a small remnant being found in Yazd, and other cities of Kerman. Indifference, scepticism, and free-thinking are, however, making a rapid progress.

This last, which may be identified with what is called Soofeism, extends every day. There is, if we may so speak, a religious and a sceptical Soofeism; the former is a sort of a mystical or fanatical aspiration after the mysteries of divine love, but without laying any or much stress on the rules and regulations of the Koran: the latter is of a bolder character, and approaches nearer to the European notions of free-thinking; its votaries affect no particular respect for religion, but are a species of metaphysical Deists, regarding the Koran merely as an elegant work, embodying sound moral doctrines, but not otherwise entitled to attention. Hence all who profess or are suspected of Soofeism are hated or persecuted by the Mollahs. But Mohammedanism in Persia, as in other countries in which it is professed, appears decidedly on the decline, and Soofeism is likely to be one great instrument of its overthrow.

The ancient religion of the Persians, which is not yet entirely extirpated, was materially reformed and renovated by the famous legislator Zoroaster, or Zerdusht. The life, and even the epoch of the birth, of this great reformer, are involved in the utmost obscurity; but the preferable opinion seems to be that he flourished about the 6th century B. C. He inculcated the doctrine of an eternal, self-existing, supreme Being, from whom every thing else has its origin; and from whom are sprung two antagonist powers, Ormuzd, the source of all good, and Ahriman, the source of all evil; of which, however, the former, though this point be extremely obscure, is destined, in the end, to obtain the ascendancy. The doctrines of original sin, the immortality of the soul, the happiness of the good and the misery of the bad in another life, are all laid down by Zoroaster. But the distinctive feature in the religion of the Persian sage is the extreme veneration paid to fire, light, and heat, which he regarded as symbolical of the Divinity. *C'est par lui que tout respire: la terre lui doit sa fécondité; l'animal, son existence; l'arbre, sa végétation. Non seulement il anime les êtres, il forme encore leurs rapports, et son action, par conséquent, n'est pas moins ancienne que le monde.* (Pastoret, Zoroaster, Confucius, &c., p. 30.) Herodotus says, that the ancient Persians neither erected temples nor statues to their gods, but sacrificed to them on the tops of mountains, or other high places. (*Herod.*, lib. 1, cap. 131.) They had, also, the singular, and, as it appears to us, barbarous custom of exposing the bodies of the dead to be devoured by birds, (*Herod.*, lib. 1, cap. 140.); and Niebuhr distinctly states that this custom was observed in his time by the Parsees at Bombay. (*Voyage en Arabie*, li. 39.) The magi, or priests, established by the Persians, had great influence.\*

**Education.**—In former reigns, particularly in the time of the Saffaveans, when literature was more encouraged than now, considerable attention was paid to education. Medressas or colleges were built and endowed, in which mollahs and teachers of suitable abilities were placed to instruct the students. These buildings consisted of a quadrangle, the interior sides of which were pierced with small cell-like apartments, like those of a caravanserai, in each of which a student lived. But these institutions were rather for students of more advanced age; for younger pupils of the lower classes there are schools kept by private persons, where reading and writing are taught, and some knowledge of the practice of religion is imparted, with perhaps, to some who are destined to become "men of the pen," a little superficial instruction in logic and grammar. The children of the higher orders are taught at home by *maulvis* and *lallahs*, or tutors, who, after the elements of Arabic and Persian are acquired, instruct their pupils in the duties of their religion, and teach them to read the Koran, with such works as are calculated to impress them with a strong regard for Sunnite doctrines. Next come the works of Saadi and Hafiz, with a superficial course of grammar, logic, and philosophy. All this time athletic exercises, riding, hunting, and the use of arms, are not neglected; and from the earliest age every boy is carefully schooled in all that regards the ceremonial of social intercourse. He is taught how to sit down and rise up, and to stand in the presence of his elders or superiors; and so much stress is laid on these matters, that it is most uncommon to observe the least deviation from due etiquette even in children of 5 or 6 years of age. But the whole system is artificial, more showy than solid, and tends in no small degree to nurse up the rising generations in that disposition to deception and hypocrisy which marks so strongly the national character.

**Military Force and Resources.**—Frugal in his diet, robust in his constitution, capable of enduring astonishing fatigue, and inured, from his infancy, to the extremes of heat and cold, to hunger and thirst, nature seems to

\* The *Zend-Avesta*, the most important work on the religion of the Parsees, was translated and published in 3 vols. 4to. by Anquetin du Perron in 1771; but it is believed by some of the ablest critics, that the most ancient portion of this work is long posterior to the age of Zoroaster.

have formed the Persian for a soldier. But as, according to the ancient customs of this people, it is deemed degrading to a person, who has money sufficient to purchase a horse, to travel on foot, the infantry of Persia has been, from the earliest ages, contemptible; whilst her numerous bodies of irregular cavalry have more than once carried terror and defeat amidst the disciplined legions of Rome." (*Kinney's Memoir*.) Her forces, however, both cavalry and foot, have varied in amount and efficiency with the varying abilities and martial skill and daring of the different monarchs. Until lately that attempts have been made to form regular corps, disciplined after the European fashion, the army has mostly consisted of levies of irregular cavalry, furnished by the chiefs of the different wandering tribes, according to their presumed numbers and strength, and also by the different cities and towns, on a plan corresponding in many respects with the feudal levies of the middle ages in European countries. The troops thus collected, though brave, are totally deficient in organisation and discipline, and could make no serious impression on a body of European troops. Inasmuch, too, as the arms and horses on which the horsemen are mounted do not belong to the state, but to the individuals, and frequently constitute their whole property, they are very apt to prefer their safety to other considerations; a circumstance which, on more than one occasion, has proved fatal to the reputation of the Persian army. The whole force that might thus be collected on an emergency might, perhaps, amount to 100,000 or 150,000 men. In the late reign, the first attempt was made to introduce European discipline and tactics among the Persian soldiers. The Prince Royal, Abbas Mirza, obtained leave from his father and officers from the E. I. Company to raise and discipline a body of troops in Azerbaijan, with a view of opposing the Russians, and strengthening his internal government; and he did form a corps amounting, with cavalry and artillery, to about 12,000 men. Of these the horse artillery were particularly good and efficient; but after the peace of Goolistan with Russia, the men composing this corps were unwisely permitted to return to their homes, mustering only occasionally; the officers remaining useless appendages of state at the court of the prince. On the commencement of the war with Turkey in 1822, as British officers could not serve against a power on friendly terms with Great Britain, they were dismissed; but the army of 35,000 men, regular and irregular, with which the prince marched against the Turks, was victorious, until dispersed by the cholera; and from that time until 1833-34 there were only one or two British officers retained to drill and to command the serbaz, or regular troops, which were still maintained in Azerbaijan. When the Prince Royal, however, proposed to subdue the rebellious chiefs of Khorasan, and to reduce some of the other more remote provinces to order, he felt the want of more efficient aid to reorganise his military force, and applied to the British government of India for a supply of commissioned and non-commissioned officers, who only reached Persia after his death, in 1833. His son, Mahomed Mirza, the present Shah, has pursued his father's plans, but with less ability and consistency, for though desirous to increase and improve his army, he has never employed these officers in the way to render their services most useful.

In the late disastrous campaigns in Khorasan, and particularly against Herat, the army suffered much from sickness, casualties, and desertion; so that no calculation can be made of its actual state. In 1837, however, when the Shah made every possible effort to bring a large force against Herat, the besieging army did not certainly exceed 35,000 men of every description. The falling off in the amount of the army from the Russian war of 1827-28, is very striking; for the Prince Royal had then a well-appointed army of 40,000 men, with all its complement of baggage, cattle, and attendants on the frontiers; while the Shah was at Chooz with another army of 50,000. It may be doubted, however, whether the attempts to introduce European tactics and discipline into such a country, and under such a government as that of Persia, can ever succeed; and whether it would not have been better policy to trust now, as of old, mainly to levies of cavalry, and endeavouring to improve and amend the defects in their constitution and discipline. What may be called the household troops of Persia, consist of a kind of militia of about 10,000, quartered in the capital and its vicinity, and liable to be called out at a moment's warning. The *gholaums*, royal slaves, or body guard, have been already noticed.

*Arts, Language, Sciences, and Literature.*—Of Persian proficiency in these, previously to the Mohammedan conquest, little or nothing is known, all that may have existed having been destroyed by the Moslems. But we may infer, from the relics of sculpture of the Sassanian era that remain, and from accounts of contemporary authors of other countries, that some of the arts, at least, were then successfully cultivated. In the days of the Saffavians, painting appears to have received some attention, and archi-

tecture still more; but though attempts at depicting the human form, as well as animals and landscapes, are numerous among the Persians of this day, they are but rude and unsuccessful, the total absence of all drawing and perspective rendering their performances ludicrous, if not disgusting. In fact, being quite without models for either painting or sculpture to copy from, excellence is scarcely to be looked for, especially in a country where the tyrannical spirit of the government and nobility would render such attainments dangerous rather than profitable to the owner. Their most successful performances are the ikkandans and small boxes, made chiefly at Shiraz and Ispahan, which are ornamented with figures of boys and girls, birds and flowers, finished with surprising minuteness and accuracy. The stone and seal cutters of the same cities are also famous for their workmanship.

When the Arabs overran Persia, about the middle of the 7th century, three languages were spoken in the country, the Parsee, Pehlvi, and Deri, exclusive of the Zend, or language dedicated to religion. The first of these languages has superseded the rest, which are now only known by name, and become the universal language of the country. It is of simple structure; and, like the English or French, has few or no inflections, prepositions governing its cases, and auxiliary verbs its tenses and modes. Many of its roots can be readily traced to the Sanscrit; and in the course of time, it has received a large accession of Arabic words. All the existing literature of the Persians dates from the Arabic conquest, and mostly, indeed, belongs to the 15th and 16th centuries.

In science the Persians are scarcely more advanced than in art. Astronomy, judicial astrology, metaphysics, logic, mathematics, and phylsle, are among those professedly cultivated. But their efforts in the first are contemptible; their theories, founded on the Ptolemaic system mixed up with fantastic notions of their own, are utterly useless, unless to aid their dreams of astrology. Their firm belief in this science is universal, and no Persian will undertake the most trivial affair without consulting some professor of its mysteries for a lucky hour. Their metaphysics and logic are scarcely less superfluous. The first consists of little more than a collection of disputations, sophisms turning on wild and unprofitable paradoxes; the second is an ingenious method of playing upon words, the object being not so much to arrive at truth, as to display quickness of mind and readiness of reply, in the discussion of plausible hypotheses. Geography is no better understood. Their knowledge of countries, and their relative positions, is extremely confused; nor can they describe, with any exactness, even those places or regions with which they are most familiar.

Mathematics, though not much more beneficially applied, are taught upon better principles, for the Persians are acquainted with the works of Euclid. Chemistry is unknown; but alchemy is a favourite study, and the search after the philosopher's stone continues to be eagerly prosecuted. In medicine, though they profess themselves pupils of Galen and Hippocrates (*Iaknoos and Boocrat*), they practise only the most wretched empiricism, united with the exhibition of a few similes, the qualities of which experience has taught them. Diseases are classed into hot and cold, moist and dry, upon no apparent principle, and each disease is combated by a remedy supposed, as vaguely, to be of an opposite quality. They are quite ignorant of anatomy, and even of the circulation of the blood, so that their knowledge of surgery is no greater than that of medicine. Yet, though they admire the skill of Europeans, and eagerly possess themselves of their remedies, they adhere obstinately to their own practice; and all the persuasion of the British mission, and its medical men, were for ten years exerted in vain to introduce vaccination, although the ravages of the smallpox were so frequently dreadful. The profits of science are confined to those who are regarded as proficient in divinity, astrology, and physic. The two former, when combined, thrive best.

The Persians make high, and, in a few respects, not ill-founded, pretensions to literature. Their treatises on the sciences now mentioned are in a great measure borrowed from the Arabians; and little improvement has been made of late in those branches. Their historical works are of a higher cast, and include some of considerable merit; but these belong chiefly to the earlier and brighter times of the empire. Among the more modern may be noticed a History of Nadir Shah, a flowery but authentic record of the life of that extraordinary monarch. But it is in poetry the Persians claim peculiar excellence; and they, no doubt, can produce the names of more eminent authors in this department than any nation of the East. From the highest to the lowest, they possess an exquisite relish for poetical compositions: from the men of letters to the lowest groom they recite passages from their heroic poets, or chant odes of Hafez; and if you find fault with a tent poet, he probably replies with a stanza from Rudiki, or a moral

apothegm from Saadi. It is singular, however, that the moral lessons inculcated by their poets and learned, and, as it should seem, admired by the people, should be and wholly inoperative in practice; the Persians being certainly as corrupt, sensual, and immoral, as any people of Asia.

Their poetry may be divided into epic and narrative, moral and lyric. Of the first class Ferdousi is the father, though Dukeekie did compose about 1000 verses of the Shahnameh, in which the former is also said to have been assisted by Aslul. Next to Ferdousi ranks Nizami, who composed a poetic life of Alexander the Great; but this, like the Yusseff and Zuleika of Jami, another on the same subject by Ferdousi; the Lella and Mignoon of Hafize; Khoosroo, Shirreew, and others, rected with rapture all over Persia, are, in fact, poetic romances, called Musnavees.

Of the didactic poets the chief, without question, is Saadi, whose Ghooshtan and Bostan abound in beautiful maxims and fine moral precepts. Sheikh Saadi, was born at Sheraz (A. D. 1194), and in his youth was a great traveller. While in Syria he was taken by the Crusaders, and actually compelled to labour as a slave at the fortifications of Tripoli. From this condition he was relieved by a merchant of Aleppo, who not only paid ten crowns for his ransom, but gave him his daughter with 100 for her dowry. The lady, however, proved a shrew, and Saadi, in several parts of his works, gives vent to the chagrin caused by this marriage. Among other taunts she is said to have reproached him with having been bought from the Christians by her father for ten crowns: "Yes," replied the unhappy moralist with a sigh, "and he sold me to you for an hundred." He died in his native city at the extreme age of 120 lunar, or 116 solar years; and his tomb is still to be seen near the place of his birth,—a small mosque-like edifice, within an enclosure, in which are some fine old fir trees and some cypresses.

In the mystic and lyrical strain there is none who can come into competition with Hafiz, to whom also Shiraz had the honour of giving birth. He flourished in the time of Tamerlane or Timour Bee, who, when he came after the defeat of Shah Mansora to the place where the poet dwelt, desired to see and converse with him. With feigned or real displeasure, the conqueror demanded to know how he dared to dispose of his two noble cities of Samarcand and Bokhara, which in a beautiful stanza\*, he declared he would give for a mole on the cheek of his mistress: "Can the gifts of Hafiz ever impoverish Timour?" was the reply, which changed the monarch's wrath into admiration, and elicited reward instead of punishment. The poetry of Hafiz is considered by Persian scholars as of a singularly original character—simple and unaffected, yet possessing a wild and peculiar sublimity. Like most lyrical effusions, his odes will not brook translation, so that his beauties can never be comprehended by the mere English reader. In his own country, however, he is fully appreciated; and perhaps no poet of any country ever attained greater popularity among those for whom he wrote than the khanjah of Shiraz. His mortal remains rest near the city whose praises he has celebrated, not far from the tomb of Saadi, and near his favourite stream of Roknabad. The tomb is in a small enclosure, whither the people of the place resort to sit under the shade of the old cypresses, recite the odes of their favourite bard, and draw omens from the pages of his works.

Next to Hafiz, in celebrity, has been placed Abdul Rahman Janie, a famous doctor of laws, and no less famous sooffee, whose *Diran*, or collection of odes, is in high estimation with the enthusiasts of his sect. His wit is said to have been equal to his poetic genius.

To these already mentioned, might be added many names scarcely less celebrated, whose works it would require too much space to particularise or describe. But it is not to be imagined that their perusal would give any pleasure to European readers. They contain, it is true, many beautiful thoughts, and their diction is frequently euphonious and expressive; but they have the vice of most Eastern works, that is, of being disfigured by the wildest extravagance and bombast, and by an endless repetition of metaphors and similes.

*History.*—Modern Persia comprises the countries known in antiquity by the names of *Media*, *Susiana*, *Caramania*, *Hyrcania*, and Persia Proper. Its ancient history is intimately connected with that of Greece and Rome. In more modern times it has been the theatre of endless civil wars, revolutions, and changes devoid of all interest to foreigners. Towards the end of the 16th century, however, order was restored, and Persia rose to distinction under the government of Shah Abbas, surnamed the Great, who defeated the Turks in several battles, taking from them the city of Taurus and the province of Georgia, and Ormuz from the Portuguese. Abbas was succeeded by a series of imbecile tyrants; and, in 1727, the country was overrun by the Afghans.

\* Beautiful, though freely, translated by Sir William Jones.

At length the famous Thamas Kouli Khan, a brigand chief, was raised to the throne by the title of Nadir Shah, and distinguished himself alike by his victories and his ferocity. Nadir being assassinated, in 1743, his death was followed by a long-continued civil war. After a vast deal of blood had been spilt, the emuch Memet Khan, succeeded, by his superior ability and good fortune, in establishing his authority over most of the provinces now comprised in Persia; and transmitted his authority to his nephew Futteh Ali Shah.

This prince waged an unsuccessful war with Russia, who stript him of a large territory in Armenia, and obliged him to pay 2,500,000*l.* as an indemnity for the expenses she had been put to in the contest! Futteh Ali kept an enormous harem; and it was his practice to disperse his sons over the empire, as governors of provinces, towns, &c., of which, speaking generally, they were the scourges. On the death of Futteh, in 1835, his grandson, the present sovereign, son of the prince royal, Abbas Mirza, succeeded to the throne in term of his grandfather's will. A few of his uncles, who were reckoned most dangerous, were deprived of sight; but on the whole the succession was unusually tranquil and bloodless. This sovereign is understood to be favourable to the interests of Russia, or rather, perhaps, he thinks it most prudent to keep on good terms with those who have the greatest means of injuring him. His unsuccessful expedition against Herat is said to have been undertaken at the instigation of Russia.

**PERSIAN GULPH**, an extensive arm of the Indian Ocean, separating Persia from Arabia, between the 24th and 30th degs. N. lat., and the 47th and 57th E. long., uniting with the Indian Ocean by the strait, about 32m. across, between Cape Muscledom (lat. 26° 19' N., long. 56° 30' E.), and the opposite coast. This gulph has somewhat of an oval shape, extending about 550 m. N.W. and S.E. with an average breadth of about 150 m.; but towards its S.E. end it is upwards of 230 m. in width, though it soon afterwards, on taking its northern bend, previously to its junction with the ocean, becomes much narrower. It receives at its N.W. end the united waters of the Euphrates and Tigris, about 70 m. below Bussorah; but it has few or no other affluents of any importance. These streams, however, assisted in some measure also by the shape of the gulph itself, tend to diminish the height of the tides, which is considerably less than in the Red Sea. (*Travels Phys. Geog.*, p. 116.) The climate round the shores of this gulph is extremely hot; and notwithstanding the prevalence of N.W. winds, the thermometer in some parts stands at a higher elevation than in almost any other locality with which we are acquainted. Owing to the number of small islands, and the number and extent of its reefs, the navigation of this sea, especially along the coast of Arabia, is hazardous, difficult and tedious: it is less encumbered along the Persian coast. The trade carried on in the ports, on or connected with the gulph, is very considerable. Bussorah is the principal inlet through which Indian and other eastern products find their way into the Turkish empire; and Bushire, in the Persian territory, is the chief entrepôt of the trade between that country and Bombay, whence it receives the products of Europe, China, and the E. Archipelago. The chief interest, however, that attaches to the Persian Gulph, is its pearl fishery, on which indeed the inhabitants of the S. coast mainly depend, as the land produces only a few dates, and is insufficient to support the pop. (For details as to these fisheries, see the article **BAHREIN ISLANDS**; and see also **BUSSORAH** and **BUSHIRE**, in this Dict.) This sea was surveyed between 1821 and 1828; but, although much information has come to us through charts and memoirs in the *Geog. Journal* (vols. v. and viii.), we are far from possessing any satisfactory information respecting its islands, which are, in all probability, more numerous and important than has hitherto been supposed. The ancient importance of the Persian Gulph is principally owing to its connection with the conquests of Alexander, and its commercial intercourse with India. Were the scheme for the steam navigation of the Euphrates to succeed, this sea might again become, as it was during a certain period of antiquity, a thoroughfare for the commerce between the E. and W. worlds; but the advantages in this respect enjoyed by the route by the Red Sea and through Egypt, are so very superior, that we have no doubt it will continue to engross by far the larger portion of the trade not carried on by the Cape of Good Hope. The islands and shores of the Red Sea have been at all times a favourite resort of pirates. At present, however, they are, in consequence of the exertions of the British government, nearly extirpated.

**PERTH**, one of the largest and most important cos. of Scotland, nearly in the centre of that part of the U. Kingdom, but communicating by the Frith of Tay with the German Ocean, having N. the cos. of Inverness and Aberdeen, E. Forfar, S. Fife (from which it is mostly separated by the Frith of Tay), Kinross, Clackmann, the Frith of Forth, and Stirling, and W. Dumbarton and Argyle. Exclusive of a small detached portion on

the Frith of Forth, it is of a compact circular form. Area 1,688,320 acres, of which 32,000 are water. This great co. comprises within itself almost all that is peculiar to or characteristic of Scotland; having every variety of surface and soil, from rugged, sterile mountains to low, level, fertile vales. Its lakes and rivers are also on a grand and varied scale; and its climate is as different as its surface, being severe in the more elevated, and mild and early in the lower districts. The contrast in the inhabs. is equally great; the Celt being found on the mountains and the Saxon on the plains, and each differing widely from the other in language, dress, and manners. Perth is naturally divided into highlands and lowlands; all the country, including the Ochil and Sidlaw hills, from its S. frontier to the foot of the Grampians, being included in the lowlands, and the remainder in the highlands. The part of the Grampian chain in this co. comprises some of the highest mountains in Scotland, among which may be specified, Ben Lawers, 3,945; Ben Marc, 3,944; Ben Glac, 3,690; Schiehallion, 3,550; Ben Achougie, 3,028; and Ben Ledi, 2,863 ft. above the level of the sea. Besides the mountains and hilly districts, there are very extensive, though progressively diminishing, tracts of moor, moss, and bog. There is, also, a large extent of natural wood and plantations. The latter were much extended by the operations of the late Duke of Atholl, who planted above 15,000 acres! But notwithstanding these, the cultivated land is estimated at from 530,000 to 560,000 acres, or at about a third part of the entire surface. The most valuable tract of low land is denominated the Carse of Gowrie, being the district bounded by the Tay on the S. and W., the Sidlaw hills on the N., and Forfarshire on the E. Its soil is mostly a deep rich clay loam; and, in point of fertility, it is not, perhaps, surpassed by any land in the kingdom. The lower part of Strathern, from Forteviot to the confluence of the Earn and Tay, consists of a similar soil, and is hardly less fertile. Exclusive of these, and the low lands along the Tay, above Perth, there are in the valleys of the Telt, Forth, and other rivers, extensive tracts of carse land, and of sandy, gravelly loam. The latter, generally, is cultivated, producing much of the best wheat in the kingdom. There are some very large estates; but there is, also, a fair proportion of the smaller class of proprietors. Arable farms vary in size, from 50 to 500 acres. The same plan that formerly prevailed in Argyle (which see) of holding lands in common, prevailed throughout the highlands of Perthshire; but examples of it are, at present, rarer in the latter than in the former. Farms in the lower districts are universally let on lease, generally for nineteen years; large stock farms are also let on lease; but some of the small highland occupiers hold from year to year. Buildings and other accommodations of the farmers, in the lower districts, are for the most part substantial and excellent; but in some of the highland districts they are still, in many instances, bad and deficient. Wheat and beans, of excellent quality, are the prime articles of cultivation in the Carse of Gowrie, Strathern, parts of Strathmore, the valley of the Forth and Telt, &c. In the midland districts, barley, and, in the higher, oats, are the principal crops. Potatoes everywhere cultivated, largely consumed, and recently exported in large quantities to the London market. Turnip culture extensively prosecuted. Considerable quantities of fruit, as apples, pears, &c., are produced in the vales, particularly in Gowrie. Breeds of cattle various, but none peculiar to the country; the stock differs with the varying quality of the land on which it is pastured. Number of sheep vastly increased within the last 40 years, and the Cheviot breed now generally diffused. "It begins to be generally understood that the land cannot stand a constant system of cropping without intervals of rest. The sheep husbandry is, therefore, daily gaining ground; and the breed of cattle has been improved both in size and earliness of maturity." (*New Statistical Acc. of Scotland, Perthshire*, p. 196.) Roads signally improved; as much so, certainly, as in any other Scotch co. Coal is found in the S. part of the co. contiguous to the Frith of Forth; and limestone and freestone are pretty generally diffused. Average rent of land, in 1810, 5s. 6d. an acre. The linen and cotton manufacture has been introduced, particularly into the city of Perth; but neither has had much success; so that, on the whole, Perthshire may be regarded as an essentially agricultural district; and we are glad to say that the progress of agriculture during the present century has been most satisfactory. The following statements by the author of the account of the par. of Wester Foulis in the *New Statistical Account of Scotland*, are generally applicable to the whole co. "Since the date of the last statistical account great improvements have been made in rural economy. Waste ground has been planted and brought into cultivation. The roads are in a superior condition, and new ones have been constructed. Farm steadings were then covered with thatch, and indifferent in building and accommodation; but they are now all slated, well built,

and adapted for every necessary purpose. Wheat, potatoes, turnips, and artificial grasses, are cultivated in a much greater breadth. More manure is laid on the soil, and it is ameliorated by fences, cleaning, and draining. Horses and harness, the different breeds of cattle and sheep, and all the implements of husbandry are much improved." Principal rivers, Tay, Forth, Earn, Telt, Lyon, Garry, Tummel, &c. Fisheries on the Tay about the most valuable in the kingdom. Perth is divided into 80 parishes, and returns 2 mems. to the H. of C., 1 for the co., and 1 for the city of Perth. Registered electors for the co., in 1839-40, 4,224. Some parishes in the S.W. part of the co. are joined, for election purposes, with the cos. of Kinross and Clackmannan; and the bor. of Culross unites with that of Inverkeithing, Dunfermline, &c. in returning 1 m. to the H. of C. Principal towns, Perth, Crieff, and Dunblane. In 1831, Perth had 23,800 inhab. houses, 31,749 families, and 142,894 inhabs., of whom 68,565 were males, and 74,329 females. Valued rent, 339,892*l*. Scotch. Annual value of real property, in 1815, 555,532*l*.

PERTH, a royal and parl. bor. and manufacturing town of Scotland, co. Perth, of which it is the cap., on a plain on the right bank of the Tay, 33 m. N. by W. Edinburgh, lat. 56° 23' 49" N., long. 3° 26' 20" W. The town is surrounded, except on the line of the Tay with gently rising, gradual, or richly wooded hills. Pop. in 1801, 14,878; in 1831, 20,016. It is connected by a handsome bridge of 9 arches, 880 ft. in length (built by Smollett in 1771, at an expense of 26,632*l*.), with the village of Bridge-end, on the left bank of the Tay, included in the parl. bor. The main street runs N. and S., nearly parallel to the river; and it and the other streets are for the most part straight. Many of the more modern streets and crescents are of freestone, and altogether the town is remarkably neat, clean, and well-built, and has a substantial, wealthy appearance. It is lighted with gas, and the side pavements are good. The inhabs. are well supplied with water, raised by a steam-engine from the river into a reservoir, whence it is conducted in pipes through the streets. The expense of these, which were constructed in 1830, was 13,660*l*. The assessment is limited to 5 per cent. on rental. North and south of the town are the two large public greens, called the North and South Inches. The former, which is flanked on the W. by Athole Crescent, has the race-course; the latter is surrounded by stately trees and elegant villas.

In addition to the gas and water-works, the public edifices are the co. buildings and gaol, of Grecian architecture, fronting the river, erected in 1819, at a cost of 32,000*l*.; the church of St. John, a building of ancient but ascertained date, surmounted by a pyramidal spire of wood covered with lead, and divided into three places of worship, appropriated to three distinct parishes; St. Paul's Church, built in 1807 at an expense of 75,000*l*.; the Academy, also erected in 1807, at a cost of 6,000*l*.; lunatic asylum; the theatre; barracks; Marshall monument (built in commemoration of a late lord provost), containing the public library and the museum of the Perth Antiquarian Society, and the town hall. A little way S. from the town, an extensive military prison, capable of accommodating 7,000 captives, was constructed, in 1812, at an expense of 130,000*l*.; but it is now (1841) about being converted into the central and model prison for Scotland.

The town has 4 parrs.; and 3 *quoad sacra* churches (in one of which the service is performed in Gaelic), connected with the establishment, have recently been erected. There are no fewer than 14 dissenting chapels; 3 of which belong to the United Secession; 2 to the Old Light Bathers; 2 to the Relief; and 1 respectively to the Independents, Baptists, General Baptists, Methodists, Glasites, Episcopalians, and R. Catholics.

The grammar-school of Perth was at an early period the most celebrated in Scotland, being attended by pupils from every quarter of the kingdom. It was the first seminary in Scotland in which Hebrew was taught. (*McCr's Life of Knox*, ii. 14-16.) Its eminence may be said still to continue. The academy, which embraces the most ample course of instruction, scientific, literary, and commercial, was founded in 1760; its first recter, Dr. Robert Hamilton, afterwards of Aberdeen, is well known by his able work on "The National Debt." These 2 seminaries are endowed; and there are, besides, about 24 other schools, of which 6 are endowed; in addition to which a large seminary has recently been erected, partly by public subscription, and partly by a grant from government, for the education of 400 poor children. Perth has 6 public libraries, one of which contains 6,000 vols.; a literary and antiquarian society; a reading-room; and 4 weekly newspapers. Printing and the publishing of literary works have been carried on here to a greater extent than in any town of a similar size in Scotland, perhaps in the empire. Among other products of the Perth press may be specified the *Encyclopædia Perthensis*, and Heron's *History of Scotland*, 6 vols. 8vo.; this branch has now, however, materially declined.

Poor laws have been introduced into the town, the assessment being about 2,200*l.* a year, in addition to the church collections, which average about 700*l.* The number of paupers ranges between 700 and 800. The incorporated trades, in addition to this, give an annual allowance of 2,270*l.* to their poor members, whose number is generally about 200. An hospital for behalf of the poor was founded by James V. This institution has a nett revenue of 557*l.* 8*s.* 6*d.* distributed among 61 paupers, who are out-pensioners, the building being let. There are two dispensaries and an infirmary, in addition to the lunatic asylum above noticed.

Perth is not eminent for trade or manufactures. About 60 years ago, however, it had an extensive trade in gloves; Perth-made gloves having a preference throughout the kingdom. Latterly, however, Dundee has quite superseded it in this department. In consequence of this, the business of tanning, which principally depended on the glove-trade, has been greatly narrowed. Its manufactures consist at present principally of coloured cottons, especially for umbrellas. A great quantity of handkerchiefs, checked and striped handkerchiefs, imitation India shawls, scarfs, trimmings, &c., are also woven. The aggregate number of weavers is about 1,600, some of whom are employed by Glasgow and Paisley houses. A flax-spinning mill has recently been erected, which employs about 70 hands. A large bleach-field at Tullyloch, 2 m. W. of the city, employs 250 individuals. There are in the town several distilleries, breweries, and corn-mills, and three considerable iron-foundries. The salmon-fisheries on the Tay, belonging to the parish, bring a rent of 1,350*l.* per annum, of which 834*l.* goes to the city. The quantity of salmon, including grilse, shipped from Perth for London, amounts, at an average, to about 4,500 boxes, or 225 tons a year.

The Tay is navigable to Perth for vessels of considerable burden; but the navigation is much obstructed, and a great deal is required to be done for the improvement of the navigation. In this view an act was obtained in 1834 for deepening the bed of the river, and forming a new harbour and wet dock, and the works are now proceeding. There belong to the port about 100 vessels of the aggregate burden of about 8,000 tons; and about 800 coasting-vessels annually enter the port. The exports consist of manufactured goods, corn, and potatoes. The quantity of potatoes shipped for the London market is often as high as 100,000 bolls: corn of all kinds, between 40,000 and 50,000 quarters. The town supports 2 native banks and 4 branch banks; it has also a savings-bank, established in 1815; 2 weekly markets and 5 annual fairs. Gross customs revenue, from 5 July, 1840, to 5 Jan. 1841, 10,760*l.*

Perth is very ancient, and some authorities refer its origin to the Romans. It was a bor, at least, as early as 1106. Its church being consecrated to John the Baptist, it was long called St. Johnstown. Prior to the reign of James II., Perth was the capital of Scotland; and from its central situation it is, perhaps, to be regretted that it did not continue to enjoy that distinction. The kings were crowned at Scone, about 2 m. N. of the city, and had a residence in the town. The "Parliament House" of Perth remained standing till 1818, when it was pulled down. Scone Palace, long a royal residence, has been rebuilt by its noble owner, Earl Mansfield, and is now a splendid modern residence. The famous stone, reckoned the palladium of Scotland, and on which the Scottish kings were crowned, was transferred from Dunstaffnage, in the 9th century, to Scone, whence it was removed by Edward I., in 1236, to Westminster Abbey; since which time it has been enclosed within the frame-work of the regal chair on which the British sovereigns have been crowned since Edward II. There were no fewer than four monasteries in Perth, exclusive of one in Scone, two nunneries, and eight chapels. But the violence of the Presbyterians at the Reformation may be said not to have left a relic of these buildings. James I. was murdered in the Blackfriars' Monastery here in 1437, and was buried in the Carthusian Monastery, which he had founded. In August, 1600, Perth was the scene of that most mysterious incident in Scottish history, entitled the "Raid of Ruthven," or the *Gowrie conspiracy*. Gowrie Palace, the residence of the noble family of that name, was pulled down within the last 25 years, and its site is now occupied by the county buildings. Perth is associated with many important events in history; but we limit ourselves to mentioning that, in 1644, it was taken by Montrose, after his victory at Tippermuir, in the neighbourhood; in 1651 it capitulated to Cromwell; and was occupied by the insurgents in the rebellions of 1715 and 1745.

Before the passing of the Reform Act, Perth was united with four other bors, in sending 1 mem. to the H. of C.; but that Act conferred on it the important privilege of returning a representative for itself. Registered voters in 1840-1, 940. Perth is an opulent bor; the corporation revenue for 1839-40 amounted to 6,226*l.*; number of councillors, 16.

Perth, though it never was the see of a bishop, is called a city; and, in the rolls of the Scottish parliament, it held rank next to Edinburgh. Its chief magistrate has the title of Lord Provost. (*New Stat. Account of Scotland, & Perthshire*, l. 162.; *Boundary Report*, &c.)

The situation of Perth is one of the finest in Scotland. Close to the city, on the E., is the hill of Kinnoul; the summit of which, of easy access, commands one of the noblest prospects that is anywhere to be met with. Towards the S. and E. is the valley of the Tay, and the confluence of the Tay and Earn; to the W. is a finely variegated country, and to the N. the prospect is bounded by the stony girdle of the Grampians. The country round Perth is amongst the most fertile in Scotland.

PERU, a celebrated country of S. America, formerly one of the most valuable possessions of the Spanish crown. It then included the modern republic of Bolivia (S. or Upper Peru); but at present the term is restricted to the republic of N. or Lower Peru, lying chiefly between lat. 3° and 21° S. and long. 65° and 81° W.; having N. the Colombian republic of Ecuador, E. Brazil, S.E. and S. Bolivia, and W. the Pacific. Extreme length, S.E. to N.N.W., about 1,500 m.; breadth varying from 40 to 600 m. Estimated area and pop., subdivisions, &c., as follow:—

Departments.	Area in sq. m.	Population.	Chief Towns.
Lima	-	-	Lima.
Truxillo	-	-	Truxillo.
Junin	-	-	Huanuco.
Huancabamba	-	-	Huancabamba.
Ayacucho	500,000 ?	1,700,000 ?	Huamanga.
Cuzco	-	-	Cuzco.
Puno	-	-	Puno.
Arequipa	-	-	Arequipa.

*Physical Geography, &c.*—The country is naturally divided into 3 regions; that between the coast and the Andes; that occupied by the latter; and the region E. of the Andes, forming a part of the basin of the Amazon. All these divisions differ widely in their physical character. The coast region from Tumbez, on the N. frontier to the river Leche, is mostly a desert; and wherever, in fact, the coast region is not traversed by streams, or is unsuceptible of irrigation, it consists principally of arid sandy wastes, and is in the last degree barren. The Andes and their ramifications have been roughly estimated to cover, in Peru, an extent of 200,000 sq. m. They consist here, as in Bolivia, of two main chains, or Cordilleras, connected in various parts by cross ranges, and enclosing several extensive and lofty valleys. Round Cuzco is a vast knot of mountains, occupying about three times the extent of Switzerland, and round Pasco, in lat. 13° S., is another knot surrounding the plain of Bounbou, 13,500 ft. above the sea level, and in which are the rich silver mines of Cerro Pasco. The Peruvian Andes are not in general so elevated as the Bolivian; though many of their peaks rise far above the limits of perpetual snow. The loftiest summits are towards the S., where the Nevado de Chuquibambá (about lat. 15°) reaches to 21,000 ft. in height; and several other mountains surrounding the valley of Desaguadero, which belongs partly to Peru (see BOLIVIA, l. 401.) may at least approach this elevation.

In Bolivia the E., but in Peru the W., Cordillera is the highest. At the mountain-knot of Pasco, the Andes separate into 3 collateral chains, which, proceeding N., separate the basins of the Marañon, Huallaga, and Ucayali. The last range of the Andes to the E., in Peru, extends between the 6th and 15th parallels of lat., at a distance varying between 200 and 400 m. from the Pacific, and separates the basin of the Ucayali from those of the Yavari, Beni, and other affluents of the Amazon. Probably no part of this range rises above 10,000 ft. in height. (See *Andes*, Vol. I.)

The space enclosed between the gigantic ridges of the E. and W. Cordillera, called the Sierra, is partly occupied by mountains and naked rocks, partly by table-lands yielding short fine grass, and extensive hilly pasture-ground, very like, in general outline, to the Highlands of Scotland, though destitute of heath, and partly by extensive and fertile valleys, that once supported a much larger amount of population. The third region, or country E. of the Cordillera, is very little known; it is mostly covered by all but interminable forests; and a large portion of it can scarcely be said to belong to Peru, since only a few R. Catf. missions are here and there scattered over its surface, the rest of the country being in the exclusive possession of the native Indians.

Peru gives birth to some of the largest rivers in the world. The Tunguragua, generally regarded as the proper source of the Marañon or Amazon, and its vast confluents the Huallaga and Ucayali (the latter formed by the junction of the Apurimac and Puro), have their sources on the E. side of the W. Cordillera, between 104° and 16° S. lat.; and pur-

sue, though with many windings, a northerly course till they leave the country. The great rivers are mostly navigable; and, with the assistance of steam-navigation, will no doubt, at some future period, carry the riches of this remote region across the continent to the ports on the Atlantic. The great lake of Titicaca (which see) is mostly in Peru; but, excepting it, there is no other large lake: there are, however, some smaller lakes, one of which, the lake of Llauricocha, to the N. of the Cerro do Pasco, gives birth to the Tunguragua. (*Geog. Journ.*, v. vi. viii.; *Poepig. Reise in Peru*, &c., ii.; *Meyen, Reise um die Erde*, &c., *passim*.)

The coast is throughout rugged and lofty. In the N. provs., some miles of a loose sandy desert intervene in a few places between the high lands and the ocean; but in general, the cliffs approach close to the shore, which has not, perhaps, in an extent of 1,600 m. a dozen secure harbours. The best are those of Callao, Payta, Secura, Salina, Pisco, Islay, Iquique, and a few others. Truxillo and Lambaque have only open roadsteads. The water being almost uniformly deep, vessels are obliged to approach within  $\frac{1}{2}$  m. of the shore, before they can anchor; and the prodigious swell which rolls in unbroken from the Pacific occasions a heavy and dangerous surf. The operation of landing is, except in a few places, at once difficult and hazardous; it is effected by means of *balsas*, or platforms raised on inflated skins, and differing in shape in different parts of the coast. The *balsa* used by the Captain Hall off Mollendo, was "made of 2 entire seal skins inflated, placed side by side, and connected by cross pieces of wood, and strong lashings of thongs; over all a platform of cane mats forms a sort of deck, about 4 ft. in width, and 6 or 8 ft. in length. At one end, the person who manages the *balsa* kneels down, and by means of a double-bladed paddle, which he holds by the middle, and strikes alternately on each side, moves it swiftly along; the passengers, or goods, being placed on the platform behind him. All the goods which go to the interior, at this part of the coast, are landed in this manner. The great bars of silver, and the bags of dollars, also, which are shipped in return for the merchandise landed pass through the surf, on these tender, though secure conveyances." (*Hall's S. America*, i. 205, 206.)

*Climate*.—The year may be divided into 2 seasons; the wet and the dry. From June to October, the coast lands in all the S. and central provs. are covered during the night and morning with a dense fog, the only moisture supplied by nature to this part of the country. These fogs diminish as we proceed N., and in the N. prov. of Piura, which is celebrated for its dry atmosphere, rains occasionally occur; and when such is the case, the *arenales*, or arid sands, are speedily clothed with the most exuberant vegetation. While, however, the dry season prevails on the coast, and especially from Jan. to March, heavy rains fall in the mountains, frequently accompanied with thunder, which never occurs along the coast. The extensive valleys between the Cordilleras, such as that of Cuzco, 10,000 ft. above the level of the sea, enjoy an admirable climate; and though between the Tropics have, in consequence of their elevation, all the advantages of the best climates of the temperate zone, with but few of their disadvantages. Beyond this, and at the level of about 14,000 ft., commences the limit of perpetual snow. Even in the coast region the temperature is not so high as might be supposed from the latitude: cooling S. winds being uniformly prevalent, and the sea-breezes by day alternating with others blowing from the land at night. The mean temp. of the year in Lima is about 70° Fahr. Wheat, and other European cerealia, though but little cultivated, succeed admirably in the elevated valleys of the Sierra; potatoes thrive at an elevation of from 11,000 to 13,000 feet. The best at an elevation of from 11,000 to 13,000 feet. The country is, on the whole, salubrious. Cholera, bilious and inflammatory diseases, small-pox, and hydrophobia are common; but in Lima, and many other parts of the country, individuals frequently live to an advanced age.

Peru is more subject, perhaps, than any other country, to the tremendous visitation of earthquakes. Shocks are felt every year; and they occasionally become so violent, as to be productive of the most disastrous consequences. The earthquake which occurred in 1746 swallowed up the entire sea-port town of Callao, and destroyed the greater part of the city of Lima. The years 1687, 1806, and 1828, were, also, distinguished by the occurrence of severe and most destructive shocks.

*Minerals and mines*.—Peru, like Mexico, is famous for her mineral products; and we have been long accustomed to associate her name with the almost unlimited abundance of gold and silver. But, though the most exaggerated notions of the value and importance of the Peruvian mines were long, and, perhaps, are still prevalent in Europe, they have, no doubt, furnished vast supplies of the precious metals. The famous mine of Potosi in Bolivia, or Upper Peru, was discovered by accident in 1545: it produced, for a lengthened series of years, vast quantities of silver; but it is now comparatively neg-

lected, and is supposed to be nearly exhausted. The greater number, as well as the most productive of the mines that are at present wrought, are situated in the Cerro di Pasco, in the dep. of Junin. They were, like Potosi, accidentally discovered in 1630.

The produce of the Peruvian, like that of the Mexican mines, has materially declined since the commencement of the revolutionary struggle. Humboldt, who had the best means of obtaining accurate information, estimated the annual value of the gold and silver produced in Peru at the commencement of the present century, at 6,240,000 dolls. (1,248,000*£*.) But at present (1841), owing to the anarchy and insecurity that has prevailed, their value is probably not much above half this amount. The silver smelted in Peru, from 1820 to 1834, is said to have amounted to 3,295,573 marcs, worth 5,604,175*£*.

The following is a statement of the quantities of silver reduced to bars at the different smelting-houses of Peru in 1834 (*Board of Trade Tables for 1839*):—

Departments.	Marcs.	Departments.	Marcs.
Lima	15,891	Ayacucho	2,417
Truxillo	15,267	Puno	31,379
Junin (Pasco)	272,558	Arequipa	4,562
Total	311,804 marcs	581,068 <i>£</i> .	

It is estimated that over and above the quantities given above, 1-3d part more is actually raised in the different departments, except in Junin, where 1-5th part of excess is produced, and smuggled out of the country in the state of *plata pila*, or native silver. In 1838, 900 marcs of gold, and 287,258 oz. of silver were coined at the several mints of Peru. Perhaps, on the whole, allowing for smuggling, &c., the total produce of the gold and silver mines of Peru, including Bolivia, may now (1841), amount to from 700,000*£*. to 750,000*£*. a year.

Huancavelica has one of the richest quicksilver mines in the world, one portion of which (St. Barbara), furnished 5,000 quintals a-year of quicksilver, for 2 centuries. It is said that the metal might be procured here at an expense of 65 dolls. the quintal; though, in 1837-38, quicksilver was so scarce in Peru, as to cost from 200 to 220 dolls. per quintal. Quicksilver mines were then, of course, unwrought; but a private company has since been formed to work them, which has proceeded to a considerable extent with its operations. (*Smith's Peru*, ii. 24.)

Exclusive of the above Peru produces iron; copper, tin, coal, saltpetre, &c. The latter, indeed, under the name of nitrate of soda has, within the last few years, become an important article of export.

*Vegetable products* are numerous, and very dissimilar. Sugar, rice, tobacco, yams, sweet potatoes, and cocoa, are raised in the warmest situations; the vine, wheat, and quinoa (*chenopodium quinoa*) are planted in colder places, and potatoes on the highest cultivated grounds. The grapes are well-flavoured, but the wine made from them is inferior. The sugar cane is mostly the *crista* species. Three sorts of maize are cultivated, and this grain, which forms the principal farinaceous food of the modern inhabs., appears to have been also the principal formerly in use among the Indians, large quantities having been discovered in subterranean granaries, where it had probably remained from a period previously to the Spanish conquest. Cotton is grown in almost every part of Peru, and the Peruvian ranks immediately after the Sea Island and Egyptian cotton in the English markets. Except in the prov. Piura, it is all short stapled. The culture is rapidly increasing, and it may now be considered one of the staple products of the country. Lucerne is a good deal grown for provender; it reaches the height of three feet, and is cut five times a year. Culinary vegetables abound; beans, with potatoes, forming the principal food of the lower classes in the uplands. Olives succeed well in certain districts, and oil is extensively produced, but it is inferior to that of France or Italy. Plantain, bananas, guavas, and other tropical fruits, with oranges, lemons, nectarines, plums, and others common to Europe, are found in great profusion. Bark, and numerous medicinal plants, with cedar, ebony, mahogany, walnut, and other valuable timber trees abound in the forests. The valuable and well known drug called Peruvian bark consists of the rind of the *cinchona lancifolia*, *oblongifolia*, *cardifolia*, &c., and is, consequently, of several varieties. The genus *Cinchona* is supposed to be confined to the Andes, ranging between lat. 10° N. and 22° S., where it grows luxuriantly to the height of 10,000 ft. above the sea. The provs. of Loxa, Ecuador, and Huanuco, are those in which the bark is principally obtained; and during a lengthened period after its first introduction into Europe in 1640, it was called Loxa bark, from the former of these provs. Its collection begins in May and continues till November. The trees are cut down close to the root; the stems are then divided into pieces of uniform length: and about three or four days afterwards the bark is taken off in broad stripes. The price which

the article fetches depends on the rapidity with which it is dried, which is effected by exposing the bark with the least possible delay to a hot sun, which makes the pieces roll up and sometimes form a solid cylinder, without any cavity in the centre. It is afterwards carefully packed in bales of 4 or 5 arrobas each, and exported in chests closely covered with skins. (*Poeppig, Com. to Bot. Mag.* i. 249) Coca, the dried leaf of the *Erythroxylon coca*, is largely used by the Peruvians for chewing, much in the same way as betel in the East. Poeppig says that indulgence in its use brings on a gloomy kind of mania; but other authorities deny that it has any effect.

*Agriculture*, which was never in a prosperous state, has like every other branch of industry, been greatly neglected since the revolution. Dr. Smith gives an account of the agriculture of a district between the Cordilleras, which he says may serve for that of the *Sierra* generally. "The agriculture of Huamaco, though alluring to the eye of the ordinary traveller, who only glances at its rich and waving fields of maize, inclosed within tapias or fences of mud, and hedges of the Indian fig and aloe or maguey plants, is in every way defective. The fields owe their luxuriance to nature rather than man, except in the single advantage of water, which he often directs and supplies to them. Manure is a thing never thought of; and the implements of husbandry are of the rudest kind. The plough, slight and single handed, is constructed merely of wood, and without a mould-board. The ploughshare is a thick iron blade (or, where iron is not at hand, a piece of hard iron-wood), only tied, when required for use, by a piece of thong, or lasso, on the point of the plough, which divides the earth very superficially. Harrows they have, properly speaking, none; but sometimes use, instead, large clumsy rakes, or a green bough dragged over the sown ground, with a weight upon it to make it scratch the soil. Instead of the roller, they break down the earth intended for canals, after it has got eight or ten ploughings and cross-ploughings, with the heel of a short-handed hoe. For smoothing down the clods of earth, some Indians use a soft, flat, round stone, about the size of a small cheese, which has had a hole beaten through its centre by dint of blows with a harder and pointed stone. To the stone thus perforated they fix a long handle; and as they swing it about they do great execution in the work of *cuspiando* or field leveling. Lacera, or *alfalfa*, is cut down, and used green, cattle and working oxen for the plough and sugar-mills being fed on it; yet the scythe is not in use among the great planters, who find it necessary to keep two or three individuals at the sickle to cut down food for herds, which, in the day time, are fed on irrigated pastures, but at night in corrals or pens. The Indians, accustomed to break up potatoe grounds on the face of steep with deep narrow spades having long handles. In the same manner the soil is turned up by those who have neither plough nor oxen, but who yet sow maize on the temperate flats on the hill sides. People thus circumstanced make holes in the ground with a sharp pointed stick, where they put the seed. The Indian sows the white grained maize in preference to the yellow, as he considers that when toasted it makes the best "*cancha*," or substitute for bread; and that when boiled it makes the best "*mole*," or simply boiled maize: it has more over the credit of making the most savoury *chicha* or beer, which they home-brew whenever they have a little surplus grain. They also make a kind of beer from the fermented juice of the maize stalks compressed between small rollers of wood turned by the hand. Dry maize leaves and stubble are most used in the foddering of cattle. The sugar mills in the valley of Huamaco are mostly made of wood, and wrought by oxen. On the larger estates small brass rollers are used; but water-power is not thought of, the proprietors adhering to the old practice of working with oxen day and night throughout the year, barring accidents, and feasts, and holidays." (*Peru as it is*, ii. 40-46.)

*The wild animals* include the puma, or American lion; the *uturuncu* (*Felis onca*, L.), a kind of tiger cat; the *acumari* (*ursus Americ.*, L.), a black bear inhabiting the mountains; the *anas*, or skunk; great numbers of deer, wild boars, armadillos, &c., which are objects of the chase; and several varieties of animals, as the llama, *alpaca*, *guanaco*, and vicuña, used, especially the llama, by the native Peruvians, previously to the Spanish invasion, as beasts of burden. (Copious descriptions of these animals may be found in *Stevenson's Trav.*, ii. 85-92., and *Smith's Peru*, &c., ii. Appendix.) Four varieties of the condor are included among the native birds. Alligators are met with in the rivers; but neither the reptile nor the insect tribes appear to infest Peru so much as the country around Guayaquil and some other regions within the tropics.

Of the *foreign quadrupeds* acclimated in Peru, sheep appear to have succeeded best. They have increased in an amazing degree on the great commons or pastures of the Andes, at an elevation of 12,000 or 14,000 ft. above the sea. Few sheep are bred on the coast; but

during certain months, large flocks are driven from the interior, and fattened for the Lima market. Many of the ewes are in lamb, and the common bargain between the drover and the farmer is to give the lambs for the pasturage, the farmer calculating on receiving 150 lambs for every 100 ewes. Besides this increase, which is greater than in England, the ewes bear twice a year, generally in June and Dec. (*Stevenson*, ii. 2.) Little attention has been hitherto paid to breeding sheep, so as to improve the wool; but as the latter is now becoming an increasing article of export, more care will doubtless be bestowed on this object. The largest quantities of wool exported are from Ilay, and are chiefly produced in the neighbourhood of Laupa, Puno, and Cuzco. It is soft and similar in appearance to English wool; but, being badly cleaned, it does not fetch more than 9d. or 10d. per lb.; that from the mountains between Lima and Pisco, being better cleaned, usually brings 1d. per lb. additional. The wool produced on the coast is of very inferior quality. Vicuña wool is exported, but only in small quantities. In the high region, cattle, horses, asses, &c., are of a stunted size; but in the valleys and on the coast they are large, spirited, and showy.

The cattle of Peru are not so large as those of Lincolnshire; but at an average, they are as large as the English, Freuch, and Spanish cattle: when fed on lucern, the moor, the green, and juicy, and the bones very small." (*Ibid.* i.) The black cattle of the Sierra do not agree with the climate of the coast, and when brought there speedily die. Ordinary horses and mules fetch from 45 to 50 dolls. each. Pura is noted for its excellent breed of the latter, and many mules are taken thence to Truxillo, Lima, &c., where they sometimes fetch 250 dolls. each. The same prov. is also famous for its goats. A good many pigs are reared in Peru; they are considered fit for market at from 10 to 16 months old, when they sell at from 6 to 9 dolls. each, if of a good breed.

*The Population* consists principally of native Indians, Spaniards, negroes, and the races of mixed origin derived from the foregoing; but of the number of each we have no authentic estimate. The accounts of the Indians given by recent travellers are in many respects conflicting and various; we believe, however, that the statements of Ulloa may, on the whole, be safely depended on. That excellent observer represents them as in the lowest stage of civilization, without any desire for the comforts and conveniences of civilised life, immersed in sloth and apathy, from which they can rarely be roused, except when they have an opportunity of indulging to excess in ardent spirits, of which they are excessively fond. (*Voyage* ii., liv. vi. c. 6.) With the exception of Mr. Stevenson, most recent travellers say that they are dirty in the extreme, seldom taking off their clothes even to sleep, and still more rarely using water. (*Modern Traveller Peru*, p. 2-6.) Their habitations are miserable hovels, destitute of every convenience or accommodation, and disgustingly filthy. Their dress is poor and mean, and their food coarse and scanty. Their religion is still tainted with the superstition of their forefathers; but they are great observers of the external rites and ceremonies of the church, and spend large sums of money in masses and processions; a species of profusion to which they are excited and encouraged by their priests, who profit by it. We have previously made some statements illustrative of their attainments in the arts at the epoch of the Spanish invasion. (*See* Vol. I. 81.) The oppressions to which they have since been subject have probably sunk them to a lower point in the scale of civilization than they then occupied; and, no doubt, it would be possible, were proper care taken, materially to improve their habits and condition. A good deal, too, of their apathy and little progress in arts and industry, must be ascribed to the physical circumstances under which they have been placed—the mildness of the climate and the fertility of the soil, which, on the one hand, by diminishing their wants, and, on the other, by enabling them to supply those which they do feel with comparatively little exertion, take away and greatly weaken some of the most powerful motives that prompt to labour and invention. Still, however, we are well convinced, notwithstanding the statements and reasonings to the contrary of M. d'Orbigny\* and others, that the Indians are naturally an inferior race, and, indeed, wholly incapable of any degree of civilization.

The principal burden to which the Indians were subjected under the Spanish government, was that of the *mita*, or compulsory labour in the mines. All male Indians from 18 to 50 years of age were compelled, during a certain specified period, to undergo this servitude. Its severity had, however, been materially abated previously to the revolution, and it was then entirely suppressed. *Manufactures* are in a very backward state, though many of the natives evince considerable ingenuity. In Tarma they make *ponchos*, or loose cloaks, of great beauty and fineness, and on the colder table lands warmer

\* See the learned work entitled *L'Homme Américain*, passim.

and coarser blankets, ponchos, &c. In the valleys, goat skins are made into cordovans, cow hides into saddle-bags, and travelling cases for bed and bedding, and mats for carpeting from rushes. Cordage for packing is manufactured from the maguey in Piura; and at Guamanga is

made the fine filigree silver work, for which inland Peru is celebrated. But in general, the manufactures of Europe have, in the larger towns, superseded those of the natives, and are supplied to Peru in exchange for raw produce.

N.B. The exports through the Bolivian port of Cobija, or La Mar, chiefly consisting in bullion and copper ore, are not included in this return.

In addition to the above articles of produce there were also exported on British account as returns for goods sold in Peru, the produce of Equator, New Granada, and central America, to the amount of 51,964*l.* The exports of bark, copper ore from Bolivia, Chinchilla skins, salt-petre, &c., manifested a considerable increase in the above over the previous year: the export of seal skins had diminished, owing to the previous great and indiscriminate slaughter of the seals. Hides cannot become an article of very considerable export for, though the greater part of the tanned leather for shoes, &c., is imported from Equator yet from the want of building timber on the coast and table lands, hides are necessarily used as a substitute for wood. The export of all articles of native produce, except the precious metals, is free of duty.

Though Peruvian he not distinguished from Bolivian produce in the above table, the exports are almost wholly from Peru, the foreign trade of Bolivia being very insignificant, owing chiefly to her great deficiency of coast and sea ports. The imports into Peru and Bolivia are supposed to average about 1,500,000*l.* a year, those from Great Britain, making about 1-3d part of the whole. Of the total imports, more than 2-3ds in value go to Peru, and the rest to Bolivia. They consist principally of plain and coloured cottons, and woollen goods from England and the U. States; linens from Germany, France, Ireland, &c.; French and China silks, hats, glass, earthenware, hardware, &c., chiefly from European countries.

The remains of the Incas' road, extending through the centre of Peru from Quito to Cuzco, a distance of 1,500 m., may, according to Humboldt, be compared with the finest Roman roads; though, when it is recollected that the Peruvians were ignorant of the arch, and that their bridges were made of osier ropes, this statement will probably appear not a little extravagant. Various passes were also cut in the steep acclivities of the Andes by the Peruvians before the Spanish conquest. The roads laid down by the European masters of the country bear no comparison with the foregoing. They consist, indeed, with a few exceptions in the vicinity of the large cities, only of foot tracks for horses or mules; and, in point of fact, goods are exclusively conveyed on the backs of the latter. In the dep. Junin, however, Dr. Smith says that laudable efforts have been lately made for improving the roads; but no regular post-houses are yet anywhere established, and at this moment the want of roads and of improved means of communication, is the

greatest obstacle to the improvement of the country. So much is this the case, that Lima and some other towns along the coast find it more convenient to receive supplies of corn from Chili by sea than from the interior of their own country! We have elsewhere described the sort of bridges in use in the Andes (see art. *ANDES*, Vol. I, 113, 114.).

The Government is popular and representative, the sovereignty, in theory at least, emanating from the people. Peru has a senate or chamber of deputies, consisting of an uncertain number of members, which delegates the executive power to a president and the other high authorities of the state. The chamber of deputies consists of representatives elected by the electoral colleges of provs. and parishes. The parochial electoral colleges consist of all the citizens resident in a par., for every 200 of whom an elector is nominated; and in every village with an amount of pop. entitling it to name an elector, a municipal body is established, subject to the approbation of the departmental *juntas*. The electoral colleges of provs. are composed of parochial electors constituted according to law, who elect dep. to congress in the proportion of 1 for every 20,000 inhabs. The prov., however, in which the whole pop. does not come up to 10,000, may nevertheless send a deputy. The government of every dep. is vested in a prefect, that of a prov. in a sub-prefect, that of a district in a governor, and that of every town or Indian village in an *alcalde*, who is entrusted with the command of the local police. To fill the foregoing appointments, it is required that the candidate should be an active and approved citizen above 30 years of age. The prefects are charged with the economical administration of their respective dep., but are strictly prohibited from interfering with the course of popular elections, or the functions of departmental *juntas*. The latter are bodies sitting in the cap. of each dep., composed of 2 mems. from each prov., elected in the same manner as the mems. of the senate, and whose functions include the assessing of taxes, examining the accounts, and determining the military force, of the dep.

*Justice*, in all the dep., is administered in the name of the republic; and in every town are justices of the peace, whose business is to endeavour to bring about an amicable termination without a formal law suit, few suits being, in fact, admitted without some preliminary attempt at settlement. In some provs. the functions of the judge are exercised by the sub-prefect. Justice is

not said to be positively corrupt, but, the law being ill understood by many judicial functionaries, civil suits especially have been frequently decided on erroneous principles. Few of the municipalities have revenues adequate to the maintenance of a sufficient police; the latter is said to be better in Junin than in the other depts. The prov. prisons are bad and insecure. Slavery is extinguished, except as respects those who were slaves previously to the declaration of Peruvian Independence in 1820. Except those individuals, a traffic in whom still goes on in the interior, every one enjoys the right of citizenship, excepting only vagrants, gamblers, drunkards, and those who, without cause, abandon their wives, or are divorced on account of misconduct.

The state religion is the R. Catholic; and, Peru having been the country in which the direct influence of Spain was perhaps more felt than in any other of her transatlantic possessions, a great deal of intolerance was formerly shown toward individuals of a different creed; though we believe a considerable portion of this has disappeared since the establishment of the republic. Lima is the seat of an archbishop, who holds the chief ecclesiastical authority. The Jesuits in the 17th century, and afterwards the Franciscan monks, established various Indian missions in the E. parts of the country. But these have almost all gone to decay; and the former missionary college of Ocopa, about 12 m. S.E. Tarma, suppressed at the revolution, but afterwards restored, is by no means flourishing, and many Indians of the interior are relapsing into paganism. The clergy are said to be careless of their duties, and lax in their morals. "The Indians and curates are often seen chattering and driving hard bargains in relation to first fruits (for tithes are collected by the state), marriages, burials, and religious festivals, which latter are closely interwoven with the entire social system of the country. The Sierra curates are men commonly much worn out in constitution at the age of 40. These gentlemen, when their home becomes irksome, start off, swayed by some sudden impulse, to the nearest town of white inhabitants, where they enjoy a finer climate and more gratifying company. The curate not unfrequently resorts to a mining village, under pretext, perhaps, of selling his 'primicias,' or first fruits, in grain, gambling with the miners day and night, till the premises be all swallowed up; and the poor resident returns home involved in a debt which he cannot pay for the next six months, even should his curacy be worth 4,000 or 5,000 dollars a year, though it be oftener much less." (*Peru as it is*, i. 211, 212.)

Schools for reading, on the Lancasterian plan, are common in the capital, and exist in the larger provincial towns; and all the white children are taught the elements of instruction. Lima has a university and several other colleges; but the former has seldom more than 50 students, and the latter establishments have mostly dwindled into insignificance. Superior education is confined to a very few among the whites, and ornamental almost universally takes precedence of useful instruction: the negroes and Indians have rarely any education except what is necessarily acquired in the ordinary intercourse between man and man. There are some good libraries in the country, and a medical college; but medical science generally is at a very low ebb. In the rural districts especially, what is called medicine is the grossest quackery; and other branches of general science are not in a much better condition. There are few hospitals or other charitable institutions, such foundations having been mostly suffered to fall into decay.

The constitution provides that a national militia shall be raised throughout the country; but in most of the provs. it can hardly be said to exist, except in name. The standing army is estimated at 3,000 men, and the naval force is quite insignificant. (*Smith, Peru as it is*, ii. 65-142.) We cannot form any clear estimate of the public revenue and debt of this state: the *Weimar Almanack* roughly states the probable amount of the latter at 20,000,000 piastres.

**History.**—When the Spaniards under Pizarro and Almagro arrived in Peru, in 1532, they found that country under the dominion of the Incas, who, according to the traditions of the Indians, had held the sovereignty about four centuries. The first Inca, Manco Capac, had either immigrated from some distant country or been a person of very superior acquirements. He pretended that his sister, Ocollo, whom he married, and himself were children of the sun, and that they were sent to instruct the rude and barbarous natives in the duties of religion, and in arts and civilisation. He made Cuzco the cap. of his dominions; and, having erected a temple to the Sun in that city, appointed 12 virgins of the blood royal to act as priestesses to the divinity, and became both the high-priest and law-giver of his people. The government and manners of the Peruvians were, as compared with those of the Mexicans, mild in the extreme. Still, however, a considerable number of the attendants of the Incas were sacrificed on their death, and interred with them, that they might appear in the next world

with their former dignity, and be served with the same respect. The remains of the roads, aqueducts, palaces, temples, and other structures, scattered over the country, attest the advanced state of civilisation at which the Peruvians, as compared with most other Americans, had arrived. The empire of the Incas fell an easy conquest to Pizarro and his bloodthirsty comrades. It continued in possession of the Spaniards till 1821, when Lima, having submitted to a Chilean army under San Martin, its independence was declared on the 28th of July. Since that time Peru has been, like the other *ci-devant* Spanish colonies, involved in all but perpetually occurring vicissitudes. (*Ulloa; Robertson's America; Simson's Residence in Peru; Smith, Peru as it is; Humboldt; Hall; Miller; Geog. Journal*, &c.)

**PERUGIA** (an. *Perusia*), a town of the Papal States, cap. deleg. of the same name, nearly in the centre of the Italian peninsula, and on the main route between Rome and Florence, about equidistant from the Mediterranean and Adriatic, and 85 m. N. Rome; lat. 43° 6' 46" N., long. 12° 23' 13" E. Pop. 20,000. It stands on the summit and declivity of a hill, 700 or 800 ft. in height. It is fortified, though not strongly; being defended, exclusive of its walls, by a castle, erected by Pope Paul III., in 1543. It is irregularly laid out, but well-built, and has several public buildings and remains of antiquity that are worth notice. The cathedral is a large Gothic edifice, which would be handsome, were it not so partly-coloured. Like many of the other churches, it is rich in works of art, having paintings by Barocci, Guido, and Perugino, exclusive of four famous pictures by Raphael—the Annunciation, Circumcision, Assumption, and Adoration of the Magi. The churches of St. Dominico and St. Francisco are interesting; the last being a very handsome specimen of early Italian architecture. The *palazzo pubblico* is a remarkable specimen of Italian Gothic. Among the antiquities are an arch, reported to have been built by Augustus, though, according to Mr. Wood (*Letters of an Architect*, ii. 104.), it is probably later. A circular building, still tolerably perfect, which is evidently of Roman origin. There are numerous public fountains; one of which, in the principal square, has been ornamented with bas reliefs and statues by Arnolfo da Lapo. Perugia has a university, with about 200 students, several academies, numerous convents, two theatres, a bull-ring, and an admirable ground for playing *palone*. This city is the residence of a Papal delegate, a bishop's see, the seat of a tribunal of primary jurisdiction, and a board of police, and the residence of the directing engineer of bridges and roads for the delegs. of Perugia, Spoltino, and Rieti. It has manufactures of carpets, silk goods, prepared skins, hats, cream of tartar, soap, and wax candles, and some trade in wines, oil, and other agricultural products. Perugia is scarcely inferior in antiquity to Cortona, and was its equal in rank among the cities of Etruria. Antony having shut himself up in the city, it was taken, after a stubborn resistance, by Octavius Cæsar, who dismissed Antony; but the city was hardly dealt with, more, as Velleius says, through the irritation of the soldiers than the inclination of the general. (lib. ii. cap. 74.) It was annexed to the Papal dominion by Julius II., in 1512. The famous painter, Vannucci, surnamed Perugino, was a native of this city. (*Wood's Letters of an Architect; Simonds*, &c.)

**PESARO** (an. *Pisaurum*), a coast town of central Italy, Papal States, leg. Urbino, on the Toggia, near its mouth, in the Adriatic, 20 m. N. by E. Urbino; lat. 43° 55' 10" N., long. 12° 34' 55" E. Pop. about 15,000. It is surrounded with fortifications, and is well built. The streets are clean and airy, and it has in general a neater appearance than most towns of Italy. Its market-place is ornamented with a fountain, and a marble statue of pope Urban VIII. Being the see of a bishop, it has, of course, its cathedral, and the usual complement of churches and convents. It has no harbour, but merely an open roadstead. Some of the churches are remarkable for their paintings, as are several of the houses of the higher ranks. The palace of the former dukes of Urbino is now occupied by the papal legate. There are many handsome private residences, 2 hospitals, a foundling asylum, a good theatre, &c. The aqueduct, which conveys water to different parts of the town, is supposed to be a work of the Romans; and there are the remains of an ancient bridge and theatre. Silk and cotton stuffs, glass bottles, cream of tartar, &c., are produced on a small scale; but the inhabitants are principally employed in the trade in agricultural produce, the surrounding country, which is rich and well cultivated, producing the best figs in Italy, with wine, olives, silk, &c. There are several handsome villas in the vicinity; one of which was occupied, in 1818-19, by Queen Caroline of England. *Pisaurum* was a Roman colony. It is noticed by Cællius,

—moribunda sede Pisauri. Carm. 82.

But the defects in its climate, which made it be so characterised, have been to a considerable extent obviated by the drainage of some adjacent marshes. The fa-

mous musical composer, Rossini, is a native of, and resident in this town. (*Rampoldi, Woods, Starke, &c., passim.*)

PESHAWER (The "Advanced Post") a considerable city of Afghanistan, cap. of a principality of the same name, which for some time belonged to Runjeet Singh, but which is now, probably, included in the dom. of the Cabul sovereignty. It stands in a nearly circular plain, about 35 m. in diameter, and watered by many branches of the Cabul river, 140 m. E. by S. Cabul, and 236 m. N.W. Lahore; lat.  $34^{\circ} 6' N.$ , long.  $71^{\circ} 13' E.$  Pop., formerly estimated by Mr. Elphinstone at 100,000, but it is now certainly much less. It is built on uneven ground, and is upwards of 5 m. in circ. The houses are mostly built of unburnt brick, inclosed in wooden frames, and are commonly 3 stories high; the lower story being usually occupied by shops. The streets, though narrow, are paved, and have a kennel in the middle. Two or three brooks run through the town, skirted with willows and mulberry-trees, and crossed by bridges. There are many mosques, but no public buildings, and no severe public works except the *Bada Hisar*, or citadel, and a fine caravanserai. The former, a castle of no strength, on a hill N. of the town, commands an extensive and beautiful view, and when visited by Mr. Elphinstone in 1809, had some fine halls, and was surrounded with spacious gardens, being the occasional residence of the king of Cabul; but when Moorcroft saw it about a dozen years afterwards, it was a heap of rubbish, and the only use made of it by its Seikh rulers was as a quarry whence to procure materials for dwellings of their own erection. Many of the houses in the city were also, at the latter period, untenanted and in ruins; in the plain numerous villages were deserted; and in the immediate vicinity of the town the Seiks had inflicted more mischief than many years' labour could remedy, by destroying gardens and orchards, and demolishing the wells, and channels of irrigation. (*Moorcroft's Trav.*, ii. 337.)

It is probable, however, that Peshawer has since recovered a portion of its previous prosperity. It is well situated for trade; and should we take possession of the Punjab, or the Indus be extensively navigated by British vessels, Peshawer would most likely become a considerable entrepôt for the trade between India, and Afghanistan, Khorassan, and the countries N. of the Hindoo Koosh. The inhabitants are very mixed, but principally of Indian origin, and occupied in commerce. The shops are well supplied with fruits and other provisions, saddlery, boots and shoes, woollens, hardware, books, and other manufactured goods.

It is said by some authorities to have been founded by Acher; but the district of Peshawer is mentioned in the histories of the 10th century; and it is more probable that it should have taken its name from a city already existing, than the reverse. Peshawer was, however, greatly improved and enlarged by Acher, in the 16th century. (*Elphinstone's Cabul*, i. 72-81; *Moorcroft's Travels*, ii. 337, 338; *Burnes's Bokhara*, &c.)

PESTH, a city of Hungary, on the E. side of the Danube, immediately opposite to Buda, with which it is connected by a bridge of boats, being the seat of the chief judicial tribunals of the country, as Buda is the residence of the viceroy and other chief state authorities, 135 m. E.S.E. Vienna. Pop. (excluding garrison and strangers), about 63,000, principally R. Catholics; or, together with Buda (which see) and its suburbs, probably 110,000. (*Berghaus*.) Pesth, with its suburbs, occupies a space about 64 m. in circ. It stands on level ground; and being almost wholly of modern date, is much more regularly laid out and handsomely built than Buda. The streets, which are mostly wide and straight, are paved, and partially furnished with trottoirs, some of them being, in the splendour of their shops and their elaborately painted signs, little inferior to those of Vienna. "After a fashion, once common with us, and of which one or two specimens still exist in London, every shop has a name and sign; so that you may buy your cigars at the *Young Prince*, your cravats at the *Three Graces*, and bonbons at the *English Lord*; and for the instruction of those who do not read, or to attract the attention of those who do, these subjects are all illustrated by large paintings, in style by no means contemptible." (*Paget's Hungary*, i. 243-4.) The squares are generally very well built; but, from the want of some object in the centre, they look bare and deserted; besides affording room for the accumulation of those heaps of sand with which the city is infested, but which might probably be prevented by planting round the outskirts. The growth of Pesth within the last few years has been most rapid. Along the riverside, which, a few years ago, was nothing but a marsh, is now a wide quay, partially paved and walled in, and lined for upwards of 1 m. by a succession of handsome buildings. Near the centre of these are the new theatre, and *Kedonten-saal*, or public ball-room; and at one end, ornamented with a portico like the last named edifice, is the National Casino, an institution similar to

the clubs of London, recently established by Count Szechenyi. It is open to strangers, who may use it during their stay in Pesth, and its reading-room is furnished with the leading newspapers and magazines of Europe. A part of the establishment is appropriated as a casino for tradesmen; and in the centre of the building is a very fine ball-room. Among the most conspicuous of the public edifices is the *Neugebäude*, in the suburb of Leopoldstadt, begun by Joseph II. in 1786; a structure of immense size, 4 stories in height, ranged round 4 spacious areas, and now used as a barrack and artillery *depôt*. Pesth has only a small number of churches in proportion to its size and pop., and none is particularly distinguished for architectural beauty. Service is performed in them according the United Greek, R. Catholic, Dissenting Greek, Lutheran, and Calvinistic rituals; and in the German, Hungarian, Slavonic, and Greek languages.

There are also several synagogues. Besides the large theatre on the quay, an elegant new national theatre, destined solely for Hungarian performances, has recently been completed by the aid of a grant from the Diet. "The grenadiers' barracks" (county hall), college, and two or three of the hospitals, are worth notice. But, in respect of public buildings, Pesth must yield to Buda; it has, however, many handsome noble palaces and other private residences, and excellent hotels and coffee-houses.

This city is also distinguished by its establishments devoted to the higher branches of scientific instruction. Its university, established at Tyrnau in 1633, and transferred thither from Buda, by Joseph II., in 1784, is the only one in Hungary, and one of the most richly endowed in Europe. The instruction is entirely gratuitous; and it has about 50 professors, an observatory on the Blocksberg in Buda, a large botanic garden, a veterinary hospital, and a library of 60,000 vols. In 1841-45, it had 1610 students; 72 in divinity, 184 in law, 885 in medicine and surgery, and 409 in philosophy, &c. The National Museum, founded in 1802, has a fine library, rich in Hungarian MSS.; a complete collection of Hungarian coins from the 10th century; collections of minerals, fossils, antiquities (principally Roman, and others, found in Hungary and Transylvania); historical relics, specimens of manufactures, &c. The Hungarian academy of sciences, originally founded for the cultivation of the Magyar language, has received many munificent donations, and has an income of about 2,000*l.* a year. It publishes transactions, and gives annual prizes for the best works in Hungarian. Pesth has, also, a gymnasium, Ron. Cath. and Lutheran seminaries, an English conventual school for noble ladies (*Englisch Fräuleinanstalt*), a teachers' seminary, many primary, and Greek, Protestant, and Jewish schools, a blind school, &c. The chief judicial tribunals are the *Curia Regia*, or Royal Table, and the *Septemviral Tafel*, so termed because it originally consisted of 7 members, but is now extended so as to include the palatine, 4 prelates, 9 magnates, and 7 other nobles. There are various charitable institutions. Several newspapers are published in the Hungarian language; the principal of which has a circulation of about 4,000. Though near the extreme verge of European civilisation towards the E., Pesth has all the appearance and conveniences of a city of W. Europe. It is well furnished with provisions of every kind, and, in some respects, its inhab. are better off than those even of the capitals of England and France! "The *fiacre* is none of the heavy, shabby, slow coaches found on the stands of London; but a very clean, smart, open calèche, with two highbred little horses, which whisk along at a famous rate; and a driver as far superior in sharpness and wit to his wooden-shod confrère of Paris, as the equipage is to that of London. In winter, instead of the open calèche, a neat close chariot takes its place; for he is a very poor *fiacre*, in Pesth, who has not a winter and a summer carriage." (*Paget*, i. 230.)

The greatest variety of costume may be seen in Pesth, especially at the four great annual fairs, which are attended by at least 20,000 strangers, many of them from very distant parts. The business transacted at these fairs is very extensive. (*See Bright's Travels in Lower Hungary*, pp. 217-223.)

Pesth manufactures silk and woollen fabrics, leather, straw hats, oil, tobacco, &c.; but its principal manufacture is that of *meerschaum* pipe-bowls. These, which consist of the species of earth called *käf-kil*, dug in the Crimea, are first rudely fashioned in Constantinople, but are finished for the German markets in Pesth. They are thence conveyed to Vienna, and ultimately to the fairs of Leipzig, Frankfurt, Mannheim, &c.; where the best fetch from 3*l.* to 5*l.*, and even 7*l.* sterling. A considerable intercourse is kept up between Pesth and Buda; and though a large proportion of the pop. be exempted from payment, by their privilege of nobility or otherwise, the tolls on the bridge of boats across the Danube are estimated to amount to 16,000 florins a year. But the nobles have agreed to relinquish this offensive pri-

ville in favour of the project for building a suspension bridge across the river. (See RUVA.)

The amusements of both cities differ little from those of the German capitals. The theatres, coffee-houses, and public gardens in the neighbourhood are the favourite places of resort. Immediately beyond the barriers of Pesth is the *Rákóczi*, a wide plain on which the diets of Hungary were held for many centuries; and on a part of which horse-races, somewhat after the English fashion, are now held yearly in May or June.

Pesth is supposed to occupy the site of the *Transacicum* of the Romans, on the ruins of which a town was afterwards built by Arpad. B. IV., in the 13th century, surrounded the town with walls; and it subsequently rose to considerable commercial importance. It was held by the Turks 160 years. The present town, one of the best built and handsomest in the Austrian dominions, may be said to have wholly grown up since the reign of Maria-Theresa. It suffered severely in 1838 from an inundation of the Danube, which is said to have destroyed 2,000 houses in the whole part of the city. (*Est. Nat. Encycl., Berghaus, Allg. Lander, &c.; Páge's Hungary*, i. 229-245; *Brigat's Travels in Lower Hungary*, &c.)

PETERBOROUGH, an episcopal city and parl. bor. of England, in liberty of its own name, co. Northampton, on the navigable river Nen, crossed here by a wooden bridge, 37 m. N.E. Northampton, and 75 m. N. by E. London. Area of parl. bor. (which includes the entire par. of St. John the Baptist, with the Minster precincts), 1,430 acres. Pop. in 1831, 6,511. This small city consists of several streets close to the N. bank of the river, regularly laid out, well paved, and lighted with gas, the houses generally being well built, and some of recent erection. The principal public building is the cathedral, formerly attached to a Benedictine monastery, founded here in 870, and regarded at the Dissolution as one of the most magnificent abbeys in the kingdom. It is a regular cruciform structure of Norman and early English architecture, erected during the 12th century. The dimensions of the interior are, length, 476 ft.; breadth of nave and aisles, 78 ft.; breadth, including the great transept, 203 ft.; breadth of transepts, 69 ft.; height of ceiling, 78 ft.; ditto of lantern, 135 ft.; length of the W. front, 156 ft.; height of the central tower, 150 ft. A tower and spire once stood over the N.W. transept; but the latter has been taken down. The approach to the cathedral has a very monastic appearance. Passing under a Norman gate, with later additions, a court is entered, the right side of which is formed by the domestic buildings of the abbey; and at the end is the noble front of the church, consisting of three fine early English arches; but their beauty is much impaired by the small chapel or porch, which, in another place, would have been very beautiful. The E. end is circular, and the aisles are made out square by perpendicular additions. The choir has a wooden groined roof of very inferior workmanship; a handsome stone screen has recently been substituted for one of wood, and the fittings of the choir have been entirely renewed, under the direction of Mr. Blome. The nave is a very good specimen of that description of Norman work which has its piers composed of shafts; the proportions are good, and the general appearance is fine, without that overwhelming heaviness seen in those edifices where the great circular piers are used. There are few monuments, shrines, or chantry chapels, the parliamentary troops having plundered the church of most of its ornaments of this description. Catherine of Aragon and Mary Queen of Scotland, were interred here; but their graves are not marked by any sepulchral monument. "The remains of the monastic buildings in the court fronting the cathedral are of somewhat varied style, but present, on the whole, a valuable specimen of bold and varied outline both of plan and elevation. In the same court, also, leading to the cemetery on the N. side of the church, is a late perpendicular gate remarkably rich in ornament, and near the S. transept are some remains that may have been the refectory, or infirmary chapel of the ancient monastery." (*Rickman's Gothic Architecture*, p. 209.) The cathedral corporation consists of the dean and six prebendaries, who divide among them a net revenue of 5,118*l.*; there are also four minor canons and a precentor. Peterborough was erected into a bishop's see by Henry VII., and the diocese now comprises the cos. of Northampton, Rutland, and Leicester. The net revenue of the see amounted, at an average of the three years ending with 1831, to 3,105*l.* a year; but it has been since augmented by an order of council to 4,500*l.*, the deficiency being supplied from the surplus fund contributed by the larger sees.

The par. church is a spacious building, lately remodelled and put in very complete repair: the living is a vicarage in the gift of the bishop. The Independents, Baptists, and Wesleyan-Methodists have also their respective places of worship, and there are Sunday-schools attended by upwards of 200 children of both sexes. The cathedral grammar-school, founded by Henry VIII., is attended by

about 30 boys, and endowed with 3 scholarships and a fellowship at St. John's College, Cambridge. There are 2 charity-schools for boys, and a national school is attended by about 300 boys and 120 girls. There are numerous other charities, including a pretty large infirmary and a dispensary. The town-hall is a small but neat structure, the area beneath being used as a market-place. The gaol and house of correction for the city and liberties are both "small and miserably deficient in accommodation." (*Prisons' Report*.) There is also a small theatre, open during the summer months.

The trade of Peterborough arises chiefly from the transit of corn and malt, large quantities of which are brought down the Nen from the interior; it also imports coal, timber, bricks, stone, and other goods. The city is not incorporated, but is under the jurisdiction of the dean and chapter, whose steward holds a court for the trial of civil actions within the city. Quarter sessions are likewise held here for the liberty of Peterborough, and it is one of the polling places at elections for the N. division of the county. Peterborough has returned 2 members to the H. of C. since the 1 Edward VI. the right of election down to the Reform Act being in the hands, paying scot and lot. The electoral limits were enlarged by the Boundary Act, so as to include with the old bor. the remainder of the par., and the extra-parochial precincts of the cathedral. Registered electors, in 1839-40, 569. Markets on Saturday: fairs, July 1. and Oct. 1. chiefly for cattle.

PETERHEAD, a parl. and mun. bor. and sea-port of Scotland, co. Aberdeen, on the point of a flat, rocky promontory, projecting into the German Ocean, 27 m. N.N.E. Aberdeen; lat. 57° 32' N., long. 1° 47' W., being the most easterly point of land in Scotland. Pop. in 1831, 5,112. Peterhead was erected into a bor. of barony by the family of Keith, earls marischal, on whose estate it was built, in 1693. On the attender of that family, it was purchased by the York Buildings Company, who sold it to the governors of the Merchant Mariners Hospital of Edinburgh, who are now the superiors of the town, and have always been its liberal and munificent patrons. It did not, however, attain to any distinction till about 1779, soon after which the famous engineer, Smeaton, was employed to construct a harbour on the S. side of the promontory on which the town is built. This harbour, though on a small scale, was sufficient to demonstrate the importance of the place, and the advantage that would result, not merely to the town itself, but to the shipping employed on the E. coast of Scotland, from the improvement of the harbour. In consequence measures have been undertaken and carried into effect during the present century for excavating the rocks that obstructed the S. harbour, and for constructing a new and extensive harbour and graving dock on the N. side of the peninsula. These great works have since been completed at an expense of above 30,000*l.*, and Peterhead has, in consequence, been rendered one of the best harbours on the E. coast of Scotland. The area of the S. harbour is 6*ac.*, and that of the N. nearly 11 acres. They are formed by strong moles projecting into the sea. The harbour dues, which, in 1808, amounted to only 367*l.*, had increased, in 1837, to 2,879*l.*, and are now about 3,000*l.*

"The general appearance of the town is airy and healthy; the streets are wide and well paved; and the houses are built of the fine red granite which abounds in the neighbourhood, and is an object of traffic." (*Parl. Board's Report*.) The streets are well lighted with gas, and the town is supplied with excellent water, brought from a distance of above 21 m. Among the public buildings may be specified the town-house, with a handsome spire 125 ft. in height, and the par. church, a respectable building 118 ft. in height. A handsome cross, consisting of a Tuscan pillar of granite surmounted by the arms of the earl-marischal, was erected in 1832. The town has also a *quoad sacra* par. and church; an episcopal chapel, with chapels for the Associated Dissenters, Independents, and Methodists. The educational establishments are not such as one might expect to find in so large and thriving a town; but measures, we believe, are now in progress for having a grammar-school or academy organised on an adequate scale. The town has a scientific association, a news' room, a valuable museum belonging to Mr. Argyll, 2 public libraries, and various friendly societies. There are mineral springs within the bor. that used to be a good deal resorted to; but they are now comparatively neglected. Except rope-making and ship-building, Peterhead has no manufactures.

In 1837 there belonged to Peterhead 82 vessels of the aggregate burden of 11,022 tons. The inhab. early engaged in the N. sea whale-fishery, and carried it on for a lengthened period with great vigour and success. In 1823, 15 ships belonging to this port brought home, 2,217 tons of oil! This, however, was the maximum of prosperity, and the business has since progressively declined, and is now nearly extinct. But the loss of the whale-fishery has been compensated by the extension of the herring-fishery and the success which has attended it.

During the year ending the 5th of April, 1840, 53,677 barrels herrings were cured here: the cod or white fishery is also prosecuted to a considerable extent.

The products of the fishery form, of course, a considerable portion of the exports from the port; but, exclusive of these, very considerable quantities of corn, butter, and other agricultural products, are exported. In 1836, for example, there were shipped 27,164 quarters of corn, 14,424 bolls meal, 3,343 cwt. butter, 1,730,000 eggs, 3,258 cwt. pork, &c. Great quantities of granite are also occasionally exported.

The Reform Act conferred on Peterhead the privilege of sending a mem. to the H. of C. in conjunction with the bors. of Elgin, Banff, Culleu, Inverury, and Kintore. Registered electors in the united bors., in 1839-40, 648; in Peterhead, only 241. The bor. has 12 councillors. (*New Statistical Account of Scotland, par. Peterhead; Boundary Report, &c.*)

PETERHEAD, (ST.). See GRANSEY.

PETERSBURG, a governm. of Russia in Europe, being that in which the cap. is situated, between 58° and 60° 30' N. lat., and 28° and 34° E. long.; having N. the Gulph of Finland, the gov. of Wyborg, Lake Ladoga, and the gov. of Olonetz; E. and S.E. Novgorod; S. Pskof; and W. the Lake Peipus, and the gov. Revel. Area, estimated at about 15,000 sq. m. Pop., in 1838, 585,000. The country is generally flat; but in the N. and S.E. are a few undulating hills. The general slope is towards the N.W.: all the rivers, the principal of which is the Neva, flow to the Gulph of Finland, or Lake Ladoga. The soil is mostly sandy and thin; and the climate damp, severe, and unhealthy. At an average, frost prevails, more or less, for 160 days in the year. Rye, barley, oats, and some wheat are grown; but the climate is unfavourable to the culture of corn; and nearly 2-3ds of the prov. is covered with wood, marshes, and lakes. Timber, indeed, forms the chief source of what may be called wealth, deals and masts being the great articles of export, and the villagers subsisting chiefly by making wood-work of different kinds. The trade is limited, in a great measure, to the capital. The best agriculturists are German colonists, who raise flax, hemp, and above all, kitchen vegetables, for the supply of the capital. Russians form the majority of the inhabs.; the remainder is composed of Fins, Carelians, Ijors, Germans, &c., most of whom are Lutherans. This gov. is divided into 9 districts; Petersburg, the cap., is the only place of importance.

PETERSBURG, the modern metropolis of the Russian empire, and one of the largest cities of Europe, at the E. extremity of the Gulph of Finland, where it receives the river Neva, by which the city is intersected, lat. 59° 56' 31" N., long. 30° 18½' E. Pop., in 1838, 469,720. The city, which is of a circular form, stands partly on the main land, on the S. side of the Neva, and partly on islands formed by its branches. It owes its existence to the genius and power of Peter the Great, by whom its foundations were laid in 1703. At first all the public buildings and houses were of wood, and were huddled together without regard either to regularity or convenience. But brick and stone buildings were soon after introduced; and the streets were laid out on a regular plan, crossing each other at right angles. This was greatly facilitated by the ravages of destructive fires in 1736 and 1737, which having destroyed some thousands of the old houses, enabled government to lay down judicious regulations for their reconstruction. The empress Elizabeth did much to improve the city; but it is chiefly indebted for its regularity, beauty, and magnificence to the empress Catherine II. Under this princess the principal channel of the Neva was faced by noble granite quays; several new streets and canals were opened; and seven of the finest public buildings and monuments were either rebuilt on an improved plan, or constructed of wood. The late and present emperors have also distinguished themselves by their efforts to improve and embellish the city. It is now certainly one of the finest in Europe, and is unmatched for the width and regularity of its streets, the length and magnificence of its quays, and the elegance of its squares and public buildings.

Among the latter, which are principally situated on the

quays bordering the main channel of the Neva, and in the street entitled the Nefski Perspective, may be specified the Winter Palace, or ordinary residence of the emperor, a vast but heavy building. It communicates by a gallery with the Hermitage, another palace, long the residence of Catherine II.; the latter has attached to it the court theatre, and contains a noble picture gallery, a valuable library, and an extraordinary rich collection of engraved stones, jewels, &c. There are also the Marble Palace, the Palace of Anitchkoff, formerly occupied by the reigning monarch, the Taurida Palace, built by Catherine II. for her favourite Potemkin, &c. The admiralty, an immense brick building, occupies the centre of the city; it contains store-houses, docks for the construction of men-of-war, and a very extensive collection of objects connected with navigation and natural history. The high gilt tower of the admiralty, erected by the empress Anne in 1734, is one of the most striking objects in approaching Petersburg. Among the other public buildings are the hotel of the academy of the fine arts, accounted one of the finest in the city; the Exchange; the palace of the senate; the hotel *de l'état major*, a magnificent building; the barracks for the guards; the new theatre; the exchange bank; imperial library; foundling hospital; hotel of the land cadets, and a host of others.

The citadel, founded by Peter the Great, but since reconstructed, stands on an island in the centre of the city. It is a regular hexagon, and has a tower 360 ft. in height.

Among the churches may be specified the cathedral of our lady of Kasan, consecrated in 1811. It is built on the model of St. Peter's at Rome, and is one of the finest ornaments of the capital. The cathedral of St. Peter and St. Paul was founded by Peter the Great in 1712: it is of large dimensions; but it derives its principal interest from its containing the tombs of all the Russian sovereigns, from its illustrious founder down to the late emperor, with the exception of that of Peter II., interred at Moscow. The church of the convent of St. Alexander Nefski, at the end of the magnificent street to which it has given its name, occupies the third rank among the churches of Russia. The mausoleum of the saint is of solid silver; several distinguished persons are interred in the church; and there is attached to it a grammar school on a very large scale, having generally about 800 pupils. The cathedral of St. Isaac, now in course of being built, will be one of the finest churches in the city. The total number of churches in 1838 amounted to 58, of which 43 belonged to the established Greek faith, 11 to Catholics and Protestants, and four to dissenters. There were also, at the same epoch, 91 Greek chapels in private houses, and one monastery.

Petersburg contains some noble monuments: at the head of these may be placed the magnificent equestrian statue of Peter the Great, by Falconet. "The monarch is represented in the attitude of mounting a precipice, the summit of which he has nearly attained. His head is uncovered, and crowned with laurel; he wears a loose vest, in the Asiatic style, with half boots, and sits on a housing of bear skin: the right hand is stretched out, as in the act of giving benediction to his people, and the left holds the reins. The design is masterly, and the attitude bold and spirited. The horse is springing upon the hind legs, and the tail, which is full and flowing, appears slightly to touch a serpent, artfully contrived to assist in supporting the vast weight. The contrast between the composure of Peter and the fire of the horse, eager to press forward, is very striking. The simplicity of the inscription corresponds to the sublimity of the design.—PETERO PRIMO, CATARINA SECUNDA, 1782." (*Core's Trav.*, ii. p. 112.) The pedestal on which this noble statue is erected is a gigantic rough block of granite. It was found at a distance of several miles from the capital, and its conveyance thither was a work of extraordinary difficulty.

The column erected in honour of the late emperor Alexander is one of the finest of its kind. It is 150 ft. in height; the pedestal is of granite and bronze; the shaft of the column consists of a single piece of red granite, 84 ft. in length, and 14 ft. in diameter. This, which is the largest monolith in the world, was cut from the quarries of Pysterlar, in Finland, several m. from Petersburg. The column is surmounted by a capital and a small dome in bronze, on which is placed a statue emblematical of religion.

The cottage occupied by Peter the Great during the foundation of Petersburg is still preserved, and will be regarded by most persons as the most interesting monument in the city. It is built of wood, painted in the Dutch style, and is not 20 ft. high.

Petersburg has a great variety of institutions for the promotion of education and literature. The university, founded in 1819, has already attained to considerable distinction, and had, in 1839, 413 pupils and 42 professors. The *medico-chirurgical academy*, founded by Peter the Great, and re-organised by the emperor Alexander, for the instruction of medical men, enjoys a high reputation; two hospitals, on a large scale, are attached to it; the instruc-

tion is gratuitous, and the number of pupils may amount to 500. A sum of 396,324 roubles a year is appropriated to the support of this establishment. The education is good, and the examinations strict. Among the educational institutions may be specified the military schools (*see art. RUSSIA*); the theological academy; the school for training and instructing schoolmasters; the Oriental institution, founded in 1823; the school of commerce and navigation; the technological institution; the Protestant school of St. Peter, at which above 500 children of both sexes are educated; two gymnasiums or colleges; the schools of Senduloi and St. Catherine, for the instruction of nearly 700 young ladies; the military orphan school; the grammar school of St. Alexander Nevski, already alluded to, and a number of others.

According to the official returns, the pupils at the various schools and educational institutions in the city, in 1836, amounted, in all, to 11,233. Now, if we take the stationary pop. of the city at 370,000 (*see post*), this would give the proportion of scholars to the pop. at about 1 in 33. But when every body is educated, the proportion at school cannot well be less than 1 in 10. The number of children in Petersburg is, no doubt, less in proportion to the pop. than in most other great towns; but it is, notwithstanding, sufficiently obvious that the means of elementary instruction are very insufficient.

Petersburg has some noble libraries, and scientific and literary collections. The Imperial library, one of the largest and finest in the world, contains about 425,000 printed vols. and 7,000 MSS. The academy of sciences, founded by Peter the Great in 1724, has long occupied a distinguished place among such bodies. It contains a valuable library, an Asiatic museum, with cabinets of medals, natural history, &c. It is also furnished with an observatory, whence the Russian geographers reckon their first meridian. The Imperial Russian academy, the academy of fine arts, &c., are celebrated all over Europe; and there are besides a great number of similar institutions. The botanic garden is extensive, and has a valuable collection of exotics. There were in the city, in 1836, 32 printing and lithographical establishments belonging to the crown, and 31 to individuals.

The hospitals are numerous, and well endowed. The most celebrated is the founding hospital, founded by Catherine II., and much improved and enlarged by the late benevolent empress, Maria Fedorovna. But, however well intended, it is pretty certain that this foundation has always been productive of infinitely more evil than good. The mortality used to be enormous; and notwithstanding the improvements that have been introduced, it continues, necessarily perhaps, to be very great. From 1822 to 1831, the admissions were 39,114, and the deaths 31,779! The establishment costs about 1,000,000 roubles a year. The city hospital, and the Imperial hospital, for sick poor, are both on a large scale; there is also an institution for deaf and dumb persons, a blind asylum, &c.

The Neva is deep, rapid, and its waters as clear as crystal. The main stream, which is broader than the Thames at London, is crossed by two bridges, and its branches by three. Those are all of boats, and are removed in the beginning of winter, before the river is frozen over. The granite quay, along the S. side of the Neva, is a stupendous work, above 3 m. in length. The S. side of the town is intersected by canals, of which the Fontanka is the finest.

The streets are, for the most part, paved with stone; a few, however, are still floored with logs of timber; and recently some have been macadamised. The foot pavements are generally good; but the carriage ways, in wet weather, become very dirty.

Many of the brick houses are stuccoed and painted, so as to have the appearance of stone; but the number of genuine stone houses is very limited, indeed, and wooden houses still predominate. According to the official accounts, there were in the city, in 1836, 8,641 houses, of which 3,024 were brick and stone, and 5,617 wood. The better class of houses are covered with iron or copper, and the inferior with tiles. The principal houses have arched door-ways, under which carriages enter, and spacious court-yards, in which wood for fuel, &c., is stored up.

Owing to the barren nature of the soil round the city, most part of the provisions required for its consumption have to be brought from a great distance by canal or by sledges. An extraordinary market for butchers' meat, game, fish, &c., is held at the conclusion of the fast, ending the 28th Dec. (O. S.), at which a large proportion of the inhabs. supply themselves with provisions for the remainder of the winter. The carcases of the vast quantities of oxen, sheep, hogs, fowls, &c., brought to this market, are all frozen; the smaller animals are piled up in pyramids, but the larger ones, which are skinned, and set on their legs, in rows, along side each other, have a ghastly and frightful appearance to persons not familiar with such exhibitions. They are cut in pieces with hatchets; and when carried home are preserved in snow cellars, of which each house has one. Previously to its

being dressed, the frozen meat is thawed in cold water, but it loses much of its flavour, and all families of condition use fresh killed meat. The length and severity of the winter necessarily occasions a great demand for fuel. This consists partly of coal from England, but chiefly of wood; and as the neighbourhood does not afford a sufficient supply, vast quantities are brought from the interior. The barges, too, which arrive from the latter are almost all broken up, and used either as timber in the construction of houses, or as fire-wood. Flour and billet magazines have been erected by government, for the accommodation of the poor in scarce and severe seasons.

There were in 1836, within the city, 6 manufacturing establishments and workshops carried on upon account of the crown, and 218 by private individuals. Among those belonging to the crown are manufactures of gunpowder, tapestry, and porcelain, and a cannon foundry. Among the private manufactures are those of silks, cottons, sail-cloth, woollens, paper, leather, stuffs, tobacco, wax-cloth, soap, types, &c.; there are extensive glass-works at Ozerski, near the city; and there are great numbers of watchmakers and jewellers, coachmakers, mathematical and musical instrument makers, carpenters, &c.

Petersburg has the most extensive foreign trade of any city in the N. of Europe. This arises not so much from its great pop. as from its being the only great maritime inlet on the Gulph of Finland, and from its vast and various communications with the interior. By means partly of canals, but principally of rivers, Petersburg is connected with the Caspian Sea, goods being conveyed from the latter to the capital, a distance of 1,434 m., without once landing them. The iron and furs of Siberia and the teas of China are received at Petersburg in the same way; but, owing to the great distance of these countries, and the short period during which the rivers and canals are navigable, they take 3 years in their transit by water. Immense quantities of the less bulky and more valuable species of goods are also brought to the city during the winter upon the ice in sledges.

The principal article of export is tallow; and, next to it, are hemp and flax, iron, copper, grain, particularly wheat; timber, potashes, canvass and coarse linen; linseed and hempsed; linseed and hempsed oils; furs, hides, leather, bristles, fox, hare, and squirrel skins; cordage, caviare, wax, isinglass, tar, &c. The principal imports are sugar and other colonial products; cotton yarn, raw cotton, and cotton stuffs; dye stuffs, wines, silks, woollens, hardware, fine linen from Holland, Silesia, &c.; salt, lead, tin, coal, &c.

During the year 1836, the total value of the exports was 129,601,862 roubles; the principal articles being, tallow, 40,732,359; hemp, 19,221,328; flax, 6,291,808; copper, 9,364,065; iron, 6,869,329; canvass and coarse linen, 7,521,786; bristles, 5,316,052; hides, 2,618,100; Russia leather, 1,246,267, and potashes, 2,134,660. During the same year the imports amounted to 180,913,530 roubles; the principal articles being, cotton yarn (almost entirely from England), 48,418,476; raw cotton, 8,262,880; raw sugar (principally from Havana), 37,343,544; coffee, 4,316,996; silks, 5,420,632; woollens, 6,174,868; cotton stuffs, 3,344,434; wine, 8,879,765; and gold and silver, 2,948,450 roubles. The customs' duties during the same year amounted to 48,568,730 roubles.

This great trade is principally conducted by foreigners, especially the English. Cronstadt, 20 m. lower down the gulph, is properly the port of Petersburg. All ships drawing more than 8 or 9 ft. water stop at the former, their cargoes being conveyed to and from the city by means of lighters. Hence Cronstadt is included in the Petersburg custom-house; and vessels clear indifferently for the one or the other. The number of vessels entering the port varies from 1,000 to 1,600 a year, of which the English are by far the most numerous. The arrivals in 1836 were 1,105 ships, of the burden of 108,613½ lasts. The Russians have few native ships. A commercial bank was established here in 1818. (For further details as to commerce, &c., *see RUSSIA*.)

In most large towns females predominate over males; but it is quite otherwise in this capital: of 451,574 individuals, composing the pop. in 1836, 330,864 were males, and only 121,410 females! This extraordinary discrepancy is accounted for, partly by the great number of soldiers in the city, very few of whom are married, partly by the great number of unmarried male domestics in great houses, and partly by the fact that the wives and families of many of the peasants are established in the districts of the country to which they belong. Deducting military and strangers, the permanent population of the city does not exceed 370,000 or 380,000.

In 1832 there were 2,185 marriages, 10,167 births, and 16,262 deaths. The city is not unhealthy. In 1830, of 8,348 deaths, of individuals belonging to the Greek church, 3,314 were occasioned by colic, 2,037 by fever, 1,162 by phthisis, 359 by diarrhoea, 376 by dropsy, and 293 died suddenly. Suicides are rare, but accidental drowning is not uncommon.

Though well situated for commerce, the position of the city is, in most other respects, far from good. The ground on which it stands is low and swampy, and the surrounding country partakes of the same character, and is covered with forests. No one less bold and enterprising than Peter the Great would have dreamed of building a large city in such a situation, and no one with less gigantic means at his disposal would have been able to carry such a project into effect. But no art can ever overcome the defects inherent in its situation. The climate is severe, foggy, wet, and variable in an unusual degree. The sub-soil is so very porous and saturated with water, that it is hardly possible to excavate a cellar any where in the city, and there is the greatest difficulty in constructing sewers to carry off filth and other impurities. But the great drawback on Petersburg consists in its little elevation above the level of the sea and the river, and its consequent exposure to the most dreadful inundations. These are generally occasioned by a W. or S.W. wind, accumulating the water of the gulph at the mouth of the river, and preventing the free exit of the latter. The years 1726, 1752, 1777, and 1824 have been particularly distinguished by these inundations. The last of these visitations was the most appalling and destructive. The whole city was laid under water; above 8,000 individuals perished, and property to a vast amount was destroyed.

The amusements of Petersburg are modified by the religion and the climate. There are four theatres, and plays are acted in Russian, German, French, and sometimes English. The actors are all paid by government, and do not, in any degree, depend on their audiences. The *personnel* of the theatres, in 1836, amounted to 1,126 individuals. During winter the national amusements are sledge-driving and sliding down artificial elevations, similar to those called in Paris the *Montagnes Russes*. All classes use the vapour bath: in 1836 the public and private baths in the city were estimated at 350. During the same year there were open 18 public markets, 2,517 shops attached to houses, 118 *magazins de modes*, 5 great magazines for merchandise, 40 live-boats for the sale of live fish, 53 eating-houses, 29 furnished hotels, 37 coffee-houses, 36 confectioners, 46 *restaurateurs*, 59 do. for the lower classes, 308 wine-merchants, 98 taverns, 5 spirit magazines, 70 dépôts for the sale of spirits, 197 bakehouses, 247 forges, &c. (For further particulars as to the climate, manners, and classes of the people, police, &c., see RUSSIA.)

The country in the vicinity of Petersburg being flat and marshy, presents few rural beauties. The imperial family have country residences at Oranienbaum, on the Gulph of Finland, Rammanoi Ostéof, Peterhof, Czarkoselo, &c. Czarkoselo, situated on the Neva, about 16 m. from Petersburg, is an exception to the general rule, inasmuch as it stands on an eminence rising 220 ft. above the river; Paulsk, in the vicinity of Czarkoselo, is also considerably elevated.

The palace of Czarkoselo is reckoned the finest summer residence belonging to the Russian monarchs. The town, though small, is handsome and improving. It has a lyceum, with 14 professors a forest school, and is the cap. of a circ. Paulsk has also a pretty little town dependent on it. These have been, for some time past, favourite resorts of the citizens of Petersburg; and the presumption is that they will be more resorted to now than ever, a railroad—the first work of the kind constructed in the empire—having been opened between them and the capital.

We have consulted in drawing up this article the *Travels of Coze, the Voyage de Deux Français dans le Nord de l'Europe* (an accurate and valuable work), *Storch's Picture of Petersburg*, &c.; but we are principally indebted to the excellent account of the city in Schnitzler's work *La Russie, La Pologne*, &c., p. 147–301, and the official accounts published by the Russian government.

PETERSBURG, a town and river-port of the United States of N. America, state of Virginia, on the Appomattox, a trib. of the James River, 21 m. S. by E. Richmond; lat. 37° 14' N., long. 77° 20' W. Pop., in 1830, 8,322, of whom 2,850 were slaves, and 2,032 free blacks. The town, which was rebuilt, in 1815, after an extensive fire, is regularly laid out, and comprises many handsome houses, with churches and other public buildings, including a masonic hall. Its inhab. carry on an active trade in cotton, flour, and tobacco; and it has pretty extensive manufactures. The fall of the river, close to the town, furnish ample water-power, and it had, in 1835, three cotton-mills, six flour-mills, a brass and iron foundry, tanneries, oil-mills, &c. The river is navigable up to the town for vessels drawing 7 ft. water; but large ships unload at City Point, near the mouth of the river. (*Murray's Encycl. of Geog.*, Amer. ed. iii. 525; *Encycl. Amer.*, &c.)

PETERSFIELD, a parl. bor., market-town, and par. of England, co. Southampton, and hund. Finch-dean, near the Loddon, 15 m. N.N.E. Portsmouth. Pop. of

parl. bor. (which includes with the old bor. the tithing of Sheet, the several pars. of Buriton, Lpp, and Froxfield, 3 tithings belonging to the par. of East Meon and the par. of Steep, with the exception of 2 tithings), in 1831, 4,391; ditto, of town, 1,495. It is a small, clean, country town, its principal street crossing the Portsmouth and London road, nearly at right angles. The church is a large brick structure, with a low, square tower: the living is a curacy subordinate to the rectory of Buriton. Near the church is an equestrian statue in bronze of William III., erected at the expense of the late W. Jolliffe, Esq., the father of the present lord of the manor; but it has a shabby appearance, and is any thing but an ornament. The Wesleyan-Methodists and Baptists have their respective places of worship, with attached Sunday schools. The endowed charity school, called Church's College, was founded in 1722, and furnishes clothing and food, with general and mathematical instruction, to 10 or 12 boys. "Petersfield has but little trade, and any consequence which it possesses arises entirely from its position on the high road between London and Portsmouth," an advantage, however, which it will not enjoy after the completion of the Portsmouth branch of the south-western railway. (*Parl. Board. Rep.*) The bor. was incorporated in the reign of Elizabeth, and is governed by a titular mayor and common-council, chosen annually at the court-leet of the lord of the manor. It returned 2 mems. to the H. of C. from the reign of Edward I. down to the Reform Act, the right of election being in the freeholders in general within the bor., though, in point of fact, it had been for many years a close bor. belonging to the lord of the manor. The Reform Act deprived it of one of its mems., and the Boundary Act enlarged the electoral limits, so as to include with the old bor. the additional pars. and tithings mentioned above. Registered electors in 1839–40, 343. It is also one of the polling-places at elections for the N. div. of Hampshire. Markets on Saturday, and fortnightly cattle-fairs on alternate Wednesdays; other fairs, Mar. 5, July 10, and Dec. 11, for sheep and hogs.

PETERWARDEIN, or PETERVARA, the cap. town of the Slavonian military frontier, and one of the strongest fortresses in the Austrian empire, on a scarped rock, on the S. bank of the Danube, opposite Neusatz, 46 m. N.W. Belgrade. Pop., with its suburbs, about 4,800, exclusive of its garrison, which is usually about 3,000 strong, though there are barracks adapted for 10,000. Peterwardein has several churches, schools, &c., and communicates with Neusatz by a bridge of boats defended by a strong *rêlé du pont*. It is the residence of the general commandant of the Slavonian military frontier and several subordinate military authorities. It is supposed to occupy the site of the ancient *Acuminum*, and derives its present name from Peter the Hermit, who marshalled here the soldiers of the first crusade. (*Ant. Nat. Encyc.*, *Berghaus*, *Slade*; *Paget*, &c.)

PETTERTON, NORTH, a market-town and par. of England, co. Somerset, hund. its own name, 74 m. N.E. Taunton. Area of par., 11,080 acres. Pop., in 1831, 3,566. The town consists of one long street, in which are many well-built houses and a spacious market-place. The principal buildings are, the par. church, a handsome edifice, a chapel-of-ease, and an endowed school for 20 boys. The inhab. are chiefly employed in retail trade and agriculture. A large corn-market was formerly held here; but it has long since declined in favour of that held at Bridgewater. Fairs, May 1. and the Monday before Nov. 13.

PETWORTH, a market-town and par. of England, rape of Arundel, co. Sussex, hund. Itorbridge, on the Arun, 13 m. N.N.E. Chichester, and 42 m. S.W. London. Area of par., 6,140 acres: pop., in 1831, 3,114. The streets are very irregular, but there are many well-built and some handsome houses, besides a fine market and sessions-house near the centre of the town. The church, a neat stone edifice recently enlarged, has a square tower: the living is a rectory in the gift of the Earl of Egremont, the lord of the manor. The Wesleyan-Methodists and Independents have also their respective places of worship, and there are various Sunday schools and a national school. Here are almshouses, an hospital, and a house of correction on the plan of Howard. A considerable retail trade is carried on for the supply of the neighbouring gentry; but most of the inhab. are engaged in agriculture. The Epiphany and Easter quarter-sessions for the W. div. of Sussex are held here, and petty sessions on alternate Saturdays. Petworth is one of the polling-places at elections for the W. div. of the co. Markets on Saturday; fairs, Holy Thursday, July 29, and Oct. 2.

Close to the town is Petworth House, the seat of the Earl of Egremont, which, both for the elegance of its exterior and the sumptuousness of its internal fittings, may vie with the finest mansions of the English nobility: the park, which is inclosed by a wall, 12 m. in circ., is beautifully laid out, and commands many picturesque as well as extensive views.

**PEZENAS**, (an. *Pescara*), a town of France, dep. *Hérault*, cap. cant. *Lez*, on the left bank of the *Herault*, and *Peind*, 24 m. W. S. W. of *Montpellier*. Pop., in 1836, 7,450. It is finely situated, and its old castle commands a magnificent prospect. Several of its streets are wide and lined with good houses. It had a handsome par. church, and had formerly many conventual churches; but one of these has been converted into a distillery, another into an hotel, and a third into a theatre! Pezenas is the seat of a tribunal and chamber of commerce, and a comm. coll. It has manufactures of woollens, cotton stuffs and yarn, linens, &c. But it is principally celebrated for the great fair, held here in September, which is attended by dealers from all parts of the S. of France. A great deal of business is then transacted in wool, woollens, cottons, and other fabrics. (*Hugo*, art. *Hérault*, &c.)

**PHILADELPHIA**, the second city, and formerly the cap. of the U. States of N. America, state Pennsylvania, between the Delaware and Schuylkill, about 6 m. above their confluence, 80 m. S. W. New York, and 123 m. N. E. Washington; lat. 39° 57' N., long. 75° 10' 59" W. Pop. in 1840, 258,832. The city, which is about 4 m. in length N. to S., by about 2 m. in breadth, is divided into square compartments by wide and well-planned streets crossing each other at right angles. It is lighted with gas, and drained by sewers, which discharge themselves into the Delaware. It is also admirably supplied with water from the Schuylkill, by means of some very extensive dams and reservoirs erected at Fairmount, near the city, at an expense of 132,512 dollars.

"There is a great air of neatness, and of almost peculiar cleanness about the city; but the extreme regularity of the streets is tiresome. The steps of the outer stairs of a great part of the houses are of white marble, and the tops of the outer railings of brass, and both, as well as the windows, are not only cleaned every morning, but made bright with a degree of care which I never before witnessed. The streets are very generally shaded with trees—a very desirable luxury in this hot climate." (*Stuart's America*, i. 365.)

The public buildings, which are generally constructed of white marble, are among the most elegant in the U. States. The United States Bank, built on the model of the Parthenon; the Pennsylvania Bank; the Mint of the U. States; a handsome edifice with Ionic porticoes, 72 ft. in length on each front; the Exchange, ornamented with Corinthian columns, and comprising a spacious hall and news-room, the post-office, &c.; the Girard Bank, Girard College, a noble structure, entirely surrounded with a colonnade of Corinthian columns; Masonic Hall, &c., are the buildings most remarkable for beauty; but the most interesting is the State-house, whence the Declaration of Independence was first promulgated.

There are about 100 churches and places of public worship, including two synagogues: the U. States arsenal; the State penitentiary, on the panopticon principle; the county prison, a massive granite building, in the castellated Gothic style, with upwards of 100 cells; and the debtors' prison demand notice. The Schuylkill is here crossed by two wooden bridges, one of which has an entire length of 1,130 ft.; the other is a single arch, and probably the widest existing, its span being 324 ft.

Philadelphia is remarkable for the number and excellence of its benevolent institutions. On the bank of the Schuylkill is the almshouse, consisting of four distinct ranges of building, comprising nearly 4,000 rooms. The Pennsylvania hospital, established in 1752, is one of the first institutions of the kind in the Union. The whole extent of the buildings from E. to W. is 278 ft.; and detached from the hospital is another building of 3 stories, calculated to accommodate numerous patients. There are belonging to the hospital a valuable anatomical museum, and a library. In 1817, a handsome building was erected for the accommodation of West's painting of "Christ healing the Sick," which is a valuable source of income to the hospital. The U. States marine asylum, capable of accommodating 400 men; Will's hospital; and the various institutions for the blind, the deaf and dumb, &c.; the Magdalen, and orphan asylums, &c., are established upon a most liberal scale. The academies and learned institutions are equally distinguished. The university of Pennsylvania, founded in 1755, occupies a large edifice originally built for the President of the U. States. It has faculties of arts, medicine, natural science, and law; with an attached junior academy and charity school. It has an excellent philosophical apparatus, and a considerable library. This university is chiefly distinguished as a medical school; in 1840 it had, in all, 555 students, of whom 444 were medical. There are here 2 other medical colleges, attended by about 200 students. The Philadelphia library, which originated with Dr. Franklin, and was incorporated in 1712, occupies an elegant edifice, in front of which is a statue of Franklin in white marble. There are belonging to it a museum, a philosophical apparatus, and the Philadelphia library and the Loganian library,

which, together, have about 22,000 vols. The American philosophical society, established here in 1763, has a library of 9,000 vols. The Philadelphia society for promoting agriculture was instituted in 1785, and has a small library, a cabinet of minerals, and a repository for agricultural implements. The oldest seminary in Pennsylvania is that incorporated by William Penn, under the title of Friends' Public Schools. It has considerable funds, and supports a number of schools, which give instruction in the Latin and Greek languages, mathematics, and natural and experimental philosophy. The astronomical observatory in the city belongs to this institution; and it has an extensive philosophical apparatus. The Athenæum, incorporated in 1815, has a library of 5,000 vols., a cabinet of minerals and medals, and upon its tables are to be found the principal newspapers of the United States and Europe, and a numerous collection of American and European magazines. The Academy of Natural Sciences has a good cabinet, and a library of 5,000 vols.; the Pennsylvania Historical Society, and the Franklin Institute, have both published valuable transactions. There are several good theatres and excellent market-houses: the markets are, perhaps, the best supplied of any in the U. States.

Philadelphia is distinguished as a manufacturing city, having shot, nail, cotton, paper, rope, glass, &c., manufactures, with numerous printing-offices, marble works, tanneries, breweries, distilleries, &c.; and is inferior only to New York and Boston in the extent of its commerce. It has the advantage of a double port: that on the Schuylkill, being the shallowest, is the grand *dépôt* for the vast quantities of coal brought from the interior; while the other, on the Delaware, having water sufficient to float the largest merchantmen close by the quays, is exclusively resorted to by the shipping engaged in foreign trade. The city communicates by numerous canals and railroads with the adjacent W. states, and the interior of Pennsylvania and Ohio. The value of the imports from foreign countries may be estimated at from 10 to 16 million dollars a year; but the principal business of the port is its coasting trade with New York, Baltimore, Boston, and other American cities, which she supplies with various descriptions of manufactured goods, flour, and provisions. At an average from 300,000 to 400,000 barrels of flour are annually exported from this city; and it is also a great mart for the export of beef, butter, salt, &c.

We subjoin some returns illustrative of the trade of the port in 1838 and 1839.

In 1836	-	-	bbls.	557,917
1837	-	-		216,339
1838	-	-		292,763

During the year ended 30th Sept. 1838, the aggregate burden of the vessels belonging to the district of Philadelphia amounted to 47,346 tons. There are 16 banks in the city, with a united capital of 51,900,000 doll.; but it is necessary to bear in mind that the United States Bank, which is in a state of bankruptcy, is included in the number, and that all the other banks have suspended payments in specie!

For municipal purposes, Philadelphia is divided into six wards, or districts, and is governed by a mayor, a recorder, 15 aldermen, and a select and common council, annually chosen by the citizens. The mayor's court has the same jurisdiction as the county courts of quarter sessions. The city sends seven representatives and two senators to the state legislature.

Philadelphia was founded by William Penn, in 1682. The first Congress of the Union was held here in 1774, and in 1776 the Declaration of Independence issued from its press. It was occupied by the British in 1777 and 1778. It continued from the last-mentioned year down to 1800, to be the cap. of the Union. (*Murray's Encyc. of Geog., Amer. edit.; Encyc. Amer.; Stuart's America, &c.; Official Tables.*)

PHILADELPHIA. See ALA-SIEHR.

PHILIPPINE ISLANDS, a group of islands of the Eastern Archipelago, principally included in its 5th division, forming, Cuba excepted, the most valuable colonial possession still belonging to Spain, between the 5th and 24th deg. N. lat., and the 117th and 124th deg. E. long., having N. the Balintang channel, which divides it from the Batanes and Bashi Islands; E. the Pacific Ocean; S. the Strait of Basilan, separating it from the Sooloo Archipelago to the E. of Borneo; and W. the Chinese Sea. Aggregate area (according to Berghaus), including Palawan, 134,115 sq. m. Of these islands, ten are large, and the rest of very inferior size, their extent and pop., in 1837 (from an official return), being respectively as follows:—

Islands and Provinces.	Area in sq. m.	Pop. in 1837.
Luzon (18 provs.)	56,404	2,261,807
(Mindoro)	4,155	29,652
Pangay (5 provs.)	4,716	406,050
Isla de Negros	5,774	35,622
Zebu	2,162	250,817
Layre	4,198	92,165
Samar	5,170	99,655
Masbate	1,215	2,310
Palawan	7,558	11,097*
Magindano (2 provs.)	55,637?	74,560*
Sooloo Islands, including the Isla de Calamianes	8,826	15,000?
Total of 30 provs.	154,115	3,500,000?

The islands of Palawan and Magindano, however, are but very imperfectly known, portions of them being only subject to the colonial government of Manila, the rest being governed by chiefs of native and often hostile tribes.

Luzon, the largest of these islands, and that also which is best known to Europeans, is of extremely irregular shape, but may be described as a long and narrow island, running N. and S., with a peninsula (called Canaries) stretching out at its S.E. side, its length from Point Cabicunga northward, to Point Calaan southward, being about 450 m., and its breadth ranging from 10 to nearly 140 m. The coast generally is rocky, and indented with numerous bays and gulfs; on the E. side is the Seno de Lamon, a deep narrow inlet, nearly separating the peninsula of Canaries from the rest of the island, and on the W. side are the gulph of Lingayen, the bay of Manila, the Ensenada de Bayan, and the Seno de Hagay. A large portion of the surface is covered with mountains; and N. of Manila the chains are divided by the Cagayan, the largest river of the island, into two nearly parallel ranges, called Sierra Madre and Sierra de los Caravillos, that terminate respectively in the Points Cabicunga and St. Vincent, the extreme N. points of the island. The latter range is the most elevated; but even its highest peaks do not rise more than 6,000 ft. above the sea. S. of Manila the chain may be traced into the peninsula of Canaries, a large portion of which it covers, and finally terminates in the Punta Calaan. The plain of Pampanza N. of the city of Manila, extends northward nearly as far as the gulph of Lingayen, from which it is separated by a ridge of rather lofty hills: it is about 90 m. in length by about 30 m. in breadth, and being watered by a river falling into the Bay of Manila, is extremely fertile, and is covered

with plantations, and densely peopled. (*Berghaus, Memoir zur Beschreibung der Karte von den Philippinen, Inseln*, p. 16.) S. of Manila is the Laguna de Bahía, about 20 m. in length and 10 m. in breadth, the waters of which are conveyed into the Bay of Manila by a wide and pretty deep stream, the Bagic, flowing through the cap. A smaller lake, S. of the Laguna de Taal, which communicates with the Seno de Bayan, by the short, but deep river Buhay, is a nearly circular, being about 11 m. in diameter, and contains the island of Taal, in which is a volcano, with two active craters. About 20 m. E. is another volcano; and more to the S., in the peninsula of Canaries, are ten volcanos, one of which has frequent eruptions: in fact, throughout Luzon and most of the Philippines, the igneous formations have been found in constant connexion with the primitive rocks, and there can be no doubt that they form a part of the great volcanic band extending from Kamtschatka, through Japan and Formosa into Borneo, Java, and Sumatra. Gold, iron, and copper, have been found in the mountains of Luzon, and rock-salt is so abundant in some parts as to be an article of export. Luzon is separated from Mindoro by the strait of that name, about 5 m. broad, and from Samar by the Embocadero de San Bernardino, the common passage for vessels navigating the Pacific on their way to China.

The Bisayan group, which lies S.W. and S. of the great island last mentioned, comprises about eight or nine considerable islands, the most westerly of which is Mindoro, and that most eastward Samar. With the exception of Panay, which is triangular, these islands are generally long and narrow; Mindoro, Negros, Samar, and Masbate, are very mountainous, and only moderately productive; but Panay and Zebu contain much good level land, and are, on the whole, the most important islands of the Philippine group. The Palawan, the extreme W. island of the Philippines, extends from N.E. to S.W. about 250 m., with a breadth of not more than 1-10th its length: it is reported to be extremely mountainous; but the greater part is inhabited by savages, and it has been little visited by Europeans. (*Berghaus*, p. 65.) A small portion only at its N. extremity belongs to Spain.

Magindano, or Mindano, the largest of the Philippine islands after Luzon, is of very irregular shape, having a peninsula stretching 150 m. from the main part of the island: length from N. to S. about 320 m.; average breadth, exclusive of the peninsula, 45 m. Daupier and Forest are the principal authorities from whom we derive any knowledge of this still imperfectly known island. In the interior, near the Bay of Ilano, is a considerable lake, which, according to Forest, is between 15 and 20 m. in width. The E. coast is mountainous, and numberless hills occur in the W. and S. districts, which are generally well-covered with timber: large tracts, however, are found in some parts quite destitute of trees, and covered, like the savannahs of America, with long, rank grass. So large an island must necessarily have large rivers; but only 2 of them are known, one on the N. side, flowing into the Bay of Butuan, and another, called the Polang, flowing westward into the Bay of Ilano, opposite the island of Butuan. The Spanish settlements, which are chiefly on the N. side, form 2 provinces in the capitanata of the Philippines. The interior is inhabited by *Horaforas*, who are treated as slaves by the Malays occupying all the S. coast; they acknowledge the supremacy of a native sultan.

The climate of the Philippines, owing to their extent, is more variable than in the other groups of islands lying so near the equator. In and about Manila, the district usually visited by Europeans, the mean temperature of the hot season (from August to October) may average about 82°, and that of the cold season, usually preceding the rains, about 70° Fahr. The years of the tropical countries, is divided into a wet and dry season, here depending on the monsoons: the former lasts from May till the commencement of November, and the latter during the rest of the year. In the S.W. monsoon immense quantities of water falls, and the rain frequently lasts for 12 or 14 days without intermission. A large part of Luzon is within the region of the *typhoons*, which are as formidable as the tornados of the W. Indies: they last from May to December, but seldom continue more than 6 or 8 hours at a time. In Luzon (with which we are better acquainted than the rest of the group), the inhabs. suffer from agues and dysentery, in consequence of the great extent of marshy and low grounds inundated during the rainy months, and exhaling pestilential vapours during the rest of the year. (*Meyen, Reise um die Erde*, ii. 281.)

The agricultural products of the Philippine islands include rice, millet, and maize; sugar, indigo, hemp, tobacco, coffee, and cotton, with a great variety of other articles of inferior importance; but with the modes of culture we are little acquainted, though, according to Moor (*Malayan Archip.*, p. 81.), the Chinese imple-

\* This estimate includes only the Spanish portion of these islands.

ments are pretty generally used in husbandry. Rice is the chief support of the pop., and hence is raised in large quantities throughout the group, the marshy nature of the country in many parts being favourable to its cultivation. In other districts, however, upland rice is cultivated. The sugar-cane is raised on the great plain of Panganga and in the island of Panay; the mode of extracting the sugar is defective, but the sugar is excellent; its culture is also rapidly extending, and it now forms by far the most important article of export from the Philippines. Tobacco grows well, and might be produced on a very extensive scale; but its growth is limited, from the manufacture of cigars, in which form alone tobacco is exported, being a government monopoly. Indigo, also, is pretty extensively cultivated, but is inferior in quality to that of Bengal. Sapan wood constitutes the chief timber of the hilly districts, and is exported in large quantities to China. The coffee-plant was introduced by the Spaniards at the close of the last century, and grows wild on the W. side of Luzon, though not in the other islands. The coffee exported from Manila is almost wholly procured from these wild plants, and is alleged to be almost equal to that of Bourbon or the Mauritius. The banana is found on nearly all the islands, and hemp is produced very abundantly in the neighbourhood of Manila, as well as in Panay and Zebu, furnishing materials both for cordage and a strong coarse cloth woven by the Malays. (*Mcyea*, ii. 279.) Excellent sago grows in most parts of Luzon, and the cocoa-nut, which was introduced from Guatemala, is very abundant, and superior in quality there to that of Peru. The shrub-cotton (*Gossypium herbaceum*) thrives well; but, owing to some imperfection in the mode of breaking the pod, the cotton is of inferior quality, and little is exported. Cinnamon, the betel-pepper, and the clove-tree are found wild in many of the islands, and the bread-fruit, mango, and shaddock are raised very abundantly and with little labour. The other fruit-trees are few in number and of very indifferent quality. The mountains produce excellent timber for building both houses and ships; and the bamboos, used in the construction of the houses of the Malays, are very long, some being as thick as a man's thigh. The fauna of the Philippines comprises buffaloes of uncommon size and strength, a small, but hardy, breed of horses, introduced by the Spaniards, goats, pigs, and a few sheep, with immense numbers of ducks and fowls both wild and domestic. Land-tortoises are plentiful in most of the islands, and their shells constitute an important article among the exports. There are no beasts of prey; but caymans are found in most of the rivers and lakes, and are particularly numerous in the Laguna de Bahía. Among the birds may be noticed the swallows which supply the edible nests. Fish abound on the coasts, and the native fishermen are equally expert with the other islanders of the E. Archipelago. Pearl-oysters also are found in large quantities, and the shells are exported to China. The sea-slug, or *holothuria*, is also an important article of commerce.

**Manufactures** are of very little importance. The plaiting of straw and chips of wood into hats, cigar-cases and matting is carried on pretty extensively, and the hats are highly prized by the Spaniards. Domestic weaving occupies most of the females; and cotton cloth was till recently an article of export to Mexico. Considerable quantities of earthenware are made in Luzon, but of very inferior quality to that of China. The manufacture of cigars is a government monopoly; and, according to *Mcyea*, ii. 211, the royal manufactory at Manila employs about 2,000 persons, two-thirds of whom are females.

**Commerce.**—Considering the great fertility and varied productions of the Philippines, and their peculiarly favourable situation for carrying on commerce, the limited extent of their trade, even with its late increase, may excite surprise. This, however, is entirely a consequence of the wretched policy of the Spanish government, which persevered until very recently in excluding all foreign ships from the ports of the Philippines, confining the trade between them and Mexico and South America to a single ship! Even ships and settlers from China were excluded. "Provisions," says La Pérouse, "of all kinds are in the greatest abundance here, and extremely cheap; but clothing, European hardware, and furniture, bear an excessively high price. The want of competition, together with prohibitions and restraints of every kind laid on commerce, render the productions and merchandise of India and China at least as dear as Europe!" Happily, however, this miserable policy, the effects of which have been admirably depicted by M. de la Pérouse, has been materially modified within the last few years. The events of the late war destroyed for ever the old colonial system of Spain; and the ships of all nations are now freely admitted into Manila and the other ports in the Philippines. An unprecedented stimulus has, in consequence, been given to all sorts of industry; and its progress will, no doubt, become more rapid, according as a wider experience and acquaintance with foreigners makes the

native better aware of the advantages of commerce and industry, and disabuses them of the prejudices of which they have been so long the slaves.

In 1837, among other articles exported from Manila, were 222,183 piculs (about 13,250 tons) sugar; 59,457 pic. hemp; 126,003 coyangs rice; 4,598 boxes cigars, with considerable quantities of indigo, hempen cloth, sapan wood; and a great number of other articles; the total value of the exports amounting in the course of that year to above two million dollars. Cotton manufactured goods constitute the great article of import. The foreign trade of the islands centres almost entirely in Manila, which see. It is, in fact, the only port in the Philippines to which either Spanish ships to or from Europe and foreign vessels generally are allowed to trade; but Spanish vessels trading with China and Singapore, may proceed to the outports of Pangasinan, Ylvera, and other places, to take on board their outward-bound cargoes. (*See MANILLA*.)

The population of the Philippines is extremely various; and, independently of foreign settlers, the natives consist of a great number of distinct tribes, such as of Malay, partly of Papuan origin, and speaking several distinct languages or dialects. Some of the natives still adhere to the polytheism they professed before the arrival of the Spaniards; but a large proportion have been converted to the Catholic faith, which, indeed, is the common bond between them and their new masters, and the principal means by which the latter have so long been able to maintain their ascendancy. The natives are said to be the most active, bold, and energetic of any belonging to the E. Archipelago. "These people," says M. de la Pérouse, "appear in no respect inferior to those of Europe. They cultivate the earth like men of understanding; are carpenters, joiners, smiths, goldsmiths, weavers, masons, &c. I have walked through their villages, and found them kind, hospitable, and communicative; and though the Spaniards speak of them and treat them with contempt, I perceived that the vices with which they are charged, ought rather to be imputed to the colonial government." (*Voyage*, chap. 15.) The people here described, however, are the Malays, who have pretty generally acknowledged the supremacy of the Spaniards, by whom they are treated as free subjects, and allowed to be proprietors of land; the Papuans, who chiefly occupy the higher parts of the country and less frequented islands, are miserable savages, incapable of civilisation, and avoiding all communication with foreigners. The rest of the population comprises European and Creole Spaniards, Spanish and Indian mestizos, Mohammedans from the E. Indies, and Chinese. The Spaniards, however, do not, perhaps, exceed 4,000 or 5,000.

The seat of government is at Manila, the residence of the captain-general of the Philippines; but there are lieutenant-governors in the most important of the other islands, and alcaldes in each of the provs., which also are subdivided into *pueblos*, having their separate intendants. The revenues of the Philippines are principally derived from *ad valorem* duties on imports and exports, and from a capitation tax, and the tobacco monopoly. Foreign commodities, imported in foreign vessels, pay 14 per cent., and in national vessels from 7 to 9 per cent.; but there are some exceptions, and wines of all sorts, except Champagne, pay from 40 to 50 per cent., according as they are brought in native or foreign bottoms. Spanish products, imported by Spanish vessels, pay 3, and, by foreign vessels, 8 per cent. Exports (in which are comprised commodities produced in the island, and imports from foreign countries for consumption) pay from 1 to 1½ per cent. *ad valorem*, by Spanish, but from 2 to 3 by foreign ships. Tobacco, however, and hempen rope, made at Manila, may be exported free of duty. Spaniards may export rice free of duty; but foreigners are charged 4½ per cent. The capitation tax, or annual tribute, is charged at certain rates on all the inhabs. except European mestizos. The Chinese, who constitute the chief portion of the shopkeepers, traders, mechanics, coolies, and household servants are divided into four classes, paying rates, varying from 12 doll. 6 rs. to 120 doll. 6 rs., to which they are subject from the age of 16 to 60; but no Chinese is allowed to settle on the islands after the age of 40 years. Chinese and Indian mestizos pay 1 doll. 3 rs. annually, from the time of puberty till death, and Indians of both sexes pay 5 rs. 6 gr. each, during the same period. The number of tribute payers amounted, in 1837, to 1,305,142, of whom 901,924 belonged to the 17 provs. comprised in the island of Luzon. The army consists of about 7,000 men, of whom only 700 are Spaniards, and the rest Malays. The cavalry are chiefly European; but the Malays are said to be good soldiers, and occupy most of the fortresses in Luzon.

The Philippines were discovered by Magellan in 1521, but were not claimed by the Spanish till 1565, soon after which Manila was constituted the cap. of their posses-

sions in this part of the world. The islands received their present appellation in honour of Philip II. when king of Spain. The Dutch and Chinese tried to make settlements here in the 17th century, though without success, owing to the determined and jealous opposition of the Spaniards. In 1762, Manila was taken by the English, who gave it back to Spain in 1764; since which they have held it without interruption. The government, however, is inefficient and unable to protect the islands from the ravages of the Sooloo and other pirates, who capture vessels, plunder villages, massacre or enslave the inhabs., and commit other enormities with impunity. (*Berghaus's Asien*; *Mejen*, li. 210-264; *Moor's Malayan Archipelago*, p. 76-85; *Mayer's Hist. View of the Philipp. Islands*; *Hamilton's Gaz.*)

PIACENZA (an. *Placentia*), a city of N. Italy, duchy Parma, cap. prov. and duchy of its own name, on the Emiliau W. near the Po, where it is joined by the Trebbia, 37 m. W.N.W. Parma, and 37 m. S.E. Milan; lat.  $45^{\circ} 2' 44''$ , long.  $9^{\circ} 42' 32''$ . Pop., 30,000. It is of an oblong form, surrounded with ramparts, now partly converted into public promenades, and defended by a citadel garrisoned by Austrian troops. Its streets are wide and regular, especially the principal, called the *Stradone*, which is one of the handsomest in Italy; but they are dull and deserted. The houses are built of brick. The principal square is mostly surrounded with old and mean buildings, but includes the town house, with the prison, an antique structure, with fine Gothic tracery-work; the governor's palace, an old building, with new front, raised by the French; and a large church: in the centre of the square are the equestrian statues of Alexander Farnese and his son. The Farnese palace, an unfinished edifice of singular architecture, designed by Vignola, is now converted into a barrack; its walls were formerly adorned with the works of Raphael, Correggio, Parmegiano, &c.; but these were mostly removed when the last Duke of Parma changed his brick palace of Piacenza for the throne of Naples. Piacenza abounds with churches. The cathedral is a heavy-looking building of the 12th century; but its cupola is ornamented with fine frescoes by Guerino and Franceschini; and it has an altar-piece of high merit, by Proccacino, with other paintings by that artist, the Caracci, Parmegiano, &c. Many of the other churches, also, boast of fine paintings; but that formerly belonging to the Augustine convent, an elegant structure by Vignola, has been converted into a granary. The city has a pretty theatre, good hotels, a public library, said to comprise 30,000 vols.; two orphan asylums, &c.; and about  $\frac{1}{2}$  m. distant, a bridge crosses the Po. Piacenza is a bishop's see, the seat of the high court of appeal for the duchy, two inferior tribunals, an episcopal seminary, with about 200 students, schools of the fine arts, architecture, a high school for young ladies, &c. It has a few manufactures of silk twist, wollen stuffs, stockings, hats, earthenware, &c.; but its chief trade is in agricultural produce. It has a large fair in April.

When colonised by the Romans, anno b.c. 219, Placentia was the most important and strongest city in Cispadine Gaul, and secured a secure retreat to the Romans, after the unfortunate battles of the Ticinus and Trebbia. Its fine amphitheatre, beyond the walls, was destroyed in the war between Otho and Vitellius. Piacenza, with its territory, was taken possession of by Pope Julius II., and given by Paul III. to L. Farnese. It has since mostly followed the fortunes of Parma. Pope Gregory X., Cardinal Alberoni, Pallavicini, Landi, &c. were among the remarkable natives of this city. (*Rampoldi*; *Cramer's Anc. Italy*, i. 79-82; *Conder's Italy*, li. 18-23, &c.)

PIAZZA, a town of Sicily, near its centre, intend. of Caltanissetta, 18 m. E.S.E. city of that name. Pop. in 1831, 13,229. It is built upon an isolated eminence. There is nothing remarkable in its buildings; but it is admired for the richness of its territory, and the great beauty of the contiguous country. The *chiesa madre*, a good church, several convents, and a college, are the principal edifices. It is a bishop's see; but, from the little attention paid to it by classical writers, and the absence of any vestige of antiquity, it was evidently a place of no great consequence in early times. (*Hoare, Sir R. C. Classical Tour*, li. 253, 254.)

PICARDY, one of the former provs. of France, now subdivided among the depts. Aisne, Somme, Pas-de-Calais, Ardennes, and Oise.

PICKERING, a market-town and par. of England, N. riding co. York, W. div. of wap. Pickering-Lythe, on the S. side of the Egton Moors, 18 m. S.W. Whitby, and 23 m. N.E. York. Area of par., including 5 townships, 32,760 acres: pop. of township in 1831, 2,555. The town, situated on a gentle eminence near a small tributary of the Derwent, is old and straggling. Near its W. extremity are the ruins of a castle, in which Richard II. was confined after his deposition, and prior to his final removal to Pontefract. The church is a fine old building,

with a lofty spire: the living is a vicarage in the gift of the Dean of York. The Wesleyan-Methodists, Independents, and other dissenters, have their respective places of worship; and there are various Sunday schools and a well-endowed charity school for 180 children of both sexes. The town sent 2 mems. to the H. of C. in 23 Edw. I.; but the privilege was discontinued in the same reign, and has not been restored. It belongs to the duchy of Lancaster, and comprises in its jurisdiction several neighbouring villages, the whole forming what is called "the Honour of Pickering." A railway, 24 m. in length, connects this town with Whitby. A manor-court is held here at Easter and Michaelmas, for the recovery of debts under 40s., and petty sessions are held on alternate Mondays. Markets on Monday; fairs the Mondays before Feb. 14., July 6., and Oct. 11., chiefly for cattle.

PIEDMONT, a country of N. Italy, composing the principal portion of the continental dom. of the kingd. of Sardinia. (*See SARDINIA KINGDOM* or.)

PIERRE (ST.) *See MARTINIQUE*.

PILLAU, a sea-port town of the Prussian States, prov. E. Prussia, at the point of a tongue of land, on the N. side of the opening from the Baltic into the large maritime inlet, called the Frische Haff, lat.  $54^{\circ} 33' 39''$  N., long.  $19^{\circ} 52' 30''$  E. Pop., 3,600. Pillau has a pretty good port, but the water is rather shallow, not exceeding 11 or 12 ft. in depth, so that vessels of large burden must anchor outside the bar. A light-house, having the lantern elevated 90 ft. above the level of the sea, has been erected on the S. side of the town, contiguous to the port. Pillau is properly the sea-port of Königsberg, and Elbing, and is, in consequence, largely frequented by shipping.

PILSEN, a town of Bohemia, cap. circ. Pilsen, on the Beraun, a tributary of the Elbe, 53 m. S.W. by W. Prague. Pop., in 1834, 8,906. It is one of the best built towns in the kingdom, and has a fine Gothic par. church, and town-hall, a gymnasium, military and other schools, a theatre, &c. Its manufactures of woollen goods are flourishing, and it has others of Morocco leather, iron and horn wares, and alum. Being on the high route from Prague to S. and Central Germany, it has a considerable transit trade; and a large annual fair is also held in Pilsen, attended by traders from every part of Bohemia. (*Austr. Nat. Encyc.*; *Berghaas*.)

PINEROLO (Fr. *Pignorol*), a town of the Sardinian dom., in Piedmont, divis. Turin, cap. prov., on the Clusone, near the foot of the Alps, 21 m. S.W. Turin. Pop. in 1838, 13,501. It was formerly a place of strength; but on its cession to Savoy in 1713, its fortifications were blown up by the French; and at present it is surrounded only by a slight wall. It is neither regularly nor well built, but contains a spacious place of arms, with a handsome hospital and cavalry barracks. It has a fine cathedral, and numerous convents. The manufactures comprise coarse woollens, silk, twist, paper, and leather; and the inhabs. have a considerable trade in these articles, and in corn, wine, spirits, and fire-wood.

PISA (an. *Pise*), a famous city of Central Italy, the cap. of one of its most celebrated republics, and now the cap. of the prov. of its own name in the grand duchy of Tuscany, in a fertile, though rather marshy, plain on the Arno, about 8 m. from its mouth, 13 m. N.N.E. Leghorn, 50 m. W. Florence, and 12 m. S.W. Lucca; lat.  $43^{\circ} 43' 11''$  N., long.  $10^{\circ} 24'$  E. The pop., which, in the 13th century, was estimated, though probably far beyond the mark, at 150,000, was, in 1836, only 20,943! The walls of the city are nearly 5 m. in circuit. In the days of its prosperity it was celebrated for the strength of its fortifications, its patrician towers, its profusion of marble, and its grave magnificence; but it is now only "the shell of a great city." (*Addison*.) Its ancient grandeur has degenerated into dullness: its towers, however, though no longer a mark of nobility, may be traced in its modernised houses; and it can still boast of many marble edifices, and of one of the finest marble bridges in Europe. Its streets, though crooked, are wide, and paved, as in Florence, with large flag stones; the river is embanked with stone quays; and a street, the *Lung-Arno*, which extends along both its banks, has a most majestic appearance. Some of the houses have curious old fronts, and one street is wholly bordered with arcades. In a large grass-grown square, at the N. angle of the city, are 4 remarkable buildings—the cathedral, baptistery, leaning tower, and *Campo Santo*; "all," says Forsyth, "built of the same marble, all varieties of the same architecture, all venerable with years, and all fortunate both in their society and their solitude." The cathedral is an edifice of the 11th century, and principally interesting as a specimen of the style then prevalent in Italy. Its length is 297 ft., breadth 108 ft.; and it has a front 127 ft. in height. Internally it is divided into 5 aisles by 68 insulated columns of Corinthian or Composite architecture; and 4 piers support an elliptical cupola. There are some beautiful altars, 3 magnificent bronze doors with sculptures

in relief by John of Bologna, and many fine paintings and bas-reliefs by some of the first Italian masters. But incongruities are numerous: "The marble pulpit is supported by a naked figure of most gross design; Bacchana and Meleager's hunt are encrusted on the walls; an ancient statue of Mars is worshipped under the name of St. Potitus; and the heads of satyrs are carved on a cardinal's tomb!" (*Forsyth*). Among the 80 other churches are many which can boast of rare works of art. The baptistery, opposite the cathedral, was built between 1152 and 1154, when Pisa was so populous and rich, that a voluntary contribution of one florin from each family is said to have sufficed to pay for its erection. This building is an immense polygon, above 160 feet in diameter and 176 in height, surmounted by a cupola and a cone terminated by a figure of St. John the Baptist. Nearly the whole of the exterior is of marble, and the interior is handsome; but, according to Mr. Woods, the building wants finish, and is not altogether well proportioned. The famous *Campanile*, or Leaning Tower, is an edifice of little actual beauty, but rendered extraordinary by its inclination from the perpendicular. It was begun about 1174, but not finished till the middle of the 14th century: it consists of 2 concentric walls, each 2 ft. thick, the diameter of the circular well in the centre being 22 ft.; it is 8 stories, or 190 ft. in height, with outside galleries projecting 7 ft. The topmost story overhangs the base on one side about 15 ft.; and to a spectator looking down from the top, the effect is terrific; though, as the centre of gravity is still 10 ft. within the base, it is perfectly safe. The view from the summit is alike extensive and beautiful. It has been supposed by some that the inclination is not accidental, but intentional, and that it was so constructed originally; but the more probable opinion seems to be, that it is a consequence of the sinking of the foundation. The observatory and baptistery have also a slight inclination, which is, no doubt, owing to the same cause.

The *campo santo*, or cemetery, is the most beautiful edifice at Pisa, and unique in its kind. It is an oblong or rhomboidal court, 383 ft. in length, by 127 ft. in breadth, surrounded by arcades of white marble, adorned with ancient Etruscan, Greek, and Roman bas-reliefs, busts, and other sculptures; and the walls covered with fresco-paintings, &c. by the earliest Italian masters. In its centre is an enormous mound of earth, said to have been brought thither from Palestine during the crusades, and formerly used as a burial ground. Pisa has a grand ducal residence, and several other palaces, which, with the nobility's club-house and bank, are fine buildings: the 3 bridges are handsome; and the hospitals, theatre, modern aqueduct 4 m. in length, &c., are well adapted to their purposes. Various remains of antiquity exist, as those of the aqueduct of Caldicelli, of the *hypocaustum*, &c., supposed to have been constructed by Nero, but especially a *sudatorium*, or vapour-bath, near the Lucca gate. About  $\frac{3}{4}$  m. distant, on the Lucca road, are the *Bagni de Pisa*, supposed to be the baths mentioned by Strabo and Pliny, and still frequented by numerous visitors.

Pisa has a university, formerly among the most celebrated in Italy, and remarkable for its tolerance; its degrees, except in divinity and canon law, being attainable by persons of all creeds. It is still the head university of Tuscany; and, in 1836, had 543 students, 25 in jurisprudence, 173 in medicine and surgery, 39 in physical and mathematical sciences, and 26 in theology. Its library comprises 55,000 vols.; and attached to it are the Ferdinand College, a fine botanic garden, cabinet of natural history, chemical laboratory, and observatory. This university was one of the first to revive the study of the civil law; though there be no good foundation for the common story that this revival was a consequence of the Pisans having found a copy of the Pandects among the spoils of Amalphi, sacked by them in 1140. The university has had many illustrious names in the roll of her professors, including, among others, Galileo, Torricelli, Redi, Malpighi, Thomas Dempster, Borelli, Castelli, Gronovius, &c. Besides the university, Pisa has an episcopal seminary, with about 80 students, several conventual female schools, normal and Lancasterian schools, &c.; and is an archbishop's see. Its manufactures, which are unimportant, consist chiefly of soap, white lead, vitriol, glass, and a few other articles; and its trade has sunk in proportion to the rise of that of Leghorn. The city is connected by navigable canals both with Leghorn and the Serchio; but it is a curious fact that no vestige can now be found of its ancient port or roadstead at the mouth of the river, though, in the 13th century, it accommodated large fleets. This singular result is supposed to have been brought about by a change in the course and embouchure of the Arno.

Pisa derives some advantage from its being the winter resort of the grand duke and of the Tuscan court, as well as of numerous invalids, attracted thither by the mildness of the climate. On the shore near the city, amidst an extensive forest of ilex, is a farm belonging to the grand duke, where a number of camels

have been reared. It is said, from the time of the crusades; and whence most of the zoological collections in Europe are supplied with these animals. Morals seem to be at a lower ebb in this, than even in most other Italian cities.

"All evils here contaminate the mind,  
That opulence departed leaves behind."

According to Simond, idleness, ignorance, and profligacy, form the general character of the inhabit. Every day I hear disgusting stories of meanness and dirty artifice in every transaction of life. Foreigners cannot hire a house, or make a bargain of any sort without being cheated. Most of the ladies have their *capotiers* served.

Most writers attribute the foundation of this city to colonists from Pisa in the Peloponnesus soon after the Trojan war.

"Alphen ab origine Pise  
Urbs Etrusca solo." *Æneid*, lib. x. v. 179.

It became a Roman colony, and its port was, in the time of Strabo, an important naval station. It did not, however, attain to any great distinction till the 10th century, when it took the lead among the commercial republics of Italy. In the 11th century, its fleet of galleys maintained a superiority in the Mediterranean, commanding the coasts of Sicily, Sardinia, Corsica, and Barbary, and assisting the French in the crusades. But in the 13th century, a struggle commenced with Genoa, which, after many vicissitudes, ended in the total ruin of the Pisans. The latter were defeated near the island of Meloria, in 1284, in a great naval engagement by the Genoese, with the loss of the greater part of their fleet, and above 16,000 men killed and taken prisoners. Pisa subsequently became the prey of various petty tyrants, and was finally united to Florence in 1406. (*Festuccia*, lib. 440. 461; *Walsh's Letters of an Architect*, ii. 333-338; *Mathews*; *Waldman*; *Forsyth*; *Candler's Italy*, lib. i. 20; &c.)

PISTOJA (con. *Pistoria*), a city of Central Italy, grand duchy of Tuscany, prov. Florence, on the Ombrone, a tributary of the Arno, at the foot of the Apennines, 20 m. N.W. Florence. Pop. in 1836, 11,266. It is between 2 and 3 m. in circuit; is surrounded by old walls said to have been originally constructed by Desiderius, the last of the Lombard kings, and is further defended by a citadel built in 1252. It is clean, handsome, and well built, with unusually broad streets, and many curious and splendid edifices; but, like many other Italian towns, is dull, monotonous, and silent. Its cathedral is in the same style of architecture as that of Pisa and that of Lucca, but inferior to either; it has, however, some interesting monuments. The baptistery, constructed by Andrea Pisano, in 1337, is a small and handsome octagonal Gothic edifice. Several of the interior churches are remarkable for their style of architecture or works of art; and the court-house is a fine old building. Instead of the suppressed Jesuits' college, there is a seminary for priests; and a large hospital is kept in good order.

Pistoja has a well-supplied market, a museum, two small public libraries, a large theatre, assembly rooms, and a race ground. Provisions are cheap and good; the climate is cool and healthy; and the city is the residence of many noble and respectable families. The manufactures, which are on a small scale, include silk twist, straw hats, paper, musket barrels, cutlery, nails, iron wire, &c.; and near the city are some tolerably extensive iron-works.

Pistoja is with Prato a bishop's see, and has an episcopal college, a superior private lyceum, with nonnal, girls', Lancasterian, and various inferior schools. In the middle ages it was the cap of a republic, which became subject to Florence about the same time with Pisa. (*Rampoldt*; *Doering's Report*; *Candler's Italy*.)

PITCAIRN'S ISLAND. See POLYNESIA.

PITTEWEEM, a royal and parl. bor. and seaport of Scotland, co. Fife, on the N. shores of the Frith of Forth, 26½ m. N.E. by N. Edinburgh. Pop. 1,317. It was created a bor. in 1537, and bears the marks of antiquity and decay. In addition to the parish church, the Episcopalian and the Relief Synod have each a chapel. Pitteweem has a small harbour; but the only business connected with it is that of fishing to a limited extent. Here are the remains of a monastery of Augustine Friars. Dr. Douglas, Bishop of Salisbury,

"The scourge of impostors, the terror of quacks,"

was born here in 1721.

Pitteenweem unites, with St. Andrew's, the two Antistruthers, Crall, Cupar, and Kilmory, in sending 11 men to the H. of C. Registered electors in this bor. in 1839, 40, 49. Corporation revenue, 448*l*. Number of councillors, 24.

PITTSBURG, a city of the U. States of N. America, state Pennsylvania, whose extensive iron-works have made it called the Birmingham of America, on

## PLASENCIA.

a triangular piece of land between the Alleghany and Monongahela, where those rivers meet to form the Ohio, 251 m. W. by N. Philadelphia, and 258 m. N.E. Cincinnati. Pop. of Pittsburg proper, in 1840, 21,296; but if we include the town of Alleghany, N. of the river of that name, the rising bor. of Birmingham, S. of the Monongahela, and other suburbs, the pop. exceeds 50,000. The city is of a triangular shape, compactly and in some parts handsomely built, though the smoke of the different works has given to the houses a blackened and rather gloomy appearance: water is supplied from the Alleghany by means of a powerful steam-engine. Among the public buildings are upwards of fifty churches, with attached Sunday schools, an exchange, mansion-house, state penitentiary, different banking establishments, the western university of Pennsylvania, the Alleghany arsenal, (occupying, with its magazines, barracks, &c., an area of 31 acres,) and buildings belonging to the Pittsburg high school, two theological academies, and a public library.

Pittsburg is admirably situated for manufactures and commerce: it has an all but unlimited command of inland navigation, and is connected not only with New Orleans and the various ports on the Mississippi, and its tributary streams, but also, by means of canals and railways, with the Great Lakes, and with Philadelphia, and other parts on the E. coast of the Union. (See PENNSYLVANIA.) And in addition to its advantageous geographical position, it has the command of inexhaustible supplies of coal and iron. In consequence it has become a principal seat of American manufactures, especially of those of hardware and glass. In 1840, the value of the cast-iron articles produced here was estimated at 446,000 doll., that of bar-iron articles at 4,500,000 doll., and that of hardware and cutlery at 351,500 doll. There were at the same time 16 glass-works; and the value of the glass articles annually produced, including mirrors, was estimated at 520,000 doll. There are, also, very extensive works for the production of steam-engines and other species of machinery, with extensive copper works, saw-mills, cotton manufactures, earthenware works, &c. Though Pittsburg be above 2,000 m. from the sea, ship-building, especially of steamers for the navigation of the Ohio, Mississippi, and their connected streams, is carried on upon a very large scale; and most part of the machinery used in the steamers built at New Orleans, and other ports in the valley of the Mississippi, is produced here. It may, also, be truly affirmed, that notwithstanding their rapid increase, the manufactures and commerce of Pittsburg are yet only in their infancy; and that they must necessarily continue to increase with the increasing wealth and population of the vast countries of which she is a principal workshop and emporium. In 1838, the aggregate burden of the steamers, belonging to Pittsburg, amounted to 11,865 tons. The inhabs., who are a mixture of all nations, Germans, Irish, English, Scotch, French, &c., are industrious, frugal, economical, and without show.

Pittsburg derives its name from Fort Pitt, a fortress constructed on the site of the city by the British previously to 1760; and round which a town began, in the course of time, to grow up. But it did not make much progress till 1793, since which it has steadily and rapidly advanced in industry, wealth, and population. In 1755, a British and Colonial force, under General Braddock, sustained a total defeat on the ground now occupied by this city. (*Stuart's America*, iii. 475. 478.; *Murray's Enc. of Geog. Amer.* ed. iii. 811.; *Encycl. Amer.*; *Offical Returns*, &c.)

PLASENCIA, a fortified city of Spain, in Estremadura, on a peninsula almost surrounded by the Jertes, a trib. of the Tagus (crossed here by three bridges), 102 m. N. by E. Badajoz, and 120 m. W. by S. Madrid. Pop., according to Mifano, 6,787. It stands in a plain, surrounded N. and E. by high mountains, is surrounded by strong walls, entered by six gates, and has several pretty wide, level, and well-paved streets, with 7 par. churches, a cathedral, an episcopal palace, 5 hospitals, a fine old aqueduct of 80 arches, which conveys water to the town, and a private collection of antiquities. The cathedral, a modern Gothic structure, is not completed; the chapter comprises a bishop, 8 dignitaries, and 24 canons. The manufactures comprise leather, hats, woollen, linen, and hempen cloths; and the surrounding plain, or *puebla*, is extremely fertile, producing large quantities of grain, fruits, oil, &c.

Plasencia, though not the *Ambra* of the Romans, is proved, by the numerous antiquities found in it, to be of remote origin. The present city, however, was built near the end of the 12th century, by Alphonso IX. of Castile. It was formerly possessed by its own lords, and gave title to a duchy; but, in 1448, it was united to the crown of Castile. (*Dillon's Travels*, p. 282.; *Mod. Trav.*; *Mifano*.)

PLASSEY, a village of Bengal, on the Hooghly river, 80 m. N. Calcutta, and 30 m. S. Moorsheadabad. This village will be ever memorable in Indian history, for its having been the scene of the great victory gained by

## PLATA, LA, (REPUBLIC OF). 513

Lord (then Colonel) Clive, on the 23d of June, 1757, over Suraja Dowla, sonbahdar of Bengal. Clive's army consisted of only 900 Europeans, 2,100 Sepoys, and 100 Topasses; yet, with this small force, he did not hesitate to attack the sonbahdar's army, of 50,000 foot, and 18,600 horse, supported by a formidable train of artillery! This, however, was not so Quixotic a proceeding as it may at first sight appear; for Clive knew that the native troops had no confidence in their general, and, in fact, they instantly gave way, so that the victory was at once complete, and easily won. The result of this contest threw Bengal into the hands of the English, and laid the foundations of our empire in India. (*Mill's India*, iii. 158.)

PLATA, LA, (REPUBLIC OF), or ARGENTINE REPUBLIC, an independent state, or rather confederation of states, in S. America, extending between the 22d and 11st degs. of S. lat. and the 54th and 72d of W. long., having N. Bolivia; E. Paraguay, Brazil, and the Banda Oriental, from all which it is separated by the Paraguay, Parana, and Uruguay rivers; S. the Atlantic Ocean and Patagonia; and W. Chili and Bolivia. Sir Woodbine Parish gives the following estimate of the area, population, and subdivisions of this territory:—

Provinces.	Area in sq. m.	Estim. Pop. 1836-7.	Chief Towns.
Buenos Ayres	180,000	220,000	Buenos Ayres
Santa Fé	15,000	60,000	Santa Fé
Entre Rios	25,000	50,000	Parana
Corrientes	35,000	40,000	Corrientes
Cordoba	80,000	85,000	Cordoba
Santiago	45,000	50,000	Santiago
Tucuman	10,000	15,000	Tucuman
Salta	50,000	10,000	Salta
Catamarca	50,000	35,000	Catamarca
La Rioja	18,000	20,000	Rioja
San Luis	20,000	25,000	San Luis
Mendoza	55,000	40,000	Mendoza
San Juan	25,000	25,000	San Juan
Total	726,000	600,000 to 675,000	

Inasmuch, however, as the pop. of the city of Buenos Ayres may itself be estimated at about 100,000, we are inclined to think that this estimate is under the mark, and that the pop. may be set down at about a million. It has sometimes, indeed, been estimated at two millions and upwards; but there can be no doubt that this is very far beyond the mark. The Indians, who are not included in any of the above estimates, are, probably, under 50,000.

On the W. this territory is bounded by the great Cordillera of the Andes; and the N.W. prov. of Salta is almost wholly mountainous, as are extensive portions of the adjacent provs. of Catamarca and Tucuman. Some points of the Desplomada chain in Salta rise probably to the height of 13,000 ft.; and in Cordoba are isolated chains, many where but in the neighbourhood of the Andes would be called mountains. Still, however, after allowing for these and other deductions, five-sixths of the country consist of plains, several of which are of vast extent. But notwithstanding its freedom from mountains, and the number and magnitude of its rivers, it is far from being the fertile region that is so generally supposed; and a large proportion of its surface is, in fact, condemned to perpetual sterility. In the N. is the S. portion of the immense tract known by the name of the *Gran Chaco*, a vast plain, occupying the whole triangular space between Bolivia on the N. and the great rivers Paraguay on the E. and Salado on the W. This immense plain, which probably covers from 110,000 to 120,000 sq. m., is but little known; in the N. it is covered with extensive forests, but its more S. portion, between the Vermojo and Salado, is, in fact, a sandy, arid, and uninhabitable desert. This, also, is the character of the extensive tract between the Salado and the Rio Dolce, and W. from the latter, as far as the Sierra Pelosa, in about the 68th deg. of W. long., extends the great Salt Desert of Salinas, a great part covered with saline effluence, and extremely hot. The great southern plain, or that which extends over the whole country S. of the 35d deg. of lat., is, fortunately, of a very different character from those previously noticed. This vast tract, which includes an area of above 300,000 sq. m., is called the *Pampas*. It may, taking its vast size into account, be regarded almost as a dead level, its slope towards the E. being gradual and imperceptible. It is interspersed with innumerable lakes; but these, as well as most of the rivers by which they are fed are brackish, the soil through which they flow being strongly impregnated with salt. Perfectly fresh and potable water is, however, found at the depth of from 20 to 50 ft. Substantially, however, the Pampas are divided into several regions, differ: in climate and produce, though under the same lat. — the leaving Buenos Ayres, the first of these regions is covered for 180 m. with clover and thistles alternately; the 2d region, which extends for 450 m., produces long grass; and the 3d, which reaches the base

of the Cordillera, is a grove of low trees and shrubs. The 2d and 3d of these regions have nearly the same appearance throughout the year, for the trees and shrubs are evergreens, and the immense plain of grass only changes its colour from green to brown; but the 1st region varies with the four seasons of the year in a most extraordinary manner. In winter the leaves of the thistles are large and luxuriant, and the whole surface of the country has the rough appearance of a turnip field. The clover in this season is extremely rich and strong; and the sight of the wild cattle grazing in full liberty on such pasture is very beautiful. In spring, the clover has vanished, the leaves of the thistles have extended along the ground, and the country still looks like a rough crop of turnips. In less than a month the whole region becomes a luxuriant wood of enormous thistles, which have suddenly shot up to a height of 10 or 11 ft., and are all in full bloom. The path is hemmed in on both sides; the view is comparatively obstructed; not an animal is to be seen; and the stems of the thistles are so close to each other, and so strong, that, independent of the prickles with which they are armed, they form an impenetrable barrier. The sudden growth of these plants is quite astonishing; and though it would be an unusual misfortune in military history, yet it is really possible that an invading army, unacquainted with the country, might be imprisoned by these thistles before it has had time to escape from them. The summer is not over before the scene undergoes another rapid change: the thistles suddenly lose their sap and verdure, their heads droop, the leaves shrink and fade, the stems become black and dead, and they remain rattling with the breeze one against another until the violence of the pampero, or hurricane, levels them with the ground, where they rapidly decompose and disappear; the clover rushes up, and the scene is again verdant. The vast region of grass in the Pampas for 450 m. is without a weed, and the region of wood is equally extraordinary. The trees are not crowded, but in their growth such beautiful order is observed, that one may gallop between them in every direction. The whole country is in such beautiful order, that if cities and millions of inhabitants could suddenly be planted at proper intervals and situations, the people would have nothing to do but to drive out their cattle to graze, and, without any previous preparation, to plough whatever quantity of ground their wants may require.

"The climate of the Pampas is subject to a great difference of temperature in winter and summer, though the changes are very regular. The winter is about as cold as our month of November, and the ground at sunrise is always covered with white frost, but the ice is seldom more than 1-10th of an inch thick. In summer the sun is oppressively hot. The difference, however, between the atmosphere of Mendoza, San Luis, and Buenos Ayres, which are all nearly under the same lat., is very great; in the two former, or in the regions of wood and grass, the air is extremely dry; there is no dew at night; in the hottest weather there is apparently very little perspiration, and the dead animals lie on the plain dried up in their skins. But in the prov. of Buenos Ayres, or in the region of thistles and clover, vegetation clearly announces the humidity of the climate, and the dead animals on the plain are in a rapid state of putrefaction. On arriving at Buenos Ayres, the walls of the houses are so damp that it is cheerless to enter them; and sugar, as also all deliquescent salts, are there found nearly dissolved. This dampness, however, does not appear to be unhealthy. The S. part of the Pampas is inhabited by Indians, who have no fixed abode, but wander from place to place as the herbage around them becomes consumed by their cattle. The N. part and the rest of the provs. of La Plata are inhabited by a few straggling individuals, and a few small groups of people, who live together only because they were born together. The travelling across the Pampas is really a very astonishing effort. The country has no road but a track which is constantly changed. The huts, termed *posts*, are at different distances, but, upon an average, about 20 m. from each other; and in travelling with carriages, it is necessary to send a man before to request the *gauchos* to collect their horses. The country is intersected with streams, rivulets, and rivers, with *pantanos* (marshes), &c., through which it is absolutely necessary to drive. In one instance, the carriage, strange as it may seem, goes through a lake, which of course is not deep. The banks of the rivulets are often very precipitous, and I constantly remarked that we drove over and through places which, in Europe, any military officer would, I believe, without hesitation, report as impassable. The most independent way of travelling is, however, on horseback, without baggage, and without an attendant. In this case the traveller has to saddle his own horse, and to sleep at night upon the ground on his saddle; and as he is unable to carry any provisions, he must throw himself completely on the feeble resources of the country, and live on little else than beef and water." (*Head's Journals across the Pampas*, p. 2-10, 46-50).

Many of the minor plains are of a very different character from either this or the Gran Chaco; and some, as those of Tucuman, yield corn and maize, rice, tobacco, the sugar-cane, &c. in the greatest abundance. The provs. of Cordova, Salta, &c. are also in parts very fertile. In general, the N.W. provs. are the most productive of grain, while the E. provinces, or those between the Parana and the Uruguay, and the S.E. provinces, abound most in cattle, and furnish the greater portion of the exports from Buenos Ayres.

The Argentine republic, excepting a small portion towards its S. extremity, watered by the Rio Colorado, and a few smaller rivers, is wholly comprised in the basin of the Plata. (See next art.) Its vast branches supply the most extensive means of internal communication; though the utility of some of them be at present a good deal impaired by the prohibitory measures of Dr. Francia, dictator of Paraguay. Many large rivers water the great plains; but several of these lose themselves in the considerable lakes previously noticed, without finding their way to the sea. The principal of these is the Rio Doce, which intersects the provinces of Tucuman and Santiago, and falls into the lake of *Los Pozos*, or great salt lake, 35 m. in length, by 20 m. in breadth. Several lakes and swamps, of a still inferior to this, are laid down in maps as existing in the Pampas; but the largest lake, or lagoon, is that of Ybera, in Corrientes, which extends over 1,000 sq. m., and supplies four considerable rivers. It is probable that the Parana formerly took its course through this lake: at present no stream runs into it, and it is supposed to derive its waters through some underground drainage.

**Geology and Minerals.**—The N. E. and S.W. shores of the Rio de la Plata present the greatest contrast in their geological features. The N. shore is elevated, and, like the islands in the river's head above Buenos Ayres, composed of granite, gneiss, and clay-slate; while, on the S. side, every trace of rock is entirely lost, and far hundreds of miles inland, not even the smallest pebble is to be met with. As far as we are yet acquainted with it, the whole of the vast level forming the Pampas, appears to be one immense bed of alluvial sand, quietly deposited, during the lapse of ages, in what was anciently a gulph of the Atlantic, of which the estuary of the Plata is now the only remaining portion. The same process appears to be, at present, going on here also: this estuary, which, in the 16th century, is reported to have been deep enough for ships of any burden, is gradually silting up, and we may expect that, at some future period, instead of discharging itself by a wide mouth as at present, or as the Nile, probably, in the most ancient times, the Plata will enter the ocean by a delta, like the Amazon, the Ganges, or the Nile of our day. In the alluvium of the Pampas, vast quantities of marine shells, and the remains of the *Megatherium oligopodon*, &c., have been found, and, according to Mr. Darwin, its whole area is one wide sepulchre for extinct quadrupeds. (*Journey of the Adventure and Beagle*, iii. 153, &c.; *Parish's Buenos Ayres*, 164, 165.)

The precious metals, with copper, lead, iron, &c., are found in different parts of the country; but, speaking generally, its mineral riches have been very imperfectly explored. Gold and silver have, however, been obtained in considerable quantities, in various districts in the N.W. and W. provinces connected with the Andes, especially at Famatina, in Rioja, where the ores of silver are said to be very rich. Hamholdt estimated the total value of the gold and silver obtained from mines and washings in the captain-generalship of Buenos Ayres, at the commencement of the present century, at nearly 5 millions dollars a year. But the greatest portion of what is now called Bolivia was then included within the limits of the government; and we have seen no late accounts of the produce of the mines on which it would be safe to place the smallest reliance: perhaps it does not, at present (1841), amount to 400,000 a year. Iron is also believed to exist in the Chaco, in extensive veins, intermixed with small proportions of nickel and cobalt; and Sir W. Parish considers it extremely probable, that the immense mass of metal presented by him to the British Museum, and considered meteoric, is rather a production of the soil. (*Buenos Ayres*, 258-263.)

Salt is the most abundant mineral, and exists in a state of efflorescence over the surface of immense tracts, in a multitude of brackish springs and pools, and in mines of rock salt. Epsom and Glauber salts, limestone, gypsum, alum, mineral pitch, and an abundance of sulphur, are to be met with along the Cordillera, besides bituminous shale, with appearances of coal in many places; and it is said, though the statement requires confirmation, that there are extensive beds of coal in the extreme S.W. angle of the country.

The vegetable products in the N. provinces include most of those which flourish between the tropics; while in the S. they are in general similar to those of S. Europe. But even as far S. as Corrientes, cotton, tobacco,

rice, sugar cane, indigo, and many other articles of primary importance in the markets of Europe, may be produced to almost any extent; and a large extent of country is extremely well adapted to the culture of wheat, maize, and other grains. Wheat, which, till of late, was little cultivated, has now become an article of export. But the implements and processes of agriculture are still in the rudest possible state. "In many towns of the interior, a common wheelbarrow is as yet unheard of; while in the capital itself, the first pump ever seen in a private house was put up a very few years ago by an Englishman!" (*Parish's Buenos Ayres*, p. 357.)

The immense trade annually inundated by the Plata, now wholly in a state of nature, might, it is said, be made available for the culture of rice on a most extensive scale. The inhabs. of Arauco, a department of La Rioja, are principally employed in the culture of the vine, and make annually from 8,000 to 10,000 small barrels of a strong sweet wine, which is sent to Cordova and the neighbouring provinces. A good deal of strong and full-bodied wine and brandy is also sent from Mendoza to Buenos Ayres.

The demand for sugar in the inland provs. is not sufficient to induce the country people to attend much to the cane; but tobacco is pretty largely cultivated, and finds a ready sale in Tucuman and the adjacent provs. Catamarca supplies all the surrounding states with cotton of a superior quality, for their domestic manufactures; and exports large quantities of red pepper to Buenos Ayres. The cactus, which feeds the cochineal insect, grows in Santiago, Salta, and elsewhere in the W., and to an unusual size; and from the first-named prov. from 8,000 to 10,000 lbs. a year of cochineal were formerly sent to Chili and Peru. Alces are equally abundant, and from their macerated fibres the Indians of the Chaco make yara, ropes, fishing-nets, and a variety of bags and pouches, for which there is always a demand among their more civilised neighbours; these articles are dyed in indelible colours, prepared by the Indians from native plants. The cocoa plant (*Erythroxylon peruvianum*), which, when mixed with lime, forms a stimulant chewed by the Peruvians, as the betel in S. Asia, grows plentifully in Salta. Bonpland found 3 new species of indigo in Corrientes; mulberry is indigenous in several places; and on one species of shrub a small insect called the *clavilla* is found, which affords a most beautiful green dye. The E. flanks of the Andes, and the banks of the W. affluents of the Paraguay, are covered with dense forests; which are, however, for the most part, useless, being at so great a distance from the Plata and sea-ports of the republic. The trees are mostly of the mimosa family; and, from the fruit of the algaroba, mixed with maize, the Indians make cakes; and by fermentation, produce their *chicha*, a strong intoxicating spirit, in very general use. The *quinaquina*, or Peruvian bark tree, various palms, and the *yepa-maté*, or Paraguay tea, are indigenous in Salta, &c. Figs, oranges, peaches, walnuts, apples, and other fruits, have been introduced by Europeans, and flourish with great luxuriance in many of the central and S. provs.; the want of pop. being, for the most part, the only great drawback to the development of the vast natural resources of the country.

But the chief source of wealth is the immense herds of horned cattle which wander over the widely-extended plains of the Pampas. Formerly, the greater number of these were unappropriated, like the land they roamed over, and were lassoed and destroyed at pleasure for their hides or fat, though sometimes, also, for their flesh, and sometimes for their tongues only, the rest of the body being left to beasts and birds of prey. But the Pampas are no longer unappropriated; a large part has been carefully measured by the government officers, and allotted to individuals, the extent and boundaries of whose *estancias*, or estates, are duly registered. Every animal a year old is branded with the mark of the owner, and the mark, being registered by the authorities, entitles him to claim his property wherever found. According to Sir W. Parish, it has been estimated that in the single prov. of Buenos Ayres there are from 3 to 4 million head of cattle, and above another million in the other provs. The number must certainly be immense; for hundreds of thousands have, on some occasions, perished through inundation and drought without sensibly affecting the supply for the market.\* But all estimates of the number of cattle in these provs. are purely conjectural, and entitled to little weight; though we incline to think that Sir W. Parish has much under-rated the numbers of cattle in the provs. other than Buenos Ayres. In Entre Rios, before the revolution, "an estate of 3 leagues in length, by 2½ in breadth, that is, of 12½ sq. leagues, might have had upon it generally about 8,000 head of horned cattle, and 15,000 horses. The price of it, with stock, &c., might be—the horned

cattle at 2s. each = 800*l.*; the horses at 6*d.* each = 375*l.*, and fixtures 100*l.*; cost, therefore, of stock and fixtures, 1,275*l.*, leaving the estate of 37½ sq. m. as a bonus to the purchaser!" (*Robertson's Letters on Paraguay*, ii. 216, 216.)

Cattle-rearing estates are frequently of vast size; and Candiotti, probably the largest landholder of La Plata, is said, by Mr. Robertson, to have been the proprietor of 300 sq. leagues of territory, with 250,000 head of horned cattle, and 300,000 horses and mules. The annual increase upon a well-regulated *estancia* varies from 30 to 40 per cent., which yields an enormous profit to the proprietor, whose expenses are comparatively trifling. And since the revolution, which has thrown open the trade of S. America, the cattle, which were previously not worth more than 3*s.* or 4*s.* a head, are now worth 20*s.* and for these 20*s.* the farmer can buy double the quantity both of necessaries and luxuries (his own commodity of cattle always excepted), which he can procure for them before. The *estancieros* of Santa Fé were formerly among the richest in the viceroyalty, and furnished by far the greater part of the 50,000 mules yearly sent to Salta for the service of Peru; but the stoppage of the trade with the latter country and Paraguay, and the attacks of the Indians, have impoverished and depopulated that province almost to the last degree. The mules were commonly sent, when two or three years old, to a periodical fair, near Salta, to which the purchasers from the interior repaired, and bought them in droves, at the rate of from 14 to 16 dollars each. The struggle for independence stopped this traffic; for Peru being to the last in the possession of the royalists, all intercourse with Salta was long cut off, and not having been renewed to any great extent, the breeding of mules has declined considerably in La Plata.

The horses of the Pampas are similar to the common Spanish horse, and of all colours: like the cattle, the original stock was introduced from Europe. They wander wild in immense herds, being caught indiscriminately by the gauchos, whenever they are required. Though as serviceable to the gaucho as to the Arab, the former, owing, no doubt, to the animal being raised without any attention on his part, cares very little for his horse: he goads it in the most unmerciful manner, and when it drops with fatigue, he forthwith lassos and mounts another, abandoning the exhausted horse to the wild animals. Mares are better treated by the Spaniards; but among the Indians, mares' flesh is the ordinary animal food. It may be supposed that mutton is neither very excellent nor dear in this country, since, by an old royal edict, the inhabs. were forbidden to drive sheep *alive* into the brick-kilns for fuel! The wool, also, a few years ago, was hardly worth the expense of cleaning, but it has lately much improved in quality, and the export of this article, which, in 1830, reached only 19,411 lbs., amounted in 1837 to 2,267,551 lbs. Still, however, the breed of sheep, like that of goats and hogs, is very inferior. The singular animal, the *coppou*, which furnishes the skins known in commerce by the name of *nutria*, is abundant in Buenos Ayres, its skins forming a principal article of export: the animal also abounds in various districts. Along the Andes are found guanacoas, llamas, vicuñas, &c. Wild boars, deer, with jaguars, pumas, armadillos, &c., are also met with. The bisecaba, a rodent quadruped, which makes travelling over the Pampas dangerous from its numerous burrowings, is very abundant; and condors, vultures, and numerous birds of rich plumage, inhabit the country. Its greatest pests are giant ants, locusts, immense bugs, musquitos, and other insect tribes.

The *gauchos*, or native peons, are the descendants of European colonists, and many of them have sprung from the best families of Spain. They are at once the most active and the most indolent of human beings; living, when not on horseback (which they generally are), in the rudest manner in mud huts. They are without agriculture, subsisting almost wholly on the flesh of oxen and game of various kinds, which they catch by means of two singular weapons, in the use of which they are extremely dexterous, the *lasso* and the *bolas*. The former, used by most natives of La Plata and Chili, is a strong platted thong of green hide, about 40 ft. in length, with an iron ring at one end forming a running noose, the other end being fixed by the peon on horseback to his saddle-girth. The gaucho, when about to seize an animal, whirls the noose with a portion of the thong horizontally round his head, holding the rest of the lasso coiled up in his left hand; and, when near enough to the object, at a precise point of its rotation, flings off the noose, which seldom or never fails to secure the animal. If a horse, it invariably falls over the neck; if an ox, over the horns. As soon as the rider has succeeded in his aim, he suddenly turns his horse, which sets its legs in a position to resist successfully the pull of the entrapped animal. The dexterity evinced in this operation, and the certainty with which an animal run-

\* In the last drought of 1831-32, it was estimated that from 1 and 1½ to 2 millions of animals died:—the borders of the lakes and arid districts in the prov. of Buenos Ayres were long afterwards white with their bones. (*Parish's Buenos Ayres*, p. 371.)

ning at full speed, is caught, are very striking. The *bolas*, used also by the Indians, is briefly described in the art. PATAGONIA, in this vol.

The Indians are of Araucanian origin (see CHILI, Vol. I. p. 592.), living like the gauchos, chiefly on horseback, but partly in movable tents made of hides. To their main food, the flesh of mares and colts, if they add any thing it is maize, obtained from the Spaniards in exchange for salt, cattle, and blankets, made by their women. They live together in different tribes, each governed by a cacique. Some are friendly to the whites, but the greater part are bitterly hostile; and the two races maintain against each other an exterminating warfare. A few Indians in the provs. of Salta, &c., are employed by the whites in agriculture; receiving in payment for their services some coarse woollen cloths, beads, baubles, and a few other articles of dress; but, in general, the independent tribes wearing only a *puncha*, or short cloak, boots of colt-skin, and other articles of domestic manufacture, place little value on European goods. Numerous settlements were made in the 16th century by the Jesuits in the Misiones, S.E. of Corrientes, and civilisation is said to have made some progress among the Indians of this quarter; but after the expulsion of the Jesuits, in 1767, they speedily lapsed into their previous barbarism.

La Plata has scarcely any manufactures. Ponchos, saddle-cloths, blankets, &c., are made by the Indian women, and sold in great numbers to the people of Tucuman and Salta. Cordova is the principal manufacturing town; but the above kind of goods and *anoraco* leather, with wooden bowls and dishes, comprise almost all the articles made there. The foreign imports consist principally of European goods for the white colonists; mostly from Great Britain. "The gaucho is everywhere clothed in British manufactures. Take his whole equipment—examine every thing about him—and what is there (not of raw hide) that is not British? If his wife has a gown, ten to one, it is made at Manchester; the camp-kettle in which he cooks his food, the earthenware he eats from, the knife, spurs, bit, are all imported from England." (*Parish*, 388.) The foreign trade of the republic is increasing; but, as it wholly centres in Buenos Ayres, the reader is referred for an account of it to the article on that city in this Diet., I. 133, 484.

Education, as may be supposed, is not very flourishing in the provinces; but in the chief towns it is not, upon the whole, so backward as in some other parts of S. America. Cordova has a university, and Buenos Ayres a good public library. Newspapers are published in several towns, and the press is quite free.

The Government is nominally a representative republic or confederation, each of the provinces being, to a certain degree, independent of the rest, as in the U. States, Mexico, &c. But, in 1835, General Rosas, who was unanimously called to the presidency, refused to act, unless invested for a period with extraordinary powers. These were accordingly granted him, so that at present the government is a nearly absolute dictatorship, presenting, however, a favourable contrast to the dictatorship in the neighbouring state of Paraguay. There is a *Junta* or parliament of 44 deputies, half annually re-elected by popular election; and a senate of 2 deputies from each province. The provincial government consists of a popular assembly, which nominates the governor. But though democratic in theory, they are quite otherwise in practice; the lower classes bowing with obsequious deference to the nominees of the upper; and "if any appeal to the people be ever made by the latter, it is generally from the necessity of supporting by a demonstration of brute force the pretensions of some particular candidate."

The powers of the president are constitutionally very extensive: he appoints to all civil, military, and judicial offices; but he, as well as his ministers, is responsible for every new measure, and liable to impeachment before the Senate and House of Representatives. The military force is of uncertain amount; but, during the late war with Brazil, about 10,000 troops were collected, besides a numerous militia. The prov. of Buenos Ayres alone supports the government expenditure; the other provinces contributing nothing to the general expenses of the Confederation. The public revenue was estimated, in 1837, at 12,000,000 dollars, a sum insufficient to meet the ordinary expenditure. The public debt, at the same period, amounted to 35,917,166 dollars, bearing 6 per cent. interest.

This country was first discovered in 1517, and settled by the Spaniards in 1533. It was long dependent on Peru; but, in 1778, was erected into a viceroyalty, comprising, together with La Plata, Bolivia, Paraguay, and Uruguay. The English made an unsuccessful attempt on this country in 1807. In 1810, the struggle began between the inhabs. of Buenos Ayres and Spain, which terminated, in 1816, in the independence of the former. The first congress met at Tucuman, but the federal cap. was soon transferred to Buenos Ayres. In 1827 a

war broke out between the republic and Brazil, respecting the possession of Uruguay (Banda Oriental), established as an independent state in 1829; and more recently La Plata has been involved in disputes with both Bolivia and France. These wars have contributed to retard the march of her prosperity; but with all her accumulated difficulties, La Plata appears only to require a few years of repose to develop her abundant natural resources, and to become a comparatively flourishing country. (*Parish's Buenos Ayres; Head's Journals across the Pampas; Andrew's Journey in S. America; Robertson's Letters on Paraguay; Scarlett's Miers; Darwén; Amer. Almanac, &c.* passim.)

PLATA (RIO DE LA) (*River of Silver*), a large river of S. America, draining with its numerous affluents the greater part of the states of La Plata, Banda Oriental, and Paraguay, with smaller portions of Bolivia and Brazil. It is formed by the union of two important branches, the Parana and Uruguay; and, gradually increasing in width, becomes a very large estuary, entering the S. Atlantic Ocean between Punta Negra (lat. 34° 55' S., long. 55° 5' W.) on the N.E., and Cape St. Antonio (lat. 36° 21' S., long. 56° 42' W.) on the S.W.; having on its N. bank the city and port of Monte Video and the colony of San Sacramento, while, on the opposite side, 124 m. from its mouth, is Buenos Ayres. The basin of this great river is estimated to occupy about 1,250,000 sq. m., being inferior in extent only to those of the Amazon and Mississippi; its length, from the source of the Paraguay to its mouth, is about 2,450 m.

The longest and most direct river, and that of the largest volume, belonging to this great water system, is the Paraguay, which, on receiving the waters of the Parana at Corrientes (27° 20' S. lat.), assumes the name of that branch. It has its sources between lat. 13° and 14° S., in the low ranges connecting the great mountains of Peru and Brazil, which constitute the water-shed between the affluents of the Amazon and those of the Rio de la Plata. Many navigable streams join it from the E., as it passes through Brazil; but those on the W. side, though not so numerous, are much more extensive. Between the 17th and 18th degs. of S. lat. occurs that wide region of swamps called the Lake of Narayes, which, during the periodical inundations of the river, is flooded so extensively as to form a great inland sea, stretching from E. to W. between 200 and 300 m., and from N. to S. upwards of 100 m., with a depth of 10 or 12 ft. At the close of the rainy season, these waters are carried off by the Paraguay, which is navigable from this point to its mouth for vessels of 40 or 50 tons, a direct distance of 1,200 m. The other western affluents are the Pilcomayo and Vermejo, which fall into it between Assumption and Corrientes, both having their sources in Bolivia, and flowing S.E. through the great *chaco*, or desert. The Pilcomayo, after a course of 1,000 m., enters the main stream by two branches, about 60 m. apart: it is shallow, and not navigable even by canoes. The Vermejo, which falls into the main river about 135 m. below that last mentioned, rises on the E. slope of the Andes, and is navigable for large boats through the whole of the level country for nearly 700 m.

The Parana (which, as we have before observed, joins the Paraguay at Corrientes, and gives its own name to its lower part) rises in the table-land of Brazil, in lat. 21° S., hardly 120 m. from the shores of the Atlantic. It flows S., and then curves westward, separating Brazil from Paraguay, and, lower down, divides the latter country from the states of La Plata. It has numerous affluents, but though the main stream he upwards of 1,000 m. in length, it is not navigable for more than 160 m., owing to the *saltes*, or falls, the lowest of which, close to the island of Apipé, is in lat. 27° 29' S., long. 56° 47' W. From this point the river at once becomes navigable for vessels of 300 tons. The most important fall, however, is considerably higher up the stream, in lat. 23° 39' S., being upwards of 50 ft. in height. From Corrientes, the united river, now from 1½ m. to 2 m. in width, flows through a vast channel, much broken by islands, overworn with trees, and subject to inundation. The only considerable trib. of the Parana below Corrientes is the Salado, which rises in the E. Cordillera of the Andes, and after a devious course through the mountains, runs south-eastward through the Pampas, to its junction with the main river, near Santa Fe, in lat. 31° 40' S. Here the Parana divides into numerous branches, formed by pretty large islands, becoming more frequent lower down the stream, which at length opens into the estuary of La Plata, by a long, but narrow delta, having two principal branches. The depth at the mouth is seldom less than 2 fathoms, and there is an uninterrupted navigation throughout the year for vessels of 300 tons from Assumption, upwards of 800 m. from the mouth. It has been estimated, says Mr. Darwin, that "the river, at its source, has only a fall of 1 ft. per mile, and much less lower down in its course; indeed, a rise of 7 ft. at Buenos Ayres may be perceived 180 m. from the mouth of the Parana. But notwith-

standing these advantages, we met during our descent very few vessels. One of the best gifts of nature seems here willfully thrown away; so grand a channel of communication being left nearly unoccupied: a river in which ships might navigate from a temperate country, as surprisingly abundant in some productions as destitute of others, to another, possessing a tropical climate, and a soil, perhaps unequalled in fertility in any part of the world. How different would have been the aspect of this country if English, instead of Spanish colonists had, by good fortune, first sailed up this splendid river!" (*Voyage of the Adv. and Beagle*, iii. 164.) The inundations of the Paraguay and Parana bear a close analogy to those of the Nile. "Both rivers," says Sir Woodbine Parish, "rise in the torrid zone, nearly at the same distance from the equator; and both, though holding their courses towards opposite poles, disembogue by deltas in about the same lat.: both are navigable for very long distances, and both have their periodical risings, bursting over their natural bounds, and inundating immense tracts of country." The Parana begins to rise about the end of Dec., soon after the commencement of the rainy season in the S. tropic, and increases gradually till April, when it begins to fall somewhat more rapidly till the beginning of July; a second rising, called *repente*, is occasioned by the winter rains S. of the tropic of Capricorn; but it seldom overflows the banks.

The ordinary average of the increase above Corrientes is 12 ft.; but at Assumption, where the river is more confined, the rise is said to be sometimes as much as 5 or 6 fathoms. Occasionally, however, these floods are much higher; penetrating into the jungles of the interior, and drowning numbers of wild animals, the carcasses of which poison the air for months afterwards. The river at these times is exceedingly turbid from the great quantity of vegetable substances and mud brought down by it: the velocity of the stream in the higher and narrower parts at first prevents their deposition; but as it approaches the lower lands, or pampas, they are spread over the face of the country, forming a grey slimy soil, which increases vegetation in a surprising degree. The extent of ground thus covered during the inundations is estimated at 30,000 sq. m.

The Uruguay, the other great branch of the estuary of La Plata, takes its name from the numerous falls and rapids which mark its course. It is upwards of 800 m. in length, rising in lat. 27° 30', on the Sierra de S. Catherina, in the province of that name, only about 75 m. W. the Atlantic Ocean. Its course is at first nearly due W., but is afterwards turned southward by a mountain-range, separating it from the Parana. It receives several important affluents, of which the Negro, the principal river of Banda Oriental, is the chief. It joins the estuary of La Plata about 50 m. below the junction of the latter; and its clear blue waters may be distinguished from the muddy stream of the Parana for miles after their junction. The country through which the Uruguay flows is of a very uneven and rocky character; in consequence of which the navigation is broken by many reefs and falls, only passable during the periodical floods. Of these, the lowest are the Saltos Grande and Chico, in lat. 31° 30', about 190 m. above its mouth.

The estuary of the Rio de la Plata, the recipient of these great rivers, is about 185 m. in length; its breadth at the mouth being about 130 m., though it gradually becomes narrower till, opposite Buenos Ayres, it has a width of only 29 m. The coast on the N. side is in general high and rocky; whereas on the opposite side the shores are low, extending inwards in immense pampas. The depth of the river increases towards the mouth, where it averages 10 fathoms; but at Monte Video it scarcely exceeds 3 fathoms, and gradually lessens, so that vessels drawing more than 16 ft. water cannot ascend above Buenos Ayres. E. of Monte Video is an immense bank of sand and shells, called the English Bank; besides which there are many other sand-banks, covered when the river is low with only about 8 ft. water, one of which, called the Otiz, is in some parts between 11 and 12 m. in width. The currents are extremely irregular, both in rate and direction, a consequence of the immense volume of water brought down at certain seasons by the Parana, as well as of the influence of the winds at the mouth of the river: indeed, this variability of the winds and currents constitutes one of the chief difficulties in navigating the Plata, which, on this account, has been termed "*El Infierno de los Marineros*."

In calm weather the currents are generally very slack, and almost as regular as tides, setting up and down the river alternately. The effect produced by the *pampas*, or S.W. gales, so called from their blowing over the pampas S. of Buenos Ayres, is remarkable from the singular fluctuations in the depth of the water before and after their occurrence; the river being always higher than usual when they begin, whereas, after they have continued for a few hours, the water is forced out to sea, so that the sand-banks begin to appear, and, on some occasions, even

the anchoring grounds have been laid bare! The tides are so much disturbed, and, as it were, hidden by the currents, that it has been affirmed they have no existence; but, according to the *American Coast Pilot*, they are clearly discernible in calm weather, though their rise seldom exceeds 6 ft. (*Amer. Coast Pilot*).

The Rio de la Plata, which, with its affluents, furnishes an internal navigation of many thousands of miles, must, of course, even in its present neglected state, have a considerable commerce, of which BUENOS AYRES and MONTE VIDEO are the great entrepôts, and to which the reader is referred for further details. The river trade, however, is far less extensive at present than is generally supposed; the intercourse with Chill and Peru having greatly decreased since the establishment of independence at Buenos Ayres, and that with Paraguay having been all but annihilated by the exclusive and despotic policy adopted by its present dictator, Dr. Francia. The river is pre-eminently well adapted for steam navigation, and, under more happy circumstances, might become the medium of a trade inferior only to that of the Ganges and the Mississippi. (*Sir W. Parish's Buenos Ayres and La Plata*, p. 179–205; *Voyages of the Adventure and Beagle*, ii. and iii.; *Amer. C. Pilot*, &c.)

PLATEA, a considerable city of ancient Greece, now wholly in ruins, in Boeotia, at the N. foot of Mount Cithæron, about 7 m. S.W. Thebes. This town has acquired an immortality of renown from its having given its name to the great battle fought in its vicinity, on the 22d September, anno 479 B.C., between the combined Greek forces under Pausanias, and the Persian army under Mardonius, generalissimo of the forces left by Xerxes in Greece. The Grecians gained a most complete victory. Mardonius was killed in the action; and the camp to which the fugitives retreated having been forced, a prodigious slaughter took place. In fact, with the exception of about 40,000 horse, who escaped under Artabazus, the entire Persian army, said to have been nearly 300,000 strong, was all but entirely annihilated. (*Herod. lib. ix. cap. 63*.) The victorious Greeks, besides securing the independence of their country, found an immense booty in the camp of the Persians. A tenth part of the spoil was given to Pausanias, the general, whose great talents materially contributed to the success of the day; and another tenth was set apart as offerings to the gods. From the produce of the latter was presented to the shrine of Delphi a golden tripod, supported on a brazen pillar formed of three serpents twisted together. And it is a singular and curious fact, that this identical pillar, having been carried to Constantinople, still exists in the Hippodrome of that city! (*Herod. lib. ix. cap. 80*.; and the arts. CONSTANTINOPLE, and DELPHI, in this work.)

Notwithstanding the services the Plateans had rendered to the common cause in this great struggle, their city was, at a subsequent period, anno 371 B.C., taken and razed by the Spartans. But she was afterwards restored, and her walls rebuilt, by Alexander the Great. The existing remains of the city date from the æra of that conqueror. (*Dodwell's Greece*, i. 278.)

PLAUEN, a town of the k. of Saxony, circ. Zurlchau, cap. districts Plauen and Pausa; on the White Elster, 58 m. S. by W. Leipzig. Pop., in 1837, 9,485. It is built on uneven ground, walled, and has several churches and hospitals, a gymnasium, and a royal castle. It is a thriving town, with manufactures of linens, and cotton goods and yarn; it has also considerable markets for wool. Pearls are occasionally found in this part of the river; and there is a royal pearl fishery at Oelsnitz, in the neighbourhood. (*Birghaus; Murray's Handb. for S. Germany*.)

PLYMOUTH and DEVONPORT (for, though separated in their municipal and political privileges, they constitute, in fact, parts of the same town), two principal and sea-port towns of England, co. Devon, and hund. Roborough, making together the principal naval port of Great Britain after Portsmouth, at the bottom or N. end of Plymouth Sound, on a kind of rocky promontory between the Tamar and Plym, 36 m. S.W. Exeter, and 193 m. W. by S. London; lat. old church, 50° 22' 14" N., long. 4° 7' 32" W. The pop. of the different towns and districts, popularly included under the term Plymouth, has been, in 1801, &c., as follows:—

	1801.	1811.	1821.	1831.	1841.
Plymouth - - -	16,010	29,803	21,241	31,083	5,527
Devonport - - -	23,472	30,083	33,528	31,883	77,222
East Stonehouse -	3,407	5,174	6,043	9,571	6,111
	43,191	56,060	61,212	72,537	88,000

These towns had together, in 1841, 8,799 inhab. houses. There is a large excess of females, the latter having amounted in the same year to 43,115, and the males to only 35,045. The towns are built on rather unequal ground; Plymouth being on the E., and Devonport on the W. side of the space (3 m. broad) between the two rivers: the

medial suburb of Stonehouse connects (with the help of a bridge over Stonehouse-pool) the two towns.

Plymouth is old, and irregularly laid out; several of its streets are narrow and ill-built, a few also being steep. Many improvements, however, have been made within the last few years, and it has now several handsome streets and good squares, lined with substantial stone houses. Devonport, formerly called Dock, may be said to be the new town of Plymouth, having been almost entirely built since 1760: most of its streets are straight and wide, and the older houses are being gradually replaced by handsomer and more substantial buildings. Its wide, handsome streets, which cross each other at right angles, are paved with limestone quarried in the neighbourhood. Both towns are well lighted with gas; and water is abundantly supplied to Plymouth by the corporation, and to Devonport by a joint stock company.

The principal public buildings of Plymouth are, a modern, though by no means handsome, guldhall, with a small attached bar; an exchange, and custom-house; a very elegant edifice, called the Athenæum, belonging to the Plymouth Literary Institution; a public library; a splendid hotel and theatre, built by the corporation, at an expense of nearly 40,000*l.*; the Royal Union Baths, and a plain stone structure called the Freemasons' Hall. A new and extensive market-place has also been formed, at an expense of more than 10,000*l.*; and it has several barracks, hospitals, and prisons belonging to government. The Naval Hospital, at Stonehouse, is of great extent, and admirably arranged; and opposite to the water-entry of this hospital is the Royal Military Hospital, with an arcade of 41 arches, supporting a terrace, and covered promenade below: there is, also, a large military prison at Mill-bay, capable of accommodating nearly 3,000 persons. One of the most striking features of Plymouth is its citadel, erected on a commanding eminence in 1670: it has five bastions, and is surrounded on three sides by a deep ditch and counter-scarp: the interior comprises a governor's house, residences for numerous military officers, and five barracks. The victualling office, erected about 10 years since, at Duval's or Devil's Point, S. of Stonehouse, is of large size, and replete with every convenience. W. of the citadel is the elevated walk called the Hoe, which commands a fine view of the Sound and the surrounding country, including Mount Edgumbe, with the Cornish hills in the W., the high land of Dartmoor in the N., and Saltram, its neighbourhood, and distant towns in the N.E. Plymouth is divided into two parishes, St. Andrew and Charles the Martyr, of the annual value of 920*l.* and 612*l.* respectively: both have been till very recently in the patronage of the corporation. St. Andrew's church, erected at different periods between the 12th and 15th centuries, is a large and rather handsome structure, with a square embattled tower; its interior comprises accommodation for 2,500 persons, and is, on the whole, elegantly arranged. Charles's church, built towards the close of the 17th century, and named after King Charles I., is a neat building, with a square tower surmounted by a light steeple. There are two chapels-of-ease, one in each par., besides the chapel in the citadel, and the mariners' church, for which a new structure, called Trinity Church, is in course of erection. There are 2 Baptist chapels, and 2 others belong to the sect denominated "Plymouth Brethren." The Wesleyan, Associated, and Bryantist Methodists, Independents, Presbyterians, and Unitarians, have each one or more chapels; and there is a meeting-house for the Society of Friends, and a synagogue. Five Sunday-schools are attached to the Established Church; and religious instruction is furnished by the Dissenters to several hundred children of both sexes. A grammar-school, in the patronage of the corporation, is attended by from 20 to 30 boys; and another school, formerly proprietary, furnishes a good general education to about 50 boys. There is, likewise, an endowed charity-school for 80 children of each sex. Dame Rogers's charity gives clothing and instruction to 52 girls; and a Lancasterian school is attended by 176 boys and 120 girls. An orphan asylum was established some few years ago; and there are 4 sets of almshouses, besides the "South Devon and East Cornwall Hospital," and "Public Dispensary," for providing the poor with gratuitous medical aid; and other benevolent and religious institutions supported by voluntary contributions. The literary establishments comprise the Plymouth Institution, or Athenæum, for the promotion of science and literature; the Natural History Society of Devon and Cornwall; a public library with 6,000 vols.; a medical library, established in 1794; a law library, established in 1815; a theological library; and a mechanics' institute. There are 5 weekly newspapers, of which 2 belong to Plymouth, and 3 to Devonport.

Devonport, unlike Plymouth, is a regularly fortified town, surrounded by lines commenced in the reign of George II., but since much improved. It is also defended by the fortress of Mount Wise, between the town and the harbour on the S., and by a fort on Mount Pleasant to the N., and a battery at Obelisk Point on

the peninsula of Mount Edgumbe, on the opposite side of the harbour. Inasmuch, however, as several of the adjacent heights command the town, it could not oppose any effectual resistance to an army attacking it by land; but it is quite secure from any attack by sea. Close to the fort of Mount Wise is the governor's house, a handsome stone building, fronted by a parade, forming a favourite promenade; on its N. side is the port admiral's house, a recent and capacious stone building. A town-hall was erected a few years ago, and other edifices for various purposes have been built since the grant of the charter in 1838. Opposite the town-hall (which is a neat Doric structure) stands a fluted column, intended to commemorate the naming of Devonport, in 1824: its summit commands a fine view of the harbour and surrounding scenery. The par. church is at Stoke-Damerell, nearly 1 m. N.E. the town; but there are 3 Episcopal chapels of ease, one of which is attached to the dock-yard. The Baptists, Independents, Wesleyan Methodists, and Unitarians, have each places of worship, with attached Sunday-schools; there are also several endowed and subscription schools, furnishing instruction to nearly 5,000 children of both sexes. A public dispensary and savings bank have also been established. Devonport, however, is mainly dependent on its dock-yard, which, indeed, constitutes by far the most interesting feature of the united town.

Plymouth has been, for a lengthened period, the second naval harbour of Great Britain. The dock-yard at Devonport, commenced in the reign of William III., is one of the finest establishments of its kind in Europe. It extends along the shore of Hamoaze 3,500 ft., with an extreme breadth of 1,300 ft., including an area of 72 acres: the entrance on the land side is from Fore Street, one of the principal thoroughfares of Devonport. The basin of the dock is only 250 ft. in length, and 180 ft. in width; but the excellence of Hamoaze as a natural harbour renders a larger basin of less importance. The wharf-wall extends along the shore; and the depth of water is such as to allow the largest ships of the line to come close up to the principal jetties to take in stores.

The dock-yard is divided into two pretty equal parts by a canal (similar to that in Portsmouth), which furnishes easy access for boats to the storehouses, roperies, smithies, &c. In the N. half, and facing the harbour, are 2 dry docks for ships of 120 guns, with jetties for their accommodation after having been undocked. A fine double dock, for ships of 74 guns, communicates directly with the harbour, and a smaller dock opens into the older basin, in addition to which a capacious new basin is now being formed in the S.W. part of the yard. The roofs of the docks are extraordinary specimens of architectural skill, each being formed of a single arch, unsupported either by buttress or pillars. Workshops and sheds are erected in various parts, and a quadrangular range of fire-proof stone buildings comprises magazines of stores, sails, rigging, &c. At the N. end, also, is a range of handsome houses, with attached gardens, forming the residence of the principal officers. On the E. side of the yard are building-ships for large vessels, and others for those of inferior size: near these is a building in which planks are steepled, when required to receive any particular curvature; and in this part, also, are extensive timber-berths, sawpits, and mast-houses, besides a large pond in which masts, yards, &c., are kept soaked to prevent their cracking by exposure to the sun. The blacksmith's shop, about 200 ft. square, comprises many forges. Anchors are made in it of the largest size. The ropery, which is the finest in the kingdom, comprises 2 ranges of building, each 1,200 ft. in length, and 3 stories in height, built entirely of stone and iron, as a security against fire: contiguous to them is the hemp-magazine. In this part of the yard, also, is the model-loft, in which are the patterns of the various parts of ships ordered to be constructed by the Admiralty.

The gun-wharf, or arsenal, separated from the Dock-yard by North Corner Street, includes within the walls about 43 acres: it has two principal warehouses for muskets, pistols, and other small arms, with sheds for gun carriages, a powder magazine, and a coopershop.

A great number of men are employed in the different departments of the dock-yard, especially during war, or when a fleet has to be fitted out; and the scale on which the various operations are conducted, the diversity of the employments, the perfection of the machinery, and the activity prevalent throughout the establishment, are all objects of admiration. But no individual who is not in uniform, or is not well known to the authorities, is allowed to enter the dock-yard, unless by special permission.

The harbour of Plymouth is double, being formed by the estuaries of the Plym and Tamar, opening into the N.E. and N.W. angles of Plymouth Sound: the estuary of the Plym forms the Catwater, a convenient and capacious harbour for merchant-vessels; and that of the Tamar expands into the noble road or harbour of Hamoaze, about 4 m. in length, by about 3 m. in width: it is almost completely land-locked, and has moorings for 100 sail of the line, with secure anchoring-

ground for a still larger number: its average depth is 9 fathoms at ebb tide, and the largest ships float close to the quays. Subordinate to the harbour of Catwaster is Sutton-pool, a small tide-basin, to the E. of the city, surrounded by quays for the convenience of colliers, coasting vessels, and fishing smacks, by which it is almost exclusively frequented. In Mill-bay, also, to the W. of Plymouth, a pier is in course of being constructed for the accommodation of the largest steamers at all times of the tide. Spring tides rise from 15 ft. to 18 ft., and neaps from 6 ft. to 8 ft.

The bay or arm of the sea, called Plymouth Sound, into which these harbours open, is used for the accommodation of the ships that have been refitted in the dock-yards, and as a safe asylum for all sorts of ships in stormy weather. Owing, however, to the heavy swell thrown in from the S., it was formerly a very unsafe place for anchoring; and, to obviate this inconvenience, a stupendous breakwater, or mole, similar to that of Cherbourg, or rather to that of Civita Vecchia, constructed by the emperor Trajan, — see CIVITA VECCHIA, has been formed in the middle of the Sound, stretching in a line, straight in the middle but inclined inwards at either extremity, about 1 m. in length, between Cawsand Bay on the one side, and Baysand Bay on the other. From the commencement of the work to the 31st of July, 1841, 3,777,063 tons of stone, procured from quarries on the banks of the Plym, consisting of rough cubical blocks, each weighing from 1½ to 2 tons and upwards, had been employed in this great work. The top presents a flat surface, about ten yards in width, whence it slopes on both sides to the bottom, the principal slope being on the side next the sea. A light-house is now being erected on its W. extremity.

This great national undertaking has cost a very large sum; but the important object in view in its construction has been completely attained. That part of the Sound within the breakwater has been rendered one of the very best roadsteads in the world: it is accessible on either side, and is sufficiently capacious to admit the largest fleets, which ride under cover of this immense bulwark during the stormiest weather in perfect safety. The Eddystone lighthouse (which see) stands about 14 m. S. by W. the breakwater, and is an important appendage to the harbour, the entrance to which would, but for this beacon, be comparatively dangerous, in consequence of the hidden rocks on which it is placed. Within the breakwater, and opposite to and commanding the entrance to Hamoaze, is St. Nicholas Island, which has been strongly fortified, and constitutes, with the redoubt at Staddon height, above Flevinsand quay (near which is formed the reservoir for supplying H. M.'s ships with water), the principal defence of the town and harbour on the side of the sea.

The Hamoaze is bounded on the S., directly opposite Devonport, by the beautiful peninsula of Mount Edgcumbe, the seat of the noble family of Edgcumbe. On the upper part of the Hamoaze, and on its W. side, is the town of Saltash (which see).

In Catwaster harbour there are wet and dry docks, formerly suited to the construction of 74-gun ships; but for many years they have been used exclusively for merchant-vessels. On the E. side of the Catwaster are the villages of Oreston and Turnchapel, mostly occupied by persons engaged in the dock-yards, or otherwise connected with the trade of the port. In this direction, also, are the finely-situated villages of Upper and Lower Hooe. Mount Batten, at the S.W. extremity of the Catwaster, opposite Sutton-pool, is a very picturesque object. It is surmounted by an ancient castle.

The trade of Plymouth is of considerable importance: the gross custom duties amounted in 1840 to 135,931*l*. There belong to the port about 370 vessels, of the aggregate burden of 30,026 tons, new measurement.

A large part of the trade of the town depends on the dock-yard, and timber is, of course, a principal article of import. Steamers touch here almost daily, on their passage between London, Dublin, Belfast, &c., and boats run twice or thrice a week to and from Southampton. The manufacturing establishments of Plymouth comprise a very extensive sail-cloth factory, a sugar-refinery, glass-house, starch-factory, and a soap-bolling establishment, which produced, in 1839, 2,904,145 lbs. hard soap. The communication with the country E. of the Plym is effected by an iron bridge five arches, raised on granite piers, built at the sole expense of the late Earl of Morley; and mail-coaches, carriages, horses, passengers, &c., are ferried over to Cornwall by a kind of floating steam-bridge, running every quarter of an hour between Torpoint and Devonport. A railway, 24 m. in length, connects Plymouth with Prince-town, or Dartmouth; and as a line of railway is already in progress, uniting Exeter with the metropolises, there can be little doubt of its being continued thither. The Bank of England has a branch here; and the Western District Banking Company, the Devon and Cornwall Banking Company, and the National and Provincial Bank of England, have establish-

ments both at Plymouth and Devonport; besides which there are the "Naval Bank," and two private banks.

Plymouth was incorporated in 13 Henry VI. Its present municipal officers are a mayor, 11 other aldermen, and 36 councillors, the bor. being divided into six wards. Corporation revenue, in 1839, 11,531*l*., exclusive of 1,297*l*. accruing from the sale of property. Quarter and petty sessions are held under a recorder; and there is also a borough-court for the trial of civil actions, and a local court of requests, established by a recent act for the recovery of small debts, embracing a jurisdiction extending, in some directions, nearly 12 m. Devonport has also very recently, on petition, been made a corporate town, and divided into wards; its municipal officers being a mayor, aldermen, and councillors. It has a commission of the peace under a recorder. Corp. rev., in 1839, 1,818*l*. Plymouth has regularly sent two mems. to the H. of C. since the reign of Henry IV.; but it occasionally exercised the franchise at an earlier period. The electoral boundaries were enlarged by the Reform Act, so as to include with the old bor. a small portion of land N.E. the town, on the Exeter road. Reg. electors, in 1839-40, 1,907. The Reform Act constituted Devonport a parli. bor., conferring on it the privilege of returning two mems. to the H. of C. The electoral limits comprise the par. of Stoke-Damerell and township of Stonehouse. Reg. electors, in 1839-40, 2,121. Neither Plymouth nor Devonport is attached to poor-law unions; but the expenditure of the united bors. in 1839 amounted to 16,332*l*., of which 9,320*l*. were expended on the poor of Plymouth. Markets, in Plymouth, on Monday, Thursday, and Saturday; in Devonport, on Tuesday, Thursday, and Saturday: both abundantly supplied with every kind of provisions.

Plymouth, originally called Tamouwerth, and afterwards Sutton (or South-town), received its present name at the period of its incorporation, in the reign of Henry VI. The town received a considerable accession of wealth on the dissolution of the monasteries, and in the reign of Elizabeth was greatly benefited by a supply of good water, conveyed by a channel, 24 m. in length, from Dartmoor, planned by the famous Sir Francis Drake, a native of the town. During the same reign, Plymouth Sound was the rendezvous of the fleet opposed to the Armada, and also of the fleet sent against Cadiz. The town suffered greatly, on three occasions, from the plague, which, in 1626, carried off 2,000 persons. During the parliamentary wars it embraced the cause of the parliament, and was besieged by Prince Maurice and the royalists, though without success.

Devonport, as is already stated, is quite a modern town, which owes its rise to the rapidly increasing importance of the dock-yard during the American and French wars. Stonehouse, which connects Plymouth with Devonport, is still more modern, and has been wholly built within the present century. All these towns suffered most severely in 1832-33 from the cholera. (*Parl. Bound. and Mun. Reports; Private Inf.*)

PLYMOUTH, a town and sea-port of the U. States, in Massachusetts, cap. co. of its own name, 35 m. S.E. Boston; lat. 41° 57' N., long. 70° 42' 30" W. Pop., in 1831, 4,718. It has a court-house, gaol, bank, several churches, &c., and some cotton and woollen factories, iron-works, and mills, the machinery of which is impelled by a rivulet intersecting the town. The harbour, though spacious, is so shallow that vessels drawing more than 10 or 11 ft. water must partly unload at a distance from the wharfs. The burden of the shipping belonging to the port amounted, in 1838, to 23,821 tons. Plymouth is the oldest town in New England, its foundations having been laid in 1620.

PLYMPTON EARLE, or PLYMPTON MAURICE, a decayed bor., market-town, and par. of England, co. Devon, hmd. its own name, 43 m. E. Plymouth. Area of borough and parish, which are co-extensive, 170 acres. Pop., in 1831, 804. The town comprises two streets disposed in the form of the letter T; and it has an old guildhall, under which is held the corn-market. The church is small, and the living is a curacy subordinate to the adjoining parish of Plympton St. Mary. The Wesleyan Methodists and Independents have places of worship. 8. of the town are the ruins of a once-magnificent castle, occupying nearly 2 acres of ground: it was built by Richard de Rivers, Earl of Devonshire, to whom the town was granted, with "the honour of Plympton," by Henry I. Plympton Earle claims to be a bor. by prescription, but received a royal charter in the 13th Edward III. It was one of the stannary towns; but for many years it has been in a decaying condition; and the bor. was not considered of sufficient importance to be included in the provisions of the Municipal Reform Act. But, decayed as it is, it sent 2 mems. to the H. of C., with some interruptions, from the reign of Edward I. down to the Reform Act, by which it was most properly disfranchised. Markets on Saturday: fairs for cattle and woollen cloth, Feb. 25, April 5, Aug. 12., and Oct. 29.

## PO. See ITALY.

**POCKLINGTON**, a market-town, par., and township of England, E. of the city of York, Wilton-Beacon, div. of way, Harthill, on a small trib. of the Derwent, 12½ m. E. by S. York. Area of par., including 4 townships, 4,380 acres. Pop. of township, in 1831, 2,048. It is a good county-town; and the market-place, though small, is conveniently arranged. The church, in the centre of the town, is a large cruciform structure, with a handsome tower at its W. end, and a chancel containing some carved stalls: the living is a vicarage in the gift of the dean of York. A free grammar-school was founded here in 1526, and endowed with lands that now yield upwards of 1,000*l.* a year: the master is appointed by the master and fellows of St. John's College, Cambridge. A national school also was established in 1819. It has no manufactures, but a considerable trade has grown up, chiefly in corn, flour, timber, coal, and general goods, since the completion of the canal from E. Cottingham on the Derwent, to Street Bridge, about a mile from the town. Markets on Saturday: fairs for horses, cattle, &c., March 7., May 6., Aug. 5., and Nov. 8. Great show of horses, Feb. 21. and Dec. 17.

**PODOLIA**, a government of Russia in Europe, chiefly between the 48th and 50th degs. of N. lat., and the 26th and 31st degs. of E. long.; having N. Volhynia, N.E. Kiev, S.E. Khesron, S.W. Bessarabia, and N.W. Galicia. Length, N.W. to S.E., 240 m. Area estimated at 12,200 sq. m. Pop. in 1838, 1,548,000, principally Poles, but including some Russians, and about 150,000 Jews. The greater part of the country is flat; but a low branch of the Carpathians extends through it in an easterly direction. The general slope is towards the S.E. Principal rivers, Bug and Dniester, which last forms the S.W. boundary. The climate is healthy, and mild enough for the vine and mulberry to flourish in the open air. Soil stony, but in general very fertile, and Podolia formerly ranked among the most durable crops of Poland, as it now does of the Russian empire. Corn is produced in abundance; the produce of wheat, in 1820, was estimated at 6,000,000 chetverts, a quantity exceeding the home consumption by 1-3*d.* Hemp, flax, tobacco, hops, beans, and various fruits are grown. The culture of the vine, though on the increase, is not yet of any importance; and orchard and garden husbandry is conducted in a negligent manner. Pastures luxuriant. Cattle-rearing is an important business; and many head of cattle are sent into Germany, where they are much prized for their beauty and excellence. The sheep yield but indifferent wool. A good many hogs are kept, as well as poultry and bees. The forests are estimated to cover 991,442 *deciatins*, or nearly 3 million acres; only a small proportion of which belongs to the crown. Game is scarce, but the fisheries are highly productive. Saltwater, lime, and alabaster, are the principal mineral products. Manufactures are quite insignificant; except distilleries, there are only a few woollen cloth, leather, potash, and saltpetre factories. The trade, which consists mostly of the export of grain to Odessa, and cattle to Galicia and Germany, is wholly in the hands of the Jews. Podolia is divided into 12 districts; its cap. is Kaminitetz. It is one of the 10 governments privileged with respect to its judicial administration and the distillation of spirits: it is subordinate to the government of Kiev, both as to military affairs and public instruction. Most of its inhabs. belong to the Greek church.

Podolia was long governed by its own princes; but, in 1569, it was united to Poland, who erected it into the two voivods of Podolia and Bracław. It has belonged to Russia since 1793. (*Schulzer, La Russie; Possart, &c.*)

**POITIERS**, or **POITIEUX**, (an *Limouan*, and afterwards *Pictava*), a city of France, dep. Vienne, of which it is the cap.; on the Chaine, a tributary of the Vienne, 58 m. S.S.E. Tours, and 78 m. N.E. by E. La Rochelle, lat. 46° 35' N., long. 0° 20' W. E. Pop., in 1836, 22,000. It is surrounded by old walls, flanked with towers. Few French cities occupy a greater extent of ground; but a large space within the walls consists of fields and gardens. The streets are inconveniently steep, ill-paved, and gloomy, and the city generally is ill-built, its houses being without either taste or dignity. It has but one good square, the *Place Royale*, in which was formerly a statue of Louis XIV. Previously to the revolution, few towns in France had so many churches; and though much diminished, many of them still exist; but there are few other public edifices worth notice. The cathedral is a large, though rather low Gothic edifice, said to have been founded by Henry II. of England. The church of St. Radegonde is much more ancient, being said to owe its origin to the wife of Clovis, in 547. The crypt containing her tomb, and some other portions of the original edifice, are still extant, but the rest of the building mostly dates from the 11th century. The church of Notre Dame is very handsome, and several of the other churches have some curious tombs and monuments. The hall of justice, public library, with 12,600 vols., bishop's palace, theatre, cavalry barracks, and baths, are the

other most conspicuous buildings. Poitiers is the seat of a royal court, of tribunals of original jurisdiction and commerce, a university academy, faculty of law, and royal college; and has societies of agriculture, arts, and sciences, a departmental nursery ground, botanic garden, &c. It is the see of a bishop, whose diocese comprises the déps. Vienne and Deux Sèvres. Its manufactures, though not extensive, comprise very various articles, as coarse woollen cloths, blanketing, hosiery, cotton netting, lace, hats, prepared sheep-skins, and goose-down. It has a considerable trade in agricultural produce, and six annual fairs.

Poitiers is one of the most ancient towns in Gaul. The vestiges of a Roman palace, an aqueduct, and an amphitheatre, are still visible. The Saracens were totally defeated in 732 by Charles Martel, in a great battle between this city and Tours. But Poitiers is chiefly memorable for the signal victory obtained in its vicinity on the 19th Sept., 1356, by an English army commanded by Edward the Black Prince, over a vastly superior French force commanded by king John. The French army was wholly dispersed; and, besides many thousand common soldiers, a vast number of persons of distinction were killed or taken prisoners, the king and one of his sons being among the latter. (*Hugo, art. Vienne; Diet. Glog.*)

**POITOU**, the name of an extensive prov. of France, previously to the revolution: it is now distributed among the departments of Vienne, Deux Sèvres, and Vendée.

**POLA**, in antiquity, a splendid city, but now a poor, decayed sea-port town of the Austrian empire, gov. Trieste, on the W. side, and near the S. extremity of the peninsula of Istria; at the bottom of a bay of the same name; lat. 45° 52' 18" N., long. 13° 50' E. Pop., about 900. It is surrounded by walls flanked with towers constructed by the Venetians in the 15th century, is the seat of a bishopric, has a castle, a cathedral, a Greek church, and 3 convents. The harbour is one of the best on the Adriatic. The entrance to it is narrow, but the water is deep, and within it expands into a large basin, land-locked and safe. It might easily be rendered an excellent station for a fleet intended to command the Adriatic. The chief occupation of the inhabs. is fishing. The sand used in the Venetian glass-works is brought from its environs.

Pola owes all its celebrity to its ancient greatness, and to the magnificent remains of antiquity of which it has still to boast. The principal of these is a noble amphitheatre, standing outside the town, and near the bay. This splendid monument is in a very perfect state of preservation, and is scarcely exceeded in magnificence by that of the Colosseum at Rome, while, in point of dimensions, it is in a very small degree only inferior to the amphitheatre of Verona. It is in the form of an ellipse, its longest diameter being 436 ft. 6 in., its shortest 316 ft. 2 in., and its height, in the most perfect parts, 97 ft.\* It is estimated to have been capable of accommodating above 20,000 spectators. The height is divided into 3 stories, and the whole circ. into 72 arches. It is constructed of Istrian stone of a very superior quality, and which, in appearance and durability, is equal to the purest marble.

Within the town are two temples which, when perfect, must have been exactly similar, and worthy the best period of the Augustan age. The best preserved is dedicated to Rome and Augustus Cæsar. There is, also, an arch raised, as the inscription announces, by a Roman lady, in testimony of her affection for her husband. It is a beautiful and elegant structure, admired for its simplicity and admirable proportions. Part of a Roman gateway, containing three arches, was discovered by Messrs. Stanhope and Allason, in 1816. The cathedral has apparently been built on the site of an ancient temple.

These ruins sufficiently attest the former magnitude and wealth of this now miserable place. Strabo, Pliny, and Mela, say that it was founded by a colony from Colchis; and of its great antiquity there can be no doubt. It became a Roman colony, and was for a lengthened period the principal town of Istria. *Pola quamdam a Colchis, id'ferunt, habitata (in quantum res transeunt) nunc Romana colonia.* (Mela, lib. ii. cap. 3.)

Malte-Brun says that it was destroyed by Cæsar for its devotion to Pompey, and rebuilt by Augustus, at the intercession of his daughter Julia. But there is no evidence whatever of its having been so destroyed, or of its restoration in the way now mentioned, other than what may be derived from the fact of its having been sometimes called *Pietas Julia*.

At present it is very unhealthy in summer, owing to marshes near the town; but these, it is said, might be easily drained. (See *Allason's Picturesque Views* of the spot.)

\* Mr. Murray, in his *Handbook*, says that it is 566 ft. long, and 292 broad; but the dimensions in the text are those given by Mr. Allason, the architect, from measurements taken by himself on the spot.

the *Antiquities of Pola*; Murray's *Handbook*, p. 295; *Spain and Wheeler, Voyage d'Italie*, &c., i. 48, 12mo. edit.)

POLAND (Lat. *Sarmatia*; Pol. *Polsk*, signifying a plain country), formerly the name of an independent and extensive country of E. Europe, comprising the territories between the 48th and 58th degs. N. lat., and the 15th and 33d degs. E. long.; including, with Poland Proper, Lithuania, Samogitia, Courland, the Ukraine, Podolia, and other provs. now belonging to Russia, with Galicia, belonging to Austria, the prov. of Posen, and some other districts in Prussia. But the existing kingdom of Poland, constituted by the congress of Vienna in 1815, and now united to the Russian empire, is of comparatively limited dimensions, extending only between the 50th and 55th degs. of N. lat., and the 18th and 24th degs. of E. long.; having N. Prussia Proper and the Russian gov. of Wilna; E. the gov. of Wilna, Grodno, Bialystok, and Volhynia; S. Austrian Poland and the territory of Cracow; and W. Prussian Poland (the grand duchy of Posen) and Silesia. Area, pop., subdivisions, &c., as follow:—

Governments.	Area in sq. m.	Pop. in 1858.	Chief towns.
Cracow	4,181	435,787	Cracow.
Sandomir	5,984	415,886	Radom.
Kalisz	6,811	449,528	Kalisz.
Lublin	6,726	518,750	Lublin.
Plock	6,118	496,807	Plock.
Moscoria	8,927	700,584	Warsaw.
Podluchia	4,853	381,703	Siedlce.
Augustow	6,926	266,053	Susulitz.
City of Warsaw		156,102	
Totals	50,757	4,298,962	

Of the pop. about 3-4ths consist of Poles, 1-10th of Jews, and the remainder principally of Russians, Germans, Gypsies, and Tartars.

The whole country, except in the S., where are some scattered offshoots from the Carpathian Mountains, is an extended plain, with a general slope towards the Baltic, in which its principal rivers have their embouchure. These are the Vistula, with its tributaries, the Wieprz, Bug, Narew, Pilzta, &c., the Niemen, and the Warta. The Vistula, after bounding the kingdom for a lengthened distance on the S., traverses its centre, leaving it near Thorn. The Niemen, Bobr, and Bug bound nearly all the E.; and the Prosna, a tributary of the Warta, a considerable part of the western frontier. These rivers are all more or less navigable. There are innumerable smaller streams, Poland being an extremely well-watered country; and in the N., E., and W. are a great number of lakes and many very extensive marshes. The surface, though flat, is abundantly diversified, presenting alternately fertile corn lands, savage steppes, rich pastures, sandy wastes, dense forests, and dreary swamps. The climate is rigorous: the cold of winter is often as great as in Sweden, in a lat. 10 degs. higher; and in 1759, the thermometer descended to 27° below zero (Réaumur). In summer, however, the heat sometimes rises to 120° (Fahr.). The mean temperature of the year at Warsaw is about 46° Fahr. The atmosphere is humid, rainy, and cloudy days occupying half the year. Between the Vistula and the Prussian frontier the soil is generally fertile, the most productive districts being in the gov. of Cracow and Sandomir, and the neighbourhood of Warsaw. In the N.E. are also some very fertile tracts; but there, and in the gov. of Plock, Lublin, &c., the surface is in great part waste.

The traveller in Poland sometimes finds himself in an expanse of surface, almost without a house, a tree, or any single object large enough to attract his notice. Soon, however, are descried the skirts of some vast forest fringing the distant horizon; and, on entering it, we proceed for 8 or 10 miles, more or less, winding with the road, through lofty pines, &c., precluded from the sight of all objects but trees and shrubs. Sometimes, in the midst of a forest, we meet with a small spot of ground (for example, of 10 or 20 acres) cleared and cultivated; its sides prettily fenced by the green surrounding woods. Sometimes a small lake is found thus situated, its borders ornamented in a similar manner; and these, generally speaking, are the prettiest scenes which Poland furnishes. These forests, in some places, are 15 and even 20 m. in all directions. Indeed, if we exclude morasses and the level pasture lands, perhaps not more than half of the country, speaking generally, is cleared. At distant intervals are found plains of some extent, affording rich pasturage. The best are those contiguous to the Vistula, some of which are periodically overflowed by that river. Such are those in the neighbourhood of Warsaw, which supply that town with good butchers' meat. (Burnett's *View of Poland*, p. 29—53.) This description was written early in the present century; and, though a considerable proportion of forest land has been cleared in the interval, it is still substantially accurate. Of 741,000 *wielka* of land comprised in the kingdom, 255,000 *wiel* are

supposed to be arable; 205,000 in forest; 171,000 in natural pastures, rivers, and marshes; 46,000 in meadows, 38,000 occupied with roads and buildings, and 26,000 in gardens. Poland has, for a lengthened period, been the granary of a great part of Europe. But Volhynia, Podolia, and Galicia, formerly included in the Polish dom., were the principal corn-growing provs.; and in the existing kingdom of Poland, with the exception of Sandomir and Cracow, the land, according to Mr. Jacob, is so poor that it can scarcely be made to yield a medium crop of wheat more than once in 9 years. The soil is mostly thin, sandy, or sandy loam, resting chiefly on a bed of granite, through which the heavy rains gradually percolate. S. of the Pilzta, however, the appearance of the land and the face of the country improve; and as we proceed southward to the Vistula, the surface becomes more undulating, and the soil stronger and more tenacious. In this quarter there are extensive tracts of clayey loam, requiring three or four horses to plough it, and yielding, when tolerably well managed, excellent crops of wheat and oats. Where, in this district, any thing like a system of rotation is adopted, the crops are very heavy.

Some of the estates belonging to the nobility of the highest rank are of enormous extent; and, not long since, those of Prince Czartoryski and Count Zamoyski, taken together, occupied a space nearly equal to half the extent of England! In the times of the republic, the former contributed 20,000, and the latter 10,000 men to the army. Owing, however, to the practice of dividing the land equally among the children, unless a majorat be established in favour of the eldest son, which is sometimes the case, much of it is possessed in smaller allotments. These, however, we should still call large, for they mostly vary from 5,000 or 6,000 up to 30,000 or 40,000 acres each. The rent and price of land is generally low; depending much more on the number of peasants than the extent of the farm. The crown-lands, comprising 1-3d part of the whole surface, or about 10 million acres, include perhaps 2 million acres of wood, the remainder being chiefly arable land, leased to tenants, who, in consequence, acquire right to the services that may be legally demanded from the peasantry. The tenants of the crown are exempted, as well as their peasants, from some taxes, to which the other occupiers of land are subject, and, in consequence, the crown estates are better stocked with peasants. With this freedom from taxation and ample supply of labourers, the rent of 8,000,000 acres of land is said by Mr. Jacob, from whom we have borrowed these details, to have amounted, in 1827, to no more than 4,000,000 florins, about 95,000*l.* sterling, or somewhat less than 3*d.* the English acre. But a large extent of land is included in this average that is literally of no value; so that, according to Mr. Jacob, the rent of the cultivable land may be fairly set down at from 8*d.* to 14*d.* per acre. It might, however, have occurred to Mr. Jacob, that, in point of fact, the money rent of land, in a country like Poland, without towns and without a market for its produce, affords not test whatever of its real value. Lands belonging to private individuals are rarely, indeed, ever let, except for services to be performed on the other parts of the same estate; and the value of the land is to be determined not by the amount of the money rent it will bring, but by the amount of subsistence it affords, or the number of individuals it will maintain in an average state of comfort, according to the customs and habits of the society. Nothing, indeed, can be more perfectly inconsequential and absurd than to set about measuring the value of land in such a country as Poland by the same standard by which it is measured in England. Formerly the whole lands of the republic were the property of the nobility or gentry, and could not be held by any one else. The possession of land was, in fact, of itself, a proof of nobility; and the owner of an estate of 3 acres in extent voted in the elections of members, and, in respect of political rights and privileges, was on a level with the richest nobleman in the country. But this state of things is now wholly changed. Landed property is no longer the appanage of a particular class; but may be indifferently held by nobles, burghers, and peasants. Jews only are prohibited from becoming proprietors of the soil, though they have numerous mortgages thereon. When they foreclose, the lands must consequently be sold; and as the Jews, who engross the greater part of the money capital of the country, cannot become purchasers, the prices they yield are very trifling. Latterly, however, some modifications have been made in the regulations respecting the Jews, and various privileges have been conceded to them.

The most numerous class of cultivators are peasants, who are a species of *quasi* proprietors of the lands they occupy, holding them under condition of working a stipulated number of days in each week on their lord's demesne, and paying him, in addition, specified quantities of poultry, eggs, yarn, &c. The extent of their holdings varies according to the quality of the land, the quantity of work to be performed, and of payments in

kind to be made. On a large property examined by Mr. Jacob, the peasants had each about 48 acres of land, for which they were bound to work two days a week with a pair of oxen. If their further labour was required, they were paid at the rate of 3d. a day for two days more, and if beyond that number, they received 6d. a day. On another property, the peasants had about 36 acres, for which they worked 2 days a week with 2 oxen; when called upon for extra labour, they were paid 6d. a day for themselves and their oxen for the next 2 days, or, without the oxen, 3d.

Under the republic, the Polish peasants were slaves, and did not, in fact, enjoy any greater consideration than the blacks of Carolina and Georgia in the present day. They were the absolute property of their masters. Down to 1768, a lord who had killed his slave was merely amerced in a small fine; and though, in that year the offence was made capital, such an accumulation of evidence was required to prove the fact, that the enactment was rendered quite nugatory. (*Coxe*, i. 113.) It was customary to make the slaves work five days a week on the estates of their lords; the latter, also, might seize on whatever wealth the slaves had accumulated, might inflict on them corporal punishment, and might sell them as if they had been so many head of cattle. The boasted freedom of Poland was, in truth and reality, merely the license of the gentry to trample under foot the mass of the people, to browbeat their sovereign, and sell their votes. It is due, however, to the nobility to state that some amongst them, as the Zamoyskis, the Czartoryskis, and others, perceived the miserable consequences of such a state of society, and were most anxious for the improvement of the peasantry on their estates, of whom they emancipated considerable numbers. Generally, however, the Polish gentry were not inclined to establish or give efficacy to any regulations in favour of the peasantry, whom they scarcely considered as belonging to the same race of beings as themselves, or as entitled to the common rights of humanity. Under the circumstances, no one will be surprised to learn that the Polish peasantry, at the dismemberment of the republic, were in the lowest state of degradation, being at once ignorant, indolent, addicted to drunkenness, poor, and improvident in the extreme. (*Coxe's Travels*, i. 14; *Voyage de deux Français dans le Nord de l'Europe*, v. 105; *Busching's Geog.*; *Introduc. to Account of Poland*, § 4; *Connor's State of Poland*, passim; *Coyer, Vie de Sobieski*, i. 129; *Malte Brun, Tableau*, &c.)

The servitude of the peasants was modified by the constitution of 1791, and it was wholly abolished in the grand duchy of Warsaw, nearly identical with the existing kingdom, in 1807: the labour and services due by the peasants to their lords having been since regulated and defined by law. Owing to the ignorance of the peasantry, the influence of this great and salutary change was for a lengthened period less considerable than might have been supposed. Though the peasants may now leave one part of the country to settle in another, they must first pay off any debt that may be owing their lords; and from inability to do this, and various other circumstances, they do not often quit the estates on which they were born. When a young peasant marries, his lord assigns him a certain quantity of land, sufficient for his maintenance and that of his family in the way in which they have been accustomed to live. Should the family grow numerous, some little addition is made to the grant. At the same time, the young couple obtain also a few cattle, as a cow or two, with steers to plough their land. These are fed in the stubble, or in the open places in the woods, as the season admits. The master also provides them with a cottage, with implements of husbandry; in short, with all their little moveable property. Owing to the powerful influence of old habits, but few peasants improve the little stock committed to their management; their conduct, according to Mr. Jacob, being most frequently marked by carelessness and a want of foresight. This, however, is by no means uniformly the case: there have been many instances of accumulation; indeed, several of the peasants have become proprietors, while others have hired a larger extent of land. But it will require the lapse of a lengthened series of years before any very general change be made in the habits and condition of the bulk of the people.

Speaking generally, the houses of the Polish peasants are miserable hovels. They are all built of wood: even "those of the better class have merely the ground floor. On the exterior they are, in every point of view, humble, very often mean in appearance: the interior is occasionally somewhat better, though an Englishman looks in vain for any thing like comfort. There are usually 2 or 3 ordinary rooms, whitewashed, though only one serves, for the most part, as a sitting-room. The floors are sometimes of earth only, but more frequently planked. A bed stands almost always in every room." (*Burnett's Travels*, p. 125.) The villages, which are of the most

wretched description, are thinly scattered, rather along the skirts than in the midst of the forests, and sometimes in vast bare heaths, where no other object is to be seen. They consist of from 10 to 50 miserable huts, rudely constructed of timber, and covered over with straw, turf, or shingles, and afford so imperfect a shelter, that the inhabitants are glad to stop up the chimnies in winter, and to be half smothered with smoke, rather than die of cold. Each of these huts consists generally of only one apartment, with a stove, round which the inhabs, and their cattle crowd together. Bad as these villages are, you may travel 10 m., even in the clear part of the country, without seeing one, or indeed beholding any human habitation. The common diet of the peasantry is cabbage; potatoes sometimes, but not generally; pease, black bread, and soup, or rather gruel, without the addition of butter or meat. Their chief beverage is the cheap whiskey of the country, which they drink in quantities that would astonish the best customers of the gin-palaces of England. Their houses generally have little that merits the name of furniture; and their clothing is at once coarse and disgustingly filthy. These, however, are only their general characteristics. The condition of the peasantry depends much on the character of their lords, and upon the more or less embarrassed state of the property on which they may be settled. On the estates of opulent and enlightened landlords, it is wholly different from what it is on the estates of those of an opposite description, and may, indeed, be said to be decidedly comfortable.

It is, perhaps, hardly necessary to state, that from the labour applied to the lords' estates being rendered so compulsory service, it is performed in the most negligent and slovenly manner possible. Mr. Jacob says that all the operations of husbandry are very ill executed; the ploughing is shallow and irregular; the harrows, with wooden tines, do not penetrate sufficiently to root up weeds in following; so that the land is always foul, and in bad order. The same want of attention prevails in the sowing.

In short, the natural effects of the system of duty-labour are strikingly visible in the whole administration of most of the large estates where it is followed; and is hardly even prevented from exhibiting itself on the estates belonging to the few proprietors who have intelligent and active managers, and are free from pecuniary embarrassments. The common course of crops is the old system of a whole year's fallow, followed by winter corn, and that by summer corn, and then a fallow again, so that 1-3d part of the land bears nothing. The winter crop, in the N. of Poland, consists of wheat and rye, the latter being to the former nearly as 9 to 1, the little manure that is preserved being laid out on the wheat land. In the S. part of the kingdom, the wheat bears a larger proportion to the rye, amounting, on the more tenacious soils, to 1-5th, and in some cases to 1-4th part, or upwards. On a well-managed farm in the prov. of Lublin, the quantities of seed and produce are said by Mr. Jacob to have been as follows: Potatoes, about 20 bushels to the acre planted, and about 200 bush. raised; wheat, 2 bush. sown, and from 16 to 20 reaped; rye, 2 bushels sown, and from 12 to 15 reaped; buck-wheat, 3 bushels sown, and from 10 to 15 reaped. The barley and oats scarcely yield four times the seed. Manure is applied after potatoes for the wheat, the former having the benefit of fallowing. This farm was one of the few in which all the labour, except that of the oxen and their drivers, was paid for in money, and not in produce. The common plan of thrashing is to give the thrasher a certain proportion of the corn, varying, according to circumstances, from the 14th to the 18th bushel. In the generality of farms, the increase is considerably less than the above; the average produce of wheat being estimated at not more than 14 or 15 bushels; rye, 10 or 12; barley, 14 or 16; and oats and buck-wheat, from 8 to 12 the acre; or at not more than half the average produce of similar crops in England. In the S. parts of Sandomir and Cracow the crops are more than usually heavy; but they are celebrated more for the excellent quality of their corn than for its greater produce. In Sandomir, a narrow district about 60 m. in length, extending along the Vistula, produces the heavy and fine grain known in London as Dantzian white wheat, but the average growth is rarely beyond 20 bushels an acre.

The stock of cattle is small in proportion to the extent of land and the number of the inhabs. The Polish horses, formerly held in high estimation, have much degenerated, and a good breed is met with only in a few studs. A miserable race of colts is employed to transport merchandise, and field labour is almost wholly performed by oxen or cows. The latter are small, and are kept in bad condition, both as to food and cleanliness. They are mostly stall-fed, but, from negligence, yield very little butter, and no good cheese. The common breed of the country may be worth from 25s. to 30s. a head; but considerable numbers of a superior breed are annually imported from the Ukraine, which may be worth 25l. or upwards, a head. Previously to the late

revolution, the total number of sheep in Poland was roughly estimated at about 3 millions; but though the country be extremely well adapted for sheep breeding, the Polish breeds were greatly inferior to those of Saxony, and there were very few flocks of fine-wooled sheep. Later, however, the Polish wool has improved very much in point of quality; and is now sent in large quantities to the markets of Leipzig, Berlin, and Breslau, where it sometimes brings a very high price. Hogs, though not very numerous, are of a good breed, originally from Hungary.

The burdens laid directly on the land are not very heavy. Tithes are moderate, and principally compounded for at fixed rates. A small sum is levied in each district for the repair of roads, bridges, and other local purposes; but that and the land-tax do not exceed 25 per cent. on the presumed annual value of the land, which is usually far below its real value. The other taxes fall equally on the different classes of the community. That on beer is levied by the government to the brewers. Heavy duties are laid on foreign commodities, such as sugar, coffee, wine, &c. The great mass of the population cannot, however, afford to purchase such luxuries, but content themselves with honey, dried chicory, and whiskey.

The forests are highly important, and in the govts. of Augustow and Plock they cover more than a third part of the surface; though in some of the other govts. they have been much neglected, and wantonly cut down; especially in the gov. of Cracow, where, however, the place of wood-fuel is supplied by coal. Scotch pine, black fir, alder, aspen, oak, beech, ash, maple, linden, and elm, are the principal forest trees, and the Polish oak and fir timber is decidedly preferable to that of America. Most of the larger forests belong to the crown, and are felled in portions annually, so as to cut them every 50 years. Mr. Jacob states, that the wood cut in one year, on the forest land belonging to the crown, produced 1,000,000 stiching, being at the rate of 54d. the acre on the whole of the woods, or 24s. on the part actually cut. (*Jacob's Report on the Agric. of Poland; Burnett's View of Poland; Coze's Trav., &c.*)

Among the wild animals may be specified the bison (*Pol. Zubr*), found in the vast forests of the prov. of Plock, traversed by the Narew. The Emperor Alexander prohibited the chase of the bison, of which, perhaps, the only remnant in Europe is now to be found in Plock and the adjoining Russian prov. of Bialystock. (Malte Brun, *Tableau de la Pologne*, p. 55.) The other wild animals include the elk, roebuck, wild boar, badgers, foxes, hares, &c., the skins of which last form articles of export.

Minerals are more numerous and valuable than might have been expected in so flat a country. Bog iron is found almost everywhere; but the principal mining districts are in the S., in the govts. of Cracow and Sandomir. Coal is raised in considerable quantities at Bendzin, Reden, Niemy, &c. Zinc, which is exported in considerable quantities, is found in the vicinity of Cracow; lead at Ollusz; and copper at Klecze. Iron of excellent quality is also mined in Sandomir.

The domestic manufacture of woollen and other stuffs is universal throughout Poland, almost every agricultural family having a loom for the manufacture of the coarse cloths required for their consumption. The yarn used to be partly imported from foreign countries, but lately a large spinning factory has been established at Girardow, which employs 500 hands, and produces, besides yarn, a quantity of linen cloth. In 1829, the woollen cloth made in the country was estimated at 7,000,000 Polish ells, worth upwards of 70 millions fl., about a tenth part of which was sent into Russia. During the disturbed period which followed, the production of Polish woollens sank to one third of what it had previously been; but it has lately revived in consequence of the importation of Polish cloths into Russia, duty free, where they are in extensive demand for the clothing of the troops, and other purposes. They are, also, sent in considerable quantities to Kiachta, on the borders of Chinese Tartary. Leather is the manufacture next in importance; and then follow linen and cotton fabrics, sail-cloth, paper, bleached wax and wax candles, atom and other chemical products, glass, printing types, jewellery, carriages, &c. Generally, however, these articles are produced on a very small scale; and notwithstanding the cheapness of labour, they are mostly, from the want of skill on the part of the workmen, at once high-priced and inferior. Poland, in fact, is an agricultural country; and, except a few of the more bulky and coarser articles, it would, were the citizens permitted to resort to the cheapest markets, derive almost all its manufactures and articles of luxury from other countries, in exchange for corn, wool, timber, tallow, flax, spirits, and such like articles. Spirits are distilled in every village from rye and potatoes, but their sale is still, as formerly, a monopolized right, each lord of a manor having the exclusive sale of spirits within his domain. There are breweries in

Warsaw, and in some other large towns; and mead, and drinks made from raspberries, cherries, &c., principally in the S. provs., are favourite beverages of the people. Of late years several beet-root sugar factories have been established.

The trade of Poland is almost wholly in the hands of the Jews. The internal commerce is carried on chiefly by means of fairs, at which, also, a considerable portion of the foreign trade is conducted. The latter is principally with Russia, Prussia, Austria, and the republic of Cracow: in 1830 the following was the value of the several exports to, and imports from each of these states, according to the *Petersburg Commercial Gazette* for 1833.

Exports.		Imports.
	Polish Florins.	Polish Florins.
Russia	14,511,196	12,282,999
Prussia	27,396,524	18,279,106
Austria	258,879	9,566,395
Cracow	2,705,241	825,184
Totals	45,073,437	47,153,684

During the revolution the exports decreased greatly, while the imports were considerably augmented. Since that period, however, the balance has been in a great measure restored. England, Holland, France, and sometimes even America, take off, through Dantzic, most of the corn which Poland has to export. But in years when prices are high in England, and when, consequently, there is a great demand for corn in Dantzic, a good deal of the supplies brought to that port come from Galicia. The customs and octroi duties produced in 1830, 8,794,231 fl., and in 1832, 9,238,003 do. Goods are conveyed in summer by heavy waggons, and in winter by sledges; but the roads are generally bad, and during the late insurrection were much cut up; latterly, however, government has been exerting itself for their improvement. Steam navigation is but in its infancy; and merchandise is at present forwarded down the rivers by flat-bottomed boats to the Prussian ports. But Russia seems to be endeavouring to put a stop to the intercourse between Poland and the Prussian ports on the Baltic, by constructing a great commercial road from the S.W. angle of Poland to the Baltic; and a railway has been planned, for which the capital is already subscribed, and the works begun, to convey to the harbours of Windau and Libau the goods which formerly went to Tilsit or Memel, or by the Pregel to Königsberg. (*Russia under Nicholas*, l. pp. 124, 125.) A similar purpose is served by the canal of Augustow, connecting the Narew and Vistula with the Niemen, and which is to be continued to the Baltic by the Windau Canal, in the gov. of Wilna. The canal of Augustow is 95 m. in length, from 5 to 6 ft. in depth, and of sufficient breadth for two large boats to pass each other with ease. It has 17 locks, and several convenient basins in different parts of its course. It was wholly completed between 1821 and 1829, and is now the means of an active traffic. These, however, are all violent and unnatural measures, and can have no useful or permanent result. No one can take up a map without being satisfied at a glance that the Vistula is the proper highway of the country, and Dantzic her proper shipping port.

Accounts in Poland are kept in *zlots*, *groschen*, and florins: the florin = about 9d., is divided into 30 gr. The Polish lb. is about equal to 14 oz. avoird.: the ship-pound = 416 lbs.

**Government.**—Previously to 1831, Poland had its two legislative chambers, those of the deputies and the senate; but since the unhappy attempt at a revolution that they broke out, Russia has suppressed these chambers, and Poland is governed nearly in the same way as the other portions of the empire. The council of administration for the kingdom consists of 3 directors-general (of the interior, justice, and finance), a comptroller-general, and other persons appointed by the sovereign. The reports of this council are submitted to the emperor by a secretary of state for Poland residing in Petersburg. There is also in that capital a department for Polish affairs, established since 1832, to which the government of Poland is confided. The legislative power is vested in the sovereign, and the proposed laws for this kingdom are submitted for his sanction by the Russian council of state. The local administration is exercised by civil governors, with the same powers as those established in the different govts. of Russia.

The civil and commercial codes at present in force are, for the most part, the same as in France: the criminal code is modelled on that of Prussia and Austria. Personal and religious liberty are nominally guaranteed; and those who do not interfere with politics are as secure in Poland as any here else. But those who wish to enjoy this security must have a care not to find any fault with any action of the government. The press is under the controul of censors, who are stricter here than even in Russia. Justices of the peace decide in civil causes up to the amount of 500 florins; above which the later

come before the tribunals of original jurisdiction in the caps of the several governments. At Warsaw, besides a court of appeal, there is a supreme court of cassation, and commercial tribunals are established in all the principal towns. Criminal causes are tried in separate tribunals, of which there are 4 in the kingdom. Political offences come under the cognizance of a council of war, or a commission specially appointed.

**Religion.**—Until lately, upwards of 3-4ths of the Poles belonged to the Rom. Cath., or the United Greek church, the Greco-Russian communicants being but few in number. But of late the Russian government has, by every means, been endeavouring to shake the spiritual dependence on the court of Rome, not only of the Poles, but of the United Greeks throughout the empire; and its measures, in this respect, appear to have been attended with so much success, that, in 1839, from three to four millions of United Greeks, including most of those of Poland, had joined the orthodox Greek church. Until 1832, the Greco Russians had no prelate in Poland; but at that period an archimandrite was appointed, who resides at Warsaw. The bishop of the United Greek church resides at Heline, in Lublin. The Rom. Catholics have an archbishop and eight bishops, nominated by the Pope on the recommendation of the Emperor of Russia; and the bishop of the government of Cracow exercises authority over the free city of that name, and its territory. There are a number of convents possessing territorial revenues; but the secular clergy receive a regular stipend from the government, the landed possessions formerly belonging to them being now public property. The parish priests, however, receive tithes, the amount of which is sometimes very considerable. The Lutherans and Calvinists, amounting together to about 220,000 persons, are principally Germans. There are a few Mennonites and Moravians, and some Mohammedans.

**Public Instruction.**—Previously to 1800, education was scarcely diffused at all, except among the nobility and upper classes residing in the towns, and the total number of persons receiving instruction at that period is said not to have exceeded 16,000, or about 1 in 260 of the pop. After the suppression of the insurrection, the schools were shut for several months, and when reopened, were organized upon the same plan as those of Russia. Private schools are subject to the same inspection on the part of the government as public schools. In 1834 there were, in all, 43,794 pupils in public and private establishments; and in 1839 the number, at 1,159 schools of all kinds, was estimated at 70,000, or 1 to every 62 individuals. (*Russia under Nicholas I.*, p. 188.) In 1834 an order was issued by the Russian government, directing that there shall be a teacher of the Russian language in every primary school; and that all children attending such schools shall be obliged to learn the Russian language: it was, also, at the same time, ordered that no individual should be employed as a tutor unless he possessed a testimonial signed by the proper authorities, certifying his ability to give instruction in the Russian language; and that no person unacquainted with Russian should be promoted to any civil or military employment.

This regulation, as was to be expected, gave much offence to the Poles, and has been the theme of much idle declamation in this and other countries. Russia, no doubt, wishes to secure her hold over Poland; and every thing that tends to Russianise the latter, and to give her people the same tastes, habits, and modes of thinking as the Russians, must necessarily contribute to this end; and we believe it will be generally admitted, that of all the means to bring about this consummation, the gradual substitution of the Russian for the Polish language will be one of the most effectual. If there were any rational prospect of Poland being able to emancipate herself from the yoke of Russia, one might regret the measure. But as there is no such prospect, the interests of both countries will be best promoted by their being, as far as possible, consolidated into one people.

The Polish army, which before 1831 amounted, in time of peace, to 35,000 men, is now amalgamated with that of Russia.

The Poles are a remarkably fine race of people, being well formed, strong, and active. In their general appearance, they are said to resemble the western Asiatics rather than the Europeans, and are, most probably, of Tartar origin. The gentry are haughty and brave, but, at the same time, frank and generous. The peasantry, however, bowed down by continual oppression, are cringing and servile; their whole behaviour evincing the state of abject servility from which they are now being emancipated. The nobility are very numerous in Poland, amounting at present to not less than 2-3,120 individuals. According to the old laws of the republic, the nobles were *terrigene*; every person who possessed a freehold estate, how small soever, or who could prove his descent from ancestors formerly possessed of such an estate, and who had not debased himself (1) by

engaging in any sort of manufacture or commerce, was a nobleman or gentleman, the terms being in Poland synonymous. The gentry were all held to be equal to each other, the titles of prince, count, &c., which some of them enjoyed, not being supposed to add any thing to their real dignity. Under the republic, the nobility were every thing, and the rest of the people nothing. The former were the absolute lords of their estates, and of the boors by whom they were occupied. They enjoyed the royal privilege of maintaining troops, and constructing fortresses; and they only could elect the sovereigns. No noble could be arrested without previous conviction, except in cases of high-treason, murder, or robbery on the highway; and then only provided he were taken in the fact! His house was a secure asylum to all to whom he chose to extend his protection, whatever might be their crimes. Even his vassals could not be arrested, nor their effects seized; they were exempted from all payment of tolls and other direct duties; and though the king might bestow titles, he had no power to create a nobleman or gentleman, that being the exclusive privilege of the Diet. Happily, however, this state of things has been wholly changed. Under the vigorous governments of Russia, Austria, and Prussia, the oppressive privileges of the nobles have been suppressed; they can no longer trample with impunity on their inferiors, nor command obedience without subjecting themselves to the full penalty of the law; and a poor gentleman no longer considers it a degradation to engage in some department of industry. (Busching, *Introduction to Poland*, &c.; Malte Brun, *Tableau de la Pologne*, 266.; Coxie, *i. loc.*, &c.)

Though modernised in a considerable degree, the richer Polish nobles continue to live in large castles, in a state of rude hospitality, entertaining great numbers of their dependants and such strangers as may happen to visit them. At these feasts the practice of sitting below the salt is still kept up, the best dishes and the best wines being appropriated by the *élite* of the guests.

Jews are more numerous in Poland than in any other European country, having amounted, in 1838, to 111,397 individuals, of whom 338,677 lived in towns, and 72,620 in villages, or in the country. They are, as already stated, in the exclusive possession of the commerce of the country; they, also, are the great manufacturers and sellers of spirituous and fermented liquors; advance money on hands and goods; are the only jewellers and silversmiths; and carry on all pecuniary dealings. Those in the towns are mostly all bourgeois; and they may be said to engross all the most lucrative businesses. But notwithstanding all this, the majority of the Israelites are extremely poor. They seem, also, to be in a lower state of civilization than any other class. Even the richer individuals, though they occupy the best houses in the towns, appear to care little for cleanliness or comfort; and the lower orders live in a state of filth and discomfort that would be intolerable any where else.

There are in Poland many instances of longevity, and, on the whole, the country may be said to be healthy; but the people are, notwithstanding, especially liable to endemic diseases, such as small pox and fevers, which frequently make great havoc. Among the diseases peculiar, or nearly so, to Poland and Lithuania, the *plica polonica* is the most remarkable. This is a disease of the head, which terminates by affecting the hair, which it dilates, softens, and clots into one undistinguished mass. This disgusting malady spares neither age nor sex, gentry nor peasants, though it be more frequent among the latter than the former. Various theories have been formed to account for its origin; most probably it is occasioned by the bad water, unwholesome food, and filth of the people.

Poland suffered much from the outbreak in 1831, in consequence partly of the destruction of property, and partly of the proscriptions and oppressive measures which it occasioned. Within the last few years, however, the country has again begun to revive.

The municipal revenues of Warsaw amounted, in 1834, to 4,094,000 fl., an increase over their amount in 1829 of nearly one fourth; and the value of insured buildings, throughout Poland, in 1835, was estimated at 505,187,000 fl., being an increase of 112,204,000 fl. over that of the buildings insured in 1829. Population has increased still more rapidly; having amounted, in 1828, to 4,088,288, and to 4,298,362 in 1838. The old roads, also, have been materially improved, at the same time that several new ones have been undertaken; so that, on the whole, however depressed in some respects, the country is certainly advancing in improvement.

**History.**—The history of Poland commences from the 10th century. In 1139, Boleslaus, under whose Christianization had been introduced into the country, divided the kingdom among his four sons, which was the source of a lengthened series of civil wars, and of all sorts of disasters. At length these different portions were united under one sovereign, in 1296. The reign of Casimir the Great, which began in 1333, and terminated in 1370, is

the most brilliant in the Polish annals; still, however, the foundations were laid in it of that anarchy that destroyed the kingdom. Casimir, having no children of his own, and being anxious that the crown should devolve, at his death, on his nephew Louis, king of Hungary, in preference to the legitimate heirs, obtained, for that purpose, the sanction of a general assembly of the nobles, and Louis agreed to the conditions under which they offered him the crown (Koch, *Tableau des Révolutions*, i. 284.); establishing, in this way, a precedent for the like interference on future occasions. On the death of Louis the grand duchy of Lithuania was added to the crown by the marriage of Jagellon, its grand-duke, to the daughter of Louis, who had succeeded to the throne. The house of Jagellon continued to occupy the Polish throne for about two centuries; but at each change of a sovereign an assembly of the nobles or *diet* was held, at which the new sovereign was formally elected to the throne. On the death of the last of the Jagellons, in 1572, the throne of Poland became, substantially as well as formally, elective, and it was called not a kingdom but a republic. Hereafter, on the death of a sovereign, the nobility or gentry repaired in vast numbers, sometimes to the amount of 100,000, on horseback, and armed, with crowds of attendants, to a sort of camp in the neighbourhood of Warsaw, to elect his successor, who had to subscribe, and make oath to observe, the *pacta conventa*, or conditions under which he had been elected. These were such as to reduce the royal authority within the narrowest limits, to secure and extend the privileges of the nobility and clergy, and to perpetuate the degradation of the people, who, being slaves in the fullest extent of the term, were not supposed, in fact, to have any legal existence! The famous John Sobieski, the deliverer of Vienna, elected to the throne in 1674, was the last of the great monarchs of Poland. But in the latter part even of his reign the vices of the Polish constitution, and their fatal operation, became obvious; and they thence continued to increase in number and virulence till its total subversion. (See the *Histoire de Jean Sobieski*, by the Abbé Coyer, passing.)

Exclusive of the diets\* for the election of the sovereigns, ordinary diets were held, at least, once every two years, at which all matters connected with the government of the country were discussed and decided upon. It is easy to see, from what has been already stated, that this form of government could not fail to produce great party contests and disorders, and that it must have afforded every facility to the surrounding powers for acquiring a preponderating influence in the diet. Probably, however, the abuses already noticed might have been repaired, but for the principle, if we may so call it, first introduced in 1552, that no decision could be come to upon any matter submitted for consideration, unless the diet were unanimous. Hence the singular and extraordinary privilege of the *liberum veto*, by which any single member of the diet was permitted to interpose his absolute veto, and, by doing so, could nullify its whole proceedings! And, which is even more extraordinary, this absurd privilege, which allowed the whim, caprice, or bad faith of an individual to prevent the adoption of any measure, however necessary and however generally approved, was, for a lengthened period, regarded by the Poles as the palladium of their liberties! (*Abregé de l'Histoire du Nord*, ii. 683.)

It is plain, from these statements, that latterly the whole powers of the state were engrossed by the nobles, or gentry, many of whom, though enjoying the same political rights and franchises as the others, were miserably poor. In consequence, corruption, intimidation, and such like arts had full scope in the Polish diets, particularly in those held for the election of sovereigns; and latterly the crown was, in fact, either sold to the highest bidder, or the election was decided under the influence of foreign force. And if, while the government was in this state of abasement, we bear in mind that the whole people, with the exception of the nobles or gentry, were slaves, on whom every indignity might be practised by their masters, it will be seen that there is but little to regret in the subversion of such a state of things.

Indeed, the only wonder is, that Poland was not sooner erased from the list of nations. Its partition had, in fact, been proposed by the Swedes in the reign of Casimir I. A short while previously to the election of John Sobieski, as the only method by which the disorders that afflicted the country could be put an end to, and the inconvenience thence arising to the surrounding states be elevated. (Rumilhère, *Anarchie de Pologne*, i. 68.) But it was not till more than a century after that the first par-

tition was agreed upon, in 1772, by the emperor of Austria, the empress of Russia, and the king of Prussia, by which about a third part of the kingdom was dismembered, and added to the dominions of the partitioning powers! But it was not to be supposed that having once begun to share in so rich a spoil, these powers would rest satisfied with this acquisition. The pretexes for farther interference still continued undiminished. Poland, as before, remained a prey to all sorts of disorders, and the Russian ambassador, and not the king, was the real sovereign.

In 1791 the majority of the nobility and gentry then assembled in a diet, which had been made permanent, being desirous to raise their country from the miserable state into which it had fallen, and stimulated by the events connected with the French revolution, drew up the *project* of a new constitution on a more liberal and broader basis, abolishing the *liberum veto*, and making the crown hereditary, on the demise of the king, in the Saxon family. This constitution was accepted by the king; but the great bulk of the nation did not, and could not, take any interest in the change; and the government were wholly without the means of supporting the new order of things. Russia had little difficulty in fomenting fresh disorders; and the unfortunate Poles, with an imbecile sovereign, without forces, and abandoned and betrayed by their pretended allies, were again compelled to submit to a fresh dismemberment of their country.

Provoked by these repeated indignities the Poles, under Kosciusko, rose in rebellion in 1794. But their means were totally inadequate to the struggle in which they had engaged; after displaying prodigies of valour, Kosciusko was defeated and taken prisoner (10th October, 1794), and Praga, the suburb of Warsaw, being taken by storm, that city forthwith surrendered; and there being no longer any obstacle in the way, a dismemberment of the remaining territories of the republic took place in 1795, and Poland was finally obliterated from the map of Europe.

The powers who dismembered Poland had, in reality, nothing better to allege, in justification of their measures, than the robber's plea, that the power to commit an act makes it at once right and expedient! But, how objectionable soever the motives by which they were influenced, and how dangerous soever the precedent which they established, there can be no reasonable doubt that their measures have been decidedly advantageous to the great bulk of the Polish people. The vices inherent in Polish society were such that it is idle to suppose they could have been eradicated by any remodelling of the constitution. There was no middle class (or none worth notice) in the country; nothing between nobles, jealous of their rank and privileges, on the one hand, and newly-emancipated slaves, brutalised and degraded by a long course of oppression, on the other. To restrain the first within the limits prescribed by law, and to raise the second class, was a work that could only be undertaken by a powerful government, such as there were no means of forming out of native materials. It is to be regretted that Russia obtained the lion's share of the spoil; but even in Russian Poland the condition of the people has been very decidedly changed for the better; and in Austrian and Prussian Poland, the improvement in their condition has been signal and extraordinary.

The existing kingdom of Poland originated in the grand duchy of Warsaw, established by Napoleon in 1807. It was assigned to Russia by the Congress of Vienna, and obtained from the Emperor Alexander a representative constitution. Unfortunately, however, the disgust occasioned by the brutality of the Grand Duke Constantine, commander-in-chief of the Russian forces in the kingdom, conspiring with the excitement produced by the French revolution of 1830, and the abuse of Russia in intemperate and ill-judged speeches in the H. of C. and Ch. of Dep., which made it be believed that England and France were ready to assail that power, precipitated the Poles into an insurrection. The result was such as all men of sense anticipated from the outset. The Poles made a gallant stand in defence of their liberties; but in the end every vestige of their independence was totally destroyed. The name of the kingdom remains; but its peculiar privileges have been subverted, and it is now substantially and in fact a part of the Russian empire.

POL-DE-LEON (ST.), a sea-port town of France, dep. Finistère, cap. com., on the Channel, 10 m. N.W. Morlaix. Pop., inc. com., in 1836, 6,451. Though ill-built, it is clean, well paved, and remarkable for its antique edifices. Its cathedral, a structure of the 15th century, has some excellent carving; and a tomb, said to be that of the first Breton king. The church of Kreizker, built in the 14th century, has a spire 394 ft. in height, and one of the handsomest in France. (*Guide du Voyageur*.) St. Pol has some trade in cattle, horses, linen, hemp, &c., but to no great extent.

POLIGNY (an *Corsum Olimum*), a town of France, dep. Jura, cap. arrond., on elevated ground, 13 m. N.E. Lons-le-Saulnier. Pop., in 1836, ex. comm., 6,566. It consists principally of 4 long parallel streets, and is well

\* The diets consisted, 1. of the senate, composed of the bishops, palatines, or perpetual governors of provinces, castellans, or governors of towns, and the grand officers of the crown; and, 2. of the diettes, or representatives of the nobles, or gentry. These bodies immediately seen, they could come to no resolution without being unanimous.

built, clean, and ornamented with several handsome fountains. Among its public edifices is a well-constructed slaughter-house. Poligny was formerly a place of importance, and a favourite residence of the sovereigns of Burgundy. It has a few manufactures of common earthenware, saltpetre, glue, &c.; and is a sub-prefecture, though the superior courts for the arrond. sit at Arbois. (*Hugo, art. Jura, &c.*)

POLTAVA, a gov. of European Russia, lying along the E. side of the Dnieper, by which it is separated from the governments of Kherson and Kieff; having the gov. of Tchernigoff on the N., and those of Kharkoff, and Ekaterinoslaw on the E. and S. Area estimated at 22,500 sq. m. Pop., in 1838, 1,622,000. (*Karppe.*) Surface quite flat; soil excellent: in some parts there is a scarcity of wood. Besides the Dnieper, the principal rivers are its affluents, the Vorskla, Pirlol, and Sula. This and the surrounding governments constitute what may be called the granary of Russia. It is one of the best cultivated districts of the empire: the return of the corn crops is said to be as 6 to 1, the total produce being about 6,506,000 chetwerts, of which about 1,500,000 are exported. The grazing grounds are excellent, affording pasturage for large numbers of the fine Ukraine breed of oxen, and for immense flocks of sheep the breed of which has latterly been much improved. Some peasants have above 100 bee hives. Manufacturing industry has not made much progress; but there are fabrics of cloth and linen, with numerous distilleries, and establishments for the preparation of tallow, candles, &c. Large quantities of corn, tallow, and other products, are annually sent from this government to Odessa, and oxen to Moscow, Petersburg, &c. (*Schulz, La Russie, &c., p. 465.*)

POLTAVA, the cap. of the above gov., on the Vorskla; lat. 49° 35' 4" N.; long. 34° 41' 15" E. Pop. 95,000. It stands on an eminence, and is built principally of wood, with broad and straight streets. There is a good square, with brick houses, embellished with a granite monument in honour of its deliverer, and the regenerator of Russia, Peter the Great. It is surrounded by a rampart, and has a cathedral, gymnasium, convalesc. &c. with three great fairs annually, and a considerable commerce.

Charles XII. of Sweden having besieged this town in 1709, Peter the Great marched to its relief; and in its vicinity, on the 27th of June of the same year, was fought the famous battle of Poltava. The Russians gained a complete victory. The Swedish army was entirely destroyed: it lost above 9,000 men left dead on the field of battle, and from 2,000 to 3,000 made prisoners in the pursuit; while the residue, consisting of about 14,000 men, under General Lewenhaupt, after escaping from the battle, were compelled to lay down their arms and surrender on the 12th of July. Charles, with only a small escort, effected his retreat across the Bug, and took refuge in Turkey. This great victory established the power of Peter on a solid foundation, and secured not merely his empire, but the success of his vast projects and plans for the civilisation and improvement of his people. To use the words of Voltaire—"Ce qui est le plus important dans cet bataille, c'est que de toutes celles qui ont jamais ensanguiné la terre, c'est la seule, qui ait peu de ne produire que la destruction, ait servi au bonheur du genre humain, puisqu'elle a donnée au Czar la liberté de polir une grande partie du monde." (*Histoire de la Russie sous Pierre le Grand, part I. cap. 18.*)

POLYNESIA, "the region of many islands," a collective term used by geographers to designate the numerous groups of volcanic and coralline islands scattered over a great part of the Pacific, but especially between the tropics, extending eastward from the Philippine Islands and New Guinea to the coast of America. Supposed aggregate pop., 1,500,000; but all calculations of this kind are merely conjectural, as there are few or no data. The equator forms a convenient dividing line between these groups, which may accordingly be comprised under the heads of N. and S. Polynesia, as follows, the order being from W. to E. [See next column.]

The whole of Polynesia may be considered as a series of submarine mountain ranges; for no portion of the earth's surface has more numerous inequalities, and nowhere, except in America, have the chains so marked a course from N. to S. Indeed, all the archipelagos have, more or less, this direction, and it not unfrequently happens that the small chains are individually terminated by an island of larger size than the others with which it is connected. Many of the larger islands, and particularly those which shoot up to a considerable elevation from the sea, consist of basalt, as well as other igneous formations; and in many of them are distinct traces of volcanic action, with a few active volcanoes. To this class belong the Friendly Islands (the largest of which, called Otaheite, has a mountain rising to the height of 10,000 ft. above the sea), the Marquesas, and Sandwich Islands, in the last of which are several, both extinct and active, volcanoes, rising from 12,000 to 16,000 ft. above the sea. The desert group of the Galapagos is likewise in a state of igneous action, and the whole is a mere

mass of lava and similar productions. The numerous small islands that stud the Pacific S. of the equator, and W. of the Friendly Islands, and particularly those that rise but a short distance from the level of the sea, are based on reefs of coral rock. Of those examined by Captain Beechey, none were more than 30 m. in diameter; they were of various shapes, chiefly formed of living coral, or at any rate encompassed by a reef of that substance. Most of them have lagoons in their centres, the bottoms and sides of which are likewise formed of coral; and the generally circular form of these islands, the existence of these lagoons, and the shelving conical form of the submarine mountains, has led to the supposition that they are nothing more than the crests of submarine volcanoes, having the rims and bottoms of their craters overgrown with coral. It is also well known, that the Pacific is a great theatre of volcanic action, and every island, yet examined in Polynesia, consists either of volcanic rocks or coral limestone, and in many instances of basalt and lava, having a girdle of coral. (*Lyell's Geology, iii. 226—229.*) The formation of coral, which, according to Captain Beechey, is very gradual, ceases as soon as it reaches the surface of the water; but it serves as a basis for a vegetable soil, which in these regions is soon covered with plants, trees, and other trees. The larger islands of Polynesia are indented with deep bays, furnishing tolerably good harbours for shipping; but the circumference of the largest is less than 200 m., so that their extent does not admit of the formation of any important lakes or rivers. By far the larger portion of Polynesia is between the tropics; but the small extent of the islands procures for them the temperature of the ocean, and a succession of light sea and land breezes. Hence the heat never becomes oppressive, even to Europeans. Hurricanes and earthquakes are of rare occurrence.

The numerous islands of the Pacific afford an extremely diversified vegetation; and among the many plants covering their surface are some of high utility for human support, especially the bread-fruit tree (a favourite article of food among the islanders), cocoa-nut, yam, the root of the *Arum esculentum*, the banana, plantain, and sugar-cane, which last grows naturally in the Sandwich Islands, and succeeds better than in any other part of the world. A native chestnut, called *Rata* (*Truncarpus edulis*), furnishes the natives with a sweet nut, that forms an agreeable substitute for bread-fruit; besides which, the *Ahia* (*Eugenia malaccensis*) bears a pulpy fruit, shaped like an apple. The Ti-root (*Draconia terminalis*) furnishes an inferior spirit, called *Aia*, the preparation of which is pretty well known by most of the islanders, and has produced very demoralising effects. The use of foreign spirits, however, has, in the groups known to Europeans, almost superseded the necessity of drinking this nauseous stuff. The tropical productions of the American continent have been successfully introduced by European navigators and missionaries; so that many of the islands, besides their indigenous productions, bear an abundance of oranges, citrons, shaddocks, pine-apples, guavas, figs, and Cape mulberries. The vine also was introduced, but was destroyed by the natives in their wars: fresh plants have more recently been imported, and thrive well in some of the islands. The growth of corn has been more than once attempted, without success; owing more, however, to the imperfect means of tillage than the unfitness either of the soil or climate. Pumpkins, melons, cucumbers, cabbages, and kidney-beans flourish better, and with less trouble, than any other foreign vegetables. The hills of the more elevated islands are clothed with forests of stately trees; the most valuable of which are the *apapa* and *fajaf*, which yield excellent timber for canoes, and the candle-tree (*Aburites trioba*), the oil of which is used for domestic illumination. The principal trees growing on the plains are the tamamu (*Calophyllum inophyllum*), and the *He-*

*biscus thiaeus* (highly valued as materials for furniture, canoes, &c.), the Chinese paper mulberry (*Morus perrieri*), and the sandal-tree, the timber from which last is exported from the Sandwich Islands to Europe and China.

The fauna of Polynesia is characterised, like that of Australia and its surrounding islands, by the absence of beasts of prey, and, indeed, all the larger animals: Hogs, dogs, rats, and lizards were the only quadrupeds originally found on the islands. The native hog is different from the European breed since introduced, and has now almost disappeared: the present breed is reared in great numbers, and pork constitutes the favourite food of the natives. The flesh of the dog is also esteemed a luxury, especially by the Sandwich islanders. Rats were occasionally eaten uncooked by the Friendly islanders; but that practice has been discontinued. Cats have been domesticated in most of the houses. Horses, asses, horned cattle, goats, and sheep have since been added, and thrive exceedingly well. The oxen are a fine breed, chiefly imported from New South Wales. The horses come from S. America, and being used only for the saddle, are never shod. Among the indigenous water birds may be noticed the albatross, tropic bird, several kinds of petrels, herons, and wild ducks. Woodpeckers, turtle-doves, and pigeons are common; besides which, the paroquet (of the species *Trichocastus*) is abundantly distributed over all the islands; and in most of them the domestic fowl and several species of wild fowl appear to be indigenous. Fish are numerous on the coasts and in the lagoons of all parts of Polynesia; the abalone, bonito, ray, and shark are eaten by the natives; in addition to which the shores abound with a great variety of delicate rock-fish. The freshwater streams also swarm with salmon, eels, &c., and many varieties of molluscan crabs, &c., with turtles, are caught on the coral reefs. Among the whales that frequent the coasts of Polynesia, the largest and most valuable is the *cachalot*, or sperm-whale (the bale of which according to Mr. Bennett, sometimes yields from 70 to 90 barrels of oil, and about 15 barrels of spermaceti), the Cape-whale, hump-back, and black-fish; besides which, porpoises and other small cetaceous animals are extremely abundant. (*Ellis's Polynesian Researches*, i. 30-77; *Moerenhout*, i. 367-381; *Bennett's Whaling Voyage*, i. 36, and appendix.)

Polynesia has, of late years, been much visited by Europeans, partly curious to inquire into the habits of people differing essentially from those of the rest of the world, and partly anxious to communicate to them the arts of civilization and a knowledge of the Christian religion. Its isolated inhabitants were found to possess many interesting features of character, but at the same time to be plunged in the grossest barbarism, sensuality, and idolatry. Cook traced among some of the islands a confused notion of a supreme intelligent Deity; but they almost exclusively worship a number of inferior gods, particularly marine and aerial deities, demons, birds, and fishes. Their rude idols were supposed to exercise a powerful influence; their temples were polluted with human sacrifices; and divination, witchraft, &c., were practised by the chiefs as political engines for overawing their subjects. (*Ellis's Polynesian Researches*, i. ch. 13, 14.) At the same time, morality, as understood by Europeans, had no existence among this wild people, and the grossest animal appetites had full sway, their gratification being encouraged, also, by their religious institutions. The law of the strongest prevailed: fierce and bloody wars frequently took place between the different insular tribes on the most trivial pretext, and conquest was generally followed by acts of the most horrible cruelty, including the extermination of the vanquished tribe, and occasionally even an indulgence in cannibalism. The female sex, too, was found in as licentious, degraded, and oppressed a state as in the wildest districts of Africa. A kind of civil marriage appears to have been generally observed; but as the sex was too much despised to allow the existence of affection, the wives were repudiated on the slightest pretext, or else neglected for more fascinating concubines. Polygamy was common in nearly all the islands, and in some groups it is still prevalent. Moerenhout, indeed, tells us, though the statement savours strongly of exaggeration, that some chiefs in the Fidje islands have as many as 20 wives. (*Voyage au G. Océan*, iii. 66-68.) Female virtue was formerly wholly unknown; and notwithstanding the labours of numerous missionaries during upwards of 20 years, chastity is still, we apprehend, extremely rare. Sexual indulgences, and even infanticide, were encouraged by a singular institution called the Aroel Society, the beneficial influence of which appears to have been pretty generally diffused over the islands of the Pacific. The missionaries state that about two-thirds of the children born were destroyed by their parents; and notwithstanding the introduction of Christianity, the practice still prevails; but we are not disposed to attach implicit credit to these statements, which, no doubt, go far beyond the mark.

Cannibalism is still practised in the Marquesas, and some of the other groups. The islanders, however, do not live in the rude independence of savage life, but acknowledge the arbitrary sway of hereditary chiefs, whose power is controlled only by those subordinate to them in particular districts. Some attempts have been made to introduce governments of a more liberal character; but they have signally failed.

The habits of the natives are still in many respects those of barbarians. Their houses, almost without exception, are confined to a single story; usually, though not always, of oblong shape, and very simply constructed with stakes of the bread-fruit-tree, driven into the earth for the purpose of supporting the roof, which is commonly thatched with the leaves of the *Pandanus odoratissimus*, or cocotree. The framework of the walls is composed of bamboo or biliscut rods, and a large portion of one side is open, being covered only at night with a kind of cloth curtain. The interior comprises only a single apartment, sometimes with a boarded floor; and the furniture consists simply of a few mats and cotton-stuffed pillows spread on the floor, a few low wooden stools, a trough and stone pestle for preparing their favourite paste called *poe* (made from the *Arum esculentum*), some cocotree shells, used as cups, with a fish-ing-spear, and perhaps a musket. Bundles of fruit hang from the walls; and occasionally may be seen a sow with a litter of pigs occupying a space in one corner, raised off for her accommodation. A separate shed is employed for cooking; and in the more advanced islands a plot of enclosed ground, planted with useful vegetables for favourite flowers, surrounds many of the houses. (*Bennett's Whaling Voyage*, i. 100; and *Moerenhout*, ii. 86-89.) Some of these huts are exceedingly large. Mr. Ellis mentions one belonging to a native prince that was nearly 400 ft. in length; and houses 100 ft. in length are by no means infrequent. (*Polyn. Researches*, i. 175.) The domestic habits of most of the natives are not only unsocial, but irregular, as respects refreshment and sleep, labour and amusement. Their meals are arranged according to their avocations or the supply of their provisions. They usually eat in the forenoon; but their principal meal is in the evening, when, if well supplied, they eat to excess. They rise early, and go late to rest; but the men are often buried in sleep during many hours of the day, while every species of household drudgery is performed by the females, who are oppressed and degraded in the last degree. The habit of frequent bathing prevails throughout Polynesia, and the natives are remarkable for cleanliness, and most of them pay great attention to personal ornament: indeed, says Mr. Ellis, "their appearance on public occasions is in a high degree imposing." The hair, in particular, is regarded as an object of great attention by both sexes, and the females commonly appear in loose ringlets entwined with flowers. (*Researches*, i. 133-136.)

\* The dresses of the islanders originally consisted of cloths woven by the women from the bark of trees, and wrapped loosely round the body, leaving a large part of it uncovered; but since their connection with Europeans, they have introduced a very dress, of the *lange* of native and European costume. The practice of tattooing the body prevails more or less through all the islands, though attempts were made a few years ago to abolish this barbarous custom in Otaheite. Tattooing is performed during childhood; and in the Society Islands at the early age of 8 or 10. The patterns vary in the different groups; but nowhere is the body so extensively disfigured as in the Marquesas, the inhab. of which have a most hideous appearance. In some of the islands the face is left in its natural state, the legs, arms, and breast being the only parts tattooed. (*Moerenhout*, ii. 121-4.) The natives of all the best known groups, except the Sandwich Islands, are, like the half-civilised inhab. of most tropical countries, extremely indolent, having, in fact, little occasion for industry, owing to the abundance with which the fruits of the earth are spontaneously produced. Their principal employments are agriculture, fishing, canoe-building, and the manufacture of cloth. Agriculture, as previously observed, is in the rudest state that can well be conceived, the only tillage that the earth receives being by a rude iron-shod stick, about as broad as a European chisel. Fishing is a far more favourite employment, and the methods used are numerous and sometimes highly ingenious. The fish are sometimes caught in circular fences, built up in the shallow parts of their lakes, and simply taken out with a hand net: these enclosures are also excellent preserves for fish not wanted for immediate use. Large nets, made of the twisted bark of the biliscut, are used for fishing salmon, herring, &c.; and on most of the islands the natives exhibit a surprising dexterity in the use of the fishing-spear. In fact, nowhere are there more skilful fishermen; and considering that before their intercourse with Europeans they were entirely destitute of iron, their variety of fishing apparatus was astonishing. The situation of these islanders necessarily imparts a

maritime character to their habits, and much of their attention is, accordingly, devoted to the building and management of their vessels. Their canoes are of various size, as well as shape, and are either double or single. The largest of those seen in the Society Islands are nearly 70 ft. in length, with very high stems and sterns, but only 2 ft. wide. Those used in war are between 40 and 60 ft. in length, firmly built, of rather elegant shape, highly ornamented with carving, and when in use decorated with gay-coloured flags and streamers. In the double canoes (which are merely single canoes lashed together), planks are thrown across to form a kind of deck for the accommodation of passengers, and over it is sometimes spread an awning of platted cocoa-nut leaves. The paddles, made of the hibiscus, are not heavy; but as they are used alternately on each side of the boats, the labour of rowing is by no means inconsiderable. The canoes used in fishing on the reefs are single, and are commonly the excavated trunks of trees; they seldom carry more than two persons. Many of the canoes have moveable masts, which are only raised when the sails are used. The latter, of which there are sometimes two, but more frequently only one to each canoe, are made with matting of the pandanus leaf, in the shape of a half oval, and the rigging is of the simplest description. On the whole, the canoes of the Society Islands are decidedly superior to those of the other groups; those of the Sandwich Islands are large and strong, but less elegant; those used in most of the other islands are of smaller size, and less skilfully constructed. The dexterity of the natives in managing these frail barks when out at sea is also, perhaps, unparalleled among the inhab. of savage countries. (*Ellis*, i. 138—170.)

The manufacture of cloth, which is more or less carried on in all the islands, is almost exclusively conducted by females, the materials commonly employed being the inner fibres of the bark from the branches of the bread-fruit tree. These fibres, after having been macerated, are beaten on a long board with a grooved mallet, the blows from which cause the moist fibres to interlace with each other, and to assume the appearance of woven cloth. By this process bales are sometimes made containing upwards of 200 yds. of cloth, 4 yds. wide. The colour of the unbleached cloth is a darkish brown; but it is always either bleached or coloured with vegetable dyes. Skill in the manufacture of this fabric was formerly highly prized by females of all ranks; but since the introduction of European cloth, it has been made in much smaller quantities, and its use (in the Sandwich, Society, and Friendly Islands) is now confined chiefly to women, children, and the lower classes. The missionaries tried to introduce the weaving and spinning of cotton, but with little success; and this pursuit has been since abandoned. A kind of delicate matting is made in some of the islands from the bark of the hibiscus; the fabrics thus formed being either bound over the loins, or worn as mantles on the back. In the manufacture of this last article the islanders of the Palliser group far excel all others. A coarser kind of matting, also, is made of palm-leaves, for bedding, and the sails of canoes.

As respects foreign trade, it may be said to have had no existence in these islands till a late period; and the intercourse is chiefly kept up by means of the whaling ships, and the number of vessels touching at the Sandwich Islands may average about 80 annually. Trading intercourse has made the islanders aware of the value both of goods and money; and beads, looking-glasses, and buttons have wholly lost their former commercial value.

Most of the islanders of Polynesia are of a lively excitable disposition; hence, when not employed in the graver pursuits of fishing, canoe-building, or war, they give themselves up with great ardour to a variety of amusements, among which dancing is, perhaps, the most prominent, being common on all occasions, not merely of pleasure, but also of religion and state ceremony. Some of these dances are stated by the missionaries to have been very objectionable; while others were of a graceful and more dignified character. The exchange of a Christian profession for a debasing polytheistic idolatry has diminished the frequency of these exhibitions, though they still occasionally take place. The musical instruments of the islanders consist of a long narrow drum, a trumpet formed of a species of murex, into which is inserted a bamboo cane for a mouth-piece, and a flute of bamboo, about 16 inches long and about 1 inch in diameter. Boxing and wrestling, also, used to be favourite amusements; but these exercises, as well as many other national entertainments, have been all but abandoned since the introduction of Christianity, though there be, after all, but too much reason to suppose, that the efforts of missionaries have produced little radical change for the better in the morals of the mass of the pop.

The islanders of the Pacific, as respects physical character, may be divided into 2 distinct classes. The most ancient tribe is composed of Papuan negroes, who are distinguished by darkness of skin, smallness of stature,

and black woolly or crisped hair: they chiefly inhabit the Admiralty Islands, New Britain, New Ireland, New Hebrides, New Caledonia, and the Solomon Islands. The other tribe, which is far more widely dispersed over the numerous groups of this great ocean, exhibits many of the features belonging to the Malays and aboriginal Americans, but is, in some respects, so different as to form a separate and intermediate race. The people of each cluster, also, are distinguished by minor peculiarities. The inhabs. of the Society Islands are of good stature, and well made; of olive complexion, with open, prepossessing features, with a facial angle as perpendicular as in the European head; a bright, full, and jet-black eye, placed under well-arched eyebrows, a straight or aquiline nose, well-formed mouth, and moderately high forehead, with straight though not wavy hair, either black or brown. The Sandwich islanders have more firm and muscular limbs, but in other respects bear a close resemblance to those just described; and they are generally active in their movements, graceful in their gait, and perfectly unembarrassed in their address. Both sexes incline to corpulence in advanced life. It is remarkable also, that the chiefs and persons of hereditary rank, throughout the islands, are almost without exception, superior to the common people, in stateliness, dignified deportment, and physical strength: indeed, so great is the difference, that Bougainville, and others, have supposed them to be a distinct race, whose ancestors at some remote period had brought the aborigines into permanent subjection. (*Ellis's Pol. Researches*, i. 78—81; and *Moerenhout*, ii. 247—253.)

With respect to the languages of Polynesia, Marsden first ascertained that there is one general language pervading the whole of the South Sea Islands, and extending, with its different dialects, from the E. Indian archipelago to the E. extremity of the Polynesian groups: "Indeed," says M. Moerenhout, "it is impossible to avoid observing the close analogy between the dialects spoken in the many different islands. So striking a similarity is there between the languages of the Society Islands and New Zealand, that the natives mutually understand each other: the inhabs. of the Sandwich, Marquesas, and Society Islands converse after only a few days' practice, and the occupants even of the far distant Easter Island are intelligible to the whole of the other islanders both N. and S. of the Equator. It has been believed by some linguists that all these dialects are branches, more or less, of the Malay language; and many words certainly bear some analogy to those in the Malay vocabulary; but, in fact, "there is no living language either of Asia or America, which can be denominated the parent-stock of the great Polynesian language." (*Crawford's Indian Archipelago*, ii. 80—86; *Moerenhout*, i. 305—308.)

1. *The Caroline Islands* (sometimes called the New Philippines) extend over about 20 deg. of longitude, and are divided by Captain Lutke into 46 groups, comprising several hundred islands, a few of which are high and rising in peaks, but by far the greater number are low, and merely of coralline formation. They were discovered in 1696 by a Spaniard, who named them after Charles II., king of Spain. The productions of these islands are very similar to those of the Sandwich and Society Islands; but the bread-fruit is found only in a few of the groups, and the hog is wholly absent; hence these islanders live chiefly on fish. The inhabs. are reputed to be the most expert sailors and fishermen of Polynesia; and, notwithstanding the tempestuous sea by which they are surrounded, they have a considerable trading intercourse in canoes with the Ladrone Islands and the E. Archipelago.

2. *The Sandwich Islands* (10 in number, of which 8 are inhabited) form a group many hundred miles distant from all the rest. The area of the largest island, Owhyhee (or, more properly, Hawaii), is estimated at 4,300 sq. m., being more than half that of the entire group, and is, indeed, by far the largest island of Polynesia. It rises in high and towering cones to an elevation of nearly 16,000 ft. from the sea; and not only is the gigantic volcano of Kiranua, with its immense crater, 2 m. in length by nearly 1 m. in width, and several hundred feet deep, to a constant state of terrific ebullition, but the whole island is one complete mass of lava; and, being perforated with innumerable apertures in the shape of craters, may be considered as forming a hollow cone over a vast furnace in the heart of a stupendous submarine mountain. (*Ellis*, iv. 246, 463.) The pop. of the Sandwich Islands is estimated by the American missionaries at 150,000, more than half of whom reside in Owhyhee. The males are of a darker complexion than those in the Society Islands; the females have coarse and disagreeable features, and both sexes are gloomy and reserved. The natives generally are remarkable for their attention to the arts of industry, and have distinguished themselves above all others by their efforts to introduce European civilisation.

Christianity was introduced by the American mission-

aries in 1820, and is now the religion of the state; schools have been established, churches have been built, and the forms of religion are, at least, pretty generally observed. European usages have also become fashionable, and the costume of the better classes, women as well as men, closely resembles that of the Anglo-Americans. Honolulu, in the island of Oahu, is the cap. of the group, and has a population of about 6,500. Some of the houses are built of stone; but the natives still prefer living in their huts, so that the town is grotesquely irregular. The principal public building is the "English school," in which instruction in English reading and writing is given to children of both sexes: there are, also, 2 churches, numerous boarding-houses, and many well-stocked shops. The harbour (formed by a barrier-reef of coral, having a single opening) has accommodation for between 60 and 70 vessels of 500 tons: in 1831, there belonged to the islands 14 ships of 2,630 tons, of which 4 brigs and 7 sloops were the property of the natives. In 1836, from the 1st of July to the 13th of December, there were 154 arrivals at the port, of which 80 were ships and schooners belonging to the country, 56 from the U. States, and from England. An English newspaper has been established in the town; and in some numbers, which we have seen, we have noticed advertisements of ladies' shoes from Paris, *cave-de-cologne*, ices, and so forth. The government has negotiated commercial treaties on a liberal footing with England, the U. States, &c. (*Sandwich Islands' Gazette; Bennett's Whaling Voyage*, i. 150—236.)

3. *The Society Islands*, with which Europeans became earlier acquainted than the other groups, consist of 6 larger and several smaller islands. The principal of these, called Otaheite (or, more properly, *Tahiti*), is 108 m. in circ., and has a pop. of about 7,000 persons. It is extremely mountainous, some parts attaining an elevation of nearly 7,000 ft.; but "extensive as well as fertile vales open on every side towards the sea, and the entire land is clothed from the water's edge to its topmost heights with a perennial verdure, which for luxuriance and picturesque effect is certainly unparalleled." (*Bennett*, i. 62.) Next in importance to Otaheite, and about 130 m. N.W. that island, is Ulietea, or Rataia, nearly 60 m. in circ., encircled by a reef of coral, bordered by numerous islands: it has a bold, mountainous appearance, and is scarcely less picturesque than that last mentioned. Eimeo is another mountainous island, with an abrupt rocky coast, and is chiefly distinguished as the central station of the missionaries on this group: a school and printing-office are established here, but both on a confined scale. The Society islanders are light-hearted, merry, and fond of social enjoyment; but, at the same time, indolent, deceitful, thievish, and addicted to the excessive use of ardent spirits. The forms of Christian worship are enforced here as rigidly as in the Sandwich Islands; but civilisation is considerably less advanced, and European costume considerably less prevalent. (*Bennett*, i. 70.) The seat of government and principal port of Otaheite is Papeete, which exhibits the same combination of European houses and native huts as the cap. of the Sandwich Islands. The harbour is a capacious sheet of smooth water, of a circular shape, and so completely land-locked as rather to resemble a large dock-basin than a natural harbour. The commerce, consisting in the exportation of pearl-shells, sugar, cocoa-nut oil, and arrow-root, in exchange for European manufactures, chiefly cloth and hardware, is carried on exclusively by foreigners, as the natives have no vessels larger than their double canoes. This port is also frequently visited by whalers coming here to refit or to obtain supplies. Otaheite is not and never can be so important a commercial station as Oahu, in the Sandwich Islands.

4. *The Marquesas*, which were discovered by the Spanish in 1595, consist of 13 islands, extending about 200 m. from N.W. to S.E. The largest, Nukihiva, is about 70 m. in circ., and is the only one generally frequented by shipping. The coast-scenery is neither picturesque nor inviting, its principal features being black naked cliffs and barren hills; but in the interior are many fertile vales, and very picturesque scenery. The inhabitants, with regard to personal beauty, are superior to most others of the Polynesian tribes; and the women, though short in stature, are well-proportioned, and sometimes even handsome. In civilisation, however, they are far behind the Sandwich islanders; and are generally characterised by covetousness, irascibility, love of revenge, and gross sensuality. Cannibalism was practised by them within a very recent period, and they have steadily resisted all attempts to convert them to Christianity. Polygamy, however, though not forbidden by law, has fallen into disuse.

5. *The Friendly Islands* are low, encircled by dangerous coral reefs. The soil is almost throughout exceedingly rich, producing, with very little care, the banana, bread-fruit, and yam. The pop. may amount to about 90,000; but the natives, though favourably mentioned by Capt. Cook, appear to be as treacherous, savage, and su-

perstitious as any in the worst parts of Polynesia. The Wesleyan missionaries established themselves in these islands in 1821, and are reported to have met with considerable success.

6. *Pitcairn Island*, which stands alone, near the E. extremity of Polynesia, is chiefly interesting on account of its having been the refuge of the mutinous crew of Captain Bligh's ship, the *Bounty*. The mutineers, after having turned their captain and a few of the crew out into an open boat, tried to make a settlement in the Society Islands, but afterwards fixed themselves in this isolated spot, where a few of them, with their descendants, were found by Captain Beechey, in 1825. It is not more than 7 m. in circ., with an abrupt rocky coast, and rises about 1,050 ft. above the sea. The present pop. comprises about 80 persons, who (being the descendants of Europeans and native women) form an interesting link in person, intellect, and habits between the European and Polynesian races. They are tall and robust, though not handsome, with black glossy hair, and frank, honest, good-humoured dispositions. In morals, also, they present a striking contrast to the inhabs. of the other islands; for they are a simple, frugal, and sensible; on the whole industrious, and strictly observant both of morality and religion.

7. *The New Hebrides* (discovered in 1506, and so named by Captain Cook, who surveyed the entire group) are considerably hilly, though well clothed with fine timber; and the valleys are extremely abundant, producing figs, nutmegs, and oranges, besides the fruits common to the rest of Polynesia. The inhabs. present about the most ugly specimen extant of the Papuan race: the men live almost in a state of nudity; and the women, who are used as mere beasts of burden, wear only a petticoat made from the plantain-leaf. Their canoes are more rudely fashioned than in most of the other islands; and, on the whole, these people seem to be among the most degraded of the islanders of the Pacific.

8. *New Caledonia*, which is the largest island of the W. groups, is far less fertile, and produces a smaller variety of fruits and vegetables than any of the islands yet mentioned. The natives closely resemble in habits, and the total absence of civilisation, those of the New Hebrides; though, owing to the ravages caused by famine, they are infinitely more wretched. The Pelew Islands, in about lat. 7½° N., long. 135° E., are chiefly known from the accounts of Captain Wilson, who was wrecked on them in 1783. He describes the inhabitants as hospitable, friendly, and humane. Breeds of cattle, goats, poultry, &c., were subsequently sent to the islands, and have succeeded extremely well. They have now a considerable trade with China.

Our knowledge of the many extensive groups of islands comprised in Polynesia is still very far from being satisfactory. Magellan began the work of discovery early in the 16th century, and he was followed at the close of the same century by Mendane and other Spanish navigators. The Dutch made further discoveries in the 17th century; but to England mainly belongs the honour of having explored and laid down the exact position of the principal groups of the South Sea islands, and the names of Hyton, Wallis, Cook, Vancouver, and Beechey, must ever rank high in the estimation of geographers: great credit is also due to La Pérouse, D'Entrecasteaux, Freycinet, and other learned navigators, sent out on exploring voyages by the French government. In consequence of the labours of these and other navigators, aided also by the information gained from missionaries resident in the islands, we have gained a pretty intimate acquaintance with the condition of the natives in the principal groups of Polynesia; but there remains a great number of islands, especially on the W. side of the Pacific, that have very seldom been visited by Europeans, and are occupied by people as savage and uncivilised as the Sandwich islanders of the last century.

POMERANIA, a large prov. of the Prussian state, lying along the S. coast of the Baltic, from long. 12° 20' to 18° 2' E., having E. and S. West Prussia and Brandenburg, and W. Mecklenburg. Its form is oblong, its length (from E. to W.) being above 200 m.; while its breadth varies from 30 to 60 and 80 m. Area, 12,179 sq. m. Pop. in 1837, 370,117, of whom 564,334 were Protestants. It is divided into three regencies, and is again into 25 circles. Surface flat. Principal towns, Stettin, Stralsund, Greifswald, Stargard, Stolpe, &c. Principal rivers, Oder, Leba, Stolpe, Rega, Persante, Ucker, Peene, and Ilma. The Haff is a large bay, or rather lagoon, of an irregular form, which communicates with the Baltic by the mouth of the Oder. Along the sea the land is in many parts so low that it would be overflowed, were it not protected by ranges of sand-hills, and where these are wanting, by dikes, as in Holland. Soil mostly sandy, and unproductive, except along the rivers and lakes, where it is marshy and comparatively fertile. A large part of the country is covered with forests and heaths, and there are also many shallow lakes. Agriculture is in a very backward state; but

since the abolition of vassalage in 1811, it has made considerable progress. Wheat and barley are grown; but rye, buckwheat, and oats, are the principal corn crops; potatoes are largely cultivated, and form, indeed, a principal part of the food of the people; flax and hemp are also grown, with tobacco, &c. The breeding of cattle, sheep, and hogs, is a favourite occupation. Geese are reared in immense numbers; and besides those consumed in the province, large quantities are exported smoked and dried. Very few farms are occupied by tenants holding under a lease, but are chiefly farmed by or on account of the proprietors. The peasantry live in mean dirty cottages of wood or clay; their clothes are all of home manufacture. Common agricultural labourers earn from 6 to 8 silver groschen a day, exclusive of subsistence. Minerals unimportant. The woollen manufacture in a domestic state is pretty generally diffused; and linen, leather, &c., are also produced. There are numerous breweries and distilleries, and dram-drinking is as prevalent here as in other parts of the monarchy. The fishery, particularly of sturgeon and salmon, is carried on along the coast, and in the creeks and rivers.

POMONA, one of the Orkney Islands, which see.

POMPEII (called by the Greeks *Pompeia*), a long-buried city of ancient Italy, in Campania, now much celebrated in ancient history, but now an object of the greatest interest in consequence of its rather recent discovery and exhumation. It was originally close to the sea; but it is now nearly 1½ m. inland, and is about 5 m. S. by W. the crater of Vesuvius, and about 15 m. S.E. Naples. The era of its foundation, as well as the greater part of its early history, is involved in obscurity, but the presumption is, that it was settled by Osci and Pelasgi prior to the establishment on this coast of the Greek colonies from Eubœa. About *anno* 440 n. c. it fell into the hands of the Samnites, from whom it was taken, with their other possessions, by the Romans about 80 years afterwards. Pompeii revolted, with the other Campanian towns, during the Social War; and little more is known of it till it was visited by an earthquake (A. D. 63), which overtook it in great devastation. *Mutæ terræ, celebre Campanie spectant Pompei, magna ex parte perurit.* (Tacit. *Annal.* lib. xiv. cap. 22.) The repairs consequent to this disaster were incomplete, as is seen by the state of the excavated ruins, when the city, with Herculaneum, Stabiae, and other towns in its vicinity, was wholly overwhelmed by an eruption of Vesuvius, A. D. 79. This tremendous calamity has been admirably recorded by the younger Pliny, whose uncle was one of the sufferers, in a letter to the historian Tacitus:—"Precesserat per multos dies tremor terræ, minus formidolosus, quia Campanie solitus; illa verò nocte ita invaluit ut non moveri unum sed eructi cœderetur. Mare in se resorberet et tremore terræ quasi repelli videretur. Cœpissent littus, multaque animalia maris in siccis arenis detinebatur. Ab alto latere nubes atra et horrenda igni spiritibus tortis vibratibus discursibus rupta in longas flammarum figuras dehincibat; fulguribus illæ et simul et majores erant. . . . Mor audires ululatus faminarum, infantium querulas, clamores virorum; alii parentes, alii liberos, alii conjuges vocibus requirebant, vocibus vocabantur: hi suum casum, illi suorum miserabatur; erant qui mortis mortem precarentur. Multi autem deos manus tollere. Nec defuerunt quicquid mentisque terrarum vera pericula auferant."

*Mox dies verus, sol citius effudit, hauriens tunc:—occurrebant trepidantibus adhuc oculis mutata omnia, atque cinere languam nive obducta.* (Plin. *Epist.* xi. 20.) It seems probable, however, from the small number of skeletons discovered, here and at Herculaneum, that the inhabs. of both cities not only found time to escape during the confusion, but also to carry with them their most valuable effects.

From this time forward, for about 1669 years, Pompeii continued buried under the ashes, pumice-stone, and other volcanic matter by which she had been overwhelmed, and even her situation was matter of doubt and conjecture. It is surprising, however, that her ruins did not sooner attract attention; for, in 1592, the celebrated architect and engineer, Domenico Fontana, having been employed to construct an aqueduct to convey water to Torre, fell in with the remains of the buried city. But this discovery appears to have attracted little or no attention; and it was not till 1748, that peasants employed in cutting a ditch fell in with the ruins of the city, that they became an object of interest and attention. The excavations were commenced in 1755; and have since been pretty constantly, though not very vigorously, prosecuted. Not having been overwhelmed by lava, but with tufa, ashes, and scorie, the excavations are much more easily effected here than at Herculaneum. (*Description de Pompeii, par Bonucci, p. 31, &c.*)

Pompeii, to borrow the words of an intelligent observer, is "the most wonderful of the antiquities of Italy; and it is perhaps the only one which never disappoints a traveller who is even moderately acquainted with the history of ancient Rome. The impression which

it gives of the actual presence of a Roman town, in all the circumstantial reality of its existence 2,000 years ago, is so vivid and intense, that it requires but a small effort of imagination to place yourself among the multitudes which once thronged its streets and theatres, and occupied its now voiceless chambers. The expression so often used, that you expect to see the inhabitants walk out of their houses to salute you, is scarcely a figure of speech. Many things, in fact, concur to foster the illusion. You see a street before you carefully paved and well worn, and bordered with *trattoirs*, in good preservation, as if it had been in use on the preceding day. The houses generally extend in unbroken lines, and even the dilapidation is in some measure concealed by the small modern roofs placed over the walls to protect them from further waste by the weather. The doors and windows, indeed, are all open; but so they generally are in the modern houses of Italy; and the sombre brown tints of the walls is not very different from what is seen in the decayed towns of the same country at the present day. You turn to the right and the left, and wander from street to street, and still you have the perfect image of a town before you, except that no inhabitants appear, and these you may suppose have only left it a few days before. We have detached public buildings of many kinds elsewhere; but here we have a Roman forum, with all its accompaniments of temples, porticoes, curia, &c., not indeed perfect, but only so injured that what is missing can be replaced, and what is mutilated restored. We have also many shops, with their utensils of trade in them, and about a hundred private houses of all descriptions, from the poor cottage to the patrician mansion, enabling us, for the first time, to obtain a distinct idea of the form and arrangement of a Roman house, and giving us, as it were, a glimpse of the domestic life and manners of the people. The public baths here, which were almost entire, have thrown new light on the structure of those buildings. Lastly, the *font-ensemble* of the walls, gates, streets, forum, houses, temples, fountains, theatres, associated as they are with each other, give us a conception of a Roman town incomparably more clear and satisfactory than any number of such objects scattered over distant localities could have furnished." (*Maclear's Notes*, p. 100. 103.)

It seems evident on an examination of the superincumbent strata, which consists of various layers, that intervals had taken place in the original eruption, which lasted for three days; and it is farther probable that some of the uppermost layers may have been the result of subsequent eruptions.

This resuscitated city, of which about 1-4th part is now laid open to public view, is of a somewhat oval form, 1 m. in breadth and ½ m. in length, covering an area of 160 acres, or about 2-3ds of the new town of Edinburgh; and considering the narrowness of the streets, the nature of the houses, and the mode in which the slave population generally were lodged, the entire population could scarcely have exceeded 25,000 inhabitants. The walls, which have been traced on every side, except towards the sea, are about 20 ft. thick, and nearly equally high, being faced with blocks of lava inside and outside. There are six gates, and many towers, rising high above the ramparts, and pierced with arches. The best approach to Pompeii is by the Appian way to "the Gate of Herculaneum," which is nearest the sea, and at the N.W. angle of the city. Along each side of the road, approaching this gate, extends a line of tombs, many of which remain perfectly entire, their angles being as sharp, their inscriptions as legible, and their whole appearance almost as fresh as if they had been erected only a few years ago. The monuments vary greatly in size, pattern, and material; many are mere cenotaphs, while others have niches for urns; and a pretty common form is that of a small oblong temple, adorned with columns or pilasters. On the whole, these tombs are not unlike the more ambitious monuments in our own churchyards; but there is nothing resembling our single upright shafts, or flat grave-stones. The gate of Herculaneum consisted, like the others, of a large central and two smaller side-gates, not unlike those of Temple Bar in London, the central archway being about 20 ft. in height and 15 ft. in width. The streets appear to have been arranged pretty regularly in parallelograms; but they are very narrow, the most usual breadth being 18 or 20 ft., of which 1-3d is occupied by the trottoirs, which invariably line both sides of the horseway. An exception, however, must be made in favour of the "Street of the Silversmiths," which is 40 ft. in width, and decidedly the finest in Pompeii. The middle of the road is paved, like the Via Appia, with masses of lava of irregular shapes, and from one to two ft. in diameter, the most level surfaces being placed uppermost; and in many parts the rutts produced by the wheels are still obvious. The trottoirs, which are raised about 10 inches above the rest of the street, average about 4 ft. in width: they are generally made of a sort of compound of lime, earth, and

gravel, not unlike the asphalt used for modern pavements in London and Paris.

The largest excavated space in Pompeii, and that which exhibits most architectural magnificence, is the Forum, an extensive oblong area, once paved with large slabs of marble. The feelings of a classic traveller, on beholding, for the first time, such a monument of antiquity, are well described by Mr. Maclaren. "I felt that it was not a trifling incident in my life, to stand in a veritable Roman forum. There it lay distinctly before me, rilled of the greater part of its marble pavement, of its statues, and some of its columns, yet retaining enough of its ancient linings, to give a perfect idea of its form, extent, and distribution of its parts. It had been terribly injured by the earthquake A.D. 63, and was rebuilding, when the great catastrophe occurred. The forum was the great place of public resort: the idle came here to inquire after news, the busy to talk of business, friends to keep appointments, patrons to meet their clients, suitors to attend the courts, candidates for office to solicit votes; here the orators harangued, and the people shouted, the magistrates met in council, and the tax-gatherers collected the revenues: here the decrees of the senate were promulgated *mina voca*, and plays, festivals, and gladiatorial shows, were advertised by short notices badly spelt, painted on the walls in rudely formed letters." (p. 131.) The entrance from the N.W. corner, (that nearest the gate of Herculaneum), is by a flight of steps leading downwards through a brick arch into an oblong area about 490 ft. in length by 114 ft. in width, "surrounded by columns, and the ruins of temples, triumphal arches, and other public edifices, the uses of which can in general only be conjectured. The red masses of brick divested of their marble casings, the brown and yellow tints of the tufa, the fragments of white stucco attached to the shattered walls of the different edifices, and the pedestals which once supported statues in honour of illustrious patriots, are all that now remain to attest its former beauty and magnificence." (*Pompeii, Library of Entertaining Knowledge*, i. 100.)

A Doric colonnade ran round three of its sides, and the fourth was occupied by a temple of Jupiter. The columns formed a species of covered gallery, raised above the central area, and a second row of smaller columns, placed on the top of the first, formed a second gallery, which would afford a view of every thing passing in the area. The temple of Jupiter has a prostyle portico, supported by 12 very beautiful Corinthian columns, and its total length, from the front steps to the back wall of the *cella*, is 120 ft., the uniform breadth being 45 ft. On the W. side of the enclosure stood the prisons and public granaries, a peripteral temple of Venus, having a façade looking southward, of nine Corinthian columns, and a Basilica, or court of justice, which is the largest building in Pompeii. It is oblong shaped, 220 ft. in length by 80 ft. in breadth, and is entered through a vestibule having five door-ways of masonry. The roof of the interior was supported by a peristyle of 28 Ionic fluted columns, and at the further end are some remains of what was once the *trætor's tribunal*. At the S. end of the Forum, which was also ornamented by a triumphal arch, are the remains of three buildings of nearly equal size, and similar shape, that may have been curia, or places of assembly for the magistrates: these, however, are of very confined dimensions, and possess little interest. On the E. side, opposite to the Basilica, and flanked on one side by the Street of the Silversmiths, is a large enclosed building, in the shape of a parallelogram, within which was an oblong peristyle of white marble Corinthian columns; it is commonly called the Chalcidicum, and was built by Eumachia (whose statue is still standing), but its former use seems to be quite conjectural, though Gell and Donaldson seem to think, from some of the pictures and other remains found there, that it may have been a kind of cloth-hall. Adjoining it, and fronting the forum, is a small temple of Mercury, in the court of which is an altar of white marble, beautifully sculptured in bas-relief, representing a sacrifice. What the next building may have been is very doubtful; but as it has an altar, without a *cella*, we incline to think that it may have been a *senaculum* or hall of meeting for the town-council. Lastly, the space close to the N.E. angle of the forum is occupied by a very large enclosed peripteral structure, supposed to have been a pantheon dedicated to the twelve Di Consentes of Roman mythology, and comprising, besides an *cellula* or raised chapel, numerous cells for the accommodation of the priests. Under the colonnades of the forum, close in front of the Pantheon, the entrance to which is by a rather narrow vestibule, are the remains of seven recesses, or shops, in some of which the pedestals of the tables are still visible; these may possibly have been the *tabernæ argentariæ*, common in most Greek and Roman fora. (For further particulars respecting these several buildings, and the monuments contained in them, the curious reader is referred to the accurate and very instructive little

work on Pompeii, in the *Library of Entertaining Knowledge*.)

Next in importance to the excavation of the Forum, is that of the quarter occupied by the theatres. Its best approach from the Forum is by the "street of the silversmiths;" the space cleared comprises two theatres of unequal size, a square usually called the soldier's quarter, and two temples, with other buildings of minor importance. The theatres will not bear to be compared, in point either of size or splendour, with the magnificent structures at Rome; but still they have the remains of considerable beauty, and the largest, at least, would be considered of large size in any modern city. It has six entrances, leading to different parts of the building, and six inner doors, or *monitoria*, opened on an equal number of staircases running down from the external circular corridor to all parts of the house. The benches were about 1 ft. 3 in. in height, and 2 ft. 4 in. in width, and it would appear that they may have been capable of accommodating about 5,000 males, chiefly of the middle classes; those of high rank sat on chairs in the orchestra, and the women occupied a gallery running round the top of the building over the corridor. All the benches as well as the orchestra seem to have been entirely covered with marble, of which, however, there are now but few vestiges. Like the Coliseum, and other ancient theatres, it was open at top; but on the outside wall may still be seen the iron rings inserted to receive the masts supporting the awning. Of the scene itself, enough remains to show that the three chief doors were situated in deep recesses, and that behind them was the *postscenium*. The smaller theatre, which communicates with that last mentioned, is built on the same plan, and similarly arranged, having had accommodation for about 1,500 spectators; but, unlike the other, it seems to have been permanently roofed. Its shape, also, is rather elliptical than semicircular. Close to the theatre is a large open space, supposed to have been soldiers' barracks; and near it is a Doric temple of Hercules, the oldest in the city, and said to have been erected at least 800 years B.C. The great amphitheatre occupies a large space at the E. angle of the town, quite separate, and at some distance from the rest of the excavations. Like other amphitheatres, it is oval-shaped, the extreme outside length being 430 ft., and do. breadth 335 ft. The seats rise above each other in 24 successive rows, and must have accommodated upwards of 10,000 persons.

The baths, which occupy a space, not far from the Forum, of about 100 ft. sq., are interesting not so much from their size as from the simplicity of their construction, which makes their arrangements more intelligible than in the complicated buildings of this kind in Rome and elsewhere. As, however, it would be impossible without a diagram to give a satisfactory account even of those at Pompeii, we pass at once to the domestic architecture of the city, which, indeed, is one of its most interesting features. Mr. Maclaren closely examined about a dozen of the private houses, which, he says, are so different from those either of Britain or modern Italy, that it is not easy to comprehend the use of their several parts. Indeed, most of them are so dilapidated that they could not be understood at all without the aid of Pliny and Vitruvius. "The present condition of the houses and shops resembles what we see in our tenements after the occurrence of a fire. The roof, upper floors, doors, and all the woodwork, have disappeared, the furniture has been carried off, and nothing remains but the half-dilapidated walls, the pavement of mosaic on the ground flats, columns entire or in fragments, stone counters, and a few bulky or heavy articles of too small value to be worth removing. The apartments, however, have been carefully cleaned out, and not only the houses but the streets were completely free of foreign matter, except a thin covering of ash and scoria deposited by the recent eruption of Vesuvius, and which was easily removed by a besom or whisk of straw." The paintings, also, are still on the walls, and remarkably fresh. The house of Pansa, though not the largest, is better calculated than any other to convey to the reader an idea of a private town residence; and, taking this as a guide, we may remark that the houses generally consisted of a square or oblong enclosure surrounded by blind walls, the central court being open, and chambers formed round it, over which sheds (*compluvia*) projected inwards, which discharged the rain water into a stone or marble basin (the *impluvium*), in the centre of the court. The larger houses, however, have a second court, with its corresponding *impluvium*, surrounded by columns; and hence, where the outer court is called simply *atrium*, the inner one (divided from it by a square apartment, called the *tablinum*, from being usually adorned with pictures and statues) is denominated the *peristyle*, and was devoted to the use of the family. Bed-rooms and parlours run round both courts, a garden extends some

way at the back of most of the houses, and the front entrance, in Pompeii at least, is by a passage 8 or 10 ft. wide. Paper, horn, mica, and even pretty thick glass, were pretty generally used; and in cold or hot weather awnings were commonly thrown over the impluvium; but no fire-places are seen in the houses, and, like those in modern Italy, they seem to have been wholly built for summer use. The exterior of the houses is generally of brick, covered with plaster, and formed into pannels: in the interior, also, the walls are coated with fine plaster, which serves as a ground for frescoes, which are found pretty abundantly in all parts of the larger houses throughout the town; and these paintings, if they do not equal other extant specimens of Roman art, are highly valuable for the light which they throw on the costumes, habits, and amusements of the ancient inhabs.

The shops, like those of Naples, seem to have been extremely small, scarcely exceeding 14 ft. square, and wholly open in front, with the exception of a low counter, being closed by shutters at night, somewhat in the same manner as the butchers' stalls and shops in England. Some of the implements of modern art still remain, such as earthen jars, ovens, mills, cooking-pans, &c.; and we have reason to believe that the ancient inhabs. pretty well understood the division of trades. Most of the shops and other places of public entertainment, not excepting those belonging to the *Domus Libera*, had images or figures over the doors, serving like the signs in modern towns, to indicate the profession or business of the occupant. The household furniture and domestic utensils found in the excavations both here and at Herculaneum have, with a few slight exceptions, been removed to the Museo Borbonico at Naples; and the number of articles of every kind and material is truly immense. "Among these," says Mr. Maclaren, "are several iron chairs, like our garden-chairs; braziers for burning charcoal or wood, keys and locks, metallic mirrors, pots and pans, glass bottles and drinking vessels, lamps of copper and earthenware, vases and urns, marble statues and bas-reliefs, ancient armour, seals, styles and inkstands, bells, moulds for bread and pastry, glazed plates for the table, scales and steelyards, spoons, ear-rings, and similar articles." The discovery of Pompeii has, in fact, thrown a strong and steady light on many points connected with the private life and economy of the ancients that were previously involved in the greatest obscurity. An acquaintance with its remains is indispensable to the classical student; and he cannot study them to more advantage than in the volumes already referred to in this article, or in the more elaborate and better illustrated works of Gell, Donaldson, David and Maréchal. (*Pompeii*, 2 vols. passim; *Gell's Pompeiana and Illustrations*; *Map of Pompeii*, Soc. of Useful Knowledge; *Maclaren's Notes*, pp. 99-132; *Lyell's Geol.*, ii. 95-103.)

PONDICHERY (Fr. *Pondichéry*), a town of Hindostan, and the principal French settlement on the Asiatic continent; on the Coromandel coast, 83 m. S.E. W. Madras; lat. 11° 57' N., long. 95° 54' E. Pop., in 1835, 52,127, of whom 606 were Europeans. Standing on a flat sandy plain, near the shore, it has a very imposing appearance from the sea; and it is in reality a handsome regularly laid out town. The streets in the European quarter are of uniform breadth, built with remarkable regularity, and intersecting each other at right angles. The houses, which are of a good height, have flat terraced roofs, the walls being stuccoed white and yellow, and not intermixed with native huts. Nearly in the centre is a spacious square, laid out in walks, shaded by rows of trees, with the government house on the N. side, and open on the E. to the sea. The black, or native town, to the W. of the former, and separated from it by a canal, crossed by several bridges, is laid out with nearly the same regularity as the European town, though the houses are very inferior. Pondicherry was formerly strongly fortified; but the only portion of its works that now remains is an old brick tower, on which the flag is hoisted. The chief buildings are the government house, an edifice of a single story adorned with columns, and surmounted by a ballustrade; the church, built by the Jesuits, and a good market-place. It has a college for Europeans, a school for the Indians, a botanic garden, and a government pawn-bank.

The French possessions in India, comprising Pondicherry, Chandernagore, Karikal in the Carnatic, Mahé in Malabar, and Yanam in Orissa, with the territory attached to each, have a total pop. of about 166,000, of whom 1,000 are whites. The territory attached to Pondicherry is considerably larger than the rest, and had, in 1835, 10,618 hectares under culture, producing 6,488,640 kilogr. rice, 6,734,000 kilogr. other grains, 6,900,000 cocoa nuts, with some betel and a little indigo, tobacco, and cotton. The total value of the imports into these settlements in the same year, amounted to 1,744,260 fr., and that of the exports to 5,399,610 fr. The trade, by far the greater part of which centres in Pondicherry, is chiefly with the rest of the Coromandel coast, Sumatra, the Isle de Bourbon, the Mauritius, and Senegal. The

governor of the French settlements in India is usually a peer of France, and resides at Pondicherry, where also is the royal court for these colonies, a tribunal of primary jurisdiction, police court, &c.

This town was purchased by the French from the Bejaapoor sovereign, in 1672. It was successively taken by the British in 1761, 1778, 1793, and 1803; but was finally restored at the treaty of Paris, in 1815. (*Hugo's Official Reports*; *Hamilton's E. I. Gaz.*, &c.)

PONT-A-MOUSSON, a town of France, dép. Meurthe, cap. canton, on the Moselle, by which it is intersected; 16 m. N. Nancy. Pop., in 1836, ex. com., 7,008. It derives its name from a bridge of 8 arches which here crosses the river, and led formerly to the old castle of Mousson, now in ruins, on an eminence E. of the town. It is surrounded by planted boulevards, and has several good edifices, including a Gothic church, built towards the end of the 13th century, a town-hall, St. Mary's Abbey, now converted into a seminary, large cavalry barracks, a good hospital, and a building termed the *Maison des Sept Pêches Capitaux*, from its front being ornamented with old sculptures intended to represent the cardinal sins! This town has manufactures of coarse woollen stuffs, printing-types, earthenware, tobacco-pipes, and beet-root sugar. (*Hugo, Guide du Voyageur*, &c.)

PONTECORVO, a town of S. Italy, the cap. of a detached territory, surrounded by the Neapolitan dom., but belonging to the Papal States, deleg. Frosinone; on the Garigliano, 20 m. S.E. Frosinone, and 37 m. N.W. Capua. Pop. about 5,500, chiefly occupied in agriculture. It has several churches and convents, and an old castle. Napoleon conferred on Marshal Bernadotte the title of Prince of Pontecorvo, which he enjoyed till he became king of Sweden. Near it are some considerable ruins, supposed to indicate the site of the ancient *Interamna ad Lirim*.

PONTE-DELGADA, a sea-port, and the largest and most populous city (though not the cap.) of the Azores, on the S. side of the island of St. Michael; lat 37° 43' 10" N., long. 25° 41' 15" W. Pop., estimated at 22,000. Its appearance from the sea is far from picturesque, exhibiting a compact uniform mass of bright-looking buildings, backed by a few conical hills, some of which, however, are covered with a luxuriant vegetation. It had, when visited by Captain Boid, in 1831, 6 churches, 8 monasteries, and 4 convents; but the latter, which were celebrated alike for their artificial flowers made of birds' feathers, their sweetmeats, and the easy virtue of the vestals by which they were occupied, have since luckily been suppressed. The houses are substantial; but the streets are very ill-paved, and disgustingly filthy. Markets are abundantly supplied with fish, poultry, eggs, and vegetables of all sorts, including Spanish beans, yams, sweet and common potatoes, oranges, lemons, &c.; and every thing is remarkably cheap. When contrasted with the other towns in the Azores, it displays considerable wealth, activity, and industry. The exports consist of oranges, wines, brandy, rocella, &c. A mule has been constructed for the accommodation of the smaller class of vessels; but those of considerable burden have to anchor in an open roadstead. The town and harbor are defended on the W. by the castle and fort of St. Braz, mounting 90 pieces of cannon, and on the E. by the forts San Pedro and Rosto de Caia. The governor of the islands St. Michael and St. Mary resides at Ponte Delgada. (*Boid's Azores*, 112-116; *Dict. Géog.*)

PONTEFRAC (vulgo *Pontfract*), a parl. and market-town and par. of England, W. riding, York, upper div. wap. Osgoldcross, on a commanding eminence about 2 m. S.W. the Aire, 10 m. E. Wakefield, and 21 m. S.W. York. Pop. of parl. bor. (which includes, with the old bor., the extra par. dist. of Pontefract park, the castle-precincts, and also the several townships of Tanshelf, Monkhill, Knottingley, Ferrybridge, and Carleton), in 1831, 9,475. The town, which is well paved, and has been lighted with gas since 1832, is well built, with open, spacious, and clean streets, lined by handsome houses, chiefly of brick, the principal thoroughfare running N.E. past the ruins of the old castle, at the N. end of the town. The principal public buildings are a modern-built town-hall, with an attached gaol, "now used only for debtors and prisoners under remand," and a court-house for the quarter sessions of the W. riding, a well-constructed market-house, &c. The par. church, originally built in the reign of Henry I., has subsequently been so altered, that little remains of the old edifice: a more ancient, and once parochial church is now in ruins; but the tower at the intersection of the nave and transepts, is nearly entire, and is worthy, according to Rickman, of attentive examination. The living is a vicarage in the gift of the chancellor of the duchy of Lancaster. There are also places of worship for Rom. Catholics, Wesleyan and Primitive Methodists, Independents, and the Society of Friends.

A grammar school, founded in the reign of Edward VI. was revived and rechartered in 1792: it is 1 of 12 schools privileged to send candidates for Lady E. Hastings' ex-

libitons at Queen's College, Oxford. Another charity-school for children of both sexes, endowed with 95*l*. a year, has been incorporated with a national school; and a neat building, formerly the theatre, has been converted into school-rooms capable of accommodating 400 children. The town has 4 Sunday schools, and 6 hospitals, or almshouses, of various foundations, furnishing lodging, clothing, and a small stipend to 53 aged people of both sexes. A subscription library, mechanics' library, and news-room have recently been formed; but the races, formerly held here in September, are now extinct.

"Pontefract is not a manufacturing, but a very substantial and respectable country town. A considerable trade is carried on in malt, which is said to be increasing. The corn-markets generally are also improving; but there does not appear any prospect of a material change taking place in the condition of the bor." (*Mun. Corp. Rep.*) The neighbouring village of Ferrybridge within the bor. is, on the Aire (crossed there by a stone bridge of three arches), and till recently enjoyed considerable advantages from its position on the Great North Road: it is now in a state of decay. The vicinity of Pontefract is famed for its gardens and nurseries, which furnish vegetables in great abundance for the markets of York, Leeds, Wakefield, Doncaster, &c. The deep loamy soil around it is also well adapted for the cultivation of liquorice (*glycyrrhiza glabra*), which is grown here in large quantities, and supplied extensively to London and other large towns. Filtering stones are quarried on the castle-hill, and are in great request in all parts of the kingdom. Pontefract received its charter of incorporation in 2 Richard III. Under the Municipal Reform Act, it is governed by a mayor and three other aldermen, with 12 councillors, having also a commission of the peace under a recorder. *Corp. rev.*, in 1839, 588*l*. The bor. has sent two mems. to the H. of C., with some interruptions, since 23 Edw. I.; the right of voting down to the Reform Act having been in the inhab. householders within the bor. *Reg. electors*, in 1839-40, 815. The spring quarter sessions for the W. riding are held here in Easter week. Markets on Saturday, and large fortnight fairs for cattle, besides eight other annual fairs.

The principal celebrity of Pontefract is owing to its castle, once of great extent, but now a mere ruin, its site having in a great measure been converted into garden-ground. It appears to have consisted of several towers, with intervening walls and other buildings, the round-tower, or donjon keep, having occupied an eminence at its W. extremity. It was finished in 1080. In the beginning of the 14th century it became, by marriage, the property of the Earls of Lancaster, and in the reign of Henry IV. was attached with the rest of the duchy to the crown. For the space of many centuries it stood the ornament and terror of the surrounding country, till the civil wars of Charles I., when, after sustaining three successive and desperate sieges, it was finally taken by the parliamentary army in 1649, when it was unroofed and demolished by order of parliament. This castle has been the scene of various tragical events in English history. In the reign of Edward II., Thomas, Earl of Lancaster, was brought a prisoner here, and detained till the day of his execution. Richard II. was confined, and eventually murdered here; and in it, also, Anthony Woodville, Earl Rivers, Richard Lord Grey, Sir Thomas Vaughan, and Sir Richard Hawes, were put to death by order of Richard III., without even the form of a trial. (*Mun. and Bound. R.p.*; *Inspector of Prisons, 2d and 4th Reports.*)

PONTINE MARSHES. *See ITALY.*

PONTOISE (an. *Brive Isaire*), a town of France, dep. Seine-et-Oise, cap. arrond., on the Oise, where it is joined by the Viosne, 20 m. N. Versailles. Pop., in 1836, ex. comm., 4,900. It stands upon an abrupt rocky hill, and was formerly surrounded with walls, portions of which still exist. The lower part of the town is tolerably well built and paved, but has no building of importance except a new and good hospital. The rivers here turn numerous flour-mills; and in addition to these manufactures has iron and copper works, tanneries, and manufactures of watches, jewellery, cotton yarn, &c. It was frequently taken and retaken in the wars between England and France; and the parliament of Paris sat here several times during the 17th and 18th centuries. (*Dict. Geog. &c.*)

PONT-ST.-ESPRIT, a town of France, dep. Gard, cap. cant., on the Rhine, 31 m. N.N.E. Nîmes. Pop., in 1836, 4,160. It derives its name from its famous bridge over the river, constructed between 1265 and 1309, 875 yards in length; it has 23 arches, but is only about 12 ft. in breadth. It is kept in perfect repair, and has of late been made practicable for carriages. The town, which is ill-built, with narrow, winding streets, has a small port on the Rhone, and a considerable traffic in corn, wine, oil, and silk. (*Hugo, &c.*)

PONTYPOOL (corrupted from *Pont ap Howell*), a market-town and township of England, par. Trevechin, hund. Aberavenny co. Monmouth, 14 m. S.W. Monmouth, and 125 m. W. by N. London. Area of par. and

township, 10,460 acres. Pop., in 1831, 10,280. The town, occupying the side of a steep hill, near a rivulet trib. to the Usk, and nearly surrounded on all sides by mountains, is large and straggling, with two principal streets, lined with neat houses and numerous shops. The church, on an eminence near the town, has an embattled square tower; and there are two chapels of ease, besides places of worship for Wesleyan Methodists and Independents, with attached Sunday schools.

Pontypool was formerly celebrated for its manufacture of japanned goods, introduced by Thomas Allgood, their inventor, in the reign of Charles II.; but this branch of industry has greatly declined, owing to the successful competition of Birmingham, which now nearly monopolises the trade. Its present importance is derived from the iron and tin mines in the surrounding district, chiefly belonging to Capel Hanbury Leigh, Esq., and from the iron-works, situated a little S.W. from the town, and conducted upon a very large scale. It is connected partly by railway and partly by canal with Newport, its shipping-place for the produce of the mines. Petty sessions for the hund. are held here. Markets, on Saturday, and cattle fairs on the last Monday of each month, besides others, April 22, July 5, and Oct. 16.

Pontypool Park, the seat of the Hanbury family, is at a short distance N.E. the town; it is finely wooded with oak and other forest trees; and the house, on a perpendicular cliff above the Avon-Llwyd, commands a fine view of the surrounding country. (*Nicholson's Cambrian Guide, &c.*)

POOLE, a parl. and mun. bor., sea-port, market-town, and par. of England, and a co. of itself, with separate jurisdiction, on a peninsula on the N. side of the extensive and almost landlocked harbour, whence it derives its name, 20 m. E. Dorchester, and 97 m. W.S.W. London. Pop. of parl. bor., which includes, with the old bor., small portions of parts of Canford and Hamworthy, in 1831, 7,939. The town consists of several streets intersecting each other at different angles, the principal running in a N.E. direction through the market-place, in which is the town-hall, a convenient building, with attached shambles. The modern houses are generally substantial, and regularly built; but the older parts of the town have a mean, shabby appearance. The church is of modern erection, and there is a chapel of ease, both livings being in the gift of the parishioners. The Wesleyan Methodists and Independents have their respective places of worship, and the town has 4 Sunday-schools, a free grammar-school, several charity schools, and 2 or 3 well endowed almshouses. There is a small gao., and the par. workhouse has lately been formed into a union with 7 other par., the expense of supporting the poor of this par. having been 3,031*l*. in 1839. "The whole town, with its inhabs. and trade, may be described as in a prosperous and increasing state. Several vessels from this port are engaged in the Newfoundland fisheries; besides which it has a large and increasing coasting-trade, the exports being principally Purbeck clay (for the Staffordshire potteries) in exchange for coal." (*Parl. Bound. Rep.*) The port has also a considerable foreign trade: there belonged to it in 1840 about 160 ships, of the aggregate burden of nearly 16,000 tons. Gross customs duty, in 1840, 12,666*l*. The entrance to Poole harbour, about 4 m. in width, has a shifting bar, over which there are seldom more than 15 ft., even at high water. Vessels drawing 14 ft. water may, however, come up to the quays. "It is a considerable and singular advantage to Poole harbour, that the tide ebbs and flows twice in 12 hours. It first flows regularly 6 hours, and ebbs for 14 hours; it then flows for 14 hours, and ebbs during the remaining 3 hours. The second flood seems to arise from the peculiar situation of the entrance; for, being in a bay facing the E., the tide of ebb from between the Isle of Wight and the main, falls into that bay, forcing its way so as to raise the water for 14 hours, at which period the water without the bar, by its falling to a lower level than that within, produces a second ebb till low water." (*Puddy's Sailing Directions for the English Channel, p. 29.*)

Near the mouth of the harbour is a bank, from which large quantities of oysters are taken, to be fattened in the creeks of Essex and Kent.

Poole, which claims to be a bor. by prescription, has received several new charters, the principal being in the 10 Edw. Under the Mun. Reform Act, it is divided into two wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. *Corp. rev.*, in 1839, 3,451*l*. The bor. has returned 2 mems. to the H. of C. since the reign of Edward III., the right of election down to the Reform Act being in the members of the corporation, resident and non-resident. The electoral limits were enlarged as above mentioned by the Boundary Act; and in 1839-40, it had 543 reg. electors. Markets on Monday and Thursday; fairs, May 1. and Nov. 2.

POONAH, a distr. of British India, presid. Bombay, principally between the 17th and 19th degs. of N. lat., and the 74th and 76th of E. long.; having N. Ahmed-

nuggur, W. the Concan, S. the Sattarah dom., and E. those of the Nizam. Area, 8,281 sq. m. Pop. about 558,000. The face of the country is mountainous and irregular, but interspersed with many fertile and well-watered valleys. The climate is good and invigorating, and more suitable to Europeans than most parts of India. A good deal of the surface consists of the black and red cotton soils common in the S. of India; rice grounds comprise about 1-16th part of the land in cultivation, and gardens about 1-10th. The land is assessed on the village system: land revenue, in 1827-8, 15,16,323 rupees. Poonah is the only city; but there are several other considerable towns, at which coarse woollen, cotton, and silk fabrics, and metallic ornaments, are made. The celebrated cave-temples of Carlee, and several places of Hindoo pilgrimage, are in this district. (*Part. Reports; Hamilton's E. I. Geog.*)

POONAH, a city of British India, presid. Bombay, formerly the cap. of the Mahratta dom., but now the cap. of the above distr.; on the Moolia, a tributary of the Beemah, 80 m. E.S.E. Bombay. Lat. 18° 30' N.; long. 74° 2' E. Pop. estimated at abt. 110,000. It stands in an extensive and bare plain, about 2,000 ft. above the sea, at the foot of a small insulated hill, crowned with a pagoda. It is without walls, and can neither lay claim to antiquity nor beauty; it is very irregularly built and paved, with mean bazaars, deep ruinous streets, and no large or striking edifices. Heber says, "that it has as few evidences as can well be conceived of its having been, till lately, the residence of a powerful sovereign." But according to Hamilton, "its principal street is wide and handsome; and the mixture of rude paintings, in illustration of mythological legends, with the carved frame-work of dark-coloured wood, gives the fronts of the houses a fantastic and cheerful appearance." The principal palace is surrounded by high and thick walls, with four round towers, and is entered through a pointed archway. There are several other palaces, but they are small and insignificant. A little west of the city is the British cantonment, on an elevated site, with wide streets, a spacious church, a good station-library for the soldiers, and another library for the officers, and regimental schools, supported by subscription. This city has a Hindoo college, established in 1821, for 100 students, with classes for Hindoo divinity, medicine, metaphysics, mathematics, and astronomy, law, logic, rhetoric, grammar, &c., which costs 15,250 rupees a year. Poonah is the residence of the British collector and judge for the distr., and has a well conducted distr. jail, several British schools, a Rom. Catholic church, &c. East of the city is an excavated temple, apparently dedicated to Siva. Poonah is first noticed in history early in the 17th century; but it did not become the permanent residence of the Mahratta sovereigns till the middle of the 18th century. It came into our possession in 1818. (*Hamilton; Heber, in Mod. Trav., &c.*)

POPAYAN, a city of Colombia, cap. of the gov. of Cauca, New Granada, on an extensive table-land, nearly 6,000 ft. above the sea, having the Cauca River, about a league distant, on the N., and a mountain named M. from its resemblance to that letter, on the E.; 230 m. S.W. Bogota, and 235 m. N.E. Quito; lat. 2° 28' 35" N., long. 76° 31' 30" W. Pop. estimated at 25,000. Like most other Spanish-American cities, it is laid out on a perfectly regular plan, its broad streets being bordered with stone footways. The houses have for the most part only one story, and are usually built of burnt brick; but, according to Mollin, some of them would not discredit a European capital; and that traveller would have preferred this to most South American cities, had it not been that the myriads of a disgusting race resorted to a residence in it all but intolerable. It has several squares, one of which is spacious and handsome; a cathedral and other churches; numerous conventual buildings, some of which are now converted into barracks, or appropriated to other uses, and was formerly the seat of a royal mint and of a tribunal of finance. Two bridges are thrown across the Molina, a tributary of the Cauca, which runs rapidly through the city, and drains it of its filth. Popayan is principally inhabited by Negroes and Mulattoes, the number of whom, a few years since, was double that of the whites. It was formerly the entrepôt of the trade between Bogota and Quito, and had a large traffic in the precious metals; but the revolution, by turning the trade into other channels, gave a blow to its prosperity, from which it has not hitherto recovered. It has still, however, some trade in woollen stuffs, salt, flour, sugar, cocoa, &c.; and its markets are always well supplied with provisions. Popayan was the first city built by Europeans in this part of the New World, having been founded by Bonalcazar in 1537. A considerable portion of the city was destroyed by an earthquake in 1847. (*Geog. Account of Colombia; Mollin, in Mod. Trav. xviii.; Dict. Geog.*)

POPERINGEN, or POPERINGHE, a town of Belgium, prov. W. Flanders, cap. cant., on the Schipwarte

canal, near the French frontier, 7 m. W. by N. Ypres. Pop. about 9,000. It has several churches, a handsome town-hall and college, some rather extensive woollen manufactures, with oil-mills, &c. It has also a considerable trade in hops. It sends, along with Thiel, 2 mems. to the States of the prov. (*De Cleet; Dict. Geog.*)

PORT-GLASGOW, a parl. bor. and sea-port town of Scotland, co. Renfrew, on the S. side of the Frith of Clyde, 16 m. W.N.W. Glasgow, and 2 m. E. Greenock. On the W. the town is flanked by a steep range of hills, about 400 ft. in height; and is, in fact, so much overshadowed by these hills, that the rays of the sun do not reach it for about 6 weeks in winter. Pop., in 1790, 4,036; in 1835, 6,018. The town is neat and regular; the streets, which are straight, for the most part cross each other at right angles; while the houses, which are generally lofty and substantial, have a pretty uniform appearance. The only modern buildings worth notice are the town-house, and par. church. The latter is ornamented in front with a portico, resting on 4 massy fluted pillars, and is surmounted with a handsome spire, rising from the centre. In addition to the par. church, there is a *quondam sacra* chapel belonging to the establishment, and a chapel in connexion with the Associate Synod. There are 8 schools, one of which is parochial; and another an endowed seminary, called Beaton's School, from the name of its founder. There are 3 public libraries, and a reading-room. A legal assessment for the support of the poor has not been introduced; but voluntary contributions to the extent of above 6000. are raised for the poor, including church collections and the usual par. dues. A savings' bank, under the designation of a Provident Bank, has existed here since 1818; and there are various friendly societies.

Two sugar-refining houses employ about 50 men; and a rope-manufactory about 45. But the most important branches of business are ship-building, and the manufacture of canvas for sail-cloth and coarse linen fabrics. The former gives employment to about 200 men, exclusive of apprentices; wages 11. or 12. 1s. a week. The building of steam-boats, some of them of the largest class, is extensively carried on. A flax-mill employs about 430 hands.

Port Glasgow, as every one knows, was the sea-port or deep-water harbour of the city of Glasgow; and was long regarded as a mere dependency of the latter. It has two capacious harbours, furnished with ample quay and shed room, together with a graving dock, the oldest in Scotland. A large and commodious wet-dock has recently been erected. Formerly the trade of this place was almost entirely carried on in ships belonging to merchants resident in Glasgow. Of late years, however, the people of Port-Glasgow have themselves become ship-builders, and at present about 1-4th part of the shipping belonging to the port, or about 7,000 tons, is owned by residents in the town. It is the principal port on the Clyde for the importation of N. American timber, the quantity imported having varied during the last 15 years, from 16,000 to 30,000 tons a year. Owing to the great improvements that have recently been effected in the navigation of the Clyde, the greater part of the trade belonging to Glasgow that formerly centered in this port, has been transferred to the former. The town, consequently, is not improving. The tonnage belonging to the port engaged in foreign trade, has ranged, for several years back, from 21,000 to 32,000 tons; but the customs' revenue has very materially decreased; a consequence of a large proportion of the goods formerly warehoused here being now carried direct to Glasgow. Thus, the customs' revenue which, in 1830, amounted to 213,349l., had sunk, in 1840, to 84,550l. More than half the trade of the port is with the British N. American possessions; about a fourth with the W. Indies; and the remainder with the E. Indies, the Mediterranean and the U. States. There is now little coasting trade between the town and Glasgow; but the numerous steam-boats that navigate the Clyde, except those that ply to comparatively distant ports, touch here in passing and re-passing.

The Glasgow, Paisley, and Greenock railway, recently opened, passes close on the W. of Port Glasgow. We have already seen (Vol. I. 907.) that the magistrates of Glasgow, in order to provide a deep-water port for their city, purchased, in 1662, the ground on which Port Glasgow stands, and laid the foundations of the town and harbour. The town supports four branch banks. The intercourse between Glasgow and its newly acquired port was at first carried on principally by land; but the improvements effected in the Clyde navigation have been such as to make Glasgow nearly independent of the one or any other port, except its own. The ruins of the castle of Newark, which originally formed the seat of the proprietor of the estate on which Port Glasgow is built, stands on the shore, immediately contiguous to the town on the E. In 1775 it was created a barony, and a municipal constitution was conferred on

It. The Reform Act united it with Renfrew, Rutherglen, Dunbarton, and Kilmarnock, in sending 1 mem. to the H. of C. Registered voters, in 1840-1, 218. Municipal revenue, 2,616*l*. (Fide the article GLASGOW, in this work; *New Stat. Account of Scotland, & Renfrewshire*, pp. 62-74.; *Donald Reports*; *Factory Returns*, &c.)

PORT JACKSON. See SYDNEY.

PORT LOUIS. See MACRITUS.

PORT MAHON, a sea-port of the island of Minorca, which see.

PORT-PATRICK, a sea-port town of Scotland, co. Wigtown, on a gentle declivity on the E. coast of the Irish Channel; bounded on the land side by hills which suddenly rise, in a romantic semicircular form, to the height of 200 or 300 ft.; 109 m. S.W. Edinburgh, and 21 m. N.E. Donaghadee, Ireland. Pop., in 1791, 512; in 1838, 1,010, of whom about a third are Irish, or of Irish descent.

The principal street is in the form of a crescent, parallel to the bay; and there are 3 smaller streets connected with it, stretching at right angles towards the hills. The houses are in general well built, comfortable, and covered with slate. With the exception of the par. church, erected in 1629, there are no public buildings; nor is there any other place of public worship, though the dissenters of all kinds in the town and par. exceed 400. Education is at a low ebb; lower, perhaps, than in any other place of similar size in Scotland. There is a small parish library; and a still smaller one connected with the Sunday-school. There are no manufactures; but the cod fishery is carried on to some extent.

Two government steam-packets, in the service of the post-office, ply between Portpatrick and Donaghadee; this having been long one of the principal lines of communication between Great Britain and Ireland.

The fare of cabin passengers is 5*s*.; and of deck passengers 2*s*. The number of the former to Ireland, annually, is about 800; from Ireland, about 450; the number of the latter to Ireland, about 5,000; from Ireland, about 4,500. This includes the last 14 years; but before that time, that is, before the general introduction of steam navigation, by which the most ready conveyance is obtained from all the great ports of Ireland to similar places in England and Scotland, Portpatrick, in consequence of the shortness of the passage from Donaghadee, formed the principal port of entry from and to Ireland, not only for passengers, but for cattle and horses. For example, 17,275 horses and cattle were imported here in 1791; 20,000 in 1812; but only 1,080 in 1837; and the number has considerably diminished since that year.

Formerly the harbour of Portpatrick was a mere inlet between two ridges of rocks, and was one of the worst and most dangerous on the W. of Scotland. Whenever a vessel approached the harbour, the inhabs. assembled to draw her to the beach, there being no quay or creek to afford shelter from the waves. But a quay and reflecting light-house were built about 60 years ago; and it having been determined to make the place a steam-packet station, a new harbour has been constructed, protected by two piers, curved to resemble a horse-shoe, and furnished with jetties near their extremities, by which the entrance is contracted to 180 ft.; the area of the basin thus formed being about 7 acres. In accomplishing this great work, rock to an immense extent required to be excavated, which was effected by means of puddle-dikes and the diving-bell; the works are not yet quite finished. The original estimate was 120,000*l*; it is, however, supposed that the total expense will not fall much short of 200,000*l*. But the entrance to the harbour is, after all, very difficult in rough weather, and it is doubtful whether Portpatrick should have been selected for a packet station; indeed, notwithstanding the outlay on the harbour, it has been already proposed to abandon it, and to select Finnera, 8 m. N. from Stranraer, on the confines of Ayrshire and Wigtownshire, as a more suitable place, on the alleged ground that the harbour of Portpatrick can never be made sufficiently accessible or secure, and that it is too remote from the central parts of Scotland.

Portpatrick was long resorted to as the Gretina Green for Ireland, and was celebrated for its run-away, or irregular marriages. The lowest sum charged was 10*l*., payable to the parochial clergyman, who performed the marriage ceremony, and 1*l*. to the session clerk. The practice was abandoned in 1826, owing to the interference of the church courts; but in the records of these marriages during the preceding period of 50 years, there occur the names of 198 gentlemen, 15 officers of the army or navy, and 13 noblemen. (*New Stat. Acc. of Scotland, & Wigtownshire*, p. 129-161.; and *Priv. Inform.*)

PORT-AU-PRINCE, now called PORT-REPUBLICAINE, a city, and sea-port, and the modern cap. of the repub. of Hayti, on the W. coast of the island, at the bottom of the Bay of Genavalles, 90 m. S. Cape Haytien, and 165 m. W. St. Domingo; lat. 18° 27' 42" N., long. 72° 27' 11" W. Pop. variously estimated, probably from 15,000 to 20,000. It is partially fortified on the land side,

and the harbour is protected by a battery on a small island near the shore. The streets are laid out with great precision, crossing each other at nearly right angles; but the town is irregularly built; the houses are principally of wood, and as they seldom exceed 2 stories in height, have a paltry appearance. Except the palace, which is a large building, with a handsome flight of steps leading to good reception rooms, there are no public buildings of any importance. The arsenal, church, mint, lycæum, military hospital, and courts of law, are all insignificant. The adjacent country is low and marshy; and the heat in the summer months being excessive, the climate is then exceedingly unhealthy. The entrance to the harbour is between White Island and the S. shore. The depth of water varies from about 18 ft. at ebb, to 20 ft. at full tide. It is customary, but not compulsory, to employ a pilot in entering the harbour. Ships moor head and stern at from 100 to 500 yards from shore, loading and unloading by means of boats, as there are neither docks nor quays to facilitate these operations. The harbour is perfectly safe, except during hurricanes, which may be expected from August to November. The markets are tolerably well supplied with beef, mutton, fowl, fruit, and vegetables; but the supply of fish is uncertain; and such is the indolence of the inhabs. and their neglect of the most obvious resources, that though turtle abound in the bay, they are rarely found in the markets.

Port-au-Prince is the seat of government, the supreme court of justice, court of cassation, a tribunal of original jurisdiction, &c. It is also the residence of the principal foreign consuls in Hayti, and the grand entrepot of the commerce of the island, which, however, is trifling, compared to what it was previously to the commencement of the disturbances and atrocities that devastated this fine colony. (See HAYTI.) It is of late origin, having been founded in 1770. It is very subject to earthquakes, by one of which it was nearly destroyed in 1770. (*Jackson's Notes on Hayti*, i. 5-25; *Encyc. Amer.*; *Comm. Dut.*)

PORT-ROYAL, a town and sea-port, and formerly the commercial cap. of Jamaica; at the extremity of a narrow point of land, bounding Kingston Harbour on the S. and E., about 5 m. S.S.W. Kingston. It formerly had 2,000 houses, and was handsomely built; but having been in great part destroyed by an earthquake in 1802, and having subsequently suffered severely by fires and hurricanes, its public offices were transferred to Kingston, and it is now insignificant as a town. It is still, however, strongly fortified, and is the seat of the royal navy yard, the naval hospital, and of some regimental barracks.

PORT-ARLINGTON, a pari. bor. and inland town of Ireland, prov. Leinster, on the Barrow, which divides it into two portions, the larger of which is in Queen's, and the smaller in King's co., 40 m. S.W. by W. Dublin. Area of pari. bor., 933 acres; pop. of ditto, in 1831, 3,000. It consists principally of a single street, nearly 2 m. in length, extending on both sides the river, which is here crossed by a stone bridge. This is, perhaps, the best-built, and cleanest country town in Ireland. "Few towns of its size have so respectable an appearance, which arises, not from its trade or manufactures, for of these it has none beyond the retail trade consequent on its pop., but from the unusual number of its resident gentry." (*Mem. General Report*.) A considerable part, perhaps, of the distinguishing features of this town may be ascribable to the fact of a colony of French Protestant refugees having been settled in it by William III. It has two churches, in one of which, frequented by the refugees and their descendants, divine service was performed in the French language within the course of the present century. It has, also, 2 Rom. Cath. chapels, a Methodist meeting-house, a market-house, and a dispensary. The schools belonging to this town have long enjoyed a high reputation, especially those for French; and in them two of the most illustrious individuals of whom Ireland has had to boast, the Duke of Wellington, and his brother the Marquis Wellesley, received the rudiments of their education. Under the charter granted by Charles II., in 1667, the corporation consisted of a sovereign, 2 port-wives, 121 Burgess, and a commonalty, who returned 2 mems. to the Irish H. of C. down to the Union. Since then it has returned 1 mem. to the Imperial H. of C. The Boundary Act fixed the limits of the pari. bor. as stated above. Registered electors, in 1839-40, 171. An obelisk on a hill adjoining the town, commands an extensive prospect. Manor courts and petty sessions are held here; and it has two consular stations, one in the portion of the town in each county. Markets on Wednesdays and Saturdays; fairs on 5th Jan., 1st March, Easter Monday, 22d May, 4th July, 1st Sep., 12th Oct., and 23d Nov. The town, with an extensive surrounding district, was granted, in the reign of Charles II., to Lord Arlington (Sir H. Bennett; the Eliah of Dryden's *Abraham and Archiphophel*), one of the famous CABAL. The town, which was previously called Cultydro, took the name of its new owner, the prefix Port being given to it in consequence of its having a small landing-place on the

Barrow. Lord Arlington, however, soon afterwards sold the property; and, after passing through various hands, it was acquired by Mr. Dawson, an ancestor of the present Earl of Portlandington. Enno House, the residence of this noble family, is about 4 m. S. from the town. (*Mun. and Parl. Boundary Reports; Fraser's Guide to Ireland, &c.*)

**PORTLAND**, a city and port of entry in the U. States, State Maine, of which, till 1832, it was the cap.; on a peninsula in Casco Bay, 50 m. S.S.W. Augusta, and 50 m. N.N.E. Portsmouth; lat. (observatory) 43° 39' N., long. 70° 20' 30" W. Pop., in 1840, 15,218. It is the largest town in the state, and is well built and laid out, having numerous churches, an elegant court-house, market, alms and custom houses, an atheneum with a good library, and several banks. The harbour has deep water, is safe and capacious, and is never frozen, except for a few days in the coldest winters. Its entrance is marked by a light-house, 70 ft. in height, on Cape Elizabeth, 3 m. S. by E. from the town. The town and harbour are protected by two forts. The inhabit. of Portland carry on an extensive coasting and foreign trade, and have a considerable share in the fisheries. In 1838, the aggregate burden of the shipping belonging to the port amounted to 53,184 tons. There are numerous schools for children of either sex. The city was incorporated in 1786. (*Encycl. Amer.; Blunt's Amer. Coast Pilot, &c.*)

**PORTO-BELLO**, a famous sea-port and town of Colombia, on the Caribbean Sea, on the N. side of the isthmus uniting the two great continents of N. and S. America, at the point where it is less than 40 m. across; lat. 9° 24' 29" N., long. 79° 43' 35" W. The town, now greatly fallen off, is built along the shore, at the foot of a mountain range which surrounds and shelters the harbour. But this barrier, at the same time that it protects the port, prevents the circulation of the air, and, combined with the heavy periodical rains, the influence of the surrounding fore-ets, and the excessive heat, renders this locality a favourite seat of yellow fever, and one of the most unhealthy places in the world. Owing, however, to the excellence of its port, which is one of the finest that can be imagined, and its contiguity to Panama, on the opposite side of the isthmus, it was, for a lengthened period, an important commercial entrepôt. Down to 1740, the galleons from Old Spain, with merchandise for the Spanish Main, Peru, and the W. coast of America, used to rendezvous at Porto-Bello, about the same time that the Peru fleet arrived at Panama, the gold and silver, and other produce brought by the latter, being conveyed across the isthmus by means of oxen, and conversely. As soon as the galleons had unloaded, and the merchandise from Panama had arrived, a fair was held, which was attended by a great concourse of strangers, and when a great deal of business was transacted. But in 1740 the galleons ceased to resort to Porto-Bello, the commerce with Peru and W. America having been since carried on direct by vessels that sailed round Cape Horn. In consequence, the importance of Porto-Bello rapidly declined; and the advantages of its port not being sufficient to countervail the unhealthiness of its climate, it is now comparatively deserted. But should the project for effecting a communication across the isthmus, by canal or railway, take effect, it is probable that Porto-Bello may recover some portion of its former importance. The climate is said to have been improved by an opening made in the mountains that encircle the town, and by the cutting down of a portion of the adjacent forests.

Notwithstanding Porto-Bello was formerly very strongly fortified, it was taken, with little loss, by Admiral Vernon in 1739. The importance of this exploit, and the abilities of the admiral, were, at the time, much overrated; and it was supposed that if he were furnished with an adequate force he would have little difficulty in reducing all the Spanish settlements in this quarter. But the events that took place during the next two years, and especially the failure of the attack on Cartagena, undeceived the public.

Porto-Bello was discovered, in 1502, by Columbus, its name being derived from the excellence of its harbour. (*Alcedo's Dictionary; Geog. Account of Columbia, l. 303.; Smolett's Hist. of England, cap. 18, &c.*)

**PORTOBELLO**, a parl. bor. and sea-port of Scotland, co. Mid Lothian, in a plain on the S. bank of the Frith of Forth, 2 m. E. Edinburgh. Pop. in 1831, 2,741; but in summer its pop., owing to the influx of visitors from Edinburgh, is much larger. It has no public buildings, except a *quoad sacra* church connected with the establishment, and chapels belonging to the Episcopalians, Independents, and Relief. The episcopal chapel is an elegant building. The main street lies along the line of the public road running E. and W.; a number of cross streets diverge from it, leading down to the sea-beach, or stretching in the opposite direction. Some of these consist of lines of detached villas. Separate villas, also, abound throughout the town, some of them fronting the sea. No fixed plan, in truth, has been observed in laying

out the town, which has a straggling appearance, and some of the older parts are very mean.

Adjacent to Portobello is the village of Joppa, now almost a part of it. There is no harbour at either place; but it has long been proposed to construct one at Portobello. There are manufactories of bricks, tiles, earthenware, glass, and crystal. Fire-clay abounds on the E. point of Joppa, where fire-bricks are manufactured to a considerable extent. A bank has recently been established in Portobello. It is estimated that the average number of visitors for sea-bathing in the town, from May to Oct., amounts to 500. And, owing to the beauty and salubrity of the situation, many families resort to it as an eligible permanent residence. A branch, leading to Leith, of the Edinburgh and Dalkeith railway, passes the town on the S.; and stage coaches ply between Portobello and Edinburgh at least every hour.

Portobello is quite a modern town. It derives its name from the first house having been built, about a century ago, by an individual who had been with Admiral Vernon, in 1739, at "Portobello." The Reform Act united it with Leith and Musselburgh in sending 1 mem. to the H. of C. Registered electors in 1840-1, 243. Municipal councillors, 9.

**PORTO FERRAJÓ**, a sea-port and the principal town of the island of Elba, which see.

**PORTO-RICO** (Span. *Puerto Rico*), one of the W. India islands belonging to Spain, being the smallest and most E. of the Greater Antilles; chiefly between lat 17° 55' and 18° 30' N., and long. 65° 40' and 67° 20' W.; having N. the Atlantic, and S. the Caribbean Sea, separated on the E. from the Virgin Islands by the Virgin Passage, and from Hayti on the W. by Mona Passage, 80 m. across. Its shape is that of a parallelogram, the length E. to W. being about 100 m., and the breadth about 38 m. Area, 3,700 sq. m. Under the old colonial system of Spain, in 1788, the pop. did not exceed 80,000, whereas it amounted, in 1836, according to the official returns, to 357,036, of whom only 41,818 were slaves; and it is now (1841) probably little, if at all, short of 380,000 or 390,000. A mountain chain, runs E. and W. through the centre of the island; the highest summit of which, at the N.E. extremity, is about 3,000 ft. in height. Numerous rivers have their sources in this chain, flowing on either side to the sea, some of which are navigable for 2 or 3 leagues from their mouth, for schooners and coasting vessels. The coast line is indented with numerous bays and creeks, some of which form excellent harbours for ships of large burden. The surface, which is finely diversified, is well watered, and the soil is generally rich and fertile. The climate is supposed to be less unhealthy, and better adapted to Europeans, than in most of the Antilles; it differs widely, however, in different parts; the N. coast being especially subject to heavy rains, and the S. to droughts. Violent hurricanes often do immense damage. Porto-Rico is singularly destitute of wild animals. "There are almost no indigenous quadrupeds; and scarcely any of the feathered tribe are to be found in the forests. The birds are few both in number and species; you may travel whole leagues without seeing a bird, or even hearing their chirp. On the rivers there are a few water-fowl, and in the forests the green parrot. Almost every other island in the W. Indies is infested by snakes, and other noxious reptiles. Here are none. But rats, of an enormous size, and in great numbers, infest the country, and sometimes commit dreadful ravages on the sugar-canes; and although continually persecuted, their numbers do not decrease." (*Hinder's Puerto Rico*, 53.)

The resources of Porto-Rico are wholly agricultural; no manufactures exist, nor have any mines of gold or silver, or other mineral products, been hitherto explored. In 1830, the lands under cultivation in the island were not supposed to exceed 110,000 acres, not being more than a 15th or 16th part of the land suitable for that purpose. According to an official return the lands under the different species of culture in 1830, and their produce, were as follows:—

Articles of Culture.	Acres in Culture.	Produce.
Sugar-cane - - -	14,803	Sugar (musc.) 411,660 cwt. Molasses - 1,507,779 gallons
Plantains - - -	30,760	Rum - 14,163 mchins. Plantains - 617,825 loads.
Maize - - -	16,194	Maize - - 65,750 fanegas.
Rice - - -	14,850	Rice - - -
Tobacco - - -	2,539	Tobacco (cured) 31,640 cwt.
Manioc - - -	1,150	Cassava bread 30,119 loads.
Sweet potatoes -	1,224	Sweet potatoes 29,570 cwt.
Yams - - -	6,696	Yams - - -
Pulse - - -	1,100	Pulse - - -
Coffee - - -	16,292	Coffee - - 4,570 -
Cotton - - -	5,079	Cotton - - ?
Fruit-trees and garden - - -	140	
Total acres in culture - -	109,587	

But during the last 10 years there has been a great increase of pop., and consequently, also, of production. Many thousand acres of land have been cleared and brought under tillage; and a very great increase has taken place of the staple products of the island. Indeed, it will be seen from the account of the exports in 1839, that the sugar and molasses exported in the course of that year very materially exceeded the entire quantity grown in 1830, as given in the above return. Indeed, we have little doubt, supposing the previous return to be nearly accurate, that the lands under cultivation in Porto-Rico may at present (1841) be estimated at above 200,000 acres.

In 1828, 1,437,285 acres of land were held by 19,140 proprietors, giving to each, at an average, 75½ acres. At the same time 423 individuals were proprietors of estates regularly established with slaves; 275 being sugar-estates, and 148 coffee plantations. The remaining 17,440 proprietors bred cattle, and raised provisions and small quantities of coffee. In consequence of the small capital required, the inhabs. formerly applied themselves almost exclusively to the latter branches of industry: so much so was this the case, that at the commencement of the present century, there were but 20 sugar estates on the island; and in 1802 the total value of the exports did not exceed 57,500 dollars! At present, however, the case is widely different; the S. coast of the island is generally occupied with sugar-plantations, and in 1839 the exports of sugar amounted to no less than 692,458 cwt., or 34,622 tons, worth above 2,400,000 dollars. But, with the exception of the S. coast, most parts of the island exhibit a promiscuous cultivation, plantations of sugar being intermixed with those of coffee, and with field-rice, maize, plantains, tobacco, and pasture. Artificial irrigation is no where practised; but notwithstanding the drought which prevails in the S., plenty of water for the cane is found at about 2 ft. below the surface. The average produce of sugar per acre, for the whole of Porto-Rico, is estimated by Flinter at 30 cwt., being more than double the quantity raised on the best lands in the most favoured of the British Antilles! (*Puerto Rico*, 180.)

The coffee is of a peculiarly good quality, much care being taken in plucking and preparing it. The trees, which mostly belong to small proprietors, grow to a great height, and sometimes yield from 20 to 40 lbs. each. Every poor family has 20 or 30 trees; and even in the woods trees are to be found in a wild state, laden with coffee. The free labourers at the harvest come into the market, some with 50 lbs., others with a cwt., and so on, being the surplus of their little crops, after leaving enough for the use of their families for the season. This they sell to the merchants, to purchase articles of clothing. The plant on the large estates, cultivated by slaves, is pruned and cut low, and yields, at an average, 1 lb. per tree. Flinter estimates that, in 1830, the 118 coffee estates may have produced 300 cwt. each, or altogether 44,400 cwt.; and that the remaining 205,600 cwt. of the estimated produce (250,000 cwt.) of that year was the growth of free labour. The tobacco of Porto-Rico, which is but little inferior to that of Cuba, is wholly the produce of free labour. Poor families, white and black, plant ½ or ¼ acre, and cure and dispose of the produce to the shopkeepers in the villages, who are generally agents for the more extensive merchants of the capital.

These shopkeepers furnish clothes and money in advance, at an enormous interest, to the cultivators, from whom they receive their crop at a certain price, generally less than half its value. The soil in many places is particularly suitable for the growth of cotton, the culture of which has been very greatly extended within the last half dozen years. Indigo grows spontaneously, but is not cultivated; and few European vegetables are raised, though the greater number might be produced without much difficulty.

The pasture lands in the N. and E. are superior to any in the W. Indies for breeding and fattening cattle; the total number of which in Porto-Rico, in 1830, was estimated at about 200,000. Cattle-breeding is, perhaps,

more profitable here than any other branch of agriculture; but, owing to the subdivision of property, few individuals possess so many as 1,000 head of cattle. In the breeding districts, where there are no arable lands, the cattle are permitted to roam at large, as on the American continent, but on a smaller scale; elsewhere they are penned up in enclosed meadows. They are mostly reared in the valleys distant from the coast, whence the carriage of sugar and coffee would be too expensive for the cultivator. The larger proprietors, who have from 100 to 150 head, if they have not sufficient pasture land of their own, divide their stock among the poorer land-owners, giving them cows, and calves already weaned, to be taken care of; and dividing the produce of the animals, when sold, with them, in a certain proportion. The cattle are turned into the fattening pastures at a year old, and in 3 or 4 months are fit for sale. A considerable traffic has long been carried on in cattle from this island with the French, English, and Danish W. I. Islands; for, in consequence of their being tamer, they are easier managed on board ship, and are not so liable to die or fall off at sea as the wilder cattle of the American continent: they fetch about 33 dollars per head. The home supplies of cheese and butter are insufficient for the consumption. The island is not adapted for wool growing, the fleece of the sheep degenerating into a species of hair; but the mutton is excellent. The numbers of sheep, goats, hogs, mules, and asses are, however, very limited; but there are, probably, above 80,000 horses of a tolerably good breed. The value of the live stock in 1830 was estimated at about 7,458,800 dollars; of which the cattle made 4,000,000, and the horses 3,200,000. The forests in the interior supply timber of the best quality for ship and house building; and to prevent their decrease, the government has ordered that three trees should be planted for every one cut down.

Previously to 1815, Porto-Rico, being excluded from all direct intercourse with other countries excepting Old Spain, was either stationary or but slowly progressive, the entire value of the exports in that year having amounted to only 65,274 dollars! But at that epoch a royal decree appeared, which exempted the trade between Spain and the Spanish colonies and Porto-Rico from all duties for 15 years; and she was then, also, permitted to carry on a free trade, under reasonable duties, with other countries. In consequence principally of these wise and liberal measures, but partly, also, of a considerable immigration of rich Spanish colonists from S. America, Porto-Rico has latterly made a most extraordinary progress. Great improvements have been effected in the police and internal administration, and roads have been constructed in all parts of the island.

The following statements as to the trade of Porto-Rico in 1839, taken from the *Balanza Mercantil*, published in the capital, afford the most conclusive proof of the advancing prosperity of the island.

ACCOUNT of the Value of the Imports into, and of the Exports from Porto-Rico, in 1839, specifying the Values of those imported and exported under different flags.

Probably, however, the most advantageous circumstance in the condition of this island is the decided preponderance of the white and free-coloured pop. According to the census of 1836, the inhab. consisted of—

Whites	-	-	-	-	188,869
Free mulattoes	-	-	-	-	101,427
Free blacks	-	-	-	-	26,124
Slaves	-	-	-	-	41,818
Total	-	-	-	-	357,238

This is a better distribution of classes than prevails in any other part of the W. Indies, Cuba not excepted; and the deep-rooted antipathy that exists between the white and black races in the other islands is nearly unknown in Porto Rico. The slaves have always been particularly well treated in the Spanish colonies; and here they are decidedly comfortable, being well clothed, well lodged, and not over-worked.

"The necessities, and many of the comforts of life are enjoyed by the great majority of the inhabs. of Porto-Rico. The Xivaros, a name applied to all the whites below the better classes, swing themselves to and fro in their hammocks all day long, smoking their cigars, and scraping a guitar. A few coffee plants and plantain trees, a cow and a horse, an acre of land, in corn or sweet potatoes, constitute the property of what would be denominated a comfortable Xivaro; who, mounted on his meagre and hard-worked horse, with his long sword protruding from his basket, dressed in a broad-brimmed straw hat, cotton jacket, clean shirt, and check pantaloons, sallies forth from his cabin to mass, to a cock-fight, or to a dance, thinking himself the most independent and happy being in existence.

"The houses of all classes, in the country, are usually built of wood. The windows have no glass: they are shut with sliding boards; so that when it rains, or when the wind blows with violence, the family remains in darkness. The roofs of the better class of houses are covered with wooden shingles. There are no inns for travellers either in the towns or country." (*Pinker*, pp. 242—251.)

The government, laws, and institutions are nearly similar to those established by Spain in the rest of her Transatlantic colonies. Porto-Rico is governed by a captain-general, whose authority is supreme in military affairs, and who is president of the royal *audiencia* for civil matters. The latter court is composed of the captain-general, a regent, three judges, a fiscal, two reporters, and a marshal; and is superior to all other constituted authorities, including the ecclesiastical tribunal. The captain-general has a *junta*, or council of the principal military officers. In the seven towns and villages, which are the caps. of departments, justice is administered by the mayors: in the smaller towns and villages by inferior magistrates, called lieutenants, who determine debts under 100 dollars, act as justices of the peace, collect the duty of subsidy, receiving 6 per cent. on the collections, &c. They are appointed by the captain-general, who also appoints the clergy to their different livings, on the recommendation of the bishop. Public instruction is very backward; but schools, though few, are increasing. The island is divided into seven military depts., each under the command of a Spanish colonel. The regular military force comprises about 10,000, and the militia about 46,000 men. The naval force consists of only a man-of-war, a schooner, and about a dozen gun-boats. The tithes and alcavala duties were abolished in 1815, and the subsidy, or direct contribution on landed property, established instead. In 1832, the total revenue of the island amounted to 798,400 dollars; the direct taxes producing 207,140 dolls., the custom-house duties 493,930 dolls., and the indirect taxes (on cock-pits, billiard-rooms, lotteries, stamps, salable offices, legacies, bulls, &c.) 97,000 dolls. The duties on imports, which, in 1839, produced 734,761 dolls., consist of certain rates charged on different articles, according to the presumed value. On some articles they are very heavy, and there is, in consequence, a considerable contraband trade. Articles imported in Spanish vessels pay one third less duty, and Spanish produce imported in Spanish bottoms pays a half less. The chief towns of the island are San Juan de Porto-Rico, the cap., Mayaguez, Ponce, Aguadilla, and Fajardo.

Porto-Rico, when discovered by Columbus, in 1493, is supposed, though probably on no very good grounds, to have had 600,000 inhabs., who were, in no very long time, almost exterminated. In the latter part of the 17th century, it was taken by the English; but from the prevalence of dysentery, they were soon after obliged to abandon it; since which, it has been mostly in the quiet possession of Spain. A revolutionary movement, which broke out in 1820, was happily put an end to in 1823. (*Pinker's Present State of Porto-Rico; and Official Returns.*)

PORTO RICO (SAN JUAN DE), the principal city, and sea-port of the above island, of which it is the

cap. on rising ground, at the extremity of a peninsula, joined to the land by a narrow isthmus; lat. 18° 29' 10" N., long. 66° 13' 15" W. Pop. 30,000? The town, which lies along the E. side of the harbour, is strongly fortified. The streets cross each other at right angles; being on a declivity it is well drained, and may be considered as one of the best and healthiest towns in the W. Indies. In the earlier part of the present century, most of the houses were of wood; but at present, except in the suburbs, not a wooden house is to be seen, and they are principally two stories high. There are some good public buildings; including the bishop's palace, and seminary; the royal military hospital, with 350 beds; public gaol, house of correction, a handsome theatre, town-house, with a magnificent public hall, several convents, &c. The government house, though old and sombre looking, has some fine apartments. The cathedral is a large, unfinished, heavy fabric; there are several other churches, with a custom-house, arsenal, &c. The harbour has a striking resemblance to that of the Havannah, to which it is but little inferior. Its entrance, about 300 fathoms in width, has the Morro Castle, at the N.W. corner of the city, on its E. side, and is defended on the W., or opposite side, by forts erected on two small islands. Within it expands into a capacious basin, the depth of water varying from 5 to 6 and 7 fathoms. On its W. side, opposite to the city, there are extensive sand-banks; but the entrance to the harbour, and the harbour itself is unobstructed by any bar or shallow. Porto-Rico is the residence of the governor, and the seat of the superior courts, &c., for the island. It has a society for the promotion of the fine arts, with numerous public schools, hospitals, &c. It engrosses the larger portion, by far, of the commerce of the island, and has, in consequence, attained to considerable distinction among the emporiums of the W. Indies. (*Pinker's Porto-Rico; Commercial Dict., &c.*)

PORTSMOUTH, including its suburb of Portsea, a parl. bor., and a celebrated sea-port town of England, being the principal naval arsenal of Great Britain, and the grand station of the fleet, hund. Portsmouth, co. Hants, on the W. side of Portsea Island, at the entrance to Portsmouth Harbour, opposite Gosport, and on the N. side of the channel, separating the Isle of Wight from the mainland. 16 m. S.E. Southampton, and 6 m. S.W. London; lat. 50° 48' 3" N., long. 6° 52' 59" W. The area of the parl. bor. and the pop. at the un-determined decennial periods have been as follow:—

Parishes.	Area in stat. acres.	Pop. in 1801.	Pop. in 1811.	Pop. in 1821.	Pop. in 1831.	Pop. in 1841.
Portsmouth	110	7,839	7,103	7,269	8,083	9,544
* Portsea	4,280	24,327	31,565	31,785	38,199	45,673
Guildable		1,060	2,099	3,591	1,107	
Total	5,090	33,266	40,767	45,548	50,389	55,017

Portsea Island, which has Portsmouth at its S.W. extremity, is about 4 m. in length (N. and S.), and from 2 to 3 m. in breadth, between Portsmouth harbour on the one side, and Long-tongue Harbour on the other; it is connected with the main land, at its N. extremity, by a stone bridge, and is generally fertile and well cultivated, producing excellent crops of corn, and large quantities of particularly fine garden vegetables. Besides the above towns, Portsea Island has several villages; and its coasts are well defended, at numerous points, by strong military works, including, together with the fortifications of Portsmouth itself, Fort Cumberland, Southsea Castle, a long line of entrenched works at Hilsea, &c. The external appearance of Portsmouth and Portsea is greatly embellished by the fine trees which ornament their ramparts; and a few towns exhibit so imposing an approach as Portsea at its principal entrance from London. The entrances to Portsmouth, the older and more southerly part of the parl. bor., are much less striking; but its interior is far superior to that of its neighbour. Portsmouth may be generally described as consisting of three or four parallel streets, crossed at right angles by two or three other lines of thoroughfares. High Street, the principal, with its angular continuation, Broad, or Point Street, runs entirely through the centre of the town; it is wide and handsome, having on either side many large and excellent houses, several public buildings, and some very superior hotels. It has also been much improved by the removal, in 1836, of the old town hall, an unsightly brick building, which previously stood about its middle, blocking up the greater part of the coach-road. Many good private houses are to be met with in some of the other streets, and on the Grand Parade, a spacious open area, used for garrison inspections, and for the daily muster of the several guards; but in general the public buildings are of an inferior character, and the back streets, particularly those at the Point and toward the

\* Portsea Guildable is that part of the parl. of Portsea not within the jurisdiction of the bor. of Portsmouth previously to the passing of the Mun. Reform Act.

N. part of the town, are of the lowest character, and, which is worse, disgustingly filthy. The *Point* is a small peninsula stretching W. to form the mouth of the harbour, and mostly beyond the walls of the town. It is, with the opposite part of Portsea, the principal seat of naval traffic, most of the ship agents, brokers, &c. having their offices here, and, in time of war especially, it presents a scene of the greatest activity.

Portsea, which has entirely grown up since the beginning of last century, on a tract formerly called Portsmouth Common, N. of Portsmouth, now greatly surpasses the latter in extent and pop. It is divided into two nearly equal parts by its main thoroughfare, Queen Street, which runs for about  $\frac{1}{4}$  m. in a direct line from Lion Gate, and is lined on each side with shops, many of which emulate those of the Strand or Fleet Street. Some few of the other streets, as St. James's Street, King Street, the Common Road, &c., are tolerably broad and well built; but except these, none of the others approach even to mediocrity. The houses in Portsea are rarely more than two stories in height, and their fronts are but seldom stuccoed. It has but one handsome open space (St. George's Square), and few public buildings; and, indeed, till within the last few years, it had scarcely an hotel deserving the name. Both towns are well paved, well supplied with water, and well lighted with gas, but their police is said to be very defective.

The suburbs beyond the walls comprise at least half the parl. bor., their more densely peopled portion extending over a space fully as large, if not larger, than that occupied by the two towns. Of these suburbs, Southsea alone has any pretensions to beauty. It consists of a succession of well built terraces facing the sea, and the E. ramparts of Portsmouth, being inhabited principally by naval, military, and government civil officers, and visitors resorting thither during the summer season. Behind these terraces are a number of tolerable streets, and some new squares, &c.

Elm Grove and Somerstown are sections of this suburb; the former, a little further eastward, is a series of elegant detached villas, surrounded by fine plantations and gardens, commanding prospects of Spithead, the Isle of Wight, &c., and inhabited by opulent individuals. Landport, Flat-house, &c., immediately to the E. and N. of Portsea, have nothing, in point of appearance, to recommend them; their inha. are, in a great measure, retail tradesmen and workmen employed by government. Newtown (Mile End), Kingston, Buckland, &c., E. of the foregoing, are cheerful and agreeable suburbs, principally extending along the London Road, and inhabited by much the same classes as those residing in Southsea.

Immediately without the walls of Portsmouth, stretching along the shore, is Southsea Common, a fine large open space, used for reviews and military inspections, and a favourite place of public recreation.

The importance of Portsmouth, like that of Plymouth, depends wholly on the excellence of her harbour, and on her convenient situation as a place for the outfit and rendezvous of the fleets in the channel, or of those cruising off the coasts of France and Spain. It is this that has made it be selected as the principal station of the navy, and has consequently advanced her to the highest destination as a naval depot.

The harbour, which is unequalled in Great Britain, and surpassed but by few in the world, has a narrow entrance, not exceeding 220 yards in width, between Portsmouth and Gosport; but within its width increases, and it expands into a noble basin capable of containing the greater part of the navy of Great Britain. There is a bar outside the entrance to the harbour; but as it has about 13 feet water over it, even at the lowest spring tides, it can hardly be said to be any obstruction to the navigation; and within the harbour there is water sufficient to float the largest men-of-war at any time of the tide. The anchoring ground is excellent; and, being free from sunken rocks, or other obstructions, ships lie as securely in it as if they were in dock.

The dock-yard, which comprises about 120 acres, lies along the E. side of the harbour. It comprises all the establishments necessary for the construction and repair of ships of war, and for their outfit with the greatest despatch, including numerous building and graving docks, partly opening into the harbour, and partly into a large basin, which communicates with the latter. Along the quay, fronting the harbour, extends a noble line of warehouses, having in its centre a handsome octagonal observatory, on the top of which is a telegraph connected, by a line of signal stations, with the Admiralty in London. In the rope-house, nearly 1,200 feet in length, cables are twisted that are sometimes 30 inches in circumference; and the anchor-forging produces anchors of the largest size. The iron and copper mills, the copper foundry, where the copper is rolled into sheets for sheathing by steam-power, the rigging and mast-houses, timber berths, saw-pits, seasoning sheds, mast-ponds, &c. are all on the most extensive scale. Probably, however, the most interesting machinery is that invented, or, at

all events, vastly improved by Sir Isambert Brunel, for cutting blocks. It is exceedingly ingenious, and has been productive of a vast saving of labour. During the late war upwards of 4,000 working men were employed in Portsmouth dock-yard, of whom 1,500 were shipwrights and caulkers; but in time of peace the numbers are greatly reduced.

In the Dock Yard are the Navy Pay-office, the residences of the port-admiral, the admiral superintendent, and the heads of the principal departments of the estab. The port-admiral's residence, formerly that of the commissioner (whose duties are now performed by the superintendent), is an elegant edifice of white brick, surrounded by gardens. Near it is the Royal Naval College, a spacious dark brick edifice, erected in 1729, its centre surmounted by a cupola and observatory well furnished with instruments. Here youths intended for the navy were formerly instructed in navigation, &c.; but, in 1839, the college was remodelled, and is now appropriated to the instruction of junior naval and marine officers in the higher branches of science connected with their profession, and especially the principles and practice of naval gunnery. The officers belonging to this establishment are boarded and lodged in the college, but are borne on the books as part of the complement of a ship of the line in the harbour. Immediately facing the residence of the port-admiral, is a handsome white brick building, intended originally for a school or college of naval architecture, for the education of a "superior class of shipwrights;" a plan which, though on no very satisfactory grounds, has since been abandoned. On the green, in front of the last mentioned building, is a bronzed leaden statue of William III. Adjacent to the college is a neat chapel-of-ease for persons attached to the dock-yard. The latter was, during last century, the scene of several conflagrations. One of these, in 1776, was clearly the work of an incendiary, who was convicted and executed for the offence. The dock-yard is, however, daily open to the inspection of visitors who apply for admission at the gate.

To the S. of the dock-yard, and nearer the mouth of the harbour, is the "Gunwharf," or arsenal for ordnance stores. This is an extensive and very complete establishment. As a depot for cannon, it is inferior to the arsenal at Woolwich, but, in most other respects, it is very superior to the latter. It comprises many extensive and handsome storehouses, filled with all kinds of ammunition; a neat armoury roofed with copper, and containing small arms for 20,000 men; a laboratory, and various other offices, spacious quays along the harbour, and a terrace of excellent residences for its officers, fronted by a finely planted inclosure. This establishment is separated into the two divisions of the old and new Gun-wharf by the Mill-pond; a dammed up creek between Portsmouth and Portsea, which supplies the moats of both, and also turns a considerable flour mill formerly attached to the victualling office, but now in private hands. The Victualling department, which formerly occupied some large piles of building within the town of Portsmouth, was, in 1828, removed to Wexill (see Gosport); and its former storehouses have partly been purchased by merchants of the town and partly given place to a handsome row of modern dwellings, the new almshouses, and the building of the Philosophical Society. The Custom-house is an insignificant building, but in a convenient situation. The functions of governor are exercised by a lieutenant-gov., who occupies a noble mansion in High Street, formerly the residence of the port-admiral.

Portsmouth appears to have been originally fortified by Edward IV. Its works were greatly augmented and improved during the reigns immediately succeeding, and in those of Elizabeth, Charles II., and James II. Under William III. they were completed, nearly as at present, the town being almost wholly enclosed within a bastioned *enceinte*, the ramparts faced with masonry, and encircled with broad moats, with a glacis beyond. But, owing to the rise of Portsea, the N. side of these works soon became useless; and, in 1770, the government began also to surround Portsea with works on a still more extensive scale. At present a continuous line of ramparts extends round both towns, and the belt of fortification is completed by the works surrounding Gosport, on the opposite of the harbour. The ramparts, being planted with elms and poplars, form the favourite promenades of the inha. ; and facing the sea is the Platform, a fine stone battery, mounting 25 pieces of cannon, and commanding an extensive and beautiful view. Portsmouth is entered by four, and Portsea by two carriage gateways, some having considerable architectural beauty. Besides the town batteries, Spithead, and the approaches to the harbour, are defended by Southsea Castle, and Fort Cumberland, Blockhouse, and Monkton. Southsea Castle, founded by Henry VIII., about 1 mi. S.E. Portsmouth, is built almost wholly of stone; as are Forts Monkton and Blockhouse on the main land, Fort Cumberland, on the E. extremity of Portsea Island,

a structure of the last century, covers a very large space, and has earthen ramparts faced with brick, and barrack-room for 3,000 men. The town, its suburbs, and auxiliary fortresses are garrisoned by the Portsmouth divisions of royal marines, and marine artillery, and a certain number of infantry of the line. Within the town are several capacious and excellent barracks; and there are others in the gun-wharf, at Tipner, Hilsca, &c. Portsmouth has a military hospital, and a Marine Infirmary situated between the custom-house and the gun-wharf. But Haslar hospital for the reception of sick and wounded seamen, the principal establishment of its kind in the kingdom, is on the opposite side of the harbour at Gosport (which see). The chief engineering department for the S. and W. of England, and the residences of the commandants of the marines and engineers, are among the other principal government buildings.

The par. church of Portsmouth, founded about 1220, but principally rebuilt in 1693, is a spacious stone edifice with a square tower, 120 ft. in height, surmounted by a cupola and vane, which forms an important landmark. Among other monuments, it has one to Villiers, duke of Buckingham, assassinated here in 1628. The vicarage, value 55*l.* a year, is in the patronage of Winchester College. Adjoining the great parade is the garrison chapel and burying-ground. In Portsea are two chapels of ease, St. John's and St. George's. St. Paul's, Southsea, and All Saints', Newtown, are elegant Gothic edifices of similar architecture, the former built, in 1822, at an expense of 15,22*l.*, and the latter, in 1827, at a cost of 12,46*l.* Two new churches are in progress of erection, one at Landport, and the other in the town of Portsea. Portsea par. church is an antiquated edifice at Kingston, about 1½ m. from the town, and surrounded by a very extensive cemetery. The living is a vicarage, in the patronage of St. Mary's College, Winchester, value 69*l.* a year. There are numerous places of worship for Independents, Baptists, Wesleyans, Bryanites, &c.; the Scotch Presbyterians, Unitarians, Rom. Caths., and General Baptists have each a chapel, and the Jews a synagogue. The town-hall and jail together occupy a large edifice; the latter, which is clean, convenient, and well-conducted, is under the jurisdiction of the bor. magistrates. A new market-house and exchange, the general dispensary, savings' bank, workhouses, female penitentiary, beneficial society's hall, literary and philosophical institution, with a handsome edifice, and a good museum and library; Hampshire library with 5,000 vols., the King's Rooms at Southsea, with an excellent bathing establishment, Green Row and York Rooms, used for balls, &c., and a theatre, are the other principal buildings of public interest. There are Lancasterian and national schools, an endowed free-grammar school for 50 boys, and St. Paul's school, a joint-stock subscription academy for superior classical and mathematical instruction; besides several good private academies, a mechanic's institute, forensic, philharmonic, &c. societies, and various charities. On the London road, about 1½ m. from the town, is a new and spacious public edifice, with an elegant entrance, a chapel, officiating minister, &c.

In addition to its other conveniences, Portsmouth harbour enjoys the important advantage of opening into the celebrated road of Spithead, between the Hampshire coast and the Isle of Wight. It derives its name from a sand-bank called the Spit, extending about 3 m. in a S.E. direction, from the narrow neck or tongue of land on which Gosport is built. A ship of war was formerly kept moored, as a guard or receiving ship, at the head of this bank; but since the peace this practice has been discontinued, and the roadstead is merely marked by buoys placed at regular intervals. It is here that ships fitted out in the docks and harbour rendezvous before going to sea; and it is also a secure and convenient asylum for the channel fleet and other vessels, during the occurrence of storms. From its safety and capaciousness this roadstead is called by sailors, "*the king's bed-chamber.*" "Thus," to use the words of Dr. Campbell, "it appears that Portsmouth derives from nature all the prerogatives the most fertile wits and most intelligent judges could devise or desire; and that these have been well seconded by art, without consideration of expense, which, in national improvements, is little to be regarded. Add to all these the striking excellence of its situation, which is such as if Providence had expressly determined it for that use to which we see it applied, the bridling the power of France, and if I may so speak, the peculiar residence of Neptune." (*Survey of Great Britain*, i. 370.)

Inasmuch as Portsmouth depends for support on its being a great naval port and arsenal, its prosperity is necessarily greatest during war. At present, however, if we compare it with previous periods of peace, it may be said to be flourishing. It necessarily has a considerable trade in the importation of the various articles required in its numerous establishments, and for the supply of

the inhabs., and the victualling of the fleet. Above 200 merchant-vessels, of the aggregate burden of above 12,000 tons, belong to the port. The gross customs revenue received here in 1840, amounted to 70,188*l.* Excepting some extensive breweries, no manufacture, unless it be that of ships of war, is carried on within the town. About 3 m. N.E. were some extensive salt-works, so very ancient as to be referred to in Doomsday-book; but they have been abandoned within these few years.

Portsmouth is connected with Arundel and London by a navigable canal, and communicates with Gosport by a floating bridge for passengers, carriages, &c., the property of a company incorporated in 1838; by which also the town is placed in communication with a branch of the South Western Railroad. (See *GOSPORT*.) Many coaches connect Portsmouth with London, Brighton, Southampton, Bristol, Salisbury, Oxford, &c.; and steam packets ply during the year to Hyde, Cowes, Lymington, Havre, Plymouth, Dublin, London, New York, &c. A branch of the Bank of England, and 5 private banks, are established here; and it has a weekly newspaper.

Portsmouth received its first charter from Richard I., which was confirmed by various subsequent monarchs. Under the Municipal Reform Act it is divided into seven wards; its municipal officers being a mayor, 13 aldermen, and 42 councillors. Corporation revenue in 1839, 4,211*l.* It has a commission of the peace under a recorder; and the boundaries of the municipal and par. bor. are co-extensive. A court of record is held here for the recovery of debts under 5*l.*; and petty sessions are held 3 times a week. Portsmouth has sent 2 mems. to the H. of C. since the 23d Edw. I.: the right of election down to the Reform Act being vested in the mayor and corporation, the number of which seldom exceeded 60. The electoral limits were enlarged by the Boundary Act, so as to include all the par. of Portsea with the old bor.; and, in 1839-40, there were 1,837 reg. electors. Portsmouth is one of the polling places at elections for the S. division of Hampshire. Markets on Tuesdays, Thursdays, and Saturdays. The charter of Richard I. established a fair in the town, called the "Free Mart," which lasts for 15 days from July 10, and is succeeded by a 3 days' fair on Portsdown Hill, attended by a great concourse of people.

The earliest mention of Portsmouth occurs in the Saxon chronicle, which states that it existed in 501. It probably owes its origin to the sea having retired from Porechester, probably the anc. *Portus Adurni* at the upper end of the harbour; on which account the inhabs. removed thither, and built a town at the mouth of the Port. It was taken and burnt by the French, in 1377, but was soon recovered; and in the reign of Henry VIII. had become the principal naval arsenal of England. (*Boundary, Municipal, &c. Reports; Charpentier's New Portsmouth Guide; Private Information.*)

PORTSMOUTH, a town and port of entry in the U. States, being the largest town, though not the cap. of New Hampshire, is a peninsula in the Piscataqua, 3 m. from the Atlantic, 40 m. E.S.E. Concord, and 50 m. N.N.E. Boston; lat. 43° 4' 30", long. 70° 45' W. Pop. in 1840, 7,848, being one of the few towns in the U. States the pop. of which has decreased (198 individuals) since 1830. It is well built; and having suffered severely at different times from fire, is now mostly constructed of brick. It has many handsome houses, and there are several good public buildings, including a fine episcopal church, various other churches, a court-house, gaol, almshouse, academy, atheneum, &c. Its harbour is one of the best in America; and it is completely land-locked, and is accessible to vessels of the largest size, having 40 ft. water in the channel at low tide. It is defended by several forts; and on Great Island at the W. entrance is a light-house, with a fixed light 90 ft. above the sea. Two wooden bridges cross the Piscataqua at Portsmouth, one of which is one-third of a m. in length. On Navy Island, opposite the town, is a navy-yard, belonging to the U. States, with three wet-docks, and other establishments fit for the construction of large ships of war. Portsmouth has a considerable but not an increasing trade, it being the only sea-port of New Hampshire. In 1838, the aggregate burden of vessels owned in the port and district amounted to 26,148 tons. (*U. States' Trade Report; Encycl. Americain, &c.*)

PORTUGAL (KINGDOM OF), anc. *Lusitania*, the most W. state of Europe, occupying the greater part of the W. portion of the Spanish peninsula, between the 37th and 42d degs. "N. lat., and the 6th and 10th W. long., having E. and N. Spain, and S. and W. the Atlantic. Length, N. to S., about 350 m.; average breadth, rather more than 100 m. Area, pop., subdivisions, &c. as follow:—[See pop. at next column.]

Geographically considered, Portugal can be regarded in no other light than as a dependency on, or portion of, Spain; and, in fact, all the mountain chains and great rivers by which she is traversed originate in the eastern

Provinces.	Area in sq. m.	Pop. 1838.	Pop. to sq. m.	Chief Cities.
Minho - - -	2,671	872,400	326.5	Oporto.
Tras-os-Montes - - -	4,065	351,200	81.5	Villa Real.
Beira, Upper - - -	8,586	{ 296,350	128.7	Coimbra.
" Lower - - -		{ 109,200		
Estremadura - - -	8,831	790,700	89.5	Lisbon.

Total - - -	36,510	3,549,420	97.2	-

and more extensive portion of the peninsula. The principal mountain chain, the Sierra de Estrella, runs S.W. and N.E. from the Spanish frontier, near Ahadla, to Cape Roca, near Lisbon, the most westerly land in Europe, lat. 38° 46' 30" N., long. 9° 30' 24" W. The culminating point of this chain, near Covilha, is 7,524 feet above the sea. Another chain, the Sierra Monchique, runs across the prov. of Algarve, the most southerly in the kingdom, terminating in Cape St. Vincent. There are a great number of inferior chains, and the provinces to the N. of the Douro are especially encumbered with mountains.

The great rivers, the Tagus, Douro, Minho, and Gaudiana, have their sources in Spain, though they are joined by some considerable affluents in their passage through Portugal. (See the names.) There are but few lakes, and those of no importance; but mineral and hot springs are not uncommon. Water, in many districts, particularly in the S., is both scarce and bad; and, in consequence, extensive tracts in the great plain of Alentejo and other provinces are nearly uninhabitable. The climate is, in general, milder and more agreeable than in Spain, owing to the height of the mountains, and the great extent of coast. In the rugged tracts of the N.E. (Tras os Montes) the air is in many parts keen. In the valleys, and in the S. part of the kingdom, the case is generally very different; but all along the coast, the heat is tempered by the sea breezes. Snow seldom lies on the low ground; but the rains of winter are often heavy and long continued; and at this season the vicinity of Lisbon and other parts of the country are very subject to earthquakes. Violent hurricanes are also of frequent occurrence.

The general aspect of Portugal is similar to that of Spain, and even more luxuriant.

— It is a goodly sight to see  
What heaven hath done for this delicious land!  
What fruits of fragrance blush on every tree!  
What goodly prospects o'er the hills extend!  
*Childe Harold, canto I. st. xv.*

The Vegetable Products are very various, as well from difference of latitude, as from the great variety of elevation. Wheat, barley, oats, flax, hemp, and other products of a northern latitude, are raised in the high grounds; vines and maize in those of warmer temperature; and rice in the low grounds. The chief fruits are olives, oranges, and lemons; but the last two grow only in the warm and sheltered valleys of the S. and central parts of the kingdom. The woods are extensive: in the N. they consist principally of oak; in the central provinces of chestnut, and in the S. of sea pine, kermes, and cork trees. Algarve produces the American aloe, date, and other intertropical products; and Portugal is supposed to have a greater number of indigenous plants than any other part of Europe. (*Balbi, Essai Statistique*, l. 145.) Silk is produced of very good quality; and, in general, any deficiency, whether in vegetable or animal products, is to be imputed not to the soil or climate, but to the indolence and unskillfulness of the people.

The Agriculture of Portugal, though recently it has begun to improve, is still, speaking generally, in the most backward and degraded state imaginable. A variety of circumstances have conspired to bring about this result; among which, the heat of the climate and the want of water, especially in the southern provinces, have, no doubt, a very considerable influence. Probably, however, the mildness of the climate has been still more injurious than its aridity, for this has at once encouraged the indolence, and lessened the wants of the people. And if to these powerful physical causes we add the pernicious practice of exempting the clergy and nobility from those direct taxes which were made to fall with their full weight on the cultivators; the vast amount of property in mortmain, and prevented from coming into the hands of those who would turn it to the best account; the want of a proper method of letting, and the consequent insecurity of the occupiers; the want of a manufacturing pop., and of great towns; that is, of markets for agricultural produce; the extreme badness of the roads, and the difficulties in the way of internal communication; the number of Saints' days, fasts, and other superstitious observances; and the ignorance of the people; we shall certainly have little cause to wonder at the low state of agriculture in most parts of the country.

In the greater portion of the kingdom the farmers are quite unacquainted with the rotation of crops, and, one

would be almost disposed to conclude, of the differences of soil, inasmuch as they continue to raise the same crops indiscriminately from all sorts of land. Their implements are of the clumsiest and rudest description; the harrow and the hoe were, till lately, nearly unknown, and thrashing was usually performed by trampling the grain under the feet of horses and cattle. Though, in so dry a country, the command of water and the irrigation of the lands be indispensable, this, in many extensive districts, is quite neglected. In consequence, the country is in parts but little occupied, and the traveller sometimes proceeds a distance of 15 or 20 m., without discovering any many houses. To show the deficiency of the means of communication, it may be sufficient to state, that on travelling from Abrantes to the Spanish frontier, along the N. side of the Tagus, a distance of about 100 m., there are six rivers to cross without a single bridge, though they are fordable only in dry weather.

It must not, however, be supposed that these statements apply equally to the whole country. The inhabs. of the greater part of the provs. of Entre-Douro-e-Minho and Tras-os-Montes, to the N. of the Douro, and of the adjoining portions of Beira, participate, to a considerable extent, in the industrious qualities of their neighbours the Galicians. (*See GALICIA*.) An abundant supply of water is here provided, partly from natural streams, but principally from wells dug in the sides of the mountains; and, in consequence, good corn crops are raised in the lower grounds, while the hills are covered with vineyards, and olives and other fruits are also extensively raised.

But, with these exceptions, agriculture in Portugal is, at this moment, probably in a more backward state even than in Spain or any other European country. We incline, however, to think that this will not long be the case. The more intelligent classes have at length become aware of the vicious nature of the institutions which have so long prevented the development of industry; and, of late years, most important changes have been effected in the tenures under which landed property is held, and in its distribution. The feudal rights of the nobility and other landed proprietors have been suppressed; an equal system of direct taxation has been introduced; and a large extent of crown property and of estates belonging to monasteries, sold at low prices, has mostly found its way into the hands of industrious proprietors. Hence, though the want of capital, the ignorance and indolence of the peasantry, be most formidable obstacles to the rapid spread of improvement, it has notwithstanding already made a considerable progress. In proof of this we may mention that, despite the facilities afforded for the importation of corn and other bulky products from the interior into Lisbon, by means of the Tagus, which runs through the centre of the kingdom, that city was long indebted to foreign countries for a considerable portion of her supplies of corn; but this, we are glad to say, is no longer the case; and, in 1839, for the first time for centuries, considerable quantities of Portuguese corn were shipped from the Tagus! Flax, hemp, and potatoes are grown only to a small extent; and, owing to the want of due care and attention, the olive oil is of an inferior quality.

Wine, however, is the staple produce of Portugal, and that by which she is best known in this country. The red wine, called port, from its being all shipped from Oporto, is produced in the Upper Douro, about 50 m. above Oporto, on a succession of low hills on both sides the river, having the finest soil and exposure. The produce of this district is generally divided into two sorts of wine, the *vinho do Fritoria*, or Factory-wine, for exportation; and the *vinho do ramo*, an inferior wine for home-consumption and distillation. Great complaints having been made, about the middle of last century, by the merchants in England and their agents in Oporto, of the bad quality and adulteration of the wine, the matter came under the notice of the Portuguese government; and the method which it took to redress the evil is singularly illustrative of its sagacity and principles of action. Instead of leaving the matter to be adjusted between the growers of the wine and the merchants, or, at farthest, contenting itself with confiscating such wines as were found to be adulterated, it made over the whole district to a joint stock company, and invested them with almost despotic privileges! Thus the agents of the company were authorised to class the wines belonging to individuals, and to fix their maximum price; so that the company became, in fact, the sole buyer, at its own price, of the wines produced within the limits of its charter.

But for the rooted taste for the wines of the Upper Douro established in this country through the influence of the long-continued high discriminating duty on French wine. It is probable that the institution of the company would have destroyed the Portuguese wine trade. It has, however, owing to the continued demand for the British markets, continued to keep its ground, or rather to increase, though not nearly to the extent that,

under other circumstances, might have been anticipated. We have elsewhere seen (*arte Oporto*) that, at an average of the three years ending with 1840, the shipments of port wine from Portugal amounted to 34,790 pipes a year. It is a curious fact, that the Oporto wine company, after being suppressed by Don Pedro, as a nuisance, has been re-established, though with less oppressive privileges. (*Henderson on Wines*, 198—214.) In addition to port, considerable quantities of Lisbon, Calcevala, and other white wines, are exported. Some red wine is also exported from Figueiras.

The pastures in Minho, and in the Sierra Estrella and some other parts, are excellent. But throughout most part of the kingdom they are very much neglected. In consequence of the great number of fast days enjoined by the church, few cattle were reared; and a large proportion of those required for the consumption of the principal towns were imported from Galicia and other adjacent Spanish provs. Horses are scarce; oxen being commonly used for draught, except in towns. Mules, however, are numerous, and of an excellent breed; and, with asses, are generally preferred, on account of the rugged nature of the country, to horses for travelling. Sheep breeding is principally conducted in Beira, where the large flocks are sent to winter in Alentejo. The wool of the Portuguese sheep might, no doubt, with a little attention, be rendered equal to that of the Spanish sheep; but no pains have been taken to improve its quality. Goats and hogs are numerous; and the latter are of a superior kind, and yield excellent hams. The fisheries, which were formerly important, are now insignificant: except in Algarve, where tunny, pilchards, &c., are taken, Galicia and England supply the greater part of the fish made use of.

The mineral products are considerable, though few mines except those of iron have been wrought, in consequence partly of the scarcity of fuel, and partly of the supply of minerals (chiefly copper and lead) from Brazil. The mountains abound in fine marble, and contain traces of gold and silver. Large quantities of salt of a very superior quality are produced in bays along the coast by natural evaporation, especially at Setúbal or St. Ubes, whence it is largely exported.

Gold dust is obtained by washings; and in antiquity the Tagus was famous for its golden sands: *Tagus arvensis celebratur*. (*Plin. Hist. Nat.*, lib. iv. cap. 22.) Coal is found near Oporto and elsewhere; and lead, antimony, &c., are raised, but not to any considerable amount.

**Manufactures and Trades.**—An Englishman can with difficulty form an idea of the backward state of manufactures in Portugal: they are in general carried on in separate cottages, like the coarse woollens of North Wales, or the linen of Normandy, and are founded on the primitive plan of every family manufacturing for its own consumption. Manufacturing establishments are but few in number, and are principally for the production of woollens, silks, and earthenware. Cotton has, also, been attempted of late years; and paper, glass, and gunpowder are made in a few places.

One might be disposed to think from the pompous enumeration of factories made by Balbi, and his vindication of the Portuguese from what he is pleased to call the reproche band of their being without manufactures, that, on the contrary, manufacturing industry was in a very flourishing state amongst them. He even goes so far as to say that the cotton yarn produced at Thomar is at least equal to that of England! It was hardly necessary, perhaps, to notice such ridiculous statements. The cottons, woollens, linens, hardware, and earthenware of England, are all largely imported into Portugal, and are used by all but the very lowest classes. To suppose, indeed, that there should be any thing like really successful manufacturing establishments in a country like Portugal, is to suppose what is all but contradictory and absurd.

"A very superficial knowledge even of some of the commonest arts exists. A carpenter is here the most awkward and clumsy artisan; and the way in which the doors and wood-work belonging to the good houses are finished would have suited the rudest ages. Their carriages of all kinds, more particularly their waggon and carts, their agricultural implements and management, their cutlery, locks, and keys, are ludicrously bad. The chief forte of the Portuguese appears to lie in ship-building and stone-masonry; they also excel in embroidery, and make good artificial flowers, and lace." (*Baillie's Lisbon*, i. 17. &c.)

The navigation and commercial intercourse of Portugal are of more importance; and though even in the times of Emanuel and Albuquerque, they were by no means so extensive as is generally supposed, they were, notwithstanding, very considerable, and appeared immense from the small amount of the shipping and trade of other nations. For a long time past, the import and export trade of the country has been conducted chiefly by foreign merchants, particularly British, settled in Lisbon and Oporto. The exports consist almost en-

tirely of raw produce, or of wine, oil, salt, wool, fruits, cork, &c. The imports have hitherto included corn and flour, but, as already seen, these will now probably be dispensed with; the other articles are cotton goods (by far the most important article), hardware, woollens, fish, linens, earthenware, drugs, tea, coal, &c.

Nearly all the foreign trade centres in Lisbon and Oporto, which see. It is principally carried on with England and Brazil. At an average of the six years ending with 1838, the real value of the British produce and manufactures exported to Portugal amounted to 1,242,114*l.* a year; but of this a considerable portion was subsequently re-exported for, or rather smuggled into Spain. Perhaps, at an average, the value of the imports and exports of Portugal may each amount to about 2 millions a year. Formerly, Lisbon had about 400 large ships employed in the trade with S. America, but now she has not more than 50 or 60 ships in all departments of her foreign trade, and those, too, of comparatively small burden. We subjoin an

ACCOUNT OF THE QUANTITIES OF THE PRINCIPAL ARTICLES OF FOREIGN AND COLONIAL MERCHANDISE IMPORTED INTO THE UNITED KINGDOM FROM PORTUGAL, IN 1838.

Articles.	Quantities.	Articles.	Quantities.
Figs — cwt.	1,702	Brandy — galls.	2,857
Lemons and oranges — chests	88,282	Sheep's wool — lbs.	627,312
Olive oil — galls.	407,046	Wine (Portuguese) — galls.	3,055,812
Shumac — cwt.	1,850	Cork (unmanufactured) — cwt.	47,794
Goat skins (undressed) — No.	25,560		

The internal traffic of such a country is, as may be supposed, inconsiderable. There is no navigable canal, and till of late years, not a single road in Portugal was practicable for carriages for more than 20 or 30 m. from Lisbon. In fact, the only mode of travelling by land from Lisbon to Oporto is in a litter, or on the back of a mule or horse; and in the wine country of the Douro, or in the province of Minho, two oxen sometimes take a whole day to convey a pipe of wine 5 or 6 m.; and to prevent the cart from being overturned, it is attended by 2 men. Accounts are kept in reis and milreis; the milrea contains 1,000 reis, and in worth about 4*s.* 6*d.* The *dobro*, or double, = 3*l.* 6*s.* 6*d.*; the *crusado* = about 2*s.* of the lb. is 4,589 kilogr., or rather more than the lb. avoid; the arroba = 32 lbs.; the quintal = 4 arrobas. The majo for grain, &c., = 24 bushels; the almind = 43 gallons. The Portuguese foot is a little longer than the English.

**Constitution.**—Like the peninsular kingdoms of Castile and Arragon, Portugal had anciently her Cortes or assemblies of the states. One of these assemblies, held at Lamego in 1411, conferred the title of king on Alfonso Henriquez, who had two years previously defeated the Moors in the great battle of Ourique. The Cortes at the same time enacted a law for regulating the succession to the throne; in which, among other things, it is laid down that females shall not be eligible to the crown, though in the direct order of succession, if they have married a foreigner, and that their marrying a foreigner when on the throne shall be considered equivalent to an act of abdication. The powers of the Cortes corresponded, in other respects, with those of similar assemblies in other countries; but their privileges and those of the sovereign were very ill defined; and the latter contrived, in the course of time, to engross all the powers of the state; the government of Portugal became, in all respects, as despotic as that of Spain; and the last convocation of the Cortes took place in 1697. (*See L'Art de vérifier les Dates*, part II. tom. vii. 1—40, 8vo. ed.)

From this period down to the administration of the Marquis de Pombal (1750-1776), every abuse continued to multiply, and Portugal was distinguished only by the inability of her government, the power and profligacy of the nobility and clergy, and the poverty and indolence of her people. The Marquis de Pombal suppressed the order of the Jesuits and confiscated their estates; he also suppressed some of the more oppressive privileges of the nobility and clergy; and effected various important reforms in several departments of the administration. In other respects, however, his policy evinced the narrowest and most illiberal views; and on his dismissal from power, most part of the old abuses in the government revived, and the country continued in its former state of apathy and abasement.

The events connected with the late war in the peninsula, the emigration of the court to Brazil, the long continuance of the English armies in the country, the organization of the Portuguese army on an improved footing, and the influence of the changes in Spain, laid the foundations of a new order of things. The nation was disatisfied with the continued residence of the court in Brazil, which, in fact, made Portugal a dependency of the latter, and the wish for some fundamental changes in the frame of the government became general.

At length, in August, 1820, a revolution broke out, and a free constitution was soon after established, having for its basis the abolition of privileges, the legal equality of all classes, the freedom of the press, and the formation of a representative body in one chamber. Our limits preclude our attempting to trace the obscure history of the Portuguese government from this period. Suffice it to say, that the constitution of 1820, which was violently opposed by the clergy and privileged classes, having been suppressed, in 1823, was replaced, in 1826, by a constitutional charter, granted by Dom Pedro; and that, in 1836, the latter was suppressed, and the existing constitution established in its stead.

Under this constitution, the government is an hereditary monarchy, with an upper and a lower representative chamber, both of which are elective, the franchise being vested in the holders of a certain small amount of fixed property. The Cortes meet and dissolve at specified periods, without the intervention of the sovereign, and the latter has no veto on a law passed twice by both houses. At present, therefore, the constitution of Portugal is decidedly liberal, probably too much so for a country in its peculiar situation. Each province has a governor, to whom the details of its government are entrusted. Justice is administered in the first instance by the Juizes de Fora; and appeals are made to the corregidores of the provs., and from these to the *Casa de supplicação* at Lisbon, and the *Relação do porto* at Oporto. All these tribunals are, however, subordinate to the royal court in Lisbon. Great abuses are said to exist in almost every department, both in the judicial and administrative branches, the inadequacy of the salaries leading to the acceptance of bribes. Assassination is more frequent here than it has ever been in Italy; the law and the police being impotent alike either to secure property or life. It is stated in an official return published by the Cortes, that in 1837 there were no fewer than 176 assassinations, and 226 robberies in the district of Oporto; and 166 assassinations, and 234 robberies, in that of Guarda! The country, in fact, teems with ruffians and crime.

The religion of Portugal is the Rom. Cath., unalloyed with any taint of Protestantism, and contributing but little, if anything, to the morality of the people. The inquisition no longer interferes with freedom of conscience, having been abolished in 1821. The Portuguese church is under the jurisdiction of a patriarch, with extensive powers; 3 archbishops, and 14 bishops.

Notwithstanding the hostility of the Marquis de Pomal to the monks, who used to say of them that they were *la vermine la plus dangereuse qui puisse ronger un état*, their numbers previously to the late revolutions were estimated at about 8,000, and the revenue of the conventual establishments was supposed to exceed 1,200,000*l.* a year! Luckily, however, an end has been put to this preposterous state of things; the monks have been turned out of their establishments, to support themselves as they best may, on a small stipend that has been allowed them, so that the public wealth is no longer wasted in maintaining hordes of idle, profligate drones. The nunneries will, it is most probable, share the same fate.

It is said that infidelity is now very prevalent among the more intelligent classes in Portugal; and it is natural that such should be the case. They have never seen religion except in association with all that was most revolting. In Portugal its ministrations have consisted only in idle and meaningless ceremonies; and its priests have uniformly been the enemies of every thing like popular rights, and the supporters of the most oppressive and offensive privileges. But now that they are reduced to their proper sphere, and are no longer used as instruments for the debasement of the people, it is probable that juster religious views will begin to be entertained; and that the profligacy and corruption of the clergy will cease to react upon religion itself.

The language of Portugal is merely a dialect of the Spanish, differing but little more from the latter than Scotch from English. Education is, at once, little diffused and of bad quality. There is a university at Coimbra; besides which, 17 high seminaries, and numerous schools exist, affording instruction to about 33,000 pupils. With the exception of Camoens, few Portuguese authors are known beyond the limits of their country. The army consists of about 28,000 men; 21,500 infantry, 3,700 cavalry, and 2,400 artillerymen. The forces of Portugal, whether naval or military, have in general been very inefficient. A partial stimulus was given, in 1760, to the Portuguese army, by a German commander, the Comte de la Lippe; but after his death his plans were not followed up; and it was not till 1809, that Portuguese troops, recruited by British funds, and disciplined by British officers, became worthy the ancient renown of their country. It remains, however, to be seen whether if left to their own resources, and without the example and assistance of foreigners, they would preserve the laurels they gained during the late war. The navy comprises only 2 ships of the line, 4 frigates, 6 brigs, and some smaller vessels.

The public revenues and expenditure for the year ending with June, 1837, were as follow:—

Revenues.		Expenditure.	
	Milreas.		Milreas.
Rent of gov. property	676,086	Royal family, Civil	4,766,797
Direct taxes	1,670,159	list, &c.	1,098,927
Indirect do.	4,241,140	Ministry of Interior	974,569
Various sources	1,686,030	Justice, &c.	663,986
	143,998	Finance	3,194,754
Insular, &c. rev.	1,071,213	War	1,062,163
		Marine	245,424
		Insular, &c. expend.	1,073,235
Totals	9,491,866		15,077,658
Deficit			5,585,792

The public debt, in 1834, amounted to 5,689,229 milreis.

The Portuguese are but little indebted to the accounts given of them by travellers. But their character, as drawn by Du Châtelet, though not very flattering, is, we believe, nearly correct. "Il est, je pense, peu de peuple plus laid que celui de Portugal. Il est petit, basané, mal conformé. L'intérieur répond, en général, assez à cette repoussante enveloppe, sur-tout à Lisbonne; où les hommes paroissent réunir tous les vices de l'âme et du corps. Il y a, au reste, entre la capitale et le nord de ce royaume, une différence marquée sous ces deux rapports. Dans les provinces septentrionales, les hommes sont moins noirs et moins laids, plus francs, plus lians dans la société, bien plus braves, et plus laborieux; mais encore plus asservis, s'il est possible, aux préjugés. Cette différence existe également pour les femmes; elles sont beaucoup plus blanches que celles du sud.

Les Portugais, considérés en général, sont vindicatifs, bas, van, railleurs, presomptueux à l'excès, jaloux, et ignorans. Après avoir retracé les défauts que j'ai cru appercevoir en eux, je serois injuste si je me taisois sur leurs bonnes qualités. Ils sont attachés à leur patrie, amis genereux, fideles, sobres, charitables. Ils sergent bien chrétiens, si le fanatisme ne les aveugle pas. Ils sont si accoutumés aux pratiques de la religion, qu'ils sont plus superstitieux que dévots. Les hidalgos ou les grands de Portugal, sont très bornés dans leur éducation; orgueilleux et insolens; vivant dans la plus grande ignorance. Ils ne sortent presque jamais de leur pays pour aller voir les autres peuples." (*Voyage en Portugal*, i. 60—71.)

The Spaniards and Portuguese regard each other with a deep-rooted national antipathy.

"Well doth the Spanish hind the difference know  
"Twixt him and Lusian slave, the lowest of the low."

"Strip a Spaniard of all his virtues, and you make a good Portuguese of him," says the Spanish proverb. "I have heard it more truly said," says Dr. Sonthey, "add hypocrisy to a Spaniard's vices, and you have the Portuguese character." The two nations differ, perhaps purposely, in many of their habits. "Almost every man in Spain smokes; the Portuguese never smoke, but most of them take snuff. None of the Spaniards will use a wheelbarrow; none of the Portuguese will carry a burden: the one says, 'it is fit only for beasts to draw carriages;' the other, that 'it is fit only for beasts to carry burdens.'" (*Sonthey's Letters*, ii. 64.) In one respect, however, their tastes are identical, bull-fights being quite as popular among the Portuguese as among the Spaniards. Sonthey's statements, as to the Portuguese character, coincide with those of Du Châtelet. "The Portuguese are generally dark-complexioned and thin, with black hair, frascible and revengeful in their tempers, and eager in their gestures on trivial occasions. They are also said to be indolent, deceitful, and cowardly; but they are temperate in diet, and that may be classed at the head of their virtues, if, indeed, they have many more. They have no public spirit, and, consequently, no national character. An Englishman, or a Frenchman, may be distinguished in foreign countries by an air and manners peculiar to his nation; but any meagre swarthy man may pass for a Portuguese." All classes seem to despise cleanliness; and Lisbon, and the Portuguese towns generally, are, certainly, entitled to the not very enviable distinction of being about the filthiest in Europe. The morals of both sexes are lax in the extreme; and, as already stated, assassination is a common offence. On the whole, we incline to think, that, owing to vicious institutions, the Portuguese rank about as low in the social scale as any people of Christendom. But the fair presumption is, that, under the beneficial influence of the now constitutional arrangements, the abuses that have depressed and degraded the nation will be extirpated; and that the Portuguese will once more recover their ancient place among European nations.

*History.*—This country, anciently called *Lusitania*, was taken possession of by the Romans about *anno* 200 u. c.; previously to which some Phœnician and Cartha-

ginian colonies are supposed to have been planted on its shores. It remained a Roman province till the 5th century, when it was invaded by the Suevi, Visigoths, &c.

The Moors landing in the S. of Spain in the early part of the 8th century, and meeting with little resistance from its thinly spread population, easily overran the greater part of Portugal; but the nature of the country favouring the operations of the inhabitants, they were not long in recovering possession of its more northern and mountainous portion. The name of Lusitania seems to have been exchanged about this period for that of *Portucale*, subsequently changed into Portugal, from the circumstance of Oporto, the principal strong-hold of the Christians, being then called *Calle*, or *Porto Calle*. (*D'Anville, Etats formés en Europe*, p. 192.)

In the 11th century Portugal became an earldom, under the kingdom of Leon and Castile; and during the 12th it was erected into an independent kingdom. Its power now rapidly increased; and by the acquisition of Algarve, in 1249, it arrived at its present limits. In the latter half of the 14th century the voyages and discoveries commenced which have shed immortal lustre on the Portuguese name. During the 15th century, Madeira, the Canaries, and Azores were discovered, and colonized; and in 1498 Vasco de Gama doubled the Cape of Good Hope, and opened a new route to India.

In the following century the Portuguese explored the coasts of Newfoundland and America; took possession of Brazil; made important acquisitions in India and the Persian Gulph, and discovered the Moluccas; by which successful enterprises they monopolized the commerce of the East, and a great share of that of the West. But the prosperity of Portugal was short-lived. After the disastrous defeat and death of King Sebastian, in Africa, in 1578, Philip II. of Spain seized on the kingdom, which remained a Spanish prov. from 1580 to 1640; and when she regained her independence, the greater part of her commerce, and her foreign possessions, were in the hands of the Dutch.

But, notwithstanding the emancipation of Brazil, Portugal still preserves the Azores, Madeira, Cape de Verde, and Guinea Islands; the settlements of Angola and Mozambique, in Africa, and those of Goa, Dilli (Timor), Macao, &c. in Asia. In 1607, Portugal was invaded by the French, when the royal family removed to Brazil. John VI. dying in 1826, Dom Miguel usurped the throne in 1827, which he held till 1833; when, after a lengthened contest, Donna Maria II. was established in its possession. (*Habibi, Essai Statistique sur le Royaume de Portugal*, &c.; *Du Chatelet, Voyage en Portugal*; *Baillie's Lisbon*; *Scmple, Southey, Murphy*, &c., in *Mod. Trav.* xix.; *Journal Statistique*, 1838; *Cuvillier's Geog.*; *Convers. Lexikon*, &c.)

POSEN, a prov. of the Prussian monarchy, comprising the portion of Poland assigned to Prussia by the treaty of Vienna in 1815, having for the prov. of Posen and Brandenburg, E. Poland, and S. and W. Silesia and Brandenburg. It is of a triangular shape. Area, 11,374 sq. m. Pop., in 1837, 1,158,698, of whom 739,527 were Catholics, 344,853 Protestants, and 74,194 Jews. Principal towns, Posen, Bromberg, Nakel, &c. It is divided into two regencies, and these again into 6 circles. Surface generally flat, and in part occupied by extensive marshes and forests. Principal rivers, Warta, Netze, and Obra. Soil various, but generally clay and black loam intermixed with sand, and naturally very fertile. Principal products, corn, timber, wool, honey, &c. Minerals and manufactures unimportant. A vast number of leeches are taken in this prov., especially in the circle of Bomster: above 1,300,000, worth, on the spot, about 65,000 rix-dollars, were exported in 1840; and, in 1849, the exports were still more extensive. This is the most backward of the Prussian provinces. When it first came into the possession of Prussia, in 1792, the great bulk of its inhabitants were in a state of profligate slavery, and were as ignorant and brutified as can well be imagined. The vigorous and enlightened government of Prussia at once put down the excesses of the nobles, and has exerted itself by introducing an improved judicial system, establishing schools and otherwise, to improve the habits and condition of the people. These efforts, combined with the total abolition of servitude (*see* PRUSSIA), have had the best effects; though a lengthened period will still have to elapse before the vices and habits engendered by centuries of slavery and degradation be completely eradicated, and the population become as intelligent and industrious as in the more advanced provinces.

POSEN, a city of Prussia, cap. prov. and reg. of the same name, at the confluence of the Prozna with the Warta, 147 m. E. by S. Berlin; lat. 52° 29' N., long. 16° 53' E. Pop., in 1838, 32,456. Since the peace of 1815 its fortifications have been vastly improved, and it is now one of the bulwarks of the kingdom on the side of Russia. Though an old town, it is pretty well built. Principal edifices, cathedral and town-house. It is the residence of the provincial authorities, and of an archbishop; and has a court of appeal, a gymnasium, or college, a theo-

logical seminary for the education of Catholics, a school of arts, &c. The business of watch-making is carried on to some extent; and there are manufactures of leather, linen, fire-arms, &c. It has three great annual fairs. Here, as in the rest of Poland, the buying and selling of goods is chiefly managed by Jews, who occupy a particular quarter of the town.

POTENZA, (an. *Potentia*), a city of the Neapolitan dom., prov. Basilicata, of which it is the cap., on a hill in a wild and rocky tract, near the source of the Basento, 54 m. E. Salerno. Pop., circa 9,000. It is fortified, and has a cathedral, several other churches, and convents, a seminary, a royal college, lyceum, hospital, government pawn-bank, &c.; but, speaking generally, it is poor and meanly built. It is a bishop's see, and the seat of the superior judicial courts for the prov. It suffered greatly from earthquakes, especially in 1684, and 1812. (*Rampoldi, Corografia*; *Dict. Geog.*)

POTOSI (SAN LUIS DE), a city of Mexico, cap. of the state of same name, near the source of the river Tambo, 165 m. W. Tampico, and 75 m. N.N.E. Guanaxuato; lat. 22° N., long. 103° 12' W. Pop. of the city itself about 15,000 (*Poinsett*), but including the *barrios* and suburbs, which, near the source of the ground, it may amount to from 50,000 to 60,000 (*Ward*). It presents a fine appearance; the churches are lofty, and some of them very handsome. The streets are well built, very clean, and intersect each other at right angles. The houses in the square, and in the principal avenues leading to it, are of stone, and two stories high; those in the suburbs are low, and of adobe (sun dried bricks). The government house, in the square, is not yet completed; but the front, which is of cut stone, and ornamented with ionic pilasters, would do credit to any city in Europe. The market-place is well supplied with meat, fruits, and vegetables. Pedlars hawk up and down the coarse manufactures of the country. Stalls are erected and set out with *mantas*, blankets, leather breeches and leggings, saddles, bridles, huge wooden stirrups, iron spurs, weighing at least 2 lbs., and a great variety of manufactures from the filaments of the Agave: ropes, cord, twine, and thread, matting, bags, saddle-cloths, &c. &c. Here, as in every part of Mexico, the vendors were satisfied with one-half of their asking price, and frequently with one-third part of what they, the instant before, had sworn on their consciences the article was worth." (*Poinsett's Notes on Mexico*, pp. 242-246.)

From its situation, this city is the natural *dépôt* of the trade of Mexico with the N. and W. Mexican states. Its foreign trade is at present almost wholly in the hands of natives of Old Spain or of the U. States. The European imports consist principally of French brandies, wines, silks, and cloths, English hardware and printed cotton goods, with some mantas or ordinary cotton manufactures from the U. States. In addition to its foreign trade, San Luis supplies the neighbouring states of Leon and Cohahuila with home-made goods of various kinds. The town abounds in tailors, hatters, leather dressers, and smiths; and the whole pop. seems industrious. (*Ward's Mexico*, II. 227.) The people are better dressed, and there are fewer beggars here, than in almost any other part of Mexico. The mines in the neighbourhood have long ceased to be wrought, from exhaustion of the ores; they were, however, formerly very productive. A college, founded by voluntary subscription, and in a flourishing state, affords gratuitous instruction to poor students in Latin, jurisprudence, theology, and constitutional rights. The city was founded in 1586. (*Poinsett's Notes on Mexico*, p. 242-246; *Ward's Mexico*, II. 226-230.)

POTOSI, a city of Upper Peru or Bolivia, famous for its rich silver mines, on the N. declivity of the Cerro di Potosi, a mountain belonging to the Andes, lat. 19° 36' S., long. 67° 21' 45' W., 6 m. S.W. Chiquisaca. Early in the 17th century this city is said to have had 150,000 inhab.; but it is now almost deserted. It is built on uneven ground, and has a spacious square in the centre. The government-house, the town-house, and the jail, under the same roof, occupy one side; the treasury and government offices another; a convent, and an unfinished church the third; and private houses the fourth. Extensive suburbs, once tenanted by Indians and miners, are now without an inhab., and no vestiges of the streets are all that remain. Among the most remarkable public edifices is the mint, substantially built of stone, in 1751, at a cost of 1,148,000 dollars. In the principal square an obelisk 60 ft. high was erected in honour of Bolivar, in 1825. The houses of Potosi, generally, are of stone or brick, and of only one story, with wooden balconies, but without chimneys. The country round is perfectly barren, and the climate disagreeable; the rays of the sun are scorching at noon, while at night the air is piercingly cold. The market is well supplied; though, from many articles having to be brought from a considerable distance, the necessaries, as well as the luxuries of life, are very dear.

The Cerro di Potosi, which is 18 m. in circuit, and

risks to the height of 16,037 ft., is supposed to be a solid mass either of the ore or the matrix of the precious metals, of which it has produced a vast quantity. Viewed from the city, it appears dyed all over with numerous tints, green, orange, yellow, grey, and rose colour. The discovery of its wealth was made by an Indian, who, in hunting some goats, slipped, and, to save himself, took hold of a shrub, which, in coming away from the ground, laid bare the silver at its root. The mines were first wrought systematically, in 1545, from which time till 1803, they are said to have produced 1,055,500,000 piastres, or 237,358,334*l.* worth of silver on which duty was paid; and during the same period they also produced a large quantity of gold; at the same time that great quantities of both metals were smuggled, or put into circulation without payment of the duty. About 5,000 openings are said to have been made in the mountain; but the number of mines wrought during the present century has rarely exceeded 100. At one time, the mines yielded about 30,000 ducats a day; and for a lengthened period they produced about 9,000,000 dollars a year. But they had begun to decline long previously to the Revolution; and since then they have been, whether from their exhaustion, defects in the mode of working, or the want of capital, never unproductive. The ore is pulverised in water-mills, worked with overshot wheels at from 1 to 10 m. from the city; but, according to Helms, both the mining and reduction of the ore were conducted in the most bungling manner. (*Andrius; Miller; Mod. Trav.*, xxviii.; *Geog. Journal*, v.; *Encycl. Americana*, &c.)

POTSDAM, a town of the Prussian states, prov. Brandenburg, cap. reg., at the confluence of the Havel with the Havel, on an island formed by the two rivers, a canal and lakes, 17 m. S.W. Berlin. Pop., in 1837, 25,560. Potsdam has been appropriately termed the Versailles of Prussia. It is a favourite royal residence; streets straight, broad, and well paved; and the houses, though frequently small, and not very commodious within, but, for the most part, splendid fronts. It is encompassed by walls and palisades; has numerous gates and bridges, some of which are highly ornamental, and is divided into three parts, the old and new towns, and Frederickstadt. The most remarkable edifices are, the palace, a magnificent structure on the Havel, having attached to it a theatre, menagerie, and spacious stables; the church of the garrison, in which are deposited the remains of Frederick the Great; the church of St. Nicholas; the great military orphan hospital, &c. In the old market-place is an obelisk of red Silesian marble, 75 feet high, on a pedestal of white Italian marble; on the base are inscribed the names of the great elector and his successors. A large garrison is always kept at Potsdam, so that the barracks are very extensive. There is a lyceum, a military school, with various public schools of inferior note, and sundry literary establishments. There are also, exclusive of the military orphan hospital, mentioned above, an infirmary, workhouse, &c. Potsdam was formerly said to be more of a barrack than of a town; but for a good many years past it has been distinguished in various branches of manufacture, such as that of silk, hardware articles, arms, &c. Being situated on a navigable river, communicating by canals, &c., with many large towns, and with the Elbe and the Oder, it has a good deal of commerce.

Potsdam is a very old town, having existed in the 8th century; it did not, however, become a place of any importance till the elector Frederick William selected it for a residence, and began the palace. It was materially improved by the king, Frederick William I.; but, like Berlin, it owes its principal embellishments to the taste and liberality of Frederick the Great. In its environs is Sans Souci, the favourite residence of that illustrious prince, and the place where he expired, on the 17th of August, 1785. The new palace and the marble palace are also in its vicinity.

POUGHKEEPSIE, a town and river-port of the U. States, Dutchess, co. New York, on the Hudson, 70 m. N. New York. Pop., in 1830, 7,222, but it now (1841) probably exceeds 12,000. The river-bank here is 200 ft. in height, but the town has five convenient landing places. It occupies a flat of about 1,800 acres; on which some 40 streets have been laid out; several of which are well paved. Many of the stores (shops) in the main street, are equal to those of the Broadway in New York; and numerous private houses exhibit both wealth and taste. Between 1831 and 1836, upwards of 100,000 dollars were expended in the improvement and enlargement of the town; and 25,000 dollars in the construction of reservoirs, &c. In the latter year, there were 10 churches, a court-house, a gaol, a co. workhouse, an academy, a Lancasterian school, four banks, and several whaling and other companies. Poughkeepsie has a considerable trade, and communicates regularly, by steam boats, with New York, Newbury, &c. It was founded by some Dutch families, in 1736, and incorporated in 1801. (*New York Gazetteer*.)

PRAGA, a suburb of Warsaw, which see.

PRAGUE, a city of Bohemia, of which it is the cap., near the centre of the kingdom, on the Moldau, by which it is intersected, 73 miles S.E. Dresden, and 152 miles N.E. Vienna; lat. 50° 5' 18" N., long. 14° 25' 15" E. Pop., in 1837, 107,358, ex. garrison, inhabs. of the citadel, and strangers; whose united numbers raise it to upwards of 120,000. It stands in a basin, surrounded on all sides by rocks and eminences, upon the slopes of which the buildings rise tier after tier, as they recede from the water's edge; and few, if any, cities of Germany, or, indeed, of any country, have so grand and imposing an external appearance. It is divided into four quarters, of which 2, the Altstadt and Neustadt, are on the right, and the others, the Kleinsseite and Hradschin, on the left bank of the Moldau. The Altstadt, or most ancient part of the city, stretches along the margin of the river, and for a considerable distance up the ascending ground; it comprises the university and the archbishop's palace, the municipality, the principal churches and public edifices, the theatre, and all the superior shops. It is the district of commerce and general activity; and is crowded with a dense and active pop. Its streets are generally narrow, dark, and winding; the principal edifices massive and gloomy; and the private buildings, usually of stuccoed brick, are black with age and dirt, and so lofty as to exclude the light from the avenues between them; but, on the other hand, there is an air of antiquity, and a singularity of architecture about many of the edifices, public and private, that renders them at once venerable and interesting. The open places are often surrounded by low heavy arcades, beside which are the churches or public buildings, exhibiting a fantastic mixture of Gothic and Italian decorations; while at every turn the eye is met by some memorial of historical events. Beyond the Altstadt, surrounding it on 3 sides, and separated from it only by a large wide street termed the *Graben*, from its having been formerly the city ditch, is the Neustadt (new city), founded by the emperor Charles IV., the most splendid of Bavarian monarchs; the streets of which are much more open and spacious, and are generally rectangular. Here are the vast convents, hospitals, and other public buildings, which owed their magnificence to the Jesuits; but the houses are poor, and the inhabs. chiefly mechanics, artisans, and traders of the lower class. At one extremity of the Neustadt, up the river, is the fortress and arsenal of the Wilshehrd, erected on a bluff rock, and connected with the line of works which extends in a curve behind the old and new city, embracing them both, and descending to the river at each extremity. On the opposite bank of the Moldau, the surface of ground is for a small space comparatively even, behind which arises a range of high, bold, craggy hills. On the even space, and partly up the ascent, is built the Kleinseite (small side); this is the quarter of the aristocracy; in it are the palaces of the ancient Bohemian nobles, with attached gardens and shrubberies, which often extend high up the irregular ascent behind.

The lofty ridge above the Hradschin forms a magnificent termination of the prospect, as viewed from the bridge below or from the opposite side of the river. Here, on the summit of a long bold eminence, is the vast palace of the old Bohemian monarchs; and close behind it rise the choir and tower of the cathedral. Further on, along the hill, are groups of stately edifices; and beyond these again may be seen, on a loftier point, the fine Premonstratensian monastery of Strahow, with its lofty towers and dark thick groves overhanging the river. The quarters of Prague on the left, like those on the right bank of the Moldau, are inclosed by fortifications; but these are of little strength, and were raised by Charles IV. merely to give employment to the working pop., as the chance of invasion was then but inconsiderable.

The bridge which connects Altstadt with the Kleinseite, the only one hitherto constructed within the limits of the city, is the longest in Germany. It is a ponderous structure of stone, 1740 ft. in length, and 35 in breadth; with a lofty tower at each extremity, and colossal stone statues, single and in groups, among which is pre-eminent that of St. John Nepomuck, the tutelary saint of the city. Not far from the bridge, and attached to the Altstadt, is the Judenstadt, a district allotted to the Jews, whose number is about 8,000, living, as usual, in crowded filthy abodes, forming a labyrinth of narrow winding streets. (*Tyrol's Austria*, &c., i. 93-96., and *Receve's Sketches of Bohemia*, No. 11.)

The Hradschin, or palace on the hill, is a vast pile, more remarkable, however, for extent than beauty. It is said to be larger than the palace at Vienna, and to comprise 440 apartments, including the Hall of Ladislaus, Imperial Audience-room, Hall of Assembly for the States, &c. On a narrow terrace immediately below the palace, 2 obelisks mark the spot where the imperial commissioners, and their secretary, sent thither with the most intolerant edicts against the Bohemian Protestants, were indignantly thrown out of the windows

of the Green Chamber, by the deputies of the kingdom, in 1618. Notwithstanding the great height of the windows whence they were ejected, the commissioners escaped unharmed, by falling, as is said, on a dung-hill. This event may be regarded as the commencement of the 30 years' contest, ended by the peace of Westphalia in 1648, which, while it secured the liberties of the rest of Germany, unfortunately consummated the slavery of Bohemia, which had long been foremost in freedom and toleration. The cathedral, begun in 1344 and finished in 1486, is within the precincts of the Hradschin. It is a fine specimen of Gothic architecture, and is surmounted by a lantern-crown similar to that on the tower of St. Giles, Edinburgh. The choir, built by Charles IV., and the unfinished chapels that surround it, are much admired. In the cathedral are the tombs of many Bohemian sovereigns and other distinguished individuals; a fine altar piece and other paintings; mosaics, and the costly shrine of St. John Nepomuk, &c. Others of the numerous churches, as that of the *Thrinakia*, in which is the tomb of the famous astronomer, Tycho Brahe, who died here on the 13th October, 1601, are interesting for their monuments. Prague had formerly a great number of convents; but Joseph II. secularised most of these establishments. Among the chapels is one which is an exact representation of that of Loretto.

The town-hall, arsenal, military hospital, military orphan asylum, lying-in hospital, principal workhouse, and theatre are among the finest of the numerous public edifices. Of the private palaces, that built by the famous Wallenstein, duke of Freidland, is the most remarkable. Though unfinished, it is of immense extent, 100 houses having been pulled down to make room for its site. It still belongs to a collateral branch of Wallenstein's family: the apartments and furniture, which are said to remain in their original state, are shown to strangers, and the park attached to the palace is thrown open to the public; but the residences of the nobility in the Kleinsite are mostly deserted. "They are generally large ugly buildings, some, however, with a good deal of architectural decoration; and the dirty rubbishy appearance of their brick walls, half covered with worn-out stucco, conveys the idea of prisons or poorhouses rather than of mansions of distinguished nobles. Their proprietors have transferred themselves and their wealth to the Austrian capital; leaving to the Bohemians these sad memorials of times, when the court of Prague might have looked with scorn on the inferior splendour of Vienna. Yet, in some of these desolate abodes, covered with dust and rubbish, we found immense collections of books. The Lobkowitz library is said to comprise more than 70,000 vols., the Kinsky 40,000, the Klobitzberg 18,000, the Klam Martinitz 21,000, and others equal or superior numbers. In some of these palaces a few rooms are fitted up and occupied during winter by a minor branch of the family, and in many of them are offices for the stewards and managers of the Bohemian estates; but when, on particular occasions, as, for instance, at the coronation of a sovereign, it is requisite for the proprietors to visit Prague, they usually occupy apartments in some hotel, their own palace being quite unfit for their reception; there are, however, a few exceptions to this general emigration. Here and there may be found the mansion of some great noble, who still upholds the local dignity of his ancestors; and below these highest magnates are a considerable body of resident nobles, inferior in wealth, though perhaps not in blood, who take a part in the provincial administration, and who form among themselves in the winter season an agreeable and elegant society." (*Turnbull's Austria*, &c., i. 101.) In the palace of Count Nostitz is a gallery, rich in cabinet pictures of the Dutch and Flemish masters; and in that of Count Sternberg is the national museum, comprising extensive collections of paintings, books, fossils, and natural objects. The library, in the Strahow monastery, one of the finest apartments of its kind in Germany, comprises a collection of about 50,000 vols.

The university of Prague, founded by Charles IV. in 1348, occupies a large edifice termed the *Carolinum*, and is remarkable as the first great public school established in Germany. The students were formerly divided into 4 nations, and are said, though there can hardly be a doubt that the statement is grossly exaggerated, to have amounted, early in the 15th century, to 40,000! In consequence, however, of a measure proposed, in 1409, by Huss, who was then rector, to abridge the privileges of the foreign students, more than half the pupils attending the university withdrew to Leipzig, Heidelberg, Cracow, and other seminaries. The *Carolinum* is now exclusively devoted to instruction in medicine, law, and the sciences; while education in theology is conducted in the *Clementinum*, an immense building, founded by Ferdinand III., in 1653, as a convent and seminary for Jesuits. The university library, in the latter, comprises about 150,000 vols.; it has also an observatory, botanical garden, and various museums; and was attended, in 1840, by about

1,700 students; but it must be borne in mind that the censorship of the press, the prohibition of foreign works, and the jealousy of the government, oppose the most formidable obstacles to the diffusion of knowledge, and hinder any real progress being made in political or even philosophical science. The same causes render the newspapers and other journals published here of little interest or importance. There are 3 gymnasia, preparatory to the university, with several other high schools, ecclesiastical, teachers', and Jewish schools; a polytechnic institute, conservatory of music, academy of the fine arts; and many orphan and deaf and dumb asylums, and other charities. The Jews settled here at a very early period, and have an infirmary and orphan-asylum of their own, and as many as 9 synagogues, one of which is very ancient.

Prague has manufactures of printed cotton, linen, silk, and woollen stuffs; leather, hats, liquors, earthenware, refined sugar, &c.; and is the grand centre, not merely of the commerce of Bohemia, but of an extensive and daily increasing transit trade. It owes this distinction to its situation on the Moldau, or principal arm of the Elbe, which is navigable by large boats to Budweis (80 m. direct dist. S. from the city), where it is joined by a railway from Lintz, on the Danube. Prague is thus rendered the centre, as it were, of the communication between Hamburg on the one hand, and Vienna on the other; and is, besides, intimately connected with Dresden, Leipzig, and other German cities. Several annual fairs are held here, including a large wool fair in June.

Owing to the number of its palaces, churches, public buildings, and other splendid remains of its ancient grandeur, Prague is more imposing than Vienna, and far preferable as a residence; the situation being much more salubrious, and the climate more mild and equable, the cold in winter rarely exceeding 24° Reaum., and generally averaging between 70 and 10°; while, during the greatest heat of summer, the thermometer seldom rises above 23°. Dr. Stultz, a celebrated German physician, who has written upon the relative salubrity of German towns, considers Prague as one of the most healthy in the empire, and affirms that it is no uncommon occurrence for the inhabs. to attain the age of 100, and even, sometimes, 115. Provisions are good and cheap; and an excellent red wine resembling Burgundy is produced in the neighbourhood. The theatre, apart from that of Vienna, and the musical department and orchestra cannot be too highly praised. Public and private concerts are also very frequent; and, except Vienna, there is no town in Germany where music is cultivated with so much success; indeed, this taste may in the Bohemians be termed truly national, for they excel both in vocal and instrumental music; and not a few of the natives travel to Italy, to acquire the language, Italianize their names, and make large fortunes in Vienna. The harp appears to a stranger their native instrument; for we meet with itinerant harpists in every part of the country, whose strains generally accompany the midday repast at every inn, however small, whether in the capital or the provinces. Their language, which is rich and expressive, is also musical, and sounds as pleasing as the Italian when wedded to melody." (*Spencer's Germany and the Germans*, i. 207-8.)

Jerome, the friend of the great Bohemian reformer John Huss, was a native of this city, and was thence surnamed "of Prague." He suffered the same fate as his illustrious friend, having been burnt alive, in pursuance of a sentence of the Council of Constance (see CONSTANCE), on the 30th of May, 1416. A very interesting account of the unfair and barbarous treatment he experienced on his trial, and of the singular ability, courage, and eloquence with which he defended himself, and exposed the malignity and bad faith of his adversaries, is given in a letter of Poggio-Bracciolini, who was present on the occasion. (This interesting document may be seen in *Shepherd's Life of Poggio*, or in the *Jerome*, in *Aikin's Biographical Dictionary*.)

Prague is very ancient; but the date of its foundation is uncertain.

Bohemia is one of the few countries in which persecution has been successful. At one time the Protestant faith was that of a great and decided majority, not of the citizens of Prague only, but of the whole kingdom. But the sovereigns of Austria having succeeded, in 1526, to the Bohemian crown, succeeded, after a lengthened struggle, partly by force of arms and partly by the most atrocious persecution of which history has preserved any account, in exterminating every germ of the reformed faith, and in totally subverting the free institutions of the country. For more than 150 years the language of the people was proscribed, their spirit was broken, and they were subjected to every species of insult and indignity. But since the middle of last century, and especially since the reign of Joseph II., the government has been conducted in a more tolerant and liberal spirit; and Prague, with the rest of Bohemia, is now advancing as rapidly in prosperity as any part of the Austrian monarchy. Prague was taken by the

Prussians under Frederick the Great in 1741, but they were soon after obliged to evacuate the city, and it has ever since been held by the Austrians. (*Geogr. Nat. Encyc.*; *Berghaus*; *Revue's Sketches of Bohemia*, in *Metrop. Mag.*, 1837; *Turnbull, Strang, Gleig, Murray*, &c., passim.)

PRATO, a town of the grand duchy of Tuscany, cap. distr. on the Bisenzio, a tributary of the Arno, 10 m. N.E. Florence. Pop., in 1836, 10,849. It is surrounded with a wall and ditch; the streets are regular, and the houses generally good. It has several squares, of which the best is the Piazza Mercatale; but the chief ornament of the town is the cathedral, a fine edifice of white marble, with ornamental parts of dark serpentine. Several other churches are handsome, and worth notice. Prato has two workhouses, several hospitals, the Geognini college for secular instruction, a small Lancasterian and infant schools, &c. The manufacture of straw hats and bonnets employs nearly 1,000 females; and it has also manufactories of woollen stuffs and caps, the latter for exportation to the Levant; with iron and copper works, paper-mills, a rope-walk, a glass factory, &c. The average wages of the working classes at Prato may be reckoned at 24 paoli, or 10½ d. a day. (*Bouring's Rep. on Tuscany*, p. 34, 35.) In the middle ages, Prato was the cap. of a republic, conquered by the Florentines in 1355. The poet Casti was a native of the town. (*Woods*; *Williams*; *Candery's Italy*; *Bouring's Rep.*; *Geog. Dict.*)

PRAYA (PORTO), a sea-port town of the Cape de Verd islands, which see.

PRENZLOW, a town of the Prussian states, the chief place in that part of Brandenburg called the Ucker Mark, at the point where the river Ucker escapes from the lake of that name, 32 m. W. S. W. Stettin. Pop., in 1837, 10,508. It is thriving and well built; has various churches, schools, and hospitals; a valuable public library, and manufactories of linen, woollens, and tobacco, with breweries, tanneries, &c. In 1806, a conflict took place in the suburbs of this town, which ended in the surrender to the French of 20,000 Prussian troops, escaped from the battle of Jena.

PRESBURG, or PRESSBURG, (Hungar. *Posony*, an. *Posonium*), a royal free town, and formerly the cap. of Hungary, and still the seat of the Diet, immediately within its W. frontier, cap. co. of its own name, on the N. bank of the Danube, 34 m. E. by S. Vienna; lat. 48° 0' 50" N., long. 17° 6' 15" E. Pop. in 1837 (excluding garrison and strangers), 37,380. Travellers differ greatly in their statements as to the appearance of Presburg; but the latest and best authority, Mr. Paget, says it is prettily situated along the bank of the Danube, and, for a town of its size, offers a greater number of handsome buildings than are often seen together. It has, however, more of the characteristics of a German than a Hungarian city, and has few public buildings worth notice. The most conspicuous of the latter is the castle, a huge square brick structure, built upon a height above the town. It is now a ruin, having been burnt in 1811, by an Italian regiment in the French service; it is, however, memorable as the scene of the appeal made in 1741 by Maria Theresa to the Hungarian states, which was so generously responded to by the latter. The hall of the Diet, or *Landhaus*, is a plain unpretending edifice, both externally and internally. The two chambers, which constitute the Hungarian Diet, meet in apartments furnished simply with long tables, round which are benches for the members who speak, as in the H. of C., from their places, and not, as in France, from a tribune. The lower chamber, visited by Paget, "is a long plain hall, traversed in nearly its whole length by two tables covered with green baize, at which the deputies sit, with pens, ink, and paper before them. At the upper end is a raised part occupied by the president, vice-president, and secretary; and behind these sit the judges of the royal table." In the intervals between the sessions of the Diet, this apartment is used as a concert-room. The members attend the Diet armed, in full national costume; and, since 1835, the deputies have not been carried on in Latin, but in Hungarian. They are sometimes very stormy. The cathedral, a Gothic edifice, supposed to date from the 11th century, and in which the kings of Hungary are crowned; the county-hall, German theatre, burse, and archbishop's palace, are the other principal public buildings. There are several handsome noble residences, but they are seldom occupied, for Presburg is not a favourite place of abode with the Hungarian nobility; and most of the members of the Diet, when assembled, live in lodgings, dining at one of the numerous *restaurateurs* in the town. Presburg was formerly surrounded with walls, but it has long outgrown these, and they are now mostly demolished. It is a bishop's see, and the residence of the archbishop of Graa, primate of Hungary. It has a Rom. Cath. academy and a Calvinist lyceum, both possessing good libraries; a Cath. high gymnasium, Cath. seminary, college for poor students, and various other public schools; 8 hospitals, including one supported by the Jews,

who are very numerous here, and have a quarter to themselves; and many charitable institutions. A fine library, belonging to Count Apponyi, is open to the public; and, according to Mr. Paget (i. 23-4), the book-sellers' establishments are well supplied with good works. The manufactories, which are various, include silk and woollen goods, saltpetre, rosoglio, tobacco, &c.; and the town has a large transit trade in corn, linen, and Hungarian wines. Immediately outside the town is the *königsberg* (king's mountain), a small circular mound to which the king of Hungary proceeds to perform an important ceremony, immediately after his coronation. A very beautiful and fertile country extends along the other bank of the Danube, opposite Presburg; and on that side are the favourite resorts of the inhabs.; the promenade in the Au; public gardens; arena, or theatre in the open air for national performances, &c.; the communication across the river being kept up by a bridge of boats. Presburg is very ancient. Joseph II. transferred its previous title of cap. of Hungary to Buda. The treaty which gave Venice to the French and the Tyrol to Bavaria was concluded here in 1805. (*Austr. Nat. Encycl.*; *Berghaus*; *Paget's Hungary*, &c., i. 1-28; *Gleig, Elliot*, &c., passim.)

PRESTON, a market-town, par., and township of England, hund. W. Derby, co. Lancaster, 8 m. E. by N. Liverpool, and 23 m. W. by S. Manchester. Area of par., 34,940 acres; do. of township, 240 acres. Pop. of township in 1831, 5,055. It is situated on high ground, over a large and rich coal-field, and consists of one long principal street, well paved and lighted with gas, on the turnpike road between Liverpool and Manchester, about 1 m. N. the railway between those towns. The principal public buildings are a town-hall, sessions-house, prison, and mechanics' institute. The par. church, an ancient structure, has a modern tower and steeple 156 ft. in height, forming a conspicuous object to the surrounding country; the living is a vicarage, of the annual value of 893*l.*, in the gift of King's College, Cambridge, to which the manor belongs. In the out-townships are 8 district churches, the patronage of 6 of which is with the vicar. There are places of worship in the town for Wesleyan and Primitive Methodists, Independents, and Unitarians, besides which there are within the par. 3 Rom. Cath. chapels, and 9 meeting-houses for different denominations of dissenters. A grammar-school, with an endowment producing 169*l.* a year, has about 30 foundation-boys (sons of inhabs.) with other pay-scholars, those born and educated in the par. having a preference to 7 fellowships and several good exhibitions at Brasenose College, Oxford. Several almshouses, erected in 1708, furnish lodging for 19 old women; and there are numerous money-charities. The other benevolent institutions are a ladies' charity, bible society, and savings' bank.

Preston has long been celebrated for its manufacture of watch-tools and movements, in both of which branches it greatly excels: files, also, of first-rate quality, and engravers' tools, are made here. In 1836, 100 men were employed in file-making, and 500 in the construction of watch tools, motion work, &c. The manufacture of coarse earthenware has for many years been carried on, the clay of the neighbourhood being well adapted for such a purpose. Cotton-spinning is carried on in 2 mills, employing, in 1839, 240 hands; and there is a small flax-mill. Coal-mines are wrought in every direction round the town; it is estimated that upwards of 2,000 men are employed in the collieries within the par.; and Liverpool receives from Preston its chief supply of coal. Many of the out-townships are very populous, St. Helen's and Eccleston having attained to some importance as manufacturing towns. Preston has petty sessions, and a baronial court for the recovery of small debts. Markets on Saturday, and fairs on alternate Tuesdays. (*See St. Helen's*.) (*Baines's Hist. of Lancaster*; *Butterworth's Stat. of Lancaster*, &c.)

PRESTEIGN, a parl. bar. and market-town of S. Wales, hund. New Radnor, co. Radnor, near the S. bank of the Lugg, in a fertile and well-cultivated valley, adjoining the confines of Herefordshire, 12 m. E. by N. Leominster. The par. of Presteign, which extends partly into Wignmore hund., co. Hereford, had, in 1831, 2,282 inhab., of which the parl. bar. had 1,623. This is a well-built town, and, notwithstanding its limited size, is the cap. of the co., the assizes and quarter sessions being held in it. "A woollen manufacture was once carried on here; but that is now given up, and there is no manufacture at present in the town, unless it be that of malt, which is made in large quantities. It is a sort of metropolis of the country for 5 m. round, supplying it with groceries, drapery, iron-work, and shop goods in general. It has also a considerable trade in timber. The inhab. are principally professional men, tradesmen, mechanics, handicraftsmen, and a few farmers. There are also some persons of small independent incomes, who reside here for the sake of the cheapness of the place." (*Parl. Bound. Report*.) The church, which is very ancient, has some curious monuments and fine old tapestry. The living,

a rectory of the annual value of about 800*l.*, is in the gift of the Earl of Oxford. The Wesleyan and Primitive Methodists, and Baptists, have places of worship. The co. hall is said to be a handsome structure, and there is also a co. gaol and a free-school. The latter, founded and liberally endowed in the reign of Elizabeth by a clothier of the town, furnishes a plain English education to between 50 and 60 boys; and there are other minor schools and Sunday-schools attached to the Church and the Wesleyan connection. At the N. end of the town is a fine circular mound, laid out in public walks, presented to the inhabs. by the Earl of Oxford. Presteigne unites with New Radnor and other small bors. in sending 1 mem. to the H. of C. Registered electors in the whole bor., in 1839-40, 522. It is governed by a bailiff and constables.

The Rev. Richard Lucas, author of the "Enquiry after Happiness," was a native of Presteigne, having been born here in 1648. The work now referred to, which has passed through a great number of editions, and is still held in considerable estimation, was written after the author had become blind. (*Hicks's Biographical Dict.*)

PRESTON, a par. and mun. bor., market-town, and par. of England, in its own div. of hund. Amounderness co. Lancaster, on the N. bank of the Ribble, crossed here by 3 handsome bridges, 19 m. S. Lancaster, and 28 m. N.N.E. Liverpool. Area of par. bor. (which comprises Preston and Fishwick townships), 2,560 acres. Pop., in 1831, 33,871; in 1841, 50,073. The town, which consists of a broad principal street, running N.E. from the river, crossed by several others in different directions, is well built, well paved, with handsome dwelling-houses and thriving factories; having a perfect drainage, and good roads leading from it. (*Bound. Rep.*) The streets are well lighted with gas, and there is an abundant supply of water. The market-place, at the junction of Fishergate and Friargate, contains about 3,000 sq. yds. The public buildings comprise an elegant court-house, erected in 1806; an exchange or market-house, town-hall, assembly-rooms, theatre, borough prison, House of Recovery, and a large county penitentiary. The church, originally erected in the 16th century, was rebuilt in 1770; the living is a vicarage, of the annual value of 665*l.*, in the gift of the trustees of Hulme's charity. There are also 7 district churches, chiefly of modern erection, and 4 others have been built in the out townships. The places of worship for dissenters comprise 4 for Rom. Caths. (a numerous and increasing body), 2 each for Wesleyan Methodists, and Independents, with others for Unitarians, Huntingdonians, Primitive Methodists, Baptists, Sandemanians, and the Society of Friends; there being, in all, within the town, 8 churches and 17 dissenting chapels. National schools are attached to the several churches; and all or most of the dissenting places of worship have large Sunday-schools, furnishing religious instruction to between 7,000 and 8,000 children. A grammar-school, founded prior to 1688, has an endowment of 50*l.* a year; there is, also, a partially endowed blue-coat school, and several day and infant schools, supported by subscription. The other charities comprise 9 almshouses, and several money bequests; a dispensary, house of recovery, built in 1829; provident society, workhouse, and savings' bank. Among the literary establishments, the first place is due to the Preston Institution for Diffusing Useful Knowledge, which has a library of about 2,500 vols., and an excellent museum. The Palatine and Dr. Shepherd's libraries are open to all classes, and the town has a public law-library. An agricultural society was founded in 1811. Avenham Walk, on the summit of the hill which rises from the banks of the Ribble, is a favourite promenade, and is kept in order at the cost of the corporation. Two newspapers are published, each once a week.

Preston, from its central position, its vicinity to an important coal district, and its extensive means of communication with the interior by canals and railways, united to the skill and enterprise of its citizens, has of late years rapidly increased in wealth and pop., and is now, in fact, one of the great seats of the cotton manufacture. In 1833, there belonged to the town 35 cotton-mills, impelled by a steam power of 1,332 horses, and employing above 7,000 hands. It has, also, numerous hand-loom weavers, though owing to the competition of the power-loom, their wages had fallen in 1838 to about 7*s.* a week at an average. The manufacture of linen cloth, formerly the principal branch of industry in Preston, is still pretty extensively carried on; and in 1838, 6 flax-mills employed about 1,400 hands. It has also numerous iron foundries, and other establishments for making machinery and other articles. Leather is tanned in considerable quantities; and there is a small fishery on the Ribble, which abounds with salmon, smelts, and eels. Two banking companies have been recently established, and there are 3 private banks. The Ribble is navigable at spring tides, as far as Preston-march, for vessels of 150 tons; but, being ill adapted for sea-borne vessels, it is frequented almost exclusively by coasters. The naviga-

tion, however, which is impeded by sand-banks, is in course of being improved by a company incorporated in 1837-38; and it is expected that a depth of 18 ft. water, at ordinary spring tides, will be attained. The river dues produce about 1,000*l.* a year. The Lancaster Canal, formed in 1796, passes the town; and it is connected with other parts of the co., and of England generally, by the North Union Railway (22½ m. in length), which crosses the Ribble on a viaduct of 5 arches, 68 ft. above the river, the Lancaster and Preston Railway (20¼ m. in length), the Preston and Longridge Railway (7 m. long), the Bolton and Preston Railway, not yet completed, and the Preston and Wyre Railway, which last connects it with the new sea-port of Fleetwood, at the mouth of Wyre harbour, now rapidly rising in importance. Large markets on Saturday, with others on Wednesday and Friday for fish, butter, and vegetables. Great fairs in Jan., March, Aug., and Nov.; the first of which, called the "Great Saturday," is celebrated for its show of horses.

Preston is a bor. by prescription, and received its first charter from Henry II. By a subsequent charter, granted by Henry III., the officers of the bor. were authorised to hold a guild merchant for the renewing of the freedom of the burgesses, and other purposes. This privilege is made the occasion of great festivity. For a long time after their first institution, the guilds were held at irregular periods; but they have now for more than a century been uniformly celebrated every twentieth year, commencing on the Monday next after the decolation of St. John, which generally happens in the last week of August. The last was held in 1832. Processions of the corporation, and the different trades in characteristic dresses, as well as of ladies, and females employed in the factories, take place on two of the days; and the amusements, which are varied and interesting, continue for a fortnight. But for civic purposes, the guild books are open for an entire month. Under the Mun. Reform Act, Preston is divided into 6 wards, its municipal officers being a mayor and 2 aldermen, with 36 councillors. Corp. rev. in 1839 (exclusive of 670*l.* accruing from the sale of property), 4,867*l.* Quarter and petty sessions are held under a recorder; and there is a court for the recovery of debts to any amount contracted within the bor. Quarter sessions for the hunds. of Amounderness, Blackburn, and Leyland are held here, and there is a monthly county court. Preston has sent 2 mems. to the H. of C. since the reign of Edward VI., the right of voting, down to the Reform Act, being in the inhabs. at large. The Boundary Act enlarged the electoral limits, so as to include the township of Fishwick with the old bor. Reg. electors in 1839-40, 6,633.

Preston is supposed to have risen on the decay of the ancient *Horriganton*, or Ribchester, a city now reduced to the condition of a mere village, about 11 m. higher up the river; and it derived its name of *Præstol'town* from the number of religious houses established here, and of which there are still some remains. It was partly destroyed by Robert Bruce, in 1322. In the parliamentary wars of Charles I., its inhabs. declared for the king, and it was besieged and taken by Sir Thomas Fairfax. In 1715, the Jacobite insurgents took possession of the town, and erected barricades for its defence; but, after a brave resistance, they were compelled to surrender to the royalist force under General Wiles. In 1745, Preston was visited by the Pretender, on his retreat; but he was compelled to withdraw on the approach of the Duke of Cumberland. (*Baines's Hist. of Lancashire; Butterworth's Stat. Sketch of Lancashire*, p. 109-113.; *Parl. and Bound. Rep.*)

PRESTONPANS, a bor. of barony and sea-port town of Scotland, co. Haddington, on the shore of the Frith of Forth, 7¼ m. E. Edinburgh. In 1835, the par., which is one of the smallest in Scotland, had a pop. of 2,467, of whom the bor. may have about 1,300. It is straggling and ill-built, consisting principally of a single street parallel to the Frith of Forth. It derives its name from its having, for a lengthened period, had a number of salt-works or pans for the production of salt by the evaporation of the sea water, and for the refining of rock salt. The latter branch of the business is now the only one that is carried on. It has, also, a brewery, at which some of the best Scotch ale brought to the Edinburgh market is produced, a soap work, and two works for the manufacture of coarse pottery. There are extensive oyster beds in the vicinity of the town, whence the Edinburgh markets derive a large proportion of their supply. Morrison's Haven, the port of Prestonpans, about 10 m. W. from the town, is a small creek, with not more than 10 ft. water at springs. (*New Statistical Account of Scotland*, par. of Prestonpans.)

Near this village, on the 21st of Sept., 1745, the royal army, under Sir John Cope, consisting of about 2,100 regular troops, was totally defeated and dispersed, with great loss, by the Highlanders, who were but little superior in point of numbers, under the Pretender. The king's troops being panic struck, threw away their arms, and fled at the first fire, and were cut down almost with-

out resistance. (*Johnston's Memoirs of the Rebellion*, p. 34-38.)

#### PRESTWICH-CUM-OLDHAM. (See OLDHAM.)

PREVEZA, a town of Turkey in Europe, prov. Albania, at the entrance of the Ambracian Gulph, 58 m. S. S. W. Yanina. Pop. 4,000? It is ill built, badly paved and dirty; but it is in a good situation for commerce, and was formerly the entrepôt of the trade of Epirus. On the isthmus, connecting the peninsula upon which it stands with the main land, are the remains of Nicopolis, consisting of the ancient walls, a theatre, some baths, and various other vestiges of antiquity. (*Burgess's Greece*, &c., i. 93-96.; *Hobhouse; Hughes*, &c.)

PRINCE EDWARD'S ISLAND, (formerly SAINT JOHN'S), an island of N. America, belonging to Great Britain; in the Gulph of St. Lawrence, principally between the 46th and 47th degs. of N. lat., and the 62d and 64th of W. long., from 20 to 25 m. E. New Brunswick. Length, of a curved line, passing through its centre E. to W. about 140 m.; greatest breadth 34 m. Area estimated at 1,380,700 acres, or about 2,150 sq. m. Pop. about 33,000, principally Highland, Scotch, Irish, and Acadian French, with some English, Dutch, Americans, and Swedes. A chain of hills of moderate height partly intersects it, but the surface in general is level, or at most only undulating. It is well watered, and its shores are deeply indented with numerous bays. The climate is milder than in any of the surrounding British colonies, and appears to be favourable to longevity. The atmosphere is nearly free from the fogs prevalent in Cape Breton and the adjacent countries. Below the thin vegetable mould the soil is generally clay or loam, resting on a base of sandstone: there are some swamps, and pine barrens; but these bear only a small proportion to the whole surface. The island in general is well wooded, the principal trees being spruce, fir, beech, birch, and maple. Oak, ash, larch, &c., are scarce, and the quality of the first is very inferior. All kinds of grain and vegetables raised in England come to perfection. Wheat is grown in abundance, and the surplus is exported to Nova Scotia. Barley, oats, and beans, are said to be equal in weight and quality to any met with in the English markets. Flax of excellent quality is raised, and manufactured into linen for domestic use. Hemp will grow, but not to the same perfection as in the adjacent colonies. It is said, though we apprehend the statement must be taken with large qualifications, that had the natural advantages of this island been turned to proper account, it might at this time have been the granary of the British colonies, instead of barely supporting a poor and limited population. Of nearly 1,400,000 acres contained in the island, only 10,000 are said to be unfit for the plough; but only 100,000 are now under cultivation. The origin of this state of things is ascribed, in Lord Durham's Report, to the injudicious grants made to absentee proprietors, under conditions that have been totally disregarded. "The absent proprietors neither improve the land, nor will let others improve it. They retain it, as I keep it in a state of wilderness." (*Report*, pp. 70-86.) What land is under the plough, is cultivated in a very slovenly manner; though the establishment of an agricultural society of late years has done something to improve husbandry.

Pastures are good, and suitable for cattle and sheep; owing to the want of proper attention, hogs are said not to thrive so well as the former. Live stock used to suffer greatly from the ravages of bears, loup-cerviers, and other wild animals; but these are much less numerous now than formerly. The island has no mines. Its fisheries are, however, of some importance; the value of the fish cured in 1839 having amounted to 5,340*l.* sterling. But owing to the want of capital and industry, the Americans have an ascendancy in the fisheries. A good many ships are built in the colony; 69 vessels of the aggregate burden of 9,934 tons having been built and registered in 1839. Total value of exports from the colony, in 1837, 7,271*l.*, timber, deals, &c. making 7,047*l.* of this amount. Total value of imports, 1,942*l.*

The constitution is nearly similar to that of Nova Scotia, and in all civil matters independent of any jurisdiction in America. The government and legislature is vested in a lieutenant-governor, a council of 9 mems., and a House of Assembly of 16 representatives, elected by the people. The governor is chancellor of the court of chancery; the chief justice and attorney-general are appointed by the sovereign; and the high sheriff is appointed annually by the local government. In the supreme court of judicature all criminal and civil matters of consequence are tried by jury. Cases of petty debt and breaches of the peace are decided by special magistrates and justices of the peace. There are two superior schools in Charlotte Town, and about 40 district schools. Charlotte Town, the cap. and seat of government, on Hillsborough river, near the S. coast, has one of the best harbours in the Gulph of St. Lawrence. The town, on gently rising ground, is regularly built, and clean, with

about 3,500 inhabs. The court-house, episcopal and Scotch churches, several chapels, the barracks, and the fort, are its only conspicuous public buildings.

This island was taken from the French in 1758. It was annexed with Cape Breton to the government of Nova Scotia in 1763, but since 1768 has formed a separate colony. (*Macgregor's America; Durham's Report on N. America*, &c.)

PRINCE OF WALES'S ISLAND (native PULO PINANG, 'the Area island.') An island and British settlement in the Eastern Seas, about two miles from the W. coast of the Malay Peninsula, lat. 5° 18' N., long. 100° 25' E. Length, N. to S., nearly 16 m.; breadth varying from 8 to 12 m. Area about 160 sq. m. Pop. in 1836, 38,450, principally Malays, Chinese, and Chulials, the Europeans being under 800. The N. part of the island is mountainous, and a range of hills runs through its centre, declining in height as it approaches the S. W. extremity. But two-thirds of the whole surface are level, or of gentle inclination, and like the hills, covered with woods. The thermometer, in the plains, ranges between 76° and 90° Fahr., and on the higher hills at from 64° to 76°. Except in a few places, Pinang is considered very healthy. Refreshing showers fall at short intervals throughout the year. The climate of the high lands is said to resemble that of Funchal in Madeira. The geological formations are primitive. Nearly all the hills are of granite; and the subsoil, where not alluvial, is principally the detritus of that rock. Tin ore is found at the base of the mountains. The island produces a good deal of timber, well adapted for ship-building and masts; and fine fruits; and it is well adapted for the growth of spices. As a commercial mart, this settlement is much inferior to Singapore; but, according to Mr. Newbold, "it bids fair by its plantations of nutmegs and cloves, to render us independent of the spice islands which we have given up to Holland." (*Malacca*, &c.)

The attention of the agriculturists is now almost exclusively directed to the improvement and extension of the spice-plantations, and dry waste land for that purpose may be obtained from the government on leases of 40 years, at a small quit-rent. The annual produce of the staple articles is estimated as follows:—

Articles.	Quantities.	Value in Spanish Dollars.
Nutmegs - - - - piculs.	400	12,000
Mace - - - - "	130	18,000
Cloves - - - - "	200	4,000
Pepper - - - - "	16,000	80,000
Total value - - - -	- - -	114,000

The value of the nutmegs, mace, and cloves, exported in the years 1836-7, amounted to 156,800 ruppees. A good many cocoa-nuts are grown; and gambir, indigo, cotton, areca, and tobacco in small quantities. Coffee, sugar-cane, betel nut, and leaf, rice, cotton, and ginger, are also raised. The trade of Pinang is chiefly that of transit, between Great Britain and British India, on the one hand, and the Malay peninsula, and Tenasserim, provs. Siam, Anam, Borneo, Java, Sumatra, China, &c., on the other. A considerable trade in cotton cloths is kept up by the Chulials with the Coromandel coast.

The revenue of Pinang and Prov. Wellesley is derived from lands, customs, licenses, and the sale of the government monopolies of opium, spirits, pork, betel-leaf, and the market. In 1835-36 it amounted to 178,930 ruppees; but the disbursements, not including the expenses of the military and the convict establishment, amounted to 253,328 rup., leaving a deficit of 74,398 rup.

Province Wellesley, a dependency of this settlement, is a strip of coast land on the Malay peninsula, opposite Pinang, 35 m. in length, by about 4 m. in breadth. Area, 140 sq. m. Pop. in 1836, 47,555, of whom 43,000 were Malays. It has an undulating surface, chiefly of alluvial soil, and a healthy climate. Its principal products are rice, pepper, sugar, and cocoa-nuts; and the gross value of its surplus agricultural produce is estimated at 80,000 Span. dollars. It supplies Pinang with cattle and poultry. These settlements are under the Bengal presidency, and governed by a resident at George Town, and an assistant resident in Province Wellesley.

George Town, the cap., at the N.E. extremity of Pinang, has a pop. of about 13,000. It is built on level ground, and consists of a long and broad street, intersected by others of inferior dimensions. It has a fort, a handsome church, an Armenian chapel, two Rom. Catholic chapels, a court-house, gaol, public school, poor-house, the governor's offices, and the civil and military hospitals. An English weekly newspaper is published in the town, and a few shops are kept by Europeans, but the major portion by Chinese. There are cantonments for the native troops near the town. Penang was purchased by the East India Company in 1783, and Province Wellesley in 1800. (*Newbold's Malacca*, &c.)

PROVENCE, one of the former provs. of France, in the S.E. part of the kingdom, now subdivided into the

déps. Busses-Alpes, Bouches-du-Rhone, Var, and a portion of Vaucluse.

**PROVIDENCE**, a city and port of entry of the U. States, Rhode Island, of which it is the cap., being, also, the second city of New England in point of pop., wealth, and commerce. It stands at the head of the tide-water in Narragansett Bay, about 30 m. from the Atlantic, 40 m. S.S.W. Boston; lat. 41° 50' 40" N., long. 71° 21' 30" W. Pop., in 1840, 22,042. It stands on elevated ground on both sides Providence River, an arm of the bay, here crossed by 2 bridges, one 90 ft. in width. It is a well-built, handsome, thriving town. Its chief public buildings are the state-house, Brown university, and the *academy*. The last, which is the finest building of its kind in the Union, was finished in 1828; it is 222 ft. in depth; has 2 granite fronts 72 ft. in width, ornamented with Doric colonnades, and cost, in all, about 130,000 dolls. Providence has numerous churches, schools, and charitable institutions. Brown University, founded at Warren in 1764, and removed thither in 1770, comprises 2 colleges, and is governed by a board of trustees and fellows, all of whom must be Baptists. It has a library of 14,000 vols., and a very complete philosophical apparatus, and is attended by about 170 students. (*Amer. Almanack*, 1841.) The Friends have a boarding-school here, which has about 200 pupils. There are several literary societies, which possess libraries, &c., and many extensive private seminaries.

Providence is distinguished as a manufacturing town: its cotton factories employ from 10,000 to 12,000 hands; and it has extensive bleaching-grounds and dye-houses; iron-foundries and machine-factories for the production of cotton machinery; with manufactures of combs, jewellery, glass wares, leather, boots and shoes, soap, candles, furniture, &c. Pawtucket, about 4 m. N.E., is also the seat of extensive cotton manufactures, the products of which find an outlet at Providence. Vessels of the largest burden come close to the wharfs, and the navigation of the bay is not often impeded by ice. In 1838, there belonged to this town 16,914 tons shipping.

Providence communicates with Boston, and with Stonington in Connecticut, by railways; with Worcester (Massachusetts) by the Blackstone Canal; and steam-boats of a large class keep up a daily communication with New York. It was originally settled in 1636, by Mr. Roger Williams, to whom is ascribed the honour of having established the first political community in which perfect religious toleration was admitted. It was incorporated as a city in 1831. (*Encyc. Americana*; *Amer. Almanack*.)

**PROVIDENCE**, one of the Bahama Islands, which see.

**PRUSSIA**, an important European kingdom, between the 49th and 56th deg. N. lat., and the 6th and 23d deg. E. long. The principal part of the Prussian dominions lies continuously along the S. shore of the Baltic, between Russia and Mecklenburg, comprising the N. part of what was formerly Poland, and most part of the N. of Germany. The inland frontier of this part of the monarchy on the E. and S. is sufficiently connected; but on the W. side it is very ragged, some small independent states being almost entirely surrounded by the Prussian dominions. But exclusive of this principal portion, there is an extensive Prussian territory on both sides the Rhine, divided into the provinces of Westphalia and Rhine. This portion is separated from the rest of the monarchy, or from what may be called the Eastern States, by Hesse Cassell, part of Hanover, Brunswick, &c. The Canton of Neuchâtel, in Switzerland, and some detached territories in Saxony, also belong to Prussia.

**Eastern Prussia** has on the N. the Baltic; on the E. Russia, Russian Poland, and Cracow; and on the S. and W. the Austrian states of Galicia, Moravia, and Bohemia, with Saxony, and other German states. West Prussia, or the provinces on the Rhine, have on the N. and E. Hanover and other German states; on the S. France; and on the W. Belgium and the Netherlands. From the extreme eastern frontier of Prussia to Aix-la-Chapelle, in an E.N.E. and W.S.W. direction, the distance is about 775 m.; and from the promontory on the Baltic, above Stralsund, to the extreme southern frontier of Silesia, in a N.E. and S.W. direction, the distance is 404 m. Owing, however, to the irregularity of

the frontier, and the intervention of other countries, these measurements give no information as to the extent of the monarchy.

The disjointed state of the dominions of Prussia detracts materially from her power. The possession of Warsaw gives Russia a position whence she may attack the very centre of the monarchy. An alliance with Saxony would bring an Austrian army within a few days' march of Berlin; and the Rhenish provinces are exposed to be overrun by France. The government, aware of the weakness occasioned by the circumstances now alluded to, have systematically laboured to give a more compact form to its dominions. But they have only partially succeeded; and it is, in consequence, necessary for the public security that the military establishment should be placed on a very imposing footing.

**Aggrandisement of Prussia.** — The rise of the Prussian power has been rapid and extraordinary. The kings of Prussia are descended from petty German princes, who, in the 14th century, were burgraves of Nuremberg. In 1415, Sigismund, emperor of Germany, sold the marquise (afterwards electorate) of Brandenburg to Frederick, one of these burgraves, for 400,000 ducats, who, by this purchase, laid the foundation of the future grandeur of his family. (Pfeffel, *Histoire d'Allemagne*, anno 1417.) In 1515, Albert, margrave of Brandenburg, was elected grand master of the Teutonic knights, who then possessed dual Prussia; and by a treaty concluded in 1525, this territory was secularised and erected into a duchy in favour of Albert and his successors. (Pfeffel, 1525.) In 1637, Prussia was acknowledged by Poland to be a free and independent state; and, after other aggrandisements, it was advanced to the dignity of a kingdom in 1700. Part of Pomerania was not long after added to Prussia.

But notwithstanding these acquisitions, when Frederick the Great ascended the throne, in 1740, his disjointed dominions did not contain 2,500,000 inhabs., who had made but little progress in the arts, or in the accumulation of wealth. But this extraordinary man, with no extrinsic assistance, and by mere dint of superior talent, wrested, in the early part of his reign, the valuable and extensive province of Silesia from the house of Austria. He afterwards defended himself, during the seven years' war, against the combined efforts of Austria, Russia, and France, and forced these powers to conclude a treaty, by which Silesia was solemnly guaranteed to Prussia. In the latter part of his reign, in conjunction with Russia and Austria, Frederick planned, and partly carried into effect, the partition of Poland, acquiring as his share the western parts of Prussia, and secured, in addition to the increase of territory, an unrestricted communication between the different great divisions of his kingdom.

By these different acquisitions, Prussia, at the death of Frederick, in 1786, had been increased in size nearly a half; while, owing to the superior fertility of the conjoined provinces, and the improvement effected in every part of his dominions, after the peace of 1763, the pop. had increased, according to the estimate of the Prussian writers, to about 6,000,000.

Prussia acquired by the subsequent partition of Poland in 1792, and its final dismemberment in 1795, a great extension of territory, including the important city of Dantzic, and upwards of 2,000,000 inhabs. In addition to this, she acquired the bishopric of Paderborn and the principalities of Bayreuth and Anspach, with several

lessor districts in Germany; so that in 1805, according to the statement of Krug, she contained nearly 5,000 geog. sq. miles of territory, and a pop. of 9,640,000.

Her disastrous contest with France in 1806, and her subsequent humiliation, are well known. But the spirit of the people was not subdued; and after Napoleon's campaign in Russia, the pop. rose *en masse*, and the zeal and bravery of the Prussians were mainly instrumental in effecting the final overthrow of Napoleon. At the general peace of 1815, Prussia became more powerful than ever. She recovered all her former possessions, except a portion of her Polish dominions assigned to the kingdom of Poland; but this was more than compensated by valuable acquisitions in Saxony, Pomerania, and the Rhenish provinces.

Considering, however, the importance of Prussia, as a counterpoise to Russia on the one hand, and to France on the other, it were to be wished that her territories were both more extensive and more compact. One of the greatest faults committed by the Congress of Vienna was the diminution of the acquisitions of Prussia in Poland. This was to be regretted, as much on account of the general interests of Europe, which requires that Prussia should be a power of the first order, as of the inhabs. of the provinces separated from her dominions.

*Divisions and Extent of the Country. Population.* — The Prussian monarchy is divided into 8 provinces, and these again into 25 regencies, which are farther subdivided into 335 circles. Each regency takes its name from its principal city, as is seen in the following Table, which also shows their extent and population at different epochs.

Account of the Provinces and Regencies of the Prussian Monarchy in 1840, specifying their Extent in Geographical, and British Square Miles; their Population in 1816, 1825, and 1840, and the Density of the Population per Geographical Square Mile in 1840.

Provinces and Regencies.	Area in Geog. sq. Miles.	Area in British sq. Miles. 69.15 to a degree.	Pop. 1816.	Pop. 1825.	Pop. 1840.	Pop. per Geog. sq. Mile, 1840.

*Face of the Country. Mountains.* — The surface of the Prussian states is generally flat. With the exception, indeed, of part of the Hartz Mountains, in the prov. of Saxony, the Teutoburger Wald, and some other mountains in Westphalia and Saxony, the volcanic district in it and the Lower Rhine, and the Riesengebirge, or Giant's Mountains, on the S.W. confines of Silesia, there is no other tract that is more than hilly. Prussia is, in fact, a country of vast plains; and is in most parts so very level, that many marshes and small lakes have been formed by the inundations of the rivers. The eastern, or principal part of the monarchy slopes imperceptibly from the S. frontier towards the Baltic, the shore of which is low and sandy. From this circumstance, and the nature of the soil, which in many places consists of little else than mere loose sand, some geologists have supposed that the sea had at one time overspread the greater part of its surface; and there would seem to be considerable plausibility in the supposition. At a comparatively recent period the country was covered in most parts with immense forests, of which there are still very extensive remains. These, when they belong to the crown, are under the control of the administration of forests.

*Soil.* — The quality of the soil is very various. In Brandenburg and Pomerania it is generally poor: in many parts, indeed, it consists of tracts of loose barren sand, diversified with extensive heaths and moors; but, in other parts, particularly along the rivers and lakes, there is a good deal of meadow, marsh, and other comparatively rich land. In Ducal Prussia and Prussian Poland, including the prov. of Posen, the soil consists generally of black earth and sand, and is in many parts very superior. But Silesia, and the Saxon and Rhenish provs., are naturally perhaps, the most productive. The plain of Magdeburg, on the left bank of the Elbe, is, perhaps, the most fertile and best cultivated district of the monarchy.

**Rivers and Lakes.**—Prussia is extremely well watered. The Rhenish provs. are traversed by the Rhine, while their E. frontier is partly formed by the Weser. The Elbe traverses the Saxon provs.; the Oder, which is almost entirely a Prussian river, runs through the whole extent of the monarchy, from the S. frontier of Silesia to the Isle of Usedom, where it falls into the Baltic. Polish Prussia (or Posen) is watered by the Wartha; West Prussia by the Vistula; and Ducal Prussia by the Pregel and Niemen. And besides the above, there are many other large rivers, as the Ems, Moselle, Spree, Havel, Netze, &c.

Owing to the flatness of the country through which they flow, none of the great rivers are interrupted by cataracts, and they are all navigable—the Rhine, Elbe, and Vistula, throughout their whole course in the Prussian dominions; the Oder is navigable, for barges, as far as Rathor in S. Silesia; and the Pregel and Niemen to a considerable distance inland. The establishment of steam-packets on these rivers, and the freeing of the navigation of the Rhine and the Elbe from the oppressive tolls and regulations by which it was formerly obstructed, have already been, and will no doubt continue to be, of vast service to the country. Canals have also been constructed connecting the Elbe, the Oder, and the Vistula; so that goods shipped at Hamburg may be conveyed by water to Dantzic, and conversely. (See the accounts of the above rivers, under their different names.)

Lakes are exceedingly numerous, particularly in Ducal Prussia and Pomerania. There are also along the coast several large bays, or rather lagoons, communicating with the sea by narrow mouths, and possessing more of the character of freshwater lakes than of arms of the sea. They are denominated *Haffs*, the principal being the Curische Haff and the Frische Haff, on the coast of Ducal Prussia, and the Haff at the mouth of the Oder.

**Sea-ports.**—The principal sea-ports are Memel, Königsberg, or rather Pillau, Dantzic, Stettin, and Stralsund. With the exception of Stettin, or rather of its outpost, Swinemünde, the water at these ports is rather shallow, seldom extending from 10 ft. to 12 ft. But at Swinemünde there are from 19 ft. to 21 ft.

**Climate.**—The climate of Prussia is not less various than the soil. Along the Baltic it is moist, and in Ducal Prussia, especially, the winter is long and severe. It is also severe in the S. parts of Silesia, contiguous to the Carpathian Mountains. In N. Silesia, Brandenburg, and the Saxon and Rhenish provs., it is comparatively mild.

**Minerals.**—The Prussian monarchy is richer in minerals than might have been anticipated from its flatness. Iron is the most generally diffused. It is very extensively wrought in Silesia, principally on account of the crown, but also by private individuals. The iron-works in the Rhine provs., near Dortmund, Solingen, Iserlohn, &c., and those near Schmiedebach, Tarnowitz, Sprottau, &c., in Silesia, are very extensive. Coals are very abundant in the Rhenish provs., Saxony, and parts of Silesia, and large quantities are annually produced. Salt, which is a government monopoly, is produced principally in the Saxon provs., which also yield considerable quantities of copper, and some silver. Silesia furnishes annually large quantities of zinc, lead, and tin; but the last-mentioned metal is partly, also, supplied by Brandenburg. Amber has long been known as a product of Ducal Prussia. It is principally found along the low narrow tongue of land between the Curische Haff and the sea.

If we distinguish the mineral products into, I. metals; II. combustible minerals; III. stones; IV. clay, sand, earth; V. salt, alum, &c.,—we have in Prussia

#### I. Metals.

**Silver**, in Saxony (Maaßfeld); Westphalia (Siegen); Silesia. (Upper Saxony (Maaßfeld), Westphalia (Siegen); Silesia.  
**Gold**, Silesia, Rhine, Westphalia, Saxony.  
**Iron and steel**, in every province, but principally in the mountains of Silesia, Westphalia, and Rhine.  
**Copper**, Westphalia (Siegen), and Saxony.  
**Arabic**, Silesia.  
**Calamine and zinc**, Silesia, Rhine, and Westphalia.

#### II. Combustible Minerals.

**Sulphur**, Silesia.  
**Amber**, Prussia.  
**Pit coal**, Silesia, Westphalia, Rhine, Saxony.  
**Brown-coal**, Saxony and Rhine.  
**Turf**, in every province, principally in Brandenburg.

#### III. Stones.

**Amethyst, agate**, in Silesia.  
**Alabaster**, Saxony.  
**Marble**, Westphalia, Saxony, Rhine, Silesia.  
**Volcanic tephra**, Rhine province, and very important.  
**Vegetation stone**, Silesia.  
**Of sandstone, mill-stones** in Silesia, Saxony, Westphalia, Rhine.  
**(Grinding, or wheel-stones)**, in Westphalia, Silesia, Saxony.  
**Limestone**, in Silesia, Westphalia, Rhine, Saxony, Brandenburg.  
**Travertine** in the same provinces as limestone.  
**Slate**, Westphalia and the Rhine.

#### IV. Clay, Sand, Earths.

**Porcelain earth** in Saxony, near Halle.  
**Pipe-clay and fuller's earth**, Silesia.  
**Sand**, suitable for the fabrication of glass, in all provinces.  
**Brick-clay and marl**, in all provinces.

#### V. Salt.

**Kitchen salt** in Saxony, Westphalia, Pomerania, Rhine.  
**Alum**, Silesia, Saxony, Westphalia, Rhine, Brandenburg.  
**Salt-petre**, in some provinces.

In 1835, there were produced in the monarchy 184,280 cwt. zinc, 1,653,297 cwt. iron, 10,896,433 tons coal, 181,534,150 lbs. salt; &c. The total value of the minerals produced in that year has been estimated at 9,196,366 rix-doll.

(See, for further details, the valuable and important work of the able statistical writer, Von Dieterici, *Statistische Übersicht der wichtigsten Gegenstände der Verkehrs und Verbrauchs im Preussischen Staate*, Berlin, 1834.)

**Vegetable and Animal Productions.**—These do not differ materially in Prussia and Great Britain. Rye and wheat, with buck-wheat, oats, barley, potatoes (now very extensively cultivated), and flax and hemp, are the principal products of Prussian agriculture. About 700,000 cimers of very fair wine are made in the Rhenish provs. It is mostly consumed in the country, the exports being so very trifling as not to exceed from 5,000 to 6,000 cimers a year. The average price of Prussian wine may be estimated at from 15 to 20 rix-dollars per cimer. The animals of Prussia are the same with those of this country, except that wolves and wild boars, which were long since exterminated in Great Britain, continue to exist in considerable numbers in the Prussian territories.

**Agriculture.**—Down to a comparatively recent period, the state of landed property in Prussia, and the condition of the occupiers of the soil, was similar to its state and their condition in most parts of continental Europe. The country was mostly divided into pretty considerable estates; and down to 1807, none but nobles or privileged persons could acquire landed property. Such parts of an estate as were not in the immediate possession of the lord were held by occupiers, in a sort of predial servitude, on condition of their paying a certain rent, consisting sometimes of services to be performed on the lord's land, sometimes of the delivery of a certain proportion (generally a half) of the produce, and more frequently, perhaps, of both the one and the other. In some places the tenants had acquired a sort of hereditary right to their possessions on their making the accustomed payments; but in other parts the title to the lands they occupied was only for life or for a certain number of years; though, by a most absurd regulation, the proprietor could not then resume the lands into his own hands, but was obliged to re-let them to an occupier of the same grade as the one who had left them! In 1807, however, the regulation which prevented peasants, tradesmen, &c., from acquiring land was abolished; and in 1811 appeared the famous edict which enacted that all the peasants who held perpetual leases, on condition of paying certain quantities of produce, or of performing certain services on account of the proprietors, should, upon giving up one third part of the land held by them, become the unconditional proprietors of the other two thirds! And with respect to the other classes of peasants, or those who occupied lands upon life-leases, or leases for a term of years, it was enacted that they should, upon giving up half their farms, become the unconditional proprietors of the other half! This edict certainly effected the greatest and most sweeping change that was ever peaceably effected in the distribution of property in any great country. It was regarded at the time, and in some respects justly, as a dangerous interference with the rights of individuals. But the abuses which it went to eradicate were so injurious to the public welfare, and were, at the same time, so deeply seated, that they could not have been extirpated by any less powerful means. It has given a wonderful stimulus to improvement. The peasantry, relieved from the burdens and services to which they were previously subjected, and placed, in respect of political privileges, on a level with their lords, have begun to display a spirit of enterprise and industry that was formerly unknown. Formerly, also, there were in Prussia, as there have been in England and most other countries, a great extent of land belonging to towns and villages, and occupied in common by the inhabs. While under this tenure these lands rarely produce a third or fourth part of what they would produce, were they divided into separate properties, and assigned to individuals, each reaping all the advantages resulting from superior industry and exertion. The Prussian government being aware of this, has succeeded in effecting the division of a vast number of common properties, and has thus totally changed the appearance of a large extent of country, and created several thousand new proprietors. The want of capital and the force of old habits rendered the influence of these changes at the outset less striking than many anti-

climated; but these retarding circumstances have daily diminished in power; and it may be safely affirmed, that the country has made a greater progress since 1815 than it did during the preceding hundred years.

The frequency of mortgages, and the embarrassed state of great numbers of the landed proprietors, are still, however, loudly complained of. Perhaps the extent of the evil is exaggerated; and we incline to think, that it is in no inconsiderable degree ascribable to the institution of land-banks, or rather of associations for the lending of money on the security of land. These associations were established with the most laudable intentions: but the facilities they have afforded of contracting debt, coupled with the little risk there is of the principal ever being demanded, provided interest be paid, have tempted many individuals to indulge in inconsiderate expenditure, and have made them injurious rather than otherwise.

Rye used to be in Prussia an article of universal consumption, occupying the same place there that wheat occupies in England, and potatoes in Ireland. Latterly, however, potatoes have been gaining upon it, and now form a very important portion of the food of the people. The usual course is to follow every third year, taking either first a crop of rye, and then wheat, or conversely. The greater part of the wheat shipped at Dantzic is brought from the Polish provinces under Russia and Austria. Flax and hemp are cultivated for domestic use, and also for sale, in all parts of the monarchy, but especially in Silesia. The best flax is raised from foreign seed, the seed produced at home being used to make oil-cake. Tobacco, hops, madder, and other plants used in dyeing, are also raised. Chicory is largely cultivated. Beet-root plantations are very extensive, and have recently made great progress, especially in Saxony and Silesia. Their produce may be estimated at from 100,000 to 120,000 quintals, being about a fourth part of the sugar consumed in the monarchy.

Except on the crown estates, there are few farms. Most considerable landed proprietors are accustomed to manage their estates by stewards; and, as already seen, the smaller occupiers are mostly all proprietors. It is impossible to form any accurate estimate of the productiveness of the soil, differing as it does so very widely in quality, culture, &c. In the most fruitful and best cultivated districts, as near Magdeburg, the produce of wheat is reckoned at from 14 to 16 *schefel* the *morgen* (1 *schefel* = 1½ bushel; 1 *morgen* = 1½ acre); whereas, in Brandenburg and Pomerania, the produce of wheat is not reckoned at more than from 6 to 10 *schefel* the *morgen*. The produce of rye varies in the best districts from 4 to 8 *sch.* per *morgen*. But in the sandy and sterile portions of Pomerania, Brandenburg, and W. Prussia, the produce is often not more than 2 or 3 *sch.* per *morgen*. The rent of cultivated land is as various as the crops, being dependent partly on soil and partly on situation. In the immediate neighbourhood of Berlin, the best lands yield a rent of 15 *rix-dollars* per *morgen*; in the country around Magdeburg the rent is in general about 10 *r.-d.* per *d.*; in Brandenburg, if it be not in the neighbourhood of Berlin, the rent is seldom more than 24 *r.-d.* per *morgen*; and in the sandy and sterile tracts, the rent is sometimes not more than 1 or 2 silver *groshen* per *morgen*.

Horses, cattle, and sheep are raised every where throughout Prussia. The growth of the latter has been of late years an object of much attention, particularly in Brandenburg, Saxony, and Silesia. In consequence of the improvements effected by the introduction of merino sheep into Germany, the wools of Saxony, Silesia, and some other provinces, has become superior even to that of Spain. The fall in the price of corn, subsequent to 1815, gave a great stimulus to this branch of industry. Wool now constitutes, in fact, the principal article of export from Germany, and has been productive of much wealth to many Saxon and Silesian proprietors, as well as to many in other provinces. The number of sheep in the Prussian dominions is estimated at about 15,000,000, and the total produce of wool at from 80,000 to 100,000 quintals, of which about a third part is exported. Hogs are very extensively reared in Westphalia, and immense numbers of geese are bred in Pomerania and the N. part of Brandenburg. We subjoin

An Account of the number of Horses, Cattle, Sheep, and Hogs, in the different Provinces of Prussia, as determined by an enumeration made in 1837:—

Provinces.	Horses and Foals.	Black Cattle.	Sheep.	Goats.	Hogs.
Prussia	411,235	870,009	2,130,577	6,361	531,833
Rhine	131,121	470,308	2,165,099	3,384	222,520
Brandenburg	179,198	504,318	2,489,865	43,773	17,421
Pomerania	40,140	2,758,492	28,075	128,263	139,811
Silesia	181,230	822,167	81,707	11,014	95,723
Saxony	117,440	445,736	554,209	73,862	227,760
Westphalia	20,465	514,853	609,783	83,141	276,594
Rhine prov.	122,111	775,813			
Total	1,472,901	4,889,892	15,011,452	327,625	1,256,301

**Manufactures.**—Though more of an agricultural than a manufacturing country, Prussia has greatly distinguished herself, particularly of late years, in various branches of manufacture. The Rhenish provinces, Saxony and Silesia, are the districts most prominent in this department. Linens and coarse woollens for domestic consumption are made in every village, and, indeed, in most cottages throughout the kingdom. The linens that are exported are chiefly produced in Silesia, Westphalia, and the Emerald, or portion of Ducal Prussia containing the circles of Braunsburg, Heilberg, Russell, and Allerstein. The manufacture in Silesia was formerly very extensive, but latterly it has been, to a considerable extent, interfered with by that of cotton. The total value of the linen stuffs annually manufactured is estimated at from 25 to 30 millions *rix-dollars*, of which a fourth part is exported. Hirschberg, and the adjacent towns and villages, are the principal seats of Silesian manufactures. Large quantities of silk and cotton goods, linens, &c., are produced in Elberfeld, and other towns in the Rhenish provinces. Very superior broad cloth is largely manufactured at Eupen, Malmédy, Berlin, Aix-la-Chapelle, &c. Prussia occupies a respectable rank in the production of the useful metals. The total quantity of bar and pig-iron annually produced may (1840) be estimated at about 130,000 tons. The articles of hardware, cutlery, &c., made at Iserlohn, Hagen, Solingen, Olpe, Essen, &c., enjoy a high reputation; but in this respect they are very inferior to the cast-iron articles, whether of fancy, ornament, or utility, produced at Berlin: these, as regards beauty and delicacy of execution, are unequalled by any made either in England or any other country. Force-lum, jewellery, watches, coaches, &c., are largely produced at Berlin and other towns. Vast numbers of books annually issue from the presses of Berlin and Halle. Beer and spirits are very extensively produced, and consumed in all parts of the monarchy. The consumption of spirits amounts, in fact, to from 160,000,000 to 180,000,000 quarts, or from about 40 to 45 millions imperial gallons (39 Prussian quarts = 1 imp. gall.) Now, it may be worth while observing, as illustrative of the habits of the people, that the entire quantity of British and foreign spirits entered for home consumption in the United Kingdom in 1840, amounted to only 25,517,326 galls., notwithstanding our pop. is about double that of Prussia. Indeed, if we take Prussia for a standard, the people of the United Kingdom may be said to be temperate in the extreme; for, while the consumption of spirits in Prussia amounts, at an average, to about 3 galls. to each individual, the consumption in Great Britain and Ireland is only about three fourths of a gall. and we believe that the consumption of beer in Prussia exceeds its consumption in the United Kingdom in a corresponding proportion.

The principal manufacturing district of Prussia, and probably of the continent, is in the Rhenish provinces on the Wupper, having Elberfeld and Solingen for its principal towns. It is well supplied with coal and water power; and the inhabs. are alike industrious and inventive. The pop. of Elberfeld has increased during the present century from 11,720 to 38,162; and the progress of many of the other towns and villages in the vicinity has been hardly less remarkable.

Some of the manufacturing establishments in the Rhine district are on a large scale, employing from 400 to 500 work-people. The first steam-engine used in Prussia was set up in 1780. In 1840, there were about 450 steam-engines in the monarchy, of which above 30 were in Berlin. The wages of the work-people employed in manufactures vary according to the work to be performed, the expense of living, &c. At Elberfeld, workmen earned in 1838 from 2 to 3 *rix-dollars*, or from 6s. to 9s. a week, working from 12 to 12 hours a day. Children employed in factories make from 3d. to 4d. a day.

We subjoin an official return of the looms at work in the different provinces of the monarchy in 1837, specifying the departments in which they were employed, and whether they were employed as a principal or secondary business. [See top of next page.]

**Commerce.**—The exports from Prussia consist principally of corn, wool, timber, Westphalian hams, zinc, flax, bristles, salted provisions, and other articles of raw produce; with linen and woollen cloths, silk wares, iron and hardware, jewellery, watches, and wooden clocks, Prussian blue, spirits, beer, &c. The imports consist chiefly of sugar, coffee, and other colonial products, raw cotton, and cotton twist and stuffs, indigo and other dye-stuffs, spices, French and other wines, coals for the use of the ports on the Baltic, salt, &c. The amount of the trade of Prussia cannot, owing to the free system of internal commerce now established in Germany, be ascertained with any precision; but it is very considerable, and is rapidly increasing. Except in dear years, when we are large importers of corn, our trade with Prussia is carried on at second-hand through Hamburg, Bremen, and the Netherlands ports. But we have elsewhere shown that the real value of our exports to

Prussia may be fairly estimated at nearly 5 millions a year. (*Supp. to Commercial Dictionary.*) Besides the facilities afforded to internal commerce by the rivers and canals already alluded to, others of a very important nature have recently been furnished. Previously to 1815, the roads in Prussia were, with few exceptions, about the very worst in Europe. They were, in fact, mere pathways, without any artificial construction; and owing to the loose sandy nature of the soil, the wheels not unfrequently sunk in them to the axle, and the carriage was drawn rather through than over the ground. But since the period alluded to, a very great change has been effected. New roads, constructed on the most approved principles, macadamised, and equal to any in England, are now carried from Berlin to all the most distant parts of the monarchy. The cross roads have also been materially improved; and every day is adding to the means of communication thus afforded. In all, about 1,200 German miles of road have been constructed since 1815, three-fourths of which have been made at the expense of government, and the rest by the country districts. Mail coaches, which travel at the rate of about six miles an hour, are established along the principal lines of road. They are under the orders of government, and are well conducted. All travelling charges are regulated by a tariff fixed by the police. Railways have been opened, or are about to be, from Berlin to Potsdam, and from Cologne to Aix-la-Chapelle; and others either have been opened, or are in the course of being constructed.

Within the last few years Prussia has prevailed on by far the greater number of the secondary and smaller German states to enter into a commercial league, by adopting a uniform tariff of duties on imports, and establishing a free system of internal commerce. Previously to the adoption of this plan, each petty state had its own custom-houses, and its own system of duties and revenue laws: these frequently differed widely from those of its neighbours, so that the internal trade of the country was subjected to all the vexatious restrictions that are usually laid on the intercourse between distant and independent states, and was, in consequence, comparatively trifling. But these restraints are now entirely got rid of. Internal custom-houses and separate custom duties no longer exist. Each state participates, in proportion to its pop., in the amount of the duties collected at the frontiers of the league; and a commodity admitted at any one of the external custom-houses may be subsequently conveyed, without let or hindrance, from Aix-la-Chapelle to Tilsit, and from Stettin and Danzig to the frontiers of Switzerland and Bohemia. It has been supposed by many that this system threatened to be very injurious to the trade of Britain and Germany; but there seems to be no ground whatever for any such apprehension. The freedom of internal commerce will do more to promote the prosperity of the countries included within the league, than any other measure their rulers could have adopted; and, as population increases, and the inhabitants become more wealthy, there will, no doubt, be an augmented demand for foreign products. Generally speaking, the de-

attempt made to raise them to an exorbitant height, the facilities for getting along the frontiers of the league are so very great, that its territories would very speedily be deluged with overtaxed products. And in addition to this signal reform, the tolls and other impediments that formerly obstructed the free navigation of the Rhine to the Elbe are now mostly removed; and there are no longer any exclusive companies, or incorporated guilds or bodies, to obstruct the general freedom of industry and competition.

**Shipping.**—Considering the extent of sea-coast possessed by Prussia, and the facilities she enjoys for ship-building, the shipping is not very considerable. In 1820 there belonged to the different Prussian ports 576 ships, of the burden of 58,007 lasts of 4,000 lbs. each. In 1828, Prussia had 604 ships, of 73,696 lbs. Stettin possesses the largest amount of shipping, and next to it Danzig. Prussia has entered into reciprocity treaties with most foreign powers.

**Money.**—Accounts are kept in rix-dollars, or thalers, of 30 silver groschen. Each rix-dollar should contain 257.68 gr. fine silver, and is worth 2s. 11½d., but is generally taken at 3s. The centner, or quintal of 110 lbs., is equal to 113.381 lbs. avoirdupois. The last, by which ships' tonnage and freights are estimated, contains 4,000 Prussian lbs. One Prussian mile is equivalent to 4.68 English miles. The morgen is equal to 1.62 bup. acres.

**Races; Population.**—The people of Prussia belong mostly to the great German and Slavonian families; the Poles in Posen, W. Prussia, &c. belonging to the latter, and the great bulk of the inhabs. in the other districts to the former. German is the language of the court, and of all the better informed classes in all parts of the kingdom. We have seen that the pop. of the monarchy, exclusive of Neuchâtel, has increased from 10,349,081, in 1816, to 14,098,125 in 1837. As only 35,029 of this augmentation is due to an enlargement of territory (the Duchy of Liechtenberg, acquired in 1834), it is a more rapid rate of natural increase than has taken place during the same period in any other country; and the condition of the people being, at the same time, materially improved, it affords the most unequivocal evidence of the increase of prosperity.

No doubt, a considerable portion of this increase may be ascribed to the change already noticed in the distribution of property. It is more than doubtful, however, whether the influence of this change will continue to be as advantageous as it has been hitherto. With few exceptions, there are neither entails nor majorats in Prussia; but when an individual dies, his property, whether it consist of land or moveables, is equally divided among his children, without respect to sex or seniority. The influence of this law in causing the splitting of property was limited, previously to 1807, by the regulation that none but nobles could hold land. But, as it may now be held by any one, the system of equal partition will exert its full force; and there is but too much reason to fear that, in the end, it may occasion the too great subdivision of landed property, and an excess of agricultural population.

We regard this as being, in fact, by far the most formidable of the unfavourable contingencies to which Prussia would seem to be exposed; and unless it be met by the organization of such a system of poor laws as will make it for the interest of the proprietors to oppose themselves to a too great subdivision of the land, and a too rapid increase of population, the consequences may be most disastrous. Already, indeed, there are in several quarters symptoms of an excess of population. This is a matter to which the attention of government cannot be too early and steadily directed.

The pop., in 1837, was divided as follows:—

Age.	Males.	Females.
To 14 (completed) years of age	2,477,154	2,416,745
From 14 to 60 (completed)	4,152,610	4,191,583
Above 60 years	409,459	430,574
Total	7,039,223	7,058,902

At an average of the three years ending with 1837, the number of births, marriages, and deaths, in the different provinces of the monarchy, was as follows:—

Provinces.	Births.	Marriages.	Deaths.
Prussia	94,492	21,411	72,426
Posen	49,603	11,214	37,056
Brandenburg	61,981	15,279	48,612
Pomerania	58,512	8,875	45,042
Silesia	111,812	25,501	91,211
Saxony	57,831	13,559	44,039
Westphalia	49,115	12,003	41,150
Rhine province	92,111	20,519	75,921
Total	557,893	128,022	438,603

There are in Prussia, exc. Neuchâtel, 535 towns with a pop. of 2,000 and upwards; the inhabs. of which amount in all to 3,060,315, or to about 3-14ths of the pop.

**Government.**—The government of Prussia is monarchical, the exercise of the royal prerogative being modified by the privileges of the different ranks and orders of the people, and still more by their intelligence and the power resulting from their military organization. The succession is hereditary in the direct male line. The king is assisted by a council of state; and there are nine ministers for particular departments, each having a salary of 12,000 rix-dollars (1,800*l.*). States have been established in the different provinces by virtue of an ordinance issued in 1823. Projects of all laws respecting their peculiar provinces, or which involve changes of taxes, or of the rights of property or individuals, are submitted to their deliberation, and are rarely passed without their sanction; but they have no power directly to originate any measures, though they may effect this indirectly by making representations to the king. The electors in the provinces of Silesia, Saxony, Westphalia, and the Rhine, are divided into four classes or states: consisting, 1st, of mediatised princes and other superior nobles; 2d, of inferior nobles and great landholders; 3d, of burghesses; and 4th, of peasants, little landholders, and free farmers; the electors in the provinces of Prussia, Posen, Brandenburg, and Pomerania, are divided into three classes or states, consisting, 1st, of nobles; 2d, burghesses; 3d, peasants, little landholders, and free farmers. The deputies are chosen by and represent these states. The following table shows the number of representatives for each state in each province:—

Provinces.	Classes of States.			Total Rep.
	I.	II.	III.	
Prussia	45	28	22	95
Posen	25	16	8	49
Brandenburg	35	23	12	70
Pomerania	25	16	8	49
Total	130	83	50	263

Provinces.	Classes of States.				Total Rep.
	I.	II.	III.	IV.	
Silesia	10	36	30	16	92
Saxony	11	29	24	13	77
Westphalia	11	20	20	20	71
Rhine province	5	25	25	25	80
Total	32	110	99	74	315
And the 4 other provinces	130	83	50		263
Gross total	162	193	149	74	578

It is next to certain, however, that very material modifications will speedily have to be made in this system of representation. Considerable disappointment was experienced at the outset of the reign of his present

majesty from his not at once conceding an extension of popular rights and privileges; and the general opinion seems to be that such concessions cannot long be withheld. The city of Breslau, and other important bodies, have already petitioned the king on the subject; and should the wish for an extension of popular privileges become general, and be vigorously pressed upon the government, it will, no doubt, have to be granted.

It is common in this country to call the government of Prussia a despotism; but if we mean by a despotism a government in which the monarch may do as he pleases, with little if any regard for the feelings and interests of his subjects, there is, perhaps, no government less a despotism than that of Prussia. It, in fact, may be said to be self-governed; for, though the king be all-powerful so long as his conduct is approved by the bulk of the people, he would, on the contrary, be quite powerless were he to lose their confidence and support. The king of Prussia has no extrinsic resources, or peculiar interests, on which to fall back in the event of his becoming unpopular. There is neither a powerful church nor a powerful aristocracy in Prussia; the army, too, is merely a portion of the citizens; and where every man is educated and every man is a soldier, the acts of the government cannot, speaking generally, be other than the acts of the public. But it is most probable, as stated above, that the Prussians will insist upon a direct control over the measures of government; but whether that should be so or not, no one acquainted with the state of society in Prussia can doubt that public opinion is there all but omnipotent.

The deputies are elected for six years, and must be 30 years of age, and the electors 25. The king nominates a president and vice-president of each state, chosen from the first or second order, and fixes the duration of the session. A majority of *two thirds* is necessary on all questions proposed by the king, but on other matters a mere majority suffices. Their sittings are not public, and the results only of their proceedings are published. All Prussians are entitled to address themselves by petition directly to the sovereign; and there is no instance of any petition, however humble the party presenting it, remaining without a distinct answer. Political writings are subject to a censorship.

A president, with powers similar to those of a French *préfet*, and a salary of 6,000 rix-dollars (900*l.*), is placed at the head of each of the eight provs. into which the kingdom is divided. Each prov. has also a military commandant, a superior court of justice, a prov. director of taxes, a prov. consistory, all appointed by the king. The last is divided into three sections, — one having the superintendence of schools, another of ecclesiastical affairs, and another of the public health. The provs. are subdivided into *regencies* or *counties*, and these again into *barons* or *circles* (*arrondissements*), and the latter into *communes*, or *parcs*, (*communes*). Each regency has a president and an administrative board or council; and the farther subdivisions have also their local authorities. The municipal organization of the towns is more complicated than that of the communes. The principal functionaries are all elective; but the elections must be confirmed by the king or the authorities.

The system of law principally in force in the E. states of the Prussian monarchy is embodied in the well-digested code entitled *Landrecht für die Preussischen Staaten*, which received the royal sanction in 1794, and became law in 1794; but it is occasionally modified by custom; and Polish, Swedish, and German laws are still in force in certain parts of the monarchy. The Rhenish provinces follow, with some exceptions, the rules laid down in the *Codex Napoleon*. The primary proceedings in judicial matters take place before local courts established in the circles and towns; thence they may be carried before the provincial courts (*oberlandes-gerichte*); and in the last resort before the supreme tribunals at Berlin. The judges are independent; and justice is purely and cheaply administered. Juries are employed in the Rhenish provinces, but not in the other parts of the monarchy. Tribunals of arbitration have also been established in the provinces of Brandenburg, Pomerania, Prussia, Silesia, and Saxony, similar to those established in Denmark (which see), and with the same beneficial results. In 1836, of 13,854 cases brought before these tribunals, in the above provinces (excepting Prussia, from which there are no returns), 11,835 were settled, and only 1,996 sent to the higher courts. In no other country, perhaps, is patronage so little consequence, and merit so sure to lead to distinction and advancement. Candidates for public employment go through a course of education appropriate to the functions they are desirous to fill; and before being appointed, have to submit to a severe examination as to their knowledge, conduct, and fitness for the office. "En Prusse," says M. Cousin, "tous les fonctionnaires sont salariés; et comme ils n'arrivent à aucune fonction qu'après des examens sévères, tous sont éclairés; et comme de plus ils sont pris dans toutes les classes, ils

portent dans l'exercice de leurs emplois l'esprit général du pays, en même tems qu'ils y contractent l'habitude du gouvernement."

The king of Prussia is, next to the emperor of Austria, the most important member of the Germanic Confederation. His contingent to the army of the Confederation is 79,234 men.

**Religion.**—The royal family belongs to the reformed or Protestant religion; but all denominations of Christians enjoy the same privileges, and are equally eligible to places of trust or emolument. In 1837, the pop. consisted of 8,604,748 Protestants, 5,294,003 Catholics, 183,579 Jews, and 14,495 Mennonites. The Protestants predominate very decidedly in Brandenburg, Pomerania, Saxony, and Ducal Prussia; while the Catholics predominate in the Rhine province and Westphalia, in the regency of Oppeln, in Silesia, and in Posen. When Silesia was acquired by Prussia, the mass of the pop. were Catholics; but at present the Protestants predominate in the regencies of Breslau and Liegnitz, particularly the last.

The Protestant church is governed by *consistories*, or boards appointed by government, one for each province. There are also synods in most circles and provinces, but no general synod has yet been held. The constitution of the Catholic church differs in different provinces. In the Rhenish provinces it is fixed by the concordat entered into between the French government and Pope Pius VII. But in every part of the monarchy, the crown has wisely reserved to itself a control over the election of bishops and priests. In the entire kingdom there were, in 1837, 5,740 ordained Protestant clergymen, and 140 assistant do.: there were, at the same time, 3,510 Catholic priests, and 2,033 vicars, chaplains, &c.; so that the proportion of Catholic clergymen rather exceeds that of Protestants.

The incomes of the clergy are very different. The higher Catholic clergy are paid by the state, the arch-bishop of Breslau receiving 1,700*l.* a year, and the other bishops about 1,155*l.* The incomes of the parochial clergy, of both sects, mostly arise from secular endowments. Generally government does not guarantee the stipend either of Protestant or Catholic clergymen; but in many parts, the clergy enjoy a public provision from the state. This is peculiarly the case in the Rhenish provinces, in virtue of the concordat already alluded to. Proselytism, or the attempting to induce a person to change his religion, whether by force or by persuasion, is prohibited by law; and all controversial sermons, or peculiar displays of religious zeal, would certainly attract the notice, and incur the displeasure of the authorities. If we except the Rhine province and Westphalia, the pop. of which are bigoted Catholics, perhaps there is in no country less of religious acrimony and contention than in Prussia. For further details as to the religious state of Prussia, see the Parl. Paper drawn up by Mr. Lewis from the official returns furnished by the Prussian government.

**Education.**—Prussia can boast of possessing a more perfectly organised and complete system of national education than has ever existed in any country. Frederick the Great has the merit of having introduced the system into Silesia, after he had wrested it from Austria; and such of our readers as are curious about these matters, will find in "*Adam's Letters on Silesia*," a very full and interesting account of the plans of Frederick in relation to this important subject, of the obstacles he had to encounter in carrying them into effect, and of their result. From Silesia the system has been gradually extended to

the other provinces, and is now in full vigour in every part of the monarchy. Attendance at school is enforced by law. Every child, whether male or female, rich or poor, must attend a public school from the age of five years complete, till such time as the clergyman of the par. affirms that the child has acquired all the education prescribed by law for an individual in its station: generally speaking, the school time extends from 6 to 14 years complete. Should a child not attend, its parents or guardians must satisfy the public authorities that it is receiving an appropriate education at home or in a private seminary. The school fees are exceedingly moderate; and the children of such poor persons as are unable to pay them, are instructed gratuitously at the public expense. According to the census of 1837, the pop. of the monarchy, ex. Neuchâtel, was 14,098,125. It is calculated that of this number, 2,830,328 were between the ages of 6 and 14, complete; and it appears from the official returns, that of this number 2,171,745 were actually at school, or were otherwise receiving sufficient instruction. It must not, however, be supposed that the 658,583 (2,830,328—2,171,745) apparent excess of children not at school are not instructed. The 2,830,328 includes, as already stated, all the children between 6 and 14 years complete; but the school education of a good many children is completed by the time they complete their 12th or 13th year; and owing to the delicate state of their health, and other circumstances, a good many do not go to school till they have attained their 7th or 8th year. And allowing for these circumstances, we believe it may be safely affirmed of Prussia, with the exception of a few districts in Posen, that every child born within her limits is educated! In so far, too, as we are able to judge, Prussian education is of the most excellent quality; and is, in this respect, as much superior to that of the lower and middle classes in England and Scotland as can well be imagined. The late king of Prussia deserved the esteem and gratitude, not of his own subjects only, but of every friend to humanity in every part of the world, for the zeal, perseverance, and discretion he displayed in maturing this system. Nothing has been omitted that could render it perfect. In the schools for the instruction of the masters, the examinations to which they are subjected, and the supervision exercised over every part, the utmost anxiety is evinced to render it as perfect as possible.

No particular religious creed is allowed to be taught in any school; but on particular days, set apart for the purpose, the children are instructed by the clergymen of the different sects to which they belong. Their religious instruction is not, therefore, neglected; while the intermixture of the different sects from their earliest years, on a perfect footing of equality, removes all asperities and religious animosities. All matters relative to the public schools are managed in each province by a public board appointed for that purpose; and the expense is defrayed by government. (For further information as to the Prussian schools, see the Report of M. Cousin, *Sur l'Instruction Publique en Prusse*, &c.) Exclusive of the gymnasiums and superior schools, Prussia has six universities, and the two semi-universities of Munster and Braunsberg. These are placed directly under the control of the minister of public instruction; and much pains has been taken to render them efficient and useful. The number of professors and subordinate teachers in the Prussian universities is very great; and we should incline to think that they had been needlessly multiplied. The following statement exhibits the attendance at the Prussian universities in 1834 and 1837:—

ACCOUNT of the Number of Pupils attending the different Universities and Semi-Universities of Prussia during the Summer Sessions of 1834 and 1837 respectively.

Universities, &c.	Year.	Prot. Theology.	R. Cath. Theology.	Law.	Medicine.	Philosophy.	Total.	Total of whom.

**Military Force.**—The situation of Prussia, surrounded by powerful monarchies, and with a disjointed territory, requires for her security a large military force. But as the revenue of the country is comparatively limited, it became indispensable to endeavour to organise the army so that it might embrace the maximum of force with the minimum of expense. The Prussian government seems to have pretty satisfactorily solved this important and difficult problem. The obligation of military service is universal; every man being obliged to enter the army of the line, or the *landwehr* (provincial army), between the ages of 20 and 32, as a private, and to serve in the one or the other for *three* years. At the end of this period he may enter the army of the line for a limited period as a volunteer, of which description of recruits it chiefly consists, or return home to prosecute some civil employment, his service in the army having secured for him various privileges. But the individuals whose period of service in the army of the line, or the *landwehr*, has been completed continue bound, on returning home, to serve in the second band of the *landwehr* till they be 39 years of age. They are seldom, however, called on to be exercised, and then only for limited periods. The *landsturm*, or *levy en masse*, consists of all the men not in the army or the *landwehr* up to the age of 50, and of young men between 17 and 20. This force is only called out in case of invasion. The army of the line may at present be estimated at 122,000 men, distributed as follows:—infantry, 83,000, cavalry 20,000, artillery 12,000, engineers 2,000, and permanent *landwehr* 5,000. The reserve and the first band of the *landwehr* amount to 228,000 men, and the 2d band of the *landwehr* comprises 180,000, making the total military force of the country about 530,000 men. Of these the regular army and the first band of the *landwehr*, amounting to 350,000, are ready to act immediately against an enemy. There are numerous institutions, at Berlin and elsewhere, for military education. The greatest pains

are taken to have the officers well instructed, and equal to their duties. Their appointments are good. The condition of the common soldier has also been vastly improved. He is seldom subjected to corporal punishment; and his pay and rations have been nearly doubled since 1806. The Marquis de Camarant estimates the total annual expense of a Prussian foot soldier, including rations, at 63½ rix-dollars (9l. 9s. 6d.) a year; and that of a cavalry soldier, including the keep of his horse, at 213 rix-dollars (31l. 10s.) a year. These allowances, considering the cheapness of provisions in Prussia, place the Prussian soldiers on a level, in point of comfort, with those of England or of any other country. Nothing, in fact, is omitted that seems calculated to benefit the army, and to keep up the martial spirit of the people.

This system imposes, no doubt, severe privations on the public. But there is a general conviction of its being necessary; and its universality, and the impartiality of the laws, prevent it from being felt as a peculiar burden by any particular class. At all events, it is clear, whatever difference of opinion may exist as to its merits in other respects, that it has *completely nationalised the army*; which must be always actuated by the sentiments and feelings that prevail among the mass of the people from which it is taken, and to which it is constantly being returned. When, therefore, it is said that Prussia is a "military monarchy," it is necessary to bear in mind that the army is not composed of mercenary troops, but of citizens serving for a limited period, and that it has very little analogy indeed to most other European armies. (For further and ample information as to the Prussian army, see the excellent Essay of the Marquis Camarant, *Sur l'Organisation Militaire de la Prusse*, passim.)

Prussia has no ships of war.

**Revenue and Expenditure.**—The following is an official statement of the revenue and expenditure of the Prussian monarchy for 1835:—

REVENUE.			EXPENDITURE.		
	Rix-d.	Rix-d.		Rix-d.	Rix-d.
Produce of the administration of domains and forests, after deducting the revenue reserved for the fee-fund of the crown	-	4,212,000	<i>National Debt, viz.:</i> Interest of the general and provincial debt, and expenses of management	6,397,000	
Of the sales of domains, &c., for the more speedy paying off of the national debt	-	1,000,000	Sinking fund	2,480,000	
Of mines, forges, and salt-mines, and of the royal china manufactory at Berlin	-	717,000	Interest and sinking fund of debts of different provinces	8,817,000	
Of the post-office	-	1,200,000		41,000	8,918,000
Of the lottery	-	669,000	<i>Pensions and Life-Rents, viz.:</i> Pensions to servants of the state, and their widows and children, and other charities	966,000	
Of the Administration of Taxes, viz.:			Pensions for life to members of suppressed spiritual corporations, &c.	1,584,000	2,550,000
(a) Taxes on landed and house property	9,355,000		<i>Perpetual Rents:—</i> Indemnification for abolished claims and usufructs	360,000	
(b) <i>Chassestour</i> (poll-taxes)	6,404,000		For capitals and securities called in	605,000	963,000
(c) Taxes on trade (patents)	1,975,000				
(d) Importation, exportation, and transit duty, on the consumption of home products; tolls; duty on navigation and the use of harbours, canals, bridges, and other communications; and stamp-duty	18,112,000		For the cabinet, the office of the minister of state, accountant-general's office, and the administration of the treasury, the mint, archive of the state and provincial archives, the secretariat of state's office, the account-office, the chancery royal, and the statistical office	-	308,000
(e) Revenue from salt	20,052,000		Ministry of spiritual, educational, and medical affairs	-	2,685,000
(f) Surplus revenues from the principal ports of the kingdom	6,566,000	45,530,000	Ministry of the interior and police	-	2,184,000
(g) Surplus revenues from the principal ports of the kingdom	-	80,000	Ministry of the interior for trades and general commissions	-	173,000
(h) Surplus revenues from the principal ports of the kingdom	-	332,000	Administration of commerce and manufactures, including land and aquatic buildings, but exclusive of roads	-	9,000
(i) Surplus revenues from the principal ports of the kingdom	-	-	Maintenance of old and making new roads, including interest of capital raised for making roads, &c.	-	2,852,000
(j) Surplus revenues from the principal ports of the kingdom	-	-	Ministry of foreign affairs	-	681,000
(k) Surplus revenues from the principal ports of the kingdom	-	-	Ministry of war, including the supplies for the great military orphan asylum at Potsdam, and its affiliated institutions	-	25,462,000
(l) Surplus revenues from the principal ports of the kingdom	-	-	<i>Central Administration of Finance, viz.:</i> (a) The finance office and for the state treasury office	159,000	
(m) Surplus revenues from the principal ports of the kingdom	-	-	(b) The general administration of the domains and forests	94,000	
(n) Surplus revenues from the principal ports of the kingdom	-	-			253,000
(o) Surplus revenues from the principal ports of the kingdom	-	-	Ministry of justice	-	2,061,000
(p) Surplus revenues from the principal ports of the kingdom	-	-	Chief-president's and provincial courts (Regierungs- räthe)	-	1,766,000
(q) Surplus revenues from the principal ports of the kingdom	-	-	Breeding of horses (Haupt- und Landgestütte)	-	167,000
(r) Surplus revenues from the principal ports of the kingdom	-	-	Revenues not recovered, extra expenses, and improvements	-	1,350,000
(s) Surplus revenues from the principal ports of the kingdom	-	-			
(t) Surplus revenues from the principal ports of the kingdom	-	-			
(u) Surplus revenues from the principal ports of the kingdom	-	-			
(v) Surplus revenues from the principal ports of the kingdom	-	-			
(w) Surplus revenues from the principal ports of the kingdom	-	-			
(x) Surplus revenues from the principal ports of the kingdom	-	-			
(y) Surplus revenues from the principal ports of the kingdom	-	-			
(z) Surplus revenues from the principal ports of the kingdom	-	-			
Total	-	51,740,000	Total	-	51,740,000

In 1838 the revenue amounted to 52,681,000 rix-dollars, which, as above, exactly balanced the expenses.

It should, however, be observed, that the above statement represents only the nett amount of revenue after the expenses of collection are deducted. These are estimated at from 3 to 4 per cent. on the produce of the direct taxes, and at from 10 to 12 per cent. on the produce of those that are indirect. It will also be observed, that in the account of expenditure nothing is set down for the civil list, or for the support of the monarch and his court: a sum of 2,500,000 dollars, is, however, specially appropriated for this purpose.

The tax on classes is a kind of poll-tax imposed on the inhab. of the country and towns, according to the amount of their property, and the pop. of the towns. The tax on industry or trades consists of the sums charged for patents or licences for leave to carry on trades, &c.

**National Debt.**—Frederick the Great effected all his extraordinary achievements without contracting any debt, and left at his death a large sum in the coffers of the state. Though his successors were not so economical,

still, at the breaking out of the war with France, Prussia was free from debt. In the course of that contest she was compelled to borrow pretty large sums, which, however, have been considerably reduced since the peace. The public debt of Prussia amounted, in 1840, to about 130,000,000 rix-dollars, or 19,500,000*l.* The question as to the provision for the poor has only become of importance since the abolition of vassalage in 1810. Previously to that

epoch they were provided for by their lords. At present poor persons, or those unable to provide for themselves, have a legal claim to support. But it is rarely necessary to resort to compulsory proceedings to enforce this claim, the really necessary being generally provided for by voluntary subscriptions. There are work-houses in most large towns. That of Berlin had, in 1838, an average pop. of from 850 to 900 persons; which cost at an average 50 rix-dollars a year each.

ACCOUNT of the Crimes judicially presented in Prussia in 1836; the Rhine Province, Neufchâtel, and Omt Pomerania excepted.

Provinces.	Number of inhab. belonging to the Jurisdiction.	High Treason.	Treason, or Resistance to Authorities.	Offences by Civil Officers.	Duels.	Murder and Manslaughter.	Infanticide. **Food, Dress, Diversions, and Habits of the Bulk of the People.**—The food, dress, diversions, and habits of the people are very different in different provs. In general, rye is the ordinary bread-corn. About half a century since the consumption was estimated at from 5 to 6 scheffel per head, but now it is not more than 3 scheffel; the defect being made up by the increased consumption of potatoes. In many districts, indeed, potatoes are now almost the only vegetable food. Besides rye-bread and potatoes, the people use barley, buck-wheat, and milk. In the Rhenish provs., wheat is more extensively used than in the other provs. The wheat cultivated in Prussia Proper and Posen, is rather for sale than for inland consumption. Beans and peas are extensively used in most parts of the monarchy. Coffee, mixed with chicory, is extensively used; and on Sundays it is used by all classes; tea is but little used. The consumption of sugar has rapidly increased; and now amounts, at an average, to about 4 lbs. per individual, notwithstanding the substitution of honey for sugar in very extensive districts. The consumption of butcher's meat is considerable, principally in towns. It is estimated over the whole monarchy at from 36 to 37 lbs. a year to each individual. (Dieterici, *Statistische Nachrichten*, s. 254.) But in the towns it may be from 40 to 50 lbs. and in the country, perhaps, not more than from 20 to 30 lbs. In Berlin the consumption of butcher's meat exceeds 100 lbs. per individual; and this, in all cases, is excessive of poultry, fish, and game. Game, indeed, is only used by the richer families; but fish is an ordinary food of the peasantry in many districts. Poultry, especially geese, are largely used by the common people in Pomerania. There is also no want of butter for the common people, but the consumption of cheese is greater.

We have already seen that the consumption of spirits is quite immense; it is less, however, in the Rhenish provs., where wine is extensively used, than in other parts of the monarchy. Beer, also, is an ordinary beverage, and the consumption is very great. The consumption of tobacco is estimated at 34 lbs. per individual. The common people (males) use, in winter, a woollen great coat, and in summer, a linen coat. Women now begin to be pretty extensive consumers of cotton stuffs; it is still, however, customary for the young female peasants to prepare stocks of linen in anticipation of their marriage. Wooden shoes are worn, but are not so frequent as in France or Ireland; and in bad weather, almost every body is well shod with leather boots and shoes; but in

fine weather, the common people often go barefoot. Silks are only used by the wealthier classes.

It is usual for the peasants to go to church regularly on the Sunday forenoon; and it is customary for them to spend the evening of the day in diversions of some sort, or other, frequently in the ale-house, and in Silesia in dancing-parties. Most little towns have shooting-places; and the meetings of the landwehr for exercise is looked forward to with much satisfaction. (Compiled from *Official Documents and Private Information*.)

**PRUSSIA (PROPER)**, an extensive and important prov. of the Prussian dominions, formerly divided into the provinces of East or Ducal Prussia, and W. Prussia, having N. the Baltic E. and S. Russia, Poland, and the prov. of Posen, and W. Brandenburg and Pomerania. Area, 215,74 sq. m. Pop. in 1837, 2,125,535, of whom 1,532,326 were Protestants, 555,230 Catholics, and the rest Jews and Mohammedans. It is divided into four regencies, and 57 circles. Principal towns, Königsberg, Dantzic, Elbing, Tilsit, Marienwerder, &c. It consists principally of an immense plain, traversed by the Vistula, Pregel, Passarge, and other rivers, and interspersed with numerous lakes and immense forests. Soil various, but generally fertile, particularly the delta of the Vistula and the country watered by the Nemen. Principal products, wheat and other sorts of corn, timber, hemp, and flax, provisions, wool, ashes, &c. Rye is more cultivated than any other sort of grain; wheat is also largely cultivated, but more for exportation than for internal consumption, rye being the ordinary bread corn. Oats, barley, and peas, are also raised; and latterly potatoes have been extensively cultivated. Farming implements defective and ill constructed: the harrows are made of wood, without any iron even for teeth. With the exception of the crown estates, which are let on lease, but little land is rented. In the circles of Dantzic, Elbing, and Marienwerder, good land fetches, when let, from about 4s. 6d. to 5s. an acre, the tenant bearing all taxes. But in other districts the rent of the cultivated land does not exceed from 1s. 3d. to 2s. 4d. an acre. The wages of farm labour vary in summer from 4d. to 8d., and in winter from 3d. to 5d., without food; but with a cottage free, or at a low rent, a garden, and pasture for a cow. In harvest the wages are a good deal higher. The peasantry live in wooden or clay cottages, with but few luxuries, principally on potatoes, rye bread, and milk, rarely tasting animal food, but drinking great quantities of spirits and beer. Linen, from flax of their own growth, and wool

spun in their cottages, furnish their clothing. Domestic servants get butchers' meat, generally pork, once or twice a week. Wood and turf are almost everywhere abundant, and are the principal articles of fuel. Amber is found along the sea-shore, but otherwise minerals are quite unimportant. There are many distilleries and breweries, but, with the exception of Posen, this is the least manufacturing prov. in Prussia. (*Jacob's First Report*, p. 13-22; *Perl's Paper*, No. 84., Sess. 1856, &c.—See PUTSANA and PUTSUNAG.)

PSKOF, a government of European Russia, chiefly between the 56th and 58th degs. N. lat., and the 28th and 32d E. long., having N. Petersburg and Novgorod, of each of which govs. it formerly made a part; E. Tver and Smolensk; S. Wittepsk; and W. Livonia. Area, estimated at 22,154 sq. m. Pop., in 1838, 705,300. The surface is nearly flat, with a slope to the N., the direction taken by most of the rivers. None of these are of considerable size; but the gov. is, notwithstanding, well watered. At the N.W. extremity is the lake of Pskof, connected by a strait with that of Pelpus. Marshes are numerous. The atmosphere is usually damp, though, on the whole, the climate is far from unhealthy. Soil thin, and not very fertile; but owing to the fecundity of the inuhs., more corn is grown than is required for home consumption. The produce averages 34 millions chertverts a year, of which upwards of 1 million may be exported. It consists chiefly of rye, barley, and oats, the proportion of wheat being small. A good deal of hemp and flax is raised. The forests are extensive, and abound with game. Cattle are not of great importance, and bees are less reared than in most provinces. Manufactures have increased during the present century, but they are still of no great consequence. The leather of this gov. is much esteemed, but its principal wealth consists in its corn and other natural produce. Pskof is divided into 8 districts; chief towns, Pskof, the cap., Toropetz, and Velikie-Louki. Its pop. consists mainly of Russians, with some Lithuanians and Poles. Public education is little extended; in 1831, only 2,110 individuals were receiving instruction, or 1 in 302 of the pop.; and only one printing-press existed in the gov.

PSKOF, or PLESKOW, a town of European Russia, cap. of the above gov., on the Velikaia, 165 m. S.W. Petersburg. Pop., in 1831, 8,731. It covers a large space of ground, and is divided into three parts, the Kremlin or citadel, the Middle Town, and the Greater Town, all surrounded with an earthen mound. It is mostly built of wood, but has two good edifices belonging to the archbishop and the consistory; a number of churches, two convents, and a high school. Its only manufactures are of leather; but it has a considerable trade in the export of the products of the country. A large annual fair is held here in Feb., at which large quantities of woollen, silk, and cotton fabrics, leather, books, jewellery, &c., are sold. This town is rather ancient, being mentioned in history as early as 903. (*Schultzler, La Russie*.)

PUEBLA (LA), a city of Mexico, cap. of the state of its own name, on the declivity of a hill, 76 m. E.S.E. Mexico, and 125 m. W. by S. Vera Cruz, lat. 19° 0' 15" N., long. 98° 2' 30" W. Pop., 50,000. (*Ward*.) It is compactly and uniformly built. The streets, which, though not very wide, are straight, and intersect each other at right angles, are paved with large diamond-shaped stones, with broad and well kept footpaths on either side. The houses, of stone, are generally two stories high, with flat roofs, having mostly a court in their centre, surrounded with open galleries, and a fountain of fine water, conveyed thither by earthen pipes. Many have iron balconies toward the street, and their fronts are laid with highly glazed tiles, or else gaudily and fantastically painted. The apartments are spacious; according to Mr. Ward, they are mostly paved with porcelain, carpets not being in use; and their walls are adorned with paintings in fresco. The family of the proprietor usually resides in the upper story, the ground-floor being occupied with shops, warehouses, or offices, and the second story by servants.

This would seem to be a perfect hotbed of priests; when Bullock visited Mexico, Puebla had no fewer than 69 churches, 9 monasteries, 13 universities, and 23 colleges. He says of the churches that they were the most sumptuous he had ever seen. "Those of Milan, Genoa, and Rome are built in better taste; but in the expensive interior decorations, the quantity and value of the ornaments of the altar, and the richness of the vestments, they are far surpassed by the churches of Puebla and Mexico." The cathedral, which forms one side of the principal square, has nothing remarkable in its exterior, but its interior is very rich. The high altar, which, however, is too large for the building, is particularly splendid. Several of the other churches are handsome, and, like the cathedral, abound in gold and silver ornaments, paintings, statues, &c. The bishop's palace has a library 200 ft. in length, which has a tolerable collection of Spanish and French books.

La Puebla is governed by 4 *alcaldes* and 16 subordinate magistrates. Its market is well supplied with all sorts of provisions except fish. Many of the inuhs. are wealthy, and have handsome carriages drawn by mules; but, like Mexico, the city swarms with beggars, a consequence of the want of industry, occasioned partly and principally by the mildness of the climate, but partly, also, by the distribution of provisions at the convent doors. It was formerly famous for its manufactures of coarse woollens, cottons, glass, earthenware, soap, &c.; but most of these have declined with the decrease of the trade formerly carried on with Acapulco, Callao, and the other ports on the Pacific. The manufactures of glass and earthenware, however, keep up their reputation, and the soap made here is sent to most parts of Mexico.

La Puebla was founded by the Spaniards. The state of which it is the cap. comprises the towns of Cholula, Tlascala, Huetoctingo, and other anc. Mexican cities; it also includes Popocatepetl, 17,716 ft. above the sea, being the highest mountain in N. America. (*Ward's Mexico*, ii. 72-74.; *Poinsett's Notes*, &c. p. 51-58.; *Humboldt, Bullock*, &c. in *Mod. Trav.* xxxv.)

PUEBLA DE SANTA MARIA. See ST. MARY'S. PUERTO-REAL, a town of Spain in Andalusia, prov. of Cadiz, and on the bay of that name, lat. 36° 42' N., and 60 m. S.S.W. Seville. Pop., in 1826, according to Mifano, 5,000; but according to Inglis, in 1830, 12,000. It is tolerably well built, with straight, regularly formed streets, crossing each other mostly at right angles, and lined with good houses. The market-place, an oblong space of considerable extent, has covered passages for provision-stalls, &c. There are 2 other public squares, both of which, as well as that last mentioned, are ornamented with handsome fountains. The only public buildings are a parish church and 2 hospitals. Fronting the sea is a wharf rising about 12 yds above the level of the highest tides; and a mole, 500 yaras broad, runs out 300 yards to low-water mark, having steps on each side for embarkation at all times of the tide: the whole is of stone, and has a handsome appearance. Near the town are extensive salt-works, the annual produce of which was estimated by Laborde at 21,300,000 quintals; and hence salt is an important article of commerce. The process of manufacture is by evaporation in wide and deep basins, communicating with the sea by locks. There are 3 series of these basins, and the salt undergoes a three-fold evaporation before it is considered sufficiently crystallized.

Puerto-Real is of no great antiquity; it was taken by the French in 1809, but soon abandoned; and during the war of independence it was the great depot for the French troops during their investment of Cadiz. (*Mifano & Laborde*, &c.)

PUNJAB (THE), (country of the Five Rivers), or LAHORE, a nominally indep. territory of N.W. Hindoostan, consisting of most part of the region watered by the 5 great arms of the Indus: the Sutlej, or Indus-Propet; the Jhylna, or Behul (an. *Hydraspes*); the Chenab (an. *Jessius*); the Ravee (an. *Hydrastes*), and the Sutledge (an. *Hyspérus*), with its tributary, the Beas (an. *Hyphasis*). It extends principally between the 29th and 34th degs. of N. lat., and the 70th and 77th E. long.; and formed, with some adjacent states, the extensive dom. of the late Maharajah Runjeet Singh. It is of a triangular shape, the apex directed S.W.; it has S.E. Rajpootana and the Bahawalpore territories, W. Beloochistan and Cambal, and N.E. the ridge of the Himalaya, separating it from Cashmere, Ladakh, and Little Tibet. Area estimated at 40,000 sq. m. Pop. probably 4,000,000, chiefly Sikhs, Jauts, Rajpoots, Hindos of low caste, and Mussulmen.

Nearly the whole country is that it is in many parts fertile, especially along the banks of the larger rivers; but it also comprises some wide, sandy, and barren tracts, especially between the Indus and Hydaspes. Cultivation generally increases and improves as we proceed eastward. Of the 4 divisions of the Punjab E. of the Hydaspes, the two nearest to that river are principally depastured by herds of oxen and cattle; and that most to the E. is the best cultivated. Sir A. Burnes says, "there is, perhaps, no inland country which possesses greater facilities for commerce than the Punjab, and there are few better supplied with the products of the mineral, vegetable, and animal kingdoms. These relieve it from any great dependence on external resources. The wheat and barley of the plains are expended within the country; and such is the number of horses, that gram, bajree, and other grains reared in a dry soil, are imported. Rice is exuberantly produced under the mountains; but it is not a diet which suits the palate of the people. The cane thrives luxuriantly, and sugar is manufactured for exportation. The smallness of its stalk is remarkable; but it is said to produce the most saccharine fluid, and is preferred to the thick cane of India. Indigo is reared E. of Lahore, and exported to the Mohammedan countries westward. A valuable oil is extracted from the *sirsya*, or sesamum plant, and used both for the lamp and cul-

nary purposes. Esculent vegetables, such as turnips, carrots, &c., are produced everywhere; and most of the vines and fruit trees common to Europe may be seen in the mountains. The climate is not very favourable to the cotton shrub; it is produced in the 'doab' between the Sutledge and Beas rivers; but it is also imported from the dry country S. of the former river. The mineral resources of the Punjab have been very imperfectly explored. A range of hills, extending from the Indus to the Hydaspes, formed entirely of rock-salt, furnishes an inexhaustible supply, and, being a close monopoly, contributes to enrich the ruler. It is in general use throughout the country, and most extensively exported, till it meets the salt of the Sambre lake in Rajpootana and the Company's territories. There is another deposit of salt on the verge of the mountains towards Mundi, but of an inferior description. In the same vicinity, it is said, some mines of coal have been discovered; and there are also extensive mines of iron. The salt range, and the iron lands, yield alum and sulphur; and nitre is gathered in large quantities from the plains." (*Bokhara*, &c., iii. 316-322.) But these statements must be received with considerable limitation: vegetable products are abundant only in the central parts of the country, through which Burnes travelled. The climate in the N., though hot in summer, is as cold in winter as that of France and central Europe, and never sufficiently warm to mature the most valuable products of Hindostan. Rice is grown in the valleys, but in limited quantities, the usual food of the pop. being wheat or peas, made into a thick soup; and, according to Mr. Trevelyan (*Parl. Rep. on India*, 1840), the Punjab does not produce sufficient sugar for its own consumption, but imports it from British India. Mr. Elphinstone, who travelled both in the N. and S. parts of this country, states that not one third part of the surface seen by him was under tillage; and there can be no doubt of the correctness of his statement, that, except near the rivers, no part of the Punjab will bear a comparison for productiveness with British Hindostan. (*Elphinstone's Caubul*, i. 109.)

The plains, which are diagonally intersected by so many rivers, might be successfully irrigated by canals; as is proved by the existence of some, and the remains of many others, the work of the Mogul emperors. The country abounds in cattle and horses, though the former be small and ill-conditioned, and no attention be paid to the breed of either. The salt mines, which were opened at a very early date, are one of the most productive sources of revenue. Burnes states that they yield about 800,000 maunds a year. The salt is sold at 2 rupees the maund, or at a third part of the price of that of Bengal; the working the mines costs 1½ lac rupees a year; but the profit to the government amounts notwithstanding, to 1,100 per cent. (*ibid.*) The remainder of the public revenue, which amounts to about 2½ crores rup., is principally derived from exorbitant taxes on land and agricultural stock. Moorcroft mentions a peculiar method of assessing the land tax, adopted, in his time, between the Beas and Sutledge, by a collector who had been chief financial minister to Runjeet Singh. "A given quantity of earth was put into a fine muslin sieve, and washed with water until all the mould was carried through, and nothing but the sand left, and, according to its proportion to the whole, a deduction was made from the assessment. Four rupees for 2 begas was the fixed rate for the rich soil; 3 if it contained one fourth of sand; 2 if it had a half; and 1 where the sand was three fourths the quantity. The general character of the soil of the Punjab, composed chiefly of mould and sand, renders this mode of appreciating its assessment more correct than might be supposed, and was, at any rate, preferable to the old plan of assessing the land according to the estimated out-turn of the standing crops." (*Moorcroft's Trav. in the Himalayas*, vol. i. p. 121.)

As respects the commerce of the Punjab, the staple commodities are the shawls of Cashmere, which reach India and Europe wholly through this channel. The annual revenue from the shawl manufacture, exclusive of every expense, is rated at 18 lacs of rupees, though, from frauds of all kinds, this sum greatly exceeds the amount that actually reaches the treasury. It is a curious fact, that the silkworm is unknown in the Punjab, though the silks of the immediately adjacent state of Mooltan have a high reputation in India. The natives in the E. of the Punjab excel in the manufacture of cotton, and their looms furnish white cloth at from ¼ to 1 rupee a yard, which, though inferior in appearance to that of British manufacture, is stronger and more durable. There is a considerable demand for foreign copper, brass, tin, and lead; all kinds of British hardware and woollens are much prized. There is a considerable importation of European articles; and British chintzes have wholly superseded those of Mooltan.

The Punjab is interesting to the classical scholar,

from its being the theatre of Alexander the Great's Indian victories. Mr. Elphinstone supposes the scene of the defeat of Porus to have been at Jelalpoor, on the Hydaspes, while, according to Burnes, it was most probably at Jelum, about 25 m. higher up the river. Burnes imagines he has discovered on the opposite sides of the Jhylum, about lat. 32° 40' N., long. 73° 40' E., the sites of Nicea (victory town), built by Alexander at the point where he crossed the Hydaspes, and of Bucephalia, built in commemoration of his favourite horse, Bucephalus, which expired in this region. (*Miford*, viii. 200.) Burnes joins Major Wilford in identifying the neighbourhood of the celebrated tope of Manikyal, between the Indus and the Hydaspes, with the site of the anc. Taxila. There are, however, very few Greek remains in the Punjab; and the statements of the historians of Alexander, as to the places where the great events in his Indian expedition occurred, are far too indistinct to allow of any certain conclusions being deduced from them. The Sikhs, now the ruling race in this quarter, originated as a Hindoo sect, about the middle of the 15th century, and remained in a turbulent feudal condition till early in the present century. About that period, Runjeet Singh, having subdued the other Seik chieftains, established a despotism; which, though far behind the governments of Europe, was yet far in advance of most native governments in the East. He maintained an army of about 25,000 regular infantry, drilled as Europeans, 5,000 regular cavalry and artillery, and, perhaps, 50,000 irregular horsemen, who were paid by assignments of land for military service; and by their means he made himself feared and respected by his neighbours. His government was vigorous, without being either cruel or unnecessarily severe. But, since his death, which occurred in 1839, no successor adequate to the task of government seems to have appeared; and it is probable that this territory will, at no distant period, be definitively incorporated with the British dominions. (*Burnes's Travels*, 3 vols.; *Elphinstone's Caubul*, &c.; *Moorcroft's Parl. Reports*.)

PUTIWL, or POUTIWL, a town of European Russia, gov. Koursk, cap. distr., on the Seim, a tributary of the Dniepr, 10.0 m. W.S.W. Koursk. Pop., 9,000. It has a high school, and a great number of churches, most of which are, however, only wooden structures. Its general trade is considerable, and it has a large annual fair. (*Schmitzer, La Russie*.)

PUY (L'E) (an. *Reussio* and *Vellani*), a town of France, dep. Haute-Loire, of which it is the cap., on the Boire, here crossed by a bridge of 8 arches, 36 m. S.W. St. Etienne. Pop., in 1836, 14,734. It stands on a steep acclivity, and has, when seen from a distance, a picturesque appearance; but, in reality, it is ill-built, and the streets, which are narrow, dirty, and ill-paved with smooth pieces of lava, are frequently impracticable for vehicles of any kind, and even dangerous for foot-passengers. Lately, however, the commerce of Le Puy has revived, and the town has been a good deal improved. The cathedral, in a very conspicuous situation, a Gothic structure of the 10th century, has a richly ornamented altar, on which is a statue of the Virgin, brought by Louis IX. (St. Louis) from Egypt, and presented by him to the city in 1254, on his return from his unfortunate expedition to that country. Adjacent to the town is a very singular needle-shaped rock, about 300 ft. in height, on the summit of which another church is erected. There are several other churches; and it is said that the remains of the famous constable Duguesclin, originally deposited in the abbey of St. Denis (*Biographie Universelle*), have been transferred within these few years to the church of St. Laurence, in this city. (*Hugo's Guide du Voyageur*.) Among the other public buildings are the prefecture, a handsome new edifice; a public library, with 5000 vols.; a town-hall, bishop's palace, seminary, college, hall of the tribunal of commerce, 2 hospitals, barracks, and theatre. Le Puy has a tribunal of original jurisdiction, a chamber of manufactures, a commercial college, normal school, a society of agriculture, science, and arts, gratuitous courses of geometry and mechanics, applied to the arts, and a small museum of antiquities and paintings. It is celebrated for its manufacture of white and black lace. Le Puy is very ancient, but its origin is uncertain. It is called *Vellavauris* by Gregory of Tours; and in the middle ages several ecclesiastical councils were held in it. It suffered considerably in the wars of the League; and till lately its trade and prosperity were much depressed. (*Hugo, art. Haute-Loire*, &c.; *Guide du Voy.*; *D'Anville, L'Anatomie Gaule*, 545.)

PUY-DE-DOME, a central dep. of France, formerly a part of Auvergne, between lat. 45° 17' and 46° 18' N., and long. 2° 20' and 4° E.; having N. Allier, E. Loire, S. Haute-Loire and Cantal, and W. Corrèze and Creuse. Area, 797,338 hectares. Pop., in 1836, 573,106. This dep. is almost wholly covered with mountains of volcanic formation, the highest of which, the Pic-de-Sancy, is 6,223 ft. in height: the Puy-de-Dome, whence the dep.

takes its name, has an elevation of 4,842 ft.\* Principal rivers, Allier, Dord, Stouze, and Dordogne, most of which have a N. direction; the Allier intersects the dept. about its centre, and its valley, the Limagne of Auvergne, is exceedingly fertile. In general, however, the soil is sandy, stony, and otherwise indifferent; and agriculture, owing to the poverty and ignorance of the natives, is in a more backward state than in most other parts of France. Great numbers of the inhabs. annually emigrate in search of field labour into the adjacent provs. In 1834, 366,339 hectares of the surface were said to be arable, 90,131 h. in pastures, 29,152 in vineyards, 82,389 in woods, and 192,112 in heaths and wastes. Rye, oats, and wheat, are the principal grains cultivated, and in 1835 the total produce of corn was estimated at 2,965,000 hectolitres, in addition to which 1,200,000 h. of potatoes were grown. The annual produce of wine is estimated at from 400,000 to 500,000 hect.; it is mostly of inferior quality, cannot be conveyed from place to place without the risk of being spoiled, and, generally speaking, is good for little, unless it be mixed with other wines. (*Jullien*, 173.) The annual produce of wool is estimated at 900,000 kilogr. Chestnuts, timber, honey, walnut oil, and cheese, are among the principal sources of its wealth. In 1835, of 225,172 properties subject to the *Contribution foncière*, 113,695 were assessed at less than 5 fr., and 37,485 at from 5 to 10 fr. Puy de Dome yields lead, antimony, coal, granite, &c. Its manufactures, which are mostly confined to the arrond. of Thiers and Ambert, consist in the former principally of cutlery and hardware, paper, leather, wax lights, &c.; and in the latter, of woollen, linen, and cotton goods, lace, and paper. The dep. is divided into 5 arronds.; chief towns, Clermont-Ferrand, Ambert, Issoire, Riom, and Thiers. It sends 7 mems. to the Ch. of Dep. Registered electors in 1838-39, 2,106. Total public revenue in 1831, 10,057,196 fr. (*Hugo*, art. *Puy de Dome*; *French Official Tables*; *Dict. Géog.*)

PYRENEES, a lofty chain of mountains in S.W. Europe, separating Spain from France, and which, taken in its largest extent, may be regarded as stretching from Cape Creux, in Spain, on the Mediterranean, near the frontier of France, W. to the coast of Galicia, a distance of about 650 m. It is more usual, however, to confine the term to that portion of the chain which separates Spain from France:—

"Pyrenæ celsa nimbus verticibus aëros  
Dilectos cœlis late prospectat Iberos,  
Atque æterna tenet magnis diuortia terris."  
*Silius Italicus*, iii. lin. 417.

When thus restricted, the chain terminates on the W. near Fuenterrabia, between lat. 42° 10' and 43° 20' N., and long. 3° 20' E. and 2° W., its length being about 270 m., its average breadth about 38 m., and the area about 1,100 sq. m. This great range may be considered as consisting of 2 parts, both having the same direction, though not in one continued line, the point of division being formed by the Val d'Aran, near the head waters of the Garonne; of these the W. part is more southerly than that to the E. The steep escarpment is on the side of Spain; the slope towards France being much more gradual, owing to the elevation of the level districts about the Adour and Garonne. It may be remarked, also, that the French valleys ascend the crest of the chain by easy steps, more or less lofty, while the opposite side presents a continued succession of rugged chasms, abrupt precipices, and huge masses of naked rock. The chain at each extremity declines towards the sea; but the fall on the E. is much more sudden than on the W.; the elevation only 50 m. from the Mediterranean being 8,500 ft., whereas on the opposite side this altitude is not found nearer than 70 m. from the coast. The following table gives the position and elevation of the principal summits of the Pyrenees.

	Lat.	Long.	Height in feet.
Le Canigou	42° 31' N.	2° 25' E.	9,141
Pic Pedraña	42 34 -	1 56 -	9,511
Pic de Serrère	42 36 -	1 59 -	9,516
Montcalm	42 31 -	1 50 -	10,603
Pic des Estats	42 40 -	1 28 -	10,611
Caraboules	42 42 -	0 37 -	10,545
Proumouse	42 45 -	0 13 -	10,496
* La Maladetta, or Pic de Néon	42 38 -	0 47 -	14,424
* Pic Posets	42 40 -	0 31 -	11,277
* Mont Perdu	-	-	11,168
Pic de Cascade	-	-	10,745
Do. Vignemale	42 46 -	0 4 W.	11,401
Do. Soube	42 49 -	0 21 -	10,276
Do. Moli de Bitorre	42 55 -	0 12 -	9,514

\* We may remark, by the way, that it was here, on the 19th of Sept. 1818, that the delicate experiments recommended by Pascal, for determining the weight of the air, and its influence on the height of the mercury to the summit of the mountain, were carried into effect, by conveying the instrument to the summit of the mountain. The result was precisely such as Pascal had anticipated, the mercury falling as the barometer reached a higher elevation. (*See Montcalm, Histoire des Mathématiques*, ii. 260.; and *Biographie Universelle*, art. *Pascal*.)

The above measurements are those given by Brnguière (*Orographie de l'Europe*), from the extensive surveys made by Charpentier, Ramond, Bébout, Vidal, &c. The summits marked with an asterisk, which comprise the three highest points of the chain, are on its S. face. Glaciers are found, as in the Alps, on some of the higher mountains; but these masses of permanent ice are much less extensive, the point of perpetual congelation being at a height of 10,000 ft., or about 2,000 ft. higher than in the Alps, a difference owing chiefly to the vicinity of the sea on either side.

The valleys of the Pyrenees are numerous, and of singular conformation; for, whereas the depressions of the Alpine system run from 40 to 70 m. nearly in the direction of the chain, all the great valleys of the Pyrenees are transversal, taking their origin at a *col* in the crest, and running N. and S. almost at right angles with the main ridge. The largest valleys are found in the central Pyrenees, the principal being those of the Garonne and Lavedan, each of which is from 40 to 50 m. in length. These transverse valleys are commonly the beds of rivers, or rather torrents; which, in the wider and less elevated parts, take a slow and serpentine course, but in the defiles become rapid and impetuous torrents, often interrupted by cascades, and sometimes by a series of falls. Lakes are frequently enclosed in the basins formed in the higher ridges of the valleys, and several of those in the central Pyrenees, which are sheltered from the sun, are perpetually covered with ice. Some valleys, also, instead of running in a deep and narrow defile, or a series of little basins, more or less extensive, rising by degrees to the height of the central ridge, present at their origin a single basin, surrounded on 3 sides by a lofty wall of rock, and opening by a narrow gully into the vale below; and these natural amphitheatres, or *cirques*, as they are termed (the principal of which is that of Gavarnia, in the valley of Barèges), constitute the grandest and most distinctive features of the Pyrenees. About 50 passes are formed through the valleys now noticed; but by far the greater number are practicable only for the peasantry, and *contrabandistas* who are found in all parts of the Pyrenees. There are only 5 good carriage roads over the chain:—1. the Col de Pertus, the extreme E. pass between Perpignan and Jonquera, practicable at all seasons, and by all kinds of vehicles; 2. the Pass of Puyomorsins, leading from the valley of the Seine to that of the Arrigè (6,229 ft. high); 3. the Port de Canfranc, between Pau and Saragossa (6,713 ft.); 4. the Port de Roncevaux, between St. Jean and Pampeluna (5,771 ft.); and 5. the Pass of Bidassoa, along the high road connecting Burgos and Vittoria with Bayonne. The first and last of these passes are those most generally used by travellers between Spain and France. The two highest passes are the Port d'Or (9,843 ft.), and the Brèche de Roland (9,866 ft.); but they are practicable only during about 2 months of the year.

The geology of the Pyrenees is still very imperfectly known, notwithstanding the researches of Charpentier, Palasson, and other naturalists. The extent of primitive rock is smaller than in the Alps; but its arrangement is very peculiar; not in isolated masses, bursting here and there through the transition and secondary formations, but in a band or zone running in the direction of the chain, but only occasionally falling in with the crest or central chain; the granite in the W. section is on the S., and in that to the E. on the N. side of the main ridge. The primitive formation is extremely simple, consisting of three rocks only, granite, micaceous schist, and primitive limestone, which, together, form a pretty continuous band, stretching three fourths across the isthmus. The transition rocks, comprising the great bulk of the mountain system, are arranged in vertical bands flanking the primitive formation, and consist of argillaceous schist, schistose and common grauwack, with blue limestone; these strata occur mostly on the N. side, the beds S. of the primitive formation being chiefly secondary rocks, as red sandstone, Alpine and Jura limestone, &c. The oolite and chalk formations are found in the lower parts of the chain on either side.

The existence of volcanic action is proved by different parts of the chain; by the peculiar manner in which many of the strata are upheaved; by the frequency of earthquakes on both sides of the range, and by the abundance of thermal springs, especially in the valleys on the French side of the Pyrenees. The most celebrated springs are those of Bagnères de Bigorre and Barrège, Bagnères de Luchon and St. Sauveur; all of which are visited, during the summer months, by persons labouring under rheumatism and chronic disorders, as well as by others in search of pleasure and picturesque scenery.

Iron, copper, zinc, and lead are found in the Pyrenees; but, with the exception of iron, these ores are not wrought, though it be a well-known fact that great mineral riches were extracted from these mountains by

the Carthaginians and Romans. Indeed, there are the remains of 300 or 400 deserted mines in different parts of the Pyrenees, some of which are said to be very rich. The veins of marble are numerous and valuable, one of them, a white marble, being equal, in purity and closeness of texture, to that of Carrara.

The flora of the Pyrenees comprises the rhododendron, the alpine rose, and a large variety of plants common to high elevations; the principal forest trees being the box, fir, pine, and, in lower situations, the deciduous oak. The fauna comprises the chamois, a species of chamois, the wolf, and the bear; with a variety of birds, many of which are migratory.

The Pyrenees give rise to numerous rivers. Those on the N. side comprise the Adour and its tributaries, the Pau, Oleron, Saison, Nive, &c.; the Garonne, with the Gers, Arrège, and others of its affluents, all sending their waters into the Bay of Biscay; and the Aude, the Tet, and the Tech, falling into the Mediterranean. The rivers descending from the S. slope are mostly tributaries of the Ebro, the principal being the Aragon, Gallego, Cinca, and Segre, all of which have numerous branches; the other rivers of this slope are the Ter and the Llobregat, the latter flowing into the sea close to Barcelona.

With respect to the scenery of the Pyrenees, as compared with that of the Alps, Mr. Inglis observes, that each has its peculiar charms, but that scenes of savage sublimity are more frequently met with in Switzerland than in the Pyrenees; the N. lat. of the former, as well as the greater size of its rivers and lakes, adding to its features of wild grandeur. The Pyrenees, however, appear to exceed the Alps in elevation, owing to the much lower level of the valleys, as compared with those of Switzerland, some of which are nearly 4,000 ft. high, while those of S.W. France scarcely exceed 2,000 ft. The presence of oaks, also, in the forests, clothing the sides of the mountains, gives a beauty to the Pyrenees which is wholly absent on the fir-covered steeps of the Alps. But, however worthy of the traveller's notice, these valleys will probably never become the frequent resort of the tourist, because access to them is extremely difficult, and the accommodation for travellers worse than indifferent; while Switzerland, accessible in several directions by good roads, is visited not only on its own account, but because it is the high road to Italy. (*Inglis's Switz., France, and Pyrenees*, p. 212-3.)

The mountaineers of the Pyrenees are shepherds, and small proprietors both of land and cattle; but owing to the delicacy of nutritious vegetation, their condition as graziers is far inferior to that of their brothers of the Alps. They are patient and industrious, though seldom raised above want; besides which, they are in every thing, but especially in food and clothing, more simple and primitive than the Alpine mountaineers, than whom, however, they are unquestionably handsomer and more vigorous. Their food usually consists of rye or barley bread and paste, made from lichen and pork, with occasionally, salted kid's flesh and pork. Mr. Inglis speaks favourably of their character for kindness and generosity; adding, also, that "crime of every description is rare in the Pyrenees, theft very infrequent, and murder altogether unknown." (P. 219.) On these mountains is found the extraordinary race of people, called *Cagots*, distinguished by the fair sallies of naturally countenances, stupid expression, want of vigour, relaxed appearance, imperfect articulation, disposition to goitres, and inferior share of mental capacity. They live in the most retired valleys, secluded from and studiously avoiding intercourse with the rest of the inhab., by whom they are looked upon as a degraded race; and though they are not persecuted, enslaved, and debarred the privileges of religion as formerly, they are "still a separate family, still outcasts; a people having evidently no kindred with those who live around them, but the remnant of a different and more ancient family." The origin of this curious race is hidden in obscurity; but M. Ramond and others conceive them to be the miserable remains of the German conquerors of the Spanish peninsula.

The Pyrenees, which seem to have been known to the Greeks under the name of *Iugæ*, are connected with many important historical events. Hannibal crossed them on his way to Italy, at the beginning of the second Punic war, most probably by the pass of Pertus, near the E. end of the chain. Julius Cæsar also traversed them with his army, when marching into Spain against Pompey. Charlemagne carried his victorious arms over these mountains, and added Spain to the empire of the Franks. Edward the Black Prince led his army over one of the western passes, when fighting in defence of Peter the Cruel against Henry of Castile; and these mountains have obtained a more recent celebrity from having been the scene of several obstinate struggles between the French and English at the close of the Peninsular war, the result of which set in a striking point of view the great military talents of the Duke of Wellington. (*Les Pyrénées*, par Chaussegny, p. 9-43. *Relation*, *Histoire Nat. des Pyrénées*, 2 vols. passim; *Encycl.*

**PYRENEES (BASSES)**, a frontier dep. of France, reg. S.W., formerly comprised in Gascony, Bearn, and Navarre; between lat. 42° 42' and 43° 35' N., long. 0° and 1° 48' W., having N. Landes, E. Hautes-Pyrenees, S. and W. Spain, and N.W. the Bay of Biscay, on which it has a coast-line of about 125 m. Area, 749,400 hect. Pop. in 1836, 428,400. The Pyrenees bound this dep. on the S.; their highest point in this part of the range, the Pic du Midi, being 9,546 ft. in height. Their ramifications cover the greater part of the dep., which is traversed by the rivers Gave de Pau, Oleron, Bidouze, Nivèze, &c., tributaries of the Adour, and flowing N.W. Small lakes, mineral springs, &c., are very numerous. Except on the mountains, the climate is temperate and healthy; the soil in the lower parts of the country is very fertile, while the mountain sides are covered with fine pastures and forests, which maintain great numbers of cattle and hogs. In 1834, 156,223 hectares of the surface was said to be arable, 66,254 in artificial meadows, 23,175 in vineyards, 130,172 in woods, and 340,732 occupied with natural pastures, heaths, wastes, &c. (*French Official Tables*). "Between Betharram and Pau, the country is beautiful. We are traversing the rich vales of Bearn, every inch of land is cultivated, and the road is a constant succession of villages and houses. The principal products of this country are fruit, wine, and Indian corn, all of which grow in great perfection. It is in this district that the pines so much prized in England are grown and prepared; and every description of fruit that is produced in the lower parts of Bearn is excellent of its kind. Here, too, we find the vine, not as it is found in the other parts of France, an insignificant shrub, covering the acclivities, and possessing not much greater beauty than a potato-field; but trained from tree to tree, as in some parts of Italy and in the Tyrol. This district, excepting the valleys of the Pyrenees, is certainly the most beautiful part of France." (*Inglis's Switz., France, &c.*, p. 304.) Agriculture is, however, in a very backward state; by what would seem to be a singular contradiction, the sides of the hills are cultivated, while the plains, which it may be presumed, would be much more productive, are left waste or in pasture; and the corn is insufficient for the home supply. Maize and wheat are the grains principally cultivated; flax and hemp are, also, raised in large quantities. The produce of wine is estimated at about 300,000 hectolitres a year, of which about a part is consumed by the inhabs.; some growths, particularly those of Jurançon, near Pau, are of a superior quality. In 1830, there were estimated to be nearly 117,000 head of cattle in the dep., and 461,600 sheep, the produce of wool being supposed to amount to about 1,600,000 kilogr. The breed of horses has been greatly improved by the stud at Pau; a great many mules are bred for export into Spain. The hogs furnish the hams so well known under the name of *jambons de Bayonne*. In 1835, of 94,893 properties subject to the *Contribution foncière*, 47,538 were assessed at less than 5 fr., while 14 only were assessed at 1,000 fr. and upwards. Copper, iron, sulphur, cobalt, slate, marble, and granite, are among the mineral products; and mining industry is carried on upon a pretty extensive scale. The manufactures comprise woollen and linen stuffs and yarn, printed handkerchiefs (called *manchoirs de Bearn*), leather, hardware, earthenware, paper, chocolate, brandy, &c.; and the dep. furnishes supplies of planks, with cordage, &c., for the dock-yard at Bayonne. The value of the cattle, wine, hams, salted geese, &c., exported to foreign countries, especially contraband to Spain, is estimated at 4,000,000 fr. a year, and that of the exports to other parts of France at about 3,000,000 fr. Basses-Pyrenees is divided into 5 arrondis.: chief towns, Pau, the cap., Bayonne, Mauleon, Oleron, and Orthez. It sends 5 mem. to the Ch. of Dep. Registered electors in 1838-9, 1,116. Total public revenue in 1831-2, 7,365,744. (*Inglis*, art. *Basses-Pyrenees*; *Dict. Géog.*; *French Official Tables*; *Inglis*.)

**PYRENEES (HAUTES)**, a frontier dep. of France, reg. S.W., formerly included in Gascony, between lat. 42° 42' and 43° 35' N., and long. 2° W. and 3° E., having N. Gers, E. Haute Garonne, W. Basses-Pyrenees, and S. Spain, the ridge of the Pyrenees forming the line of demarcation between the two kingdoms. Area, 452,790 hectares. Pop. in 1836, 233,031. Within the limits of this dep. are some of the most remarkable places of resort and objects of curiosity in the Pyrenees, as the baths of Bagnères, Bagnères, and Cauterets, the valley of Gavarnie, *Brèche de Roland*, &c. By far the greater part of the surface is covered with ramifications of the Pyrenees, among which the Gave de Pau, Gers, Adour, &c., take their rise. Small lakes are very numerous in the mountains. In 1834, of the surface of the dep. 94,539 hectares were estimated to be arable, 44,376 in meadows, 15,382 in vineyards, 84,611 in woods, and 79,579 in heaths, wastes, &c. There is a larger proportion of good soil in this than in the neighbouring dep. of the *Basses-Pyrenees*,

though the produce of corn (chiefly maize and wheat), be still insufficient for the inhabs. Property is much subdivided: most of the peasants are proprietors of the soil they cultivate; and the greater number of the other proprietors are engaged in the cultivation of their own lands. In 1835, of 78,713 properties subject to the *contrib. foncière*, no fewer than 44,031 were assessed at less than 5 fr., and 12,865 at from 5 to 10 fr., while only eight were assessed at 1,000 fr. or upwards. (*French Official Tables*.) *Hugo* describes a family in the mountains whose condition might be taken as a fair sample of that of the poorer mountaineers of the Pyrenees. "The property of the peasant," he says, "consisted of two cows and three goats. A small meadow in the neighbourhood of the hut was fertilized, and allotted to rye, and about a rood of land was laid out in potatoes and cabbages. The peasant and his family consumed the whole produce of the animals. Meat of no kind ever entered the cabin; but the lake, 1½ league distant, occasionally supplied a few fish. A kind of cheese, like some of the poorer Scotch cheeses, was made from the goats' milk; and the sale of this to the lower orders at Carcets was the only source of the money necessary for the purchase of clothes and whatever else was not produced by cows and goats." (*Switzerland, the Pyrenees, &c.*, p. 280, 281.) The dep. produces about 270,000 hectolitres a year of inferior wine, about a half of which is exported or converted into brandy. A good many cattle are reared, and the horses bred in the plain of Tarbes are extensively purchased for the service of the light cavalry. Mules are bred for export into Spain. The produce of wool is reckoned at about 370,000 kilogr. a year; and a good deal of butter is made of the milk of the sheep. The produce of honey and wax is also considerable. Minerals and manufactures, though of little importance, are not quite valueless, there being good marble quarries, and some fabrics of woollen, linen, and cotton stuffs, with tanneries, distilleries, &c. The dep. is divided into three arrondis: chief towns, Tarbes (the cap.), Argeles, and Bagnères de Bigorre. It sends three mems. to the Cham. of Dep. Registered electors, in 1838, 39,545. Total public revenue, in 1831, 3,118,056 fr. (*Hugo, art. Pyrénées-Hautes; Dict. Géog.; French Official Tables*.)

PYRENEES-ORIENTALES, a marit. and frontier dep. of France, reg. S., consisting principally of the old prov. of Roussillon, with a portion of Languedoc, E., having N. Ande, W. Arles, S. Spain, the ridge of the Pyrenees forming the line of demarcation between the two kingdoms, and E. the Mediterranean. Shape nearly triangular. Area, 411,623 hectares. Pop., in 1836, 157,052. The Pyrenees in this dep. are less lofty than in the greater part of the rest of their course; still, however, the Canigou, their highest peak, attains to an elevation of 9,140 ft. The dep., though in great part mountainous, comprises a large extent of plain country. The principal rivers are the Tet, Tech, and Agly, but none of these are navigable. In 1834, 92,554 hectares of the surface were supposed to be arable, 9,796 in artificial pastures (probably meadows), 58,442 in vineyards, 43,877 in woods, and 188,407 in heaths, wastes, &c. The arable lands are of two classes,—wet and dry. The irrigable, or wet, are always under culture; in the rotation to which they are subjected, they usually yield three crops in two years; one of which is wheat, and the others trefol, or beans, maize, potatoes, hemp, or flax, when they are kept in grass for an equal period. The dry, or non-irrigable, lands are alternately under wheat or rye, or in fallow. But though agriculture be better conducted than in most of the adjacent depts., the corn continues to be separated from the grain by treading out with horses, as in Ande. The total produce of corn, chiefly wheat, maize, and rye, was estimated, in 1835, at 442,160 hectolitres a year, a quantity obviously much below the demand of the pop. The dep. also furnishes in ordinary years about 300,000 hectol. of wine, and 12,000 of oil. The *vins ordinaires* are highly coloured and heavy, and are but little drunk in the pure state in other parts of France, but are extensively employed to give colour and body to the weaker wines of other depts. The red wines of Bagnols and the white wines of Rivesaltes are, however, of a very superior description. The former are *pleins de corps et de spiritueux, avec de la melle, du velouté, et un fort bon goût. En vieillissant ils acquièrent de la finesse du bouquet, et un couleur de l'or.* (*Jullien*, p. 282.) The white Muscat wine of Rivesaltes is said by the same distinguished authority to be decidedly the best *vin de liqueur* produced in France. *Il est plein de finesse, de feu, et de parfum, il embaume la bouche et la laisse toujours fraîche; et il est bien constant que ce vin est l'un des meilleurs de l'univers, lorsque il provient d'une bonne année et qu'il a vieilli.* (p. 285.)

The horses of the dep. have been very much improved by the royal stud at Perpignan and otherwise; sheep and goats are, however, the most valuable domestic animals; the former yield annually about 50,000 kilogr. of wool for exportation, after supplying the home consumption.

The mulberry has been introduced, but this dep. ranks last among those in which silk is grown. About 300,000 kilogr. a year of cork are collected. Property is very much subdivided. Of 54,906 properties subject to the *contrib. foncière*, in 1835, 27,018 were assessed at less than 5 fr., and 9,454 at from 5 to 10 fr.; only 32 properties were assessed at 1,000 fr. and upwards. Iron, copper, blamuth, and lead are raised, but in no great quantities. Many of the inhabs. of the coast are occupied in the tunny and anchovy fisheries; and there are manufactures of coarse woollen stuffs and hosiery, with iron forges, tanneries, paper-mills, distilleries, &c. The dep. is divided into three arrondis: chief towns, Perpignan (the cap.), Céret, and Prades. It sends three mems. to the Chamber of Dep. Registered electors, in 1838, 39,849. Total public revenue, in 1831, 3,182,498 fr. Roussillon belonged successively to the kings of Majorca and of Arragon, till Louis XI. took it from the latter. It was restored by Charles VIII., and remained attached to the Spanish monarchy till 1640, when it was finally annexed to France. (*Hugo, art. Pyrénées-Orientales; Dict. Géog.; French Official Tables*.)

## Q.

QUEBEC, a city and sea-port of Canada, of which, and of the British possessions in N. America, it is the cap., on the N. W. bank of the St. Lawrence, at the point where it is joined by the St. Charles, about 340 m. from the mouth of the former, lat. 46° 48' 49" N., long. 71° 10' 45" W. Pop., in 1843, 31,567. It occupies the extremity of a ridge, terminating in the angle formed by the junction of the two rivers, in the point called Cape Diamond, rising to the height of nearly 340 ft. above the St. Lawrence. The cape is surmounted by the citadel; and the town extends from it, principally in a N. E. direction, down to the water's edge. It is divided, from the difference of elevation, into the Upper and Lower towns. The old town, which lies wholly without the walls, partly at the foot of Cape Diamond, and round to the St. Charles, had narrow and dirty, and in parts steep streets. We say *had*, for the principal part of it has been destroyed in two tremendous conflagrations in May and June this year (1845). Though built of stone, the houses which have been burnt down were mostly roofed with shingles; and to this the extent of the destruction occasioned by the fires in question is principally to be ascribed. In rebuilding the town care will, no doubt, be taken to have the streets properly laid out, widened, and otherwise improved. The ascent from the Lower to the Upper town, is by a winding street, and by flights of steps. The streets in the latter, though narrow, are generally clean, and tolerably well paved, or macadamised. The public buildings, and most of the houses in it, are roofed with tin plates.

Quebec is very strongly fortified, and may, in fact, be called the Gibraltar of America. The citadel over Cape Diamond includes an area of about 40 acres; and is formidable, alike from its position and its works, constructed on a gigantic scale, and on the most approved principles. The line of the fortifications, which stretches nearly across the peninsula on the W., and runs along a ridge between the upper and lower towns, is intersected by five gates, and has an inner circuit of about 2½ miles. Beyond the ramparts, on the W., are the extensive suburbs of St. Roch, St. John, and St. Louis.

The public buildings are substantial, rather than elegant. The Château St. Louis, the residence of the governor-general, a large, plain building, on a height overhanging the river, was burnt down early in 1835. The Rom. Cath. cathedral of Notre Dame, the Protestant cathedral, with sandy other Catholic and Protestant churches; the old episcopal palace, now the seat of the Canadian legislature; the quadrangular edifice formerly the college of the Jesuits, but now a barrack; in the upper town; with the Quebec bank; the Exchange and bug room, well furnished with American, British, and other newspapers and periodical publications; and the government warehouses, in the lower town, comprise the principal public buildings.

There are three nurseries, one of which, the Hôtel de Dieu, is a very valuable hospital. The nuns are here, in fact, a most useful class of persons, acting as nurses to the sick admitted within these establishments, and as instructresses of young girls.

Among the establishments for educational purposes, the first place is due to the French college. It has a principal, and professors of theology, rhetoric, and mathematics, with 5 regents for the Latin and Greek classes. Here is, also, a royal grammar school, a classical academy, a national school, and many French and English private schools. A royal institution for the advancement of learning within the prov., and a Literary and

Historical Society, respectively enjoy the patronage of the government and of the principal inhab. A Mechanics' Institute was established in 1830; and it has numerous benevolent associations. The city public library, though not very extensive, is said to be well selected, and to contain a great variety of standard works. The Garrison, also, has a good library. Several newspapers are published in the city.

Though not a manufacturing town, Quebec has various distilleries, breweries, with tobacco, soap, and candle works; and numbers of fine ships have been launched from its yards. It has two or three banks, and a savings-bank. The markets are well stocked with most sorts of produce, except good fish, which is rather scarce and dear.

The climate, though on the whole good and healthy, is in extremes. In summer the heat is equal to that of Moscow, while the cold of winter is not inferior to that of Moscow. This inequality occasions a corresponding difference in the modes of life during the different seasons of the year. In winter travelling is carried on by means of sledges and carriages, in the same way as in Russia. The first view of Quebec in sailing up the St. Lawrence is striking in the extreme; and Mr. Macgregor speaks in high terms of the magnificent prospect from the citadel on Cape Diamond.

The majority of the pop. being of French extraction, the French language, which is still spoken in some of the best circles with great propriety, and the R. Catholic religion, predominate. Society is here more polished and refined than in any other town of British America; and the higher provincial gentry of French descent are distinguished by the courteousness and urbanity of their manner. But, in consequence, perhaps, of the seductive example of the mimic court established amongst them, all classes are much given to show, and generally indulge in expenses beyond their means. Hence Quebec is very expensive; and owing to the jealousies that exist, and the violence of provincial politics, society is split into different parties. Great attention is, also, paid to etiquette; and those admitted to the governor-general's parties rarely associate with those who do not enjoy that honour.

Vessels of the very largest burden arrive at Quebec.

ACCOUNT of the Arrivals of Ships in Quebec, specifying the Amount of Tonnage, the Number of Seamen employed, and Number of Immigrants; with the Number of Vessels built in Quebec, the Tonnage, and Number of Men employed in building the same; in each Year from 1833 to 1839, both inclusive:—

	1833.	1834.	1835.	1836.	1837.	1838.	1839.
Arrivals - - -	1,005	1,122	1,132	1,185	1,032	1,125	1,175
Tonnage - - -	271,148	325,863	325,305	355,505	326,186	313,782	383,814
Seamen - - -	12,584	15,516	11,480	15,556	12,844	15,413	15,727
Immigrants - -	22,062	30,217	30,217	27,513	21,855	2,950	7,138
Ships built - -	15	11	18	3	18	16	17
Tonnage - - -	3,952	4,601	8,482	749	9,920	8,448	9,512
Men employed -	715	808	990	165	990	880	935

\* The small number of immigrants in this and the previous year is ascribable to the then disturbed state of the prov. The numbers have since become as large as formerly.

ACCOUNT of the Ships arrived at Quebec and Montreal in 1838, specifying the Countries whence they arrived, and the Number of Ships, with the Tonnage and Crews from each.

Quebec, as every one knows, was taken from the French in 1759. A British army, under General Wolfe, having effected a landing near the city, attacked and defeated the French army under Montcalm, on the heights of Abraham, to the W. of the town. Wolfe

its harbour or basin, between the city and the island of New Orleans, is of great extent, having in general about 28 fathoms water, the tide rising from 16 to 18 ft. at neaps, and from 25 to 30 ft. at springs. Ships lie alongside the wharfs along the St. Lawrence. There are extensive flats between the lower town and St. Charles, where, if it were deemed of importance, wet docks might be easily constructed.

The trade of the city is very extensive. It engrosses almost the entire trade of the prov. with the mother country, the W. Indies, &c.; and is annually resorted to by vast numbers of immigrants, who partly settle in Canada, but who mostly re-emigrate to the U. States. It has a regular intercourse, by means of steamers, with Montreal, and other ports higher up the St. Lawrence, and with Halifax, and other ports on the Atlantic. Still, however, it must not be forgotten, that in so far as the United Kingdom is concerned, the trade with Canada and Quebec is wholly forced and factitious, and is not a source of profit, but the reverse. It is in fact, as has been already shown (1. 522.), almost wholly a consequence of the high discriminating duties laid on our ports on timber from the N. of Europe, by which we exclude a cheap and good to make room for a comparatively bad and dear article. But for this preposterous arrangement, the trade between Great Britain and Quebec would be extremely unimportant. Thus, in 1837, of the total value of the imports from Canada, amounting in all to 908,792., timber made 651,786. 1 the only other article of any importance being ashes. The principal articles of import into Canada consist of corn, cottons, woollens, silk, and other manufactured goods; glass ware, spirits and wines, iron and hardware, sugar and tea, &c. The total value of the imports into Lower Canada (nine tenths of which went to Quebec), in 1837, amounted to 1,602,333.

It is material, however, to bear in mind, that little more than a third part of these imports were paid for by the exports; they were, in fact, principally paid for by the treasury at home, and are to be regarded as the means sent out by England to pay the troops and meet the other heavy expenses she has to incur in the preservation of this most unprofitable colony. We subjoin some returns relative to the trade and navigation of Quebec during the seven years ending with 1839.

fell in the moment of victory; and Montcalm, who was also mortally wounded in the action, expired soon after. The French, panic-struck by the loss of the battle and the death of their commander-in-chief, surrendered the city before even a single battery had been opened against it. A monument was erected, under the patronage of Lord Dalhousie, in the gardens of the chateau, inscribed to the "Immortal memory of Wolfe and Montcalm."

QUEDLINBURG, a town of Prussian Saxony, reg. Magdeburg, circ. Achersleben, on the Bode, a tributary of the Saale, 7 m. S.S.E. Halberstadt, and 33 m. S.W. Magdeburg. Pop. in 1838, 12,503. It is well built, and is surrounded by turreted walls, pierced by 4 gates. On an eminence immediately above the town is an old castle, now falling into decay, but which has a good library, and is in part converted into a school. It was formerly the residence of the abbesses of Quedlinburg, who were princesses of the empire, and had a seat on the Rhenish bench of bishops. Many of these abbesses are buried in the *Stiftskirche*, or church of the ancient abbey; in which are also the tombs of Henry the Fowler, his empress, the beautiful countess Königsmark, mother of Marshal Saxe, &c. Quedlinburg has several hospitals, public schools, and various charities; with manufactures of woollen stuffs, distilleries, sugar refineries, &c. The rearing of cattle and hogs employs many of the inhabs. Klopstock, author of the "Messiah," was a native of Quedlinburg, having been born here on the 2d of July, 1724; since his death a monument has been erected to his memory in the Brühl garden, near the town. Quedlinburg was formerly a free imperial city, and has been frequently the residence of the German emperors and the seat of ecclesiastical councils. (*Berghaus, Allg. Länder, &c.*, iv. 654.; *Murray's Handbook for N. Germany.*)

QUEENBOROUGH, a bor., sea-port, and par. of England, co. Kent, Lake Scray, on the E. coast of the

Isle of Sheppey, at the junction of the channel of the Swale with the estuary of the Medway, 2 m. S. Sheerness, and 37 m. E. by S. London. Area of par. 390 acres. Pop. of do., in 1831, 786. The town, which is poor and mean, consists principally of a main street, having the guildhall, with a gaol underneath, near its centre. The church, an ancient structure, has a tower at its W. end; and there is, also, a chapel for Independents. A charity-school for the education of the sons of the freemen used to be supported by the corporation and the parliamentary representatives for the bor., and there are some minor-schools, and a Sunday-school. The inhabs. are almost wholly engaged in the breeding and supplying of oysters for the London market. Inconsiderable as it has long been, Queenborough enjoyed the privilege of sending 2 memb. to the H. of C. from the æra of Elizabeth down to the passing of the Reform Act, when it was most properly disfranchised. It was reckoned too unimportant to be included in the provisions of the Municipal Reform Act. A fine old castle in the vicinity of the town was demolished by order of parliament in 1650.

QUEEN'S COUNTY, an inland co. of Ireland, prov. Leinster, having N. King's co., E. Kildare and Carlow, and a detached portion of King's co., S. Kilkenny, and W. Tipperary. Area 396,810 acres, of which 60,972 consist of unimproved bog and waste lands. Surface generally flat; soil, except where bogs occur, for the most part very fertile. Estates mostly large, but many of them are let on perpetual leases; the head lessors on these estates forming the middle class of gentry. These, however, have mostly relet their farms, generally in smaller divisions, to inferior tenants; and these again have subdivided them to others; so that many of the occupancies are extremely small, and held by persons too poor to be able to make any improvement. But where farms have been let on terminable leases, they are larger, and on these various improvements have been introduced, both as respects the rotation of crops, the implements of husbandry, and the stock. Dairying is carried on to some extent, and a good deal of cheese is made for the Dublin market. Average rent of land 14s. an acre, except where bogs occur, for this co.; but the former is not wrought. Principal rivers, Barrow and Nore. It is divided into 8 baronies, and 50 parishes; and sends 3 memb. to the H. of C., being 2 for the co. and 1 for the bor. of Portlinton. Registered electors for the co., in 1835-40, 2,347. In 1831, this co. had 23,783 inhab. houses, 25,403 families, and 145,851 inhab., of whom 72,469 were males, and 73,382 females.

QUEENSFERRY (SOUTH), a parl. bor. and seaport of Scotland, co. Linlithgow, on the S. shore of the Frith of Forth, nearly opposite to N. Queensferry, 8 m. W. by N. Edinburgh. It is a poor decayed place, which was originally founded for, and is still principally dependent on, the ferry, which has long been established at this point, across the Forth. Pop., in 1831, 684. It consists chiefly of one street, running parallel to the Frith. The only public buildings are the parish church, a dissenting chapel, and the town-hall: it has a soap manufactory and a brewery. Newhall, immediately to the E. of the town, is now the principal ferry station across the Forth; though, under certain circumstances, the ferry-men prefer the pier of the bor.

North Queensferry, on the opposite side of the Frith, which is here less than 2 m. across, is still more considerable. The principal ferry business across the Forth is now, in fact, carried on between Newhaven and Brunt-island, and Newhaven and Kirkcaldy. Dr. Wilkie, author of the "Epigonidæ," was a native of S. Queensferry, having been born there in 1721. Queensferry unites with Dunfermline, Inverkeithing, Culross, and Stirling, in sending 1 memb. to the H. of C. Registered electors in this bor., in 1835-40, 42. Hopetoun House, the splendid mansion of the Earl of Hopetoun, is situated a little W. from S. Queensferry. It occupies a commanding position, and has a noble view.

QUENTIN, ST. (an. *Augusta Vermanduorum*), a manufacturing town of France, dep. Aisne, cap. arrond., on the Somme and on the canal of St. Quentin, 24 m. N.W. Laon; lat. 49° 50' 51" N., long. 3° 17' 38" E. Pop., in 1836 (exc. comm.), 19,892. It was formerly a place of strength; but since the time of Louis XIV., its ramparts have given place to suburbs and public walks, and a fine public promenade extends on the E. side of the town, along the banks of the canal. St. Quentin is tolerably well built; its principal streets being wide, its new quarters handsome, and most of its houses modern. In the centre of the town is a large square, in which is the town-hall, a curiously ornamented Gothic edifice. The principal church, or cathedral, is a vast and majestic pile, 416 ft. in length internally, and its nave 212 ft. in height. The hospitals, the public library, with 14,000 vols., the court-house, belfry, theatre, and concert-hall, comprise the other buildings worth notice. It has tribunals of original jurisdiction and commerce, a chamber

of manufactures, a council *des prud'hommes*, &c., a communal college, drawing and commercial schools, courses of practical geometry and mechanics, and a society of arts and sciences.

St. Quentin was formerly the centre of an extensive manufacture of linen fabrics and yarn. This branch of industry has now almost disappeared; but its place has been supplied by the cotton manufacture. In 1834, within an area of 12 leagues round St. Quentin, embracing its arrond., with parts of the depts. Somme, Du Nord, and Pas de Calais, it was estimated that nearly 75,000 hands were employed in weaving, bleaching, and spinning cotton; besides many more employed in subordinate departments. The principal articles are striped and spotted muslins, yarn, &c., and the town and its neighbourhood have about 700 bobbin frames. The cotton spinners, whose number is about 4,000, reside principally in the town; the weavers live in the villages and surrounding country, where most of them are petty proprietors, occupied in agricultural labour for 3 or 4 months of the year. But it is obvious that goods produced by semi-manufacturers of this sort could never withstand, for a moment, the free competition of goods produced in factories supplied with the best machinery, and with a proper distribution and division of labour, and that they must depend wholly on the artificial market produced by the exclusion of cheaper articles. At St. Quentin the weaving of 1,200 and 1,400 checked muslins of a coarse description, 32 in. wide, and sold for 9d. per ell of 44 in., is paid at the rate of 10d. a day; a still coarser description is sold for 6½d. or 7d. the ell, and the weaver gets 8d. a day. For finer goods the weavers' wages vary from 1s. to 1s. 6d. a day; these prices are wholesale, with 5 or 8 per cent. discount, ready money. The wages are gross, the winding only being paid by the manufacturer. At an average the weavers in the country gain, children from 3d. to 2s. 6d.; women from 7d. to 10d.; and men from 1s. 3d. to 1s. 6d. a day. In the cotton mills in the town, the average wages of a male adult may be from 6½ to 7 fr. a week. The workmen on the bobbin frames get from 1 f. 50 c. to 1 f. 75 c. a day; and from 40 to 50 Mechlin frames have been set up, for the produce of which a considerable demand, and on which the wages amount to 6 fr. and 7 fr. a day. The workpeople in the town, of all ages, work 13 hours a day. In the country the hours are not regulated; but they work nearly as much as in the town, especially in winter. (*Symons, in Handloom Weavers' Rep.* p. 128.)

The cotton-mills of St. Quentin are by no means so extensive as those of the dep. Haut-Rhin: few employ more than 200 hands. Children are employed here at an earlier age than in the cotton-factories of Alsace; but the workpeople of all ages appear to enjoy much better health and more comforts in St. Quentin than either at Mulhausen or Lille. The working classes make no complaints; they seem all pretty well supplied with the necessaries, and many of the women of the town are well clothed, and have plenty of vegetables to eat; little meat is consumed, or desired by them." (*Symons's Rep.*)

Table linens, leather, soap, and sulphuric acid are also produced here; and the commerce of the town with the adjacent parts of France, Belgium, and Germany is much facilitated by good roads and by the canal of St. Quentin. The latter connects the inland navigation of France with that of the Netherlands, by forming a communication between the Oise, the Somme, and the Scheldt. It is remarkable chiefly for the tunnels cut through the high ground, about 4 m. N. St. Quentin. The first of these is 160 ft. below the surface, 24 ft. in width, the same in height, and 4 m. in length. The second tunnel is on a still larger scale, being 3 m. in length, and 200 ft. below the surface. Day-light is admitted at certain distances, by openings carried to the surface; and the tunnel being cut through a chalk rock, the sides are not built. It was finished in 1810. (*Hugo, art. Aisne; Villermé, Tabl. des Ouvr.; Handloom Weavers' Rep.*)

St. Quentin, as previously stated, was formerly strongly fortified, and was regarded as one of the bulwarks of France on the N. In 1557, in the earlier part of the struggles between Philip II. and France, the army of the former, under the Duke of Savoy, having threatened to attack the town, defended by the famous Admiral Coligny, and a weak garrison, the constable Montmorency advanced with a considerable army to its relief, and succeeded in throwing some reinforcements into it. On his retreat, however, he was overtaken by the Spaniards, when a general action ensued, which ended in the total defeat of the French, who lost all their artillery and baggage, with about 7,000 men killed and prisoners, including many persons of distinction. The town soon afterwards fell into the hands of the Spaniards. The battle having been fought on the 10th of August, St. Lawrence's day, the vast palace of the Escorial, built by Philip II., was dedicated to the saint in commemoration of the victory. (*Watson's Philip II.* vol. i. 70, &c.)

Pierre le Hanée, better known by his Latin name of

*Ilamius*, one of the earliest and ablest opponents of the scholastic system of philosophy, and the Marquis Condorcet, were natives of the vicinity of St. Quentin, though not, as is frequently stated, of the town itself.

**QUERETARO**, a city of Mexico, cap. of the state of its own name, in a rich and fertile valley, 110 m. N.E. Mexico, and 60 m. E.S.E. Guanajuato; lat.  $20^{\circ} 36' 39''$  N., long.  $100^{\circ} 10' 15''$  W. Pop. at least 40,000. (*Ward*.) It is a well-built city, with three large squares, many handsome public and private edifices, and the usual excess of convents and churches. The Franciscan monastery is spacious, and surrounded with extensive gardens; and the convent of Santa Clara is an immense building, inhabited by 250 females, including many young ladies sent thither for their education. The streets have side pavements, laid with flags of porphyry; the city is well supplied with water, brought to it by an aqueduct about 10 m. in length, carried across the valley upon 60 arches.

It is divided into 5 parishes; 4 in the body of the town, and 1 in the suburbs, separated from the rest by a little stream. "We were much struck with the busy look of Queretaro, which has quite the air of a manufacturing town. More than half the houses contain shops, and the pop. is engaged either in small trades or in the wool manufactories, which are still very numerous. These are divided into two classes, *obrajes* and *trapiches*. The first comprises the establishments that employ from 10 to 30 looms; the last those in which only one or two are in activity. In both coarse cloths, of different patterns and sizes, are manufactured; part of which are retailed upon the spot in the great Plaza, where a market is held every evening by torchlight, and part sent to the capital or other great towns of the confederation. The demand for these manufactures has decreased very much since the ports were opened to European imports; indeed, the woollen trade is now principally kept up by a government contract for supplying the army with clothing. The price paid for scarlet, green, and yellow cloths of the very coarsest texture, varies from 24 reals (12s.) to 15 reals (7s. 6d.) per vara; and there is no doubt that they might be obtained of a better quality at a much lower price from abroad. The wool is brought principally from the northern states, San Luis de Potosi, and Zacatecas; its price fluctuates from 16 to 24 reals the arroba of 25 lbs., including carriage; but the wool most esteemed is the produce of the state itself. It acquires its value, not from any superiority in the breed of the Queretaro sheep, but from the circumstance of the fleeces being so much smaller than those of the north that they can be better attended to, fed in richer pastures, and kept more clear from thorns, which deteriorate the fleece. This wool sells for 34 dollars (or 30 reals) the arroba." (*Ward's Mexico*, ii. 183, 184.) "The manufactures of this city are conducted on the same nefarious system that prevails elsewhere in Mexico (*see* this vol., p. 316.), of inveigling the Indians into debt by the voluntary advance of money, and then shutting them up in the factories, under prison discipline, with criminals of all kinds, till they have liquidated the debt by their labour, a circumstance which every pains is taken to prevent, and which rarely occurs. (*Poinsett's Notes on Mexico*, p. 186, &c.)

**QUIMPER-CORENTIN**, a town and river-port of France, dep. Finistère, of which it is the cap., at the junction of the Eir with the Odet, about 11 m. above where the latter falls into the bay of Bonaudet, 115 m. W. by S. Rennes; lat.  $47^{\circ} 54' 29''$  N., long.  $40^{\circ} 6' 15''$  W. Pop., in 1836, 9,715. It stands on the declivity of a hill, and is divided into the old and new town. The former, surrounded by walls flanked with towers, is ill built; but in the new town there are some good streets and houses. The cathedral, a handsome Gothic edifice of the 15th century, and other churches; the military hospital; the college, a large structure formerly belonging to the Jesuits; the theatre, and some public baths, are the principal public buildings. The river is navigable as far as the town for vessels of 200 tons burden, those of greater size anchoring opposite its embouchure, in the Bay of Bonaudet. It has manufactures of earthenware, and building docks; its inhabs. also engage in the pilchard fishery, and carry on a pretty brisk trade in provisions. Quimper is a bishop's see, and derived its present name from its first bishop, in the 5th century; previously to which, it was called *Corisputum*. It was sacked by Charles of Blois in 1345.

Among the distinguished men, of whom Quimper has to boast, may be mentioned Hardouin, the commentator of Pliny, celebrated alike for his learning and his paradoxes; and Freron, the most voluminous, but, at the same time, the least valuable of the French critics of last century. (*Hugo*, art. *Finistère*; *Dict. Géog.*, &c.)

**QUITO**, a celebrated city of S. America, cap. of the repub. of Equator (*Ecuador*), in a ravine on the E. side of Pichincha (a volcanic mountain, which, at no very distant period, was in a state of activity), above 9,500 ft. above the sea, 160 m. N.N.E. Guayaquil, and 460 m. S.W. Bo-

gota. Lat.  $0^{\circ} 13' 27''$  S., long.  $78^{\circ} 10' 15''$  W. Pop., variously estimated at from 40,000 to 70,000. Quito is, on the whole, one of the best built cities in the New World. It has four broad, straight, and well-paved streets, and three large and some smaller squares, in which are the principal public buildings, and the best private residences. The streets which run N. and S. are pretty level, but those which cross them ascend the skirts of the Pichincha on the one hand, and descend on the other towards a small river, over which is a small bridge; and from this unevenness of the ground some of them are so steep as to be impracticable for carriages, besides being, for the most part, narrow, crooked, unpaved, and almost impassable after heavy rains. So numerous, also, are the crevices in the mountain, that, in the suburbs particularly, several of the houses have been raised on arches. The houses, which are large and convenient, are mostly built of unburnt bricks, cemented with a species of mortar, used by the anc. Peruvians, which soon becomes extremely hard. On account of earthquakes, they are seldom more than one story in height, exclusive of the ground-floor, or *rez-de-chaussée*. They are flat-roofed, and have usually a balcony towards the street. Generally speaking, they are indifferently furnished, and deficient in cleanliness. The city has an abundant supply of indifferent water, obtained from several streams, which flow through it in conduits. The principal square has, in its centre, a fine brass fountain; and on its sides are the cathedral, the bishop's palace, the town-hall, and the palace of the president. The last is a gloomy-looking building, with a terrace in front, ascended by two flights of steps. In it are the halls of the *audiencia*, treasury, and archives, the president's apartments, with the offices of the public secretaries, and the gaol. The cathedral, a plain building, with a steeple at one corner, is much less handsome than several of the other churches. Quito has numerous convents. The ex-Jesuits' college has a beautiful front, with Corinthian columns, finely sculptured by native artists. The interior of this edifice is very rich, and when visited by Stevenson it had a library, said to comprise 20,000 vols., including several rare works. A part of the edifice has been converted into halls for the university, and another part into barracks. Ulloa speaks in high terms of the Franciscan convent, which, he says, from its size, fine proportions, and beauty, might be classed with the best edifices in Europe. Previously to the Revolution, the churches and convents were richly furnished with silver ornaments, plates, paintings, &c.; but a part of this wealth has, we believe, been since turned to more useful purposes. It has a workhouse and orphan asylum on a large scale, and said to be well conducted, an hospital, &c.

Quito ranks pretty high, at least among Spanish American cities, as a place of education. It had two universities before the time of Charles III., but they were then united into one. Besides this university, which still exists, there are several colleges under the guidance of the different religious orders. Ulloa states, that young men of distinction usually studied philosophy, theology, and jurisprudence. "They succeed pretty well," he adds, "in the exact sciences, but are extremely ignorant in all that respects politics, history, and those other essential studies which are necessary to expand and enlarge the mind." There can be no doubt that this is a perfectly accurate statement; but we apprehend the students of Salamanca in Old Spain were, at the epoch of Ulloa's visit to Quito, but little more advanced than those belonging to the latter. It were absurd to suppose that colleges conducted by priests, under an arbitrary government, should supply any sound instruction, either in politics or philosophy.

The city was made a bishop's see in 1543, and is the residence of the President, and the seat of all the superior courts and offices of the republic.

Coarse cottons, and woollen cloths, baizes, flannels, ponchos, stockings, &c., are made in Quito, which is also highly celebrated for its confectionary; but its chief exports consist of the corn, and other agricultural products of the province. These, with some of its manufactures, are sent by way of Guayaquil to Central America, in exchange for indigo, iron, and steel; and to Peru in return for brandy, wine, and oil, and for gold, silver, and other metals, Ecuador not being very rich in mineral wealth. The foreign imports comprise all kinds of European manufactured goods, with iron, steel, and some other raw materials. "The European manufactures most in demand are English broad cloths, kerseymeres, coloured broad flannels, calicoes, plain and printed dimities, muslins, stockings, velveteens; Irish linens, in imitation of German *plattils*; all kinds of hardware and cutlery, and foreign silk velvets, satins, &c., as well as English ribbons and silks. As for the Lima market, the articles should be of a good quality, and of the newest fashion; the more this point is attended to, the better the market will be found." (*Stevenson's S. America*, ii. 319.) The markets of Quito are abundantly

provided with beef, mutton, pork, and poultry, both cheap and good; vegetables and fruits of all kinds, bread, &c. The consumption of cheese is said to be very great, its cost price being estimated at from 80,000 to 90,000 dollars a year, and many of the neighbouring farmers are principally engaged in its manufacture.

The inhabs. of Quito do not differ materially from those of other Spanish American cities; bull fights, masquerades, dancing, music, and religious processions being their principal amusements. When Ulloa visited the city, indolence was, and, we suspect, still is, the distinguishing characteristic, if we may so speak, of all classes. This is, in great part, no doubt, to be ascribed to the mildness of the climate, and the ease with which the ordinary necessities of life may be produced. The city enjoys, as it were, a perpetual spring. Vegetation never ceases at any period of the year; but from Dec. to March violent storms of rain and lightning almost daily occur in the afternoon. Earthquakes are, also, frequent; and one of those visitations that occurred in 1797 is said to have destroyed in the prov. above 40,000 persons, and to have had a permanent influence over the climate. A plain, about 4 leagues N.E. from the city, was made choice of by the French and Spanish astronomers, in 1736, for measuring a degree of the meridian; and an inscription on a marble tablet on the wall of the ex-Jesuits' church in Quito commemorates the event, and the labours of the commission; but the most enduring memorial of that great undertaking is to be found in the *Historical Voyage* of Ulloa, one of the best works of its kind that has ever been published. Quito was founded by Sebastian Benal-gasar in 1534, and incorporated as a city by Charles V. in 1541. (*Ulloa*, liv. v. caps. 4, 5; *Stevenson's S. America*, ii. 279-325; *Geog. Account of Columbia*, &c.)

## R.

**RAAB** (Hung. *Győr* or *Nagy Győr*, an. *Jaurinnum*, *Arabo*, or *Arabotina*), a royal free town of Hungary, cap. the co. Raab, at the confluence of the river of the same name with the Danube, 22 m. W.S.W. Comorn, and 39 m. S.E. Presburg. Pop. about 13,500. It stands in a low and marshy plain, and is rather unhealthy. Like Vienna, the city is separated from the suburbs by its old fortifications, and an open glacis, planted with trees, and forming public walks. Some of the streets are regularly built; and, besides three or four churches and a cathedral, the city has the bishop's palace, the public buildings belonging to the co. and the corporation, and some handsome residences belonging to the Esterhazy and Zichy families. (*Bright's Travels*, 298.) It has, also, a royal academy of law and philosophy; and Rom. Cath., Greek, and Lutheran high schools. In the centre of the city is an immense Capuchin convent, its roof surmounted with two very high and conspicuous spires. There are various other conventual establishments, 2 work-houses, 2 barracks, a theatre, arsenal, &c. Raab is the seat of a larger trade in corn than any other city in Hungary and is a great *dépôt* for the trade of Pesth with Germany and Italy. (*Bergbäus*.) It has several large annual fairs, its commerce depending, for the most part, on its favourable position on two navigable rivers. It was a strong post under the Romans, and has been generally kept in a defensive state by the Hungarian kings; but it was twice taken by the Turks, and, in 1809, an Austrian force was routed by the French under its walls. (*Oesterl. Nat. Encyc.*; *Bergbäus*; *Bright's Travels in Lower Hungary*; *Walsh's Constantinople*, &c.)

**RACONIGI**, or **RACONIGI**, a town of the Sardinian dom., div. Coni, prov. Saluzzo, cap. mand., near the Maira, and 21 m. S. Turin. Pop., in 1838, inc. com., 10,102. It is walled, and tolerably well built: it has several good churches; but its chief ornament is a noble castle and park, belonging to the Prince of Carignano. Among the works of art in the castle are some pictures (if they may be so called), beautifully executed in silk. Silk weaving and spinning are the principal branches of industry in and round this town. (*Diet. Geog.*, &c.)

**RAKNOR**, an Internal co. of England, S. Wales, having N. the co. of Montgomery and Salop, E. Hereford, S. Brecknock, from which it is separated by the Wye, and W. Cardigan. It is of a triangular shape, and comprises 272,640 acres. With the exception of some low and comparatively fertile tracts along the borders of Hereford and Salop, and in the valley of the Wye, the larger portion by far of this co. is wild, mountainous, and dreary. It is stated, in *Davies' Survey of S. Wales*, published in 1815, that about *two thirds* the surface consisted of waste land, mostly moor, but partly also bog! Several divisions and some extensive enclosures have, however, been effected in the interim; so that the extent of waste or common land, though still very great, has been materially diminished. At present, the wastes are mostly

depastured by sheep; and this co. rears, in proportion to its size, more sheep than any other in the principality. They are mostly of a small hardy breed. Numerous encroachments have, from time to time, been made on the wastes or commons by persons who had property adjoining, and by cottagers, who erected huts on their borders, and gradually extended their gardens, till they sometimes included acres of land. A good many of the manors on which these encroachments were made formerly belonged to the crown; and having been lately sold, the purchasers have attempted to oust those who had made these encroachments. But though, no doubt, the act was illegal, still, under the circumstances, it was beneficial rather than otherwise; and having been permitted in the first instance, their rights should have been protected. The farms in the low grounds vary from 20 to 200 acres: they are mostly held at will, or from year to year; and as there are no conditions to enforce a proper system of management, agriculture is in the most backward state, there being no proper rotation of crops, and the land being frequently foul and out of order.

Many of the low farms have a portion of moor or common meadow attached to them. The cattle in the low grounds are principally of the Hereford breed; there are some extensive meadows, and irrigation is well understood. There are some rather large estates; but there are, also, many of an inferior size. Average rent of land, in 1810, 6s. 3d. an acre. The minerals and manufactures of the co. are of no importance. Radnor is divided into 6 hundreds and 50 parishes; and sends 2 mems. to the H. of C.; being 1 for the co., and 1 for New Radnor and its contributory hors. Reg. electors for the co., in 1839-40, 2,034. In 1831 this co. had 4,437 inhabs. houses, 4,872 families, and 24,651 inhabs., of whom 12,453 were males, and 12,198 females. Sum contributed to the relief of the poor, in 1838-39, 8,836l. Annual value of real property, in 1845, 163,578l. The bor. of New Radnor, referred to above, is of great extent, embracing an area of nearly 30 m. in circ. In 1831, it had a pop. of 2,550; but the town itself has not more than 400 inhabs., and would not be worth notice but for its being the head of the part. bor. **PRESTING** (which see) is the only town in the co. of any importance.

**RAGUSA**, a town of Sicily, prov. Syracuse, co. Modica, near the W. bank of the river of its own name, about 14 m. above the embouchure of the latter on the S. coast of Sicily, and 30 m. W.S.W. Syracuse. Pop., in 1831, 21,466. The inhabs., who are said to be active and industrious, have considerable cloth and silk manufactures, and a rather extensive trade in the corn, oil, wine, and cheese of the surrounding territory. It is near the site of the anc. *Hybla Heræa*; but being seldom visited by travellers, little is known of its state. (*Rampoldi's Cosmograph.*)

**RAGUSA** (Slav. *Jadrurnik*, Turk. *Propernik*, an. *Ransium*), a sea-port town of the Austrian dominions, prov. Dalmatia, cap. circ. of its own name, on a peninsula in the Adriatic, 37 m. W.N.W. Cattaro; lat. 42° 36' 30" N., long. 18° 11' 59" E. Pop., in 1837, 3,039. It is walled, and has two good harbours, one to the N.W., and the other to the S.E.; which, as well as the town, are protected by several modern forts. Its streets are narrow, except one, the Corso, which intersects it from N. to S.; its houses are well built, in the Italian style, but many of them are now unoccupied. It has a cathedral, a Greek church, a Piarist grammar-school, military hospital (once the Jesuits' college), lazaretto, and theatre. It is the see of a Rom. Catholic vicar-bishop, and the seat of the superior judicial courts for the circ.; it has manufactures of silk, leather, and rosoglio. Though Ragusa has greatly declined from her former importance, she still has a considerable coasting trade; and in 1838, 236 vessels belonged to the port, 30 of which traded to the Levant and the western ports of the Mediterranean. Ragusa was founded in the 7th century by some fugitives from Epidaurus in Illyria, when that city was destroyed by the Slavi. It continued to be a republic under the successive protection of the Greeks, Venetians, and Turks, till 1806, when it was taken by Napoleon, who erected it into a dukedom, which he conferred on Marshal Marmont. On the fall of the former, Ragusa was given to Austria. (*Bergbäus, Allgemeine Länder*, &c., iv. 960; *Austria, Nat. Encyc.*, &c.)

**RAJAHMUNDRY**, a distr. of the Madras presid. in British India. (See **CIRCARS**, **NORTHERN**.)

**RAJAHMUNDRY**, a town of Hindostan, cap. of the above distr., on the Godavery, about 50 m. from its mouth, and 65 m. N.E. Masulipatan. It stretches along the river for some distance, and has an old fort, several mosques, a fine bazaar, &c. It is the seat of the district court, and a station for two companies of sepoys. (*Madras New Almanac*, &c.)

**RAJEMAHAL** (*The Royal Residence*), a town of British India, presid. Bengal, prov. Bhawalpur, on the Ganges, 66 m. N.W. Moorsheadabad. Under Ameer, and Sultan Shujah, the brother of Aurungzebe, it

was the cap. of Bengal; and, though much decayed, it is still estimated to have 30,000 inhabs. It consists principally of one long street of stone or mud houses, generally with 2 stories; about a dozen market-places, scattered over a wide extent of ground; a few tombs and mosques, and the ruins of a spacious palace. The inhabs. have some traffic with the hill people of the district, but their main source of profit is derived from their supplying necessaries to travellers on the Ganges. (*Hamilton's E. I. Gaz.*; *Mod. Trav.*)

**RAJESHAYE**, a distr. of British India, presid. and prov. Bengal, principally between the 24th and 25th degs. of N. lat., and the 88th and 90th of E. long., having N. Dinajepoor, and Runkpoor; E. Myemunsing, and Dacca Jelalpoor; W. Parneah; and S. the Ganges, separating it from Jessore, Nuddea, and Moorsshedabad. Area, 3,950 sq. m. Pop., in 1822, 1,087,155; about 2-3ds Hindoos, and the rest Mohammedans. The whole surface is so low that from the beginning of July to the end of Nov. it is nearly submerged by the inundations. Towards the E. it is thickly wooded. Few solid edifices, and no fortresses exist, in this distr.; but it comprises many populous commercial villages, and the towns of Natore, Bauleah, and Hurrial. Land revenue, in 1829-30, 14,64,290 rupees. (*Parl. Rep.*, &c.)

**RAJPOOTANA**, the largest prov. of Hindostan, towards its N.W. quarter, between 24° and 31° N. lat., and 70° and 77° E. long.; having W. and N. Moultan and Lahore, E. Delhi and Agra, S. Malwah and Gujrat, and S.W. Sind. Its length, N. and S., is estimated by Hamilton at 350 m., and its average breadth at 200 m., giving it an area of about 70,000 sq. m. It comprises a large extent of sandy desert, but in the S. and E. are many fertile tracts. This prov., which is wholly subsidiary to the British, consists of a number of feudal principalities, the chief of which are Jodpore, Jesselmore, Jeypore, Odeypore, and Bikanere, which see. For further and full particulars respecting this portion of Hindostan, the reader may consult the copious work on Rajasthan by Colonel Tod.

**RAMGHUR**, a distr. of British India, by far the largest under the Bengal presid., occupying all the S. part of the prov. Bahar, between the 22d and 25th degs. of N. lat., and the 83d and 87th of E. long.; having N. Shahabad, Bahar, and Bhaugulpore; E. Beerbhoom, and the Jungle Mehals; and S. and W. the territory ceded by the rajah of Berar. Area estimated at 22,430 sq. m. Pop. in 1832, 2,252,985. A large proportion of this distr. is rocky and unproductive, or covered with wood. Iron, coal, lead, and antimony exist in the hilly region of the S., but from want of capital and enterprise among the inhabitants, few, if any, mines are wrought. Many of the zemindars have very extensive possessions, and are, in a great measure, independent of British authority. Slavery, though of a very mild character, is universally prevalent. There are many old brick forts in Ramghur, affording protection to hordes of banditti, and other refractory persons; but few other durable buildings. This distr. has always been notorious for crime; and hitherto, notwithstanding its great extent, has been of little value to the British Indian government. The land revenue in 1829, amounted to only 161,233 rupees. (*Parl. Reps.*; *Hamilton's E. I. Gaz.*)

**RAMILLIES**, an inconsiderable village of Belgium, prov. S. Brabant, 18 m. S.S.E. Louvain. This village is famous in history from its being the scene of the great victory gained on the 23d of May, 1706, by the allied forces, under the Duke of Marlborough, over the French, under Marshal Villeroi. The French army amounted to about 80,000 men, being superior in numbers to that of the allies. The latter, however, owing, as is alleged, to the bad dispositions and incapacity of Villeroi, gained an easy as well as a complete victory. The French lost about 8,000 men, killed and wounded, and nearly 7,000 prisoners, including 600 officers, with all their artillery and baggage. The loss of the allies did not amount to 3,000 men. The Duke of Marlborough, whose gallantry was as conspicuous as his great talents as a general, had a horse shot under him in the action; and the head of Colonel Brienfield, who was assisting his grace to remount, was carried off by a cannon-ball! (*Smollett's Continuation of History*, cap. 9.; *Voltaire, Siècle de Louis XIV.*, cap. 20.)

**RAMPOOR**, a large town of British India, prov. Delhi; on the Cosilla, a tributary of the Ganges, 112 m. E. by N. Delhi. It has two brick palaces, a lofty mosque in the principal street, the magnificent mausoleum of a former chief, and some good houses; but the greater part of the town consists of sun-burnt brick houses, with thatched or tiled roofs. Its territory is exceedingly productive, and well cultivated.

Another town, called Rampoor, situated on the Sutlej, about 160 m. E. by N. Unnitair, is a favourite place of Hindoo pilgrimage, and an *emporion* for the commerce of Hindostan with the countries beyond the Himalaya, on which account it has a large yearly fair. (*Hamilton's E. I. Gaz.*)

**RAMREE**, a town of British India, prov. Aracan, cap. of the prov., and on the island of the same name, about 115 m. S. by E. Aracan. Pop. estimated, in 1835, at 8,000, and increasing. It stands at the head of a creek, in which there is pretty good anchorage, and has a bazaar, supplied, though meagerly, with British goods. Its inhabitants, who are a fine athletic race, carry on a brisk trade with Chittagong, Sandoway, Bascien, and Calcutta. (*Pemberton's Rep. on the E. Frontier*, p. 33., &c.)

**RAMSAY**, a town and par. of England, co. Huntingdon, hund. Huntingstone. The par., which extends into the co. Cambridge, and has an area of no less than 17,660 acres, had, in 1831, a pop. of 3,066, of whom about 1,600 may belong to the town. The latter, about 10 m. N.N.E. Huntingdon, consists principally of one long street, running E. and W., with another branching off to the N. Houses mostly brick. The church, a fine old edifice, has a nave, chancel, and aisles, with an embattled tower at the W. end. The town formerly belonged to the Cromwell family, several of whom are buried in the church, but there are no monuments to their memory. It has a free-school, founded and endowed in 1619, which educates about 70 boys; and a charity-school, which educates about 50 girls. It was founded towards the beginning of last century by John Dryden, Esq., a relation of the great poet. The town suffered severely from fire in 1731. Ramsay is within the great level of the fens; and in its vicinity are several shallow lakes, or meres, that called the Whittlesea, about 4 m. N.W. from the town, being the largest in the kingdom. A magnificent Benedictine abbey, founded here in 969, acquired, in the sequel, great wealth and celebrity. At the dissolution, its revenues amounted to 19,884l. a year. A ruined gateway is all that now remains of this once famous fabric. Market-day Saturday; fair, 2d July, for pedlery.

**RAMSEY**, a town of the Isle of Man, which see.

**RAMSGATE**, a sea-port, watering-place, and par. of England, co. Kent, on the E. coast of the Isle of Thanet, 15 m. E. by N. Canterbury, and 65 m. E.S.E. London. Area of par., 260 acres. Pop., in 1841, 10,909. The town, which, till the beginning of last century, was little more than a small fishing village, has risen to its present importance, partly in consequence of the construction of its artificial harbour, the largest of its kind in England, but principally from its having become a favourite summer resort of visitors from the metropolis. Its older portions, irregularly built, with narrow streets and mean-looking houses, occupied chiefly by the tradespeople, lie in a flat opening towards the sea by a narrow gulley, (here called *gaze*, whence the name of the town,) between two very steep cliffs; the latter, which are ascended by stone steps, are now covered with good-looking, though, in general, not very substantial houses, laid out in terraces, crescents, &c. Building is still going forward on a pretty extensive scale. The town is well lighted with gas. Till 1838 the supply of water was insufficient, and constituted no small item of expense to the inhabs. of the houses on the cliffs, but an ample supply was then introduced from the neighbouring village of St. Laurence. A market-house stands at the intersection of the principal streets of the old town, opposite to which is the principal public library and town bank.

Facing the sea are several hotels (in one of which are the assembly-rooms), a public library and well-constructed baths on the W. cliff, with the Clarence and other baths, bazaars, and a custom-house, in the lower part of the town, abutting on the lunar basin. The church, recently erected, a large and handsome building, in the perpendicular style, with an octagonal tower, provides accommodation for about 2,000 persons: the living (created by act of parl. in 1827) is a vicarage of the annual value of 4000l., patron the Archbp. of Canterbury. A chapel-of-ease, till lately the only episcopal place of worship in the town, is supported chiefly by voluntary subscriptions and pew rents; besides which, there are places of worship for Wesleyan Methodists, Independents, Baptists, and Unitarians, and a Jewish synagogue. The town has four Sunday-schools, attended by about 800 children, and there are national Lancasterian and infant schools, furnishing instruction to nearly 500 young persons of both sexes.

The most striking feature of the town, however, is its harbour, one of the most magnificent works of its kind in the kingdom, formed by double piers, built under the superintendence, successively, of Smeaton and Rendle. It was commenced, at the public expense, in 1750, with the intention of forming an asylum for vessels in the Downs, which might otherwise be driven on the Goodwin Sands. The E. pier extends, in a curvilinear direction, upwards of 300 yards into the sea, its total length, including its angles, amounting to 2,000 feet; that of the W. pier being about 1,600 feet. The width of the entrance is 240 ft., and the harbour area 48 acres.

The general breadth of the piers is 26 ft., including a strong parapet on the outer sides next the sea. They are constructed chiefly of Portland and Purbeck stone.

After the piers were nearly finished, the deposition of sand and mud within the harbour being so great as to threaten ruin to the entire project, Smeaton recommended the construction of a basin within the harbour, to be filled at high water and let out again at ebb tide, so that any deposit might be carried off by the artificial current. This was accordingly done, and has been found to answer the purpose; and, in 1787, an advanced pier was undertaken to facilitate the entrance of shipping in tempestuous weather. About the same period a dry dock was excavated, and storehouses erected. There is a light-house on the head of the W. pier, whence a clear red light is displayed at night, when there are 10 ft. water in the mouth of the harbour; this notice being given, during the day, by a red flag from Sion Hill. A wet dock has lately been constructed near the basin for the repair of vessels. Still, however, it must be admitted that, though no cost has been spared to render this harbour as useful as possible to the shipping in the adjacent dangerous part of the channel, it is, owing to the want of water, very defective, and, as it can be entered only at certain times of the tide, it is far from realising the expectations that were formed of its being a good refuge harbour. It is under the superintendence of an incorporated company of trustees, who appoint the chief and deputy harbour-master and other officers. It was made a royal port in honour of a visit from George IV. in 1821; and an obelisk near the pier-gates has since been erected to commemorate that most unimportant event.

Ramsgate had formerly an extensive commerce with the Baltic, but this has long declined. It has still some trade with France and Holland, chiefly in the importation of eggs, fruit, provisions, &c.; the gross customs revenue of the port (which includes Margate and Broadstairs), amounted in 1840, to 7,088*l*. Its coasting-trade is pretty extensive, chiefly with London, Newcastle, and Sunderland. A considerable fishery of turbot and soles is carried on off the coast by boats from the W. ports of England; but only a small share of it is taken by the boats of Ramsgate. Indeed the town displays little activity beyond what is caused by the influx of visitors during the summer season, and for whose accommodation steamer-packets ply daily to and from the metropolis. The smoothness of the sands E. of the harbour, and the clearness of the water, make the beach particularly well adapted for bathing, and it constitutes a favourite resort for visitors, hundreds of whom may here be seen in the height of the season strolling about, lounging on chairs, and enjoying the sea-breeze. The pier furnishes another delightful promenade, and on the W. cliff, which is ascended from the inner basin by a flight of stone stairs, is a fine broad walk, extending westward towards Pegwell Bay. Two well-conducted bath establishments are replete with accommodation for invalids; and libraries, news-rooms (one of which is in a marquee on the sands), bazaars, concerts, &c. furnish ample means of occupation and amusement. Ramsgate is a member of the Cinque Port of Sandwich, and is governed by a deputy, appointed by the mayor of that bor.; but judicial affairs are regulated by a local magistracy under a local act, passed in 1812. Markets on Wednesday and Saturday, but daily during summer, and exceedingly well supplied.

RANGOON, a town, river-port, and the chief, and indeed almost the only, *entrepôt* for the foreign trade of the Birman empire, prov. Pegu, on the E. and principal branch of the Irawaddi (called the Rangoon river), about 26 m. from the sea, 50 m. S. S. W. Pegu, and 90 m. W. by N. Martaban; lat. 16° 42' N., long. 96° 20' E. Pop. according to a census in 1826, about 18,000, which is perhaps not far from its present (1841) amount, though it has been stated to amount to 40,000, and even 50,000! The town and suburbs extend lengthwise along the bank of the river for about 1 m. by  $\frac{1}{2}$  in depth; but the houses are very unequally scattered over the area. The fort, or rather wooden stockade, which constitutes the town properly so called, is an irregular oblong, entered by 8 gates and several Sally-ports. (*Crawford's Embassy*, ii. 51.) According to Mr. Malcolm, who visited Rangoon in 1835, "the city is spread upon part of a vast meadow, but little above high tides, and at this season (May) resembling a neglected swamp. The fortifications are of no avail against modern modes of attack. They consist of merely a row of wooden timbers set in the ground, rising to the height of about 18 ft., with a narrow platform running round inside for musketeers, and a few cannon lying at the gateways in a useless condition. A dozen foreigners have brick tenements, very shabby; there are also four or five small brick places of worship, for foreigners, and a miserable custom-house. Besides these, it is a city of bamboo huts, in appearance as paltry as possible. The eaves of the houses generally descend to within 6 or 8 ft. of the ground; very few being of more than one story, or having any other covering than thatch. Cellars are unknown, and all the houses are raised two or three ft. above the ground, for coolness and ventilation. As the floors are of split bamboo, all dirt falls through; and what is not picked up by crows, dogs, fowls, &c., is

occasionally swept out and burned. The streets are narrow, and paved with half-burnt bricks, which, as wheel-carriages are not allowed in the city, are in tolerable repair. There is neither wharf nor quay: in four or five places are wooden stairs, at which small boats may land passengers; but even these do not extend to within 20 ft. of low-water mark. Vessels lie in the stream, and discharge into boats, from which the pack-ages, slung to a bamboo, are lugged on men's shoulders to the custom-house." (*Travels in S. E. Asia*, i. 76, 77.)

The river opposite Rangoon is about 600 yards across; and the town is accessible to ships of 1,200 tons' burden. The navigation, though somewhat intricate, is safe and practicable with the aid of ordinary native pilots. At neaps the tide rises and falls about 18 ft., and at springs, from 25 to 30 ft. Rangoon presents many facilities for ship-building. The banks of the river are so flat and soft, as to render docks almost unnecessary; and there is nearly a complete water communication with the teak forests of Pegu, by far the most abundant in India. Ship-building has, in fact, been carried on at Rangoon since 1786; and in the 38 years which preceded our capture of the town, 111 square-rigged vessels of European construction had been built, the total burden of which amounted to upwards of 35,000 tons. Several were of from 800 to 1,000 tons. But Malcolm says that this branch of business is now almost annihilated.

The markets of Rangoon are well and cheaply supplied with many sorts of provisions, as rice, poultry, fish, &c. The foreign commerce of the town is still considerable, though greatly crippled by enormous port-charges and absolute prohibitions against exporting rice or the precious metals. Specie is, indeed, exported, but only clandestinely. The trade of the empire seaward is principally with the ports of Chittagong, Dacca, Calcutta, Madras, Masulipatan, and Penang, and occasionally with the Persian and Arabian Gulphs. No direct trade has yet been carried on between Birmah and any European country. The articles exported to foreign countries from Rangoon are teak wood, catchu, stick, cane, bees' wax, elephants' teeth, raw cotton, orpiment, gold and silver, gems, and ponies, which are much esteemed at Madras. By far the most important of these commodities is teak timber; the quantity of this wood annually exported is said to be equal to 7,500 full-sized trees. The principal imports are cotton piece goods from India and Britain, British woollens, iron, steel, quicksilver, copper, cordage, borax, sulphur, gunpowder, saltpetre, fire-arms, coarse porcelain, English glass ware, opium, tobacco, cocoa and areca nuts, sugar, and spirits. Of these by far the most important is cotton piece goods. In 1826-27, the exports and imports of Rangoon were estimated each at 300,000*l*. (*Crawford, &c., in Commerce Dict.*)

About 2 m. N. N. W. Rangoon, is the celebrated Shoe-Dagon temple, which, though rather smaller than that of Shoe-Madon, at Pegu (which see), is much more highly ornamented. The two principal roads leading to it are lined on either side with numerous pagodas, some of considerable size. The great temple, similar to that of Pegu, stands on a planted terrace, raised upon a rocky eminence, and reached by an ascent of 100 stone steps. The area of this terrace is about two acres; the temple at its base is 310 ft. in diameter, and 338 ft. in height, surmounted by a *tee*, or umbrella of open iron-work, 45 ft. in height, and richly gilt. "The golden temple of the idol may challenge competition, in point of beauty, with any other of its class in India. The building is composed entirely of teak-wood, and indefatigable pains are displayed in the profusion of rich carved work which adorns it. The whole is one mass of the richest gilding, with the exception of the three roofs, which have a silvery appearance. A plank of a deep red colour separates the gold and silver, which has a happy effect in relieving them. All round the principal pagoda are smaller temples, richly gilt, and furnished with images of Gaudina, whose unmeaning smile meets you in every direction; and the sight of which, accompanied by the constant tinkling of the innumerable bells hung on the top of each pagoda, combines, with the stillness and deserted appearance of the place, to produce an impression on the mind not speedily to be effaced." (*Mod. Trav.* xi. 124, 125.) This temple, having long enjoyed a higher reputation than any other in the Birman dom., is resorted to by numerous devotees; and near it live 150 families, called "slaves of the pagoda," to whose care it is entrusted. (*Malcolm's S. E. Asia*, i. 76-82; *Crawford's Embassy to Ava*, ii. 51-57; *Mod. Trav.* xi.)

RASTADT, a town of W. Germany, grand duchy of Baden, circ. Middle Rhine, of which it is the cap., on the Murg, a tributary of the Rhine, 13 m. S. W. Carlsruhe. Pop. 3,650. It is walled, and has wide streets, several R. Cath. and Lutheran churches, a gymnasium, lyceum, various other schools, and a palace, the residence of the last margraves of Baden, in which is a curious collection of Turkish trophies. Rastadt is the seat of the superior judicial court for the circ. It has

manufactures of tobacco, chicory, carriages, and machinery and instruments of various kinds; but is principally noted for two congresses held in it: the first, in 1714, when a treaty was concluded between Marshal Villars and Prince Eugene; and the second, in 1798-99, which terminated abruptly in the unexplained assassination of two of the French envoys. (*Bergbaus*; *Dict. Géog.*)

**RATHKEALE**, an inland town of Ireland, prov. Munster, co. Limerick, on the Deel, 17 m. W.S.W. Limerick. Pop., in 1831, 4972. It principally consists of one street, nearly 1 m. in length, which has many good houses and shops. A par. church, a R. Catholic chapel, with an Independent and a Methodist meeting-house, a fever-hospital, dispensary, court-house, and bridewell. Several families of German palatines are settled in the town. General sessions are held four times a year; petty sessions on Thursdays. It is a constabulary station, and has a considerable retail trade. Markets on Thursdays: fairs on 7th Feb., 4th April, 1st and 19th June, 5th Aug., 18th Sept., and 18th Nov. Post-office revenue, in 1830, 3762; in 1836, 5802. A branch of the national bank was opened here in 1835.

**RATISBON** (Germ. *Regensburg*, an. *Castrum Reginum*, afterwards *Augusta Tiberii*), a city of S. Germany, cap. of the Upper Palatinate, in Bavaria, on the Danube, across which it communicates with its suburb, Stadt-am-Hof, by a bridge, 1,000 German ft. in length, 64 m. N.E. Munich. Lat. of St. Emmeran's Tower 49° 0' 59" N.; long. 12° 5' 43" E. Pop. about 22,000, two-thirds being Rom. Catholics. It is one of the oldest towns in Germany, and has a proportionally antique appearance. Its streets are narrow and irregular; and its houses, though lofty, are altogether old-fashioned and inconvenient. Many have tall battlemented towers, loopholes for musketry, &c.; and among the large residences are several ornamented with heraldic bearings. The cathedral is a fine Gothic edifice, begun in the 13th century, but the greater part appears to have been constructed in the 15th: its interior was formerly crowded with a number of extraneous ornaments; but these have been removed. In it are a few fine works of art, including a *bas relief* on the tomb of the Primate Dalberg, designed by Canova. Two older cathedrals adjoin this edifice; one, now used as a baptistry, is supposed to date from the 10th or 11th century, and the other is of a still earlier date.

Near the cathedral is also a massive square tower, probably a remnant of an ancient Roman fortress. The church of St. Emmeran has some very curious monuments of high antiquity, but it is now half in ruins; and St. Emmeran's Abbey, a large though not a fine building, has been converted into the palace of the prince of Tours and Taxis. The establishment to which the latter belonged was founded long before the time of Charlemagne, by whom it was enlarged; and, at the time of its dissolution, it is said to have been 1,200 years old. The Scotch Benedictine convent, a monastic institution in Ratisbon, the small revenues of which has prevented its secularisation, supports two monks and five young Scotch ecclesiastical students. It has a very curious church, supposed to date from the 10th or 11th century. The town-hall, a gloomy and irregular structure, is interesting as being the seat of the German diets from 1653 to 1806. The apartments formerly occupied by the diet present little that is remarkable; and beneath the edifice are some dungeons, in which are preserved the rack, and other machinery of torture, formerly in use. (See *Murray's Handbook for S. Germany*, p. 66.)

The old bishop's palace, in which the emperor Maximilian II. died, is now a brewery. The ramparts of Ratisbon are no longer of use as a means of defence, but serve as public walks. Within the city is a monument to the great astronomer Kepler, who expired here in 1630. Ratisbon has a royal academy, Rom. Catholic lyceum, Lutheran gymnasium, theological seminary, observatory, public library with 20,000 volumes, school of design, museum of mathematical and philosophical instruments, botanic society, &c. Since it has ceased to be the seat of the German Diet, it has been mostly shorn of its importance; but a good many vessels for the navigation of the Danube are built here; and it has several breweries, distilleries, tanneries, and iron-works. It formerly enjoyed the exclusive right of the navigation of the Danube, upwards to Ulm, and downwards to Vienna. This privilege is extinct, but it still has a large share of the traffic on the river. At Donauwörth, on the Danube, about 6 m. distant, is the *Fathalla*, a fine Doric marble temple, built by the present king of Bavaria, for the reception of statues and busts of the distinguished men of Germany. This edifice, commenced in 1830, was to be completed in the course of 1841.

Ratisbon was the capital of the dukes of Bavaria, till their duchy was overturned by Charlemagne. It was afterwards a free imperial city, governed by a count of the empire. In 1809, some severe fighting took place

before it between a part of the grand French army, under Napoleon, and the Austrians, to the disadvantage of the latter, who were forced to retire towards Bohemia. (*Bergbaus*, *Allg. Länder*, &c., iv. 135.; *Dict. Géog.*, &c.)

**RAVENNA**, a city of the Papal States, cap. loc. of the same name, on the Montone, amid extensive but fertile marshes, 43 m. E.S.E. Bologna, 84 m. N.W. Ancona, and 43 m. from the Adriatic; lat. 44° 25' 16" N., long. 12° 12' 11" E. Pop., about 16,000. It is chiefly deserving of notice for its architectural remains. Having been the cap. of Italy during the last years of the W. empire, and successively the residence of Honorius, Valentinian, Odoacer, Theodoric, and the succeeding Gothic monarchs, it presents many interesting specimens of the architecture of that period, few of which are elsewhere to be found. The empress Placidia, from 422 to 450, and Theodoric, from 492 to 526, embellished it with the best edifices the times were capable of producing; and many of these exist in singularly good preservation. The church of San Vittore is said to date as far back as the early part of the 4th century; but, according to Mr. Woods, what remains of it, even if the date be accurate, is a mere barn, without character. The earliest perfect church is that of Santa Apata Maggiore, completed in the early part of the 5th century, having granite columns, rich marbles, &c., apparently taken from some more ancient edifice. San Giovanni del Sagra was built by Placidia, *anno* 453; San Francesco apparently about the same date. St. Apollinare Nuovo, a foundation of Theodoric, and having mosaics of that period; St. Apollinare, at Chiassi, built by Justinian, on the ruins of an ancient temple of Apollo; and Spirito Santo, also of the 6th century. In all these churches the general plan and style are nearly the same. They consist of three naves divided by columns, supporting arches; the middle nave terminating in a semicircular recess, covered with mosaics. The roof is of timber, and not concealed. No very distinct marks of specific difference are observable in the workmanship, between the structures of the 4th and 6th centuries, except in the ornamental parts: the capitals and mouldings of the later period are much more fanciful. The cathedral of Ravenna was originally founded toward the end of the 1st century; but the present building is modern, and has some fresco by Guido, bas-reliefs, and rich altars. Near it is the baptistry, an octagonal building, probably of the same date as the ancient cathedral, and almost covered with mosaics, attributed to an archbishop who lived about 430. The baptism of Christ is represented on the dome in mosaic, "and the river-god seems also to be introduced into the composition." The church of San Vitale, another octagonal structure, dates from the first half of the 6th century. Here, also, is a little church built by Placidia, whose tomb it contains, with those of Honorius, Constantius, Valentinian III., &c. Without the city is the mausoleum of Theodoric, constructed by his daughter Amalasuintha.

But by far the most interesting of all the structures to be seen at Ravenna is the tomb of Dante, the immortal author of the *Divina Commedia*, who expired here, in exile, on the 14th of Sept., 1321.

"Happier Ravenna! on thy hoary shore,  
Fortress of falling empire! honour'd sleeps  
The immortal exile!" (*Childs Harold*, iv. 59.)

He was buried in the church of the Franciscan monastery, in a handsome tomb erected by his protector Gualdo da Polenta, restored by Bernardo Bembo in 1483, again restored by Cardinal Corsi in 1692, and replaced by a more magnificent sepulchre in 1790, at the expense of Cardinal Luigi Gonzaga. The Florentines repeatedly demanded the ashes of the mighty dead, but these demands were uniformly met by a flat and firm denial.

The *Porta Aurca*, a triumphal arch at the W. entrance of the city, and a few remains, said to be portions of Theodoric's palace, and having, according to Woods, some similarity to those of the palace of Diocletian, at Spalatro, comprise the principal remaining antiquities. The city has ramparts, which, however, are of little service as means of defence. Some of its squares are neat, and ornamented with statues of popes, &c.; and the streets are mostly wide and regular, but dirty; and the houses are old-fashioned, and gloomy. It has a few silk manufactures, and a large annual fair; but, like Padua, it is very dull, and fitter for study than for active business. A monastery has been appropriated to a public library, containing from 30,000 to 40,000 vols.; and a museum, with a few objects of natural history, antiquities, casts, and paintings. Few of the churches are rich in paintings, but there are some good private galleries. Byron praises Ravenna for its climate, and says, he found much education and liberality of thinking among the higher classes. It is an archbishopric, and the residence of a Papal legate.

Ravenna was originally founded by a colony of Thesallians, most probably on the sea-shore, but in the days of Strabo, it was, owing to the accumulation of mud,

surrounded by marshes. (Lib. v. p. 148.) Hence says Silius Italicus

"Lenta paludose perscindunt stagna Ravenna."  
(Lib. viii. v. 502.)

Being difficult of approach, and well fortified, its advantages as a stronghold, and naval station were perceived by Augustus, who constructed a new harbour, about three miles from the old town, which he connected with the Po and the old city by a canal, and with the continent by a causeway. Ravenna henceforward became the principal station of the Adriatic fleet, and the new and old cities were nearly joined by intermediate buildings. But the same cause, the accumulation of mud and other matters, brought down by the Po and other rivers, that had destroyed the port of the ancient city, in no very long time destroyed that constructed by Augustus: it is now, in fact, about  $\frac{1}{2}$  m. from the sea, and so early as the fifth or sixth century of the Christian era "the port of Augustus was converted into pleasant orchards; and a lovely grove of pines covered the ground where the Roman fleet once rode at anchor!" (*Gibbon*, v. 209, 8vo. ed.) But this very circumstance, though it lessened the naval importance, increased the strength of the new city, which, from the beginning of the fifth to the middle of the eighth century, was considered as the seat of government, and the capital of Italy. At length the Greek ex-archæ being overthrown, the city and its territory was given by Pepin to the Holy See in 773. Subsequently Ravenna successively belonged to its own lords, the Bolognese, and the Venetians, till 1509, when it reverted to the Pope. In 1512, the French, under the Duke de Nemours, gained a signal victory over the Spaniards, at a short distance from Ravenna, commemorated by an obelisk erected on the field of battle.

READING, a parl. and mun. bor. and market-town of England, hund. its own name, co. Berks, of which it is the cap., on the Kennet, close to its junction with the Thames, and on the line of the Great Bath Road and of the Great Western Railway, 38 m. W. London. Area of parl. and mun. bor., which are co-extensive, 2,060 acres. Pop., in 1841, 19,512. "The town is of considerable size, and apparent prosperity, the inhabs. having increased rapidly within the last 15 years. A new high road into the heart of the town, lately completed, is an important improvement. There are many excellent houses, and the main streets are spacious, containing very good shops, and being well lighted with gas." (*Bound. Rep.*) The town-hall, completed in 1788, is a substantial building, well adapted for municipal purposes. The borough gaol is small and inconvenient; and the house of correction, though large, is reported to be "deficient in various important requisites, badly ventilated, insecure, and without punishment cells." (*Prison Inspectors' 5th Rep.*) Reading has three par. churches. St. Lawrence is a large structure, with a fine tower of flint and stone, chiefly in the perpendicular style; the other churches are of a mixed architecture; and St. Mary's is remarkable for a handsome tessellated tower. Two of the livings are in the gift of the lord chancellor, and St. Lawrence belongs to St. John's College, Oxford. There is a chapel-of-ease and a licensed episcopal chapel in the par. of St. Mary's, and a district church in that of St. Giles; and there are places of worship for Rom. Catholics, Baptists, Independents, Wesleyan Methodists, and the Society of Friends. The town has numerous Sunday-schools, furnishing religious instruction to nearly 2,000 children, and there are several subscription day-schools, attended by about 800 children. The grammar school, originally founded in the reign of Henry VII., and endowed with property belonging to the decayed hospital of St. John, received great additions from Archbp. Land, and Sir Thomas White conferred on it two fellowships at St. John's Coll., Oxford. It enjoyed a high reputation as a classical seminary, while the Rev. Dr. Valpy was head master, and was then attended by 120 boys, partly day scholars and partly boarders; since then, however, it has greatly declined; but it continues to be a respectable school, and is improving. The school is open to all boys, whether natives or residents of Reading; but none are admitted free. (*Char. Comm. 32d Rep.*) A blue-coat school, founded in 1646, has an endowment producing an average income of 850*l.* a year, and furnishes clothing, instruction, and an apprentice-fee to 40 boys (elected by the corporation); a girl's green-coat school, in St. Mary's par., is supported by subscription. Reading has a co. hospital, opened in 1839, and numerous almshouses and money-charities, few towns in England having so large an amount of property held in trust for charitable purposes. A dispensary, eye-infirmary, and savings' bank have been established within the last few years. The Reading Institution has an excellent library and news-room, and it has also a subscription news-room, mechanics' institute, small theatre, and two weekly newspapers are published. The trade of Reading is very considerable, but more of

a general than specific character. The manufacture of woollens was formerly pretty extensively carried on, chiefly in a large range of buildings known as the Oracle; but the business is now wholly abandoned, and the buildings are occupied by riband and silk weavers, of whom there is a considerable number in and about the town. Floor-cloth and sail-cloth are also produced, and there are several large breweries. The trade of the town has been greatly facilitated by the Kennet and Avon Canal and the Thames Navigation, and it will be still more facilitated by the opening of the Great Western Railway, which has here a principal station.

Reading, "which claims to be a bor. by prescription," was incorporated by Henry III., and has received many subsequent charters. Under the Municipal Reform Act, the bor. is divided into 3 wards, the municipal officers being a mayor and 5 other aldermen, with 18 councillors. Corporation revenue in 1839, 2,400*l.*, exclusive of 93*l.* accruing from the sale of property. Quarter and petty sessions are held under a recorder, besides which there is a civil court for debts under 10*l.* The Lent assizes and winter quarter sessions for the co. are held here, besides weekly petty sessions. Reading has sent 2 rep. to the H. of C. since the 23 Edw. 1., the right of voting down to the Reform Act being in the inhabs. paying scot and lot. The electoral limits were left unchanged by the Boundary Act, and in 1839-40 it had 1,141 reg. electors. Reading is likewise one of the polling places at elections for the co. Markets on Wednesday and Saturday; on the latter for corn. Fairs, Feb. 2, May 1, July 25, and Sept. 21; the last being for cattle and cheese, and extremely well attended.

Reading is of great antiquity, though its origin be unknown. In 1263, Henry III. held a parliament here, and it was adjourned hither in 1453. In the great civil war it was successively occupied by the forces of parliament and of the king. Archbishop Land was the son of a clothier in this town, where he first saw the light in 1573. In his prosperity he did not forget the place of his birth, to which he was a liberal benefactor.

RED RIVER, an important tributary of the Mississippi, which see.

REDRUTH, a market-town and par. of England, co. Cornwall, hund. Penrith, on an acclivity on the high road between Truro and St. Ives, 8 m. W.S.W. the former, and 11 m. E. the latter. Area of par. 3,770 acres. Pop., in 1831, 8,191. The town consists principally of one long street, built on the side of the hill. It has been greatly extended and improved of late years, having fully doubled its pop. since 1801; and is pretty well built, paved, and lighted with gas. Among the more recent buildings are a handsome square granite tower, with an illuminated clock in its upper part; and the savings' bank, a neat edifice with a colonnade in front. The par. church, at the foot of the Carn Bre Hill,  $\frac{1}{2}$  m. S.W. the town, was rebuilt about 1770. The living is a rectory, in the patronage of Lord de Dunstanville, of the gross annual value of 500*l.* A chapel of ease, in the pointed style, has, however, been erected contiguous to the town, partly by a grant from the parliamentary commissioners, and partly by subscription; the living is a curacy. In the patronage of the rector. There are also meeting-houses for Baptists, Methodists, and Presbyterians, a grammar-school, erected by voluntary contribution in 1803; with various other private and Sunday schools, a subscription reading-room, and a small theatre.

Redruth owes its importance wholly to the extensive copper and tin mines in its vicinity. The Consolidated and United Mines, between it and Gwennap, are the most extensive of any in Cornwall. In 1836 they employed in all 3,196 individuals, and 21 steam-engines, some of which were of the greatest power. One of the shafts in these mines was more than 300 fathoms deep, the temperature at the bottom being from 96° to 99° Fah. 1. (*See De La Beche's Geology of Cornwall*, p. 601; *Statistics of the British Empire*, i. 387.) The org. is conveyed by railways to Devonport, a creek belonging to Falmouth harbour, and to Portreath, Hayle, &c., on the N. side of the peninsula. Redruth has a brisk general trade. Markets on Wednesday and Friday, which last is one of the largest corn-markets in the W. of England. Fairs, May 2d, Aug. 3d, and Oct. 12, chiefly for cattle. Trehiddy Park, the seat of Lord de Dunstanville, is about 2 m. from the town.

RED SEA (an. *Arabicus Sinus*, or *Rubrum Mare*), an extensive inland sea between Africa and Arabia, connected with the Indian Ocean by the strait of Bab-el-Mandeb, less than 20 m. across, between lat. 12° 40' and 30° N., and long. 32° and 42° E. Extreme length, 1,420 m.; do. breadth, 230 m.; average breadth, 135 m.; estimated area, 185,000 sq. m. It runs in a pretty direct course from N.N.W. to S.S.E., being divided at its N. extremity into two arms, the longest and most westerly of which is the gulph of Suez, at the head of which is the port of the same name, which see. The other branch, which runs N.N.E., having a length of 120 m., is called

the gulph of Akaba, which sea. On the promontory between these gulphs is the mountain group of Djibbel-Musa, including mounts Sinai and Horeb, famous in Scripture history. The gulph of Suez is more than 180 m. in length, and its breadth may average about 23 m. The strait of Djubal, the entrance to this gulph, is nearly 16 m. across. The present charts of the Red Sea were formed in 1829, by order of the E. India Company, under the superintendence of Capts. Elwin and Moresby; but a considerable section of its S. part had been surveyed in 1801 by Sir H. Popham under Lord Valencia. The more recent, however, is the only complete survey that has been made of this important gulph.

The Red Sea, though, generally speaking, of great depth (probably averaging 100 fathoms), is in parts studded with rocky islets and hidden coral banks, which extend far into the channel, and sometimes impede the course of vessels. The islands are scattered pretty abundantly in all parts of the sea. Several occur near the entrance of the two northern gulphs; but by far the greater number are found at its S.W. extremity, nearly opposite Massouah, this group being denominated the Dhalak Archipelago. Further S. are several other islands, one of which (called Djibbel-Teer) comprises an active volcano, rising nearly 1,200 ft. above the sea. (See *Moresby's Sailing Directions for the Red Sea*, p. 26.) The island of Cameran lies S.W. Lohela; and nearly opposite Hodeida, in lat. 15° N., is the group of the Zebayer islands. The coral reef of this sea are more numerous and extensive than in any other body of water of equal extent. They extend most commonly in long strips parallel to and about ½ m. from shore, with which they are in many cases united: the deep water runs close up to their edge; but the banks themselves are seldom more than 5 ft. below the surface. Among the reefs unconnected with the shore, several are at some distance from it, a channel intervening of sufficient depth to admit of navigation by small vessels, and having good anchorage in stormy weather. These reefs are more numerous on the E. than on the W. coast; but the Dhalak Archipelago is, perhaps, more extensively intersected with them than any other part of the sea. There are also many isolated reefs; but they present few obstacles, owing to the transparency of the water, which renders them easily discoverable. No surf is ever observed on them, how boisterous soever the weather, a circumstance attributed to the porous nature of the coral on the outer edge of the reef. (*Wellsted's Arabia*, li. 246.) After all, however, these reefs offer no considerable obstacle to ships, and the shelter which they afford in some cases facilitates navigation without decreasing its speed.

The existence of the islands and reefs just described has led to a division of the Red Sea into a central and two lateral channels. The central channel, between the outer extremities of the reefs extending from either shore, is very deep throughout, and in some parts no bottom has been found, even at a depth of 250 fathoms. The breadth of this channel in the parallel of Djidda is 110 m.; but further S. it diminishes to little more than 40 m., and continues gradually decreasing down to the strait of Bab-el-Mandeb. The inner channel, on the Arabian side, is formed partly by broken reefs and sunken rocks, partly by islands and long-continued reefs, a large part also being open to the sea: its average width is from 2 to 3 m., and the depth is very considerable, though the anchorage is so insecure as to afford little protection from the sea. The inner channel, on the opposite coast, is similarly bound to that now mentioned; but it is much narrower, and soundings can be obtained only in a few places: the harbours, of which there are seven or eight, furnish tolerably good anchorage, but it is very unsafe to anchor on the rocky shelves projecting from the reefs. Both these lateral channels are connected with the open sea by cross channels, some of which, especially N. of lat. 17°, are of great width and depth.

The winds of the Red Sea are not uniform in its different parts and channels. With respect to the central channel, it may be observed that the N.E. monsoon here becomes a S.E. wind of considerable force, decreasing, however, as it passes northward, and disappearing about lat. 18°, where it is replaced by the N. breezes that prevail during the warm season. The S. winds commence in Oct., and subside at the end of May, when they are succeeded by N.W. winds, which usually bring with them thick, hazy weather, especially on the Arabian side. In the lateral channels, N. winds, inclining to land and sea breezes, are more or less prevalent, land-squalls being very common both in April and May.

The currents of the Red Sea appear to be entirely governed by the winds; for it is observed that with S. breezes they set northward, and with N. winds to the S. It is probable, also, that they increase according to the strength of either, as little or no current is perceptible during the prevalence of light, variable breezes, just before the monsoon. N. of Djidda, however, both the winds and currents are very variable throughout the

year; but here even the latter depend on the former, and a strong S. wind will cause a current of 20 or 80, and even 40 m. a day. Tides have been observed in a few parts of the coast; but the rise and fall are not sufficient to allow of the conclusion that this sea is subject to lunar influence. The idea that the waters of the Red Sea were formerly at a higher level than the Mediterranean, and that the surface has been depressed by the constancy of currents flowing towards the Indian Ocean, is wholly chimerical: the fact is, that from May to October, during the prevalence of N. winds, the water is 2 ft. lower than the average level; whereas from December to February, when the currents run in an opposite direction, the water collects at the N. part, which accordingly becomes unusually elevated. (*Geog. Journ.*, vi. 82; *Wellsted's Arabia*, li. 300., and *Append.*; *Sailing Directions*, p. 211—219., &c.)

The country about the Red Sea is more or less mountainous, though the high lands seldom abut directly on its coasts: indeed, this sea may be described as the lower part of a valley bounded eastward by the tableland of Arabia, and westward by a range of mountains rising from 4,000 to 6,000 ft. above the sea. Between the high grounds and the shore, however, a level district intervenes, of some extent, and considerable fertility; but it is almost uncultivated, the inhabitants living in idleness, and contenting themselves with the wretched pittance that may be obtained by pasturage, and the plunder of the Hadj season. Nothing, indeed, can be conceived more wretched and degraded than the condition of the people dwelling in the villages bordering the Red Sea.

The principal harbours on the E. side of this sea are Mocha, Hodeida, Lohela, and Djidda, the first and last being by far the most important: Suaz, Cossier, Suakim, and Massouah, are the chief places on the African side; and a pretty active communication is kept up between the inhabs. of the opposite shores, more particularly as the sea is crossed by all the African pilgrims on their way to Mecca and Medina. The vessels employed in transporting the pilgrims and their merchandise may amount to about 400, each averaging 130 tons; and the pilgrims from Africa alone are said to average 20,000 annually. (*Geog. Journal*, vi. 80.) Grain, also, and slaves are large articles of trade between the two shores: the grain is shipped at Cossier, wholly on account of Mehmet Ali, pacha of Egypt; the slaves are brought almost exclusively from Suakim and Massouah. Mocha being the only port whence goods are exported, the Red Sea has not, till within the last few years, been much frequented by foreign vessels, except those belonging to pilgrims from Persia and India, with the merchandize of both countries; wheat, tobacco, dates, and Persian carpets being brought by the former, and rice, sugar, muslins and other fabrics, indigo, spices, and handsome young females, by the latter. Coffee, frankincense, and gums are sent in exchange from Mocha; but the returns from the other ports are in cash, pearls, &c. (*Geog. Journal*, vi. 81.) Within the last few years, however, the navigation and commerce of this sea has greatly increased; and steamers have been regularly established between Suez and India, by means of which, and of the steamers from Alexandria to Marseilles, Bombay is now brought within less than 60 days' distance of England! The gales in the N. part of the Red Sea offer some impediments to steamers; but we learn from Wellsted and other Indian officers, who have engaged in the survey and packet-service, that there are no obstacles which experience and perseverance may not overcome. *Dépôts* for coal, &c., are already established in different parts, and the steam-packets now run with almost undeviating regularity. The beneficial consequences of this communication, too, will, in all probability, not be confined to England, Egypt, and India; for it is scarcely to be supposed that the Red Sea can become the high road from Britain to her Indian possessions, without a portion of the commerce carried on between the Eastern and Western worlds again reverting to this its ancient and most direct channel, and without the diffusion of industry and civilisation among the barbarous hordes that now inhabit its coasts.

The Red Sea is first mentioned in sacred history in connection with the miraculous passage of the Israelites across the Gulph of Suez. (*Exod.* xlv. 21.) In the time of Solomon two ports, Flath and Ezlongebah, were established on the Gulph of Akaba; and the Phœnicians seem to have carried on a large trade on this sea, though, probably, they had no direct communication with India. The early Greek writers, including Herodotus, seem to have had very vague notions respecting the Red Sea; for the *'Erythræa Salsum'* apparently comprises, in their estimation, the whole extent of coast from the Indus to the coast of Africa. During the flourishing period of the Persian empire, the Persian Gulph was the medium through which Europe and Western Asia received the wealth of the East; but under the successors of Alexander, especially the Ptolemies, who exerted them-

selves to promote the trade of this sea, it became an important channel of intercourse between Europe and India and the East. This intercourse continued with little intermission, though not to the same extent at all times, till the discovery of the passage round the Cape of Good Hope, by which commerce was diverted into a wholly different channel. The time, however, seems now to have arrived when the Red Sea is again to recover a portion, if not the whole, of its ancient importance as a great commercial highway.

Great discrepancy of opinion has prevailed respecting the origin of the name. According to Pliny (*Hist. Nat.* lib. vi. cap. 23.) and Quintus Curtius (lib. viii. cap. 9.), its Greek name signifying red, is derived from Erythros, a king of the adjoining country. But the more probable opinion seems to be that it is derived from the great abundance of coral found in it. (*Wellsted's Arabia*, vol. ii. passim; *Moresby's Sailing Directions*, pp. 200–223; *Geog. Journ.* vols. vi. and vii., &c.)

REGGIO (an. *Rhegium Julii*), the most S. city and sea-port of Italy, in the Neapolitan dom., prov. Calabria Ultra I., of which it is the cap., on the E. side of the Strait of Messina, 8 m. S.E. of Messina, and 78 m. S.W. of Catanzaro; lat. 38° 7' N., long. 15° 55' E. Pop. 8,000. As a city, it is inferior to its opposite neighbour Messina; but it has a fine situation in the midst of orange groves, is well supplied with excellent water, and its climate is said to be the best in all the continental dom. of Naples. The former town was destroyed by the earthquake of 1783, since which Reggio has but slowly recovered its prosperity. It has been laid out on a regular plan, which, when completed, will render it a handsome city. A wide road, called the *Marina*, extends along the sea shore, parallel with which the principal street runs through the centre of the town. The houses are, for the most part, good; and as it stands on a gentle declivity, it is well drained. It has a collegiate and many other churches, several convents, a royal college, hospital, foundling asylum, and a handsome theatre. It is surrounded with walls, outside which are several suburbs. Its ancient fort no longer exists. Reggio is the seat of an archbishop, and of a civil and criminal tribunal. It has manufactures of gloves, stockings, &c. of silk, and produces some articles from the filaments of the *Pinna marina*; which, with oil and fruit, are its chief exports.

The ancient Rhegium was one of the most celebrated and flourishing cities of *Magna Græcia*. It was founded nearly 700 years B.C., by a party of Chalcidians, Zancleans, and other Greek colonists; and was for 200 years the cap. of one of the principal republics of S. Italy. The government was subject to the same mutations as that of the other Greek cities, being sometimes under a democracy, but more frequently under an oligarchy, or a single tyrant. It was besieged by the elder Dionysius, tyrant of Syracuse, who having succeeded in cutting off all communication between the sea on the one hand and the country on the other, reduced the inhabitants to such distress for want of food, that a bushel of wheat is said to have been sold for 5 minas, or, according to the usual method of computing, about 15*l.* 12*s.* 6*d.* At last, after sustaining the most dreadful privations, they were obliged to surrender, when most of those who survived were sent as slaves to Syracuse. It, however, again recovered some portion of its former importance, and succeeded in repelling an attack of Hannibal. Augustus established a colony in the city. It produced several distinguished followers of Pythagoras, some historians of celebrity, and some distinguished sculptors. It suffered in antiquity, as well as in more modern times, from earthquakes. (*Mitford's Græce*, v. 452., ed. 1838; *Ancient Universal History*, viii. 29. 8vo. ed., &c.)

REGGIO (an. *Regium Lepidi*), a city of N. Italy, cap. of a distr. of the Duchy of Modena, between the Tessino and Crostolo, tributaries of the Po, 16 m. W.N.W. of Modena, and 15 m. S.E. by E. Parma. Pop. about 18,000. It is defended by ramparts and a citadel, and is a well-built and rather handsome, though miserably dull town. Its streets are regular, and bordered with arcades. It has some handsome churches, numerous convents, a town-hall, theatre, lyceum, public library, and a library and museum of antiquities, collected by Spallanzani. No antiquities remain, except a statue in the principal square, traditionally said to represent Brennus, the Gallic leader. Reggio has manufactures of silk and linen fabrics, horn, wooden, and ivory articles, &c.; with some trade in cattle and agricultural produce, and a large fair, which lasts during the entire month of May. It is supposed to have been founded by M. Emilius Lepidus, who constructed the famous Æmilian way. It was here that the elder Brutus was slain by order of Pompey. Napoleon erected Reggio into a dukedom for Marshal Oudinot. Among other distinguished individuals to whom this town has given birth, may be mentioned Artot, perhaps the greatest of Italian poets, born here on the 24th of Sept. 1477, and the naturalist, Spallanzani; its vicinity has also to boast of being the birth-place of the great painter, Antonio Allegri, surnamed Corregio.

(*Cramer's Anc. Italy*, i. 85.; *Rampoldi*; *Dict. Géog.*, &c.)

REICHENBERG, a town of Bohemia, and, next to Prague, the largest and most flourishing in that kingdom, circ. Bunzlau, in a well wooded part of the Lausnitz mountains, 27½ m. N.N.W. Gitschin, and 56 m. N.E. Prague. Pop. 11,500. It has 3 par. churches, 2 castles, a fine school-house, a new theatre, and the largest brewery in Bohemia. It has manufactures of woollen cloth and yarn, cottons and linens, with numerous dyeing-houses, &c. (*Aust. Nat. Encyc.*; *Berghaus*.)

REIGATE, a parl. bor., market-town, and par. of England, co. Surrey, hund. its own name, in the valley of Holmstead, at the foot of a range of chalk-hills, traversing the co. from E. to W., 16 m. E. Guildford, and 18½ m. S.S.W. London. Area of parl. bor., which is co-extensive with the par., 5,900 acres. Pop., in 1831, 3,397. The town, which consists of a principal thoroughfare running E. and W., crossed at one end by another at right angles to it, is "small, but remarkably neat, with a greater number than usual of gentlemen's houses attached to it." (*Bound. Rep.*) The church, in the fields a little E. of the town, is a large structure, in the perpendicular style, with an embattled stone tower, the rest of the building being of grey limestone: in the interior are many handsome monuments, and in an attached building is a public library. The living is a vicarage of the annual value of 418*l.*, in private patronage. The Wesleyan Methodists, Baptists, and the Society of Friends, have their respective places of worship, with attached Sunday-schools: there is, also, a large national school for children of both sexes, and a small grammar-school. The market-house and town-hall is a small brick building of no pretensions to beauty; and near it is a clock-house, occasionally used as a prison. A castle once stood on an eminence N. from the town; but the only parts now remaining are the moat, and a curious excavated chamber, once used either as a prison or store-house. The priory, the property of Earl Somers, an elegant modern mansion at the S. end of the town, built on the site of an Augustinian monastery, has an attached park of 70 acres. Reigate formerly carried on a pretty considerable trade in oatmeal, no fewer than 20 mills being employed, previously to the American war, in its manufacture; but this business has since so much declined, that only one mill remains. At present it depends principally on its being on the line of the principal thoroughfare between Brighton and London; an advantage which, however, it will probably lose, now that the Brighton Railway, which passes about 1½ m. W. from the town, is completed. Fuller's earth and white sand are found in considerable quantities in the neighbourhood, which produces an abundance of medicinal and other plants.

Reigate is a bor. by prescription, its governing officer being the bailiff of the lord of the manor. It sent 2 mems. to the II. of C. from the 23. Edw. 1. down to the Reform Act, the right of election being in the burghage holders, of whom, in 1831, there were only 8, wholly under the influence of Earl Somers, the lord of the manor. The Reform Act deprived the bor. of one of its mems., and extended the electoral limits so as to comprise the whole par. Reg. electors, in 1839–40, 198. It is a polling place at elections for E. Surrey. Petty sessions for the hund. and the spring quarter sessions for Surrey are held here by the co. magistrates. Markets for corn, &c., on Tuesday; and a cattle market the first Tuesday in each month. Fairs, Whit-Monday, Sept. 14., and Dec. 9.

REMI, or REMY (ST.), a town of France, dép. Bouches-du-Rhône, cap. cant., in a valley 15 m. N.W. Arles. Pop., in 1836, ex. com., 3,238. It was formerly surrounded with a double line of ramparts; but these have been levelled, and their place is occupied by a fine circular promenade. Streets, narrow and irregular; but there are many good houses. The town-hall, the par. church, and a lunatic asylum are the principal public buildings. St. Remi is chiefly remarkable for its Roman antiquities, about 1 m. from the town, and supposed to belong to the an. *Glanum*. They consist of 2 edifices; one an arch somewhat similar to the central portion of that at Orange, but much mutilated; the other a beautiful Corinthian monument, square at its base, but circular above, appearing from an inscription to have been erected by Sextus L. Marcus to his parents, whose statues are in the circular portion of the structure. This relic of antiquity, an engraving of which is given in *Wood's Letters*, i. 159., appears to be in good preservation.

The Abbé Expilly, one of the most laborious and useful topographical writers of last century, was a native of St. Remi, where he first saw the light in 1719. His principal work, entitled *Dictionnaire Géographique, Historique, et Politique des Gaules et de la France*, in 6 tomes fol., is incomplete, reaching only to the letter S; it contains a vast fund of information.

RENAIX, or RONSE, a town of Belgium, prov. E. Flanders, arrond. Oudenarde, cap. canton, 20 m. S.W.

Ghent. Pop., in 1836, 12,920 (*Hensching*). It is in a fine situation, and is embellished with several public fountains: its old castle is now in ruins, but it has some good public buildings. It has manufactures of cotton, woollen, and linen stuffs, hats, beer, and chocolate; with a considerable trade in linens, a monthly and 2 weekly markets, and 2 large annual fairs. (*Fandermaelen, Dict. Fland. Orientalc.*)

RENFREW, a small maritime co. of Scotland, having N. and W. the river and Frith of Clyde, S. Ayrshire, and E. Lanarkshire. Area, 145,280 acres, of which about a half may be arable. There is a large extent of hilly, moorish ground, in the W. parts of the co., and along the confines of Ayrshire; but from Port Glasgow, eastwards along the Clyde it is comparatively flat. Soil very various; being in parts thin and sandy, while in others it consists of a deep, loamy, fertile clay; and the country being in general well enclosed with hedges, and ornamented with gentlemen's seats and plantations, has a rich appearance. Tillage husbandry is still in a rather backward state, and neither the rotation of crops nor the management of the land is so well understood as might have been expected. "Much, however, has been done in the way of improvement during the last 40 years; enclosures have become general; new roads have been constructed; the land has been drained, and limed, and the rotation of crops improved." (*New Statistical Account of Scotland, art. Lochmnoch, or Renfrew.*) Farm-houses and offices have, also, been greatly improved. On the whole, however, the co., from the humidity of the climate and the nature of the soil, is better adapted for grazing and dairying (the latter of these is extensively followed) than for tillage. There are several large estates, but property is, notwithstanding, a good deal subdivided. Farms of a medium size. Average rent of land, in 1810, 17s. 7d. an acre. There are valuable coal-mines near Paisley and the eastern parts of the co., and limestone and freestone are very generally diffused. Paisley is the principal seat of the Scotch shawl manufacture; and, next to Glasgow, of the Scotch cotton manufacture; manufacturing industry is also extensively prosecuted at Pollockshaws, Neilston, and other places. Greenock and Port Glasgow, which are both in this county, are considerable sea-ports. Principal rivers, White-Cart, Black-Cart, and Gryffe. The co. is divided into 16 parishes, and sends 3 mems. to the H. of C., being 1 for the co., and 1 each for Paisley and Greenock. Renfrew and Port Glasgow are associated with other bors. In the return of a mem. Registered electors for the co., in 1839-40, 2,249. In 1831, this co. had 11,153 inhab. houses, 28,264 families, and 133,443 inhabs. of whom 61,154 were males, and 72,289 females. Valued rent 69,172*l*. Scotch: annual value of real-property in 1835, 295,534*l*.

RENFREW, a parli. bor. of Scotland, co. Renfrew, of which it is the cap., within about 1 m. of the S. bank of the Clyde, 5 m. W. Glasgow. Pop., 2,002. It consists merely of a single street, from which several lanes issue. The only public buildings are the parish church, town-hall, and jail. There is no dissenting chapel. There are no native manufactures in the town; but about 250 looms are employed on account of Glasgow manufacturers. It has also a distillery, and a considerable dairy establishment. The bor. was connected with the Clyde by a canal in 1786, but it has been allowed to go into disrepair. A quay was constructed on the Clyde opposite to the town in 1835; and a railway, 34 m. in length, connects the bor. with Paisley. On the whole, however, it has but little trade or enterprise. The royal family of Stuart, so called from their office, had their original residence near this town. It joins with Port Glasgow, Dumbarton, Rutherglen, and Kilmarnock, in sending 1 mem. to the H. of C. Registered electors in this bor., in 1839-40, 91; councillors, 19; corp. revenue, 1,500*l*.

RENNES (an. *Condate*, afterwards *Redones*), a city of France, dép. Ille-et-Vilaine, of which it is the cap., in a plain, at the confluence of the Ille and Vilaine, 61 m. N. by W. Nantes; lat. 48° 6' 50" N., long. 19° 40' 47" W. Pop. in 1836, ex. com., 25,569. The Vilaine divides Rennes into an upper and lower town. The former, which is the largest, is regularly built, and handsome; the lower town is quite the contrary. The houses in both are, however, of a dull grey stone, which gives the city a sombre appearance.

Rennes has several tolerable squares, as that of the *Palais de Justice*, in which was formerly a bronze equestrian statue of Louis XIV.; and the *Place aux Armes*, planted with lime trees, and forming a favourite promenade. But it has neither public fountains nor covered market-places; and, for a city of its size, there are few public buildings worth notice. Though not fortified, it has several gates, on one of which is an almost effaced Latin inscription in honour of the emperor Gordian. Opposite this gate is the cathedral, a heavy-looking edifice, with a front flanked by two square towers, and ornamented with five rows of columns of different orders.

Several of the other churches are in much better taste. The town-hall is one of the best public edifices. It has been rebuilt, together with a large part of the city, since a destructive fire in 1720, and comprises a large saloon, used for public fêtes, the halls of various judicial courts, a public library of above 80,000 vols., schools of design and architecture, and the apartments occupied by the mayor. The hotel appropriated to the use of the royal court, tribunal of commerce, law-school, &c., is a building in the Tuscan order, having some good paintings and arabesques.

Rennes has several hospitals, a house of correction, in which various manufactures are conducted, an arsenal, artillery forges, and various military schools. It is the seat of a bishop, whose diocese comprises the dép. Ille-et-Vilaine: it is also the seat of the royal court for the 5 dép. of Brittany, the cap. of the 13th military division, and has a chamber of manufactures, a faculty of law, a secondary school of medicine, 2 seminaries, a tolerable museum of painting, and some other scientific establishments. In the immediate vicinity are several good promenades; the principal, the Thabor, formerly a garden of the Benedictines, on a height above the city, has a statue of Duguesclin.

Though favourably situated for trade, Rennes has few manufactures: the principal are those of sail-cloth, for the navy, &c., fishing-nets, and twine. It has, however, a considerable traffic in linens, butter, cyder, and provisions, which is much facilitated by the canal of Ille and Rance, and that between Nantes and Brest. It has 12 annual fairs.

Rennes was the cap. of Brittany from the 9th century to the Revolution. It has produced numerous distinguished men, among whom may be specified the famous Constable Duguesclin, born in the castle of Motte-Broon, in the immediate vicinity, in 1314; La Bletterie, the author of the lives of Julian and Jovian; Ginguéne, the author of the *History of Italian Literature*, &c. (*Hugo, art. Ille-et-Vilaine; Guide du Voyageur; Dict. Géog.*)

REPTON, or REPINGTON, a par. and village of England, co. Derby, hind. Repton, on a small affluent of the Trent, 6 m. S.W. Derby. Area of par. with Rectory chapelry, 6,440 acres. Pop., in 1831, 2,083. The town consists principally of a street of scattered houses, about one mile in length; its inhabitants being chiefly agricultural. The par. church is a spacious structure, with an elegant spire, and several handsome monuments. The living, a perpetual curacy, in the gift of Sir G. Crewe, is worth 123*l*. a year. A free-school, well endowed in 1566, is held in the remains of a priory of Black Canons, established in 1172.

REQUENA (an. *Loretum*), a town of Spain, in New Castile, prov. Cuenca, on the Magro (a tributary of the Júcar), 43 m. W.N.W. Valencia. Pop., according to Mifano, 10,898. It is surrounded with walls, and commanded by an old castle, built on a rock, with the streets are tolerably straight, lined with well-built houses, and, as in most Spanish towns, there is a spacious plaza, in the centre of which is an ornamental fountain. Three par. churches and a college are the only public buildings. The chief employment of the inhabs. is in weaving ribands and silk goods. There has been a great increase of activity since the restoration of tranquillity; and Requena now furnishes a large supply of these articles to Madrid, Seville, and Cadiz. A fair is held annually in September. The neighbourhood, a portion of which is irrigated, is well cultivated, and furnishes corn, wine, fruit, saffron, and large quantities of silk. During the war of the succession, in 1706, the castle was taken by the English, but retaken the following year by the French under the Duke of Orleans. (*Mifano; Dict. Géog.*)

RETFORD (EAST and WEST), a parli. and mun. bor. of England, co. Nottingham, hind. Bassetlaw, on the Idle, a tributary of the Trent, 26 m. N.N.E. Nottingham, and 129 m. N.N.W. London. Area of the former parli. bor., which was coextensive with the par. of East Retford, 130 acres; its pop., in 1831, being 2,491. The modern mun. bor., however, comprises, together with the par. of East Retford, parts of those of West Retford, Clareborough, and Ordsall, and may have a pop. of between 4,000 and 5,000. The town consists principally of several thoroughfares, which meet in a common centre, and are united by several cross streets. To the N.E. are the hamlets of Moorgate and Spittal Hill; and to the S. South Retford and Thrumpton, to which last houses extend from East Retford, so as to form almost one continued line of buildings. West Retford is divided from East Retford by the Idle; the bridge over which being in the line of the streets of both towns, they seem to be, what, in fact, is substantially the case, a single town. The houses of East and West Retford have a respectable appearance, and the streets are lighted with gas. (*Mun. Corp. Rep.*) East Retford church is a spacious edifice of different dates, with a lofty square tower. The church of West Retford is small, but has a handsome spire. The living of East

Retford is a vicarage, value 140*l.* a year; patron, Sir R. Sutton: that of West Retford is a rectory, in the gift of the corporation of East Retford, value 364*l.* a year. (*Ecccl. Rev. Rep.*) In the suburb of Moorgate is a new chapel of ease, in the Gothic style: there are in the town places of worship for Baptists, Independents, Wesleyans, &c. The town-hall is a convenient building, surmounted by a cupola, and having beneath a good market-place. There are 2 almshouses, one for old men, the other for women; a free grammar-school, founded by Edward VI., of which the municipal authorities are trustees; a national school, established in 1813, various minor charities, a news-room, and a small theatre. There is no manufactory of any kind in the town, which depends entirely for its support upon the retail trade carried on with the inlubs. of the surrounding agricultural districts. (*Man. Corp. Rep.*) Hating was formerly extensively carried on, and hat-making and the manufacture of worsted were introduced; but these branches have nearly ceased. The lile is not navigable at Retford; but it communicates with the Trent by the Chesterfield Canal, which passes S. of the town, and is carried over the lile by an aqueduct. East Retford is governed by 4 aldermen and 12 councillors, and had formerly petty sessions, &c.; but the Municipal Reform Act orders that it shall not have a commission of the peace unless upon petition or grant. Previously to this act, its police was reported to be very inefficient, and the administration of the corporate and other revenues had been very unsatisfactory. (*Man. Rep., Appendix.*) It is said to have been a bor, by prescription: it received many charters from Henry III. and subsequent sovereigns, down to James I. East Retford returned 2 mems. to the H. of C. in the 9th Edward II., and continued to enjoy this privilege down to 1826. But it having been proved that gross bribery had been practised at the election that then took place, it was proposed by one party to incorporate the adjoining hundred of Rasselaw with the bor., and by another to transfer the franchise to Manchester, Birmingham, or some other of the great towns that were then unrepresented. After lengthened discussion, the first-mentioned plan was agreed to, so that the par. bor. of East Retford is now identical with the hundred of Rasselaw. Registered electors, in 1838, 40, 2,785. Markets at East Retford on Saturdays; fairs, March 23, and Oct. 2., for horses, cattle, and cheese. (*Parl. Reports, &c.*)

RETHIEL, a town of France, dep. Ardennes, cap. arrond., on a steep declivity beside the Aisne, here crossed by a wooden bridge, 21 m. S.W. Mézières. Pop. in 1836, ex. com., 6,771. It is pretty well laid out, and is improving; but the houses are still mostly of wood, and there is no remarkable public building.

Rethiel was formerly the cap. of a co. of Champagne, and was fortified. It has a court of original jurisdiction, a communal college, society of agriculture, theatre, several hospitals, and two prisons. It is chiefly noted for its woollen manufactures, which are estimated to employ from 1,400 to 1,800 hands, mostly spinners. As in most small manufacturing towns, the workpeople are generally employed at their homes. The prices of labour are some-what lower than in Rheims; but provisions, &c., are cheaper, and, on the whole, the woollen spinners of Rethiel are in a better condition than those in that city. Its trade has been considerably augmented by the opening of the canal of Ardennes: besides woollen manufactures, the town has many iron forges, breweries, and tanneries. (*Hugo, art. Ardennes; Villerme, Tableau des Ouvriers*, i. 248—252.)

REVEL, a gov. of European Russia. (See ESTHONIA, i. 869.)

REVEL (Esth. *Talline*, Russ. *Kolyvan*), a sea-port town of Russia in Europe, cap. of the above gov.; on a small bay on the S. side of the Gulf of Finland, 200 m. W.S.W. Petersburg; lat. 59° 26' 33" N., long. 24° 44' 30" E. Pop. about 13,000. The city proper, including within the ramparts, is small; and though it has many good brick houses, its streets are narrow and irregular. There are several Lutheran, R. Cath., and some Greek churches, all stone edifices; and various charitable and educational establishments, the latter including a gymnasium, episcopal seminary, and a school (*penzion*) for nobles. The castle, a modern edifice, is appropriated to the provincial authorities; the municipal officers, who are elected by the city, reside in the town-hall. The admiralty is the principal remaining public building. The suburbs, consisting mostly of wooden houses, cover a large extent of ground along the shore. Revel is much resorted to as a watering place, and has some good warm baths, a theatre, several clubs or casinos, and 3 or 4 public libraries, one of which, the property of the city, is said by Possart to comprise 10,000 vols. This town is one of the stations for the Russian fleet, and has a harbour defended by several batteries. This port, which was materially improved in 1820, is deeper than that of Cronstadt, though more difficult of entrance. The roadstead, formed by some islands, is well sheltered: the long

duration of the frost is the principal drawback on Revel as a naval station, though that is a disadvantage which it shares in common with the other Russian ports in the Baltic. Though not connected with the interior by any navigable river, Revel has a considerable trade. Its principal exports are corn, spirits, hemp, flax, timber, and other Baltic produce; the imports consist of colonial produce, heyrings from Holland and Norway, salt, cheese, wine, tobacco, fruits, dye stuffs, cotton yarn, stuffs, and other manufactured goods, &c. A portion of the customs' revenue is enjoyed by the town.

Revel was founded by the Danes in 1218, and afterwards sold by them to the Knights of the Teutonic Order. In 1561 it came into the possession of the Swedes, but was taken from them by the Russians in 1710. Near it is the Katharineubath Palace, built by Peter the Great; the gardens of which are a favourite public promenade. (*Schützel; Possart, &c.*)

REUS, a town of Spain, in Catalonia, 9 m. W. Tarragona, and 54 m. W. by S. Barcelona. Pop., according to Mirano, 24,600. It stands on a plain gently sloping towards the coast, and comprises several streets lined with good houses, with numerous churches, hospitals, barracks, an orphan asylum, theatre, and handsome public fountains. The inlubs. are extensively employed in the manufacture of silk and cotton fabrics, hats, soap, &c.; besides which, there are large dye-houses, bleaching-grounds, tanneries, spirit-distilleries, glass-houses, &c.; in fact, Reus may be regarded as one of the most important manufaturing towns of Catalonia, and the numerous handsome houses in its neighbourhood sufficiently indicate the industry and prosperity of its inlubs. The town is connected by a canal with the port of Salou, whence its products are exported in exchange for rice, flour, cod fish, anchovies, &c. Its weekly market is one of the largest in Spain, and is frequently attended by upwards of 10,000 persons. The town was founded in the middle of the 12th century; but its present importance is wholly consequent to the establishment of silk and cotton manufactories at the close of the last century. (*Mitiano; Laborie, Itinéraire de l'Espagne; Diet. Géog., &c.*)

REUSS, a territory of Central Germany, forming two indep. principalities, between lat. 50° 20' and 51° N., and long. 12° 45' and 12° 15' E., having S. Bavaria, E. Saxony, and N. and W. the territories of Prussia, Cobourg, Gotha, and Weimar, the last dividing it into two unequal portions. Area, 591 sq. m. Pop., in 1838, 101,800. Surface generally hilly: in the N. it is watered by the Elster, in the S. by the Saale. Tillage is less an occupation of the inlubs. than the rearing of cattle and sheep. The most fertile tract adjoins the town of Gera. Woods comparatively extensive, and one of the chief sources of national wealth. Woollen, linen, and cotton fabrics are produced; mining is little followed, and the only metallic works are a few iron-forges. The inlubs. are almost all Lutherans. The territory of the elder branch of Reuss consists of the lordships of Greiz and Burgh, having an area of 144 sq. m., and a pop., in 1838, of 32,100. Greiz is the chief town, and seat of the superior judicial court, whence appeal lies to the tribunal of Jena. The public revenue amounts to about 80,000 dollars a year; the contingent to the army of the confed. being 223 men. The younger branch of Reuss has a territory of 447 sq. m., composed of the lordships of Schleiz, Lobenstein-Ebersdorf, and Gera, with a pop. of 62,700; chief town, and seat of gov., Schleiz. Appeal from the courts of this principality lies also to Jena. Public revenue, about 235,000 dollars; contingent to army, 522 men. Each branch has a separate vote in the full diet of the German Confed., and together with Hohenollern, Lippe, Liechtenstein, and Waldeck, the 16th place, and a vote in the committee. (*Berghaus, Allg. Länder, &c.*, iv. 392—394.; *Almanach de Götting.*)

REUTLINGEN, a town of Württemberg, circ. Schwarzwald (Black Forest), of which it is the cap., on the Eschatz, a tributary of the Neckar, 19 m. S. Stuttgart. Pop. in 1838, 11,500. Reutlingen presents a contrast to many other old Imperial cities, having mostly regular streets, and well-built though antiquated houses. It has fortified, and has several suburbs. One of its churches has a tower said, by Berghaus, to be 320 ft. in height: the town-hall, lyceum, a well-endowed hospital, and orphan asylum, are the other most conspicuous edifices.

It has manufactures of leather, lace, net for women's caps, of the annual value of 100,000 florins; clocks and watches, &c.; with dyeing and bleaching factories, and printing establishments, whence many pirated editions of German works have issued.

Reutlingen was the first town in Swabia which embraced the Reformation. (*Memminger Besch. von Württemberg; Berghaus, &c.*)

RHEIMS or REIMS (anc. *Durocoritarum*, post. *Remi*), a cr. bated city of France, dep. Marne, of which, though not the cap., it is by far the largest town, cap. arrond. in a plain near the Vesle, a tributary of the Aisne, 27 m. N.N.W. Chalons, and 95 m. E. by N.

Paris; lat.  $49^{\circ} 14' 41''$  N., long.  $4^{\circ} 2' 47''$  E. Pop. in 1836, 38,359. It is surrounded by ramparts faced with stone, which, being planted with trees, form agreeable public walks; and there are other promenades in the immediate neighbourhood. It is about a league in circuit, and is entered by six gates, one of which, the *Porte Neuve*, a triumphal arch, with handsome doors of open iron-work, was raised in honour of Louis XVI. at his coronation. Two principal thoroughfares, which meet in the *Place Royale*, divide the city into four unequal portions. It is tolerably well laid out, its streets being wide, straight, and generally clean; it has several good squares; but its houses are small, having mostly only two floors, and are constructed with monotonous uniformity. Water-works, beyond the walls, distribute the waters of the Vesle through the town, but, according to Hugo, in insufficient quantity; and there is not one handsome public fountain. It has, however, some remarkable public edifices.

The cathedral, one of the largest and most magnificent in Europe, is that in which the coronation of the French kings has taken place, with few exceptions, from the era of Philip Augustus. It was chiefly constructed between 1212 and 1242. It is 479 ft. in length, 99 ft. in breadth, and 144 ft. in height. It has a noble front, flanked with two square towers, 262 ft. in height. Of the three grand entrances on this side, the central is 50 ft. high, and those on either side 22 ft. in width; above the former is a beautiful circular window. The whole front is ornamented with nearly 550 statues, and a great number of columns and bas-reliefs; and similar decorations abound in every part of the exterior. In one of the towers is a bell weighing 23,000 lbs. This cathedral has some fine stained glass, tapestry, marble pavements, &c.; a very fine organ; the "washing the feet," a *chef d'œuvre* of Poussin; various curiosities, including the font said to have been used in the baptism of Clovis, and the tomb of Jovinus, a citizen of Rheims, who arrived at the dignity of Roman consul *anno* 356. The last, an admirable specimen of ancient art, was transferred from the church of St. Nicaise, destroyed during the phrenzy of the Revolution.

Rheims, which was a place of great consideration under the Romans, had various other antiquities, but they were mostly destroyed or carried off during the period in question. The most remarkable ancient monument now existing is the *Porte de Mars*, one of the city gates; a triple archway, ornamented with eight Corinthian columns, and numerous bas-reliefs, though these are now greatly defaced. This arch appears to have been erected in honour of Cæsar and Augustus, when Agrippa was governor of Gaul. Without the walls are the traces of an amphitheatre.

The church of St. Remi, constructed in 1041, is considered the oldest in the city. It occupies almost as much ground as the cathedral, and though much less lofty and ornamented, is in a similar style of architecture. It contains the remains of the ancient and curious mausoleum of St. Remi. The town-hall, an edifice of the time of Louis XIII., with whose statue its front is ornamented, the new prison, *maison rouge*, which has some historical interest, theatre, several hospitals, &c., are among the other chief objects of notice. In the centre of the *Place Royale* is a bronze statue of Louis XV., surrounded with allegorical figures, erected in 1818, to replace a similar statue destroyed in 1793. Rheims is the seat of an archbishop, whose suffragans are the bishops of Amiens, Beauvais, Chalons, and Soissons, and of courts of assize, original jurisdiction, and commerce, a council *des prud'hommes*, chamber of manufactures and arts, a royal college, &c. It has a public library of 24,000 printed vols. and 1,000 MSS., a botanic garden, schools of mutual instruction, a *mont de piété*, savings' bank, &c.

Rheims is the centre of the manufacture of woollen stuffs, which extends over nearly the whole dep. of Marne, and the adjacent dep. of Aisne and Ardennes. In 1834, these manufactures were estimated to occupy 50,000 hands, of whom 12,000 were settled in Rheims. About 3,000 of the latter were weavers, 1-10th part of whom wrought at jacquard-loom; 1,500 were employed in spinning yarn, 4,000 in fulling, washing, and otherwise preparing the fabrics made. For the last 25 years the woollen manufacture of Rheims has made a considerable progress in most of its branches. Wages are good. Those of workmen vary, according to the work, from 12 up to 45 fr. a day; women from 75 c. to 1½ fr.; and children from 50 to 75 c. But the average is estimated to be, for 1st class workmen, 2½ fr. to 3 fr.; 2d class, 1½ fr. to 2 fr.; and women 75 c. to 1 fr. 25 c. daily. They usually work for about 12 hours a day; those living in the city being mostly employed in the workshops of the manufacturers. In general the workpeople are well clothed and well fed; but they are said to be improvident, and few save money. The vice of drunkenness is very prevalent; and morals are as bad or worse, perhaps, than in most manufacturing towns of France. From 1825 to

1835, the proportion of illegitimate to total births amounted to about 1 in 4. (*Villermé, Tableau des Ouvriers*, 1. 216-247.) Rheims also produces soap, candles, biscuits, and gingerbread; and has breweries, tanneries, leather-factories, &c. It is a principal *dépôt* for the wines of Champagne, large quantities of which are stored up in cellars, similar to those of Epernay, which see. Besides its trade in woollen manufactures and wines, it has a considerable trade in cotton stuffs, flour, and other agricultural products, &c. Under the Romans, *Durocoratum* was the cap. of Belgica II., and was distinguished as a seat of letters and philosophy. It became a bishopric before the irruption of the Franks, and received many privileges from the Merovingian kings. In 1399, Rheims successfully resisted the arms of Edward III. In 1547, a university was founded in it, which lasted till the Revolution, when it was suppressed. In 1814, it was taken by the Russians, who were soon after expelled by Napoleon, with great loss.

Among the great men of whom Rheims has to boast, the most distinguished by far is Colbert, minister of finance during the most splendid period of the reign of Louis XIV., born here on the 29th of August, 1619. It has also given birth to the Abbé de la Pluche, the historian Vely, &c. (*Hugo, art. Marne; Villermé, Tableau des Ouvriers; D'Anville, Notice de la Gaule*, 280., &c.)

RHIN (BAS, or LOWER-RHINE), a frontier dep. of France, in the E. part of the kingdom, which, with Haut-Rhin, formerly constituted the prov. of Alsace, chiefly between the 48th and 49th degs. of N. lat., and the 7th and 8th E. long.; having N. Rhenish Bavaria, and the dep. of Moselle, W. Meurthe and Vosges, S. Haut-Rhin, and E. the Rhine, separating it from the Grand Duchy of Baden. Area, 464,781 hectares. Pop., in 1836, 540,213. The W. part of the dep. is covered by the Vosges mountains, and their ramifications. The average elevation is from 2,000 to 2,500 ft.; but the Hochfeld rises to 4,450 ft., and the Schneeburg to 2,850 ft. The surface declines towards the E. Principal rivers, the Ill, with its numerous tributaries, the Moder, Zorn, Sarre, &c. In 1834, the arable lands were estimated at 180,920 hectares, meadows 56,024 ditto, vineyards 13,123 ditto, orchards 5,224 ditto, and woods 117,754 ditto. The marshes in the E. and the stony tracts of the W. are unsuitable for agriculture; and though the middle of the dep. be fertile and well cultivated, the produce of corn is not sufficient for home consumption. More potatoes are grown than in any of the neighbouring dep.s; nearly 4,745,000 hectolitres having been produced in 1835. A good deal of tobacco is raised, and bought by the government. The annual produce of wine may be estimated at about 460,000 hectolitres: it is of a medium quality, but, speaking generally, is inferior to that of the Haut Rhin. About a half of the produce is consumed in the dep., the rest being sent, partly to other dep.s and partly to Baden, &c. Hops, wood, hemp, onions, and other vegetables, are articles of extensive cultivation. The plough is usually drawn by horses. Horned cattle are pretty numerous, but sheep are scarce. Poultry are extensively reared near Strasburg; particularly geese, the livers of which serve to make the *pâtes de fois gras*, for which that city is so celebrated. In 1835, of 231,956 properties subject to the contrib. *foncière*, 141,562 were assessed at less than 5 fr., and only 83 at 1,000 fr. and upwards. Iron mines are wrought; lead, antimony, cobalt, coal, and bitumen are met with; and salt is made from springs in the N. and W. The dep. has manufactures of cotton yarn, muslins, woollen, and linen cloths, leather, saddlery, carriages, glass wares, &c. There are many iron-forges; and fire-arms are manufactured at Mutzig and Klünzthal. Strasburg is the seat of an extensive general commerce and transit trade. Bas-Rhin is divided into four arrondis; chief towns, Strasburg the cap., Saverne, Schlestadt, and Wissembourg. It sends 6 mems. to the Ch. of Deputies. Registered electors (1838-39), 1,762. Total public revenue (1831), 14,336,474 francs. The majority of the population is Protestant.

RHIN (HAUT, or UPPER RHINE), a frontier dep. of France, in the E. part of the kingdom, formerly comprised in the prov. of Alsace; between lat.  $47^{\circ} 27'$  and  $49^{\circ} 18'$  N., and long.  $6^{\circ} 45'$  and  $7^{\circ} 35'$  E., having N. Bas-Rhin, W. Vosges and Haute Saône, S. Doubs, and the Swiss cantons of Neuchâtel, Berne, and Valais, and E. the Rhine, separating it from the territories of Baden. Area, 406,036 hectares. Pop. in 1836, 424,288. In the W. are the chains of the Vosges and Jura; one summit of the former, the *ballon d'Alsace*, rises to 4,602 ft. above the sea. The rest of the surface is mostly plain. Except the Rhine, the Ill is the only navigable river; but the canal between the Rhine and Rhone intersects the dep. in its whole length. As in Bas-Rhin, the most fertile portion of the surface is in the centre of the dep., where agriculture is in a pretty advanced state. In 1835, the arable lands were estimated to comprise 155,671 hectares; meadows, 52,566 do.; vineyards, 11,141 do.; orchards,

8,819 do.; and woods, 113,215 do. Principal crops, wheat and barley; 2,460,000 hectolitres of potatoes were said to be raised in 1855. The produce of wine is estimated at above 400,000 hectol. a year. Some of the white wines, especially those of Guebwiller, Riquevill, Thann, &c., are highly esteemed. The *vins gentils* are extensively purchased by the merchants of Cologne and Frankfurt, who mix them with the wines of the Rhine, to which they impart strength and vivacity. They keep for more than twenty years, improve as they grow older, and sustain no injury from travelling. The d<sup>ép.</sup> also produces excellent beer. In 1835, of 174,015 properties subject to the *contribution foncière*, 100,859 were assessed at less than 5 fr., and 26,810 at from 5 to 10 fr. There are various iron and other mines, and good building stone and other minerals are met with in various parts. "Hand-loomers are scattered over nearly the whole of the d<sup>ép.</sup> of the Haut- and Bas-Rhin; the articles produced are chiefly muslins and fine calicoes. The wages of the hand-loom weavers vary: for the most skilled class, from 6 to 9 fr. per week; for the second-rate class, from 4½ to 6 fr.; and for women and children, forming the third or lowest class, from 2 to 4½ fr. These are nett wages, the manufacturers either beaming the warps and furnishing the looms in factories, or paying equivalently." (*Symon's Report*, p. 119.) Villermé states that in 1834, the cotton manufactures of the Haut-Rhin employed 100,000 individuals, or nearly a fourth part of the entire pop.; and, since that period, he affirms the number has still further increased: but a large proportion of these persons prosecute the cotton trade as a subsidiary employment only, carrying it on in their cottages when they are not necessarily engaged in the culture of their little patches of ground. Mulhausen, Thann, Guebwiller, Sultz, and Sainte-Marie aux Mines, are the chief seats of the cotton manufacture. "The homes of the weaving classes (in these towns) are, for the most part, dirty and comfortless, and evince every symptom of bad management and poverty. Even those who have children in the cotton-mills do not keep up any appearance of comfort. The Alsatian weavers have, generally speaking, a sufficiency of food, though in all other respects they are badly off. In the mountains of the Vosges, the peasantry are worse off still: the looms found there are chiefly on the system of the 'customer' weavers of Scotland, but there are some who weave for manufacturers at very low wages." (*Symon's Reports*, p. 120.)

Villermé gives a deplorable account of the abject poverty of a great portion of the cotton weavers of the Haut-Rhin, many of whom come from Switzerland and beyond the Rhine. (*Tableau des Ouvriers*, i. 24—30, &c.) This d<sup>ép.</sup> has also manufactures of hardware, clocks, and watches, with various iron and steel forges.

It is divided into 3 arronds: chief towns, Colmar, the cap., Altkirch, and Belfort. It sends 5 mems. to the Ch. of Dep. Number of electors (1838—9), 1,596. Total public revenue (1831), 5,338,247 fr. Unlike Bas-Rhin, the majority of the pop. in this d<sup>ép.</sup> are Rom. Catholics, but Protestants are numerous.

Alsace, which formed a part of the kingdoms of Austrasia and Lorraine, afterwards belonged to the German empire till 1208, when it became mostly independent. It subsequently belonged to Austria; but was finally annexed to France by Louis XIV. in 1697. (*Hugo*, art. *Haut-Rhin*; *Villermé*; *Parl. Papers*; *French Official Tables*, &c.)

RHINE, a large river of W. Europe, rising on the N. side of the Alps, flowing through Switzerland and Germany, and falling into the North Sea or German Ocean, between lat. 46° 30' and 52° N., and long. 3° 40' and 9° 50' E. Length, measured along the stream, 950 m.: area of basin, including tributaries, 83,298 sq. m., or about 1-43d part of Europe. It originates in two principal streams, which have their sources on the N. side of the Pennine Alps: the principal of these, called by the Germans Vorder-Rhine, is formed by the junction of two small streams flowing from the N. side of Mount St. Gothard, at an elevation of 6,581 ft. above the sea, lat. 46° 32' N., long. 8° 53' E., only a few miles from the source of the Rhone. Hence the main stream, which soon becomes enlarged by the affluence of numerous brooks and mountain torrents, takes at first a N.E. direction through the magnificent and stupendous ravine of the Rheinwald, enclosed on both sides by almost perpendicular rocks, rising 3,000 ft. above the river, and clothed to their very summit with stately firs. At the lower end of this valley, and only a few miles above Chur, near Reichenau, the river is joined by its E. branch, the Hinter-Rhine, which rises on the side of the Moschelhorn or Vogelberg, near the pass of St. Bernard. At Chur the river defects N., maintaining that general direction through a fertile and romantic valley, abounding with vineyards, as far as the lake of Constance, into which it pours its waters, their level at this point being 1,355 ft. above the sea, or 5,326 ft. below the source. The river, leaving this beautiful lake at its W. end, near the town of Constance, enters a smaller expanse of water,

called the Unter- or Zetter-See, in which is the island of Reichenau, and thence, narrowing its channel, runs W. to Schaffhausen; 3 m. below which the stream, pent between lofty rocks, and divided by craggy islets, falls over a ledge of rocks 76 ft. in height, forming one of the most celebrated European cataracts. (*See* SCHAFFHAUSEN.) The channel, from this point to Basle, is extremely tortuous, winding through lofty rocks, which confine the waters within a narrow compass, and consequently increase the rapidity of the current. At Zuzach, about 1 m. above the confluence of the Aar, occurs a second fall, down which, however, the natives venture their loaded barks, except during the spring-floods. The river maintains its W. direction through a rocky valley, interrupted with frequent crags rising above the stream, as far as Basle, where it is crossed by a wooden bridge, 600 ft. in length, with stone abutments. Here also commences the navigation of the river, its level at this point being 827 ft. above the German Ocean.

Basle, indeed, seems to be the proper point of division between the upper and lower Rhine; for the navigation above this town is so interrupted by falls and rocks as to be scarcely of any importance, whereas from hence to the mouth boats pass at almost all seasons of the year. Assuming at Basle a pretty constant N. course, the Rhine becomes the boundary between France and the grand duchy of Baden, and afterwards between Baden and Rhenish Bavaria, the cities and towns in this part of its course being Mannheim, on the E. bank, at the confluence of the Neckar, and Strasburg, Speier, Oppenheim, and Mayence, on the W. bank. At the last of these towns, at the junction of the Main, the stream takes a sudden turn W. to Bingen, on the W. bank, from which point the course of the river is pretty uniformly N.W. to the delta at its mouth. Coblenz, at the confluence of the Moselle, Bonn, Cologne, and Clèves, are the chief towns on the W. bank; those on and near the E. side comprising Wiesbaden, Dusseldorf, Wesel, and other places of inferior size. The delta of the Rhine is the largest in Europe, not even excepting that of the Volga: it extends, with its ramifications, 110 m. along the coast, from the E. shore of the Zuider-Zee to the S. branch of the Maas; and the distance from the apex, about 10 m. below Emmerich, being 72 m., the total area of the country comprised within its limits is 4,150 sq. m. When the river divides, the left or S. arm takes the name of Waal; and the other retaining that of the Rhine, is connected, a little farther N., by an artificial canal with the Yssel. Still lower down the Rhine takes the name of the Leck, in order to distinguish it from the old Rhine, now sanded up, which passed by Utrecht and Leyden to the sea at Catwyk. The Rhine has at present three mouths. About two thirds of its waters flow to the sea by the Waal, the remainder being carried partly to the Zuider-Zee by the Yssel, and partly to the ocean by the Leck and Maas, on which is the great Rhenish port of Rotterdam. These branches, however, are so interlaced with natural and artificial channels, and there are so many lagoons, marshes, &c. in this district, that a map becomes indispensable to any detailed description. (*Lyle's Geol.* li. 52—59.)

The entrance to the Maas, leading to Rotterdam, lies in lat. 51° 56' N., and is commonly called the Briel-gat; or channel: it has a bar across, on which there are 7½ ft. water at neap-tides. Spring-tides rise here from 1½ to 12 ft., and neaps 6 or 7 ft. (*Norie's Sailing Directions for the North Sea*, p. 153.)

The breadth and depth of the Rhine in different parts of its course have been pretty accurately determined by repeated observations. At Chur, in the Grisons, it is about 260 ft. in width, or about as broad as the Thames at Richmond; at Schaffhausen the width is estimated at 370 ft., and at Basle about 550 ft. The breadth of the stream between Basle and Strasburg is much increased by the numerous islands that interrupt the current; but from the last-mentioned place to Speiers the width varies from 1,000 to 1,200 ft. The size of the Rhine thence downwards to Coblenz gradually increases to near 2,000 ft. in width; but near that point it enters a mountainous defile, and becomes much narrower, widening again at Cologne, where it is 1,400 ft. across, and flows down to its mouth, in the principal navigable branches, it has a breadth exceeding 2,000 ft. The depth of the channel from Basle to Strasburg averages about 12 ft.; and below the latter town the river is navigable by large steamers and vessels of considerable tonnage. July is the season when the river is fullest, and it then rises about 12 ft. above its average height. May and October are the seasons of low water. The descent of the river, and consequently the rapidity of the current, are extremely variable in different parts; but the mean inclination from Strasburg is estimated at about 1-3 ft. per mile; and the current may average somewhat more than 3 m. an hour, though below Cologne it is greatly decreased, the Rhine there becoming comparatively a sluggish river.

The affluents of the Rhine are very numerous; but the chief tributes, belonging to the portion below Basle. The only navigable affluent above that point is the Aar, a stream which drains the greater part of Switzerland, and brings down nearly an equal volume of water with the Upper Rhine itself. It rises in the great mass of St. Gothard, passes through a narrow valley, in which is the cataract of Aarfall, 150 ft. in height, afterwards enters the lake of Brienz, and thence, after passing through the lake of Thun (1,875 ft. above the sea) runs past Bern, and enlarged by different tribs., bringing down the waters of lakes Lucerne, Wallendstadt, Zurich, &c., joins the main river at Coblenz (47° 26' N., and 8° 15' E.), with a wide and powerful current. Its chief affluents are the Reuss and the Limmath; the former rising on the N.W. side of Mount St. Gothard, receives the waters of lakes Lucerne and Zug, while the latter rises in the Oberland Alps, and runs through the lake of Zurich, both joining the Aar on its E. bank, about a mile from each other. Both are navigable except during the spring floods, but owing to the rapidity of the current boats ascend empty.

Below Basle the Rhine is joined by many large tribs., the most important of which enter from the E. or right bank. The first of these is the Neckar, which falls into the main river at Mannheim, about 214 m. below Basle. It rises in the Black Forest, in about lat. 48° N., and 8° 30' E., and has a very tortuous course, first N.E., subsequently N.W., and lastly W., of more than 180 m. It is navigable for large barges up to Heilbronn, and for small craft as far as Stuttgart. The Mayn, which enters the Rhine at Mayence, or Mainz, about 20 m. below Frankfurt, which is on its N. bank, is the most important tributary. Large river barges, vessels of 100 tons burden, ascend as high as Kitzingen, which is 165 m. from the mouth: its entire course is estimated at 320 m. (See MAYN.) The Lahn joins the Rhine about 48 m. below Mayence; it is about 140 m. long, but is not navigable above Limburg, 21 m. from the mouth. The Ruhr and the Lippe are two other considerable tribs. on the E. side; both navigable for about 100 m. The principal affluent on the W. bank is the Moselle, which rises on the W. side of the Vosges, at an elevation of 2,356 ft., and after flowing past Nancy, Metz, and Trèves (near which it is joined by the Sarre), enters the main river at Coblenz, after a course of 280 m. The confluence of the Meurthe, 160 m. below the source, marks the extent of the navigation. The Meuse, or Maas, rises in the d.e.p. of the Upper Marne, on one of the W. offsets of the Vosges, and running with a tortuous course, somewhat like the letter S., past St. Mihiel, Verdun, Sedan, Mézières, Namur, Liège, and Maestricht, joins the Waal, or principal stream of the delta, near Gorkum, below which, as already observed, the main stream assumes the name of Maas down to its mouth.

The geology of the valley of the Rhine has been rather extensively investigated by Boué, Von Buch, Brongniart, and other French naturalists. The bed of the Upper Rhine, from its source to the Chur, is formed of primitive rocks, chiefly gneiss and porphyritic granite; but at this point, grauwacké, blue limestone, and old red sandstone become the prevailing rocks, as far as the lake of Constance, where they are succeeded by tertiary formations, probably of more recent date than the gypsiferous strata of the Paris basin. Secondary and tertiary rocks line the river from Basle to the Neckar; but from this point to Bingen, below the confluence of the Mayn, granite, gneiss, and mica-schist form the substance of the high crags that line the river on both sides. Lower down the cliffs are composed of secondary limestone, with superimposed strata of new red sandstone, and in some parts volcanic rocks are found, curious and interspersed with the inferior chalk strata. The coal formations are found in the upper parts of the Ruhr and Lippe, this part of Rhenish Prussia furnishing the chief supply of coal material for the purposes of steam-navigation. Below Düsseldorf the tertiary rocks are replaced by diluvial and alluvial formations, which form the subsoil of the delta. Geologists, however, are of opinion that the numerous islands in this intricate delta have been formed not so much by deposits brought down by the river, as by the inroads which the sea is continually making on this coast. (Lyell's *Geol.* ii. 53; and *Encyclopédie Méthod.*, art. *Rhin*.)

The scenery of the Rhine has been justly admired by travellers. Wildness and rude grandeur characterise it in the defiles above the lake of Constance, and the country from the Unter-See westward, as far as Rheinfelden, 6 m. above Basle, is almost equally romantic. But at this point the character of the scenery changes, and the river, formerly an inconsiderable feature in the landscape, becomes a broad and majestic stream, flowing as far as Mannheim through a rich open valley, from 30 to 50 m. in breadth. The banks there begin to be more bold and rocky; but the scenery most generally admired is chiefly between Mayence and Coblenz. The Rhine here pursues a meandering course,

peut between lofty and craggy mountains, and resembles rather a succession of lakes than a river. Here, indeed,

The river nobly foams and flows,  
The charm of this enchanted ground,  
And all its thousand turns disclose  
Some fresher beauty varying round.

(Childe Harold.)

"These mountains, however, are after all only mountains in miniature. They have often, indeed, the steepness, rudeness, and overhanging ridges of the mountains bordering the Rhine; but, as compared to them in size, they are but mole-hills. The groves on the hill-sides are few and far between; but there is no grove without a church spire rising in the midst, and overtopping the trees. Frequently a daring and fantastic cliff, crowned by an ancient castle, frowns over the river, or rises majestically from the brow of the steep; but the woods, unlike those of the Rhone, look like plantations, and the vines obtrude an unceasing idea of the artificial." (*Leitch Ritchie's Travelling Sketches on the Rhine*, p. 79.)

The Rhine, with its various affluents, comprises a navigation of about 1,500 m., and, in a commercial point of view, is perhaps the most important river in Europe, owing to the numerous states to which it affords a water conveyance. The following table exhibits the extent of the states, or portions of the states, included within the valley of this great river:—

Switzerland	-	12,400 sq. m.	Prussia	-	31,152 sq. m.
France	-	15,000	Oberr. Germ. States	-	2,041
Austria	-	4,640	Belgium	-	4,100
Holen	-	4,644	Netherlands	-	6,620
Bavaria	-	10,000			
Wurtemberg	-	5,520			83,298

The navigation of the Rhine has always been of considerable importance, but since the employment of steamers, and the abolition of the tolls, and other political obstacles to its free use, its importance as a channel of navigation and importance has been immeasurably increased. Vessels of large burden ascend the river to Cologne, and Strasburg is reached by those of 80 or 90 tons. Recently, however, steamers have been regularly established on the Upper Rhine, between Strasburg and Basle, and an astonishing increase has taken place in the number of passengers, and the quantity of goods passing up and down the river. In 1827, for example, the number of passengers conveyed along the Rhine, in the Prussian territories, amounted to only 33,452; whereas, in 1836, they amounted to 146,961, and now (1841) exceed 260,000! The increase in the quantity of merchandise conveyed along this great international highway has been equally great; and its importance will, no doubt, be still more rapidly increased by the opening of railways, and improved methods of communication with the great cities on its banks.

Besides the goods conveyed up and down the Rhine in steamers and sailing vessels, immense quantities of timber are sent down in the form of rafts. The smaller rafts from the Upper Rhine, and the smaller affluents of the river, used formerly to rendezvous at Namey, near Andernach, where they were consolidated into rafts of a larger size, that were sent down the river to Dordrecht, where they were generally broken up, and the timber sold and forwarded to its final destination. Of late years, however, the plan of constructing very large rafts has begun to fall into disuse, though, as they are still sometimes met with, the reader may not be displeased to have them described.

"A little below Andernach the little village of Namey appears on the left bank, under a wooded mountain. The Rhine here forms a bay, where the pilots are accustomed to unite together the small rafts of timber floated down the tributary rivers into the Rhine, and to construct enormous floats, which are navigated to Dordrecht, and sold. These machines have the appearance of a floating village, composed of 12 or 15 little wooden huts, on a platform of oak and deal timber. They are frequently 800 or 900 feet in length, and 60 or 70 in breadth. The rowers and workmen sometimes amount to 700 or 800, superintended by pilots, and a proprietor, whose habitation is superior in size and elegance to the rest. The raft is composed of several layers of trees, placed one on the other, and bound together: a large raft draws not less than 6 or 7 feet of water. Several smaller ones are attached to it, by way of protection, besides a string of boats loaded with anchors and cables, and used for the purpose of sounding the river and going on shore. The domestic economy of an East Indian or an English man of war is hardly more complete. Poultry, pigs, and other animals, are to be found on board; and several butchers are attached to the suite. A well supplied boiler is at work night and day in the kitchen; the dinner hour is announced by a basket stuck on a pole, at which signal the pilot gives the word of command, and the workmen run from all quarters to receive their messes. The consumption of provisions in the voyage to Holland is almost incredible; sometimes amounting to 40,000 or 50,000 pounds of bread; 18,000 or 20,000 of

fresh, besides a quantity of salted meat; and butter, vegetables, &c. in proportion. "The expenses are so great, that a capital of three or four hundred florins is considered necessary to undertake a raft. Their navigation is a matter of considerable skill, owing to the abrupt windings, the rocks, and shallows of the river; and some years ago the secret was thought to be monopolised by a boatman of Rüdesheim and his sons." (*Autumn on the Rhine.*)

The *Rhenus*, or Rhine (Gr. *Ῥῆνος*), became first known to the Romans by the conquest of Julius Cæsar, who crossed it twice to punish the Germans. It is thus described by him:—*Rhenus oritur ex Lepontis quæ Alpes incolunt, et longo spatio per fines Nantianorum, Helvetiorum, Sequanorum, Mediomatricorum, Tribucorum, Trevarum citates fertur; et ubi oceanum appropinquat, in plures diffundit partes multis ingentibusque insulis effectis quarum pars magna a feris barbarisque nationibus incolitur, (ex quibus sunt qui piscibus atque ovibus avium vivere existimantur.) multisque capitibus in oceanum influit.* (Bell. Gall. iv. 10.) Ancient writers, though agreed with respect to its general course, differ respecting the number of mouths by which it falls into the ocean. Tacitus (Ann. ii. 6.) speaks of two only, one of which, probably the modern Waal, he terms *Vakalis*, and the other *Rhenus*. Pliny and Ptolemy, however, say that there were three mouths, the most northerly of which, called *Plevum*, was supposed to have been formed by a channel dug by Drusus, to connect the Rhine with the Ivala, which is most probably identical with the Yssel, as Poinponius Mela (iii. 2.) assures us that it fell into the lake *Flevo*, or modern Zuider-Zee. No doubt, however, the channels of the river in the delta must have shifted, both prior and subsequently to the accounts given by the classical writers; besides which, the inroads made by the sea on the coast of Holland render it impossible to ascertain what may have been the exact number of its mouths at any very remote period. (*Encyclopédie Méthod.*, art. *Rhin*; *Bruguière*, *Org. de l'Europe*; *Conversations Lexicon*; *Ingolds's Switzerland*, &c. &c.)

**RHINE (PROVINCE OF)**, a prov. containing the S. portion of the Prusso-Rhenish states; having N. Holland, E. the prov. of Westphalia, Nassau, and other German states, S. France, and W. the latter, Belgium and Holland. It lies between 49° and 52° N. lat., and 6° and 9° E. long. Area, 10,327 sq. m. Pop., in 1837, 2,433,290, of whom 1,842,154 are Catholics, and 564,728 Protestants. Principal towns Aix-la-Chapelle, Cologne, Coblenz, Düsseldorf, Elberfeld, Treves, Bonn, &c. It is divided into 5 regencies, and these again into 59 circles. Principal rivers, Rhine, which traverses almost the whole extent of the prov. Moselle, Saar, Roer, &c. Surface very various. Its E. part to the N. of the Moselle consists principally of volcanic mountains, and a chain of the same sort (Eifel Gebirge) runs across the prov. between Malmedy and Coblenz. The debris of volcanic rocks being particularly unfavourable to the growth of the vine, it is very extensively cultivated; the produce of the vines of the Rhine and the Moselle being estimated at about 700,000 cimers a year, though but little is exported. Exclusive of wine, the principal raw products consist of corn, flax and hemp, timber, tobacco, &c. Manufactures in the Lower Rhine are both extensive and flourishing. In the town of Aix-la-Chapelle, Eupen, Malmedy, Montjoie, &c., along the Netherlands frontier, and in Elberfeld, Barmen, and others to the E. of the Rhine, improved machinery is to be met with; and the manufacture of fine woollen cloths, castmères, fine and coarse cottons, silks, &c. is prosecuted with great vigour and success. The iron works and hardware manufactures are also important and valuable.

We subjoin an Official Account of the principal businesses carried on in the Rhine Province, in 1837, and of the number of establishments, and the number of work-people employed in each:—

Manufactures.	No. of Estab.	Workmen.
Silk and mixed silk wares	40	5,190
Woolen cloth and other woollen stuffs	101	8,829
Establishments for woollen yarn spinning	45	1,857
Wool cotton spinning and weaving	45	4,184
Printed stuffs	1	302
Flax spinning	1	109
Cards for spinning mills	7	653
Stocking weaving	7	530
Iron and metal wares	15	308
Pins and needles	23	1,400
Varnished plate wares	1	68
Machines and bellows	15	796
Chemical products	8	63
Porcelain and earthen wares	2	129
Porcelain painting and gliding	1	145
Eau de Cologne	12	58
Liquors and spirits	12	45
Sugar refineries	7	166
Sugar candy	1	90
Chocolary	2	5
Vinegar	2	5

Manufactures.	No. of Estab.	Workmen.
Tobacco	30	684
Salt	5	65
Gunpowder	5	41
Paper	8	628
Carriages and coaches	5	40
Brushes	1	8
Toys and trifles	1	30
	389	26,145

**RHODE ISLAND**, the smallest state of the N. American Union, in N. England, comprising a territory on both sides Narragansett Bay, having N. and E. Massachusetts, W. Connecticut, and S. the Atlantic. Area, about 1,350 sq. m. Pop., in 1840, 108,830. This state derives its name from an island in Narragansett Bay, 15 m. in length, by 3 m. in width; besides which, it includes several small islands in the Atlantic. Surface generally broken and hilly; soil moderately productive. Small rivers numerous; the principal are the Pawtucket and Pawtuxet; they all have their embouchure in Narragansett Bay, a fine sheet of water, extending more than 30 m. inland, and having several good harbours. Rye, barley, oats, and in some places wheat, are produced in quantities sufficient for home consumption; cider is made for exportation; artificial grasses are raised in large quantities; cattle of a good breed; but the inhabitants generally have applied themselves more to commerce, the fisheries, and manufactures than to agriculture. Iron, copper, marble, and freestone, are among the minerals; and there are extensive beds of anthracite coal; but this, though good, has been hitherto little wrought. Principal manufactures, cotton and woollen goods, leather, hardware, and machinery; there are, also, calico printing and bleaching works, and numerous iron foundries. The value of the exports in 1839 amounted to 185,234 dollars, and that of the imports to 612,000 do. In the same year there belonged to the state 44,572 tons shipping. Providence (which see) is the chief commercial town; and with Newport, the cap. and seat of government, Bristol, Warwick, and Coventry, are the other principal towns. Rhode Island is the only state in the Union without a written constitution; it continues to be governed by the provisions of the old royal charter. The governor and lieutenant-governor are chosen annually; and with 10 other members, compose the senate. The House of Representatives consists of 72 members, elected twice a year, in April and August. The General Assembly, composed of these two chambers, meets four times a year. The judicial power is vested in a supreme court, and a court of common pleas for each of the five cos. in the state. The judges, who receive no fixed salary, are appointed annually by the General Assembly. The state appropriates 10,000 dollars a year for the support of common schools; a larger sum is raised by the towns for the same purpose, and the instruction fund receives considerable aid from private contributions. The most numerous religious sects are Baptists and Congregationalists. The militia of the state consists of all able-bodied males, between 18 and 45 years of age, with but few exceptions. This state was first settled, in 1636, by a person of the name of Williams, banished from Massachusetts, on account of his religious opinions. Williams obtained a charter for Rhode Island and Providence Plantations in 1644; but, in 1663, the present ruling charter was granted by Charles II. Rhode Island suffered greatly during the revolutionary war. It sends two representatives to congress.

**RHODES**, a famous island of the Mediterranean, off the S.W. coast of Asia Minor (an. *Lygia* and *Caria*), 10 m. S. Cape Volpe; the city of Rhodes, at the N.E. extremity of the island, being in lat. 36° 26' 53" N. long. 28° 12' 51" E. It is about 45 m. in length, N.E. and S.W., and is, where broadest, about 18 m. across. Pop., according to Savary, 36,500, of whom rather more than a third are Greeks; but Turner says it does not exceed 20,000. Probably it may be estimated at about 25,000, a number that would have been insufficient in antiquity to have peopled one of its three cities. A chain of mountains runs lengthwise from one end of the island to the other; their highest summit, Mount Artemira (an. *Atabyras*, on which was a temple of Jupiter), commanding a noble view of the island and of the adjacent shores of Asia Minor. In antiquity this mountain chain was covered with dense forests of pine, whence the Rhodians drew supplies of timber for their fleet, and in modern times it has supplied considerable quantities for the dockyards of Constantinople. Speaking generally, the soil in the lower parts is dry and sandy; but it has some fine valleys, and is well watered by the numerous streams that descend from the mountains. In antiquity it was famous for its fertility—

A region pregnant with the fertile seed  
Of plants, and herbs, and fruits, and foodful grain;  
Each verdant hill unnumber'd flocks does feed;  
Unnumber'd men possess the fruitful plain.

PINDAR, by Wm. R. Gifford, Odes, No. 7.

But, owing to the insecurity and extortion of which the inhab. have been long the victims, its agriculture is in the most depressed state, many of its finest fields being allowed to lie waste, and the island not producing corn sufficient even for its scanty population. Its wheat is still, however, of the finest quality; but, according to the statement of Mr. Turner, its wine, which he calls "tolerable, red, and sharp," must have sadly degenerated from that mentioned by Virgil as being fit for the feasts of the gods!

Non ego te, Dis et mensis acceptis secunda  
Transferim, Rhodia, et tumida, bunnate, racemis.  
Georg. lib. ii., lin. 101.

It also produces oil, oranges, citrons, and other fruits; and, but for the grinding despotism by which it is weighed down, it might produce, in profusion, most necessities and luxuries. Marble is quarried in several parts of the island.

The climate of Rhodes (*claram Rhodon*, Hor.) is probably the finest in the Mediterranean. "It is," says Dr. Clarke, "a truly delightful spot; and its gardens are filled with delicious fruit. Here, as in Cos, every gale is scented with the most powerful fragrance, wafted from groves of orange and citron trees. Numberless aromatic herbs exhale, at the same time, such profuse odour, that the whole atmosphere seems to be impregnated with a spicy perfume. The present inhabitants of the island confirm the ancient history of its climate; maintaining that hardly a day passes throughout the year in which the sun is not visible." (*Travels*, iii. 278, 8vo. ed.) The heat, which otherwise would have been oppressive, is tempered by the wind, which blows with little variation from the N. and N.W.

The only beasts of burden used in the island are mules and donkeys, there being no camels, and but few horses, and those only belonging to the richer Turks. Partridges are very abundant. Various species of excellent fish, with coral and sponges, are found in the adjacent sea.

The city of Rhodes is situated, as already stated, at the N.E. extremity of the island. It is built amphitheatrically, on ground rising gently from the water's edge; and is strongly fortified, having a mounted castle of great size and strength, and being surrounded by walls, flanked with towers. These walls were constructed by its former masters, the knights of St. John; and Mr. Turner says, that, though he had known nothing of the history of the island, he should have perceived that its fortifications were the work of the same master hand that had constructed those of Malta. (ii. 11.) The town consists generally of narrow winding lanes and mean houses. When in possession of the knights it had many substantial stone houses, some of which, as well as the public buildings, were ornamented with the arms of the knights in *alto relievo*; but the greater number of these houses are now in a state of ruin, and such as have been rebuilt in their stead are mere wooden fabrics. Contrary to what might have been expected, the best streets in the city are in the quarter inhabited by the Jews. The Greeks occupy a distinct quarter, behind and S.E. from the city properly so called. On the land side the city is surrounded by a burying-ground; and beyond it are the suburbs, consisting of detached and finely situated houses, surrounded by gardens, many of which, however, are said to be unoccupied. The ancient palace of the Grand Master is now the residence of the Pacha; the large and fine church of St. John is the principal mosque, and the grand hospital has been converted into a public granary. It has two harbours: the smallest, a fine basin, with a narrow entrance, is protected on all sides from the wind; but the Turks having allowed filth and sand to accumulate in the entrance, it can now be used only by the smaller class of vessels: the other harbour is much larger, and has deep water, but is safe only during westerly winds, those from the N.E. throwing in a heavy sea; on this account large vessels prefer anchoring in the roads in 21 fathoms water, from its being more convenient for getting out to sea, in the event of the wind setting in strong from the N.E. A light-house is erected on a mole between the two harbours. Several ships for the Turkish navy have been built at Rhodes; but the trade of the town is quite inconceivable. There are some, though but few, remains of antiquity in the city; the barbarism of its Saracenic and Turkish conquerors, and the recurrence of destructive earthquakes, having destroyed most memorials of its former splendour.

**Historical Notice.**—Rhodes was early distinguished by its wealth, its naval power, the wisdom of its laws and institutions, and its superiority in art and science. Tlepolemus, a prince of Rhodes, distinguished himself at the siege of Troy; and the island could then boast of the three famous cities—Rhodus, Jalyssus, and Camirius. The city of Rhodes is much less ancient, having been founded during the Peloponnesian war. But its advantageous situation, and the excellence of its harbour,

soon gave it a decided superiority over the other towns of the island, many of whose inhab. withdrew to it; and it was, in fact, one of the best built and most magnificent cities of the ancient world. It had been constructed with the greatest regularity; its streets being wide and straight, and the houses in each being of the same height and built on the same model. Pliny calls it *civitas libera et pulcherrima* (*Hist. Nat.* lib. v. cap. 31.); and Strabo, who had seen Rome, Alexandria, and other great cities of the ancient world, gives the preference to Rhodes. "The beauty," says he, "of its harbours, streets, and walls, and the magnificence of its monuments, render it so much superior to all other cities, as to admit of no comparison." (*Lib.* xiv.) Its temples, especially those dedicated to Bacchus, Diana, Isis, &c., were celebrated alike for the magnificence of the building, and the statues and paintings with which they were enriched. In the noble ode already referred to, written about 500 years B.C., Pindar alludes as follows to the excellence of the Rhodians in statuary:—

Thence in all arts the sons of Rhodes excel;  
The best their forming hands the chisel guide;  
This in each street the breathing marbles tell,  
The stranger's wonder, and the city's pride.

The most famous of the works of art in Rhodes were two pictures, of the most transcendent merit, by Protogenes, the contemporary and rival of Apelles (*Strabo*, lib. xiv.; *Pliny*, *Hist. Nat.*, lib. xxxv. cap. 10.), and the Colossus, the work of Chares of Lindos, deservedly reckoned one of the wonders of the world. This magnificent brazen statue, erected in honour of Apollo, the tutelary deity of Rhodes, is said to have been 70 cubits (about 105 ft.) in height, and of the most admirable proportions. It was set up about anno 278 B.C., and was thrown down by an earthquake 56 years thereafter; and it is a curious fact that it lay where it fell for nearly 800 years, or till A.D. 667, when the island, having been taken by the Saracens, they broke the statue to pieces, and sold the brass. Blaise de Vigenère, a writer of the 16th century, stated, for the first time, that the Colossus stood with a foot on each side the entrance to the port, and that the largest vessels, under full sail, passed between its legs. This story, which carries absurdity on its face, and for which there is not a shadow of authority in any ancient writer, having been adopted by Rollin, has thence found its way into most modern works. (*Pliny*, lib. xxxiv. cap. 7.; *Rollin*, *Hist. Ancienne*, iv. 137. 4to ed.; *Savary's Letters on Greece*, Eug. trans. 63.; *Biographic Universelle*, art. Chares.) Exclusive of this matchless work, Rhodes had 105 colossal statues; each of which might, according to Pliny (*loc. cit.*), have sufficed to illustrate the town.

The wealth of the Rhodians was derived partly from the fertile soil and advantageous situation of their island, but more from their extensive commerce and commercial navigation, and the wisdom of their laws, especially those having reference to maritime affairs. Such, indeed, was the estimation in which the latter were held, that the rule of the Rhodian law *de facto* was expressly embodied in the Digest (*lib.* xix. tit. 2.), and has been thence adopted into all modern codes. Indeed, the fair presumption seems to be that most of the regulations as to maritime affairs included in the civil law were derived from the same source.

Rhodes was also famous for its science and literature. Eschines, on his retirement from Athens, opened a school of rhetoric in this city; and towards the termination of the Roman republic, and under the early emperors, Rhodes was held, as a school of eloquence, literature, and philosophy, to be little, if at all, inferior even to Athens; and these, combined with the genial temperature of the climate, and the luxurious refinement of the capital city, made it be resorted to by some of the most illustrious individuals of whom Rome has to boast, including, among others, Pompey and Cicero. Julius Cæsar, too, had set out to study at Rhodes, and was only prevented by being captured on his voyage by pirates. (*Suetonius*, lib. i. cap. 4.) Tiberius resided for about 7 years in the island. It seems also to have been a favourite retreat of those Romans who wished to withdraw from the factions and turmoil of Rome. (*Cicero*, *Epist. ad Fam.* lib. ii. epist. 28.)

The government of Rhodes, which, like that of most other Greek cities, was originally monarchical, was subsequently changed into a democracy, and thence into an aristocracy; under which it enjoyed a degree of tranquillity and prosperity to which most Grecian cities were strangers. It was taken by Mausolus, king of Caria, but recovered its independence under his widow, the famous Artemisia. From this period Rhodes continued to enjoy profound peace, till it was attacked by Demetrius, the son of Antigonus, one of Alexander's successors. The siege of the city of Rhodes by Demetrius is one of the most celebrated in ancient history; but all the science and efforts of Demetrius were defeated by the bravery and resolution of the Rhodians, and he was compelled to raise the siege, anno 303 B.C., after it had continued

about a year. The expense of the colossus was mostly defrayed from the sums received by the Rhodians for the machines and other engines used by Demetrius in the siege, and which he gave up to them. It may be worth while to notice the fact, mentioned by Hume, that this siege affords the only example to be found in antiquity of the establishment of a cartel for the exchange of prisoners. (See *Essay on the Populousness of Ancient Nations*.)

The Rhodians were subsequently ranked among the steadiest of the allies of Rome; they repulsed Mithridates, who made an attack on their city, and continued to enjoy their liberty till the reign of Vespasian, when Rhodes was made a Roman province. The island was overrun by the Saracens; but having been recovered by the eastern emperors, it was presented, in 1308, by the Emperor Emanuel, to the knights of St. John of Jerusalem, who held it till 1522, when, after a desperate resistance, it was taken by the Turks, under whose barbarous brutalising despotism it has sunk to the miserable condition in which we now find it. "Beauty and mildness of climate, fertility of soil, variety and abundance of necessary and agreeable articles, a situation favourable for useful enterprise and a prosperous trade, nothing is wanting to this fine island, except to be delivered from the Turks, who possess, in so eminent a degree, the fatal talent of converting the most happy abode into a spot to be shunned and dreaded." (*Sonnini's Travels in Greece and Turkey*, i. 166. Eng. trans.; see, also, exclusive of the works already referred to, *Anc. Universal History*, viii. 157—212, 8vo. edit.; *Savary's Greece*, Letters XII. and XIII.; *Fugate d'Anacharsis*, cap. 73.; *Schomberg's Treatise on the Maritime Laws of Rhodes*, passim, &c.)

**RHODEZ**, or **RODEZ** (an. *Rhodanum*), a town of France, dep. Aveyron, of which it is the cap., on a hill beside the Aveyron, 163 m. E. by S. Bordeaux; lat. 43° 21' 8" N., long. 2° 34' 2" E. Pop. in 1836, ex. com., 9,158. Like most other very old towns, it is ill built: streets steep, narrow, dirty, and dark from the projection of the upper stories. The neighbourhood is, however, agreeable; and the town, which has rather an imposing aspect from without, is closely surrounded with gardens and planted promenades. Almost the only edifice worth notice is the cathedral, a Gothic building, constructed between the 13th and 16th centuries. Its fine tower, which, it is said, may be seen at a distance of nearly 50 m., is 260 ft. high, square for two thirds its height, then octagonal, ornamented with delicate tracery, surmounted with a small cupola and a colossal statue of the Virgin; it has minarets at each corner, on the summits of which are figures of the four evangelists. This church is rich in arabesques, and has a fine organ. The bishop's palace, prefecture, royal college, formerly belonging to the Jesuits, seminary, public library, with 16,000 vols., town-hall, hospital, convent of Cordeliers, a building of the 14th century, &c., are the other chief public edifices.

Rhodes is a bishop's see, and has courts of primary jurisdiction and commerce, a chamber of manufactures, schools of drawing, and for deaf and dumb persons; many actures of coarse woollens for clothing troops, hats, wax candles, and playing cards; and some trade in cheese, wool, coarse linens, &c. It has four annual fairs. In its vicinity many mules are bred. Rhodes was annexed to the dom. of the crown by Henry IV. (*Hugo, art. Aveyron*, &c.)

**RHONE** (an. *Rhodanus*), a celebrated river of S.W. Europe, rising in the Pennine Alps, traversing portions of Switzerland and France, and falling into the Mediterranean, between lat. 43° 15' and 45° 15' N., and long. 4° and 8° 20' E. Length, 590 m.; estimated area of basin, 37,300 sq. m. The highest source of this river is on the W. side of the great mass of St. Gothard, between the Furca, Gallenstock, and Grimsel, at an elevation of 5,780 ft. above the sea; but it scarcely assumes the form of a river till its junction with three or four other streams at the foot of the glacier of its own name, a beautiful fan-shaped cluster of ice, the lower edge of which is 5,470 ft. above the sea. Its course through the Valais is W.S.W. as far as Martigny, about 82 m. from its source, the height of the river at this point being 5,523 ft. above the sea; but here the stream assumes a N.N.W. direction for about 24 m., entering the lake of Geneva at a level of 1,236 ft. above the sea, bringing with it a deposit of mud which has partially filled all the upper part of the lake. (*Lyell's Geology*, i. 333, 334.) The Rhone, on leaving this lake at the town of Geneva, where it is crossed by two bridges, is soon afterwards joined by the Arve, and then enters a rocky defile between the Alps and Jura chain, taking a S.W. direction for about 22 m., as far as the gorge called the *Perte du Rhône*, where its waters are hidden by limestone rocks nearly meeting over the stream. Its course thence is nearly due S. for 40 m., as far as St. Cenis, at which point the river is still 645 ft. above the sea. Here, however, it takes a sudden turn to the W.N.W., which direction it maintains with few exceptions to its junction with the Saône at Lyons, the average fall from the lake of Geneva to this city (a

distance of about 120 m. along the stream) being estimated at somewhat more than 6 ft. per mile. The *Perte du Rhône* is thus described by Mr. Bakewell:—

"The river, before arriving at the *Perte*, runs in a narrow bed, cut in soft clay strata resting on a hard calcareous stratum; but on reaching this stratum, the waters have excavated a deep tunnel in it, into which they fall with considerable force; the rocks on each side approaching so close, that before the space was widened by the Sardinian government, to prevent smuggling, a man might have strode across and seen the Rhone pass at a great depth between his feet. This tunnel is divided half-way down by projecting ledges of rock into an upper and lower channel. In winter and early in spring the river runs below these ledges, and is nearly concealed; in one part, also, masses of rock have fallen down, and entirely covered the lower bed of the river for about 60 yds. This part may be traversed when the river is low; but in summer, during the melting of the Alpine snows, it is much enlarged and flows over the intervening rock." The Rhone was in this state at the time of Mr. Ingli's visit; and to this circumstance may be traced the disappointment felt by that traveller. (*Bakewell's Travels*, iii. 265, 266.; *Ingli's Switzerland*, p. 175.) The Rhone leaves the hilly country a few miles E. of Lyons, where its deep, transparent blue, and very rapid waters are joined from the N. by the sluggish and muddy stream of the Saône: indeed, so marked is the difference between these rivers, that for many miles below Lyons, they flow side by side, the E. portion being clear and blue, the other known as the muddy yellow colour. The course of the Rhone close to the city is from N.E. to S.W.; it has a medium breadth of about 650 ft., and is so liable to inundations that embankments have been formed to protect the town and its suburbs. From Lyons the united stream holds a course nearly due S. to the Mediterranean, receiving numerous streams both from the W. and E., but chiefly the latter: the Isère, a considerable river, rising on Mount Cenis, joins it between Tournon and Valence; and near Avignon (where the Rhone is 117 ft. above the sea), it is joined by the Durance, a swift and turbid stream, which collects the waters from the western face of the maritime Alps.

The Rhone enters the Mediterranean by four mouths: the first separation occurs at Arles, where two branches are formed; one called the great Rhone, running S.E., the other known as the little Rhone, pursuing a S.W. course, and both together enclosing the alluvial island of Camargue, which has an area of about 1,900 sq. m. Each of these again bifurcates a short distance above the mouth; but the E. channels are those only which admit of safe navigation. The Rhone, which has a very rapid course (*Rhodanus ferax*), brings down a whitish sediment, discolouring the Mediterranean to a distance of 6 or 7 m., and there is every reason to suppose that there has been a constant, though slow, advance of the base of the delta during the last 18 centuries: indeed, Mese (an. *Mesua Collis*), stated by Pompi. Mela to be almost an island, is now far inland; and Notre Dame des Ports, a harbour in the 9th century, is now a league from the sea. The confluence of the Rhone with the currents of the Mediterranean forms bars across the mouths of the river, and by these means considerable spaces become divided off from the sea, and subsequently from the river also, when it shifts its channels of efflux. Some of these lagoons being subject to the occasional ingress of the river when flooded, and of the sea during storms, are alternately fresh and salt. Others, after being filled from the sea, become more salt by evaporation, and are, in fact, natural salterns. The sea, opposite the mouth of the Rhone, deepens gradually from 4 to 40 fathoms within a distance of 6 or 7 m., the bottom being characterised by very curious alternations of marine and freshwater shells. (*Lyell's Geology*, i. 341—345.)

Among the tribes of the Rhone, by far the most important is the Saône (an. *Arar*), which rises on the Vosges, in that mass of high land which gives origin also to the Meurthe, Moselle, and Meuse: the source is at Vionneuil, 1,300 ft. above the sea. Its course is tortuous, though generally S.S.W. as far as Chalon; 18 m. above which it receives on its E. bank the waters of the Doubs. This river rises at an elevation of 2,830 ft. above the sea. In one of the longitudinal valleys of the Jura mountains; and after running N.N.E. for about 60 m. is suddenly deflected southward by Mount Terrible, whence its course is S.W., past Besançon, to its confluence with the main river. The general direction of the Saône from Chalon is S. by W., past Macon, Trevoux, &c.; and the average fall from the former place to its junction with the Rhone at Lyons scarcely exceeds 1 ft. per mile; and the channel being extremely tortuous, it has a very slow current. (*Ingli's incredible lenteur, ita ut oculis, in utram partem jnat, judicare non possit*. Cæsar, lib. i. cap. 12.) Its waters are charged with marl, sand, and the débris of Jura limestone. The Isère and Durance have already been mentioned. They are extremely rapid, charged with deposit from the secondary strata flanking

the main ridge of the Alps. The only considerable W. trib. is the Ardèche, rising in the Cévennes, not far from the Loire.

Owing to the rapidity of its current, the Rhone was formerly of comparatively little use in navigation, the principal trade being carried on by vessels down the stream, mostly from Lyons to Beaune, the boats that ascended the river being usually dragged up by horses. But since the introduction of steamers, a vast impulse has been given to the navigation; the Rhone, Saône, and their greater affluents, have become important channels of intercourse; and their basins are now improving more rapidly than any other part of France. We extract the following details from the interesting work of Mr. Maclaren, who sailed down the Saône and Rhone, from Chalons to Marseilles:—

"I left Chalons at six a.m., and reached Lyons by the steam-boat at two, distance about 85 m. The fare was only 4½ francs. From Lyons to Avignon the fare is 30 fr., the distance about 170 m.; time about 13 or 14 hours per steamboat. The steam-boats are English built, and worked by English engineers. They are about 100 ft. long, 25 wide, and of rare neat and commodious, though by no means splendid. They are very flat in the bottom, drawing only about 24 inches of water. The Rhone is full of sandbanks, which, owing to the rapidity of the current, are continually shifting, and vessels drawing a greater depth than two ft. cannot navigate the river with safety. The English engineer told me that his steam-boat went about nine m. an hour in still water; the current adds about five m. going down, and deducts as much going up; so that she moves at the rate of 14 m. the one way, and 4 the other.

"The Rhone passes through one of the most beautiful, picturesque, and delightful regions in the world. It is one continued vineyard, skirted and sheltered by mountains from 500 to 2,000 ft. in height, presenting every variety of form and aspect,—how round and smooth—now rugged and peaked—now bare and sterile—now clothed with vines or mulberries, or cut into terraces, and carefully cultivated to their summits. Mount Pilâtre, and others of the high Cévennes, on the W., and the Alps on the E., capped with snow, appear through openings in the lateral chains at intervals. The valley is often contracted to a space of one m.; again it spreads out in the form of a rich plain, to a breadth of 10 or 12 m. Twenty times the river appears closed in by the hills, and you are puzzled to conjecture where it escapes, till a bend in its course clears up the mystery. To the natural beauties of the country are added those which it derives from the industry and taste of its inhabitants. There is an almost unbroken line of large towns, villages, hamlets, cottages, and neat villas, along each side of the river, and not merely on its banks, but reaching back to the mountains. The glittering white walls of these buildings, surrounded by rich, well cultivated lands, give vivacity to the scene, and fill the mind with images of peace, abundance, security, and contentment. From Chalons to Marseilles, the marks of progress meet the eye everywhere. The whole district, 270 m. in length, is advancing with giant strides. At every step, in descending the river, we meet with houses or manufactories building, quays forming on the river, bridges erecting, roads or towing paths, or embankments making. Two facts will show that this is no exaggeration. It is only eight years since steam-boats were introduced; and there are now six plying between Chalons and Lyons, and ten between Lyons and the sea, though the coal they use is brought from England, and costs about 50s. a ton. It is but ten years since suspension-bridges were heard of in the district; yet in the short intervening space, the industrious inhabitants of these districts have erected fourteen suspension-bridges over the Saône, and twelve over the Rhone. I doubt if there be as many at this moment in all England. And let it not be supposed that the bridges are paltry, or rude and imperfect works. They are light and elegant; the arches are often of great span, and the pathway is either level, or slightly and uniformly curved. Sometimes they have two arches, but in general three. The chains are sometimes single, but more commonly triple or quadruple; the suspension rods always single. The columns on the piers are sometimes slender obelisks of stone, sometimes thin tall slabs of cast iron. Taking them altogether, they are the lightest and most handsome structures I ever saw, and show great boldness, as well as skill and taste, in the engineer. But the fact on which I wish to fix attention is the enterprise, and the wealth which these works bespeak. The twenty-six bridges must have cost at least 200,000*l.*; and this sum has been raised by the public spirit of the district, and expended on one species of improvement, while many others were in progress." (*Notes on France*, &c., pp. 32–37.)

The basin of the Rhone is connected by canals with the other principal rivers of France. The canal of the Rhone and Rhine connects the Doubs with the Ill, an affluent of the Rhine; the *Canal du Centre* unites the

Saône to the Loire, and the canal of Burgundy connects the Saône with the Yonne, a navigable branch of the Seine; so that in this way the four principal rivers of France are all united. The navigation of the mouth of the Rhone is considerably improved by the canal of Arles, which runs close to the Great Rhone, and by the canal of Beaucaire, which leaves the river near the town of that name, and not only runs into the Mediterranean, but is joined by branch canals with the *Canal du Midi*, connecting the Garonne and the Bay of Biscay with the Mediterranean. The Rhone is also connected with the Loire by a railway, which passes through the important manufacturing town of St. Etienne. (*Bakerwell's Travels*, II. 260–275.; *Lyell's Geol.* I. 340–345.; *Encycl. Méthodique*, art. *Rhône*.)

Rhone, a dép. of France, and next to that of the Seine, the smallest in the kingdom, though, from its containing the city of Lyons, it be among the most populous, reg. S. between lat. 45° 28' and 46° 18' N., and long. 4° 20' and 4° 55' E., having N. Saône-et-Loire, W. and S. Loire, and E. and N. Isère, from which it is principally separated by the rivers Rhone and Saône. Length, N. to S., 55 m.; average breadth, about 20 m. Area, 279,081 hectares. Pop., in 1836, 434,429. Surface mostly mountainous, being covered with ramifications of the Cévennes. The dép. is well watered; but there are no navigable rivers, except the Rhone and Saône. In 1831 it was estimated that it had 143,120 hectares arable land, 36,399 ditto meadows, 30,552 vineyards, and 34,496 of woods. The produce of corn is far below the internal demand. The produce of wine, the chief source of agricultural wealth, is supposed to exceed 450,000 hectolitres a year. The wines produced in that portion of this dép. called the Beaujolais belong to the class of Macon wines. Of the other growths, probably the best is the Côte-Rôtie, a red wine raised near Ampuis. It is an excellent wine, possessing *du corps, du spiritueux, de la finesse, une saveur et un parfum très-agréable*. (Jullien, p. 184.) It requires to be kept in the cask for five or six years before bottling. The white wines of Condrieux are also very good. The forests produce fine chestnuts; but the quantity of timber they yield is insufficient for the demand of the important manufacturing districts round Lyons and St. Etienne. Fortunately coal is abundant. Neither horned cattle, nor sheep are very numerous; but a great many goats are kept, and in some places they have been crossed with the breed of Thibet. From the milk of the goats on Mont d'Or a cheese is made which fetches a high price. The silk-worm is reared in some places, but the culture of the mulberry appears to be diminishing. Rhone is rich in minerals. Besides coal, iron, copperas, argentiferous lead, barytes, manganese, fine marbles, &c. are obtained; and in this dép. are the two most productive copper-mines in France, those of Chessy and St. Bel.

The principal manufacture is that of silk stuffs, which is carried upon a most extensive scale. It, however, has been fully noticed under the art. Lyons, to which the reader is referred. It has also manufactures of muslins at Tarare, linen and cotton thread at Thizy and other towns, and of hardware, jewellery, glass, paper, paper hangings, chemical products, &c. In 1835, of 81,044 properties subject to the *contrib. foncière*, 31,881 were assessed at less than 5 fr., and 12,358 at from 5 to 10 fr.; but 212 were assessed at upwards of 1,000 fr., which, taking into account the small extent of the dép., exhibits a much greater proportion than ordinary of the larger class of properties.

Rhone is divided into two arrondissements; chief towns Lyons and Villefranche. It sends five mems. to the Ch. of Dep. Number of electors (1838–39), 4,251. Total public revenue (1831), 25,900,703 francs; expenditure, 18,801,371 francs. (*Hugo*, art. *Rhone*; *French Official Tables*.)

RHONE, BOUCHES DU. See BOUCHES DU RHONE.

RIA ZAN, a gov. of European Russia, between lat. 53° and 55° 40' N., and long. 38° 20' and 41° 15' E.; having N. Vladimir, E. and S. Tambov, and W. Tula and Moscow. Area, 14,988 sq. m. Pop., in 1838, 1,241,700. Surface generally flat. The Oka, running from W. to E., divides it into two unequal portions of very different aspect. The country S. of that river is the more elevated; the air wholesome, and the soil fertile; in the N., on the contrary, the country is generally low, marshy, and covered with woods, or destitute of culture. More corn is grown than is required for home consumption; the average produce being between 5,000,000 and 6,000,000 chetverts a year. The forest, which are very extensive, cover above a third part of the surface; those belonging to the crown comprise about 428,000 dectiatines, or 1,284,000 acres. Hops, tobacco, and garden vegetables are, in some districts, raised in large quantities. The proprietors of the pasture lands let them to graziers belonging to the Ukraine, who bring thither large herds. The breed of horses is good; the Russian gov. has a *dépôt d'Etalons* at Shopine. Bees are supposed to produce about 250,000 roubles a year. There are a few iron

mines, and stone quarries. Manufactures have made some progress. Those of glass and hardware occupy the first rank; and there are others of woollen, cotton, and linen fabrics, cordage, potash, soap, &c., with dyeing establishments, tanneries, and distilleries. A portion of the manufactured goods is sent to Moscow, and by way of the Oka, down the Wolga; but the principal exports are the raw products of the gov., consisting of corn, cattle, honey, lard, iron, timber and wooden articles. The pop. is principally Russian; but partly of the Tartar stock. Riazan is subdivided into 12 districts; chief towns, Riazan the cap., Zarsk, and Kacimof. Education is very backward. In 1832, the pupils at schools and other seminaries amounted to only 1 in 934 of the pop. There was then, also, but one printing-press in the gov.

RIAZAN, a town of European Russia, cap. of the above gov., on the Troubege, a tributary of the Oka, 110 m. S.E. Moscow; lat. 54° 37' 41" N., long. 39° 15' 54" E. Pop., about 9,000. It consists of 2 distinct portions; an irregular fortress, with an earthen rampart, inclosing numerous churches, the episcopal palace, formerly the residence of the princes of Riazan, the consistory, &c.; and the town-proper, in which are also numerous churches, with a fine edifice for the government-offices, several convents, a seminary and public library, hospital, &c. The town has greatly increased in size and importance within the last 50 years; but most of the houses are still of wood, and planks occupy the place of pavement in the streets. Riazan is the seat of a military governor, with authority over the gov. of Riazan and Toubouf, and of the chief judicial courts of its gov. It has a gymnasium, to which a society of arts was attached in 1820; a school of drawing and architecture, founded in 1824; schools for the children of official persons, &c.; and several of the principal manufactures in the gov. The old town of Riazan, destroyed by the Tartars in 1548, is distant about 33 m. S.E. (*Schneider, La Russie; Possart, Russland, &c.*)

RIBEAUVILLE (Germ. *Rappolzweiler*), a town of France, dép. Haut-Rhin, cap. cant., at the foot of the Vosges, 7 m. N. Colmar. Pop., in 1836, ex. com., 6,561. Above it are the remains of the old castle of Ribeau-pierre; and in the immediate neighbourhood are some other ruined fortresses, and the principal remains of the ancient wall, called the *Heidenmauer* ("wall of the Pagans"), erected at a remote period along the top of the most E. range of the Vosges. It has manufactures of calicoes and cotton handkerchiefs.

RICHMOND, a parl. and mun. bor., market-town, and par. of England, the cap. of a district called Richmondshire, having a separate jurisdiction. W. div. wap. Gilling, N. riding, co. York, on the declivity of a hill rising from the Swale, which half encircles the town, and is crossed here by a stone bridge, 11 m. S.W. Darlington, and 41 m. N.N.W. York. Area of parl. bor., which comprises the pars. of Richmond and Aske, 5,690 acres. Pop. of town, in 1831, 4,000; ditto, in 1841, 4,765. The town, which is most picturesquely situated, commands, from many points, very fine views of the Swale, its bold rocky banks, and the well-wooded country around; and its appearance is made more imposing by the ruins of its castle and keep, built on a rock above the river. The streets are irregularly laid out; but a very fine broad avenue leads from the Darlington and Northallerton roads into an extensive market-place, surrounded by the principal shops, town-hall, chapel-of-ease, and one of the largest hotels in the N. of England (comprising the assembly-rooms). In the centre of the market-square is a column, or cross, under which was a reservoir for water, brought by pipes from the neighbouring hamlet of Aislebeck; but the supply being deficient, a much larger quantity has recently been brought from Coalgate, and a new and larger reservoir has been constructed for its reception. The houses are mostly built of a reddish sandstone; and the town, being well paved, lighted with gas, and kept remarkably clean, has a very neat appearance. The church, built on a slope facing the river, is principally in the perpendicular style, with a fine pinnated tower; but some portions are clearly of an older date. The living is a rectory in the gift of the lord chancellor; but the perpetual curacy of the chapel-of-ease has, till lately, been in the patronage of the corporation. The Wesleyans and Baptists have places of worship, and there is a large Rom. Catholic chapel with an attached school. The town has a national school, attended by about 200 boys and girls, an infant school, and Sunday-schools. A free grammar-school, founded in 9 Elizabeth, is well endowed with property under the management of the corporation, who appoint its head master. All natives, and the sons of residents within the bor., are admitted gratis. The number of day-scholars, however, seldom exceeds 20; besides whom the master is allowed to take boarders. The school recently attained considerable distinction, having been till lately under the superintendence of the eminent scholar, the Rev. James Tate, whose eldest son is now (1841) head master. Another free school, for com-

mercial purposes, is under the control of the corporation; in whose hands, also, are several charity estates including endowments for almshouses. (*See Char. Comm., 184 Report.*) A scientific society and mechanics' institute have attached libraries, and there is a savings' bank. "There are no manufactures of importance at Richmond. Its market is a very considerable one for corn; but the quantity brought thither has recently decreased, and the prospects of the town are not improving. The failure of the lead-mines (about 12 m. higher up the river), the supply of corn from Ireland, and the facilities given by the railroad between Liverpool and Manchester, all contribute to its decline." (*Mun. Corp. Rep.*) It is, however, inhabited by many wealthy families, who, with the neighbouring gentry, cause a pretty extensive retail trade. The training of race-horses is also a considerable business; and races are held annually in October, about a mile from the town, on a high moor, which has a commodious grand stand. About 14 m. N.N.W. is Aske Hall, a fine seat belonging to the Earl of Zetland; and near Catterick is Brough hall, the residence of Sir W. Lawson.

Richmond, which received its first royal charter, in 3 Edw. III., and was incorporated in the 19 Eliz., is governed, under the Mun. Reform Act, by a mayor, three other aldermen, and 12 councillors. Corp. rev., in 1840, 1,358*l.* Quarter and petty sessions for the bor. are held under a recorder, and petty sessions for the wap. of West Gilling take place on alternate weeks. A civil court for the recovery of debts under 100*l.*, another for the district of Richmondshire, and a court leet for the manor, are held occasionally; and there is a monthly ecclesiastical court, under the Archdeacon of Richmond. The bor. has returned two mems. to the H. of C. since the 27 Eliz., the right of election down to the Reform Act being in the holders of burgage tenures. The Boundary Act enlarged the limits of the bor. by the addition of the par. of Easeby; and in 1839-40 it had 299 reg. electors. It is also one of the polling-places at elections for the N. riding of the co. Market on Saturday; three annual chartered and other fairs.

The history of Richmond is closely associated with that of its castle, founded by Alan, the first Earl of Richmond, who, having received from William the Conqueror the forfeited estates of the Earls of Mercia, built the castle and part of the town of Richmond, to protect his family and property. Under the Norman monarchs, the title and property were possessed by different families, allied to the blood royal; and in the contest between the houses of York and Lancaster, they also several times changed possessors, till at length they were vested in the crown by the accession of Henry, Earl of Richmond, to the throne, under the title of Henry VII. Since this epoch, the castle has been allowed to fall into partial decay. It still, however, bears marks of its former grandeur and importance. The keep tower, of which the walls are nearly entire, is a Norman structure, about 100 ft. in height, the walls being 11 ft. thick; the lower story is supported by a vast column in the middle, from which spring three arches, closing the top. The floors of the two upper rooms have fallen in; but a modern wooden staircase leads to an older flight in the walls, by which the visitor may reach its summit, which commands an extensive and beautiful view of the surrounding country. The ruins of several other parts of the castle still remain, and latterly they have been partially repaired. In the S.E. corner of the area is a ruinous tower, in which is a dungeon, 13 or 14 ft. deep. The ground covered by the castle comprises nearly six acres: it belongs to the Duke of Richmond and Lennox, on whose ancestors it was conferred, with the title of duke, by Charles II. Here are also the ruins of a monastery of Grey Friars, the steeple of which is a remarkably fine specimen of the perpendicular style; and at Easeby are extensive and highly interesting remains of an abbey, built in the 12th century, for Premonstratensian monks; the buildings are chiefly in the early English style; but the windows both of the chapel and refectory have some very elegant tracery, well worth examination. (*Richman's Arch.* p. 276.)

RICHMOND (the Tivoll of London), a town and par. of England, upper div. hund. Kingston, co. Surrey, at the bottom, and on the slope and summit of an eminence rising from the S. bank of the Thames (crossed here by a handsome stone bridge of five arches), 10 m. W. by S. London. Area of par. 1,230 acres; pop., in 1831, 7,343. The principal street extends the whole length of the town, running along the ridge on its W. side to the summit of the hill, and being, in the lower parts, parallel to the river. The other streets are of very inferior importance. The houses in the lower part of the town are old-fashioned, and by no means large; but on the hill and outskirts are many handsome mansions occupied by families of distinction. The houses in the terrace of the Star and Garter Hotel, at the summit of the hill, command very extensive and noble prospects of the Thames and its rich valley, Windsor Castle being distinctly seen in the distance.

"— Here let us swear  
The boundless landscape.  
Heavens! what a goodly prospect spreads around,  
Of hills and dales, and woods and lawns, and spires,  
And glittering towns and gilded streams, till all  
The stretching landscape into smoke decays."  
Thomson's *Summer*.

The church is a respectable structure, with a low embattled tower, and, till 1658, was a chapel-of-ease to Kingston, to the rector of which par. the patronage still belongs. It has been much enlarged and repaired within the last century, and contains the remains of Thomson, the poet of the *Seasons*, who died here on the 27th of Aug. 1748, of Dr. Moore, author of *Zeluco*, and of *Views of Society in France, Italy, &c.*, Gilbert Wakefield, the scholar, Kean, the actor, &c. A new district church has also been recently erected in the pointed style. There is a Rom. Cath. chapel, and the Independents, Baptists, Wesleyan and Calvinist Methodists, have places of worship, to most of which Sunday-schools are attached. A charity-school, founded here in 1713, and subsequently endowed, furnishes gratuitous instruction to about 250 poor children, 60 of whom receive clothing. There are also three sets of almshouses, with pretty considerable endowments, and numerous money charities. A theatre is open during summer, and there are several excellent hotels, that on the hill, already alluded to, being a very extensive establishment in a magnificent situation.

Richmond is infinitely more a place of pleasure than of business, though it has a considerable retail trade for the supply of the resident families and visitors. It is a principal resort of visitors from London during the summer months, conveyed thither partly by coaches and partly by steamers and row boats: on the whole, however, the influx of visitors to Richmond, at least of the middle and lower classes, has materially diminished since the establishment of steamers on the river to Greenwich, Woolwich, Gravesend, &c.

Richmond park, the principal entrance to which is at the W. end of the terrace contiguous to the Star and Garter Hotel, formed by Charles I., comprises an area of 2,253 acres, being about 8 m. in circ. It consists mostly of poor soil; but has a great variety of surface, is well stocked with deer, and perfectly open to the public. The great lodge, which stands on rising ground, commanding a fine prospect, was built by Sir R. Walpole, ranger during the reigns of George I. and II., at an expense of 14,000*l*. Here, also, is a new or stone lodge, built for a hunting seat by George I., and given by George III. to Lord Sidmouth, by whom it is still (1841) occupied.

What is called the *Old Park* extends along the Thames from Kew to Richmond, and includes the royal gardens and pleasure-grounds attached to Kew Palace (see *Kew*). This park is, however, inaccessible to the public, except on certain days; and is considered as belonging rather to Kew than to Richmond.

The *Green*, at the bottom of the town, forms a parallelogram almost as large as Lincoln's Inn Fields; it is used in summer for playing matches at cricket, bowls, &c.: on one side of the green is a handsome public walk.

Richmond (formerly called *Shene*), was for centuries the site of a royal palace; but at what period it was erected is uncertain, though it became a fixed residence of royalty as early as the 14th century. Henry V. rebuilt it in a magnificent style. Henry VII. held a tournament here, in 1492, soon after which, the building having been destroyed by fire, a new palace was erected by that monarch, who gave the name its present name, being that of his own title, previously to his accession to the crown: he died here in 1509. But its principal distinction consists in the fact, that when the emperor Charles V. visited England in 1523, he was lodged in this palace. Queen Elizabeth was imprisoned in it by her sister Mary, and it afterwards became one of her favourite palaces, and here she died, on the 24th March, 1603. During the commonwealth, the palace was sold by the parliamentary commissioners for 10,752*l*; and the whole appears to have been then dismantled and demolished, nothing now remaining except a few of the out-offices, its site being occupied by several modern mansions held on lease from the crown. On the N. side of the palace once stood a monastery, founded by Henry V., for Carthusian monks, the revenues of which, at the dissolution, were estimated at 9,53*l*. A Franciscan convent, founded here in 1499, by Henry VII., was suppressed with the other in 1534.

The custom of Borough English, by which, in the event of the father's dying intestate, lands descend to the youngest son, or, in default of heirs male, to the youngest daughter, prevails in the manor of Richmond.

**RICHMOND**, a city and port of entry of the U. S. of N. America, cap. state of Virginia, on James River, about 150 m. from its mouth in Chesapeake Bay, and 105 m. S. S. W. Washington; lat. 37° 30' N., long. 77° 31' W. Pop. in 1830, 16,060; but in 1835, including its suburb of Manchester, on the opposite bank of the river, it had, according to Bradford, above 20,000 inhabs. "The

situation of Richmond is very striking. The town is built on rising grounds of various shapes, descending to the eastward; but though it possesses every facility for being kept free from filth, it is the dirtiest city, with the worst kept pavements and streets, that I have seen in this country." (*Stuart, Three Years in America*, II. 72.)

The chief street is handsome and spacious; and there is a fine square, covering about 10 acres, planted with trees, and laid out in gravel walks. In this square is the capitol, an elegant building on the model of the *Maison carrée* at Nîmes, erected shortly after the war of independence. It has a statue of Washington, by Houdon. A public library has been established in the senate hall, which has also a portrait of Jefferson. Near it is the city hall, a neat Doric structure. The churches are numerous, and one occupies the site of the theatre destroyed by fire, with great loss of life, in 1811. The Virginian armory, the penitentiary, and a new theatre, include the other chief objects of notice. The city is abundantly supplied with water from three reservoirs. Richmond is favourably situated for commerce. It stands at the head of the tide-water, in James River, and is connected by James River Canal with Buchanan, 175 m. distant, and by railways with Aquia Creek and Petersburg. It is consequently the natural depot for the wheat, hemp, and other produce of a large extent of country. Immediately above the city are some falls, beyond which the river is navigable by boats for upwards of 200 m. The falls supply valuable water power, which is used to work flour, cotton, paper, and rolling mills. Richmond has also a cannon foundry, tobacco factories, &c. The suburb of Manchester is connected with Richmond by two bridges; and with some coal-mines, 13 m. distant, by a railway. But, notwithstanding its numerous advantages, neither the foreign trade nor the shipping of Richmond is so considerable as might have been expected. There belonged to the port, in 1839, 5,147 tons shipping.

**RICKMANSWORTH**, a market-town and par. of England, co. Herts., hund. Cashio, on the Gade, 18 m. N.E. London. Area of par., 9,740 acres. Pop. in 1831, 4,574. The parish church has been rebuilt within these few years, with the exception of the embattled tower, which has belonged to the old church. The living, a vicarage, in the patronage of the Bishop of London, is worth about 510*l*. a year. It has an endowed national school, and other minor and Sunday schools, and two almshouses. It is governed by two constables and two head-boroughs. In its vicinity are several streams, on which considerable flour and paper mills have been erected. Its trade is facilitated by the Grand Junction canal, which passes close by the town. Moor Park, a seat of the Marquis of Westminster, in the vicinity, was once the residence of Cardinal Wolsey; but it has since been rebuilt in the modern style; the grove, belonging to Lord Clarendon, and other seats, are also in the immediate neighbourhood.

**RIGA**, an important city and river port of European Russia, cap. of Livonia, on the Dwina or Duna, about 9 m. from its embouchure in the gulf of Riga, lat. 56° 57' 12" N., long. 24° 19' 42" E. Pop. in 1835, including the garrison of 10,000 men, 67,338. About two thirds of the resident population are Lutherans, the rest consisting of members of the Russo-Greek church, Catholics, &c.

Riga is strongly fortified. It consists of the town, properly so called, and the suburbs; the former being entirely inclosed by the fortifications. Streets in the town narrow, crooked, and houses generally brick; in the suburbs, which are much more extensive, the streets are broad and regular, and the houses mostly of wood. One of the suburbs lies on the left bank of the river, the communication with it being maintained by a floating bridge about 2,400 ft. in length.

Among the public buildings are the cathedral, consecrated in 1211, and rebuilt in 1547; the church of St. Peter, built in 1406, with a tower 440 ft. in height, being the most elevated in the empire, and commanding a fine view of the city and adjacent country; the castle, the seat of the chancellor, and of the general and civil governors; hall of the provincial states; town-house; exchange; arsenal, &c. A magnificent column, surmounted by a colossal bronze Victory, was erected in 1817, by the mercantile body, in honour of the emperor Alexander and the Russian army.

Among the literary establishments are a gymnasium, a lyceum, a school of navigation, and various elementary schools, a public library, an observatory, a society of Lettonian literature, &c. Manufactures of no great importance, though, of late, materially improved. In 1845 there were in the city 25 different manufacturing establishments, employing in all 1,397 workmen, of which those of cotton, cloth, and rugs, were the most important. There are also various sugar-houses, tobacco manufactories, breweries, &c.

Owing to her situation on a large navigable river, Riga is the entrepôt of an extensive country and is, in respect of foreign commerce, the next town in the Rus-

slan dominions to Petersburg. Corn used to be the principal article of export, but it is now far surpassed by flax and flax-seed, the exports of which have increased very rapidly. The other great articles of export are hemp and hemp-seed, timber, including masts and deal-boards, tallow, coarse linen, and canvass, &c. The total value of the exports in 1836 amounted to 47,735,684 roubles, of which flax constituted 23,854,420 roubles, flax-seed 8,731,763 ditto, and timber 3,543,763 ditto. In 1835, the exports of hemp amounted to 855,482 pots, but this is rather above the average. The imports consist principally of sugar, and other colonial products, dye-stuffs, wines, cotton, cotton-stuffs and cotton-yarn, woollens, salt, herrings, &c. Their total value in 1836 was 15,093,675, being less than a third part of the exports. The largest part by far of the trade is carried on with England. There is a bar at the mouth of the river which has usually from 12 to 13 ft. water; and it is customary for vessels drawing more than this to load and unload the whole or a part of their cargoes at Bolderaa, a small port outside the bar. The entrance to the river, at Dunamunde, is guarded by a fort, where is also the custom-house. The ships arriving at Riga vary from 1,000 to 1,500 a year. In 1836, the arrivals were 1,102, and the clearances 1,127, about a third part of which were English. The customs duties during the same year exceeded 8,000,000 roubles. If we may depend upon the official returns, Riga has increased very rapidly. Under Catherine II. its pop. did not exceed 20,000; in 1824 it amounted to 39,908, and in 1835, as already stated, to 57,338, exclusive of the garrison. It has occasionally suffered considerably from inundations. (See the official returns published by the Russian Government; *Schmitzler, La Russie*, &c. p. 565.; the art. DWINA, in this dictionary, &c.)

RIMINI, (an. *Ariminum*), a city of Italy, Papal States, leg. Forlì, between the rivers Marecchia (an. *Ariminus*), and Ausa (an. *Aprusa*), within about two m. of the embouchure of the former in the Adriatic, 28½ m. E.S.E. Forlì, and about the same distance S.E. Ravenna. Lat. 44° 4' N.; long. 12° 34' 35" E. Pop. about 12,500; but including the suburbs, and immediately contiguous villages, the pop. amounts to 27,000. (*Rampoldi*.) It is walled, and entered by several gates. A long street traverses it, terminating on the N. at the *Porta di San Giuliano*, whence emerges the *Æmilium* way, leading to Piacenza; and on the S. at the *Porta Romana*, whence ends the *Flaminian* way, conducting thither from Rome. The town is well built, having some good streets, and handsome marble palaces; but, like most other Italian cities, it has a dull, melancholy, and deserted appearance. The cathedral, said to have been built on the ruins of a temple of Castor and Pollux, was restored and altered by Alberti in the 15th century, and has a very elegant exterior, to which, however, the interior offers a lamentable contrast. In it are some tombs of the Malatesta family, once lords of Rimini. According to Eustace, this building was converted by the French into a military hospital. The church of *San Giuliano* has a fine altar-piece by Paul Veronese, and several good paintings by Guido, and other masters; in that of *St. Augustin* is a ceiling handsomely painted in fresco. It has a handsome town-house, theatre, a bowling green, and a good fish market; and in the *Gambalunga* palace is an extensive library, liberally thrown open to the public. The castle built here by Sigismund I. is falling into decay. The principal square is embellished with a fountain, and a statue of Paul V.; and in another of the open spaces is a small platform, or pedestal of a column, which, according to an apocryphal tradition, was the *suggestum* on which Cæsar harangued his troops after passing the Rubicon! At the S. entrance of the city is a triumphal arch, raised in honour of Augustus, and in most respects worthy of admiration; but Eustace says, that it was surmounted in the middle ages by a Gothic battlement, by which it is still disfigured. Both rivers are crossed by solid bridges; that over the Marecchia appears, from the inscriptions, to have been commenced by Augustus, and finished by Tiberius. It is of marble, 220 ft. in length (*Rampoldi*), and has five arches. Critics differ as to its merit as a work of art; but being still in excellent preservation, there can be no difference of opinion as to the solidity of its construction. Without the walls are the traces of an amphitheatre, and other remains of antiquity. The port of Rimini, on the Adriatic, at the mouth of the Marecchia, is so much obstructed by sand, as to admit small vessels only; but the fragments of marble buildings, piers, &c., attest that it was formerly of considerable importance.

Rimini has manufactures of silk, glass, and earthenware; and the surrounding country being very fruitful. It has a considerable trade in corn, and furnishes quantities of fish to the neighbouring towns.

In antiquity Ariminum was of far more importance than at present. It was the first considerable town on the E. coast of the peninsula, after crossing the

Rubicon, (the boundary between Cisalpine Gaul and Italy, properly so called,) and was regarded as one of the bulwarks of the latter. A Roman colony was planted in it *anno* v. c. 485, and at a subsequent period it received another colony. It was occupied by Cæsar immediately after he had crossed the Rubicon, and was honoured with the especial patronage of Augustus. It was given by Pepin, with the rest of Romagna, to the Holy See, to which, with few intermissions, it has since belonged. (*Rampoldi, Corografia dell' Italia; Woods's Letters of an Architect; Cræmer's Ancient Italy*, l. 255. &c.)

RIO DE JANEIRO, or simply RIO, a city and seaport of Brazil, of which it is the cap., and the largest and most important commercial city of S. America, on the W. side of one of the finest bays in the world, at m. W. Cape Frio, lat. 22° 54' 15" S., long. 43° 15' 50" W. Pop. probably about 200,000, of whom about a half are whites, and the rest mostly negro slaves. The city, which is in the shape of a parallelogram, is situated on level ground, at the foot of hills, and has a fine appearance from the bay. The older portion, or that adjoining the sea, is divided on the W. from what may be called the new town by a large open space, the *Campo da Honra*. The style of architecture is in general mean, resembling that of the older parts of Lisbon; and though great improvements have been effected since the emigration of the court of Portugal to Rio in 1807, a great deal remains to be done before it be entitled to rank even with a second-rate European town. The streets, which are mostly straight, and intersect each other at right angles, are pretty generally furnished with *trottoirs*, and paved with blocks of granite. But, though many of them have been widened of late years, and otherwise improved, they are still, for the most part, narrow and dirty, with a water-course in the centre, the usual receptacle of the filth from the houses. (*Three Years in the Pacific, by an American*, l. 97.) The houses, which are mostly of granite, or of granite and wood, are seldom more than two stories in height, rough, or whitewashed, with red tile roofs. They are narrow, but deep in proportion to the height; the lower story is commonly occupied by the shop or workhouse, and in the houses of people of distinction, by the stable and coach-house; the second story (and third, if there be one) comprising the family apartments. The mildness of the climate, which is here a perpetual spring, rendering artificial heat unnecessary, there are no fire-places except in the kitchens, and, consequently, very few chimneys, which, to a stranger from Europe, gives the city a bald and, as it were, truncated appearance. The windows in the second story generally open upon iron verandas, the *jalousies* having been removed by order of government. In the outskirts of the town the streets are unpaved, and the houses of only one floor, low, mean, and dirty, with doors and windows of lattice-work, opening to the outdoors to the advantage of the cat-owners. The rent of houses is as cheap as anywhere in London. Inside the houses it is usual for all the apartments on the same floor to communicate above the partitions, which do not extend to the ceiling. This, though it destroys privacy, is advantageous, by allowing that free circulation of air so important in hot climates.

There are about 40 churches in the city; but none of them can be called fine buildings, or are worth the notice of travellers from Europe. The cathedral or church of Nossa Senhora da Gloria, on a lofty hill, on the S. side of the city, is a conspicuous object from a distance, and especially from the bay. There are several conventual establishments; a *misericórdia*, with an attached hospital; a foundling hospital; an institution where female orphans, born of white married parents, are educated and portioned off in marriage, with various other charitable institutions.

Water is conveyed into the city from a neighbouring lofty hill (2,308 ft.), called the Corcovado, by a magnificent aqueduct, constructed in 1740. The water is thence conveyed to public fountains in different parts of the city; and a good many persons earn a livelihood by carrying water from these fountains to private families. Nothing, however, would contribute so much to the cleanliness and health of the city as an increase in the supply of water, and its distribution by pipes to private houses. The town is very indifferently lighted. There are but few inns and hotels, and those mostly very inferior; they are wholly unfit for the accommodation of strangers, being rarely visited by the townspeople.

The royal palace forms two sides of a *torgo*, or oblong space, opening to the bay near the principal landing-place. It consists partly of the old palace of the viceroys, and partly of a convent formerly belonging to the Carmelites, and is wholly destitute of architectural beauty. Among the other public buildings may be specified a new and handsome theatre, the exchange, the old college of the Jesuits, and the episcopal palace and royal villa of Christovao, in the environs.

Neither education nor literature is here in a very flourishing state. There are, however, sundry lycæums

and grammar schools, and a great many private licensed academies. Among the principal educational institutions may be specified a school of surgery, military and commercial academies, an academy of arts, a national museum, &c. In the vicinity is a very good botanic garden, comprising about 4 acres, including, among other exotics, numerous specimens of the tea plant. Near the Imperial palace is the public library, containing from 80,000 to 70,000 vols. Several daily and weekly newspapers issue from the Rio press; but they are said to be, without exception, the most worthless publications of their class any where to be met with. The police and health of the city have been materially improved within the last dozen years.

The market-place consists of a collection of filthy booths, for the sale of vegetables, which are at once abundant, excellent, and cheap. The farina of the *Jatropha Manihot* is here the grand substitute for bread stuffs, and is extensively used by all classes, forming, with bananas, the principal food of the negroes. The yam supplies the place of the potatoe; and the finest oranges are sold at from 10 to 25 cents per lb. Butchers' meat is sold in shops, scattered up and down the city. The beef, though wholly without fat, is tender. Pork is good; mutton bad and dear. Fish abundant and good. The slave-market, described by Basil Hall and others, no longer exists; but the clandestine importation of slaves is still carried on to a very considerable extent. (*Three Years in the Pacific*, l. 135.) Slaves, however, are, speaking generally, very indulgently treated. "We may," says a Rio circular, "assure our philanthropic friends abroad, that, as regards the slaves, they are here better fed, better clothed, are on the whole better treated, laugh more and weep less, than the major part of the labouring poor in Europe."

**Commerce.**—The trade of Rio is very extensive, and has increased rapidly during the last few years. It is now by far the greatest mart for the export of coffee. The shipments of this important article which, in 1830, amounted to 396,785 bags, have increased with such unexampled rapidity that, in 1839-40, they amounted to 1,098,346 bags, that is (taking the bag at 154 lbs.), to 168,683,294 lbs., or 75,305 tons! being nearly equal to all the exports of coffee from all the other ports in the world.\* Sugar is also an important article of export from Rio, though latterly it has been decreasing, and does not now exceed 10,000 cases (15 cwt. each); the exports of sugar from Santos are, however, increasing; and amounted, in 1839-40, to 624,750 arrobas. (See SANTOS.) The other great articles of export from Rio are hides, rice, tobacco, rum, tapioca, ipecacuanha, manioc flour, and other inferior articles. The export of cotton has almost entirely ceased; and that of gold, diamonds, &c., is mostly clandestine, and too inconsiderable to be worth notice. We subjoin

AN ACCOUNT OF THE QUANTITIES AND VALUES (in Reiss) of the Principal Articles of Brazilian Produce, exported from Rio, in 1840.

	Reis.	Reis.
Coffee, 5,255,950 arrobas, at 3,500	18,395,825	
Expenses, including duty and commission, 1½ per cent.	3,219,269	21,615,094
Sugar, 575,000 arrobas, at 2,100	1,207,500	
Expenses, as above, 1½ per cent.	905,620	2,113,120
Hides, 184,292, at 6,500	1,161,039	
Horns, 100,000, at 4,500 per 100	4,500	
Tanned half-hides, 17,500, at 2,500	43,750	
Rice, bags, 17,805, at 9,000	161,145	
Tobacco, arrobas, 189,000, at 4,500	450,000	
Rum, pipes, 3,110, at 5,500	202,150	
Tapioca, barrels, 250, at 9,000	2,250	
Ipecacuanha, lbs., 20,000, at 500	10,000	
Jacarama, manioc flour, and various articles	200,000	
Expenses, as above, 1½ per cent.	2,254,857	2,514,184
Total value of exports during the year 1840	279,550	26,242,398*

\* Being, at the medium exchange of the year, equal to about 5,400,000*l.*

The aggregate value of the exports, in the under-mentioned years, has been —

1836	1837	1838	1839	1840
18,395,825	15,569,642	20,155,865	23,367,298	26,242,398

The principal article of import consists of cotton goods, the value of which amounts to full one third of the total value of the imports. Next to cottons are woollen, linen, and silk manufactures, wine, jewellery, and ironmongery; flour, meat, fish, butter, and other articles of provision; spirits, salt, earthenware, paper, and a host of other articles. Of the total value of the imports in 1838-9, estimated at 25,456,698*l.*, that of the cotton goods, which were almost wholly supplied by Great Britain, amounted to 10,355,704*l.* We subjoin

AN ACCOUNT OF THE VALUE OF THE IMPORTS INTO RIO during each of the Three Years ending with 1838-9, specifying the value of those furnished by each Country:—

Countries.	1836—1837.	1837—1838.	1838—1839.
Great Britain and her possessions	15,315,145	2,689,846	15,092,554
United States N. A.	5,292,175	2,804,160	4,313,463
Hamburg and Bremen	1,654,474	1,667,863	1,799,687
States in the R. Plata	2,637,558	1,661,875	1,696,517
Portugal and her possessions	1,098,264	1,599,680	1,577,217
Spain	1,671,359	1,556,396	2,659,598
Italy	357,619	692,619	765,113
Ports of the Pacific	475,674	265,261	475,015
Mallic ports	282,614	216,657	9,294

The customs' duties at Rio, in 1840, amounted to 1,920,822*l.* on imports, and to 1,920,406*l.* on exports. During the same year 858 ships arrived at Rio from foreign ports; and 812 sailed, of which 512 were laden with Brazilian produce, and 280 in ballast. On the 1st of June, 1841, there were in the port 21 British, 27 Portuguese, 12 American, &c. ships. The arrivals coastwise, in 1840, amounted to 1849. (*From Freese's Rio Circular, and Private Returns from Rio.*)

The currency of Rio, and of Brazil generally, is in a very vitiated state. The par of exchange, when the silver currency was maintained, was 67*½*d., and the current rate was usually higher; but, for some years past, owing to the introduction of paper and copper, the exchange has fallen, so that its average rate in Rio, in 1840, was 30*½*d.

**Harbour.**—As already stated, the harbour of Rio is one of the finest in the world. Its entrance is marked by a remarkable hill, in the form of a sugar-loaf, 900 ft. in height, close to its W. side, while on the opposite side of the bay, at the distance of about 1½ m., is the fort of Santa Cruz, on which is a light-house. There is, also, a light-house, having the lantern elevated about 300 ft. above the sea level, on *Ilha Rasa* (Flat Island), about 10 m. S. from the mouth of the harbour. Ships may enter either by night or day, there being no obstruction or danger of any kind. The water in the bay is sufficient to float the largest ships of war; and it is extensive enough to accommodate all the navies of all the countries in the world.

RIO M (an. *dicomagus*), a town of France, dep. Puy-de-Dôme, cap. arrond., on a hill, 8 m. N. by E. Clermont. Pop. in 1836, ex. com., 11,050. It is well built; but the houses are mostly in an antiquated style, and being wholly constructed of Volvic lava, with which it is also paved, it has a singularly sombre appearance. It has several handsome public fountains, and its churches, hospitals, the various public offices, and the sub-prefecture, are good buildings. One of its promontories is ornamented with a statue of Desaix.

Riom is the seat of a royal court for the dèps. Puy-de-Dôme, Allier, Cantal, and Haut-Loire; and of tribunals of primary jurisdiction and commerce. It produces cotton and linen cloths, candles, leather, and brandy; and has a large trade in agricultural produce. It was formerly the cap. of Auvergne, and the residence of its dukes, some remains of whose castle still exist; and it continues to rank as the second town within the ancient limits of that province. Among the distinguished individuals belonging to Riom may be specified Gregory of Tours, and the learned Jesuits J. A. and A. Sirmoud. (*Illego*, art. *Puy-de-Dôme*; *Dict. Gèog.*, &c.)

RIPON, a city, parl. and mun. bor. and market-town of England, N. riding co. York, lower div. warg. Skell, on the Ure, close to its confluence with the Great Ouse, both of which are here crossed by stone bridges, 22 m. N. W. York. Pop. of parl. bor. (which comprises the township of Ripon with part of the district of Bondgate), in 1831, 5,700. "The appearance of Ripon is that of a very respectable and wealthy country town; it is increasing in population, and, though it has no manufactures itself, there is an extensive manufactory of saddles in Bondgate. The neighbouring country is rich and well wooded, containing many objects of local attraction and interest; and this may, perhaps, account for the fact, that of late years many respectable families have been induced to settle here. The town has, therefore, increased in importance as a residence for persons of that class." (*Parl. Bound. Report*.) The streets are irregularly laid out, but clean, and well lighted with gas, many of them meeting in the market-place, a spacious square surrounded with good shops, &c., having in its centre an obelisk 90 ft. in height, surmounted by the city arms, and on its S. side a particularly handsome town-hall, comprising court offices, and a handsome room for balls and public meetings. Ripon minster, erected in 1836 into a cathedral, and built in the 14th and 15th cen-

tures, is said to be one of the best proportioned churches in England. It is a cruciform structure, with a tower rising from the intersection of the nave and transepts, besides two others (each 110 ft. in height) at the W. end. Its length, from E. to W., is 266 ft.; breadth of choir and aisles, 67 ft.; and length of transepts, 132 ft. "This venerable edifice," says Mr. Britton, "contains various parts worthy of attention, particularly its W. front, a very fine specimen of bold early English, and, except the battlements and pinnacles, without alteration. A part of the church is Norman, and a great portion of the transepts but little later. The choir is partly decorated; and S. of it is a Norman crypt, above which are some Norman buildings used as vestries. At the E. end of the choir, which is sadly disfigured by heavy modern galleries, is a decorated E. window of five lights with very elegant tracery. The nave is very light, exhibiting some extremely fine composition; and there is a considerable quantity of good screen-work, both in wood and stone." The chapter comprises a dean, subdean, and six canons, who divide among them a net revenue of 633*l*. Ripon was erected into a bishopric in 1538, the diocese comprising most of the populous parts of the W. of England, with the liberty of Richmondshire in the N. riding. The annual revenue of the see is 4,500*l*, chiefly derived from the surplus fund formed out of the deductions from the revenues of the larger sees. Trinity church, built and endowed in 1826 at a cost of above 13,000*l*, is a Gothic cruciform structure, with lancet windows, and has accommodation for upwards of 1,000 persons. The Wesleyan Methodists have two places of worship, and there is one each for Independents and Primitive Methodists. The town has several Sunday-schools, besides which there are national schools both for boys and girls, and an endowed blue-coat school. A grammar-school, founded in 1555, has an endowment producing about 370*l* a year; it is free for Latin, Greek, and English grammar, to the sons of all residents, besides whom the master may receive boarders and day-scholars. The town has several almshouses, money-charities, &c.; and a dispensary furnishes relief to the sick poor. A mechanics' institute, subscription library, and news-room, are comprised in "the public rooms," a large and rather handsome building, erected by subscription, having attached gardens and pleasure-grounds. A theatre was built in 1792; but it has been converted into a depot and riding school for the York hussar yeomanry cavalry.

Ripon was formerly celebrated for its manufacture of spurs, and the expression, "as true steel as Ripon rowels," was once proverbial for men of integrity and intrepidity. It had also a considerable manufacture of woollen-cloth; but both these branches of industry have long ceased to exist. Linnen-weaving, mauling, and tanning are pursued to some extent; and, as seen above, saddle-trees and saddlery are made in pretty large quantities. It is a large staple for wool, bought up here by the clothiers of Leeds, Halifax, &c.; and it has an excellent corn-market. In 1767, the Ure navigation was brought up to the town, which is thus rendered accessible by barges of 30 tons. The Knaresborough and Clarno banking company and Wensleydale banking company have branches here, and, in addition to these, there are two private banks and a savings' bank.

Ripon is a bor. by prescription, but received a charter from James I. Under the Mun. Reform Act it is governed by a mayor, 3 aldermen, and 12 councillors. Corporation revenue, in 1839, 401*l*, exclusive of 900*l* accruing from the sale of property. The bor. has a commission of the peace under a recorder, and a separate manor-court is held by the dean and chapter, having jurisdiction over the district, called "canon fee." Ripon has sent 2 mems. to the H. of C. since the reign of Edward VI., the right of election being previously to the Reform Act, in the holders of burgate tenures, all of which had, for many years, been in the possession of a single individual. The limits of the par. bor., as fixed by the Boundary Act, comprise the entire township of Ripon with a part of the township of Alsunderby-cum-Bondgate. Reg. electors, in 1839-40, 383. Large markets on Thursday, abounding with all kinds of agricultural produce, and six yearly fairs.

Ripon obviously derives its name from its position *in ripis* of the river Ure; but whether it be of Roman or Saxon foundation is wholly unknown. A monastery, founded here A. D. 661, attained considerable celebrity. It was, however, destroyed by the Scotch in the reign of Edward II., and was not afterwards restored.

RIVE-DE-GIER, a rapidly increasing town of France, dep. Loire, cap. cant., on the Gier, a tributary of the Rhone, at the head of the canal of Givors, and on the railway from St. Etienne to Lyons, 12 m. N.E. the former, and 30 m. S.W. the latter. Pop. in 1836, ex. com., 9,040; but it is now (1841) probably much higher. It was formerly fortified, but its works have been destroyed, and it is now principally remarkable for its commercial activity, sharing largely in the growing prosperity of the

country along the Rhone (which see), and the districts round Lyons and St. Etienne. It has extensive manufactures of glass ware; and its coal-mines furnish a large proportion of the coal required in the hardware factories of St. Etienne. It has also hardware manufactures of its own. The offices of the Givors Canal company, and the noble reservoir belonging to that canal, are the most remarkable public works at Rive-de-Gier. (Hugo, &c.)

ROANNE (supposed to be the *Rodumna* of Ptolemy), a town of France, dep. Loire, cap. arrond., on the Loire, here crossed by a new bridge, 30 m. N. Montbrison. Pop. in 1836, ex. com., 9,334. It is a pretty, well-built, open, straggling town, with a good quay, a large hospital, a handsome theatre, and a communal college, having a good library and cabinet of natural history, &c. It is the seat of a tribunal of original jurisdiction, and a chamber of manufactures; and is a depot for the manufactures of Lyons and the S.E. of France, passing to the central and N.W. depas. It also manufactures muslins, calicoes, and woollen fabrics; and has some trade in corn, wine, flour, timber, and charcoal. Various remains of antiquities have been frequently discovered in and near the town. (Hugo, art. Loire; Dict. Gög.) ROCHDALE, a par. bor., market-town, and par. of England, middle div., bund. Salford, on the Mersey, on the Roch. trib. of the Irwell, 11 m. N.N.E. Manchester, and 37 m. E.N.E. Liverpool. Pop. of town and par. bor. (which comprises all within the limits of a circle described with a radius of  $\frac{3}{4}$  m. from the town-hall), in 1831, 25,000; pop. of par. (which extends over 58,620 acres), 74,427. The town consists of several streets, greatly improved of late years: the principal thoroughfare, in which are the market-house and town-hall, being wide and lined with brick houses. The streets generally are well paved, lighted with gas, and well supplied with water from four reservoirs in the township of Wardleworth. Here are two assembly-rooms, a ball theatre, a commodious gaol, and work-houses. The parish church, a structure of Norman and early English architecture, with a square pinnacled tower, stands on an eminence, to which there is an ascent from the lower part of the town by a flight of 126 steps: the living is a vicarage, of the annual value of 1,730*l*, in the gift of the Archbishop of Canterbury. The town has also two episcopal chapels; and within the par. are six others, chiefly in the patronage of the vicar. Here is a Rom. Cath. chapel, and 12 places of worship for different denominations of dissenters, among whom Methodists, Independents, and Baptists are the prevailing bodies. Each church and chapel has a Sunday-school, attended by great numbers of children. The town has a large national school, another well-endowed establishment, called the *Moss school*, for the gratuitous education of 40 boys and 20 girls; a free grammar-school, founded in 1561, and attended by about 45 boys (who, owing to the smallness of the endowment, pay a fee of 6*l*. a year); an endowed girls' school, and numerous money charities. A dispensary and ladies' charity furnish relief to the sick poor; besides which, there are bible, tract, and other religious associations, a literary society, an horticultural society, and a savings' bank.

Rochdale is a principal seat of the woollen and cotton manufactures, especially the former: the woollen articles produced here consist principally of balzes, flannels, and kerseys; and those of cotton of strong calicoes, fustians, &c. In 1839, there were in the parish (exclusive of Saddleworth township) 56 woollen mills, 95 cotton, and one flax mill, propelled by an aggregate steam power of 2,969 horses, employing, in all, 9,745 hands, of which 8,132 belonged to the cotton mills. There are also numerous hand-loom weavers, though power-looms have been extensively introduced within the last few years. Hat-making is pursued on a pretty considerable scale, and numerous hands are employed in the town and neighbourhood in making machinery. The Manchester and Liverpool District Banking Company have a branch here, and there are two private banks. Coal and stone abound in the neighbourhood, and the par. comprises 10 collieries. Iron ore has been found in considerable quantities in Butterworth township, and flags are quarried at Spotland. Rochdale has means of communication with Manchester and Liverpool westward, and with Halifax, Leeds, &c. eastward, both by canal and railway. The Rochdale Canal, which passes near the town, uniting westward with the Duke of Bridgewater's Canal, and eastward with the Calder and Ribbles Navigation, 33 m. in length, cost upwards of 600,000*l*, and is supplied, at its summit-level, by large reservoirs, one of which covers 130 acres. It was opened in 1804, and the daily traffic may amount to 1,400 tons. The Manchester and Leeds Railway passes through the district; and in Culderbrook township is a tunnel 2,860 yds. long, chiefly cut through the solid rock, 80 ft. below the surface. The total length of the line is 504 m., and the whole is now open.

Notwithstanding its pop. and manufacturing importance, Rochdale had no representative in the legislature

till the passing of the Reform Act, which conferred on it the important privilege of sending 11 mem. to the H. of C., the electoral limits being defined, as above stated, in the local act of 6 Geo. IV. c. 101. Reg. electors, in 1830-40, 965. It is also a polling-place for the S. div. of Lancashire. The town is under the jurisdiction of the co. magistrates; but a manor-court is held every 3 weeks for the recovery of debts under 40s. Markets on Monday and Saturday: fairs, May 14, Whit Tuesday, and Nov. 7, for horses and cattle. (*Baines's Hist. and Geog. of Lancashire; Butlerworth's Stat. of Lancashire; Parl. Reports, &c.*)

ROCHEFORT, a maritime town, and the third naval port of France, dcp. Charente-Inférieure, on the Charente, about 12 m. (by water) from its mouth, opposite the Isle of Oléron, and 10 m. S.S.E. La Rochelle; lat. 45° 56' 10" N., long. 0° 57' 34" W. Pop., in 1836, ex. com. 13,218; but said to have been, in 1841, upwards of 17,000. (*Ports, &c. of France, 160.*) It is situated at the extremity of an extensive plain, and is shaped like a bow, the arc formed by the ramparts, and the chord by the river. The town, which is wholly of modern date, having been founded under Louis XIV., is well laid out and built, though the houses want elevation. Some of the principal streets are planted with double rows of poplars; and in the centre of the town is the *Place d'Armes*, a large and regular square, planted, and ornamented with a fountain; which, with other fountains, provide the inhabitants with an abundant supply of river water. The port is capacious, and is deep enough to receive vessels of the largest size, having 20 ft. water at low ebb, and more than 40 ft. at high tide. The mercantile harbour, separated from the *port militaire*, admits vessels of from 800 to 900 tons. The naval yard is entered by the *Porte de Soleil*, a handsome gateway constructed in 1828; on either side of which are lodges for the guard, the agents for the surveillance of the port and officers of the customs. It comprises building-docks for ships of from 60 to 120 guns; sawing, brass and copper mills impelled by steam; a sail-loft, model workshop, a *bagne*, or prison, capable of accommodating 1,000 convicts; a rope-house, in which cables upwards of 400 yards in length are made, and a naval and military arsenal, biscuit manufactory, and stores for materials of every kind necessary in the fitting out of ships of war. The cables and ship-biscuit made at this port are admitted to be the best in France. The naval hospital without the town comprises 9 separate buildings, furnishing accommodation for 1,200 patients. The residence of the naval commandant is a fine building, surrounded by gardens, which are open to the public. Rochefort is the seat of a maritime prefecture, and tribunals of original jurisdiction and commerce; and has schools of naval gunnery, hydrography (2d class), medicine, drawing, music, &c.; a society of arts and literature, Bible society, public library, &c. It has a few vinegar factories, and sugar refineries; but ship-building is by far the most important branch of industry, and the ship-builders of the mercantile port construct handsome vessels for the coasting trade and cod-fisheries. The little trade otherwise enjoyed by Rochefort is principally in corn, wheat, salt, and brandy. The town was formerly very unhealthy; but it has been, in this respect, greatly improved by the drainage of the adjacent country. (*Ports and Arsenals of France, 159-173; Guide du Voyageur en France; Dict. Geog.*)

ROCHELLE (LA), a town and sea-port of France, dcp. Charente-Inférieure, of which it is the cap., on the Atlantic, 76 m. S. by E. Nantes, and 93 m. N.N.W. Bordeaux; lat. 45° 59' 21" N., long. 1° 9' 40" W. Pop., in 1836, 14,857. "Rochelle has an admirable commercial position. The town forms, as it were, the bottom of a small gulph, which serves as an *avant port*. It is defended by 2 handsome towers, which, whether La Rochelle be approached by land or water, are seen at an immense distance. Opposite the town, at the extremity of the roadstead, are the isles of Île and Oleron. The harbour is safe and commodious; it is protected by a strong jetty, and is capable of receiving vessels of 400 or 500 tons' burden. There has recently been erected a dock or *arrière port*, where vessels are careened. The town itself is clean and well built." (*Ports, &c. of France.*) The streets are wide and straight, and have foot-pavements, mostly under arcades, on which the houses are built. Few of the private buildings are lofty or of much size; but the town has, notwithstanding, a striking appearance. The fortifications, constructed by Vauban, consist of ramparts, with 19 bastions and 8 lunettes, the whole enclosed with ditches and a covered way. The town is entered by 7 gates, one of which, the *Porte d'Honneur*, is a handsome structure, apparently of the 16th century. There are several good squares; and without the walls are the promenades called the Mall and the *Champ de Mars*. The cathedral, town-hall, courts of justice, hospital, orphan-asylum, exchange, and a good bathing establishment, are the principal public buildings, though several more are worth notice. La Rochelle is

the cap. of the 12th military division of France, which comprises the dcp. Charente-Inférieure, Deux Sèvres, and Vendée; the seat of a bishop, of courts of primary jurisdiction and commerce, of a royal academy of arts and sciences, &c., and the residence of several foreign consuls. It has a seminary and communal college, schools of navigation and design, a public library of 20,000 vols., botanic garden, &c.; several prisons, a mint, and a royal arsenal and foundry. Its trade is extensive, not only in wines and brandies, but in wood, iron, salt, cheese, butter, oil, sardines, and colonial produce.

La Rochelle appears to owe its origin to a castle constructed here to check the incursions of the Normans. It was for some time in the possession of the English, from whom it was taken by the French in 1221. During the religious wars, and especially after the massacre of St. Bartholomew, it was a stronghold of the Protestants. It was invested by the Catholic forces in 1572, and withstood a long siege, terminated by a treaty. "The numerous infractions of that treaty in the reign of Louis XIII., and under the ministry of Richelieu, led to a second siege which commenced in August, 1627, and which was as violent, and longer and more decisive than the former. The king, the Duke of Orleans, Marshal Bassompierre, and all the most renowned generals of the time, were present at the siege. The circumvallation extended for 3 leagues round the town; but the sea being open, English vessels poured in provisions and ammunition. After 6 months of heroic resistance, the famous engineer, Métézeau, was directed to bar the entrance of the harbour by an immense dyke, extending 1,500 metres into the sea, and of which the remains are still visible at low water. The result was soon fatally apparent. Famine quickly decimated the ranks of the besieged; and after a siege of 14 months and 18 days, La Rochelle was compelled to capitulate. Richelieu made a triumphal entry into the city; the fortifications were demolished, and the Protestants deprived of their last place of refuge." (*Ports and Arsenals of France; Guide du Voyageur, &c.; Dict. Geog.*)

ROCHESTER, a city, parl. and mun. bor., and market-town of England, ro. Kent, lathe Aylesford, at the W. end of and adjoining Chatham, on the S. bank of the Medway, crossed here by a handsome stone bridge of 11 arches, 25 m. W. by N. Canterbury, and 28 m. E. by S. London. Pop. of parl. bor. (which includes with the old bor. additional portions of the par. of Stroud), in 1831, 124,584. The bridge over the Medway runs the town with Stroud, on the opposite bank of the river; so that the three towns of Chatham, Rochester, and Stroud form, as it were, a continuous street, upwards of 2 m. in length, along the road from London to Dover. The houses in Rochester generally have a somewhat antiquated appearance; and among them are several built chiefly of timber, with projecting gables and stories. The town is partially paved, and lighted with gas. Fortifications were erected for its protection in 1802; but Fort Pitt is now used as a military hospital, and Fort Clarence has become a lunatic asylum for soldiers. The town-hall, a spacious brick edifice, fronted by Doric columns, is open underneath, and above is a large hall with several portraits of public characters; at the back is a small bor. gaol. On the site of the former guildhall is the clock-house, a neat building erected in 1796, at the expense of the celebrated admiral Sir Cloudesley Shovel. A theatre is occasionally opened; there are also assembly rooms and baths, and a record room at the end of the bridge. At the S.W. angle of the town, rising abruptly from the river, is the castle, anciently a strong fortress, but which has, for a lengthened period, been in a state of decay. The walls, which are of Kentish ragstone, enclose a quadrangular area of nearly 300 sq. ft., and, with their towers, are now in ruins. The walls of the keep, however, at the S.E. angle of the court, are in good preservation: it rises about 104 ft. from the ground, and has turrets at the angles rising 12 ft. above the battlements of the building. "The style of the whole building is Norman, and it presents a fine specimen of the modes adopted at the date of its erection to enable a very small number within the castle successfully to resist a much greater number of besiegers; for which purpose, indeed, the access, the various successive gates, and other defences, are admirably calculated. The masonry in the interior is very good, especially that of the well, which is in one of the walls, and was accessible from several floors of the castle." (*Rickman's Archæ.*, p. 187.)

A little E. of the castle is the cathedral, originally founded by Ethelbert, about A. D. 600; but the present building was principally erected in the 12th century, from the plans of Bishop Gundulph, one of the first church architects of his day. It is a cruciform structure, with a central tower, of modern erection, rising from the intersection of the nave and transept, and another, now unroofed, called Gundulph's Tower, on the N. side, close to the E. transept. According to Britton, the dimensions of the church are as follows: total inside

length, 306 ft., of which 156 ft. belong to the choir; breadth of nave and aisles, 66 ft.; length of the great and small transepts, 122 ft. and 90 ft. respectively; extent of W. front, 81 ft.

"The exterior appearance of this cathedral is not very imposing, and the exterior walls of the nave are either much decayed or covered by modern repairs. The other parts of the church are surrounded by buildings, so that little more than one portion can be seen at a time. The W. front is a fine specimen of Norman enrichment, but has a very large inserted perpendicular W. window. The nave has Norman piers and arches, except those next the cross, which, with most of the E. portions of the church, are early English. There are other Norman portions on the other side, which appear to be the remains of the cloisters and other monastic adjuncts. The crypt is very spacious, extending under the whole choir; its character is early English; but a portion under the N. aisle may be considered almost Norman. There are a few monuments; but they are more remarkable for singularity than beauty. The whole cathedral, except the nave and S. aisle of the chancel, is adorned with early English groining, and, as at Canterbury, the floor of the choir is considerably raised above that of the nave." (*Britton, quoted in Rickman's Arch.*, p. 184.)

The interior has very recently been repaired in excellent taste, and Rochester cathedral is one of the best specimens of the early English style in the kingdom. The ecclesiastical corporation comprises a dean and 6 prebendaries, who divided among them, in 1834, a net revenue of 5,106*l.*, and have the patronage of 30 benefices; there are, also, 4 minor canons. The sec. of Rochester was worth, at an average of three years ending with 1831, only 1,460*l.* a year; but it either has been or is to be increased to 4,000*l.* a year. The town has two par. churches; one of which, St. Margaret's, is of very mixed architecture, and the other, St. Nicholas, in the perpendicular style; the living of the former is in the gift of the dean and chapter, and of the latter in that of the bishop. The Wesleyan Methodists, Independents, Unitarians, and the Society of Friends, have places of worship; and the Sunday-schools within the bor. are attended by above 600 children. A grammar-school, founded in 1542, having six exhibitions at Oxford and Cambridge, is supported by the dean and chapter; besides which there is an endowed mathematical school, established in 1701. Two national schools give instruction to about 500 children; and there are 2 or 3 almshouses, with smaller money-charities.

"Rochester, like Chatham, was in a great degree dependent on the expenditure produced by the naval and military establishments at Chatham during the war, and the reduction of that expenditure has been severely felt. The greater part of the pop. consists of retail tradespeople. There is no manufactory in or near the town; but a considerable quantity of coal and other articles is imported for the supply of the country inward as far as Tunbridge; and there is a large export trade in hops." (*Municipal Report*.)

The gross customs duty received here in 1840 amounted to 52,426*l.*, being nearly double the amount received in the preceding year; by far the largest portion of this sum is, however, derived from the trade of Chatham. The town is said, in the *Municipal Boundary Report*, to be declining in prosperity; "the poor-rates have increased; many of the houses are uninhabited, and there is less expenditure and luxury among the upper classes than in former times."

The bor. of Rochester, first incorporated in the reign of Henry II., is divided, under the Municipal Reform Act, into three wards, and is governed by a mayor, five aldermen, and 18 councillors. Corporation revenue, in 1830, 3,427*l.* It has a commission of the peace under a recorder, and petty sessions are held twice a week; besides which, there is a court for the recovery of small debts, with two or three other minor local courts.

Rochester has returned 2 mems. to the H. of C. since 26 Edward I., the right of election down to the Reform Act being in the freemen not receiving alms. The electoral limits were enlarged, as above mentioned, by the Boundary Act. Reg. electors in 1839-40, 1,124. Corn markets on Tuesday, and for provisions generally on Friday; fairs, fessed.

The only event of any importance connected with the modern history of Rochester is the descent made by the Dutch in 1667. See CHATHAM.

**ROCKY MOUNTAINS**, a very extensive mountain system of N. America. (See Vol. I. 78.)

**ROCTOY**, a town of France, dep. Ardennes, cap. arrond., in an extensive plain, near the Belgian frontier, 15 m. N. by W. Mézières. Pop., in 1836, 3,682. It is surrounded by a rampart strengthened with bastions and demi-bastions; is the seat of a tribunal of original jurisdiction, and has a military hospital, a society of agriculture, and some hardware manufactures.

Roctoy having been besieged by a Spanish army in 1643, the Prince of Condé, then Duke d'Enghien, and

only 21 years of age, advanced to its relief, with an army inferior in numbers and in the quality of the troops. But the extraordinary talent and brilliant courage of the Prince more than made up for his inexperience and the inferiority of his force. The French gained a complete victory (19th May 1643). The Spanish infantry, which had hitherto been invincible, was cut to pieces; and the French arms acquired a superiority which they preserved for more than sixty years, or till the battle of Blenheim. The humanity of Condé, henceforth called "le Grand," was as conspicuous on this occasion as his talents and his courage. (*Voltaire, Siècle de Louis XIV.*, cap. 3.)

**ROMANS**, a town of France, dep. Drôme, in a fine plain, on the Isère, by which it is separated from the Bourg-de-Péage, on the opposite side of the river, the communication between the two being maintained by a fine bridge, 12 m. N.E. Valence, and 35 m. W.S.W. Grenoble. Pop., including Bourg-de-Péage, in 1836, 11,345. Romans, which is surrounded by an old wall flanked with towers, is said by Hugo to be a handsome well-built town, and has some fine promenades. The parish church is the only remaining portion of the famous monastery founded here by St. Bernard, in 837, to which the town owes its origin. Romans has a theatre, a *pensionnat*, or school for the gratuitous education of young ladies, a tribunal of commerce, &c., with manufactures of silk and woollen stuffs, hosiery, gloves, &c. It has also an active trade in the produce of the department, including silk, wool, wine, oil, truffes, &c., which is much facilitated by the junction of the Isère with the Rhone. (*Hugo, art. Drôme; Dict. Géographique*.)

The famous Baron Lally, who, having distinguished himself at the battle of Fontenoy, was subsequently sent as commander-in-chief of the French forces to India, was a native of Romans, where he first saw the light, on the 15th of January, 1702. Being of a violent, irritable temper, and involved in the greatest difficulties, Lally got embroiled with every body. After the fall of Pondicherry, in 1761, he returned to France, where, pursued by the hatreds he had excited in India, he was, after a lengthened imprisonment, tried by the parliament of Paris, and condemned to be decapitated. His unjust sentence was carried into effect on the 9th May, 1766. (See for a calm, dispassionate statement of the case of Lally, the *Siècle de Louis XIV.*, by Voltaire, cap. 34.; the article on Lally in the *Biographie Universelle* is by a partizan.)

**ROME**, the most celebrated of European cities (*Lux orbis terrarum, et arx omnium gentium*, Cicero, Catil. 4, cap. 6.), famous alike in ancient and modern history; first, as the metropolis of the most powerful nation of antiquity, and, afterwards, as the ecclesiastical capital of Christendom, and the residence of the pope, on both sides the Tiber, but principally on its E. bank, about 16 m. from its mouth, 41° 53' 54" N., long. 12° 29' 47" E. Florence; lat. 41° 53' 54" N., long. 12° 29' 47" E. The pop., which in 1837 amounted to 156,552, has decreased, in 1838, to 148,903, owing to the influence of cholera and other causes. (*Scrivatori Statistica*, 1824.)

Modern Rome, which interests alike by its classical associations, its antiquities, its churches, and its works of art, is surrounded by walls (mostly occupying the site of those constructed by the emperor Anurian) in the form of an irregular polygon, about 14 m. in circ., the longest diameter being from the Porta del Popolo, N.W., to the Porta S. Sebastiano, S.E., about 3 m. in length. The city has 16 gates, three of four of which, however, have been walled up; of these, the principal are the Porta del Popolo, on the road to Florence and Ancona; the Porta Pia, on the road to Tivoli; the Porta Maggiore, leading to Palestrina; and the Porta S. Giovanni, leading S.E. to Albano and Naples. But not more than a third part of the enclosed area is covered with buildings, the rest consisting of ruins, gardens, and fields, with some churches, convents, and other scattered habitations. The older part of the ancient city, where the principal ruins are found, is about  $\frac{1}{2}$  m. S. from the modern city; but it is needless to add, that the former, under the emperors, was much more extensive than the modern town, inasmuch as, besides the space within the walls, it had very extensive suburbs. The ground occupied by the city is mostly low, being only from 35 to 45 ft. above the level of the sea. Exclusive, however, of the low grounds, several low hills, or eminences, are comprised within the limits of the city; and in consequence of ancient Rome being popularly said to stand upon seven hills, it was sometimes called *arz septuaginta*. The following measurements exhibit the height of the hills now referred to:—

	Eng. Ft.		Eng. Ft.
Capitol, at the W. angle of the Tarpeian rock	151	Equiline hill	218
Do. at N. end	160	Quirinal hill at the Pope's palace	158
Palatine hill	170	Ancient pavement of the Forum	39
Aventine	146	Do. do. of Trajan's Forum	43
Celsian	168		
Pincian	218		

The Palatine hill, the nucleus of the city, comprises a space of about 40 acres, and appears originally to have

had precipitous edges; but excepting this, and the Capitoline hill, comprising about 16 acres, the rest have an easy ascent, and are, in fact, mere eminences. No doubt, however, owing to the accumulation of rubbish in the valleys, and the lowering of the hills by rains, the digging of foundations, &c., the elevations of the latter must have been much more striking in antiquity than at present. The seven hills, properly so called, on the E. bank of the Tiber, were included in the city so early as the reign of Servius Tullius; but at a later period the *Mons Pinetius* (*Pinian hill*), to the N.E., and the *Mons Vaticanus*, and part of the *Mons Janiculus*, on the W. side of the Tiber, were enclosed within the city walls. The hills consist chiefly of volcanic tuffa intermingled with thin beds of travertine, making good building stone, as well as of silicious sand, and a few layers of pumice and scoria; while the low ground which has been raised several feet above its ancient level, apparently by the deposits left by frequent floods, is covered with calcareous sands, marls, clays, or silt.

Rome is divided into 14 districts, or *Rioni*, 11 of which are in the portion now inhabited; but the more popular, and for general purposes more intelligible, distribution of the city is into a central portion on the low ground E. of the Tiber, the ancient *Campus Martius*, a division to the N. of the latter, on the *Quirinal*, *Quirinal*, and *Viminal* hills, and a third division on the W. side of the river. The first of these quarters is the chief seat of bustle and trade; it is intersected by the *Corso*, and has some other good streets. On the N.W. side of the Capitol is the meanest and dirtiest part of the city, chiefly inhabited by Jews, and many decrees worse than Monmouth Street or Houndsditch in London. The upper part of the city on the *Pinian* and *Quirinal* hills is less densely covered with houses, and chiefly comprises palaces and villas, churches, convents, and gardens; it is intersected near the pope's palace on the *Quirinal* hill by two fine avenues, crossing each other at right angles, and having four fountains at the point of intersection. Between the *Quirinal* and *Esquiline* hills are several streets inhabited by the lower orders, and extending to the *Via Vecchia*, a rather broad thoroughfare leading to the Roman forum. Beyond N., E., and S., are gardens and fields, studded here and there with villas, churches, and ruins, including the baths of Diocletian and Titus, and the Colosseum. That portion of Rome which lies on the right or W. bank of the river, consists of two parts: the Vatican, northward, in which are comprised the castle of St. Angelo and St. Peter's, the glory not merely of the eternal city but of Christendom; and the *Trastevere* or ancient *Janiculum*, southward, which has the street, called from its length (nearly 1 m.), *Via Longara*, a botanic garden, and the *Villa Corsini*.

Rome, meaning the modern city (as we shall afterwards notice the ruins), is dull, dirty, and, with a few striking exceptions, meanly built. "Indeed," says Mr. Forsyth, "whenever you take your attention will be divided between magnificence and filth." (*Italy*, p. 124.) Most of the streets are narrow, crooked, and badly lighted with melancholy-looking *verreheres*, or else by lamps hung over the statues of the Virgin, which seem to be indispensable to all considerable houses. From this general censure, however, must be excepted the *Corso*, already alluded to, extending, in a straight line, more than a mile, from the *Porta del Popolo* to the foot of the Capitoline hill, and which, in the greater part of its extent, is 50 ft. wide, with *trotoirs* at the sides, which, however, are so narrow, and so often encroached on, as to be, in fact, of little service: it is lined with many handsome palaces, some of which may vie in grandeur with the noblest in Italy. Two other streets, the *Strada di Ripetta* and the *Strada del Babuino*, diverging from the open space before his holiness' palace, are long, straight, and tolerably wide. These three streets are crossed by a line connecting the bridge of St. Angelo with the *Pinian* hill, and forming one of the most bustling thoroughfares in Rome. With these exceptions, however, the streets are mean looking, and the houses have a shabby, dilapidated appearance, wholly unworthy so celebrated a city. The private houses are usually from three to five stories in height, built of tuffa or brick, and plastered over. With these are intermixed many huge old buildings (*palazzi*), contrasting most strikingly with the surrounding slight, mean tenements, by their bulk, height, and air of antique grandeur. In consequence, however, of the decay of the families to which they belong, many of them are now turned into ecclesiastical colleges or hotels, or let to foreign ambassadors or noblemen; and in those which have escaped this fate, the lower story is sometimes let for shops, and sometimes retained for stables, coach-houses, and servants' rooms. The second story is generally a picture gallery, consisting of a suite of rooms all opening into each other, and richly adorned with marble and painted ceilings. The owner of the building occupies the third story, or, if there be a fourth, the third and fourth,

throwing open his galleries to artists and all who choose to give two or three *pauli* to his servants. "The great size of many of the palaces, and the abundance as well as bold projection of the ornaments, produce, indeed, a general impression of magnificence; but if we can get space enough in front to examine the parts distinctly, we often turn away dissatisfied with the absurdity and disproportion they exhibit. Generally speaking, these buildings exhibit great simplicity of design, usually presenting to the street one simple continued line of surface, rarely decorated either with columns or pilasters. Ornaments round the windows are never omitted, but are generally too large, and in bad taste. The stories are generally divided by horizontal mouldings along the front, and great space is left between the ranges of windows. The whole is crowned by a large and rich cornice." Such, according to Woods (*Letters of an Architect*, i. 438.), is the general external appearance of the best among these *palazzi*, of which Rome comprises in all upwards of 300, many, of course, being very inferior both in size and architectural beauty.

Rome has not a single square; and of the piazzas or paved areas, the *Piazza del Popolo*, the *Piazza Navona*, and that in front of St. Peter's, are the only three that deserve notice. They are adorned with obelisks, statues, and fountains; but the first and last being at the extremities of the town, are lost as places for walking in or meeting friends. The fine promenade on the *Pinian* hill, E. of the *Piazza del Popolo*, is planted with trees, and commands an extensive view; but it is of small extent, and is shut at sunset. Without the walls, however, on the N.E. side of the city, is the *Villa Borghese*, the grounds of which, nearly 3 m. in circ., planted after the fashion of an English park, and ornamented with statues, fountains, &c., are open to the public, and constitute the favourite resort of all classes, whether on foot or in carriages. Rome, like London and Naples, is destitute of promenades sheltered from the weather, and well lighted at night, a convenience which Paris has in perfection; and another defect is the absence of elegant shops, cafés, and restaurants, that forms so striking a feature in the French capital. In the number and grandeur of its public fountains, however, and in the quality of its water, Rome surpasses every city. Almost every public piazza has its fountain, and almost every fountain has some peculiarity in its size, form, or situation, to attract attention. The finest of these, and perhaps the most magnificent in the world, is the fountain of Trevi, which has a white marble basin in a vast inclosure paved with large slabs of the same material. It represents a palace of Neptune placed on a rough, broken rock, and adorned with Corinthian pillars; in the centre of the building, under a rich arch, stands Neptune in his car drawn by sea-horses; and water runs down in torrents from the rock, making, as it were, a sea at its base. In the summer the waters overflow their usual limits, fill the whole marble basin, and rise to a level with the square, which after sunset is a favourite lounge of the inhabitants. The fountain in the *Piazza Navona* has an obelisk in its centre, surrounded by Tritons and Naiads, seated on rocks, and spouting forth water in magnificent *jets d'eau*. The *Fontana Felice*, on the *Viminal* hill, discharges itself under an Ionic arcade through a rock, which a figure of Moses is striking with his rod. Other figures surround the prophet, and below are four lions hanging over the basin, as if eager to slake their thirst. These and the other fountains of the city are supplied from three only out of the numerous aqueducts which attest the luxuriance of the ancient city; and yet such is the quantity they convey, and so pure are the sources whence it is derived, that no city can boast of such a profusion of clear and salubrious water, poured forth spontaneously in *jets d'eau* without the aid of expensive machinery, as at Versailles, St. Cloud, and Chauxworth. But, after all, water at Rome would seem to be provided rather for show than for use. Forsyth says that when he visited the city, the fountain of Trevi was inaccessible from filth! (P. 124.) There is, generally, in fact, a great deficiency of cleanliness, and a limited consumption of water, in all cities supplied by fountains, and wherever, indeed, it is not conveyed by pipes into private houses, and placed, as it were, under the hand of the occupiers.

The great glory of modern Rome consists in the magnificence of her churches, or rather in the matchless structure of St. Peter's.

"— then, of temples old, or altars new,  
 Stand alone — with nothing like to these —  
 Worshippers of God, the holy and the true.  
 Since Zion's desolation, when that He  
 Forsook his former city, what could be,  
 Of earthly structures in his honour paid,  
 Of a sublimer aspect? Majesty,  
 Power, glory, strength, and beauty, all are said  
 In this tender ark of worship undet'd."

This magnificent fabric occupies the site of an older structure raised by Constantine the Great. Pope Julius II. laid the first stone of the new building on the 18th

of April, 1506, having selected the famous Bramante for his architect. But the latter dying in 1514, other architects were employed to carry on the work, till, in 1546, it was fortunately committed to the illustrious Michael Angelo, who nearly completed the dome, and a large portion of the building. After Michael Angelo's death, in 1563, the work was prosecuted under other architects, till its completion in 1614. The colonnade by Bernini was added in 1655-67. "St. Peter's," says Mr. Maclaren, "unlike many other celebrated edifices, surpasses expectation. The front is too low, and has some other defects; but the vestibule is admirable, and the interior is solemn, grand, rich, harmonious, beyond any thing that I had conceived. It is unquestionably the noblest building ever reared by human hands, the only work of art, as Madame de Staël observes, which produces an impression of grandeur akin to that which we receive from the works of nature. So vast are its dimensions, that colossal statues and monumental groups of figures are stowed away in its aisles and recesses without impairing the unity and simplicity of the plan, as they do in the St. Paul's of London. The interior of the dome (which is 140 ft. in diameter), as well as a considerable portion of the other surface, is covered with pictures, all of which, however, are, with one exception, of mosaic. The eye forms most erroneous estimates respecting the height of the different parts of St. Peter's, and most visitors are on this account disappointed by first impressions. The splendid bronze *Baldachino*, or canopy, immediately under the dome and over the high altar, close to the supposed tomb of St. Peter, is about 120 ft. high, though in appearance only 30. The chair of St. Peter, too, behind the high altar, appears from a distance as if raised only a few steps from the ground, whereas it is placed on an elevation 70 ft. above the floor. The pen seen in the hand of the prophet in one of the lower compartments of the dome might be supposed to be 12 or 18 inches in length, whereas its real length is 6 ft. The visitor has no adequate conception of the magnitude of the dome until he arrives at the roof (the passages of which are so contrived that one may ascend on horseback), when he finds it rising before him like a mountain. The view from the external gallery round the lantern is exceedingly fine and extensive, embracing the Campagna from the sea to the Apennines; besides which, on looking at the roof of the church, its 10 cupolas give it somewhat the appearance of a town, so astonishing is its size. The depth of the floor, as seen from the interior of the lantern, appears lessened from 400 ft. to 100 ft.; but it may be discovered that the eye is deceived, as the promenade below appear only as tiny infants. When we stand in the interior gallery of the epola corresponding with the whispering gallery of St. Paul's in London, and look at the mosaics \* on the concave, we are surprised to find them composed of square bits of coloured stone, half an inch broad, clumsily put together, often with intervals between them; yet, seen from below, they might pass for oil paintings. We find a pictured face of an angel close to us nearly a yard broad; but, when we look across the gallery, a similar face, and really of equal proportions, seems to be of the natural size. The lights in this splendid edifice are finely tempered, well distributed, and kept in admirable order. The profusion, also, of rare and beautiful marble, introduced in every part, together with the gilded roof, the statues, monuments, mosaic ceilings and pictures, forms a display of brilliant and unexampled magnificence, which requires weeks and almost years to contemplate." (*Maclaren*, 177, 178.; *Burton*, li. 131-140.)

The form of the church, as designed by Bramante, was that of a Latin cross; but this was changed by Michael Angelo to a Greek cross, which has the advantage of exhibiting the whole structure at one coup-d'œil. Unfortunately, however, the plans of the latter were afterwards departed from by Carlo Maderno. In the music, and, perhaps, unjust language of Forsyth, "a wretched plasterer came down from Como to break the sacred unity of the master-idea, and him we must execrate for the Latin cross, the aisles, the mean-looking attics, and the low, ugly front." (*Italy*, p. 179.) The latter, however, is 396 ft. in length, and 159 ft. in height; and with whatever defects it and other parts of the structure may be charged, still there can be no question that "St. Peter's is beyond all comparison the most magnificent temple ever raised by mortal hands to the worship of the Supreme Being. It is a spectacle that never tires; you may visit it every day, and always find something new to admire. Then its temperature is delightful—as pleasantly cool in summer, as it is comfortably warm in winter. The fact is, that the walls are so thick that

the air is not affected by that without, so that, like a well-built cellar, it enjoys an equality of temperature all the year round." (*Matthew's Diary of an Invalid*, p. 86.)

Of the many august ceremonies performed in this magnificent temple, the most imposing is that of the *Tenebræ*, on the night of Good Friday, when the hundred lamps that burn over the tomb of St. Peter are extinguished, and a stupendous cross of light appears suspended from the dome between the altar and the nave, shedding over the whole edifice a soft lustre, delightful to the eye, and forming, with the objects animate and inanimate on which it sheds its light, a scene singularly striking, by a happy mixture of tranquillity and animation, of darkness and light, of simplicity and majesty; a scene, indeed, far more sublime and more deeply impressive than the illumination of the external dome on the night of St. Peter's day (June 29.). (*Eustace*, li. 164-192.)

The dimensions of St. Peter's have been variously given by different authorities, and perhaps exactness is not attainable; but the following measurements are adopted by Gwilt, and may, perhaps, be depended on. The dimensions of St. Paul's, of Milan cathedral, and St. Sophia's at Constantinople, are from Woods, Ens-tace, and Dallaway.

Dimensions.	St. Peter's.	St. Paul's.	Milan Cath.	St. Sophia.
	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>
Extreme inside length	607	510	493	269
Length of transepts	445	282	284	243
Height from cross to floor	458	362	356	
Width of nave	107	-	177	
Total area including outside walls	227,000	81,000		

Comparing the Roman church with the British cathedral, which, though *longo intervallo*, may well claim to be the second in the world, the floor of St. Peter's covers nearly 5 English acres (nearly the size of the Colosseum), while that of St. Paul's occupies only 2 acres; and the actual bulk or entire contents of the former, as compared to the latter, are as 4 to 1. And taking into account the number and splendour of the decorations of St. Peter's, we need not wonder that it is supposed to have cost, with its monuments, gilding, and embellishments, from 12 to 16 millions sterling, whereas the cost of St. Paul's did not exceed 750,000*l.* In the interior of these two noble buildings, the difference is scarcely less striking than between one of our old barn-like meeting-houses and the most elegant of our modern episcopal churches; but, as regards the exterior, all admit, that in symmetry, purity of design, and true architectural beauty, the English is superior to the Roman temple." (*Maclaren's Notes*, 177-180.)

It is to be regretted that the situation of this cathedral of Christendom has been remarkably ill chosen. "No building," says Mr. Woods, "of great consequence was ever so badly placed. There is no distant point of view in which this church gives the impression of great magnificence, or from which it has the appearance of being such an immense building as it really is. This is owing to its situation in a hollow between the Janiculate and Vatican hills, which are connected by a neck behind it; so that on three sides it is surrounded by slopes rising almost immediately from it to about the height of the nave; and even in front, notwithstanding the large space before it, the building seems encumbered with houses, which occupy a slip extending towards the river. From the bridge of St. Angelo little is seen but the dome itself; and even when a glimpse is at length caught of its front and of the circular colonnade by which it is approached, it appears much nearer than it is; and the magnificent avenue, the *chef-d'œuvre* of Bernini, seems a finer object than the edifice to which it leads." (*Woods's Letters of an Architect*, 1. 308.) This colonnade, which consists of two opposite semi-ellipses, forming each a broad covered passage leading to the front of the cathedral, comprises 256 Doric columns of travertine 40 ft. in height, arranged in four rows, and surmounted by 192 statues of saints. In the central space, between the colonnades, flanked by two fountains, is an obelisk, consisting of a single block of granite about 80 ft. in height, surmounted by a cross, the total altitude being 136 ft.: it was brought from Egypt to Rome by Caligula, and formerly stood in the circus of Nero, having been removed to its present situation by Pope Sixtus V.

"All churches," says Forsyth, even of the patriarchal class (those called *basilicæ*), stand at an awful distance from the majesty of St. Peter's." That of St. John Lateran, however (at the S.E. extremity of Rome, far from the modern buildings, and upwards of 1 m. from the Colosseum), is entitled to the second place, and in former times was superior to St. Peter's. The chapter of the Lateran even now takes precedence, and the popes are always crowned here. This church was

\* The mosaic work is made not far from the church, in a building, part of which is used for the office of the Inquisition. The pieces employed in forming these pictures are square pieces of a vitreous substance, called *smalta*, composed of glass, lead, and tin; and there are about 15,000 different shades of colour. Marbles were first used, but the glare from their polished surface was found to destroy the effect of the picture (*Burton*, li. 140.)

built on the site of an older structure in the beginning of the 14th century. Its front, consisting of a magnificent colonnade, is certainly impressive, notwithstanding its numerous faults. There are 5 entrances; that in the centre having a bronze door taken from the Temple of Peace in the Forum; and on the top of the façade are 15 statues of our Saviour, and various saints. The interior is divided into 5 aisles, and in the pillars of the nave are colossal statues of the Twelve Apostles: this church comprises also a chapel of the Corsini family, in the form of a Greek cross with a central dome, gorgeously decorated with marbles, gilding, and pictures, and said to be one of the richest in Rome. Adjoining this church is a palace, which, after having been for many centuries the residence of the popes, was converted, in 1833, into an hospital for the poor; and at no great distance is the Scala Santa, a building celebrated for containing a staircase of 28 white marble steps, alleged to have belonged to the palace of Pilate at Jerusalem, and which orthodox Roman Catholics esteem a meritorious act of piety to ascend on their knees; indeed, so great is the number of the devotees, that, with a view to the preservation of the steps, they have been covered with planks of wood. At the top is a painting of our Saviour at the age of twelve, begun by St. Luke, but finished by miraculous agency! (*Burton's Rome*, ii. 177.) The church of St. Paul's, outside the walls, one of the handsomest in Rome, and in many respects superior to that of St. John Lateran, was burnt down in 1823, and is now in course, though very slowly, of being rebuilt. The basilica of St. Maria Maggiore is a very fine and large edifice; but the profusion of its ornaments takes from the unity of the main design, and the narrow brick tower, rising above the whole, is in very bad taste. The interior has three aisles, the central one being lined by 36 Ionic pillars of white marble, which have a very beautiful effect: they are undoubtedly ancient, and may have belonged to the temple of Juno Lucina, that formerly stood here. A chapel in this church, belonging to the Borghese family, deserves notice for the richness of its decorations. The church of St. Pietro in vincolo, originally erected about anno 420, but since wholly rebuilt, presents to the eye a noble hall, supported by 20 Doric columns of Parian marble, opened on all sides, adorned with some beautiful tombs, and terminating in a semi-circle behind the marble. But it is principally remarkable for its containing the tomb of Julius II., illustrated by the noble statue of Moses by Michael Angelo.\* The other churches are so numerous that it would be an almost endless task to describe them: many of them command admiration from the splendour of their decorations and the articles of *virtù* which they contain; but perhaps the finest and most worthy of attention from the stranger are those of *Santa Agnese*, in the Piazza Navona, *San Carlo al Corso*, *San Ignazio*, the *Santi Apostoli*, the *Chiesa di Gesù*, and the *Chiesa Nuova*; all of which are abundantly rich in marbles, gilding, &c., though not always disposed in the best taste.

The Vatican, the most ancient and by far the most celebrated of the papal palaces, is a mass of buildings erected at various times by different popes, said to cover a space about 1,200 ft. in length by 1,000 ft. in breadth, and to comprise above 4,000 apartments. "The effect," however, says Burton, "is any thing but pleasing: from no point of view does it present any extent of front or magnificence of design; while its proximity to St. Peter's interferes most unfortunately with the view of that building." (ii. 255.) The interior consists of a suite of galleries of small breadth, which, if placed in a continuous line, would extend two miles in length. It contains a countless multitude of inscriptions, statues, busts, reliefs, urns, sarcophagi, and vases, to say nothing of its literary and numismatic treasures, its books, MSS., drawings, the number of which the visitor can only guess at by counting the presses that conceal them from his sight. Taken altogether, it is by far the richest museum in Europe, and the precious objects it contains are magnificently lodged; for when the church was rich, she patronised the arts liberally both by buying and building, and even now the posthumous benevolence of popes and cardinals occasionally expends itself in erecting a new gallery or embellishing an old one. (*MacLaren*, p. 174.) The collection of sculptures is beyond all comparison the largest and most valuable in Europe, comprising, among other great works, the unequalled group of Laocoon and his sons, which even Michael Angelo despaired of being able to restore, the celebrated Apollo Belvedere (found at Antium, near the close of the 15th century), the well-known group of the Nile and his offspring, the Belvedere Torso of Hercules and Hebe, a noble statue of Adonis, and another of Marcellus, with an excellent bust of Pius VII. by Canova. The library of the Vatican is alleged to comprise about 80,000 printed books and 35,000 MSS.; but, in point of fact, its literary riches are unknown, the

catalogues having never been completed. There is reason, however, to think that its collection of ecclesiastical MSS. immeasurably surpasses any other in Europe; but it is very deficient in works of modern literature; and its value can be fully appreciated only by the churchman and the antiquary. The picture-gallery, which is by no means extensive, is, as compared with the collections now noticed, quite of modern creation. The frescoes of Raphael and Michael Angelo, indeed, have long adorned the walls of the Vatican; and the works of the former occupy three open galleries, called the *Loggia di Raffaello*, which go round three sides of a square court; but the oil-paintings have been collected wholly by Pius VI. and subsequent pontiffs, including the present pope, to whom we are indebted for the completion of the gallery. It comprises several of the *grand* productions of the Italian schools, including among others the "Transfiguration," by Raphael, usually considered his *chef-d'œuvre*, and the noblest work of art in the world; the "Madonna di Foligno" by the same master, the "Communion of St. Girolamo" by Dominichino, the "Martyrdom of St. Sebastian," perhaps Titian's very best work, the "Madonna of Monte Luca" by Giulio Romano, &c. The Vatican has two chapels, the most celebrated of which, known as the Sistine Chapel, was built by order of pope Sixtus IV.; its walls and ceiling were covered during the pontificates of Julius II. and Paul III. with frescoes from the masterly hand of Michael Angelo. Behind the altar is the magnificent painting of the Last Judgment, the theme of so much eulogy and so much criticism; and on the ceiling are represented the Creation, the Deluge, and other scriptural subjects, the windows being adorned, somewhat inconsistently, with full-length figures of Prophets and Sibyls. It is a very large and lofty oblong room, with scarcely any of the furniture of a chapel: it is used on few occasions, except during the Holy week, when the *Tenebræ* and the "overwhelming" *Miserere* of Allegri are sung by the papal choir. In this chapel also the cardinals meet in conclave for the election of a new pope. The *Sala Regia*, a hall of great size and good proportions, connects the above-mentioned chapel with another dedicated to St. Paul, which, like the first, is painted in fresco by Michael Angelo, and used only on great festivals. The Vatican is now seldom inhabited by the pope, except during the grand festival of Easter, the present abode of the pontiffs being on the Quirinal Hill (now called Monte Cavallo, from the two horses on its summit, taken from the baths of Constantine). This palace, which was begun by Paul III., presents two long fronts, plain and unadorned, like those of most of the other palaces, the court within being upwards of 300 ft. in length by 165 ft. in width, three sides being surrounded by porticoes, and the fourth having a double row of arcades surmounted by a clock tower. The grand staircase on the side to the right of the gateway conducts to the papal apartments, the gallery, and the chapel, all of which are on a grand scale, and adorned with fine paintings, especially those by Guido, which ornament a small private chapel. The adjoining gardens are spacious, refreshed by several fountains, and shaded by groves of laurel, pine, ilex, and poplar; but little attention being paid to them, they have a shabby, neglected appearance, made only more apparent by their great size. In front of the palace stands an Egyptian obelisk, flanked on either side by the statues of the horses which, as already stated, give the hill its present name. The Lateran Palace, near the church of St. John Lateran, has three lofty fronts of great extent and simplicity: a few apartments are reserved for the pope, when he comes to perform service at St. John's; but the rest is used as an hospital for 250 orphans.

Among the public buildings of modern Rome, the *Campidoglio*, or modern capitol, deserves notice, as being one of the best architectural works of Michael Angelo. The road to it is by a labyrinth of narrow dirty streets, leading from the Corso to two flights of steps, at the foot of one of which are two basaltic lions. At the top are colossal equestrian statues of Cæsar and Pollox, on a line with which stand several other statues and trophies. Opposite the steps is the senator's palace, the two other sides being occupied by the Palazzo de Conservatori and the Museo Capitolino, the garden of which overhangs the Tarpeian rock.

"———" Gilest goal of treason's race,  
The promontory whence the traitor's leap  
Cured all ambition."

But, owing to the accumulation of soil at the bottom, this leap might now be taken without any very extraordinary risk.

The ancient buildings, to be noticed in the sequel, are nearly all gone; but there are many statues, and one in particular, a bronze equestrian figure of M. Aurelius, occupying the centre of the Piazza del Campidoglio, demands attention, not only on account of its beauty, but its acknowledged antiquity. In fact, quite enough is still furnished both by Nature in the commanding position of

\* The magnificent ode or sonnet of Zappi, inspired by the contemplation of this statue, may be seen, with a spirited translation, in *Roscoe's Life of Leo X.*, iv. 229, 3d edit.: it is also given with a different translation in *Burton's Rome*, ii. 244.

the hill, and by Art in the various architectural embellishments formed principally of ancient materials, to call up in the mind of the classical student those bye-gone days when decrees issued from the capitol fraught with the destinies of a subject world.

"Ages and realms are crowded in this space,  
This mountain, whose obliterated plan  
The pyramid of empires pinnacled.  
Hither the kingdoms and the nations came  
In supplicating crowds to learn their doom."  
Childe Harold.

The Capitoline Museum comprises a few and not very valuable paintings by the old masters; but on the other hand, the collection of statues and marbles includes some of the most precious relics of ancient art, among which may be mentioned the "Dying Gladiator," the misnamed "Antinous," and the splendid group of "Cupid and Psyche." (*Conder's Italy*, iii. 347; *Maclaren*, p. 60—162.) The only other government buildings requiring notice are the new post-office, in the Piazza Colonna, near the Corso, and the castle or citadel of St. Angelo: the central tower of the latter was built by Hadrian (thence called *Moles Hadriani*) for a mausoleum, and was unquestionably the most superb sepulchral monument ever raised in Rome. It began to be used as a fortress when the city was attacked by the Goths: its defences were strengthened by various pontiffs, the last and greatest improvement having been made by Urban VIII., who completed the *fossé* and bastions towards the meadows. It is now used as a state prison and house of correction, but is better known to foreigners as the place whence are discharged the magnificent fireworks of the Easter festival.

Rome, as previously seen, comprises a great number of palaces, with the general plan of which the reader is already acquainted; but a few deserve more particular notice. The *Colonna* palace, in the square of its own name, fronting the Corso, is entered by a noble painted staircase, leading to a gallery which, in point of size and architecture, is the finest in Rome: the roof of the saloon is supported by polished columns of *giallo antico*, and the ceiling displays the battle of Lepanto, the event of which raised a Colonna to the honours of a Roman triumph. The collection of pictures, however, is about the worst of any in Rome. (*Williams's Letters*, ii. 80.) The *Borghese* palace is also a very splendid building, "remarkable for its extent, its porticoes, its granite columns, and its long suite of apartments, being still more distinguished by the well-supported magnificence that pervades every part, and gives the whole mansion, from the ground-floor to the attic, an appearance of neatness, order, and opulence." These are the words of Eustace; and, according to later writers, this palace is at present equally well kept up. The collection, which, contrary to the usual rule, is on the ground-floor, occupies nine large rooms, and ranks among the first in Rome. The *Doria* palace, in the Corso, has three vast fronts, and comprises a spacious court, surrounded by colonnades: the gallery is particularly rich in paintings of the Italian and other schools, including many landscapes by Gaspar Poussin and Claude; in fact, nowhere else in Rome is there so varied a collection, or one so well suited for the purposes of study. (*Rome in the 19th Century*, iii. 6—14.) The *Borghese* palace, one of the grandest buildings in modern Rome, built from the united designs of Maderno, Bernini, and Borromini, consists of a projecting centre, surmounted by a square lantern and two smaller wings; it comprises, also, besides statues and paintings, a noble library, freely thrown open to the public. The *Farnese* palace, a noble structure, to erect which the Colosseum and the theatre of Marcellus were despoiled of their choicest ornaments, had formerly a magnificent and, in some respects, unrivalled collection of ancient sculpture, paintings, and books. But the king of the Two Sicilies having succeeded to the rich inheritance of this illustrious family, the collection has been carried to Naples. On the ceiling of a gallery belonging to the *Rospigliosi* palace, on the Monte Cavallo, is the famous Aurora, the *chef-d'œuvre* of Guido, which the beautiful engraving by Morghen must have made familiar to many of our readers. The *Bracciano* and *Corvini* palaces, and others too numerous to be mentioned, deserve attention for their architectural merits and the treasures of art with which they are furnished.

Rome, besides its palaces, has numerous *villas*, both within and without the present walls, built chiefly by a few cardinals, whose riches, taste, learning, and leisure, conspired to create these beautiful retreats. The *Villa Borghese* has already been mentioned as including the modern Roman grounds that form the favourite resort of the modern Romans, and the mansion, with its collection of pictures and marbles, is equally beautiful. The *Villa Albani*, outside the Porta Salara, is of exquisite design, planned by Cardinal Albani, one of the profoundest antiquaries of modern times: it was here that, under his patronage, Winkelmann pursued those

Vol. II.

studies that enabled him to write his history of ancient art. The collection, once far more extensive, is said to be extremely choice; in fact, it does not contain a single mediocre piece. The *villas* Aldo-brandini, Pamili, Lanti, and Ludovisi, are all, more or less, adorned with frescoes and ancient statuary; besides being well situated and surrounded with fine gardens. The magnificent Medici villa, on the Pincian hill, is now appropriated to the use of the French Academy.

The Tiber, including its windings, runs for three miles through Rome. The greatest breadth of the stream within the walls is only about 400 ft., and the smallest 200 ft., the average being somewhat less than one third the breadth of the Thames at London Bridge, and considerably less than that of the Clyde at Glasgow. It is deeper, however, than the Clyde, and has certainly a larger volume of water.

"Vorticebus rapidis et multâ fluvius arenâ  
In mare prorumpit." *Virg. Æn. vii. 31.*

It well merits the epithet of *fluvius*, as it is not only discoloured, but loaded with *gelo*, mud beyond almost any other river; and this is not the consequence of accidental floods, for its waters are scarcely ever clear, and hence, no doubt, its ancient name *Albula*. Its banks are low and tame, consisting for the most part of crumbling soil, without quays, and at many places without even protecting walls; and they are not ornamented by a single promenade or decent street. (*Maclaren*, p. 150.) There are only two places where there is a sort of quay, or landing-place, one called *Ripetta*, on the E. bank, above the bridge of St. Angelo, where boats from the inland provinces land wine, provisions, &c., and the other at the S. end of the city, on the opposite bank, called the *Ponte di Lipa Grande*, where sea-borne vessels land their cargoes, and where there is a line of warehouses, and a custom-house. Three bridges cross the river within Rome; that most northward is the Ponte St. Angelo (anc. *Pons Ælius*), built by Hadrian, and restored in its present form by Clement IX.: it is a structure of no great heauty, having a balustrade, on the top of which are several hideous-looking figures of angels. The next, proceeding southward, is the Ponte Sisto (anc. *Pons Janiculensis*), built by either Trajan or Antoninus Pius, and rebuilt by Sixtus IV., in the 15th century. About half a mile lower down is the island of San Bartolomeo, the ancient *Insula Tiberina*, of oblong shape, about 1,000 ft. in length, and 300 ft. in breadth, united with the E. bank by the Ponte San Bartolomeo (anc. *Pons Cestius*), and with the W. bank and the district of Trastevere by the Ponte di quattro Capri, so called from a head of Janus Quadrifrons that formerly stood there; it is the Pons Fabricius of antiquity, and was constructed anno 61, B.C. Within Rome, also, are the remains of three ancient bridges, the principal being the *Pons Triumphalis*, so called from the circumstance of the triumphal processions crossing it on their way to the capitol: it is now entirely destroyed, by the piers of it may be distinguished by the agitation of the water a little below the bridge of St. Angelo. About half of the Pons Palatinus, the most ancient bridge of Rome is still standing, a few yards below the island of San Bartolomeo, and a continuation has been made of wood for the accommodation of foot passengers. The Pons Sublicius or Æmilii, the most southerly of the old Roman bridges, has long disappeared. The Tiber is now, as it was in Virgil's time, subject to very high and also frequent floods, the water sometimes rising as high as the Piazza di Spagna, and very frequently laying under water all the streets in the busy quarter near the river. On the Porto di Ripetta are two pillars which mark the height of the different floods for some centuries past; and it appears from it that they have all happened between the months of November and February. The frequency of these inundations gave rise to various projects for preventing them, and Aurelian caused the banks to be raised and its channel cleared, though with what success we are not informed. The vast accumulation of soil, however, by which the surface of modern Rome is raised so many feet above the ancient city, must, undoubtedly, make it less liable to suffer from floods now than formerly. (*Burton*, i. 336.)

The CLASSICAL MONUMENTS of Rome are very numerous, their interest depending on their beauty, grandeur, and singularity, their intrinsic merits, or on the events and personages historically associated with them. Those who expect gratification from the first source will, in many instances, be disappointed, as the greater number present little to please the eye or gratify the taste. The *aqueducts*, for example, those astonishing efforts of human industry, which stretch across the Campagna in various directions, exhibit their real greatness only to the understanding. To the eye, these works (of which there seem to have been 14, coming from 9 different sources,) present merely a series of naked brick arches, scarcely larger than a house-dorm in span, or higher than a park-wall, and without any sort of ornament. Near the

Q q

mountains, and in crossing valleys, they may be lofty; but in the vicinity of the city they are low and tame: three only now remain in a state fit for use, viz. the *Acqua vergine*, *Acqua felici* (anc. the *Claudian aqueduct*), and the *Acqua Sabatina*, which supplies the Janiculum. The Roman roads, also, solidly built of large stones, may be called great works for their expense and utility, but they have no external attractions. The same remark applies to the *Cloacæ*, of which a false idea is conveyed by calling them *sewers*. They were rather drains made to carry off the stagnant water of the pestilential marshes, which occupied much of the low ground near the Tiber, and the spaces between the Aventine, Palatine, and Capitoline hills. They were constructed at a very early period (according to some, in the time of the kings), for the obvious reason, that the marshes separated the first inhabited parts of the city from each other, and their desiccation became indispensable. The height and width of the *Cloaca maxima*, are equal, each measuring 134 ft.: a view of it may be obtained at its mouth, where it flows into the Tiber a little below the Ponte Rotto, another portion being visible near the Arch of Janus Quadrifrons.

The *baths*, as they now exist, are an assemblage of naked, half dilapidated brick walls, which surprise by their huge size and the extent of ground they cover. We know of the former existence of eight *thermæ*, erected by different emperors; and the carcasses of three remain in considerable masses, those of Titus, Caracalla, and Diocletian, the ruins of the first two of which are in vineyards, a great part of the last having been transformed by Michael Angelo into the church and monastery of Santa Maria degli Angeli. Each consists of a labyrinth of apartments, the uses of some of which antiquaries have scarcely been able to conjecture. Caracalla's baths covered an area of 28 English acres, a space nearly three times the size of Lincoln's Inn Fields, in London. "But we must keep in mind the multifarious nature of these establishments, which included not only baths, with their *caldaria*, *frigidaria*, *sudatoria*, &c., but porticoes and gardens, libraries, lecture and conversation rooms for the philosophers, academies and halls for declamation, gymnasia for the "fancy," theatres for the gay, temples for the devout, and, most probably, wine shops or places of refreshment for all; in fact, they were less baths than "places of universal recreation." The Roman citizen left his house early, and only returned at night to his bed, spending the day chiefly in the forum, the courts of justice, or at the baths. The latter establishments seem to have combined the uses of our coffee-houses, reading-rooms, libraries, lecture-rooms, and theatres, as well as baths. We may call them, indeed, national *club-rooms*, supplied with every species of accommodation then in vogue, and open to the whole free citizens of Rome. It is this circumstance which gives them their interest. We cannot tread these ghastly chambers, where no sound now falls on the ear save the echo of our own steps, without thinking of the animated throng that once peopled them: the crowd of Roman citizens of all grades and classes, from the emperor to the mendicant who received his monthly dole of wheat from the public granaries, the foreigners from every clime, princes, tax-gatherers, hostages, petitioners, ligants, soldiers, parasites, who came to the seat of empire for business or pleasure. All these must have resorted to the baths, some for ablution, exercise, or amusement, some to read in the libraries, some to listen to the philosophers, some to talk of the news and hear bulletins read from the armies, announcing battles on the Rhine or Euphrates, or insurrections in Spain or Gaul." (*Maclaren's Notes*, p. 142.)

Among the numerous temples that once adorned the ancient capital of the world, the Pantheon and the temples of Vesta, Peace, Fortuna virilis, and Bacchus, present extensive and very interesting remains; but incomparably finer than all the rest is the Pantheon (in the ancient *Templum Martis*), which, though stripped of its external ornaments, is distinguished by two modern bell-towers, erected by Bernini, is entire within. This exquisite temple was built, as Pliny tells us (*Hist. Nat.*, lib. xxxvi. cap. 15.), and as the inscription on the portico testifies, by Agrippa, the friend and general of Augustus, who dedicated it to Jupiter the Avenger, *Jovi uttori*. It is a perfect circle, 180 ft. in diameter.

"Relic of nobler days and nobler arts!  
Despoiled, yet preserved, with thy classic spreads  
A hollows appealing to all hearts—  
To art a model."

Its beauty consists in its admirable proportions; and its portico, 110 ft. in length, by 44 ft. in depth, supported by 16 Corinthian columns of white marble, has a most majestic appearance. "The portal is more than faultless; it is positively the most sublime result that was ever produced by so little architecture." (*Forssyth*.) The dome is of great extent, and has a central aperture, from which the building receives its entire light. The Pantheon has been stripped of every thing that could be taken away, in order to furnish materials for the embellishment of St. Peter's. It is now made the receptacle

of monuments to those who have deserved well of their country, and contributed to sustain the reputation of Italy.

The great wonder of ancient Rome, however, is the Flavian amphitheatre, now the Coliseum, or more properly Colosseum\*, unquestionably the most august ruin in the world, and by far the largest amphitheatre of which we have any knowledge.

"Omnes Cæsareo cedit labor amphitheatro,  
Unum præ cunctis fama loquatur opus."  
*Martial de Spect.*

It consists of a vast ellipse, the length of the longest diameter measured from the outside of the outer wall being about 620, and that of the shortest 513 ft., so that it covers about 5½ Engl. acres of ground! The longest diameter of the arena has been variously given at from 287 to 300 ft., and the shortest at from 180 to 190 ft.; the space between the arena and the outer wall (from 160 to 167 ft.) being occupied by the walls, corridors, and seats that rose tier above tier from the wall round the arena nearly to the top of the outer wall. The latter, which is about 179 ft. in height, consists of three rows of vaulted arches rising one above another, exclusive of which, it had, when perfect, upper works of wood. This colossal amphitheatre is said to have had seats for 87,000 spectators, and standing room for 20,000 more! There is really, therefore, but little of exaggeration in the statement of Addison that the amphitheatre

—on its public shows unpeopled Rome,  
And held, uncrowded, nations in its womb.

The arena was sufficiently extensive for the exhibition, on the grandest possible scale, of the bloody sports that delighted the ancient Romans; and here hundreds, and even thousands, of gladiators and of wild beasts have frequently contended at once —

"Butcher'd to make a Roman holiday!"

This magnificent ruin has been much damaged by earthquakes, lightning, and the destroying influence of time; but it has suffered incomparably more from the injuries inflicted upon it by the successive masters of Rome. In the 12th century it was occupied as a fortress; and in the course of the next century it became, what it long continued to be, a common quarry, whence materials were taken to build a large portion of the modern city. (*Hobhouse's Illustrations of Child Harold*, pp. 263—286.) In consequence of these lengthened devastations, "not a single step is now remaining of all the seats of stone which rose in regular succession from the arena; but the wall which surrounded it, to prevent the escape of the wild beasts, is nearly entire. The interior presents a most complete scene of destruction. By means of broken staircases, we may climb up a considerable height, and almost be lost in the labyrinth of ruins. It is from such a view of these remains that the best idea of their vastness is formed; and if viewed by moonlight, when the shattered fragments of stone, and the shrubs which grow upon them, are seen at a distance in alternations of light and shade, the mind receives mingled impressions of gratification and melancholy which, perhaps, no other prospect in the world could produce." (*Burton's Rome*, li. 52—55.) At length, however, an end was put to the spoliation of this most splendid relic of imperial Rome. "Benedict XIV. consecrated the spot which persecution and fable had stained with the blood of so many Christian martyrs." (*Gibbon*, xii. 455.) And subsequent pontiffs have repaired and strengthened portions of the existing ruin.

"The pile speaks powerfully to the imagination, through the bloody rites once celebrated in it. It was the scene of those savage fights of gladiators, those combats of wild beasts which were unknown among other ancient nations, and have fixed a brand of infamy on the Roman name. The interior has been carefully cleared out, and the boundaries of the arena, which was so often soaked with blood are distinctly seen. When we stand among the broken arches of this vast edifice, now the abode of bats and owls, silent as the grave, and with not a single building near it, our thoughts are irresistibly carried back to the thousands of all ranks and both sexes who once filled its ample benches, to the roars and yells of the wild animals lacerating each other, the shrieks of the slaughtered human beings, and the shouts of the blood-thirsty multitude now applauding the blow which took away a fellow-creature's life, and now calling out for fresh victims. These cruel exhibitions were characteristic of Rome, both republican and imperial. The Greeks, wherever they established their power, carried with them the elevated sentiments and graceful mirth of the stage; and you may trace the dominion of the Romans over the ancient world, by the amphitheatres built

\* The amphitheatre of Vespasian and Titus was, in the lower ages, called *Coliseum*, or *Colosæum*, from the vastness of the building, and not, as has been sometimes stated, from a colossal statue of Nero, supposed to have stood near it. (*Lamirault's Antiquities of Rome*, a valuable work, p. 329.)

for the gratification of their ferocity." (*Maclaren's Notes*, 150-2.)

The Romans, always fond of shows and games, were especially attached to those of the Circus.

— Duas tantum res anxius optat,  
Panem et Circenses.

JOURNAL, Sat. 10. v. 81.

There are said to have been at one time no fewer than 15 circuses in the city and its environs. The principal of which were the Circus Maximus, Circus Agonalis, and the circuses of Nero and Caracalla. Of the Circus Maximus (which Ammianus Marcellinus describes as being at once "the temple, the dwelling-house, the public meeting, and all the hopes of the ancient Romans"), there are now no remains; but Pliny informs us that it was capable of accommodating 260,000 spectators; and Juvenal, using, perhaps, a poet's licence, goes the length of saying,

"Totam hodie Romani Circus capit."

The form of the Circus Agonalis (supposed to have been built by the Emperor Severus) may be traced in the Piazza Navona; and even the round end is not lost: it is about 750 ft. in length; and the races held here during the Carnival forcibly remind us of the uses to which it was formerly devoted. The Circus of Caracalla, outside the gate of San Sebastian, has its walls still entire, though the seats have fallen in, leaving a kind of terrace along the whole length of the walls. It appears to have been 1,678 ft. in length, 435 ft. in width, and to have been capable of accommodating 20,000 spectators. Of the other Roman ruins (excepting those of the forum and capitol), the two columns of Trajan and Antonine, and the three triumphal arches of Titus, Constantine, and Severus, principally deserve attention, for their beauty and the taste displayed in their execution. The column of Trajan, erected to commemorate that emperor's successes in Dacia, is 115 ft. 10 in. in height, not including the statue of St. Peter, which Sixtus V. had the bad taste to substitute for that of its illustrious founder. A spiral staircase leads to the balustrade at the top; and the exterior is adorned with sculptures in *basso relievo*, spirally arranged round the column, representing the victories and achievements of the emperor. Napoleon's pillar at Paris is a good imitation of that of Trajan. The pillar of Antonine (or, more correctly, of M. Aurelius, for he erected it), in the Piazza Colonna, is 123 ft. high, and is now surmounted by a colossal statue of St. Paul; the bas-reliefs, similarly arranged to those on the other column, are not nearly so well executed, and the whole is much injured and defaced. The Arch of Titus, built to commemorate his victories over the Jews, consisting of a single arch, was adorned with eight marble columns of the Composite order, and had its interior covered with sculptures, representing the emperor's triumph after the capture of Jerusalem; but it is in a state of great dilapidation, many of its rich decorations having been carried off to embellish the Farnese and other palaces: latterly, however, some attempts have been made towards its restoration. Till the time of Sixtus IV., the bas-reliefs were not visible, so much had the soil accumulated and buried the arch; but that pontiff ordered it to be excavated; and there is now a clear passage under it at the level of the ancient pavement, and, perhaps, on the pavement itself. The arch of Constantine, at the foot of the Palatine hill, near the Colosseum, is the most noble, because the best preserved structure of a single arch, in Rome; but it is indebted for its chief beauty to the spoliation of the arch of Trajan, which stood in the forum of that emperor, and which the senate, with equal barbarism and servility, stripped of its *bas-reliefs* and other rich materials, employing them to ornament the new structure. It consists of a large arch between two of smaller size, having on each side 4 fluted Corinthian columns of giallo-antico supporting the figures of 8 Dacian captive warriors. It is covered with the bas-reliefs taken from the arch of Trajan, and with others of later date and of very inferior execution. The soil which had accumulated round this arch was excavated in 1804, when part of the *Via Triumphalis* was brought to light. The grass-grown platform at the top was once, probably, occupied by the victor in his triumphal car; but this has disappeared. We have already stated, that the paltry gateway in front of Buckingham Palace is a wretched miniature imitation of this arch. (*Lumsden's Ancient Rome*, 327.)

The Capitoline Hill, "that rock of triumph, that high place where Rome embraced her heroes," naturally kindles a feeling of enthusiasm; but of the topography of the ancient Capitol we really know next to nothing. "Four temples, 15 chapels, 3 altars, the great rock, a fortress, a library, an atheneum, an area covered with statues, the enrollment-office, all these are to be breadth; and of these, the last only can with precision be assigned to the double row of vaults crowded with soil, where the inscription of Catulus was discovered. The citadel may be believed to have extended along the

whole side of the hill." (*Hobhouse's Illustrations of Childe Harold*.) But however little be known of the precise position of these ancient buildings, here was situated the *domus de canna straminibusque*, which passed for the house of Romulus, and was preserved with religious care till the time of the emperors; here the Roman people celebrated their most sacred rites, and kept their treasures, archives, trophies, records, Sibylline books, and other valued relics; and here 300 conquerors, in the space of 1,000 years, deposited their spoils and consummated their glories, by the grand spectacle of a triumph. (*Maclaren*, p. 161.) The Roman forum, however, is, perhaps, the most melancholy object within the walls of "the eternal city." Its former grandeur is utterly annihilated; the ground has been applied to other purposes, and even the exact position of its various parts is much disputed, though it be probable that excavations, judiciously conducted, would set the question at rest. The forum, as described by Bunsen, the Prussian envoy, who took great pains on its investigation, appears to have been of no great size (about 2 acres), and to have owed much of its magnificence to the temples, basilicæ, curiæ, and other buildings that surrounded it. Indeed it was in consequence of its inadequate size, that Julius Cæsar built a new one. Augustus, Trajan, and other emperors, followed his example, and Rome had ultimately a multitude of forums. But though the ancient Forum Romanum and present Campo Vaccino be so desolate that we might apply to it Virgil's description of its appearance before the arrival of the Trojan settlers, (*Æn.* viii. 360,) : —

" ——— passim armenta videres  
Romanique foro et laetis imitare carinis,"

the classical scholar turns with more pleasure to the pages of Byron: —

"The Forum, where the immortal accents glow,  
And still the eloquent air breathes, burns with Cicero!  
The field of freedom, fiction, fame, and blood;  
Where a proud people's passions were so shed  
From the first lust of empire to the last  
To that when further worlds to conquer last."

The forums of Augustus, Trajan, and Nerva, were laid out near the foot of the Capitoline Hill, close to, though separated by buildings from the Forum Romanum; and southward rises the Palatine Hill, on which was built that mere village or collection of huts of which the masters of the world, in the days of their grandeur, loved to speak as "the cradle of their empire, the acorn, whence spring the mighty oak that overshadowed the world." Cicero had a house here, and the brick ruins are still extant of the golden palace of Nero; but at present this spot, which once lodged the whole Roman people, is occupied by a single villa, surrounded by vineyards and gardens. All the more conspicuous monuments above described belong to the Imperial times, for scarcely a shred remains which can be referred with certainty to the ages of the Republic. The principal exceptions are the Tullian prison, comprising two dungeons, perfectly dark, and built with huge blocks of stone, answering, in all respects, to the striking description given of it by Sallust; (*Bel Catalan*, cap. 55.); there are also two ancient tombs (one of which belonged to the Cornelian family, and contained the bones of the Scipios); and the Cloaca Maxima already mentioned; but these structures have little beauty, and derive their interest almost exclusively from classical associations.

*Population.* — It is extremely difficult to arrive at any just conclusions with respect either to the population of Rome, or of any other of the great cities of antiquity. Generally it has been exceedingly exaggerated. The great actions of the Romans, the vast extent of their empire, and the magnificence and splendour of their capital, the original seat of their power, seem naturally enough to lead to the conclusion that its pop. must have been immense. The strong national spirit of the Roman writers led even the most cautious among them to magnify the power and importance of the eternal city, which were exaggerated beyond all bounds by orators and poets, anxious to gain the favour of the public by flattering their prejudices, and exalting their power and greatness. The statements, too, of the classical writers as to the pop. of Rome and other great towns, are not only in themselves very vague, but, being extremely liable to mistakes in copying, have, no doubt, in many instances been magnified by copyists and others, always prone to exaggerate what is really great, and of which they have no distinct knowledge. And in addition to this, all inquiries into the pop. of Rome, Athens, and other ancient cities, are rendered peculiarly difficult from the circumstance of the returns of the censuses, and the statements in the classical authorities founded on them, usually or always referring to such free citizens only as were capable of bearing arms, without including children or slaves, though the latter formed in most instances a large, if not the largest portion, of the pop. Our limits will not, however, permit of our entering into any detailed examination of the various statements that have been put forth with respect to the

pop. of Rome. The exaggerations of Vossius, Lipsius, Châteaubriant, and others, who give to imperial Rome 14, 5, and 3 millions of inhab., are too absurd to deserve notice. Hume, who in his masterly *Essay on the Populousness of Ancient Nations*, has discussed the question of the pop. of Rome with his usual learning and good sense, arrives at the conclusion that Rome, when in the zenith of her greatness, might have been about as populous as London in 1760; in other words, that she might then have had from 700,000 to 800,000 inhab. Gibbon estimated the pop. at 1,200,000 (v. 286, 8vo. ed.); but it would appear that the more moderate estimate of Hume is the more accurate, though the probability be that even it is beyond the mark. It appears from the very learned and elaborate researches of M. Dureau de la Malle (*Economie Publique des Romains*, liv. ii. cap. 10.) that the area of Rome, included within the walls of Aurelian, which have been traced and laid down with the utmost precision, amounts to very near 1366½ hectares, that is to about 3-5ths the area of Paris: and the fair presumption is from the numerous forums and other open spaces in Rome, the number of the public buildings, and the great magnitude of many of the private residences, that its pop., as compared with that of Paris, would be in a still less proportion. To the pop. within the walls has, however, to be added that of the suburbs, the amount of which is the subject of elaborate inquiry by the same learned critic. On the whole, he concludes, apparently on good grounds, that the pop. of imperial Rome, including its suburbs, in its most flourishing period, may be fairly estimated, allowing for troops and strangers, at between 560,000 and 570,000 (i. 403.). And although we would not be understood as agreeing with M. Dureau de la Malle in all his statements, we have no doubt of their general accuracy, and of his estimate coming very near the mark. And, in fact, how small soever it may appear when contrasted with the statements that have been long current as to its vast magnitude, a pop. of 600,000 is really immense for a city like Rome, without either manufactures or trade, and the inhabs. of which chiefly depended for subsistence on the gratuitous distribution of the corn supplied by the conquered provinces.

During the troubles that devastated Italy, and especially Rome, from the sixth to the 13th century, the pop. of the city rapidly declined, and did not exceed that of a third or fourth rate town of the present day. But from the 14th century it began again to increase; and in the "golden days" of Leo X., it is supposed to have amounted to about 85,000. Towards the middle of the 17th century it was estimated at 90,000. In 1709, the inhabs. amounted to 138,568; in 1740, to 146,080; in 1765, to 161,895. (*Gibbon*, xii. 425.) But, owing to the influence of the French occupation, which had fallen off, in 1821, to 146,000, exclusive of Jews. It has, however, again increased; and at the last census, in 1838, it had 148,903 inhabs. Owing partly to the unhealthiness of a portion of the town, and partly to the celibacy of large classes of the pop., the deaths uniformly exceed the births; so that were it not for the influx of inhabs. from all parts of Italy, and indeed of Europe, the pop. would rapidly decline. The decrease in 1837 was chiefly attributable to the ravages of the cholera.

The inhabitants, generally, are of a very mixed race; and it would be absurd to suppose, after so many changes, that they possess any considerable portion of ancient Roman blood. The men of the working and middling classes are generally stout and good-looking; though what are called Roman faces seem to be rarer than in England. The women, though good looking when young, soon become coarse, and, being large-boned, have a haggard appearance on losing their plumpness in old age. The men wear hats with crowns like a sugar-loaf, very wide cloaks wrapping round and round like a Scotch plaid; pieces of cloth tied about the legs with cords, instead of stockings, and sandals in lieu of shoes. The women generally wear a scarlet smock with sleeves; and, for a head-dress, a piece of white linen, thickened on the crown by numerous folds, and with the end hanging down behind to the shoulders. Want of cleanliness is a common vice. The streets, public places, houses, and persons of the bulk of the pop., would all be improved by scrubbing, washing, and combing. Some of the most interesting objects are inaccessible from the accumulation of filth; and the appearance of the monks is absolutely disgusting; they are not redolent of holiness, but of dirt and vermin.

The cardinals and bishops being (under the pope) the rulers of the country, constitute the court-party, and claim the highest rank, after whom come the lay-nobility, subsisting on the revenues of their estates. The priesthood forms a very numerous portion of the inhabs.; for, besides 37 cardinals and bishops, it appears, according to the census of 1836, that there were then in the city 3,490 priests and monks, besides 1,384 nuns. The civil nobility, with a few exceptions, are few in number, poor, and without power or influence. The lawyers, who are divided into 4 classes (correspond-

ing nearly with king's counsellors, barristers, attorneys, and notaries), form a pretty extensive section. After them rank the artists, a very numerous body, with a good deal of influence in society; and next to these are the *mercanti di Campagna*, a wealthy class, who farm extensively, and have warehouses at Rome for the sale of their produce. Rome has about 5,500 shops; but their owners, with some few exceptions, rank below the classes above described. The foreigners, a mixed multitude, among whom the English and Russians are the most numerous, and, generally speaking, the best informed, constitute a class of themselves; enjoying also, in consequence of their wealth, many peculiar privileges. The police exercises no inquisitorial powers; and foreigners may live as they please without attracting attention, and do, with impunity, what would not be permitted to natives. To this circumstance, as well as to the fascinations of antiquity and modern art, we may attribute the visits of foreigners; for, of the English at least, a large proportion are led by motives very different from a love either of the fine arts or classic lore. (*Maclaren*, p. 145.) With respect to morals, it is admitted on all hands that they are extremely lax. The common people are intelligent, and obliging, but passionate; and, on the slightest provocation, strike at each other with knives. Revenge and jealousy often lead, among the lower orders, to assassinations; rendered more frequent by the almost perfect impunity with which they may be committed. The statements as to conjugal infidelity are, perhaps, exaggerated; though the circumstances under which society is placed, the swarms of priests, monks, and others, having no excitement but that of intrigue, leave no doubt as to the prevalence of licentiousness, and the general corruption of morals. The modern Romans are prone to falsehood. "They never speak truth," says Mr. Maclaren, "at the expense of their own interest; and in the courts it is asserted that any quantity of false evidence may be got for money. Cheating, in all its forms, is practised by high and low; and provided it be cleverly done, and successful, they feel a pride in telling it. The judges and functionaries of all kinds have the reputation of being very corrupt. The higher classes are slaves to their vanity, and their indolent pleasures; the lower to the most abject superstition. This character, however, chiefly belongs to the past or passing generation. A large proportion of the young Romans in the middle and upper classes are described as liberal, gentlemanly, and honourable; but they, and indeed the educated classes generally of all ages, are Deists. They speak with contempt of the mummeries and pious frauds they daily witness, but go once a year to confession in order to avoid scandal. The Romans have, however, their redeeming qualities: they are very sober, social in their habits, fond of their children, and obliging to strangers. There is no town, perhaps, where foreigners feel so much at ease. They may dress as they please, live as they please, and indulge in all their personal tastes and eccentricities, without being annoyed, or even stared at. In private lodging-houses strangers find a comfortable meal. Dancing, conversation, and cards are the chief evening amusements; dinner-parties are almost unknown, and suppers are only given on great occasions. In the month of May, all the inhabitants that can afford it, go to the country for 2 months, and again in October for the same period, the air of the Campagna being then purified by the rains of April and September. On these occasions, they hire a house or lodging in one of the petty towns 10 m. or 15 m. from Rome; and their principal amusement during their *villagetur* consists in fishing and bird-catching; the chase; in any of its noble form, being little followed.

The public amusements consist of theatrical representations, concerts, and religious ceremonies, with occasional frolics at the carnival and other festive seasons. There are three theatres, two of which, the opera seria and opera buffa, are open during a great part of the year; but the performances are of a very mediocre description; the concerts have little to recommend them, and among the people at large, music forms but a small part of their enjoyment, though a few wandering harpers (*carciatari*) may sometimes be found trying

to inspire them with the love of sweet sounds. An amphitheatre (*correa*) for bull-fights, tumbling, horseriding, &c. has been formed out of an ancient mausoleum of Augustus, and when open is a favourite resort. The carnival would require some space for its description in detail: it may be sufficient here to observe, that in its license and intrigue, its unbridled mirth, and its levelling of rank; nay, even in the season of its celebration, it bears an obvious resemblance to the Roman Saturnalia; but it approaches, perhaps, more closely to the feast of Cybele, when, according to Livy (xlv. c. 14.), the richest draperies were hung from the windows, masquerading took place in the streets, and every one, disguising himself as he pleased, walked about the city in jest and buffoonery. If the historian had informed us in addition that one of the principal amusements was a promiscuous pelting of sugar-plums or chalk-stones, he would have furnished us with a precise picture of the modern Carnival. Religious festivals are very frequent, but occur outener between Advent and St. Peter's Day than at other seasons. The Pope celebrates mass and conducts his public benediction in St. Peter's on Christmas Day, Easter Day, White-Sunday, and other festivals, on which occasions the solemnities are unusually grand, and attract immense crowds to the church.

The exhibition of the illuminated cross has been already mentioned. The illumination of the exterior of the church is also very imposing: the appearance of this immense building, with its dome, lantern, and cross, all lighted with large paper lanterns, has a most striking and magnificent effect, which, however, is much heightened, when at a given signal thousands of globes and stars of vivid fire, suddenly ignited, as if shot-kindled, blaze in a moment into one dazzling flood of light, all over that vast structure. Immediately after the above display, on the night of St. Peter's day, follows the *Girandola*, an exhibition of fire-works, from St. Angelo, which is generally admitted to be superior to any other of the kind in the world. These festivals cost the Papal treasury about 15,000 crowns a year.

We have already noticed (PALAP STATES, *anté*, 462.) the wretched state of literature and education in modern Rome. It has, indeed, a university, a college, and numerous public schools; but they either afford no instruction in the higher branches of literature and philosophy, or such only as is of the worst possible description. All foreign publications, that might tend to expand and enlighten the public mind are rigidly excluded; all native works must be submitted to the revision of the licensers; and the only literary pursuits that meet with any encouragement are those having reference to antiquity and the fine arts; and even they feel the paralysis that affects the other and nobler branches of study. "Rome, once the mistress of the world, the seat of arts, empire, and glory, now lies sunk in sloth, ignorance, and poverty, enslaved to the most cruel as well as to the most contemptible of tyrants, superstition and religious imposture." (*Middleton's Cicero*, l. 494. 4to ed.)

Rome has numerous charitable institutions, the total annual revenue of which amounts to between 800,000 and 900,000 dollars, half of which comes from the papal treasury, the rest being supplied by endowments or voluntary contributions. But however large be the number of these establishments at Rome, "a great proportion of them are of doubtful, ill-directed, and even pernicious charity. Not to speak of the foundling hospitals, or those which offer a premium to idleness and thoughtlessness; there are 13 societies for giving dowries to girls on marriage, and pecuniary gifts on taking the veil; and of 1,400 women married here in a year 1,000 avail themselves of these societies." There is also much private almsgiving, especially by the pope, who thus spends about 35,000 crowns a year. The consequence of this indiscriminate charity is seen in the mendicancy, squalor, wretchedness, idleness, and want, that meets you at every step in the streets of Rome. There are in the city 21 establishments for the diseased, insane, and convalescent, of which 8 are public and 11 private hospitals, accommodating, on the whole, about 4,000 patients; the average mortality is about 7 per cent. There are also 8 foundling hospitals, in which are nearly 4,000 children of both sexes. In fact, Rome is one of the great receptacles for abandoned children, brought thither from remote provinces, and even from Naples. The mortality in these hospitals is absolutely frightful, upwards of 72 per cent.

An account of the Papal government, its judicial system, &c., has been already given, with other statistical details, in the article PAPAL STATES. The city is governed by an ecclesiastical governor, and a council (*acra consulta*), appointed by the pope; and though there be a *senator*, or civil governor, he enjoys only the name without its authority; and the title has, for many years, been conferred exclusively on a native of another Italian state, as it has not been thought safe to entrust it to a Roman. The police of the city consists of about 4,000 carabinieri, somewhat similar to the *gens d'armes*;

but the inefficiency of this body, which is said to be even more imbecile than the old town guard of Edinburgh, is proved by the frequent robberies and assassinations committed with almost total impunity.

Rome, though the chief manufacturing city of the Papal States, has no manufacture deserving much notice. The principal are silk and woollen goods, especially velvets, brocades for the clergy, and the more expensive kinds of silk goods. Hats of very good quality are made here to the value of about 200,000 crowns a year. The manufacture of mosaics and jewellery of an extremely varied character, occupies a great number of hands, and many also are employed in making casts, or imitations of antique models, &c. Leather, and prepared skins, gloves, parchment, strings for musical instruments, glue, glass bottles, are among the other articles manufactured in the city; but they are of no great importance: and with the exception of works connected with the fine arts, all the manufactures are conducted in the most clumsy manner. The Hospital of St. Michael was the privilege of furnishing cloth for the apostolic palaces and the pontifical troops. But no native wool is employed in the manufacture; the spinning is done by hand, chiefly by women in the prisons, the warping is effected also by manual labour, and it is made a boast that no machinery is employed where the work can be done without it! The establishment has 25 looms, employs 850 persons, and produces about 77,500 yds. a year of the most costly, if not the best, cloth produced in Europe. Manufactures of some kind or other are carried on also, chiefly by hand-labour, in 12 conservatories, containing about 600 inmates. Rome has an insurance company, a public bank, besides two private banking-houses, a savings' bank, and a *monte di pietà*, the last of which had, in 1836, a circulating capital of 230,000 crowns.

A great discrepancy of opinion has prevailed with respect to the climate of Rome. The fact, however, seems to be, that wherever the houses are few, and the ground is mainly covered with gardens, fields, or ruins, malaria is felt during the summer months, though not in the same degree as in the open country outside the walls. Now, this is the condition of the greater part of ancient Rome, of all the districts E. and S. the Quirinal and Capitol; so that five of the seven hills are either wholly or partially unhealthy. The upper part of the Pincian hill, the road towards the Porta Pia, and the space between the baths of Diocletian and the Porta San Lorenzo are also considered unhealthy, and there are districts of the same character hardly inhabited, having a convent here and there, the rest being laid out in gardens, vineyards, &c. West of the Tiber, the district of Lungara is unhealthy. The more densely peopled parts, on the contrary, are sufficiently healthy; and it may be said, with truth, that *modern Rome*, which extends from the Quirinal and the Capitol to the banks of the Tiber, is generally free from malaria. There are unhealthy seasons in Rome, as in most other cities, and in particular years epidemic fevers prevail to a fearful extent in the dirty and densely peopled districts; but these have no connexion with malaria, being attributable rather to the absence of sewerage, and the filthy habits of the lower orders. The temperature of the city is generally mild and genial. Frosts are not frequent, and though snow falls occasionally, it seldom lies on the ground more than a single day. The *tramontana*, however, a piercing cold N. wind, sometimes blows for days together. Rain is frequent and heavy in November and December; but fogs are rare. In summer the heat is often oppressive, especially during the prevalence of the *scioccata*. In summer, the hour after sun-set is considered the most unwholesome period of the day, and then people generally avail exposure to the air. (*For. Quart. Rev.*, xxi. 38, &c.)

The history of Rome, which includes, for many centuries, that of all the countries washed by the Mediterranean, and, at a later period, that of the Western Christian church, is far too extensive to allow of any considerable details in a work of this nature. Its foundation is hidden in the obscurity of an age respecting which few records remained in the time of its historians; and the investigations of Beaufort and Niebuhr have thrown much doubt on its early traditional history. Chronologists, however, are pretty well agreed in assigning its foundation to Romulus, its era, according to Varro, being 753 years B.C. According to the account of Livy, the founder was succeeded by 6 other monarchs; and the constitution during the kingly period was an *elective* monarchy, with a king, senate, and popular assembly, the king being, at the same time, chief magistrate, high priest, and commander of the army; though, in point of fact, as his election depended on the voice of the comitia, the "people" were the real source of power. The senate originally consisted of 100 members, to whom, in course of time, others were added. The comitia comprised the burghers only, and the decrees of the senate required their approval before they became law. The Romans during

this period being successful in war, added considerably to their previously confined territory. The public and private vices of Tarquinius Superbus led (anno 510 B. C.) to the abolition of kingly government, and the establishment of the republic, under 2 consuls, annually chosen, originally from the patricians only, but afterwards from either patricians or plebeians. The temporary ascendancy of the patrician party effected the institution (B. C. 500) of the dictatorship, by which, on extraordinary emergencies, the whole power of the state was committed to a single individual, who might act with despotical authority. In the sequel, after many delays, and much opposition, officers called tribunes were appointed by the people, who had a *veto* on the proceedings of the senate. The constitution was thus founded on the principle of a distribution of power between the aristocracy and the commonalty; and in this state it remained without any considerable change to the end of the Punic wars, the empire of Rome being in the meanwhile extended over Italy, Sicily, Corsica and Sardinia, the N. coast of Africa, and part of Spain. Amid these successes the distinction of patricians and plebeians seemed to have disappeared; but the unequal distribution of the public lands, or of those conquered by the arms of the republic, led to new, protracted, and bloody struggles between the patricians, who had appropriated to themselves the lion's share of the lands, and the plebeians, who sought to bring about their more equitable division. This occasioned the introduction by the latter of an *AGRARIAN LAW*; not, however, meaning by this, as is commonly understood, a law to interfere with or to effect an equal distribution of private property, but merely a law to limit the extent of the public lands held by individuals, and to subject them to a real and not a nominal rent. (See Niebuhr, II. *passim*.)

The history of the intestine troubles of Rome during the long protracted contests respecting this law, and the extension of the franchise to all Italian subjects and allies of Rome (the latter of which led to the Social War), would lead us into details quite unsuited to the nature of this work. It is sufficient here to state that the principle of representation not being adopted in the Roman constitution, it could not long survive, after the extension of the franchise to the Italians in general. The deliberations of the city assemblies were henceforth liable to be controlled by an influx of citizens from a distance, and full scope was given for the exercise of all sorts of corruption and intimidation. The soldiers, too, after they had carried their victorious arms beyond the boundaries of Italy, gradually ceased to pay their accustomed deference to the orders from Rome, and began to regard themselves rather as the servants of the generals by whom they were commanded, and to whom they looked for advancement, than of the republic. In consequence, the whole power of the state came to be engrossed by the great military leaders; and Marius and Sylla, Pompey and Cæsar, Marc Antony and Augustus, were successively masters of the Roman world. The battle of Actium (anno B. C. 30.) threw the whole power of the state into the hands of Augustus, and the public, weary with intestine wars and revolutions, were glad to enjoy tranquillity under his supremacy. The *emperor*, who had previously been merely the commander in chief, now began to concentrate all the powers of the state in his own person. He became, in effect, perpetual dictator, and held the sovereign power free from all constitutional responsibility. The senate, indeed, continued to exist under the emperors, and the prætors or judges retained their names; but the decrees of the former were recommended, or rather dictated, by the emperors, and the *edicts* of the latter were superseded by summary decrees called *constitutiones principum*. In this state the government of Rome remained about 400 years. The succession depended partly on the will of the reigning emperor, who sometimes appointed his successor, either by adoption, or by giving him the title of Cæsar. In the event of no successor being named by the previous emperor, the right of election devolved on the senate; but it was frequently usurped by the army and by the Prætorian guards; and sometimes rival emperors were chosen by the senate and the army, or by different armies, the pretensions of the candidates being decided in the field. Under such circumstances, and considering the degraded state of the Roman people, enervated by indolence, and corrupted by largesses, immunity from taxes, and indulgence in public shows, it may well excite surprise that the empire did not sooner fall to pieces.

Some speculative inquirers have classed the circumstance of the imperial dignity being elective among the causes that contributed to its decline; whereas it really appears to have been almost the only principle that enabled it to survive so long. In a government like that of Rome, where every thing had to be transacted directly by the emperor, a hereditary monarchy, which supposes the occurrence of minorities, was out of the question. And how unworthy soever the means by which

some of the emperors arrived at the imperial dignity, not a few of them owed it to their superior ability. Nerva, Trajan, the two Antonines, Severus, Aurelian, and other able princes, gave new vigour to the tottering fabric, and prolonged its existence.

At the close of the 4th century, the Roman dominions, which still extended from Britain on the W., to the Euphrates on the E., were divided between Honorius and Arcadius. At this time, too, the barbarians, sensible of the growing weakness of the Romans, began to harass the empire with incessant hostilities, and one country after another was lost, till at length Italy itself was invaded by the Huns, and shortly afterwards by the Helli, whose general, Odoacer (A. D. 476), dethroned the impotent Romulus Augustulus, assumed the title of *rex*, and fixed his residence in Ravenna. Thus fell the greatest empire of the world, exactly 1,229 years after its supposed foundation by Romulus. Odoacer gave way to Theodoric, king of the Ostrogoths, and during his reign Rome and all Italy enjoyed a period of peace and prosperity. But the calm was only temporary; Belisarius, the general of Justinian, and Totila the Ostrogoth, successively took Rome, which was stripped of some of its most splendid monuments, at the same time that its inhabitants were reduced to a state of wretchedness which they had not before experienced. After having become a province or *exarchate*, of the eastern empire, Rome passed, in 774, under the dominion of the Franks, who retained it till the deposition of Charles le Gros, in 887, after which the possession of Rome and Italy became, during more than three centuries, the subject of contention between the emperors of Germany, the numerous states into which Italy had been parcelled, and the bishops of Rome, who with the title of pope assumed a right to temporal power. Nicolas III. at length obtained from Rodolph of Hapsburg, in 1278, the grant of an independent territory, called the States of the Church; and thus began the sovereignty of the popes, which, with some interruptions, has continued to the present day. (Further details respecting this part of Roman history will be found under the head PAPAL STATES.)

ROMFORD, a market-town and par. of Essex, in the liberty of Havering-atte-Bower, on the high road from London to Norwich, 13 m. E.N.E. London, and 16 m. S. W. Chelmsford. Area of par., 3,340 acres. Pop., in 1831, 4,294. The town consists principally of a long wide street along the high road, having near its centre the market-house and town-hall, in which are held the petty sessions for the liberty. The church is an ancient structure, consisting of a nave, chancel, and N. aisle, with a tower at the W. end. The living is a curacy subordinate to that of Hornchurch, in the patronage of New College, Oxford, value 54*l.*, besides which the curate receives an annual stipend of 200*l.* (*Ecclesiast. Report*.) The Wesleyan Methodists and Baptists have their respective places of worship, with attached Sunday-schools; besides which there is a national school, partly endowed and partly supported by subscription. The town has also several almshouses and benevolences for the poor. At a little distance from Romford are cavalry barracks, erected in 1795, but now disused. The inhabs. are chiefly retail dealers or persons employed in market gardening and agriculture. The town derives, however, its principal advantage from its situation on the London road, and more recently from being one of the stations on the Eastern Counties Railway. It is also one of the polling places for the S. div. of Essex. Markets, especially for calves, well attended, on Mondays, Tuesdays, and Wednesdays; fair, June 24, for cattle and horses.

ROMNEY (NEW,) a cinque-port, decayed bor. market-town and par. of England, co. Kent, lathe Shepway, partly in lib. Romney-marsh, and partly in hund. St. Martin's Pountney, 19 m. S.W. Dover and 84 m. S.E. London. Area of bor. and par., 2,320 acres. Pop., in 1831, 983. The town, which arose out of the ruins of Old Romney, was formerly in a comparatively flourishing condition, being a considerable sea-port; but the haven has for many years been completely filled up. It consists at present of a broad principal street crossed by one of inferior size, in which is the town-hall. Houses chiefly of brick, the market-house and town-hall being modern erections. The church is a spacious structure, consisting of a nave, aisles and chancel, partly Norman, and partly in the pointed style, with a large and curious tower at the W. end; the living is a vicarage in the patronage of All-souls' College, Oxford; of the nett value of 161*l.* a year. The Wesleyan-methodists have a small chapel, and there are 2 sunday-schools, besides a free-school and almshouses. The inhabitants, with a few exceptions, are employed in grazing cattle on Romney-marsh, a rich tract of land, extending about 7 m. N. and W. from the town, and comprising about 47,000 acres. The tract is defended from the encroachments of the sea by an immense embankment called Dymchurch-arch-wall, along which is a good road for carriages; this sea-wall is kept in repair by a rate levied on the proprietors of the

marsh. The sheep depastured here furnish long combing wool.

New Romney is a bor. by prescription, and returned 2 mems. to the H. of C. from the reign of Edward III. down to the Reform Act, by which it was disfranchised. It was not considered of sufficient importance to be included in the provisions of the Mun. Reform Act; but it still retains certain privileges reserved in that Act for the Cinque-ports. Old Romney, 2 m. W. the town, has now only a few houses surrounding the church. Markets on Thursday: fair, August 26, for pedlery, &c.

ROMORANTIN, a town of France, dep. Loir-et-Cher, cap. arrond., on the Soudre (a tributary of the Loire), where it receives the Morantin, 24 m. S.E. Blois. Pop. in 1836, ex. com., 6,563. It was formerly the cap. of Sologne, and was embellished by Francis I. It has an old castle, a spacious prison, a theatre, courts of original jurisdiction and commerce, and some manufactures of woollen stuffs and yarn. Romorantin was taken by Edward the Black Prince in 1356. Cannon appear to have been used in the siege; but this, though one of the earliest, is not, as has been alleged, by any means the first occasion on which they were so employed. But it is better known in history, by giving its name to the edict of 1650, drawn up by the chancellor l'Hôpital, which gave to bishops, and took away from the parliaments the power to try cases of heresy. It is said that the chancellor consented to this edict only to avoid a still greater evil, the establishment of the inquisition. (*Henaull Abbece, Anno 1650, Hugo, &c.*)

ROMSEY or ROMSEY, a mun. bor., market-town, and par. of England, co. Hants, hund. King's Southampton, the town being situated on the Test, a tributary of the Anton, on the Andover canal, 6 m. N.W. Southampton. Area of par., divided into Romsey-Extra and Infra, 9,310 acres. Pop. in 1831, 5,432. The town, which consists chiefly of a long and wide street, crossed by another at right angles, covers a considerable extent of ground. It has an audit-house, with a market-place beneath, and an old town-hall, in which petty sessions are held; but by far the most remarkable public building is the par. church. This interesting edifice is almost the only remaining portion of an abbey said to have been founded here by Edward the Elder. The present structure appears, however, to date from the beginning of the 12th century, and it is one of the most complete Anglo-Norman monuments in the kingdom. "It is a cross church, with a low massive tower; the general exterior appearance is Norman, of very good character, and much of it unaltered. The W. end is early English, very plain outside, and its details accommodated to the Norman part; but the inside of this W. portion is a very fine specimen of the early English, rich rather by composition than minute ornament. The central portion and the transepts, with the sides of the chancel, are Norman, showing various singularities and mixtures of pointed and round arches." (*Rickman, Goth. Arch.*, p. 176.) This church has a fine high altar, much good tracery, stained glass, &c.; and a curious peculiarity is, that a large fruit-bearing apple tree grows from its roof. The living, a vicarage in the gift of the dean and chapter of Winchester, is worth 365*l.* a year. The Presbyterians have a meeting-house in Romsey; and it has an almshouse, a charity school for 30 boys, a free school, &c. The corporation are trustees for several charities which, with the affairs of the bor. generally, appear to have been well managed. (*Mun. Corp. Appendix.*)

The bor. was first chartered by James I.; its corporation consists of a mayor, 6 aldermen, and 12 capital burgesses. Romsey-Infra is the only corporate town; Romsey-Extra being without the jurisdiction of the former. Corporation revenue, 98*l.* 1*s.* 3*d.*; corporation debt, 1,300*l.*

The sole importance of Romsey is derived from its supplying goods by retail to a large agricultural district. The bor. is increasing in pop., but the trade is decreasing. Formerly, many extensive manufactures of paper and other articles were carried on at Romsey, where there is abundant and excellent water-power; but the introduction of steam has greatly diminished the trade of Romsey. (*Mun. Corp. Append.*) Immediately adjacent to the town is Broadlands, the seat of Viscount Palmerston. Markets on Thursday: fairs on Easter-Monday, Aug. 26, and Nov. 8., for cattle, sheep, and horses. (*Part. Reports, &c.*)

RONDA, a city of Spain, in Andalusia, prov. Granada, on the Guadiaro, 40 m. W. by N. Malaga, and 48 m. N.N.E. Gibraltar. Pop., according to Mifano, 18,678. Its situation is peculiar, being built on lofty rocks beetling over the river, across which, at an elevation of 200 ft. above the surface, are thrown two bridges, one of which consists of a single arch, 110 ft. in span, and surmounted by another bridge of three arches, at a much greater elevation. A third bridge crosses the stream somewhat above the town. The river is wholly unnavigable; and several cascades are formed close to the city. One portion, called the Old City, overhangs the S. cliff, and is

encircled by an old embattled wall, built by the Saracens, and flanked by extensive outworks, while the more widely spread buildings on the opposite bank bear the name of *El Mercadillo*, or New Town. Within the fortifications stands the royal palace of Abou-Melic, the Moor, now a vast heap of ruins. The only entrance to the city is through a succession of gates, leading to a long and narrow, but tolerably straight street, running N. and S. for about  $\frac{1}{2}$  m. to the upper or new bridge. This street is lined with handsome shops; and from it lead off both right and left numerous alleys, communicating with little courts and crooked passages, all of which, however, are lined with remarkably good houses. In fact, says, Capt. Scott, "this labyrinth is the Mayfair of Ronda, the aristocratic location of all the *Hidalguia* of the province, who, proud of the little patch of land won by the swords of their forefathers from the accursed Moslems, would as soon think of denying the infallibility of the pope as of taking up their abode among the mercantile inhabitants of the mushroom suburb, which, however, is, beyond all comparison, the most agreeable place of residence." (*Scott's Ronda and Granada*, i. 103.) The principal streets of the New Town are wide and tolerably straight: it contains some fine open *plazas*; and although the houses are thus more exposed to the sun, they enjoy a freer circulation of air. The absence of an enclosing wall tends, also, in point of coolness, to give the Mercadillo an advantage over the city. It is nearly as difficult of approach, however, and as incapable of expansion as the walled city itself, for cliffs bound it on three sides, leaving the access free only on its N. side. The city has few public buildings except its churches, which are numerous, and gaudily fitted up; but they have neither paintings nor statuary of any merit. The New Town comprises a small, but commodious theatre, the stables of the *Real Maestranza* (or corporation of nobility for breeding horses), and the *Plaza de los Toros*, a circular covered building of stone, one of the handsomest in Spain, and capable of accommodating 10,000 spectators.
